In the House of Commons last week the Under Secretary for the Colonies was able to announce that the garrison of Irak has been reduced by two-thirds, and that the country still remains tranquil. This is good news, and the public will share Mr. Wood's opinion that it reflects great credit on Sir Percy Cox, the High Commissioner, and on Sir Aylmer Haldane, the Commander-in-Chief. Nor must it be forgotten that credit should be given also to King Faisal, who since his arrival in the country has undoubtedly worked hard to create a peaceful atmosphere. The reduction of forces has, no doubt been effected after full consultation with the men on the spot; but it is to be hoped that no pressure of any kind has been put upon them to agree to the proposals merely in order to satisfy the clamour that has been raised in certain quarters for 'economy' in this region. The history of Irak shows that it has not been exactly a peacefull and in the past, and we cannot expect its inhabitants—a singularly, conservative people in such matters—to change their customs and habits all at once, even under the wonderful influence of Sir Percy Cox. Moreover, as our Allies, the French, are now reported to be handing over a quantity of war material to the Turkish Nationalists, and as the latter have certainly had their eye upon, and their agents in, Irak for some time, it would certainly be advisable to be prepared for developments in the North at any moment. For these reasons we hope that the garrison will not be reduced too quickly.

### *Kuchik Khan Worsted.*

The struggle between the Sardar Sipah and Kuchik Khan appears to be going all in favour of the former.

Digitized by Google

The Jangali leader is reported to have fallen out with some of his principal supporters, with the result that they either deserted, or surrendered to the enemy without offering any effective resistance; and though he himself put up a stiff fight, as was to be expected of him, he was finally compelled to take refuge in flight. His stronghold is reported to have been captured, and he is said to have fled to Talish. It remains to be seen whether the War Minister's force will go on from success to success, and capture the famous "Jungle" leader, or whether a swift turn of Fortune's wheel may bring him to the top again. For as far as it is possible to judge the situation in Persia from the incomplete, and often contradictory, reports which reach us, it looks as if the country is in a state where literally anything may happen. It is even possible that the Persians may work out their own salvation.

### *Birth of a Roumanian Prince.*

The birth of an heir to the Crown Prince and Crown Princess of Roumania is an event on which both the Royal House and the nation may be sincerely congratulated. With the succession secured, as may be hoped, for two generations with Princes born on Roumanian soil, the dynasty, though foreign in origin, becomes wholly identified with the country, and the process of welding together Throne and people, begun under the ordeal of war, is completed. Now that her territories have been largely increased Roumania may have occasion to learn, as other countries have learned before her, what a valuable asset she has in the unifying influence of the Crown. The new Kingdom has yet to achieve political solidarity; but if the traditions of the Royal House, inaugurated by King Carol and "Carmen Sylva," and enhanced by King Ferdinand and Queen Marie in their whole-hearted and practical devotion to the country's service, become the guiding principle of succeeding occupants of the Throne, Roumania has every reason to face the future with confidence.

### *A Lead for India.*

The departure of the Prince of Wales for India was naturally the occasion for a large number of special articles in the English Press, but to our mind the most significant of them all was that which Mr. Sastri contributed to *The Times*, because it suggests that the great mass of sane and reasonable opinion has at last found the leader it has waited for so long. Mr. Sastri at least sees clearly that the pernicious doctrine of non-cooperation will not die of itself, but must be fought and killed, and the essence of his article is the call to fight. The moderate party must, as he says, overcome their fear and their apathy. They cannot afford to leave the field in possession of men who, merely because they are active and organised, have obtained an ascendancy to which they are not entitled, and who have thus been enabled to inflict on the innocent masses damages from which they might have been saved. This is straight talk, such as India needs just now; and we hope that when Mr. Sastri gets back from the Conference at Washington, he will remember that iteration is an essential part of leadership, and persist in his teaching until the lesson has been learned.

### *India in the Lords.*

The most noteworthy feature of last week's debate in the House of Lords was the straightforward speech in which Lord Chelmsford claimed as his own, and at the same time defended, the Fabian policy pursued by his Government in regard to the non-cooperation movement. Apart from this speech, a report of which appears elsewhere in this issue, we were struck chiefly by the portentous language in which Lord Curzon condemned the discussion as inopportune. Matters of the utmost importance were, he said, the subject of constant communication between Simla and Whitehall; no statement could be made at the moment regarding them, but probably the opportunity would come during the present session; and meanwhile the debate could only do harm; particularly when telling sentences are cabled to India without their context. We wonder what will be the result of cabling these particular sentences. Judging by recent precedents, the whole country will conclude a fundamental change of policy is imminent, and that meanwhile the wisest course is to sit on the fence.

### *"Grit in the Bearings."*

Possibly the most useful part of the debate was the attention which was drawn to the delay in arranging for the retirement from India of those officers who feel that they cannot honestly work under the new Constitution. The principle was definitely fixed by the Joint Committee long ago, and there can be no question that, when a new and complicated machine was being started, every possible step should have been taken to ease its working from the outset. The election of last year was the very latest date at which the scheme of retirement should have been announced to the Services, if not to the public; yet according to Lord Lytton, the India Office is still boggling over the framing of a scale of pensions which would be fair, and not, he hoped, ungenerous, and mean. It strikes us as a first-rate administrative blunder, and if as is rumoured, the scheme, when it materialises, will give rise to trouble in the Legislative Assembly, the authorities will have only themselves to thank.

According to a report from Constantinople a **treaty of peace** has been signed at Kars by representatives of the Soviet Republic in Transcaucasia and the Nationalist Turks.

# THE WEEK AT HOME.

*London, Monday Evening.*

**The Rift within the Lute.**

Things seem to have quieted down on the Continent with the definite failure of the plot in Hungary—success might have led to a similar and more formidable attempt on the part of the Hohenzollerns—and the withdrawal of the German Cabinet's resignation. For these mercies at least we are thankful. But trouble, or at least the promise of trouble, has got worse at home.

The Unionist Die-hards (only they never really die) have definitely revolted, and put down a vote of censure on the Government for its negotiations with the Irish rebels; it appears that Mr. de Valera's telegram to the Pope was the last straw which broke the camel's temper. This afternoon there is to be a debate in the House, to which Mr. Lloyd George is to reply; there is no doubt whatever of the result.

The small band of malcontents has no leader; for with every respect to Sir John Butcher—who is a very pleasant fellow—he is not really the stuff of which leaders are made. Nor have they any big names n the camp; but they do represent a tangible section of opinion. They are the small part of the Tory milk in the Coalition pot that has boiled over, but the rest of the milk is getting uncomfortably warm.

Their case, such as it is, will be torn to pieces by Mr. Lloyd George; but with them, and those who sympathise with them, it is not so much a matter of reason as of faith. The Unionists as a whole are inarticulate but distrustful; they cannot explain in words the difference between black and white, but they know there is a difference, and they know the difference when they see it. They will be conquered, but resentful.

The political gossips are now busily speculating as to the chances of a reformed Conservative Party under Lord Birkenhead and Mr. Winston Churchill. The stock of both statesmen has appreciated a good deal this last two years, but I doubt if this particular Cabinet is likely to be formed within measurable distance. But, like one of those intriguing machines one sees on the meteorologists' counters, it is my business to record which way the wind blows, and it is blowing rather strongly in that direction just now.

**Ireland and Washington.**

The Irish negotiations are not dead; but they are only just alive. In the language of the zoologist, they are hibernating, and de Valera's telegram to the Vatican was the frost which nipped them untimely in the bud. The Government could not overlook his reiteration of independence and refusal of allegiance to the Crown; and although the Irish delegates are said to have made light of it, they were almost as embarrassed by the telegram as the Cabinet. It is rumoured that they would have liked to disown the telegram and their leader; but one cannot quite do that right in the middle of a discussion without making the mess worse than ever.

Accordingly the negotiations have been directed to another phase—the Ulster question, which is a more actual controversy than the quite theoretical discussion of momentary independence. Here it is very largely a question of the two counties of Tyrone and Fermanagh, which is about as complex a matter as the Upper Silesian problem. No solution appears to have been arrived at.

The prolongation of this preliminary state of the negotiations, combined with the check introduced by de Valera's indiscretion, makes it still uncertain whether the Prime Minister can go to America next week for the Washington Conference. It will be a thousand pities if he is prevented, but it is known that some sections of Irish and Irish-American opinion have no wish to see Mr. Lloyd George cross the Atlantic; these extremists do not desire any improvement in the relations between England and America.

**London Traffic.**

One result of the unemployment difficulty is that the London railways may be electrified. This sounds like a paradox, but it is not so in fact. Many of the suburban railways are awaiting electrification and enlargement; the schemes are ready, but the difficulty is to raise the capital. If the Government will guarantee the companies concerned against loss, the new capital they must raise will rank as a gilt-edged security paying a lower rate of interest, and the work—which would provide employment for many thousands of men for some years—could be put in hand at once.

It is proposed to electrify the South Eastern and Great Eastern suburban lines; and to extend the underground system from Wimbledon, where it at present ends, to Sutton. It would also help the Great Eastern very considerably with their already congested suburban traffic, which is increasing every day. The scheme seems a very hopeful one, and although the London County Council has objected to some of the conditions proposed by the Underground system on the plea that it is asking practically for a monopoly, public opinion on the whole seems in favour of the arrangement being made.

Unemployment is still bad, but in some quarters there is a belief that trade is a little better than it was. It would not, however, take very much to put us back into the Slough of Despond again, and some fears are expressed that the possible default of the German Government next January may cause a further wave of industrial depression. The movement for a cancellation of all war debts and indemnities, as the quickest way to a revival of trade, is, therefore, growing.

**Debts of Honour.**

A most astonishing decision has been given by the House of Lords this week, to the effect that betting by cheque is not legal, in the sense that the amount of the cheque can be recovered from the recipient—usually the bookmaker—within the statutory period of six years after the payment. The law, of course, does not recognise debts of honour, but public opinion does; and there will be very few cases in which a betting man will plead this decision, although the advertising bookmakers, I believe, are a little apprehensive. The real sting of the decision is that executors and trustees of an estate can recover money lost during the life of the wagerer after he is dead; and according to law, they not merely can, but must, so proceed to recover. Since it is impossible, even for the biggest "mug" that ever walked a racecourse, to guarantee that he will not die within six years of losing his money to Messrs. Sharper and Thimblerig, the results may yet be very interesting, and even gratifying to the legal profession.

**Einstein and Painleve.**

Some excitement has been caused in scientific circles by the very damaging logical criticism which M. Painlevé, the greatest of French mathematicians, has brought against the Einstein theory. According to Einstein,

Digitized by Google

time and space are entirely relative. But M. Painlevé, addressing the Academy of Science last week, asserts that time and space have a real, and not merely phenomenal existence, since whatever mode of measuring or reasoning be adopted, the actual coincidence of two phenomena at a certain point and at a certain moment must always exist; this is, I take it, the "event" which is actual and real; and according to a certain school in psychology, the universe consists in a succession of events. Apparently each of those several and multitudinous events must be regarded as real. It is evident that there is much more to say upon this subject, but this is hardly the place to say it.

**Complaining of the Moon.**

As if there had not been enough to worry us at home and abroad of late, Professor Crommelin, usually one of the best behaved of astronomers, has chosen this particular time to startle us with the report that the moon has got out of gear. After a long and blameless course in the heavens, during which it has been as steady as a butler in a duke's family, it began to go wrong about 1894. For some years past, it appears, these reprehensible irregularities have been discussed in observatories, but astronomers, like burglars and other folk who work at night, are reticent folk. Now, however, that the moon has got so far wrong that the *Nautical Almanac* will have to be corrected, Professor Crommelin has decided to make this scandal in his family public. One gathers that matters may get worse before they get better, as there seems to be some unknown influence pulling the moon away from her proper course—a kind of celestial co-respondent with no sense of proper honour.

All the occultists and astrologers and the superstitious generally are greatly intrigued at the news, and we shall probably have many fantastic explanations. One can only hope that, after the recent eclipse, the moon will think better of it, and return to her proper duties by making up for lost time. At any rate, it is a relief to find that Professor Crommelin, on second thoughts, has decided that the *Daily Mail* has exaggerated the divagations of the proverbially inconstant moon.

**The Theatres.**

The autumn theatre season seems to have opened successfully. Most of the theatres are producing light but amusing stuff, but at the Playhouse Miss Gladys Cooper has at last got something worthy of her great gifts, in "The Sign on the Door." Mr. Bernard Shaw's latest, "Heartbreak House," is puzzling and amusing London as it was intended to; its real defect, as Mr. Walkley remarks, is that it does not take love seriously, and the stolid Englishman will continue to hold that Mr. Shaw is too brilliant to be sound. Meanwhile Mr. Oscar Asche has produced his third great spectacle. "Kismet" was a reasonably good play, beautifully staged, and it had a good run. "Chu Chin Chow," its successor, was a poor play magnificently staged, and it ran five years. "Cairo" is a still worse play still more magnificently staged, and is therefore likely to run still longer. It is a sensuous production, and one has to use one's opera glasses to discover that the characters have any clothes on; the critics professed to be shocked at the display, but their disapproval caused an immediate run on the box-office. It is understood that the Censor has requested Mr. Asche to spend a little more money on drapery, but not enough to damage the show, and it will soon settle down into one of the regular sights of the town after this preliminary advertisement. The plot does not matter.

**The Week's Books.**

Two amusing books of light reminiscences may be mentioned. "The Chronicles of a Gay Gordon" (Cassell) by Brigadier-General J. M. Gordon, are an interesting story of a life's wanderings; and even more attractive are the "Days and Ways of an Old Bohemian" (Murray) by Major Fitzroy Gardiner. This is, as the saying goes, full of good stories, but I will only quote one. Major Gardiner was Sir Herbert Tree's manager, or secretary—I am not quite sure of the precise term. Tree was a hopelessly extravagant producer, and Gardiner had once to make a great effort to cut down an elaborate spectacle which cost £190 every performance. He drew up a list of possible economies; Tree went through them carefully, disallowed one after another, and finally decided to supply a penny instead of a threepenny paper to the Green Room! They saved exactly a shilling a week.

The second volume of the "Naval History of the Great War" (Longmans) by Sir Julian S. Corbett, is even more interesting than its predecessor. It begins with the German raid on the Hartlepools and Scarborough in December, 1914—when both sides tried to come to grips and missed each other in the North Sea fog, and it contains a full account of the Dogger Bank fight, where the Blücher was sunk, but the Lion was heavily damaged, and goes on to the disastrous business of the naval operations in the Dardanelles in March, 1915. It is essentially a book for students, but many who merely want to read a fine story will do well to get it.

"The Days that are no more" (Nash and Grayson) is a volume of reminiscences by Princess Pauline Metternich. It is sure to be popular, for it has many interesting stories. One of the best is that of the great Prince Metternich: On the day that he was raised to the rank of Prince his valet asked him: "Will your Highness put on the same coat as his Excellency wore yesterday?"

"Jack London: the official Biography" (Mills and Boon) is a full length account of the popular American novelist, written by his wife. It is a record of a brave life which attained success over tremendous difficulties.

"A History of the Cambridge University Press" (Cambridge University Press) by S. C. Roberts, is a far more attractive book than it somehow sounds. In its first hundred years—it was established in 1521—the chief publications of the Press were theological, and it was somewhat suspect of the authorities, as Cambridge was a centre of Puritanism. Even the names of these works and their authors are now forgotten; but in the following century the Press had the honour of printing one of the earlier poems of Milton, and his press corrections are still a treasured possession of the University. From that time onwards the Press has been, and it still remains, one of the great headquarters of scholarly printing.

"Memories and Notes" (Arnold) by Sir Sidney Colvin, is a long-awaited book. Its distinguished author was a friend of many of the great Victorians, and his recollections include stories of Gladstone and Victor Hugo, Meredith and George Eliot. I like Gladstone's grim jest when suffering from lumbago—"I don't know whether to treat it by the method of conciliation or coercion." But better still is the seriousness with which G. H. Lewis took George Eliot. Some visitors called on that lady when she was writing "Middlemarch," and as they went out Lewis told them gleefully that 'Celia is going to have a baby.' After some searching of mind, they remembered that Celia was the heroine of "Middlemarch."

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents).*

## SUDAN.

*Khartoum, October 9.*

**Provincial News.**

News has arrived from Dongola Province that as the result of a fire at Kareima on the morning of the 4th inst, two of the passenger coaches, running on the Atbara-Kareima service were completely destroyed and a third coach badly damaged. Fortunately there was no loss of life and an inquiry is now being held into the cause of the fire.

A certain amount of excitement is reported from Makwar owing to disturbances between Italian artisans employed on the dam construction and native Province policemen. The Superintendent of Police was called in, but before he was able to ascertain the reason of the commotion a further struggle took place, which necessitated the arrest of three of the Italians, who were, however, immediately released on bail. An inquiry is now being held into the cause of the disturbance.

**Personalia.**

His Excellency the Governor-General and Lady Stack arrived in Egypt on October 10 and spent a few days at the Residency at Ramleh.

Monsieur J. Claessens, in charge of the Second Section, Agricultural Directorate, Belgian Congo Administration, was expected to leave Rejaf en route for Khartoum and Egypt on the 7th inst. Monsieur Claessens has been deputed to study methods of agriculture in the Sudan and Egypt.

## YUGOSLAVIA.

*Zagreb, October 26.*

**The Karlist Adventure.**

Ex-King Karl's renewed adventure has, of course, been the sensation of the week. His return was immediately held to be a *casus belli*, and the Yugoslav Minister, Dr. Milan Miloyevitch, at once left Budapest. Mobilisation of the First and Fourth Army Districts (Novi Sad and Zagreb) was at once ordered, to protect the frontier from possible aggression, a blockade of the frontier declared, and the monitors sailed up the Danube and the Tisa. The Little Entente proved solid, and the Czecho-slovak and Roumanian Ministers called and announced their adhesion, and gratification was expressed at Poland's doing the same. The attitude of Italy caused suspicion, and the public were quite prepared for hostility in that quarter, when the Italian Minister announced that his Government was on the side of the Little Entente against any return of the Hapsburgs; although some of the papers insist on a sensational story of a secret agreement between Rome and Budapest.

It is stated that the Little Entente presented an ultimatum at Budapest, giving Karl two days to leave the country, with a threat of the three armies marching on the capital in the event of non-compliance.

The *démarche* of the British and French Ministers at Belgrade advising the Government to take no precipitate action without consulting the Big Entente, was an unpleasant surprise, for it is held here that the Great Powers have muddled the situation and by their lack of firmness, their dilatoriness, and their absence of policy, have endangered the peace of Central Europe; and now they try to prevent the parties who are directly interested and have the knowledge and power, from taking the necessary steps.

The news of Karl's arrest relieved the situation, but everybody is sick of this nonsense, and is determined that an end must be put to Karl's escapades and capacity for mischief. Switzerland is blamed for being so naive as to expect him to keep his promise.

**Some Results of the Coup.**

But it is an ill wind that blows nobody good, and Karl's adventure has had at least the benefit not only of throwing into relief the solidarity of the Little Entente and the sympathy of Poland, but it should dispel for ever the rumours of disunion in Yugoslavia. Public opinion in the West has been led by the demagogy of Raditch, the abstention of the Narodny Club, and of the Slovene Clericals from the Constituent Assembly, and the propaganda inspired by Italy and Hungary, to believe that the Kingdom of the Serbs, Croats, and Slovenes is on the eve of resolving itself into its component parts. The mistake is pardonable enough, because in the bad old days, even Austria, in spite of her far-reaching system of spies, frequently was led to believe, owing to the vigour of domestic politics, that Serbia was divided against itself. There was an instance of this on the presentation of the famous ultimatum to Serbia. Of all M. Pashitch's political enemies, few were more bitter than Dr. V. Georgevitch, a famous Serbian statesman, who was at the time in Austria. When he read the news in the Press, and considered the possibility of Serbia's giving way to Austria's impossible demands, he exclaimed that if Pashitch yielded he would instantly fall under the bullets of an outraged populace in the middle of the Terazije. Party passions are stilled on these occasions, and exaggerated importance is attached to them in quieter days.

**A Proof of the Union.**

So now, when the threat of war appeared on the horizon, all parties rallied round the Government at Belgrade, for no one could tolerate a recrudescence of the Magyar danger. A Croatian lawyer has written the following expressly for THE NEAR EAST:—

"The news received of the arrival of Karl in Hungary has again disturbed public opinion in Yugoslavia, especially in Zagreb. Directly the news was received a great meeting was held in front of the University, where fiery speeches were made against Karl and against Hungary. The Government was called upon forthwith to take the most energetic measures to prevent the realisation of this new Hapsburg adventure, and to teach the Magyars that they must respect the Treaties of Trianon and St. Germain, for which Croats, Serbs and Slovenes have shed so much blood in their glorious past and present. The question arises again whether Karl's return to Hungary signifies the assertion of claims upon Croatia with Slavonia and Dalmatia. Since the Croatian Diet broke off all union between Croatia and Hungary on October 29, 1918, and therefore all connection with the person of the ruler, that would mean that the claims of the Hungarian king are counter to the will of the Croatian people, especially now, when the Yugoslav people is united into one sovereign national state of the Serbs, Croats, and Slovenes. By this act of union there is broken off for ever all connection between Croatia and Hungary based upon earlier pragmatic sanctions, on which the Hapsburgs would certainly wish to base their plans and again restore by all possible manner of propaganda the integrity of the Magyar Crown of St. Stephen, which would endanger the consolidation of the young Yugoslav State. For this reason, the Croatian people welcomed the Government's measures of mobilisation, for it has always been penetrated with a deep-rooted love of freedom and the rights of mankind, and from the depths of its soul hostile to all foreign dominion. The Croat people in the present situation will take a most determined stand alongside the Serbs and Slovenes in the defence of its ideals, for which will fight with full realisation of their action the united ranks of peasantry, labour and townsfolk."

**The Relation of Croatia to Hungary.**

The union between Austria and Hungary depended on the Pragmatic Sanction of 1711, but that between Hungary and Croatia by another Pragmatic Sanction a year later, in 1712, dates back nearly ten centuries. The Pragmatic Sanction of 1711 was dissolved by the Budapest Parliament in 1918, and that of the 1912 by the Croatian Diet an October 29, 1918. Of course, the Diet was not by law competent, but it was a revolutionary act, the declared will of the people, which the people will defend by force—which is, of course, the last arbiter in these matters. Karl, at his coronation as King of Hungary, swore to defend the integrity of the Hungarian lands and the rights of the Crown of St. Stephen: this referred in particular to the Crown lands of the provinces of Sremska, Pozhezhka and Virovititza, with the towns respectively of Osijek, Pzhega and Vukover. In the

Digitized by Google

old days, the eldest son of the dynasty of Arpad was always *Dux Croatiae*, afterwards altered to *Dux Pannoniae et Slavoniae*. This explains the extreme excitement caused in Croatia in particular at the return of Karl; for it involves a reassertion of his rights over Croatia, rights which the people will repudiate with armed force if necessary.

**A Destructive Fire at Belgrade.**

On the evening of the 24th. a fire broke out at the Central Store of the railway station at Belgrade. The fire brigade assisted by the public, the railway staff and a detachment of the troops and of cadets worked like Trojans, and by dint of extreme efforts and endurance, succeeded in saving the royal train, and large quantities of goods and barrels of benzine. The dwellers in the neighbourhood, in panic, carried out their household goods into the streets, but the fire was not allowed to spread. The engine house caught and blazed up, till the roof fell in with a tremendous crash, amid columns of dust and tremendous flames: the wind carried the sparks, and a store containing inflammable matter was blown up with fierce explosions.

Owing to the prolonged dry weather, fires are reported from all over the country. Three houses have been burnt down at Osijek, involving damage to the extent of nearly a million kruna, while forest fires are raging in different parts of Croatia and Slovenia.

**M. Drashkovitch's Assassin.**

Alijagitch, the murderer of M. Drashkovitch, has been condemned to be hanged, and his accomplices, Cholakovitch, Loyanditch and Petronitch, to fifteen years' penal servitude.

**A Postscript.**

The Cabinet have taken note of the *démarche* of the British and French Ministers, but decided that they must be masters in their own house, as their vital and national and economic interests are at stake, and must act in concert with their Czecho-Slovak and Roumanian allies. The report comes from Belgrade that to-morrow an ultimatum will be presented to Budapest, demanding the delivery of Karl Hapsburg to the representatives of the Little Entente within forty-eight hours.

## ROUMANIA.

*Bucharest, October 20.*

**Russo-Roumanian Pourparlers.**

The negotiations which are now taking place at Warsaw between the Roumanian representative, M. Filaliti, and the Russian Soviet Delegate, M. Karachan, are more or less feelers to ascertain whether an understanding between Russia and Roumania could be arrived at. Certainly, there is no question of a peace treaty, for the simple reason that the two countries are not at war. There are, however, certain important differences between them, which, if satisfactorily settled, would clear the way for a future conference for the purpose of concluding an economic and, eventually, a diplomatic accord. This is particularly Russia's aim.

The two principal points of divergence are the Bessarabian question and the restitution of the Roumanian State Treasure at Moscow. The Bessarabian question, although it is repeatedly hinted at by the Russians, the Roumanians point-blank refuse to discuss; for they consider it definitely settled by the self-determination of the people of the province and by the Allies' recognition thereof.

The point which Roumania is mostly concerned about is her State Treasure, which was sent away to Moscow during the war, on the Allies' recommendation. From what has transpired so far it is doubtful whether this Treasure still exists, and the doubt is strengthened by the equivocal answers given by the Soviet representative during the conversations at the Warsaw meeting.

**Fiscal Reform Measures.**

M. Titulescu, Minister of Finance, on his arrival at Bucharest, was interviewed by local Pressmen, to whom he declared that, despite the Opposition campaign against his Fiscal Reform Bill, he is still determined to carry it out as it has been passed by both Houses. He afterwards stated, however, that he might consent to certain modifications, should they prove necessary.

He then promised that in a few days' time he will give the Press full particulars with regard to the application of the new taxes, about the country's financial situation in general, and also about the Swiss Loan, which has been so severely criticised by a certain section of the Press during his absence.

**A Communistic Plot.**

After several months of investigations and constant watching, the authorities have at last succeeded in unearthing a new communistic organisation with headquarters in Bucharest. The plotters' hiding places having been located, on Monday night a large police force was concentrated in a certain quarter of the town, and by raiding twenty houses they managed to capture twenty-four Communists together with their leaders. In searching these houses a case containing three bombs, arms and ammunition and important documents was found. These documents have given the authorities very important information. A complete list of the Bucharest committee of the organization was found in a note-book, which enabled the police to carry out further arrests. The three bombs were destined for three important buildings in the capital. The organisation was divided into two sections: one for propaganda and the other for terrorist purposes, which is very similar to the communistic organisation recently discovered in Bessarabia. Compromising correspondence with instructions from Moscow was also found; and the funds also are shown to have come from Moscow by special couriers via Bulgaria. A large part of the arrested Communists are Roumanian deserters recently returned from Russia.

**Scarlet Fever Epidemic.**

Great anxiety is felt throughout the country as a result of the spreading of the scarlet fever epidemic. This disease is especially prevalent in Bucharest with its over-population and its inadequate housing facilities. Since August the number of cases have increased, in the capital alone, at the rate of 150 a month; and they have to-day reached a total of about 450 with no signs of abating. Fortunately, however, the fatal cases are only about 9 per cent. The spread of this disease is largely due to the ignorance and neglect of the rural population, and even of a good many townspeople, who have an aversion to hospitals. The consequence is that patients are not properly isolated. The present insalubrious condition of the towns and villages, and the exceptionally long spell of dry weather have also greatly contributed to the epidemic. Naturally, the great danger lies in the schools; and the authorities intend closing them in case there are no signs of improvement within a few days. Out of the 170 schools in Bucharest, 80 are already affected.

**The Paris-Bucharest Air Line.**

On Wednesday afternoon the inauguration of the first Paris-Bucharest Air Line took place at the aerodrome of Pipera, near Bucharest. This was celebrated by the arrival of two large aeroplanes from Paris, belonging to the Franco-Roumanian Air Service Company. The two machines were piloted by Capt. Deullin and Lieut. de Marmier, who on landing, were greeted with cheers by a very large and select assembly, headed by the Royal family. The two pilots were then presented to the King and Queen by M. Aristide Blank, one of the founders of the Company.

Captain Deullin declared that he had had a very easy and pleasant flight. He left Paris ten days ago in order to have plenty of time in which to study the new route. He and M. de Marmier have been successful in establishing the different landing stations and the time of flight between them. The first distance from Paris to Strassburg took two hours and forty minutes. From Strassburg to Prague three hours twenty minutes; from Prague to Budapest three hours fifteen minutes; from Budapest to Turnu-Severin three hours thirty minutes; and from Turnu-Severin to Bucharest one hour forty-five minutes, a total of fourteen and a quarter

Digitized by Google

hours of actual flying. Captain Deullin's machine carried five passengers and Lieut. de Marmier's machine three passengers.

The Franco-Roumanian Air Service Company intends running a daily trans-European service, by connecting Paris with Prague, Vienna, Budapest, Belgrade, Bucharest and Constantinople, with a side-line to Warsaw, for carrying passengers, letters and parcels.

## BULGARIA.

*Sofia, October 23.*

**The Assassination of M. Dimitroff.**

The assassination of the War Minister, M. Dimitroff, is by far the most important event of the week. In company with three friends, M. Dimitroff left Sofia by motor car on Friday night, the 21st, for the village of Kenyavo, which is 10 miles east of Kustendil. The following morning the party set out for Kustendil and, according to the scanty details that are so far to hand, the car was ambushed on the road, and M. Dimitroff, his chauffeur, and two friends were all killed. The third friend, M. Nihileff, escaped. It appears that all the deaths were caused by rifle shots.

M. Dimitroff took up his duties as War Minister some six months ago, and he has always been very active in dealing with Macedonian *Komitajis*, who, it is said, threatened him with death a short time ago. It appears, therefore, although there is no confirmatory evidence as yet to hand, that the assassins were Macedonians.

The Government are taking all possible measures in order to catch the band of murderers, and besides closing the Serbian frontier have sent troops and gendarmes to scour the countryside. Apart from the personal side of the tragedy—for M. Dimitroff was a married man with a large family—his death is a great and almost irreparable loss to the Agrarian Party. He was M. Stambolisky's right-hand man, and was regarded by everyone as being one of the mainstays of the Agrarians. It is as yet too early to speculate regarding his successor, but it will be very difficult to find a man so determined and strong-willed as was Dimitroff.

The Minister was 54 years of age and before becoming Minister of War last June, was for 18 months Minister of the Interior. He was a native of Radomir, and it is probable that he will be buried there.

**The Trial of the Radoslavoff Cabinet.**

This trial, which was adjourned on October 19 for a few days, will be continued to-morrow. It is understood that a number of fresh witnesses have been subpoenaed, and that the total number of witnesses now borders on 300, and includes M. Stambolisky, M. Malinoff, who was the Prime Minister at the time of the Armistice, and many other well known public men. Great admiration is felt in all circles at the attitude of General Jekoff, the late Generalissimo of the Army. His voluntary return in order to stand his trial, his dignified and soldierly bearing before the Court of Justice, and the tale of his three years' exile in Germany, have all gone a long way towards arousing popular opinion in his favour. Whilst it is idle to prophesy as to the punishment he may receive, it is interesting to note that well informed quarters consider he stands a good chance of being acquitted.

**Colonel Nicoloff's Case.**

Lieut-Colonel Nicoloff is still in prison, and as yet there is no sign of his trial taking place. The British Colony in Bulgaria are doing all that lies in their power to prevail on the Government at least to accelerate the holding of the trial, and with this object in view have presented a petition to M. Stambolisky, asking him to have an investigation made into the case. The British Minister, the Honourable W. A. F. Erskine, has promised to present this petition to the Bulgarian Prime Minister.

**Decision of the Radicals.**

At the beginning of last week the Radical Party held a general meeting at Sofia; and after a heated discussion it was decided that the future policy of the party would be to support the other bourgeois parties. In the past the policy of the Radicals has been to remain entirely independent; but the younger members of the party have realised for a long time that this policy was not going to lead them anywhere, as their numbers both inside and outside of the Sobranye are too small to allow them to wield any influence alone.

**The Jubilee of M. Bakaloff.**

M. Tsanko Bakaloff, Minister of Public Works, commonly called "The Poet Minister," celebrated his thirtieth year as a poet on Sunday. The occasion was marked by a great gathering of the Agrarian party at Bela Tcherkva, the birthplace of M. Bakaloff. Practically all the Cabinet and in addition two or three Diplomatists attended at the ceremony, which took the form of a series of addresses made by M. Stambolisky and other Ministers, and included the bestowal of various gifts on M. Bakaloff. In the evening an open air performance of "Sous le vieux ciel" which was written by M. Bakaloff, was rendered by the full company of the National Theatre.

## GREECE.

*Athens, October 22.*

**Departure of Earl Granville.**

The Greek papers here have published a report to the effect that, on his own application, Earl Granville, the British Minister in Athens, is being transferred to Copenhagen. The report has been received with great regret by all parties in Greece, who are unanimous in praising the diplomatic manner in which Earl Granville has dealt with the very delicate situation that arose on the return of King Constantine after the elections of November 14, 1920. His unfailing courtesy and real endeavours to do everything possible to establish and enhance friendly relations between Great Britain and Greece are fully recognised, and many eulogies of him are published in the Athenian Press.

Official news of Earl Granville's departure has not been received up to the time of writing.

**The Opening of the National Assembly.**

It was decided that prior to the departure of M. Gounaris on his visit to Paris, London, and Rome, a special sitting of the National Assembly should be held, in order that the Prime Minister might outline his policy, and take a vote of confidence. The meeting took place last Saturday, and was attended by 311 deputies; and, as was expected, the voting went in favour of the Government, which obtained 201 votes. Only 71 members of the Liberal Party were present, and these left the room before the voting. The 26 Stratist deputies voted for the Government under certain reserves, whilst the 13 Ministers abstained.

In the course of his speech, M. Gounaris gave a detailed account of the recent operations, and outlined the military situation, which, he said, was very satisfactory. He went on to say that the object of his mission to the Great Powers was to demonstrate the justness of the Greek cause. He thought that a verbal interview with the Prime Ministers of the Allies would greatly facilitate the clearing up of differences existing between them and Greece, and he would be able to point out the future policy of this country with regard to Asia Minor, and repudiate the false *communiqués* on the military situation issued by the Government of Angora. Before proceeding on his mission, however, M. Gounaris thought it would be necessary for him to have the full confidence of the House.

The Prime Minister's speech was received with prolonged cheers from his supporters, and the vote of confidence was then taken with the result stated above.

**The Prime Minister's Departure.**

M. Demetrius Gounaris and the Minister for Foreign Affairs, M. Baltazzi, accompanied by General Stratigos and Admiral Malikopoulos, who will act as technical advisers, left Athens for Western Europe on Sunday afternoon. The Greek delegation is now in Paris, and M. Gounaris has probably been already in touch with M. Briand. During his stay in the French capital the Greek Premier will interview many notable French politicians.

Prior to his departure M. Gounaris stated to the reporters that what he had said at the meeting of the National Assembly was what the people should know. You may, however, inform your readers, he added, that I have great hopes of seeing the rights of Greece recognised by the Great Powers, and that the Greek people will obtain satisfaction for all the sacrifices it has made.

## TURKEY.

*Constantinople, October 23.*

**The Franco-Turkish Convention.**

Although it was not without considerable difficulty that the French envoy to Angora, M. Franklin Bouillon, succeeded, after spending three weeks over the final haggle, in persuading the Angora Government to sign and ratify a peace treaty, the event is one of the most hopeful signs that has appeared upon the Near Eastern horizon for some time. It yet remains to be seen how the Angora Government will fulfil its obligations; but in any case the bare fact that it has entered into an agreement with one of the so-called 'Capitalist and Imperialist Governments of the West' can hardly be a source of undiluted pleasure in Moscow. For the Franco-Kemalist Convention is no mere Trade Agreement, but a very definite political and economic treaty. Moscow will doubtless remember that 'the wise man is senseless of the bob,' and will send congratulatory messages to Angora with regard to triumphant vindication of the rights of the Turkish proletariat (!), and Angora, with that exquisite politeness characteristic of the Turk, will duly give thanks for the congratulations; but these amenities will deceive no one. It is too early yet, of course, to judge how far the conclusion of the convention indicates a definite decision on the part of the Angora Government in favour of the so-called *Gharb politika*, or Western policy, but the circumstance is certainly a blow to the exponents of the so-called *Shark politika*, or Eastern policy, which involved a strong forward policy throughout the East in co-operation with the Bolshevists against the 'tyrannical domination of Western Imperialist and Capitalist Powers.'

Little is known regarding the actual clauses of the Agreement; but they are known to concern frontiers, economic concessions, and the delivery of war material. The French are said to have agreed to a frontier line running north of Alexandretta and leaving Marash and Aintab to Turkey. It is not known whether the Angora Government has agreed to grant the French a special sphere of economic influence in any shape or form. On the one hand Mustapha Kemal announced in the Great National Assembly that the Agreement was in harmony with the conditions of the National Pact, whilst the French authorities claim that it is in harmony with the Tripartite Agreement, which means that either the National Pact or the Tripartite Agreement—or both—has been considerably stretched to meet the situation. The French have also agreed to grant the Turks certain facilities in order that they may make use of Alexandretta for trade and transport purposes. Finally, the French have agreed to deliver to the Angora Government a certain quantity of military material used by the French forces in Cilicia. One may ask what advantage the French are obtaining in comparison with the obvious advantages to the Turks, but this question can only be answered when the complete details of the economic clauses of the agreement are known. There is no reason to suppose that the French have failed to secure a *quid pro quo*.

**The Release of British Prisoners.**

Although the French have been the first of the Allies to arrange a squaring of accounts with the Turks—even though it may be only provisional—the British Government has also some grounds for satisfaction in that at last the exchange of prisoners has been definitely arranged. In one week from to-day, if all goes well, the Turkish prisoners from Malta will disembark at Ineboli, and the British prisoners will embark in the same ship. There is also some satisfaction in the circumstance of a more moderate tone in the Anatolian press in regard to the British. This can only be the result of orders from Angora, and although undue optimism must be avoided, there really seems to be a break in the heavy clouds that have for so long darkened the eastern horizon. General Franks, who is in charge of the British side of the proceedings, has already made the acquaintance of the Nationalists at Ismidt, and it is probable that the favourable impression then made on both sides may be strengthened at Ineboli, thus helping to pave the way to a deeper and more far-reaching understanding than the exchange of prisoners agreement.

**The War in Anatolia.**

Since the abortive attempt to drive back the right flank of the Greek army and recapture Afion Kara Hissar, the Nationalist army has ceased to be aggressive, and as the Greeks have also contended themselves with defensive tactics, the war seems to have reached once again the old stalemate position. There is still a good deal of talk about negotiations between the Greeks and the Turks, but it is difficult to understand how, even yet, an acceptable basis for negotiations can be found. Even admitting that the National Pact may have been stretched to meet the French, it is certain that Angora will not weaken with regard to Smyrna, and will certainly have a good deal to say about Thrace. Dare the Government of Constantine yield so far as to meet the Turkish demands for an unconditional withdrawal from Anatolia? Leaving rumour and 'officieuse' information on one side, there is nothing to indicate any such intention on the part of the Hellenic Government. On the contrary, the recent pronouncements of M. Gounaris, if they mean anything at all, mean that the Greeks intend to make full use of the territorial advantages they have gained at the cost of such heavy sacrifices. If a winter campaign is to be avoided, it would seem as

Digitized by Google

if intervention will be the only way to bring about that much-to-be-desired end.

## ASIA MINOR.

*Smyrna, October* 11.

**An Unfortunate Incident.**

Signor San Severino, Italian Vice-Consul, was arrested by the Greek Police on his landing in Smyrna from the Italian warship Agordat. In spite of his vehement protest, he was marched to the Police Station and detained there until a superior officer of the Gendarmerie came along and ordered his prompt release. M. Sterghiades, Greek High Commissioner, immediately called on the Italian Consul-General and apologised to him and to his Vice-Consul for the unfortunate mistake, and announced that the policemen responsible for the "incident" had been punished.

*Smyrna, October* 20.

The representatives in Smyrna of the respective High Commissioners in Constantinople have addressed a *Note Verbale* to M. Sterghiades, Greek High Commissioner and Administrator of the Greek Asia Minor Zone, protesting against the measures adopted by the Greek military authorities to prevent the large grain crop being carried to Smyrna by the British and French railways.

**Naval Movements.**

H.M.S. Tumult arrived in Smyrna to replace H.M.S. Tuscan, which has taken Sir Harry Lamb, Representative of the British High Commissioner, to Mitylene.

## CYPRUS.

*Nicosia, October* 4.

**An All Greek Meeting.**

The ill-advised decision to hold a general meeting to decide yet again upon a "policy," is to be carried into effect in spite of many symptoms of disapproval. The Archbishop is issuing a circular calling upon the people in all districts to appoint and send representatives for October 10, the day fixed. Nothing could be more inopportune, especially at a season when villages in many parts of the island are very busy over the vintage, olive gathering, and other agricultural work. A visit to the capital may be pleasing to some. Little else is to be gained by listening to vain repetitions over the flogging of a dead horse. The meeting may be called Pan-Hellenic in Greek, but not in English, as this would imply that Cypriots are Hellenic subjects; whereas, after having been Ottoman, they are now British subjects.

**Eulogy of Great Britain.**

It is not often that the Greek papers have a good word for the island Government, and it is seldom that they express much gratitude for benefits received under British rule, But in a recent leading article the Nicosia paper *Phone tes Kyprou*, under the heading "The moral victory of England," speaks in glowing terms of the part which Britain has taken under her distinguished Premier in the Allied Councils. This constitutes her real glory, one far surpassing that which has been gained through the victories of her fleets and armies. It is due to her defence of the right, her protection of weaker races, and the deliverance of those who suffer from tyranny. After comparing the policy and sentiments which have guided Germany with those of Britain, the paper states that respect for England inspires all the peoples who have come under her protection, and especially the Greek people, who entertain the deepest esteem and admiration for Mr. Lloyd George, whose name every Greek extols as equal to, and even higher than, that of Gladstone, Byron, and other famous phil-Hellenes. "Happy is the country that has such an interpreter of its sentiments. It is this which constitutes the irresistible might of England. This is the true victory which entitles a nation to happiness, to security, and the moral leadership of the world." The article does not, of course, omit to point out how great the debt of gratitude would be were the protection enjoyed by Cyprus exchanged for freedom and union with Greece.

**General News.**

The Legislative Council will be dissolved on or about October 15. The troops, i.e. the one company which forms the garrison of Cyprus, on leaving Troödos will be quartered at the Polemidia Camp, near Limassol. The Camp at Famagusta is given up. The Armenian refugees have all left the island. The Russians, about 700, are still here. The vintage is about to begin, and grapes are being gathered in most of the wine-making areas. The yield is expected to be moderate. Good prices are still being obtained for last year's wines, up to 70s. the load (of 128 okes) for red wines.

M. M. Nicolaides, one of the leading members of the Larnaca community, has spoken and written as an opponent of the puerile policy of Greek members upon non-attendance in the Legislative Council. The High Commissioner has paid short visits to Limassol and Larnaca. The French Consul, M. du Pierrier de Larsan, will probably vacate his office in Cyprus shortly. There have been some forest fires, the worst being not far from the Kykkou Monastery, in the Great Troodos range, where some thousands of pines have been destroyed.

Some attention is being drawn to the relation of crime to drink, and many are in favour of a reduction of licences to sell intoxicating liquors in the towns. There are certainly more than enough of these. But murders are chiefly committed in Zurah districts, and those who want wine and spirits will always have the means of procuring them. Licences are granted in the autumn and spring, application being considered by the "Courts of Administration" (*Meglis Idare*), mixed bodies of official and elected native members, subject to the approval of the District Commissioners.

The Greek Archbishop's mother has died, at the age of 95. His Beatitude is building at his own expense a school at the village of his birth.

The Chief Inspector of Police, Mr. S. Televantou is taking seven men of the force to Alexandria to be trained in the repairing of arms at the British workshops there.

Merchants are now paying 19s. a kantar for carobs in many parts of the island. It would seem, therefore, that the recent protests regarding the low prices paid to peasant manufacturers have had some effect.

## THE SERBS AND ALBANIA.

According to a telegram received in this country from the Tirana Government Serbian troops in considerable numbers are continuing their offensive against the Albanians. There has been fierce fighting with severe losses on both sides. The Serbians are reported to be approaching Lourja, a position of gr-at strategic importance; and they are credited with the intention of trying to encircle the whole of Northern Albania.

SCHOOL OF ORIENTAL STUDIES.

# CORRESPONDENCE.

## THE PONTUS EXECUTIONS.

*To the Editor of "The Near East."*

Sir,—With reference to your editorial note on the Pontus Executions, which appeared in your issue of the 13th inst., may I say that it was a very unhappy paragraph, in no way doing justice to THE NEAR EAST and that its only attenuating remark *i.e.* that it was "not written in defence of Mustapha Kemal's action," was far from sufficient?

Are you not of opinion, that no tribunal, whether on earth or beneath it, could ever pronounce a sentence on a mere treasonable "desire" expressed some two years before, and without evident outward tokens of that desire having actually been in existence in the immediate past?

Or is one to be so naive as to imagine that there could possibly exist hundreds of Greeks—for the number of persons executed has long since exceeded that given in your note—who in spite of being aware of what was in store for them, were so foolish as to continue in their "treasonable" attitude towards the Kemalists? Moreover, if I do not mistake, no court, not even that Kemalist mockery of justice, the so-called Tribunal of Independence, ever tried the children and wives of those notables before condemning them to be burnt alive in their churches.

Or perhaps is one to accept, without a word of protest (and I see none in your note in question), the mentality and point of view of the Kemalists as one accepts the mentality and point of view of cannibals, who know no better?

The Pontus Executions needed no explanation. Their simple and unconditional condemnation by a civilized and Christian conscience was all that was necessary, in order that it might not be spoken of others also, what was said of the Germans, when the latter remained passive and criminal spectators of the Armenian massacres.

I am, etc.,
F. P. Floridis.

Constantinople, October 20.

## "BEDOUIN."

*To the Editor of "The Near East."*

Sir,—I have read the letters of Dr. Cook and Mr. Séfi with much interest, and with all the respect due to the writers' scholarshup; but I still remain quite unconvinced that the use of 'Bedouin' as a singular, or of 'Bedouins' as a plural, is desirable, or even permissible in English. Indeed, both Dr. Cook's quotation from Professor Bevan and Mr. Séfi's letter seem to me evidence in the exactly opposite direction. Professor Bevan states plainly that 'in modern times the plural of *badawi* seems to be *bidwan*;' and Mr. Séfi says that the Arabic singular *badawi* makes its plural *badawiyoun* in the nominative case, and *badawiyin* in the accusative and genitive, colloquially shortened into *badawin*. Now, it will be observed that both these writers agree in putting the "n" only in the plural form; and if we make allowances for the difficulty of hitting off a correct rendering of the vowel sounds in 'modern' or 'colloquial" Arabic, it seems to me that 'Bedouin' is not very far from the word as spoken by the Arabs. At any rate, it is certainly a great deal nearer to it than 'Bedouins;' and why we should follow the French in this error, as in so many others, I quite fail to see. I submit respectfully that the English practice here is very much the better, and that 'Bedouins' is as utterly wrong in fact as it is unpleasant to the ear and eye. And after all, Colonel Tennant's book is written in English, and therefore French pratice has no bearing on the point at issue.

May I again direct attention to Sir Richard Burton's note on this subject (quoted in your issue of October 20, p. 483,? There are, of course, considerable differences between the Arabic of different regions and countries; e.g. between that of Syria and that of Egypt; but I take it that in his famous 'Pilgrimage,' Sir Richard was referring to the Arabic of Arabia, and we may surely conclude that the weighed up the *pros* and *cons* of the case before committing himself to the regular use of 'Bedouin' as the plural. His knowledge of the colloquial Arabic at any rate can hardly be called in question.

I should like, with your permission, to thank both your correspondents for their very interesting letters, and to express the hope that some of your readers in Arabic-speaking lands may give us the benefit of their views on the subject.

I am, etc.,
Your Reviewer.

October 28.

## LORD CHELMSFORD ON INDIA.

Speaking in the House of Lords on October 26, on the occasion of a debate on the situation in India, Viscount Chelmsford said that it was only six months since he gave up the responsibility for the government of India. He did not disclaim any responsibility for the acts which he did during his tenure of office. He should not have alluded to any personal matter if it had not been that Lord Sydenham and Lord Ampthill asserted quite plainly that he had not supported the officers in the Punjab rising. He had endeavoured ever since that rising to abstain, though at the risk of misunderstanding, from utterances on the question, because he did not wish to increase the contentions that had arisen over that unfortunate occurrence. The Punjab rising was a very serious one because of the virile and martial character of the men of the Punjab. Action had to be taken, and had to be taken summarily and promptly. He assured Sir Michael O'Dwyer, the Governor-General of the Punjab, and his officers that they would receive unwavering support in any action that they found it necessary to take. The rising was put down. This was set out in the dispatches. They praised Sir Michael O'Dwyer for his conduct during that time, and they praised the officers generally and the military who took action under those officers. In certain cases they found it necessary to express disapproval of methods which had been adopted and which they said were injudicious and improper. So far and so far alone could it be said that full support was not given to our officers in the Punjab.

The dominating factor in the present situation in India was the race and colour issue. There was a revolt of the coloured races going on all over the world against the ascendancy of the white races. But though it was not merely an Indian problem, it met them in almost every Indian question which came up. Two consequences had flowed from this. In the past, we governed India on the basis of the acknowledged superiority of the British race. That superiority was now challenged, and, in surveying the situation, they could not ignore that the challenge had been made. The colour issue had become a unifying force in India, and through all the diversity of creeds and races it was creating union.

The second large issue was that of the constitutional reforms which were identified with the names of the Secretary of State and himself. Those who were against the policy of those reforms would say: "All the trouble is due to your policy." He would reply: "But for the policy, the whole of India would be against you, and you would not have a friend at all."

It was sometimes said: "You have based your policy on the conciliation of the politically-minded class, an insignificant fraction of the population, and not the true leaders of the people." But was there any country in the world where, in matters of government, they could ignore the politically-minded class and where that politically-minded class was not merely a fraction of the population? It was the politically-minded that demanded and pressed for reform and had influence with the rest of the population, and, even in India, they could not under-estimate the influence of this class. In his policy he had felt it imperative that the new Constitution should function, that they must win to their side the co-operation of the constitutional party, and that, in any action they might have to take, they should have secured the support of the constitutional party. He knew that they might have an uncomfortable time, but he felt that the gain would be greater if the policy of non-cooperation were rejected by the Indians themselves, endowed for the first time with responsibility. In other words, he took a long and not a short view of the situation.

It had been once or twice suggested that the Secretary of State for India was a sinister figure in connection with the policy in India. As regards the question of the policy on non-cooperation, the Secretary of State, from beginning to end, had had no part or lot in its except that he was kept fully informed of what the Government were doing and of the policy that they were pursuing The educated classes had refused to join in the Gandhi movement, and each day they saw fresh dissensions from it. The Moplah rising was one of the greatest blows which had occurred to Mr. Gandhi, because it had undoubtedly alienated from him an enormous amount of public support.

## A FETE DAY IN YUGOSLAVIA.

*Liubliana, October 3.*

On Sunday, October 2, the little town of Radovlyice, some two hours by slow train up the Save valley beyond Liubliana, was the scene of an interesting double celebration. There was the opening of the new *Sokolski Dom* (Athletic Club House) and the unveiling of the memorial tablet set up over the last resting-place of Orlip, a young *sokol*, native of Radovlyice, who was shot by the Austrians for political reasons in 1918. The Sokolski Dom is a very plain red brick affair, as yet somewhat unfinished in appearance from without, but remarkable for the effort and self-denial expended in its erection. During the war all Sokol activity had been suppressed owing to its nationalist character; but as soon as the Austrian rule had come to an end, the members of the Radovlyice Sokol began to build their club-house. Because of the scarcity of labour and the high prices, they set to and did it with their own hands, men and women alike. Building material was given by those who could afford it, and the peasants of the vicinity did the carting free of charge, out of regard for the Sokol Societies.

Before the Liberation the *sokols* owed their influence to their championship of the national sentiment; now they are popular as the centres of patriotic activity, regardless of class, and outside all parties in a land where party politics are carried to extremes. The weather was perfect, and the occasion had attracted a large crowd of visitors from Liubliana and elsewhere, *Sokol* delegates from all parts of the Kingdom, conspicuous in their red Garibaldi shirts and buff uniforms with the black cap and characteristic falcon's feather, ex-volunteers and peasants. One peasant, a striking figure in his national costume, made a speech in which he mentioned that he had just visited Serbia as member of a Slovene peasants' delegation, and that he had been deeply impressed by the similarity between the Serbian peasant and the Slovene, and had brought back with him the consciousness that they were indeed both of one nation.

After the opening ceremony there was an excellent gymnastic display.

Under the mellow October sun, in its magnificent setting—the grey and forbidding Karawanken on the one hand, and on the other a semi-circle of wooded hills all glorious in their autumn tints, with the tremendous pile of the Kamnishke (Stone) Alps, topped by the great Triglav rising heavenward in the background and shutting off the horizon towards the West, the scene was singularly beautiful and impressive, especially towards evening. Radovlyice itself is an old town, with a handsome Renaissance chateau, formerly the property of the princes of Turn and Taxis, a fine Gothic church, and no end of pretty parts and picturesque houses.

F.S.C.

A new weekly publication, entitled "Yugoslavia," is announce from Belgrade. It is to be published in English and French.

It is reported from Stockholm that negotiations are at present going on between Sweden and Persia regarding the employment of a number of Swedish officers in the Persian Gendarmerie.

## THE CARAVANSERAI

*Think, in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day.*
*How Sultan after Sultan with his Pomp*
*Abode his Hour or two and went his way.*

OMAR KHAYYAM—

The scarcity of lodgings in Zagreb is so acute that ingenious bachelors have invented a new way of finding accommodation. The newspapers are full of advertisements of most eligible (according to their own description) young men, who are always "intelligent, sympathetic and solid," who are desirous of making the acquaintance of a young woman, widow or *divorcée* with a view to matrimony. The lady must be of good appearance, not too old, and with an "irreproachable" past, but the sting lies in the tail: the indispensable condition is that she must be in possession of a furnished flat or lodging! What the "solid" young man wants is a flat. He will put up with a wife provided she can oblige him in this respect.

The Oriental is very like a child in many respects, and in none more so than in his unconscious imitating of other people's tricks of intonation and turns of speech. And, of course, he possesses a parrot-like power of picking up and retaining in his memory—for use on inappropriate occasions—words which would be very much better left unsaid. In regard to them his memory is indeed 'wax to receive, and marble to retain;' and his tongue seems to twist itself round them with a natural affection, so that he can pronounce them far better than he pronounces words that should be like them in sound though different in meaning. The word 'blank' for example, he usually converts into 'per-lank,' but a certain other word beginning with the same two letters gives him no trouble at all—he hears it once, and thereafter has it pat. I remember my surprise, when, as a young traveller, I stepped out of the station at a small Egyptian town, to be greeted by a quite respectable-looking young native with the remark. "This way to the b — y bazaar, Sir,"—Only, of course he used the hard-worked word itself, and I must admit that it sounded quaint.

My thoughts have been set running on this native use of the Western corruption of 'By our Lady,' by being reminded lately of a little tale that was told me very many years ago in Baghdad. The teller was one of the British community, who is, I believe, still in the City of the Khalifs; and he told it merely as an illustration of the liking of the native Christians and Jews, in those days, for airing their knowledge of foreign languages. He was, he said, passing a group of native Christian young men, when one of them observed to another: "The strange thing is that though we keep on writing to them we *nevah* get any b—y answer!" And, by Jove, I should like to bet that the linguist pronounced the "cuss word" perfectly, whatever the case may have been with regard to the others!

## MUSICAL NOTES.

**The Flonzaley Quartet.**

It is superfluous now to describe the virtues of the Flonzaley Quartet, the most wonderful combination in the world. At the Wigmore Hall on October 21, they played Haydn's Quartet in D major (Op. 64. No. 5) and Beethoven's Quartet in D Major (Op. 18. No. 3) with the finest unanimity, tone, and imagination conceivable. Their balance of tone is literally glorious, with never a roughness or a false prominence. Quite simply, they are unique. The way in which they took the finale of the Haydn Quartet was comparable only to the way in which Busoni does Weber's "Perpetuo Moto." This concert was notable also for the first performance in England on Enesco's Quartet in E flat major. This Roumanian composer is not well-known in England, but unfortunately this quartet of his, which is dedicated to the Quartet who played it, will not promote a search into the reaons for his fame in other countries. For it is intolerably prolix and contains little genuine matter. It is well laid out for the instruments, but, apart from the middle section of the first movement (allegro moderato), it is dull in the extreme. Its good reception was due to the way in which it was played, not to the work itself.

**Eugene Goossens.**

Eugene Goossens is a great conductor. Whatever doubts one may have had of his ability to play music other than that written in the modern idiom were for ever dispelled at the superb orchestral concert which he gave at the Queen's Hall on October 27. The orchestra and programme were of the choicest, and the playing was indeed glorious. A finer presentation than Goossens secured of the encored performance of Bach's C minor fugue orchestrated by Elgar is inconceivable. This marvellously constructed work was a joy all the way through, producing in its gorgeous climax a thrill such as comes only from the highest interpretation of music. Alone this fugue was enough to mark the class of Goossens, but he turned from it to the delicately shimmering "Garden of Fand" of Arnold Bax with the easy mastery of the universal musician. Bax's is a beautiful work, overflowing with individual and poetic ideas, but it is a little long. The "Pastorale d'Eté" of the Swiss composer, Arthur Honnegger, was surprisingly refreshing and natural. It is delightfully quiet, with even melodies and smooth harmonies. Then came a great work by Gustav Holst, his suite called "Beni Mora." This suite, in three movements, is a record of impressions gained in a holiday spent in Algeria. It is no common imitation of the atmosphere of the East, but it genuinely evokes the monotonous and illimitable colours of Northern Africa. The third movement perhaps is the most interesting: it begins (*adagio*) with the vague spaciousness of the Sahara outside Biskra, upon entry into which town a highly-coloured dance of the "Ouled Nails" is heard, and then, as the traveller turns the corner of the street in which the dancing girls were, he comes again upon the nocturnal spacious silence. It is an exquisite picture, and I regretted only the fact that the transition to the end, certainly very effectively done, was so soon made. The concert ended with Brahms' First Symphony, which, it seemed, had not been so thoroughly rehearsed as the other works. But one's appetite had been whetted by the sharp edge of the newer foods, and this sound, wholesome symphony tasted a little stale after them. No one who wishes to hear fine orchestral playing and the more interesting of the newer works should miss the remaining Goossens concerts, which are to be given at the Queen's Hall on November 9 and 23, and December 12.

**The "Chelsea Pops."**

The second of the Philharmonic String Quartet's ten chamber concerts at the Chelsea Town Hall was given on October 25. This quartet's virtuosity could not have been better exemplified than in the whimsical and very intricate "Phantasy Quartet" of Goossens; for its rhythmical ingenuity and difficult interlacing of wisps of melody were fitted together with superb craftsmanship. It was a performance excellent in every way. But the work which inevitably gave most lasting satisfaction was Mozart's "Quintet in G Minor." The Quintet is a perfect work, alike in invention, joinery and balance. There was perhaps a slight tendency in the first violin to be too prominent in the first two movements, but in the last exquisite two (*adagio* and *allegro*) the players seemed to subdue themselves to the sheer beauty of the music, and poured out its bubbling freshness with a most charming grace. This indeed belonged to the music of Paradise. The next concert is on November 22.

**A Young Violinist.**

Although M. Toscha Spivakovsky looks a mere boy, his abilities, both technical and interpretative, are those of an advanced artist. He showed, at his recital at the Wigmore Hall, on October 27, an individuality and a freedom from affectation that were remarkable for a violinist of his age. I did not hear him in great music, it is true, but his pure, clean playing of such things as Chopin's "Nocturne in D flat," Saint-Saen's "Rondo Cappricioso," and his technical maseery of "Campanella," betokened a big future for him.

**English Pianists.**

Mr. Herbert Fryer's second of his series of four recitals, given at the Æolian Hall on October 26, rather confirmed than belied one's previous doubts concerning his pianoforte-playing. This recital was called one of "modern composers," by which was meant an English group of Herbert Fryer, Balfour Gardiner, and Sydney Rosenbloom, a French group of Debussy and Ravel, and a mixed one of Rachmaninoff, Liszt, Moszkovski, and Dohnanyi! Mr. Fryer's was average playing, with little trace of imagination or even of insight. His own variations on a theme of Purcell were insignificant, and the other English composers seemed to be performed in the full and true knowledge that they were quite unrepresentative. In Debussy his deficiencies in the matter of overtones were one of his least omissions; there was no colour, and little variety even, in his touch. In short, though perfectly honest and consistently sincere, his playing was humdrum.

It is to a very different school from Mr. Fryer's that Miss Elizabeth Wray, whose recital was at the Wigmore Hall on October 26, belongs. She has definite ideas of her own, sometimes good and sometimes bad. Her technique is sufficiently advanced to make her various meanings clear; these, though often interesting, are scarcely profound. The best thing I heard her in was Bridge's "Fire-Flies;" her beautifully light touch and a justly delicate perception produced an excellent presentation. It is probably where the problems are chiefly technical that she best succeeds. The worst thing I heard her in was Schumann's "Scenes of Childhood;" here the romantic simplicity of the music found her ill at ease, and the different characteristics of the varying scenes were poorly portrayed. Her Beethoven (Sonata in D minor, Op. 31) had little dignity or strength; this seemed rather to prove that the greater the work the farther away was she from its realization. However, she has undoubted promise, though at present her technique is in advance of her musical intelligence.

**Mr. Dawson Freer.**

It must have been gratifying to Mr. Dawson Freer to find the Æolian Hall on October 24 filled for his song recital, for there are many better singers than he who could not do it. Moreover, the secret of his popularity is undiscoverable. I heard all his three groups of songs, and in not one of them was there evidence of distinctive ability. For example, Mozart's "Non piu andrai" needs, perhaps first of all, flexibility; Butterworth's "Is my team ploughing" needs an unstrained sense of ghostly spirituality; and the traditional Hungarian "O'er the Forest raincloudes lower" needs a rigid exclusion of sentimentality—all of which necessities were sadly absent. Mr. Freer has certain merits: he has a sense of humour (i.e. Parry's "Laird of Lockpen") and an obvious disinclination to sing in languages other than his own. But in spite of these things without the excellent assistance of his accompanist, Mr. O'Connor Morris, I don't know where he would have been.

ANDANTE.

---

The following appointments in the Royal Air Force will take place early in 1922:—

To the command of the Royal Air Force in Egypt:—

Air Vice Marshal Sir E. L. Ellington, *vice* Air Vice Marshal Sir Geoffrey Salmond.

To be Director General of Supply and Research:—

Air Vice Marshal Sir Geoffrey Salmond, *vice* Air Vice Marshal Sir E. L. Ellington.

As from February 1, 1922, the Royal Air Force command, now known as the Middle East Command, and comprising the Royal Air Force in Egypt, Palestine, Aden, and Irak, will be divided into separate commands, one consisting of the Royal Air Force in Egypt, Palestine, and Aden under the command of the Air Officer commanding Egypt, and the other consisting of the Royal Air Force in Irak under the command of the Air Officer and administered direct by the Air Ministry, instead of as at present by the Air officer commanding the Middle East, which title from thenceforth will not be used.

## THE UPBUILDING OF A RACE.

**"KASHMIR IN SUNLIGHT AND SHADOW," By C. E. Tyndale-Biscoe, M. A. (London, Seeley, Service and Co., Ltd., 12s. 6d. net)**

Kashmir lives in legend as a land of lakes, rivers, and secluded valleys, inhabited by deft artificers and beautiful women. The climate of its highlands approaches perfection, its soil is prodigiously fertile, and until recent years it was a paradise for sportsmen. Here the Mughal Emperors found relief from India's, sun-scorched plains; but, on the disappearance of their régime a land so highly favoured by Nature was coveted by powerful neighbours. In 1750 it fell a prey to the Afghans, who made forced converts to Islam of its Hindu population. Fifty years later they were ousted by the Sikhs; but the Kashmiris gained nothing by the change of masters. In 1846 the Sikhs succumbed to the might of Great Britain. The East India Company might well have colonized the uplands of Kashmir with European settlers. Instead of adopting a statesmanlike policy, they sold Kashmir to Gulab Singh, who ruled the adjacent province of Jammu, for a comparative pittance of £750,000, which was paid in part by jewellery torn from the luckless population. Gulab Singh was a Rajput, and therefore subjected to priestly influence. He established a theocracy, decreed death as the penalty for the slaughter of cows, and filled every public office with foreign Brahmans. In 1867 Lieutenant Robert Thorpe, who visited Kashmir for purposes of sport, started a press campaign in favour of the downtrodden Mohammedans. Although he met a martyr's death by poison, his disclosures stirred the slumbering conscience of England. Under pressure from the Indian Government, the great Missionary Societies of London were permitted to establish hospitals, dispensaries, and schools in Kashmir. A series of able Political Agents enforced many useful reforms; and under its present ruler, Kashmir is in many respects a model Native State.

Mr. Tyndale-Briscoe came out in 1891 as an assistant to the Principal of a Mission school. He found that the Kashmiris had all the evil traits which are generated by ages of cruel oppression; tempered by a keen sense of humour and the ability to respond to sympathetic treatment. Being a "Muscular Christian," he determined to develop the instinct of team-work which is a fundamental fact in human nature. After a prolonged struggle with deeply-ingrained prejudices, he succeeded in placing manly games on a sound basis. The example of his scholars playing football with zest and respecting the canons of fairplay has been taken to heart by the Kashmiris. Mr. Tyndale-Briscoe's naive, discursive, but wholly charming book records the gradual upbuilding of a downtrodden and degraded race. The principles on which he worked might well be adopted in a wider field. "It seems strange," he writes—

that the authorities have not found a more suitable education for Indians. It has created a class which continues to despise manual labour, and panders to their desire for Government employment, in which there are not enough billets to satisfy them Therefore the country is crowded with half-educated youths, who cause endless trouble to the Government which has given them their education at schools and colleges practically for nothing. Well, that same spirit which I found in the boys of Kashmir and their parents still remains; so, until I can find something better, I am going in hard for "social service" to teach the youth of this country their duties towards their fellow citizens.

F.H.S.

## THE BLACK MOUNTAIN.

**"OFF THE MAP. THE SUPPRESSION OF MONTENEGRO.": By Alex Devine. (London. Chapman and Hall, Ltd; 1s. net.)**

The author of this pamphlet is well-known as a champion of Montenegro, and in "Off the Map" he has summarised the series of events which ended in the absorption of that country by Serbia. For many people, for practically all acquainted with the Montenegro of two decades or more ago, the elimination of the small country has come as a shock to their sense of the fitness of things. At the time of the marriage of King Nicolas's eldest son, Montenegro was still a mediaeval country; the Prince—he had not yet assumed the title of King—was veritably the father of his people, and often dispensed justice in the approved patriarchial style. Impromptu sports, held by the Cetigne garrison, recalled the Homeric games. Montenegro with its fine traditions and delightful cult of the simple life was one of Europe's most attractive spots. Changes, of course, began to creep in; but up to the outbreak of the war anyone entering Montenegro had the sense of having left modern Europe behind. To-day, it is to be feared, the country is a stranger to the old world peace it once knew. Many of the people, no doubt, have their rifles still by their side or up to their shoulder, as in the old days, but instead of pointing in one direction—across the frontier into Turkey, as it then was—they are apt to be levelled in any direction, against fellow Slavs on Montenegrin soil. For Montenegro's sake we can but hope that the absorption by Serbia, in spite of the violence by which it was enforced, if it has to stand, will ultimately prove as successful as the Union of England and Scotland. The story of the injustice done, so pointedly told in this pamphlet, may serve both as a tribute to a gallant people and as an incentive to the new Yugoslav State to see that as far as possible all bitterness is removed. Mr. Devine has rounded off his labours on behalf of Montenegro with a telling indictment; which will be invaluable to the future historian seeking for light upon a question that has been far from clear to contemporary observers.

## OFFICIAL AND UNOFFICIAL EGYPT.

**"THE LEISURE OF AN EGYPTIAN OFFICIAL".' By the late Lord Edward Cecil, K.C.M.G., D.S.O. (London: Hodder and Stoughton. 15s. net).**

Egyptian bookcases are none too full of works of humour in the English language, but here we have a notable contribution, containing, we believe, only one reference to the Pyramids, and not one to the Sphinx or

SIR VALENTINE CHIROL'S
NEW BOOK

**India Old and New.**

By Sir VALENTINE CHIROL, Author of "Indian Unrest," "The Egyptian Problem," etc. 8vo. 10s. net.

*.*—Sir Valentine Chirol deals in this volume with the present situation in India as another and crucial phase of the long struggle between the ancient but static civilisation of the country and the dynamic forces of Western civilisation with which British rule first brought her into contact. It is a most timely and instructive book on current Indian affairs.

SIR RABINDRANATH TAGORE.

**The Fugitive. Poems.**

By Sir RABINDRANATH TAGORE, Author of "Gitanjali," &c. Crown 8vo. 7s. 6d. net.

*Daily Mail*:—"'The Fugitive' is likely to be as warmly welcomed and as lovingly treasured as any. These rhythms are almost all of them shot through with imaginative beauty; they conjure up haunting images; they enhance the mystery and splendour of life."

MACMILLAN & Co., Ltd., LONDON, W.C.

Digitized by Google

the bazaars, while local colour is almost wholly mental, with the single exception of Ahmed Bey's sartorial get-up as acting-Governor of Port Said. We know Ahmed Bey; at least, if we do not, we know his first and second cousins once removed. He is not exactly an orthodox Moslem, and he is quite convinced that all good Anglican deans are married and always ready to "split a bottle." We also know all the Pashas in this funny book, although we are solemnly assured that they are purely fictitious characters. We know very well those ancient gilt arm-chairs resting insecurely on the worm-eaten plank floors of the decrepit Ministries of the Interior or of Finance—chairs that expire suddenly of old age every now and then, and deposit the bulk of the Minister of Public Works or of his colleague of Public Instruction upon the floor. We know the official "express train" with its "venerable saloon of vast proportions which had the peculiar, earthy, musty smell of extreme age. Everything in it was very old—even the fleas only walked about; their hopping days were over."

But to revert to the Pashas. We know, or knew, His Excellency of Public Works and War, "a stolid, fish-like individual," and His Excellency of Justice with the "bilious eye," and His Excellency the President of the Council with his "oleaginous smile." They are all tremendously alive, these Pashas, under an utterly good-humoured caricature. And, outside the Egyptian officialdom, who does not know the Baron Sodinsky, the Austrian Minister—a very skilful diplomat sketched by our very skilful author with the sure pencil of an artist; and Mrs. Fitz, Miss Sandenham, Captain Bentley and "the infant in the Rifle Brigade"? The latter part of the book under the generic title, "Going on Leave," is not in our opinion as racy as the rest, but the sure touch of our author may be seen here in his description of the unchangeable menu well known to all travellers in French dining-cars. "Vermicelli soup; Fish of a peculiar nature which I believe are bred in the engine tanks; small slices of wear-resisting Beef; eight-legged winners of the Chicken Marathon Race; caramel Pudding." Amen!

The book is an edited collection of private letters written by the late Lord Edward Cecil Pasha, who was twice on the staff of the Sudan Reconquest Armies, and in 1905 attached to the Egyptian Ministry of Finance, becoming Financial Adviser in 1912 until his death in 1918. The general impression forced upon us by these clever sketches, especially those directly descriptive of his Egyptian experiences, is that there must be many more than those here published, and that those many more must have proved equally delightful and instructive to Lord Edward's relatives. Even Financial Advisers to the Egyptian Government undress at times, but they have not all had the Adonis-like *psyche* of this son of the late Lord Salisbury. Evidently with all his humour Lord Edward Cecil had some distinct prejudices. His references to Americans in this volume are invariably sarcastic if not hostile, as also those to the French. One essay, that on Lord Kitchener, written after the tragedy of the Hampshire, confesses to something stronger than dislike of Abbas Pasha Hilmi, the last Khedive; while the "pseudo-Nationalists" come in for some withering contempt.

By Alex Devine.

Disclosing for the first time the Truth about Serbian Intrigue in Montenegro and the Tragedy of a Small Nation.

LONDON. CHAPMAN & HALL

## THE ETERNAL PILGRIMAGE.

**"SANTAL." By Ronald Firbank. (London: Grant Richards. 7s. 6d. net).**

The author of this book is already known as a very clever writer, with much ability in line and colour, and in the subject-matter of his latest book he has found admirable scope for the employment of his diverse qualities. "Santal" is a sketch of an episode in an Arab boy's life. Cherif, an orphan with "forlorn, profound eyes that had vision in them," was wont to visit the East angle of the Mosque, where "he was able to forget for a while the difficulties of his existence." Here one day he had a dream. "And in his sleep he fancied himself journeying towards high hills that as he advanced seemed ever to recede, and presently the vision changed and he saw, seated by a pool of clear shining water, an old man, marvellously majestic. A great melancholy was in his face, and in his hands he held a book." As soon as possible Cherif sought from the marabout the explanation of his dream, and on learning that it meant he was to visit Mecca, he determined at once to fulfil his destiny. How he went alone, day after day, across the Sahara; how through desolate, waterless country he wandered until he almost foundered on the other side of Hope—Illusion; and how he finally asserted his Moslem individuality and allowed Resignation to reign in his heart—all these things, recounted with exquisite sensibility, would be spoiled if explained here in detail. For the whole sketch is made with extreme delicacy and sensitiveness. Such parts as the conversation between Cherif's aunt Amoucha and two widows, Embarka and Mabrouka, which is done with the most delightful malice possible, the impression of the thronging Souk, and the description of the wilder-growing country East of Gardaia, are written with an art that is quite unusual in books of this kind; and, what is the worthiest factor of all, through all these decorations there runs the whimsically human philosophy of the author.

That Mr. Firbank knows what he is writing about is obvious apart from the fact that his book was written in Tunis, though he is the sort of imaginative writer who can easily dispense with local information. But for those who insist on detailed accuracy, what he says on minbars, senbel, stenitzias, and the like will cause additional enjoyment. And for another class of reader we may add that his book is beautifully printed.

## MISS DIVER REPRINTED.

**"STRANGE ROADS," By Maud Diver; "THE STRONG HOURS," By Maud Diver. (London: Constable, Westminster Library, 4s. 6d. net).**

These two books by Miss Diver, whose writings are always widely read, really form one story, but were published in consecutive years, 1918 and 1919, owing to paper scarcity, and difficulty of producing a long book at the time. They tell the story of Derek Blount, of Avonleigh, who has been one of Miss Diver's most popular heroes. They are now re-issued by Messrs. Constable in their attractive and inexpensive Westminster Library, which, except in price, does not seem to differ from the usual 7s. 6d. or 8s. 6d. editions of novels.

## BOOKS RECEIVED.

"The Greek Renaissance." By P. N. Ure. (London: Methuen and Co., Ltd. 6s. net.

"The New World of Islam." By Lothrop Stoddard. (London: Chapman and Hall Ltd. 16s. net.)

"Twenty Years in Roumania." By Maude Parkinson. (London: George Allen and Unwin Ltd. 10s. 6d. net.)

"Hellenism and Christianity." By Edwyn Bevan. (London George Allen and Unwin Ltd. 12s. 6d. net.)

The 2nd class Order of the Nile has been conferred upon Mr John Hume, Sub-Governor of the National Bank, Cairo.

It is announced from Sydney that the first volume of Mr. Bean's "History of Australia in the War," was published last week and that it carried the story to the end of the first eight days after the Anzac landing.

November 3 (New Style).
October 21 (Old Style).
Rabia I, 3, 1340 A.H. of the Moslem Calendar.
Marheshwan 2, 5682 of the Jewish Calendar.

Lady Ratan Tata has left York House for India.

The Hon. Lady Lloyd has left London for Bombay.

Prince Ibraham Hilmi, brother of the Sultan of Egypt, has taken up his residence at 12, Connaught-place.

General Sir George Milne and Lady Milne have returned to London from South Africa.

The Earl of Bessborough is expected to return to London in a week from South Africa.

Sir Deva Persad Sarvidhikary left London last week for Marseilles to return to Calcutta.

Monsignor Stanley, Bishop of Emmaus, has arrived in Rome from England.

According to intelligence received in Paris from Tangier, Sir Herbert E. White, British Agent and Consul-General for Morocco, has retired.

It is stated from Cairo, that Judge Carroll Spring, the American diplomatic agent in Egypt, has resigned, and will be replaced by Dr. Howell.

M. Dusan Resetar, Secretary to the Legation of the Kingdom of Serbs, Croats, and Slovenes, left London this week for Rome.

King Alexander II of Yugoslavia left Paris on October 29 for Belgrade, where he arrived, with M. Pashitch, on October 31.

Lieutenant-Colonel Sir T. Cunninghame, Military Attaché at Prague, has been decorated with the Czecho-Slovakian War Cross for services after the war.

Lieutenant-Colonel Sir John Norton-Griffiths, M.P., will return to London early in December from South America.

Mr. and Mrs. C. T. Allen leave England this week to join the P. & O. steamer Naldera at Marseilles *en route* to India.

We are glad to be able to announce that Sir Alexander Mc Robert, who has recently undergone a severe operation, is making favourable progress.

**OUTFITS** FOR EGYPT, INDIA, AND THE FAR EAST

The Official, Business or Sporting traveller going East this Winter will find just what he wants at

**THRESHER & GLENNY**

A century old outfitting experience and records of what others have taken are at your service.

*Write for List "H" mentioning destination and nature of appointment.*

**152 & 153, STRAND, W.C.2.**

The engagement is announced between J. H. Greathead, Public Works Ministry, Cairo, and Sybil, second daughter of Lieutenant-Colonel J. A. Cole, O.B.E., and Mrs. Cole, of Thurlaston House, near Rugby.

Mr. and Mrs. C. Algernon Moreing have returned from a motor tour in Yugoslavia and Austria, and are at 11, Mount-street, Berkeley-square, which is now their permanent London address.

Mr. E. O. Mousley, the New Zealand Secretary on the Secretariat of the British Delegation to the Washington Conference, and author of "The Secrets of a Kuttite," left England last week for the United States.

King Boris, with the Cabinet and Diplomatic Corps, attended the funeral of M. Dimitroff, the recently assassinated Bulgarian War Minister, which took place on October 28.

Captain and Brevet Major C. O. Harvey, 38th King George's Own Central India Horse, has been appointed a Commander of the Order of the British Empire (Civil Division).

Kathleen Viscountess Falmouth, the Hon. Pamela Boscawen, Sir John Campbell, and Sir Robert and Lady Aitken have left for Bombay in the P. and O. steamship Naldera.

The engagement is announced of Captain G. G. Hills, M.C., only son of Colonel George Scott Hills, Indian Staff Corps, and Patricia Mary Grace, only daughter of Mr. and Mrs. C. R. Kenyon, of Ranger Lodge, Glandyfi, Cardiganshire.

The Countess of Cromer will leave England on November 4, to spend the winter with Lady Francis Scott in British East Africa, where she will be joined by the Earl of Cromer from Ceylon in April. Lord and Lady Cromer expect to be abroad until the beginning of next May.

A new departure has been made in missionary work in India by the establishment of an agricultural school at Assam, where the Bishop has purchased about twenty acres of land for the purposes of the school, and is looking forward to great results, both religious and agricultural.

The engagement is announced between Captain Guy Nicholas Vansittart (K.G.O.) Central India Horse, youngest son of Captain R. A. Vansittart, late 7th Dragoon Guards, of 34, Queen's Gate-terrace, and Margaret Helen, elder daughter of Sir Henry and Lady Proctor, of Ware Hill, Great Amwell, Hertfordshire.

The engagement is announced of Captain Christopher Riley, M.C., Coldstream Guards, son of Athelstan Riley, Seigneur de la Trinité, Jersey, and of the late Hon. Mrs. Athelstan Riley, and Betty, eldest daughter of Colonel Hanbury, C.M.G., and Mrs. Lionel Hanbury, of Hitcham House, Burnham, Bucks.

The marriage was celebrated on October 25, at the British Consulate, Cairo, and afterwards at All Saints' Church, by the Rev. Canon Horan, between Arthur James Mansfield, elder son of Dr. James P. Grieves, of Portishead, Somerset, and Margery Adah, elder daughter of the late Captain Arthur C. Woods, Royal Navy, and Mrs. Woods, of 1, Sherard Gardens, Eltham.

Mrs. Fanny S. Copeland, whose name is familiar to readers of "The Near East," has been nominated English lecturer at the University of Liubliana. It will be remembersd that she translated into English S. Tushitch's "The Liberators," and Dr. Voshnyak's "Bulwark Against Germany;" and a new translation by her of Ivo Vajnovitch's "Dubrovnik Trilogy" is expected to be published soon.

A large concourse of Hindu students and their British friends assembled on October 29 at the Shakespeare Hut, Keppel-street, to celebrate Diwalee, or New Year's Day, and the anniversary of the death of Swami Dayananda, the Hindu reformer, from whose teachings has sprung the Arya Somaj, which perpetuates his maxims. The chair was taken by Sir C. Sankaran Nair, who was supported by Sir M. M. Bhownaggree and Sir E. Denison Ross.

## MARRIAGE.

PEATT—NOWILL.—On October 17, 1921, at All Saints, Moda, Constantinople, by Canon F. C. Whitehouse assisted by the Rev. L. Buchanan, D.D. Capt. Ernest S. W. Peatt, O.B.E. R.A.V.C., son of J. W. Peatt, V.S., of March House, Leominster, to Alice Gertrude, daughter of Stephen Nowill, of Constantinople.

## APPOINTMENTS AND PROMOTIONS.

President Harding has appointed Rabbi Joseph Saul Kornfeld, of Ohio, United States Minister to Persia.

General Dange, Belgian Consul at Cairo, will be appointed Minister in the Belgian Legation which is to be re-established there.

Dr. Thesleff, the Finnish Minister at Christiania, has been appointed a member of the League of Nations Commission which is to report on Albania.

The King has been pleased to approve the appointment of Mr. Walter George Salis Schwabe, K.C., to be Chief Justice of the Madras High Court in succession to Sir John Wallis, who is retiring from the Bench.

The Cairo correspondent of the *Morning Post* telegraphs that it is understood that the Egyptian Government has agreed to the appointment of Mr. Jasper Y. Brinton as successor to Mr. Tuck as American representative on the Bench of the Mixed Court of Appeal. The necessary formalities will be completed at the next meeting of the Cabinet—so ending a long drawn out dispute.

## OBITUARY.

The death has occurred of Lord Raglan at the age of sixty-four Sir George Fitz-Roy Henry Somerset, third Baron Raglan, G.B.E., C.B., was the grandson of the Field-Marshal who lost an arm at Waterloo, and who commanded the Army in the Crimea. He joined the Grenadier Guards in 1876. After being orderly officer to Major-General Sir R. Phayre in the second phase of the Afghan War, 1879-80, he was appointed aide-de-camp to Sir James Fergusson, Governor of Bombay, from 1880 to 1883.

## FOREIGN DECORATIONS.

The King has granted to the following officers of the Royal Navy his Majesty's Royal licence and authority to wear Decorations which have been conferred upon them by the King of Roumania in recognition of valuable services rendered by them in connexion with the Mission to Roumania in 1920 :—

Order of the Star of Roumania.

Cross of Commander.—Capt. H. W. Bowring, D.S.O., R.N.

Cross of Chevalier.—Paymaster Lieut. H. P. Chapman, R.N.

The King has been pleased, by Warrants under his Majesty's Royal Sign Manual, to grant permission to wear the undermentioned Decorations, which have been conferred in recognition of valuable services rendered during the War :—

FRANCE.

Legion of Honour.

Cross of Commander.—Sir James Stevenson, Bt. ; Sir E. H. W. Tennyson d'Eyncourt, K.C.B., Director of Naval Construction, Admiralty.

Cross of Officer.—Sir Davison Dalziel, Bt., M.P. ; Sir Charles Stewart-Wilson, K.C.I.E. ; Sir Robert Murray Hyslop, J.P. ; Alfred Howe Collison, C.B.E., M.I.C.E. ; R. S. Gardiner.

BELGIUM.

Order of the Crown.

Insignia of Grand Officer.—W. Behrens.

Cross of Commander.—Sir D. M. Stevenson, Bt., late Lord Provost of Glasgow.

Cross of Officer.—Sir Reginald Blomfield, R.A., Litt.D. ; A. C. Turner, O.B.E. ; E. A. Ebblewhite, J.P. ; G. Empedocles, Director-General of the Commercial Bank of Greece, Athens ; Professor Maurice Alfred Gerothwohl.

Cross of Chevalier.—F. Handley Page, C.B.E. ; G. H. S. Bunning, O.B.E. ; W. M. Greathead, Aliens Officer, Harbour Station, Folkestone ; G. W. T. Omond ; P. J. Poels ; W. Reynolds-Stephens ; L. Tertis ; L. H. G. Walford.

Order of Leopold II.

Cross of Chevalier.—Mr. E. S. Murray, Consul for Belgium at Aden.

ITALY.

Crown of Italy.

Cross of Commander.—Sir Basil Phillott Blackett, K.C.B. ; Sir James Currie, K.B.E., C.M.G. ; Sir Edward Hussey Packe, K.B.E. ; Sir Arthur William Holmes, K.B.E. ; Sir Ernest Hodder-Williams, C.V.O. ; C. Hanbury ; P. C. Sarell, Consul-General at Tunis.

Cross of Officer.—The Rev. B. S. Batty, M.A., O.B.E. ; C. de G. Sells, O.B.E. ; T. Okey, M.A., Professor of Italian, Cambridge University ; E. G. Gardner, Litt.D., Professor of Italian, Manchester University ; W. W. Seton, M.A., D.Lit., University of London.

ROUMANIA.

Order of the Crown of Roumania.

Insignia of Grand Officer.—Sir Edmund Wyldbore Smith.

Cross of Commander.—B. H. Dobson, Indian Civil Service.

Cross of Officer.—A. D. Erskine.

Cross of Chevalier.—C. C. Pyke, O.B.E.

SIAM.

Order of the White Elephant.

Insignia of the Third Class.—A. N. L. Cater, Indian Civil Service.

SERBS, CROATS, AND SLOVENES.

Order of Saint Sava.

Insignia of the Second Class.—Sir Edward Boyle, Bart.

Order of the White Eagle.

Insignia of the Fourth Class.—Capt. W. H. Lainson (while in command of the Transport Danube).

GREECE.

Order of George I.

Cross of Officer.—Capt. C. W. Read (while in command of the Steamship Admiral Cochrane).

## INDIA'S GIFT TO BRIGHTON.

On October 26, Major-General the Maharaja of Patiala unveiled the Indian Memorial Gateway at the Royal Pavilion in Brighton. This gateway has been given by the princes and people of India as a permanent memorial of their gratitude to Brighton for the hospitality and kindness shown to wounded Indian soldiers during the earlier part of the Great War. It was designed by Mr. Thomas Tyrwhitt, F.R.I.B.A.

The Bulgarian Legation issues a formal denial of the report that, desiring to be demobilised at once, some Bulgarian officers and soldiers had revolted.

A telegram received by the Bulgarian Legation announces that great damage has been done during the past few days by fires in the Eastern Balkans, in the *arron lisements* of Nova Zagora, Slivno, Elena, and Kotal. Owing to the great dryness the fires spread rapidly. The inhabitants of several districts, to the number of ten thousand, have been mobilized to fight the fires.

A sub-inspector of police and two constables were wounded and 13 persons were arrested in a disturbance at Calcutta which followed upon the breaking up of a Khalifate meeting.

The first woman to be enrolled as a vakil of a High Court in India, says a Reuter message from Allahabad, is Miss Cornelia Sorabji, who was recently allowed to practise in the Allahabad High Court.

**SUMMER PALACE HOTEL**
RAMLEH—ALEXANDRIA.
Under entirely New Management.
Every Modern Comfort, American Bar, Restaurant, Billiards.
WINTER SEASON.
Best Orchestra, Daily Concerts, Weekly Dances.
Special Terms for Families.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON.
TROODOS—Olympus Hotel,
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troodos.
For Tickets and further Particulars, apply
NAJEM HOURY & SONS, Limassol, Cyprus.
Proprietors of "The Army and Navy Stores."
Branches—Polymedia, Troodos, Nikosia, Famagusta, and Larnaca.
Head Offices and General Stores : LIMASSOL.

## THE EGYPTIAN PROBLEM.

The negotiations between the British Government and Adly Pasha's Delegation regarding the future status of Egypt are understood to be nearing their end, and it is to be hoped that a satisfactory agreement will not be jeopardised either by premature unofficial disclosures or by carelessly worded communications of an official or semi-official character. Every separate stage in the proceedings up to the final ratification of the Treaty by Egypt and Great Britain promises to be a delicate one, and it is most desirable that the two parties should appreciate one another's difficulties, and avoid any course likely to prejudice in either country the cause that both have at heart. The warning is necessary in view of the fact that only last week a most tactless statement regarding the negotiations appeared in a number of newspapers in England. Not only did it fail to represent the position accurately, but it also referred to a subject that is admittedly the crux of the discussions in the way most calculated to embarrass the Egyptian Delegates in their own country. In a settlement which has to be essentially in the nature of a compromise it is inevitable that one or more provisions separated from the rest should arouse misgivings even in quarters favourably disposed to the idea of a Treaty between Great Britain and Egypt; whereas when taken with the Agreement as a whole they may be found difficult to challenge. The Prime Minister has stated that no change will be made in the relations between this country and Egypt without adequate opportunity being given for discussion in Parliament. On the strength of this promise it would be well if the necessary secrecy of the negotiations were respected, until such time as the agreement arrived at between Adly Pasha and the British Government can be announced simultaneously in the two countries, together with any commentary that may be required to explain the reasons actuating each party in the acceptance of the proposed Treaty.

Various matters in regard to the negotiations in London are common knowledge, and it is not without interest to recall that the discussions must necessarily have followed certain definite lines. In the first place both parties were morally pledged to the general lines of the Milner Report. The British Protectorate over Egypt was to be superseded by a Treaty recognizing the independence of Egypt, while safeguarding the essential interests of Great Britain and enabling the latter to furnish the guarantees which must be given to foreign Powers to secure the relinquishment of their capitulatory rights. But the agreement reached between Lord Milner and the Egyptian Delegation headed by Zaghloul Pasha was indefinite on certain points, in particular with regard to the military question. Egypt, it was decided, was to confer on Great Britain the right to maintain a military force on Egyptian soil for the protection of her Imperial communications, but it was left to the Treaty to fix the place where the force should be quartered, with the proviso that the presence of this force should not constitute in any manner a military occupation of the country, nor prejudice the rights of the Government of Egypt. Unfortunately, since the publication of the Milner report, serious rioting has occurred in Alexandria, which had to be suppressed by British troops. Not only did the incident create misgivings among the British community, but it is also understood to have led to remonstrances on the part of foreign Governments, who are said to have emphasized the necessity of British troops being kept in the chief towns in the event of any modification of Egypt's status. In this connexion we may well imagine that two outstanding factors were always present to those carrying out the negotiations; on the one hand it is of paramount importance to Great Britain that nothing in the proposed Treaty should undermine the position of Adly Pasha and the moderate section of enlightened public opinion in Egypt associated with him; on the other hand it is obvious that any clause accepted by Adly Pasha that might be capable of being represented by the Egyptian extremists as a recognition of an "Army of Occupation" would effectually rally the whole of Egyptian public opinion behind Zaghloul Pasha. There would be no cause for wonder if this problem of the retention of a military force has occupied a large share of the discussions, but it would have been unpardonable if the difficulty had been allowed to wreck the negotiations.

To a certain section of British opinion it appears a grave mistake to yield to extremist agitation in Egypt. The view is held that any change must be for the worse as far as the country and its inhabitants are concerned, quite apart from any possible prejudice to British Imperial interests. To this conscientious belief the reply is that Great Britain is morally bound by repeated promises of self-government for Egypt; no one who is not an Egyptian questions the unreadiness of the country to dispense with British assistance in its internal administration, but a variety of circumstances renders it impossible to postpone any longer the fulfilment of the promises. The war, punctuated as it was with declarations of the Allies' faith and aims, has evoked throughout the world a spirit that will not allow a country of any size with a homogeneous population set upon independence to remain subject to alien rule; moreover, public opinion in Great Britain would never reconcile itself to the worry and expense of maintaining the present status of Egypt against the expressed wishes of the great bulk of the Egyptians. The solution is to grant independence in no niggardly spirit, but without violence to all the promptings of common sense. In regard to the military question an adjustment of the conflicting views to which reference has been made can be found in the fact that any change from one set of conditions to another must of necessity take time. The Egyptian Army has not been trained for all the emergencies for which the army of occupation has been equipped. The work of training it must now begin, and as the Egyptian troops become qualified and obtain the necessary equipment they can replace British soldiers. A treaty between the two countries must provide for a period of indefinite length; it has no occasion, therefore, to stereotype a transitional phase. With Egypt governing herself as she ought to be governed, the presence of British troops in the capital will not be needed. If, then, the Treaty specifies the locality where they are to be quartered ultimately, there will be time before the change is completed to gauge the wisdom or unwisdom of this particular provision. And so indeed with the whole Treaty. Our confidence in the British Empire is robust enough to believe that it will know how to take care of itself, whatever happens in Egypt. As for the Egyptians themselves, they have forgotten to-day their experiences of self-government half a century ago. If, unhappily, these should be revived, the memory of the relative advantages of British supervision will be fresh enough to point them to their remedy.

## FISH IN YUGOSLAVIA.

Visitors to a strange country are always good patrons of the restaurants; for they have little choice. In Yugoslavia, as elsewhere, they will find the invariable "biftek" and "ros'bif" of the *soi-disant* variety, but are sure to come to grief over the fish-course, even in those restaurants where the menu is written in French as well as in the vernacular—which by the way, is no guarantee that they are the best. The reason is that most of the fish are kinds unknown in the West of Europe. Still, the ingenuity of hotel-keepers is equal to the occasion, for they know that most people, especially Englishmen, are conservative in their food and avoid even delicacies that they are not familiar with. There is a fish called *som*, ugly, but good eating, which beat the manager of a leading hotel in Belgrade, until he had an inspiration and on his French menu labelled it *saume*; it required but little to stretch this to *saumon*, and the innocents abroad were mesmerised into believing that they were eating *salmon*; and only the more observant expressed surprise at the whiteness of the flesh.

In Yugoslavia, the coast lands of Croatia and Dalmatia abound in delicious sea-fish while the limestone rivers of the Karst regions of Slovenia, Bosnia, Herzegovina and Montenegro teem with trout, as delicious to the epicure as they are unsophisticated to the angler. For very many years it has been the custom to keep live trout in a tank in restaurants, so that customers can pick their own fish alive, and so be certain that it is fresh, the local equivalent of choosing your own chop in a grill-room. The correct name for trout in Serbo-Croat is *pastrva*, (it is necessary to roll the "r"), but they are usually referred to as *pastronka*, which name also means smoke-dried meat, a Yugoslav biltong in fact; but where Austrian influence survives, they are more frequently called *forelle*, the one pretty word which the German language has produced.

But modern visitors to Yugoslavia generally find themselves in Belgrade or Zagreb, and there trout are unknown. Certain ignorant or unscrupulous restaurant keepers sometimes serve up a fish under the name of *forelle*, but—well, one can hardly expect mine host to be an ichthyologist! These cities are dependent for their fish on their fine rivers, the Danube, the Save and and the Drave, and here we find a quite distinct fish fauna. The menus include *kechiga*, *sharan*, *fogosh*, *smudj*, and sometimes *sudak*, and it would puzzle most linguists to turn these into French.

One of the commonest is the *sharan*, a name which means "speckled," and would be appropriate to trout, but in reality is nothing more nor less than carp. With our great wealth of sea-fish in Britain, we have despised this as a muddy fish since the days of Henry VIII, and cattle now graze on the sites of the ponds where the old monks preserved their Friday dinners; but a good carp from clear water is by no means to be despised. They are numerous, too, in the big lakes of Macedonia, especially in Langaza or Ajvasil, near Salonika, where fishing, mainly for carp, is the staple industry, and there is a fish exchange. A good big carp, the sides slit and red pepper rubbed well in, grilled on a spit over a camp fire, is a dish fit for a King. The Macedonians call it *sharan* too, or else *karpche*.

One of the best of these river fish is the *smudj*, a handsome green, dashing and fierce fish related to the perch. It is also found in the rivers of Western Europe, but is common enough in Austria and further east. His scientific name is *lucioperca fluviatilis*. He is described on menus in French as *sandre*, from one of the German names *Zander*, but in Vienna appears as *Schill*. In Zagreb he is often enough described under his Hungarian name *fogosh*, and it is quite common to see the two names side by side, *fogosh* and *smudj*, on a menu, to make it look more comprehensive, for the restaurateur must know it is one fish. In Russia they call him *sudak*, but they do not prize his firm white meat as they ought.

A fish that Serbs especially value is the *som*, *silurus glanis*, a hideous creature with broad flat head, gaping mouth, and barbels. He is one of a family of five hundred species, but the only one occurring in Europe. In Macedonia our troops, who would sometimes get large ones in the lakes, called him cat-fish, and he closely resembles the cat-fish of the river Plate, but has not those dangerous and powerful pectorial fins with which that creature can strike through a thick rubber sole. The *som* is unknown in Western Europe, but abundant in the Danube, and its affluents, and the other rivers of South Eastern Europe, going out into the Ægean and Black Seas; and he is common in the Caspian. He sometimes attains a great size; one caught in Belgrade weighing over three hundred pounds, was referred to in "The Near East" last year, but giants of four hundred pounds and even five hundred pounds have been recorded, and these may be nearly ten feet long. Such monsters may be dangerous to bathers, as indeed pike have been known to be in England, dashing at swimmers' fingers and lacerating them badly with their innumerable teeth. The *som*, in spite of his unprepossessing appearance, is decidedly good eating, and makes, in particular, an admirable "*alaska chorba*", or fish soup.

The pike is common, too, and in general an appreciated fish on the Continent. The Serbs and Russians call him *shtuka*. He seldom runs to much more than four feet in length, and fifty pounds in weight, but specimens scaling up to seventy pounds, and even over, are recorded.

Both *som* and pike are usually caught in crinoline nets, called *urshka*, or *bubanj*. The fishermen on the Save have a peculiar instrument of wood; a round disc about two inches in diameter with a carved handle which they grasp and with it beat the flat disc on the surface of the water. This produces a dull, booming noise that sounds through the water, and attracts the fish, but especially *som* to the nets.

Perch are fairly common and of a good size, and quite good eating. The fish has a number of names in Yugoslavia in different districts, as for example *ostresh*, *okun*, *bandar*, *bulja*, *buljes*, *belitsa*, but the correct name is *grgech*, meaning "the humped fellow."

But the pride of the Danube system is in its sturgeon. He is a royal fish in England, where one occasionally strays from the Elbe or the Rhine, just as he is in China; And the ancient Greeks and Romans prized him particularly. Of course in Russia the caviare industry is a very important one, the output from Astrakhan being about a hundred tons a year. Danube caviare is just as good, but is scarcer; there is a small industry in it at Kladovo in Serbia, on the lower Danube.

Several species of sturgeon are known in the Danubian river system, but only two are important. The chief is the *kechiga* or sterlet, *acipenser ruthenus*, not as many think, a young sturgeon, but a distinct species that rarely attains three feet in length or twelve pounds in weight. All the sturgeons are rich and oily, but the sterlet is the most dainty. They were much prized in Russia before the war, and were always an expensive dainty, though far from rare. The Russians made soup of him, with plenty of lemon, delicious when piping hot, but glutinous and unpleasant when cold. The Yogoslavs prefer him fried or cold with mayonnaise, which is a dish fit to put before a King.

A contrast to the dainty *kechiga* is his gigantic cousin the *moruna*, the *bieluga* of the Russians, the biggest fresh water fish of Europe, exceeding the *som*. Specimens have been recorded twenty-six feet long, and weighing a ton and a half; from six hundred to a thousand pounds is a common weight. The meat is coarse and not much prized. The caviare is good, but inferior to that of the *kechiga*, and some other species. Nine hundred pounds of caviare were taken from a female weighing about three thousand pounds.

A rarer species, that in spring ascends the rivers flowing into the Black Sea, is the *pastruga* (*acipenser stellatus*) the *severuga* of the Russian. It runs to about fifty to sixty pounds in weight, and both the meat and the caviare are excellent.

The *jesetra* of the Yugoslavs, *osietr* in Russian, (*a.*

Digitized by Google

*schypa*) is the standard sturgeon of restaurants. It is found all the year round in the Danube system, about sixty-five pounds is its maximum weight.

Lesser known sturgeons are the *tashikar* (*a. guldenstaedtii*), one of the best eating of this group, running to about one hundred and seventy pounds; the *sim* (*a. glaber*), common enough, running to about sixty pounds, but flabby meat, and the *chiga*, (*a. gmelini*) a spring visitor from the Black Sea, of little value.

The sturgeon of Western Europe, (*a. sturio*), occasionally turns up on the Dalmatian coast, but is unknown in the rivers that drain into the Black Sea. The northern Slavs confuse it with the *jesetra*.

The sturgeons, with their tiny mouth and sluggish habits, are perfectly inoffensive. In addition to the meat and caviare, they give us shagreen, which is their skin, isinglass, and the finest fish glue, which is made from the bladder. They are not numerous enough in the Danube system to be the basis of an important industry, but in the Caspian, a large population, especially at Astrakhan and Petrovsk, are dependent upon this king of fish for a living.

## PRESS ON THE NEAR EAST

### Egypt.

The *Morning Post* of October 27 contained an article upon "Realities and Egypt." It began with a comment upon what it believed to be the one vital point of difference between the British and Egyptian negotiations—that of the presence of British troops within Egypt:—

The Egyptians, so we gather unofficially, are prepared to tolerate the guarding of the Canal by our forces, but they object to their presence in Cairo, Alexandria, and the interior of the country. The issue, of course, is fundamental, and renders an early and successful ending to the negotiations extremely improbable. Independent countries are not usually in the habit of allowing foreign troops to be billeted permanently in their midst, and are usually credited with the ability to look after the interests of their own nationals and protect the foreigners who live within their borders. If the Egyptians are incapable of fulfilling these elementary requirements of civilised government, then they are not yet worthy of that independence which their more vociferous spokesmen are so loudly demanding.

It then restated its conviction that the June riots at Alexandria proved conclusively that "Egypt cannot govern itself," and ended in sweeping fashion:—

The art of government, particularly the art of democratic government, is learned only after a prolonged political apprenticeship. A few agitators may fan the passions of a race, may fire the prejudice of colour, may appeal alike to the lowest and the highest instincts of which man is capable, and then triumphantly describe the storm which they have let loose as evidence of the capacity for self-government. Mr. Lansing once spoke of self-determination as a phrase "loaded with dynamite." His description is worth recalling when one compares the declamations of the Egyptian Nationalists with the sorry scenes which disgraced Alexandria last June. These riots proclaimed to the world that Egypt was not yet ready to be mistress in her own house. Peoples, like ex-Kings, can at times be too precipitate.

And there is another point of view—a point which is out of fashion in these strange days—we mean the British point of view. From that angle the problem is not whether some Egyptians wish to have the power to ruin their country in their own way, but whether we can afford to break the spinal cord of our Empire. When we were beset by a host of enemies we proclaimed our protectorate over Egypt, and now when we are victorious we are toying with the idea of surrender. Why? We surely are not ashamed of our work in Egypt. Never in their chequered history have the Egyptians been so contented as they were under Lord Cromer and Lord Kitchener. Literally those great leaders and the men who served under them made the desert blossom like the rose, and in place of the arbitrary misrule of corrupt factions brought to a distracted country the peace and the majesty of the *Pax Britannica*. Is their beneficent rule to be but a brief interlude in the tragic history of Egypt, a bright gleam between the clouds of the past and the future? We cannot be ashamed of our work in Egypt. But are we ashamed or tired of our Empire? Even the Milner Report insisted on the protection of our communications, but Great Britain cannot protect the Canal by placing a garrison on its banks cut off from all connection with Cairo. And there is also the question of the Sudan. Egypt to be happy must have not only independence but water. An independent Egypt is incompatible with an independent Sudan, and the Egyptians may yet find that the principles of self-determination may apply to the upper as well as the lower reaches of the Nile. Such is the muddle to which the lure of phrases is dragging both Great Britain and Egypt. Within the generous boundaries of the British Empire Egypt can win for herself all the prizes of a high destiny. She can win them without endangering the safety of that Empire on which not only her own existence but the peace of the world depend. She can win them without the danger of finding herself face to face with another Mahdi. But she must first of all reject shams and accept realities.

---

While the above extracts may be taken as representing the extreme British view, we give below some views, taken from the *Manchester Guardian* of October 28, which come from the other side. It is "from an Egyptian Correspondent":—

A report has been published that an agreement had been reached between the British Government and the Egyptian Delegation in London, but that is not the case. Though the verbal conversations ended last week the results are still being considered by the British Cabinet, which has not yet put its definite proposals before Adly Pasha. There are certain points on which there can be no compromise on the part of the Egyptian people. The latter, whether Zaghlulist or Adlyist, are unanimous, about them:—

(1) Egyptian independence and the sovereignty of the Egyptian people must be clearly recognised by the British Government and otherwise proclaimed to the world at large.

(2) The Sudan must be regarded as an integral part of the Sovereign Egyptian State, the whole Nile Valley being an indivisible entity. The Nile being the life-blood of Egypt, its control can never be relinquished no matter what guarantees were given.

(3) British military occupation cannot be accepted in any part of Egypt outside of the Canal zone for the sole purpose of safe-guarding British Imperial communications, and by virtue of the proposed alliance.

(4) There is no need to insist upon the protection of the European residents in Egypt by any special "guarantees," Egypt to-day being a country governed and administered on the best approved European lines, and the Egyptian people being as hospitable and generous to foreigners as any people in the world.

It is upon the two latter points that the London negotiations have proved the most difficult. The Egyptians argue that to accept military occupation outside the Canal zone would be derogatory to their conception of independence, without in any measure serving British interests or necessarily those of the foreign residents. It would, on the contrary, be an uncalled-for insult to the sentiments of Egyptian people. We recognise the full community of interests between Egypt and Britain. For Britain to impose a military occupation would be to substitute suspicion for a recognition of mutual interests as the basis of our relations.

Either a British-Egyptian alliance would work smoothly or not. If the former, the Egyptian Government would never oppose the movement of British troops in Egypt as against a third party, because Egypt would be only too grateful for British assistance against such an aggressor. On the other hand, if the troops were not wanted against a third party, it follows that they would be wasted against Egypt. Britain's command of the seas would, in the latter event, enable her to pour in and move whatever troops she wanted into Egypt. But it would be a pity to wreck the chance of a friendly settlement, based on the spontaneous frank recognition of a community of interests, by imposing guarantees which could only exasperate Egyptian feeling. During the last two years friendly feelings towards Britain have been developing fast—largely as a result of the influence of Zaghlul and Adly Pasha, seconded by the manifestations of a more liberal spirit on the part of the British, as revealed in the press, and especially in the generally sympathetic spirit of the Milner Commission. As for the protection of Europeans, Egypt is far too proud of the reforms brought about by the aid of the British during the last 40 years to admit that there is any such need. Egypt to-day, thanks to Great Britain, is as well organised and administered a country as most of the European countries from which these foreign residents originally came, and in some cases even better.

It concludes by saying that if the present opportunity for a settlement is rejected, the "bag-and-baggage" party in Egypt will regain their pre-war ascendancy, "to the confusion of the moderates, represented by Zaghloul and Adly Pasha, who are fundamentally one in spirit:" The article ends rather lyrically:—

Egypt won her liberty from Turkey in 1838-40 on the battle-field—a fact which was specifically mentioned in a proclamation by the British Commander-in-Chief in November, 1914. That liberty Egypt completed into *de jure* independence by her support of the Allies in the Great War. Egypt is therefore to-day independent in her own right—and it is Egypt that is making concessions to the British in view of the occupation as the price of transferring her *de jure* into a *de facto*, *de jure* independence. These concessions are all the more readily made by Egypt because Egyptians realise the community of interests with Britain which is the best basis of all alliances.

Digitized by Google

In an article upon "The Egyptian Question," *The Times* of October 29 summarizes the present position of the negotiations. After stating how the British Government failed to seize the favourable occasion created by Lord Milner's recommendations, it continues :—

We recognize to the full the difficulties of our own Government. No British Government can afford lightly to surrender our real and permanent interests in Egypt, or to abandon to the precarious protection of a formula the positive results of our long and not fruitless occupation. On the other hand, there is a subtle danger in the numbing persuasion of habit. It is possible to exaggerate the importance of a mere form and appearance of security, and the negotiations with Adly Pasha have reached a point at which the most sensitive judgment is necessary in order to determine wherein the security of British interests in Egypt really consists. The formal recognition of the internal independence of the Egyptian people and the substitution of a Treaty of Alliance for the Protectorate are recognized. The point now at issue is whether this Treaty of Alliance will sufficiently guarantee British interssts without a continuance, perhaps in an attenuated form, of the military occupation.

And after commenting on the possibility, consequent upon the retention of British garrisons in Egypt, of our purchasing "outward and temporary security at the price of a permanent insecurity which would not only darken the prospects of Egyptian independence, but might lead to a very serious increase in our own responsibilities," it says :—

The problem, then, is to discover the stable guarantees for British interests under the new status which it is proposed to give to Egypt. Given the present uncertain and suspicious temper of the Egyptian people, it seems to us that such guarantees can only be established by measures that by their ocular effect will arouse confidence in British good faith and will demonstrate the reality of Egyptian independence. The Egyptian delegation, we believe, fully recognizes the necessity of guarding the Imperial lines of communication by the maintenance of British troops along the Suez Canal. Nor should it be difficult to provide for a transition period during which adequate measure for the protection of the life and property of foreigners in the chief centres of Egypt could be elaborated by friendly consultation on the spot. The actual evidence of such a gradual transfer of authority to native hands would go far to restore that confidence in British intentions which can no longer be maintained by a mere display of force. There would be difficulties and uncertainties in the transition period, no doubt; but a movement in that direction would certainly be more favourable to our prestige than the present painful immobility of suspense.

And it concludes with what it calls "the most cogent consideration that should urge us to adopt a conciliatory policy" on the lines it advocates—which is, that the accredited Egyptian delegation now in this country represent the type of Egyptian opinion with which we can most easily deal.

## Greece and Turkey.

Writing from Paris in the *Pall Mall and Globe* of October 21, Mr. H. Charles Woods remarks how enlightening it is to view the Asia Minor question from another aspect than the national one—particularly from the French stand-point. He continues with impressions gained from his French visit :—

The outstanding impression which one gains is that neither the maintenance of the Treaty of Sèvres nor its modification to the benefit of Greece are now questions of practical politics. This is the case, not so much because of the very serious set-back which has been sustained by the Hellenic army, but because French policy is in favour of Turkey, and because the Nationalists will never lay down arms until at least their more important claims in regard to Smyrna have been satisfied. Thus, whilst for many months France has been distinctly on the Turkish side, things have entered upon a new phase since the commencement of the negotiations between M. Franklin Bouillon, the French delegate who went to Angora, and the Nationalists. Those negotiations are now reported to have come to a standstill, but, in view of the interests of the two parties, this hitch can hardly be otherwise than temporary. Consequently, it is more than probable that ere long the world may be faced by the conclusion of an understanding which, though not in actual opposition to the Treaty of Sèvres, will throw the weight of French influence more than ever against the ratification of a document which is now entirely obsolete. The great question of the moment is, therefore, whether there should be international mediation or intervention in favour of the modification of that document, or whether the Allies, maintaining the neutrality which they proclaimed at the meeting of the Supreme Council held here in August last, should permit the Greeks and the Turks to continue to fight for the domination of Anatolia. Desirable as would be an early peace in the Near East, no doubt rests in my mind that the belligerents (particularly the Greeks), having more or less taken it upon themselves to solve the question by force of arms last March, should be left for the moment at least to continue a campaign which ought never to have been reinaugurated.

He enumerates some reasons for the case of non-intervention :—(1) There is no real international accord, (2) Neither of the parties concerned is prepared for arbitration except upon terms which would be entirely unacceptable to the other, and (3) Mediation has been offered and rejected, and therefore there is no reason to repeat that offer to-day simply because the military situation has changed in favour of Turkey. He concludes with a note emphasizing the necessity of a resumption of Turko-British friendship :—

But if my readers at home are to understand the further reasons for which the Allies need not mediate in a manner which at the present time would, in fact be disadvantageous to Turkey, it is necessary for them to realise what is the post-war position of and in the dominions of the Sultan. History has proved that the external relations of Turkey have been governed much more by the international than by the local situation. For instance, the rise of Germany's power resulted in the substitution of an Anglo-Russian understanding for our Crimean policy—a substitution which had for one of its consequences the Young Turkish Revolution of 1908 and the hurling of Turkey into the arms of the Central Powers. These days are now past, and with the defeat of Germany the interests of Great Britain and of Turkey once more become strongly opposed to those of Russia. Thus, even if the Nationalists have sought the temporary support of Moscow, simply because they cannot secure help elsewhere, such men as Dr. Rechad understand quite well that sooner or later Bolshevism will develop into Nationalism, and that Russia, frustrated in the West by the creation of the Baltic States and Poland, must turn her attention towards the the East and South—directions in which the success of her aims would be as dangerous to Turkey as to the British Empire. Although, therefore, such a British policy need not be carried beyond the limits of strict neutrality, there is a great deal to recommend our following the example of the Quai d'Orsay, which understands very clearly that the French task in Syria will be facilitated by fairness to Turkey. By so doing we shall not only minimise the difficulties by which we are beset in Egypt, Palestine, Mesopotamia, Persia, Afghanistan, and India, but we shall gain the friendship of a people who, in any event, must continue to play a role in areas which are vital to the safety of the Empire.

## Articles to Note.

"India," by Lord Meston, in *Looking Forward*. (October).

"The Caliphate Historically Considered," by D. S. Margoliouth and "The Doctrine of the Arabian 'Brethren,'" in the *Moslem World*. (October).

## INDIAN AND PERSIAN ART.

Messrs. Sotheby held last week a two-days' sale of Indian and Persian miniatures and other works of art. A Persian MS., on 364 leaves, with eight finely illuminated pages, three full-page miniatures on gold ground and 39 minatures in the text, 1575 A.D., was sold for £505 (Sabin). Another, "The Rosary of the Pious," 132 leaves, had four full-page miniatures, and smaller miniatures; it made £400 (Gudemain). Five leaves (11in. by 8½in.) from an album of verses, written and signed by Mir 'Ali of Herat, dated 1532 A.D., brought £205 (Gazdar). The total for the two days was £4,344 18s.

## TOPICS IN PARLIAMENT.

The subjoined headings are those given in the official report :—

Mesopotamia, (Native Levies). (October 18).

India (October 19).

British Subjects, South Persia.—Greece and Turkey.—Albania and Serbia.—British Army, Prisoners, Erzeroum.—India: Fiscal Commission. Railway Administration. Provincial Governments (Purchase of Stores).—Kenya Colony (Indians). (October 20).

Greece and Turkey.—Egypt.—Foreign Refugees (British Expenditure).—India: Field Service Batta. Civil Service Candidates. (October 24).

India: Civil Service (Proportionate Pensions). Moplah Rebellion.—Greece (Queen Olga). Loan.—Egypt (Zaghloul Pasha).—India (Disturbances, Trivandrum). (October 25).

South Persia Rifles.—Egypt (Zaghloul Pasha).—France and Angora.—Asia Minor (Alleged Massacre).—British Army. Iraq Garrison.—India. Munitions Prosecution. Moplah Rebellion.—Aliens (Ahmed Mohammed).—Russia (Roumanian and Bulgarian Grain. (October 26).

---

The outbreak of an insurrection among the Cossacks, Khirgi and German colonists in the province of Kazan is reported from Moscow.

Two more Indian battalions are being sent to Malabar, as the Government is anxious to finish the Moplah operations as soon as possible.

The Rome correspondent of the *Morning Post* states that the ex-Khedive of Egypt has arrived in Italy, and is credited with the intention of residing in Rome, where his presence would probably lead to further attempts at Egyptian propaganda against Britain.

## EASTWARD.

### Between Trains at Vienna.

*(By Wayfarer.)*

It was with a certain uneasiness that I approached Vienna for the first time since the war, Vienna which I used to know as well as I know my waistcoat pocket. I came in from the north, from Bohemia, a country which is rapidly making a name for itself in the new order of things, is regaining its old intellectual, spiritual importance, and is in the way of rising to a material importance which had ever been discouraged by Imperial Vienna.

The train swung down in sweeping curves instead of dashing through tunnels and cuttings as happens in more western countries, and so I was able to enjoy the ever changing scenery. Hills in the blue distance framed the pleasant landscape with its broad fields on swelling ground, its vineyards and farm-steads. Now and again quaint old-world villages and walled towns appeared, and the shadows of sailing clouds seemed to linger above them. There was plenty of smoke to mark our progress, which was not one of undue haste. Then came familiar landmarks, the broad and placid Danube spanned by an iron bridge at Tulln, the wooded heights of the Wiener Wald, the ruins of Greifenstein half hidden among trees all green and gold in the glory of a strong autumn day. I was glad to see this sight, for tales had reached me that the Wiener Wald had vanished, having been cut down to provide fuel for Vienna. Then the familiar Franz Joseph Station.

The Franz Joseph station was never a delectable place exactly. I found it looking neglected and dirtier than usual, but it was some consolation to note that its name had not been changed. This habit of changing names may have its moral, its patriotic significance, but the result is puzzling to one who revisits familiar haunts. Vienna seems to have escaped this infliction: true I found one quiet little spot named after the Revolution, but it seemed to take its new designation very soberly—there was no flaunting of the "Will of the People" or "Self-determination" about it; there was not even a republican policeman within sight. It was a glorious autumn evening, mild and sunny, so I naturally turned towards the Prater. Here again I found that the tales of wholesale felling of trees had been greatly exaggerated. Still it was not the Prater of old. It was crowded as usual, the crowd was as animated as ever; but there was an unfamiliar ring about the clamour of voices. There was something wrong, and it was worth while to find out as best one could in those few hours between trains, what was at the bottom of the change. With the atmosphere of the Prater my former knowledge of Vienna's dialect returned to me, so I entered into conversation here and there. The Viennese were ever ready for conversation and were always interesting: they are so still, but there is pathos underlying their unquenchable gaiety. The brisk little lady who sold me some very bad cigars, was chatty and gay on the surface, but she was hungry, not far from starving. The good soul who sold me a ticket for a seat at an open air concert looked pinched and wan for all her pleasant-manner—and manners are still the mark of the Viennese, despite their afflictions.

The military string band played as delightfully as ever and the band master was decorated profusely—band masters do collect decorations in surprising fashion, perhaps because they are among those warriors who find sufficient leisure or lease of life, for that pursuit when the nations go to war. But here again was a change, and a peculiarly unlovely one. Austrian uniforms have abandoned their former dapper style, and approximate more to the German. Worse still, uniform collars are adorned with the straps that were formerly peculiar to the Prussian Guards only, the extreme of German military snobbishness.

But Viennese good manners, Viennese courtesy, remain, even towards the foreigner, albeit the opinion prevails that much of the present distress is due to foreign invasion. There are two classes of invaders, one which comes for booty only and openly; while the other comes with friendly intent, in some cases sincere. The effect according to the Viennese is the same. Citizens of countries where the exchange stands high, are able to buy all they fancy at prices ridiculously low in comparison to their "Valuta." They need not stint themselves for food or clothing—but they send prices up to the detriment of the Viennese, who have to go without the bare necessities of life in many cases. Vienna is full of foreign missions who are clothed in fine raiment and fare sumptously every day. And Vienna is now threatened with yet another invasion: it is rumoured that the League of Nations is to take up its abode in that distressful city. What matter that the housing problem is as acute in Vienna as in any capital of Europe? Room must be found for these elect, the cream of many nations, but a cream which imposes a strain on the finances of even the wealthiest States. And some can no longer afford this latest blessing of civilization. Their name is Legion, and should they join the swarms of foreign missions, the flights of international commercial vultures, and settle on Austria's ancient capital starving and destitute, then God help Vienna; its days are indeed numbered.

---

The Bulgarian Government has had to call out 10,000 people to fight a serious forest fire which is raging in the eastern parts of the kingdom.

A disturbance at Makwar between Italians and Sudanese police is reported from Khartoum. A renewal of the disturbance led to the arrest of three of the Italians on October 2.

On the occasion of the anniversary on October 26, of the death of King Alexander of Greece, a Requiem Mass was sung in Athens Cathedral. The Cabinet Ministers, civil and military authorities, and the head of the French Military Mission were present.

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square, E.C. 2.

**The Turkish Exchange.**

The sudden depreciation of the Turkish exchange which has provided one of the most notable movements of the foreign exchanges in recent weeks is discussed by our Constantinople Correspondent in a message which will be found in another column. He points out that the causes that have led to the rapid fall are difficult to discover, and that while the existing conditions readily account for the depreciation of the exchange they are "generally considered not to be sufficient to account for the slump of 200 piastres in a couple of days." An explanation, which, he states, has been widely accepted, is that it is due to a "subtle financial operation of some magnitude," but it is difficult to see how anything of the kind could have produced such a result.

**Consequences of Depreciation.**

It is easy to realise the consequences of this sudden depreciation of the exchange on the Turkish market which has been for so long in such an unfortunate position. "The natural result," says our Correspondent, "has been to turn the entire commercial situation upside down and to create the utmost confusion throughout the markets." Of course fluctuations such as this make business simply impossible, for traders are unable to know how they stand as regards their commitments, and no improvement is to be anticipated until the exchange shows signs of stability. Our Correspondent, it will be noted, does not think the crisis will be prolonged. "The Turkish pound" he says "will probably drop back to a level considerably above the former rate of 550 to the pound sterling, and remain there. In the interval incalculable damage will have been done, and a few individuals will have filled their pockets."

**Trade Credits.**

Necessarily some time must elapse before we are in a position to see how far the amended scheme of export credits is going to assist trade. The proposals, as I have pointed out, would seem to provide a workable basis from our point of view, but unfortunately that is not the only aspect from which they have to be considered. Business opinion—and in this I include the banks—is inclined to be non-committal on the subject so far, though it is admitted that the Government have made a most praiseworthy attempt to solve a most difficult problem.

**The Difficulty.**

The real weakness of the scheme—of any such scheme for the matter of that—lies in the fact that its utility in helping to promote trade with those areas with which commerce is rendered all but impossible owing to the prevailing conditions must depend ultimately not on the facilities for credit, but on the probable relation of the exchange of the importer's country to sterling at the time of the maturity of the debt. That is the explanation of the comparative failure of the first credit scheme and of that which is now in operation. The business that has been done speaks for itself. According to the latest return the credits actually issued amount to no more than £1,300,000.

**The Importer's Case.**

Looking at the matter from the importer's view it will be realised how difficult the position really is. He is offered goods on credit. In some cases he may not be required to furnish security; if otherwise, he has to deposit a certain amount with a local bank, and has to increase the cover if the exchange depreciates, which means that in present circumstances business is almost impossible. Supposing business to result, the importer has to find at the allotted term the equivalent in sterling for the amount of his credit. If his exchange is, and has been for some time, showing a tendency to appreciate he will have an inducement to enter into transactions, but with the exchanges fluctuating as they are at present is it surprising that he holds aloof from commitments?

**The Problem of the Exchanges.**

In plain terms the success of the scheme would seem to depend on the course of the exchanges. They have not yielded, as was hoped, to a *laissez faire* policy, and it is now evident that for an improvement in the near future we must look to international action. It is generally agreed that a step calculated to have a very beneficial effect would be the cancellation of the war debts of the Allies. The postponement or modification of the reparations is also a measure which finds favour in some quarters. These matters, and others will, it may be hoped, form the subject of discussion at the Washington Conference, which, while convened primarily to settle the disarmament question, provides a great opportunity for arriving at a solution of the not less important economic problem with which the world is confronted.

**Position in Bulgaria.**

A correspondent who has just returned from Bulgaria, where he had been in a position to obtain very accurate information as to the general state of affairs, speaks most hopefully of conditions in that country. Within a comparatively recent period he has visited most of the countries in Central and South-Eastern Europe, and he is emphatically of the opinion that nowhere else has he seen the same tendency to settle down that is to be seen in Bulgaria.

**Bulgarian Loan Offer.**

Last week a statement was issued giving the terms of the arrangement made for the settlement of the Bulgarian Loans issued in this country, to which I referred several weeks ago. Briefly, British holders of the Four and a Half per Cent. Loan Bonds of 1909, bearing the British stamp of a date prior to October, 1915, are offered payment of the coupons and drawn bonds for the period December 1, 1915, to June 1, 1923, at their face value in French francs, and a similar offer is made to holders of the Six per Cent. 1892 Loan. The amount to be paid in francs will be converted into sterling at the sight rate of exchange on the day of presentation, less tax.

**Terms of Settlement.**

The offer actually provides for the immediate payment of only three coupons, those which matured on December 1, 1915, June 1, 1916, and December 1, 1916, and the bonds drawn for redemption on these dates, but as the date of payment of the coupons and bonds due on June 1 and December 1, 1917, is November 1, it may be said for practical purposes that five coupons are payable immediately. The coupons and bonds due on June 1, and December 1, 1918, and on June 1, 1919, will be payable on December 1, those due on December 1, 1919, and June 1, 1920, on June 1, 1922, those due on December 1, 1920, and on June 1 and December 1, 1921, on December 1, 1922, and those due on June 1 and December 1, 1922, and on June 1, 1923, on June 1, 1923.

**Acceptance Recommended.**

While the offer entails a considerable sacrifice on the part of the bondholders they have the satisfaction of knowing that they are receiving the same treatment as the French holders of Bulgarian loans. Acceptance of the offer is advised by the committee of Bulgarian bondholders acting with the committee of Foreign Bondholders, and it may be assumed that this course will be followed in view of the fact that the course of the exchanges is extremely problematical.

**Egyptian Cotton Freights.**

The report that the manager of the Levant-Mediterranean sections of the United States Shipping Board is on his way to England on a mission connected with this question will give rise to justifiable hopes that despite the untoward turn that the controversy took better counsels will prevail and an understanding yet be reached. A careful consideration of the facts shows that there is now no real point at issue. The Shipping Board judging by what has been stated, will be satisfied with a share of the carrying trade to America, and this the Liverpool Conference Lines have expressed their willingness to give.

**Constantinople Loan.**

A meeting of the holders of the bonds of the City of Constantinople Five per Cent. Loan, 1909, the last coupon of which to be paid in London was that which matured on June 14, 1914, has been called for to-day by Messrs. Baring Brothers and Co., and the National Bank of Turkey. It is understood that the position with regard to the loan will be dealt with fully at the meeting, and that a resolution will be submitted in favour of the appointment of a committee to represent the bondholders. The loan, it may be added, is a direct obligation of the municipality, and its principal and interest are guaranteed by the Turkish Government, and the loan is further secured by certain receipts.

# Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

## TURKEY.

*Constantinople, October 23.*

### The Financial Crisis.

The sudden and tremendous slump in the value of the Turkish pound which commenced over a week ago has now reached alarming proportions. From less than 600 piastres the pound sterling has risen to well over 800, and has even touched 900 piastres and more. The natural result has been to turn the entire commercial situation upside down, and to create the utmost confusion throughout the markets. Importers are refusing to take up their bills of lading unless payment is accepted at the rate of exchange which prevailed when the orders were given—somewhere about 540 piastres to the pound sterling—and many firms have stopped all sales until the situation becomes more settled. Naturally prices are soaring, and the public, always only too ready for a gamble, has made matters worse by frantic speculation.

As usual the true reasons for the sudden slump in the value of the Turkish pound are not at all easy to discover. Doubtless the fact that exports exceed the imports by about 400 per cent, has something to do with the depreciation, but not with the suddenness of the slump. It is not as if the situation varies very much from month to month. Since the closing of Anatolia and Russia to commerce the value of the Turkish pound has steadily declined from under 400 piastres to the pound sterling until it reached, before the present crisis, 550 piastres. That depreciation was perfectly natural, and easily accounted for, but the causes for it are generally considered not to be sufficient to account for the slump of 200 piastres in a couple of days. The explanation that is widely accepted is that a subtle financial operation of some magnitude is responsible, but as there is no certain information as to the nature of that operation, speculation on the subject is idle . . . . . for the moment.

The rumour-mongers, of course, seized the opportunity to create panics which enabled them to fill their pockets. One of the most mischievous of these rumours was a report to the effect that the Angora Government was issuing several millions worth of paper money. The report was completely false, but it served its purpose. It was also stated that the Greek Government has ordained that all commercial transactions in the occupied provinces in Anatolia are to be carried out in Greek currency, but this is not a fresh measure. The fact that an effort is being made to oust the Turkish for Greek currency in the occupied areas has undoubtedly contributed to the general depreciation in the Turkish pound, but again, this does not account for the sudden slump.

The Imperial Ottoman Bank has taken the step of refusing to deal with the members of the Bourse, and if other banks followed the example the crisis would perhaps be shortened, but in any case it cannot last long. The Turkish pound will probably drop back to a level considerably above the former rate of 550 to the pound sterling, and remain there. In the interval incalculable damage will have been done, and a few individuals will have filled their pockets.

## GREECE.

*Athens, October 15.*

### Greco-Czecho-Slovak Commercial Treaty.

M. Grégorino, Consul for Czecho-Slovakia at Salonika, has been in touch with M. Babougtchick, Minister for Yugoslavia, who is entrusted with the care of Czecho-Slovakian interests, with a view to the opening of negotiations for a commercial treaty between Greece and Czecho-Slovakia.

The view is taken that owing to the abnormal situation in Greece difficulties stand in the way of a commercial convention at the present time. M. Grégorino declared, however, to the representatives of the Ministry of National Economy that his Government was desirous that intimate commercial relations should be established between the two countries, pointing out that certain Greek products such as currants, tobacco, and wine, were very much in demand in Czecho-Slovakia, in exchange for which Greece could obtain sugar, glassware, porcelain, enamelled utensils, and agricultural implements.

The necessity for a commercial convention being thus demonstrated, it has been decided that a provisional agreement for the exchange of goods should be concluded which is to be converted into a definite treaty as soon as circumstances will permit.

### Customs Receipts.

The receipts of the Piraeus Customs during September (O.S.), amounted to 10,842,190.60 drachmae in paper and 347-387.40 in gold. Compared with the receipts during the corresponding period last year, there is an increase this year of 4,832,685.85 drachmae in paper, and a decrease of 47,536.75 drachmae in gold.

*Athens, October 22.*

### Greco-Czecho-Slovak Relations.

The pourparlers for a commercial agreement between Greece and Czechoslovakia, of which I spoke in my last letter, have temporarily been suspended. This is due to the fact that the Greek Minister of National Economy could not wholly accept the conditions set forth by the Czecho-Slovakian Government, and the latter requested its representative, M. Gregorino, to postpone the negotiations to a later date.

### The Piraeus Chamber of Commerce.

The Chamber of Commerce of Piraeus at a meeting held last week discussed the question of the Consortium of Banks. The opinion expressed was to the effect that the Syndicate was a necessary institution, and had rendered great service to the country in its present difficult hours. The necessity of the war having been recognised by the meeting, it was agreed that the first question to be settled by the Consortium was that of the exchange abroad, in order that the State might cover its purchases of the necessary supplies for military operations. When this was satisfied it was maintained that exchange should be placed at the disposal of the country's commerce but only for articles of absolute necessity for the needs of the population in general.

The meeting resolved to submit to the Government resolutions advocating (1) The complete prohibition of the importation of articles of luxury; (2) that the sale of goods, the prices of which are subject to fluctuation, should only be allowed to well-known merchants, thus avoiding speculation in the price of foodstuffs; (3) that orders abroad should only be placed after special authorisation, so that the stocks of useless goods, the payment of which has not been authorised by the Syndicate, should not accumulate at the Piraeus; (4) that the amount of imports should be regulated in accordance with the exports by allowing permits to import goods to merchants who undertake to export Greek goods of an equal value.

## ROUMANIA.

*Bucharest, October 20.*

### British Loan for Roumania.

It is reported that a British Consortium has offered the Roumanian Government a loan of £5,000,000 against Treasury Bonds redeemable in 3½ years, and bearing an interest of not more than 8½ per cent. per annum payable every six months through a London Bank, the capital and interest to be guaranteed by one of the State revenues or by one of the staple products of the country such as

Digitized by Google

grain or timber. This offer is now under consideration by the Cabinet.

**Export of Railway Sleepers.**

In order to assist the timber industry in certain regions of the country the Ministry of Industry and Commerce has decided to allow the producers of timber to export 20 million railway sleepers of beech-wood without being compelled to deliver the 40 per cent quota to the State Railways. The usual duty taxes, however, will have to be paid. This concession has only been accorded to Transylvania, Bukovina, and the Banat.

The old conditions still remain in force as regards oak sleepers, *i.e.* 50 per cent. has to be given to the State Railways, etc.

**Roumano-Greek Trade.**

The Roumanian and Greek Governments are negotiating for the exchange of certain products, which will be subject to a special duty tariff until an economic convention has been concluded between the two countries. Roumania will supply Greece among other things with timber for building purposes which is so urgently needed for the new colonisation of Asia Minor.

**Export of Pigs.**

During the period March 25 to October 25, the Ministry of Industry and Commerce granted permission for the export of 91,195 pigs and 487, 040 kilogrammes of bacon. Only about 25,000 pigs and about 300,000 kilogrammes of bacon have actually been exported. The authorities are anxious to develop this export, for according to statistics Roumania has a large surplus stock. Transylvania alone has at least 1,2000,000 pigs.

**Miscellaneous.**

A Bulgarian delegation consisting of the presidents, vice-presidents, and members of the Chambers of Commerce of Sofia, Varna, Bourgas, Rustchuk and Philipoppolis arrived in Bucharest a few days ago for the purpose of visiting the Roumanian Industries Fair at the Carol Park.

The Belgian steamer s.s. Livonier left Braila last week with 900 kilos of gold from Transylvanian private mines. The gold is said to be destined for Belgium and England. Up to the present 1,605 kilos. of gold have been allowed to be exported. The time-limit for export fixed by the State expires on October 21.

The Bulgarian Post Office Department intends to approach the Roumanian Government with a view to the establishment of postal and telegraphic facilities between the two countries based on the conventions which existed before the war.

## BULGARIA.

*Sofia, October 23.*

**The Financial Crisis.**

The financial crisis which has existed here for such a long time has become much more severe of late. None of the banks, even the biggest ones, have any ready money at their disposal, and the result is stagnation in commerce and industry. It is generally believed that the crisis will become less acute towards the end of the year (as it did in 1919) because the peasants, who are richer to-day than they ever were before, are accustomed to make large purchases at this time of year. The wealth of the peasants is indeed very great, as one soon realises by spending a few days in the provinces and noting the numerous and well fed herds of cattle, horses, pigs, etc. that are everywhere to be seen. Meanwhile poverty in the large towns is becoming worse every day, as with the purchasing value of the leva becoming less there is a corresponding rise in the cost of living. The control of the prices of foodstuffs is a step which ought at once to be taken by the Government, but as it is composed of Agrarians it has no incentive to institute such a reform. In Roumania the leu has about the same purchasing value as the leva, but General Averescu's Government have taken severe measures against food profiteers, and at Bucharest meat is not allowed to be sold at more than seven lei per kilogram whereas at Sofia the price runs from 23 to 25 levas. If the leva continues its downward course, the position of the poorer classes amongst the townsfolk will indeed become lamentable. At present the majority of the professional classes are living on their capital. In some Central European countries the situation has become such that it is almost impossible to remedy it, but this is not the case in Bulgaria where 3½ to 4 million peasants constituting roughly 75 per cent of the total population, are living in peace and plenty at the expense of their less fortunate countrymen in the towns.

**New Import Taxes.**

The Ministry of Finance has prepared a new scale of import duties which is at present being studied by the Reparations Commission. The new scale provides for great increases in the duties on articles such as tea, textiles, motor cars, and all kinds of machinery, etc. Thus it is proposed to increase the duty on motor cars from 6,000 levas per motor car to 50 per cent *ad valorem*. Such an increase will effectually put a stop to the import of all cars, and as a matter of course the import of tyres, spare parts, etc. will also cease. The object of the new taxes is to increase the revenue, but the reverse result will apparently be obtained. Incidentally it must be borne in mind that there is no motor car industry in Bulgaria to protect. Another anomaly in the new scale is the very slight increase in the tax levied on sugar. The Bulgarian sugar industry is of considerable importance, and stands in need of protection from foreign rivals. Altogether the new duties would seem to require a considerable amount of revision before being laid before the Sobranje.

## ASIA MINOR.

*Beyrout, October 12.*

**The Tripoli-Homs Line.**

The inauguration of the reconstructed railway line Tripoli-Homs was celebrated on October 1. The French Governor of the Lebanon, official delegations of the new Lebanese State and of the neighbouring states of Damascus, the Governors and Mayors of the towns of Tripoli and Homs, and the high officials of the Railway Administration, were among those who attended this function. General Gouraud's suite consisted of his aide-de-camp, the Military Commissioner of the Syrian and Cilician railway system, and a professor of the Collège de France who had landed on the previous day.

The High Commissioner and Commander-in-Chief of the Army of the Levant presided over this ceremony not only as the supreme authority in Syria, but also as the representative of the Government of the Republic which defrayed the cost of this enterprise, chiefly at his recommendation. Several speeches were delivered, and General Gouraud had to make not less than three.

The Tripoli-Homs line was originally built in 1910, and, until 1914, it was most profitable. Among the French railways in the former Ottoman Empire only the Adrianople line equalled it in financial results. During the war, the Turco-Germans carried away all

Digitized by Google

the materials of the permanent way, rails, fishplates, and sleepers, for use in the construction of the Baghdad Line beyond the Euphrates.

The line is 103 kilometers in length, and the cost of its reconstruction amounts to 103 million francs. The 17,000 tons of steel used has been supplied by three French works all of which curiously enough are in the devastated provinces, viz.: Pompey, Hayange, and Isebergues.

The railway company, seriously affected as it was by the war, could not possibly have undertaken this enterprise at the present time. How the line suffered during the conflict may be gathered from the following extract from the speech of the Director-General of the Railway Administration at Beyrout, describing what he saw on his first visit to Syria immediately after the Occupation:

"Out of 700 kilometers in Syria 200 were completely destroyed, and several bridges and culverts blown up. All the buildings on the Royak-Aleppo line were burnt down, and the accessories of the line and garages had been taken away. The fine workshops of Royak, which employed 300 workmen, were a heap of ruins, under which were buried machines and tools which it is practically impossible to replace in the present state of world industry. As regards rolling stock it had practically vanished. Out of 63 locomotives practically new in 1914, only five were delivered back, and they were almost useless. The trucks had been smashed, burnt or thrown away on the neighbouring lines. The passenger carriages were stripped of their blinds and panes. The lighting material was gone, so was the upholstering, and, what was more serious than all, the safety appliances, the automatic brakes, were no longer there. A depot of spare parts, well stocked, and which had cost several millions, was completely ransacked."

After the railway ceremony General Gouraud proceeded to Akkar to preside over another ceremony held to mark the introduction there of land registration, the establishment of model farms for experimental cotton cultivation, and the creation of studs (haras) for the preservation and improvement of the Arab horse breed.

*Smyrna, October 20.*

**Trade of Smyrna.**

During the month of August the Ottoman (Aidin) Railway Company carried to Smyrna 4,091 tons of goods, principally made up of dried fruits, valonea, grain, tobacco, and provisions.

## ALBANIA.

*Valona, October, 11.*

**Imports.**

During the first half of this year Albania's imports amounted in value to 41,000,000 francs. Italy's share of this total was 29,000,000 francs, Greece's 9,000,000, and the United Kingdom's only 340,000.

**Export of Horses.**

Italy having imposed high duties on horses imported from Albania this country is seeking outlets. Albanian horses are small beasts, standing from 120 to 135 centimetres high, but they are strong and have great powers of endurance. From three to four thousand horses are generally exported from the plain of Muzekié.

## GROWTH OF ROUMANIA'S EXPORTS.

(*From Our Own Correspondent*).

*Bucharest, October 12.*

For the first eight months of 1921 Roumania's exports of her principal products—grain, oil and timber—were as follows (in tons), the figures in brackets representing the corresponding totals for 1920:—Wheat 25,689 (229); wheat-flour 12,928 (52); rye 52, 711 (1,924); barley 268,041 (56,770); oats 82,685 (1,463); maize 670,370 (106,665); crude oil 11,462 (3,500); oil residuals 11,640 (18,346); refined oil 59,887 (86,948); petrol 51,182 (38,715); mineral oil 12,545 (9,078); boards and planks 43,545 (17,282); other timber for constructional purposes 3,494 (4,058); fir-poles 10,674 m.c. (2 m.c.).

## TRANSPORT CHARGES IN 1853.

(*By our Khartoum Correspondent*):

The following figures taken from Le Compte D'Exayrac de Lanture's "Le Desert et le Soudan" of 1853 are of considerable interest in these days of high freights and speedy (?) travel:—

Transport charges from Khartoum to Cairo per rotole of five quintals:—Khartoum to Berber by boat, 10 days, PT 4-8, or by caravan, 10 days, PT 50; Berber to Serbra Korosko via Abu Hamed by caravan, 15 to 20 days, PT 160-180; Korosko to Aswan by boat, three days, PT 3-4; camel hire to avoid cataracts three days, PT3; Aswan to Cairo by boat, 15 to 20 days, PT 10-12. For an alternative route the figures are:—Khartoum to Deble via Atmom-Bahiouda, 12 days, PT 50-60; Deble to Dongola by boat, three days, PT 3-4; Dongola to Wadi Halfa by caravan (transport on this part of the Nile being dangerous) 12 days, PT50; Wadi Halfa to Aswan by boat, 8 days, PT3-6.

For the route from Kordofan to Cairo we have the following:—Lobeidh (El Obeid) to Khartoum via Coursi Sanzur Coamet and Tor el Khada, 10 days, PT50-60. An alternative way is given:—Lobeidh to Debli via Bara, Kaymar, Djebel Haraza, Wadi-et-Ombililla or via Elai Simria, etc., 15 to 18 days, PT 80.

Thus the hardy traveller of these days would take from 46 to 56 days from Khartoum to Cairo and considerably longer to do the trip from Cairo to Khartoum owing to the current being against him on the way south, whilst the cost of taking his worldly possessions would be from 230 to 257 piastres per 5 quintals. In the same way the journey from El Obeid would occupy from 56 to 74 days according to the route fixed upon. Verily the T. G. to the Sudan of the early fifties had his money's worth from the point of view of time at any rate.

## GENERAL GOURAUD.

Abdelkader el Dana writing from Beyrout with reference to the inauguration by General Gouraud of the Tripoli-Homs line, a description of which will be found in another column, says:—

"It must be said that the General is actively engaged in every other direction also for the opening up of inland communications to facilitate the trade and commerce of the country. No praise is too much for what he is doing, and for the manner in which he does it."

A decree issued in Athens prohibits the importation into Greece of marks, crowns, and Turkish pounds, and the export of gold and silver.

The traffic receipts of the Egyptian Delta Light Railways for the week ended October 10 amounted to £E15,199; total for year £E187,440. For the corresponding period of last year receipts amounted to £E16, 890; total for year £E248,227.

## KAGALU EXPERIMENTAL FARM.

*(From Our Own Correspondent.)*

*Khartoum, October 1.*

In 1911 the Forest Department took over the Kagalu Plantation in Mongalla Province, consisting of Cerea rubber and banana trees and a large stock of Cassava. It was decided to experiment primarily with the rubber, and during the years 1915 to 1920 inclusive 360 feddans were planted with 50,440 trees. Early planting was on the basis of 15′ by 15′, subsequently increased to 15′ by 20′, and finally in 1918 to 20′ by 20′, as likely to afford the best results. The original avenues of trees were devoted to experiments in the various methods of tapping, and very excellent results were obtained with the ordinary knife and pricker. Always provided that sufficient care be exercised to avoid making too deep an incision there appears to be no subsequent damage to the tree. Possibly owing to climate conditions bark renewal is remarkable for its rapidity, and from observations recorded it would be quite possible to re-tap the same surface after an interval of 12 months. In 1919 tapping was commenced on the 20 feddans put down in 1915, but it was found possible to tap the 1917 area the following year owing to acceleration in growth due to wider planting, the very promising result of an average of ½lb. per tree for 90 tappings being obtained on this area of three years olds. A few of the seven year old trees averaged out two lbs. per tree for 90 tappings. The yield for 1919 was two tons of dry rubber, which was doubled in the following year and increased to six tons in 1921, the estimate for 1922 being nine tons. The cost of production has so far worked out at 20 to 30 milliemes per lb. (4d. to 7½d.) which should decrease very materially as the trees grow older.

In 1917 the question of coffee cultivation received consideration and an experimental plot of 15 feddans was planted with coffee Liberica. The growth of the plants has been fairly satisfactory, but it is evident that the climate is hardly damp enough for this particular species, as on at least two occasions the moisture proved insufficient for the ripening of the berries. During that and the following year a considerable quantity of Mocha seed was imported from Harar (Abyssinia), but with the exception of 100 plants failed to germinate. As a result of careful nursing these survivors proved sufficient to enable a large stock to be raised, and at the end of May last some 10,000 plants were awaiting transplanting. The species has proved most successful and bears heavy crops. *Hemeillia Vestatrix* is prevalent, but with proper precautions is more or less negligible. An effort has been made to encourage local cultivation of coffee amongst the natives, and a few plants have been given to a local chief for this purpose.

A series of experiments were also made in growing cinchona, ginger, cocoa, and cardamons but the results have been so disappointing that further serious development is unjustifiable. Two cinchona bushes flowered, and it is proposed to try this as well as coffee at a higher altitude further south. It is, of course, possible that better results could be obtained with acclimatised seed. Excellent results were obtained with Mauritius and Sisal hemp. An exceptionally good fibre (*Hibiscus sp.*) was produced, which in 1917 was valued at the high figure of £98 per ton.

As regards wood, teak, kapok, toon, mahogany and various species of eucalyptus have been raised at odd times. The results with toon (*Cedrela Toona*) and mahogany have been so promising that it is proposed to put down a further 10 acres of each this year. Tropical fruits of course do excellently, and it is a great pity that the Government steamers do not evolve a system of cold storage which would enable their transport to Khartoum where there would be a large and steady demand.

---

The directors of the Royal Mail Steam Packet Company have, resolved to pay an interim dividend of 2 per cent. (less income tax) on the ordinary stock. The dividend warrants will be posted on November 4.

## THE GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to August 31, 1921 (new style January 14 to 13, September 1921).

| | Monopolies, tobacco stamps, stamped paper, Naxos emery. | Piraeus Customs. |
|---|---|---|
| | Drachmae. | Drachmae. |
| Gross receipts. Aug. 1921 .... | 6,052,883.38 | 7,172,990.25 |
| Do. do. do. 1920 .... | 6,506,630.27 | 4,362,540.20 |
| Estimated receipts for 8 months (Law of Control) ..... | 19,266,666.67 | 7,133,333.33 |
| Actual receipts for 8 months, 1921 ..... | 45,551,232.42 | 38,941,967.40 |
| Actual receipts for 8 months, 1920 ..... | 42,739,212.27 | 38,437,048.90 |
| Difference between estimated and actual receipts for 8 months 1921 | ×26284,565.75 | ×31,808,634.07 |
| 1921 | ×23472,545.60 | ×31,303,715.57 |

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1–5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893.

The products of the sales of Naxos emery have been paid in paper drachmae since August, 1920. In the case of the Piraeus Customs, the receipts in gold are included in the above statement at par.

---

The imports of coal into Alexandria for the period January 1 to August 31, amounted to 589,110 tons as against 370,826 tons for the same period last year.

---

The traffic receipts of the Smyrna Aidin Railway for the week ended October 22 amounted to £10,855.

Constructed on scientific principles, and wrought in the finest grade materials, by highly skilled workmen—what else could ensure the reliability and guaranteed accuracy found in every UBEL Pressure and Vacuum Gauge?

Manufactured in UBEL works, this but one of the long list of products representing British workmanship supreme, and UBEL quality unsurpassed.

## GAS-FILLED LAMPS.

Everyone has heard the name "gas-filled" applied to electric lamps of the latest type, but it may be that the term, although scientifically accurate, conveys a totally erroneous idea to the user that the lamp is in some way a combination of a gas and electric lighting system. In this type of lamp the filament is surrounded by a gas which is unchanged by heat, and has no effect whatever on the filament in either a hot or cold condition. In the older metal filament and also in the still older carbon filament lamp the filament was in a bulb from which every particle of air was exhausted, making as perfect a vacuum as possible. Had there been the slightest trace of oxygen or of atmospheric air left in the bulb the lamp would have burned out as soon as the current passed through the filament.

One of the largest firms of electric lamp makers in the world has just sent me a note pointing out that the temperature to which the tungsten filament can be heated in a lamp is limited by the fact that a very hot filament gives off continuously fine fragments of tungsten, or in other words is continually disintegrating. The rate of the disintegration depends on the temperature, the higher the latter the more rapid the separation of the particles, so that it is obvious that if a reasonable length of life is required there is a limit to the temperature to which a filament can be heated.

Owing to the chemical action of the air on tungsten, the original "Osram" lamp was made with the filament glowing in a vacuum. It was later discovered, however, that by introducing into a bulb a gas which was chemically inert the rate of disintegration could be retarded; but as a result of the cooling effect of the gas the filament could not be maintained at the high temperature without an excessive expenditure of electricity.

By winding the filament into a spiral of extremely small pitch the surrounding gas forms a hot zone or kind of blanket round the filament, and prevents much of the cooling which results when the filament is straight. In this way it has been found possible to maintain the temperature of the filament higher than is practicable in a vacuum type lamp, with the result that the efficiency is greatly increased without detriment to the life of the lamp.

### The Gas Used in the Bulb.

In the earlier types of gas-filled lamps nitrogen was employed, as it was the most convenient form of inert gas. Excellent results were obtained with the higher candle powers, such as are used in public lighting and the illumination of docks, railway sidings, and other large spaces. Difficulty was found, however, in producing satisfactory lamps in the lower ranges of candle power.

This difficulty has been overcome by the use of argon in place of nitrogen. Argon is so remarkably inert that its presence in the atmosphere was unsuspected until the historical investigations of Lord Rayleigh and Sir William Ramsay, F.R.S., revealed its presence in the air. A plant has been installed for the production of argon in commercial quantities at the Osram-G.E.C. Lamp Works, and the use of this gas enables "Osram" gas-filled lamps to be made in candle powers suitable for general lighting purposes, both at standard supply voltages and at the very low voltages used in motor car lighting.

### Shape of Bulb.

The "Osram" gas-filled lamp differs from the standard "Osram" in other particulars, notably the shape of the bulb. The bulb is in its latest form "club-shaped with an elongated neck in which the hot gas rising from the filament is cooled.

One advantage of this form of bulb is that the minute particles of tungsten thrown off by the white-hot filament are carried upwards by the stream of gas and deposited on the neck, where the slight blackening they produce does not obscure the light as it would do on other parts of the bulb.

It is pointed out that to secure the most satisfactory results gas-filled lamps should be hung vertically. In certain of the smaller sizes the filaments are so supported and arranged that the lamp will burn in any position, but, as will readily be understood, inclining the lamp tends to reduce the cooling effect of the long neck and as a result impairs to some extent the life of the lamp. As most of the modern electrical light fittings and shades are designed so as to give the best effect when lamps are hanging vertically downward the adherence to this position is not by any means a drawback in modern lighting.

It may be said, in concluding, that for equal consumption of electricity, as compared with the vacuum type of lamp, approximately double the candle power is obtained, except for the smaller sizes, or in other words for equal candle power the electricity consumption and therefore the burning cost is halved, while compared with a vacuum lamp the light approximates much more nearly to sunlight in colour. The intrinsic brilliancy of the filament is actually about eight times that of a tungsten filament glowing in a vacuum.

---

### Char-a-bancs Abroad.

It is interesting to note that at a recent meeting of the International Touring Alliance the Automobile Association was able to get a proposal passed for the extension of foreign travel facilities to large touring vehicles such as char-a-bancs. The Alliance will endeavour to obtain from the various European Government permission to issue *triptyques* for these vehicles, and also for motor caravans and trailers, to enable them to pass foreign frontiers without any customs difficulties.

### Hiring Electrical Goods.

I understand that there is a widespread feeling in electrical circles to the effect that greater facilities should be given the public in connection with using such handy little domestic appliances as flat irons, hot plates, and toasters heated electrically. The argument is—and it must be admitted that it is perfectly sound—that the public do not know the advantages of using these devices and they are not going to pay anything to find out. No one is ready to pay for anything of doubtful advantage, and when the station engineer and the contractor say that a certain electrical device is an exceptionally good thing, they rightly ask to be allowed to try before they buy.

Now at the present time all electrical supply undertakings possess powers to hire out electrical apparatus, and although some have availed themselves of these powers for some time past there are a far greater number who have not yet done so. By one of the principal authorities it is regarded as essential that hiring facilities for the more expensive appliances should be provided, and as he says it would appear that in many undertakings there is hesitation in setting up hiring systems under existing circumstances because the impression exists that it is necessary to commence with a more or less elaborate showroom and a special staff. Supply engineers are asked therefore to consider the possibility of starting the hire of domestic apparatus with a minimum of preliminaries and elaboration, or, in other words, to start and get on with the work quietly and without any preliminary fuss. There is little fear that the inauguration of hiring systems will result in a flood of orders, and in consequent embarrassment to the electricity undertaking, as although hiring is essential a good deal of spade work has to be done. There is no proposal that any exhaustive and expensive publicity campaign should be started; on the contrary, the idea is that those undertakings which have not hitherto done anything of the kind should get a grant from the powers that be and spend a limited sum in the course of the next six months or a year in buying appliances on the best possible

Digitized by Google

terms, and hiring them out to such customers as will not only give them a fair trial, but who are of such standing as to be able to purchase them outright as soon as they are satisfied they will do all that is claimed.

**Power Alcohol.**

With regard to the remarks on power alcohol production which recently appeared in these columns it is of some interest to note that a few days ago Mr. E. Shrapnell Smith referred to the use now being made of home produced alcohol on actual industrial transport work. He mentioned that a certain large firm who have given the subject deep consideration, and who had conducted preliminary tests, are now running their fleet of commercial lorries on a mixture of petrol, power alcohol, and benzole in the proportion of about one-third of each. In Mr. Smith's opinion this is to be regarded as the line of development in connection with the use of alcohol which will be followed in the immediate future.

Commenting on this the only thing I fail to see clearly is why there should be any petrol-benzole mixture. I would not for a moment suggest that Mr. Smith is in error, and that the firm are running on a mixture of equal parts of petrol, paraffin and alcohol, or of benzole, paraffin and alcohol, although such would be a very suitable fuel. But why benzole and petrol with alcohol? Of course there is a slight added power with benzole as compared with petrol, as I have often pointed out, but this gain is offset by the higher price. Alcohol does not mix more easily with a combination of petrol and benzole than with either alone, and the carburation of the mixture is not better than with one of the light hydrocarbons alone. My advice to any commercial firm intending to use power alcohol as it stands would be to cut out one or other of the hydrocarbons and use a straight benzole-alcohol or petrol-alcohol mixture in the proportion of two-thirds of the former to one-third of the alcohol. To my mind more economical and quite as satisfactory running would be obtained by using a mixture of 30 per cent. power alcohol, 50 per cent. petrol and 20 per cent. ordinary paraffin.

Of course, the relief in respect of duty has given great encouragement to the production of power alcohol from home resources, and a great deal of research work is in progress. That eminent authority on engine design, Mr. Ricardo, is a firm believer in the future of power alcohol as a fuel, and we may expect some important and far reaching developments in this connection shortly.

*(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)*

**Egypt.**

Clothing, etc.—The Lunacy Division, Abbassiya, invites tenders for the supply of clothing, bedding, furniture, hardware, slippers brushes, and other household necessaries required for Abbassiya and Khanka Asylums for one year from April 1, 1922, November 21.

Paper and Stationery.—The Egyptian Ministry of Finance invites tenders for the supply of paper, stationery, and general office material required by the Central Stores, Ministry of Finance, for the year 1922—23. December 15. (D.O.T.)

Pumping.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of installation of pumping plant at Atf Pumping Station. December 31.

**Greece.**

Telephone Installation.—The Commercial Secretary to the British Legation at Athens has forwarded to the Department of Overseas Trade a copy of a notice of adjudication for the supply of a new Telephone Installation at Athens which is to take place on November 14 next. The Installation is to be of the central battery type and of an approximate capacity of 5,000 local lines, 40 inter-urban lines, and at least 50 special lines connecting Athens with the Piraeus.

**Roumania.**

Pipe Line Construction.—In connection with the laying of a pipe line, 26 kilometres in length for the supply of natural gas to the town of Targul-Mures in Transylvania. H.M. Consul at Cluj has received from the Engineer in charge of the scheme a statement of the material which will be required. This includes: 8,000 metres Mannesmann steel pipe; 21,600 metres steel pipes of various diameters; 17,700 metres drilling tubes of various diameters; 15,000 kilogrammes steel for hand tools; 40,000 metres galvanized iron or copper wire; various valves and fittings; spades, shovels, mattocks; also tools for two iron workshops and two mechanical workshops; 500 metres camel hair belting, pulleys etc. Quotations for the supply of this material are desired from United Kingdom firms who would be prepared to grant a long credit of three or more years. (D.O.T.)

**India.**

Bogie Carriage Underframes, etc.—The Burma Railways Company invited tenders for the supply of (1) 25 bogie carriage underframes without wheels or axles; and (2) 200 wheels without axles. Specifications can be obtained from the secretary, 109, Gresham House, Old Broad-street, November 11.

Bogie Carriages—The East Indian Railway Company invites tenders for the supply of 20 bogie carriages. November 9.

Condensing Plant, etc.—The Calcutta Electric Supply Corporation invites tenders for the supply and erection at Cossipore generating station of (1) one 15,000 kw. turbo-alternator and condensing plant, and (2) two water-tube boilers each with evaporation of 60,000lb. per hour. November 9.

**Malta.**

Conveyance of Mails.—Sealed tenders will be received at the Office of H.M. Treasury, Malta, up to 4 p.m. on November 30, 1921, for the service of the conveyance of mails between Malta and a port in Sicily or the Continent of Europe for a period of six years, (*a*) twice weekly, (*b*) three times weekly, provided that either party can terminate the contract by giving six months' notice on the expiration of the first three years. Tenderers will give the following particulars:—(*a*) Days of the week and hours of proposed arrivals and departures at Malta and at specified ports abroad. (*b*) Gross and net tonnage of steamers, speed, passenger and other accommodation. (*c*) Amount of annual subsidy required. (*d*) Date of commencement of service. Copies of conditions of contract and forms of tender may be obtained on application at the Treasury Office, Malta, or to the Crown Agents for the Colonies, 4, Millbank, Westminster, London S.W. The Government will consider any other conditions which tenderers may propose. No tender will be considered unless it is signed by the tenderer and by a suitable guarantor, residing in these Islands, for the due performance of the contract, and unless it is accompanied by a deposit of £500, which in the case of unsuccessful tenderers will be returned as soon as a contract is completed within the term fixed in para. 8 hereof. In the case of the successful tenderer the deposit shall be returned after the signature of the contract. The tenderer whose offer is accepted shall forfeit the deposit of £500 should he or his surety fail to sign the contract within eight days from the date of an intimation given to them to that effect, and fail to deposit with the Government of Malta, within eight days from the date of acceptance of the tender, a sum of two thousand pounds (£2,000) as security for the due performance of the contract.

---

Coupons of the Persia 6 per cent. Loan of 1911, due November 15, will be paid on and after that date at the Imperial Bank of Persia, 25 Abchurch Lane, E.C.4. or at their bankers Messrs. Glyn, Mills, Currie and Co., 67, Lombard Street, E.C.3

Debenture interest coupons and also the debenture bonds (drawn for redemption) of the Land and Mortgage Company of Egypt due November 11 will be paid on or after that date by Barclay's Bank, Ltd., Lombard Street, E.C.

# Near East Markets.

## LONDON PRODUCE REPORT.

Sugar.—British refined has continued in good demand. West Indian crystallised has been done at 40s. 6d., a rise of 6d., while Czecho-Slovakian has come to business at 19s. 9d., a fall of 9d. White Mauritius is 6d. up at 44s., but White Java is 3d. down at 47s.

Coffee.—The market has been quiet. Costa Rica has come to business round about 130s., an increase of 4s., while Indian has been done at 114s., a rise of 14s. Other transactions include Jamaica at 140s., and Nairobi at 106s. Future are :—December 48s., March 49s., May 49s., July 49s., September 49s.

Oilseeds.—An irregular tone has prevailed. Indian linseed at 16s. 6d. shows a rise of 1s. 3d., while La Plata is 1s. up at 14s. Rapeseed has been weak with Toria 9d. down at 18s. 6d., and Brown Cawnpore 6d. down at 18s. Cottonseed has been variable, with Indian 6d. up at 8s. 6d., and Sakellaridis 1s. down at 10s. 6d. Egyptian Black has come to business at 11s.

Seed Oils.—A variable tendency has ruled. Linseed is 1s. 6d. up at 27s. 6d., while for November-December 27s. 3d. is quoted, and for January-April 27s. 9d., advances of 2s. and 1s. 3d. respectively. Rape oil has been inactive, the crude variety being 2s. down at 50s., while refined is 1s. lower at 55s. Cotton oil has been dull. Refined common edible is unchanged at 55s., but Egyptian crude is 3s. lower at 44s., while deodorised is also 3s. down at 59s. Turpentine has been firmer, American being 3s. 6d. up at 68s. 6d.

Oilcakes.—The market has been very weak. Linseed cake has been done at 240s., a drop of 35s., while cottonseed cake has come to business at 160s., a fall of 30s. Arachis cake is 80s. down at 220s., while palm kernel is 50s. down at 110s.

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended October 15 :—

Sultanas.—The total estimated arrivals to date amount to 121,570 bags compared with 69,280 bags for the corresponding period of last year. The total estimated sales are 113,570 bags as against 63,280 bags for the same period last year, and the estimated stock unsold amounts to 8,000 bags as compared with 6,000 bags for 1920.

Figs.—The total estimated arrivals to date total 134,137 loads as against 134,821 loads for last year. The total estimated sales are 129,137 loads as compared with 130,821 loads for 1920, and the estimated stock unsold amounts to 5,000 loads against 4,000 loads for last year.

Shipments.—The s.s. Stork for London has on board 28,875 boxes sultanas, 756 cases figs, 268 boxes figs, and 12,279 bags figs; the s.s. Cypria for Liverpool has 29,820 boxes sultanas, 908 cases figs, 5,263 boxes figs, and 3,701 bags figs. The s.s. Belgravia for Liverpool sails on the 22nd inst, while the s.s. Minerva for Amsterdam is loading.

Markets.—The exchanges continue fluctuating widely, but the tendency towards the week end was upwards with every indication of renewed sensational movements. There was an improved demand for sultanas, sales for the week amounting to about 1,200 tons, mainly for Continental, Colonial, and American account. Prices are firm with an advancing tendency. Fine grades have been enquired for, and are becoming scarce.

Business in figs has been stimulated by an increased American demand and the lower foreign equivalents owing to advancing exchanges. All arrivals have been lifted off the market, and indications point to continued activity. Most packing establishments have been closed, business now being limited to Natural Figs in bags. Stocks remaining in the country are estimated at about 3-3,500 tons all grades. At the same time last year stocks amounted to about 11,000 tons.

It is hoped that the Prince of Wales will open the Ceylon Industries Exhibition in March.

The Zagreb Chamber of Commerce states that there is no ground for the rumour that it is proposed to introduce any measure prohibiting the payment of foreign claims in the kingdom of the Serbs-Croats-Slovenes.

## THE ROUMANIAN HARVEST.

(*From Our Own Correspondent.*)

*Bucharest, October* 12.

According to the last reports received by the Ministry of Agriculture the yield of the 1921 grain crops of the Old Kingdom is as follows ( in waggons of 10 tons) :—Wheat 264,585 ; rye 26,769 ; barley 141,415 ; oats 100,693 ; maize ( estimated ) 384,000. It is estimated that the quantities of seed required are as follows ( in waggons ), the second total representing the area in hectares to be sown :—Wheat 66,600 ( 3,700,000 ) ; rye 6,120 ( 340,000 ) ; barley 23,520 ( 1,470,000 ) ; oats 14,000 ( 1,000,000 ) ; maize 10,500 ( 3,500,000 ). Therefore Roumania needs for home consumption and seed :—wheat and rye 231,436 waggons, barley 86,987, oats 67, 467, maize 382,500. From these figures it appears that Roumania has the following quantities available for export :—wheat and rye 59,918 waggons, barley 54,428, oats 33,226, total 148, 072 waggons, besides the stock of grains existing from the previous year.

## SUDAN NOTES.

(*From Our Own Correspondent*)

*Khartoum, October* 15.

Rain gauge returns from Kordofan for the second half of September register a fall of 17 millimetres at El Obeid, 14 m.m. at Um Ruaba, 16 m.m. at Rahad, 10 m.m. at Nahud and no rain at all in the Bara district. Cultivation reports in the various districts with the exception of Bara are good, but a certain amount of damage by birds is reported from the three omodias of Um Ruaba.

News from Kassala is to the effect that cultivation in general is progressing favourably although certain districts are suffering from lack of rain. The fall during the second half of September is given at 5.4. m.m. for Kassala, 57 m.m. Gedaref, 64 m.m. Mefaza, 25 m.m. Butana and 44 m.m. at Gallabat.

The rainfall in the Nuba Mountains has been satisfactory, 54 m.m. being registered during the second half of September.

News from the Blue Nile is not quite so encouraging. There were heavy rains in certain districts which greatly benefited cultivation, but the crops in the Hassa Heissa and Kamlin districts are disappointing, having suffered from the drought.

Good rains are notified from the Fung Province, the maximum being 138 m.m. at Darfung and 96 m.m. at Roseires. Unfortunately for the prospects of the sesame crops red blight has appeared in several places.

Returns from the White Nile Province state that the rainfall has been much below average except at Dueim where 67 m.m. were registered, and weather reports from the north and centre of the province indicate that the rains have now ceased at an exceptionally early stage. In view of the large crops of Dhurrah last year, the areas sown this year have been very much less, and the frequency of the rains at the start of the season militated against adequate weeding. These factors in conjunction with the early cessation of the rains indicate a total crop yield of not more than fifty per cent. of last year's record.

The average rate of exchange obtaining at Adis Abeba during August is returned as 11.10 Maria Theresa dollars to the pound sterling.

## CZECHO-SLOVAKIA'S GOOD HARVEST.

The Statistical Department of the Czecho-Slovak Government has published the preliminary figures for the 1921 harvest. Although with the exception of oats the area under cultivation was smaller than in 1920, the total yield of crops has shown a considerable increase. This is particularly the case with wheat, rye and barley. The approximate totals are as follows (the figures in brackets representing the corresponding yields in 1920) : Winter wheat 1,017,932 (641,839) ; spring wheat, 89,025 (75,625); winter rye, 1,361,231 (821,311) ; spring rye, 20,138 (15,444) ; winter barley, 14,008 (12,703) ; spring barley, 1,017,236 (798,063). These figures are not final, but, provided that they are even approximately accurate, they show a gratifying increase and will relieve the Government of the onerous necessity of purchasing such large supplies of cereals abroad.

There is an opening for tractors in Yugoslavia in Croatia, the Banat, and the Batchka.

## LEVANT MARKET REVIEW

The following extracts are taken from the review of the National Bank of Turkey for September :—

Exchange fluctuations have limited business to a great extent during the month, as firms cannot afford to buy English goods, when the pound sterling has been quoted at 650 piastres. As a result of this, local firms are turning their attention more and more to Germany where they can buy goods at prices far lower than those quoted by English manufacturers. German goods are finding their way to Constantinople, and unless some scheme of stabilising exchange is devised Germany will regain her lost trade.

The situation in Anatolia has undergone a complete change since last month, and it is thought by some that the final stage of the campaign may have been reached. The approach of winter and the resultant impossibility of keeping open lines of communication point to a settlement in the not-far-distant future. The re-opening of Anatolia will undoubtedly have a temporary stabilising effect on the Turkish lira. Although at the moment business in Constantinople is passing through a very dark period, the future is not without promise.

*Flour.*—During the month 120,000 sacks arrived chiefly from America and a small quantity from Bulgaria. 30-40,000 sacks were exported to the Black Sea ports and Batoum. Large arrivals are expected from the United States early in October. Stocks are estimated at about 40-50,000 sacks.

*Barley.*—The total amount of barley available for export from Roumania is understood to be some 1,000,000 tons. Owing to the new scale of Roumanian taxation, however, only a little barley has been exported, but it has been offered on the market from Bulgaria and Tunis at the parity of 8 and 7¾ piastres per oke c.i.f. respectively. Exchange fluctuations have varied the Turkish value of those offers. United Kingdom prices fell from 40s. 6d. to 43s. for Roumanian barleys. Local prices opened round nine piastres per oke, but after falling to 7¾ piastres are now about 8½ piastres.

*Sugar.*—During the month 3,000 tons arrived as follows :—Java, 2,750 tons ; American, 250 tons. The price per ton c.i.f. Constantinople varied between £24 and £28. Exports amounted to about 500 tons for Bulgaria. The market is overstocked and prices have dropped below those ruling at producing centres owing to the cessation of all transit trade here. Stocks are estimated at about 9,000 tons.

*Rice*—About 800 tons arrived from the United States of America and Marseilles. C.i.f. prices for American were quoted at 10.50 dollars per 100 kgs. Roughly 250 tons were exported to the Black Sea ports and Bulgaria. Stocks on hand 750 tons.

*Coffee.*—250 tons arrived from Brazil per s.s. "Pollux" and 300 sacks were sent mostly to Bulgaria. C.i.f. prices were around 60 piastres per oke. As there are hardly any stocks on this market prices advanced rapidly and floating goods have already been disposed of.

*Textiles, Dry Goods, etc.*—Another month has passed without any marked improvement in the general business situation. Prices asked by holders of stocks have for the moment become prohibitive owing to the depreciation of the lira against the pound sterling. Buyers only become accustomed gradually to the new exchange level. Violent fluctuations of exchange have also been recorded in Roumania and Bulgaria and business in the former country has been practically suspended. The sudden and rapid rise in the price of raw cotton during the early part of September was felt here, though its full effect has not yet been recorded. Prices advanced considerably but not high enough to encourage importers to make new purchases in England. The violent depreciation of the lira has paralysed the sale of cotton yarns. This sudden rise is considered locally by some to have been caused by American Stock Exchange manipulations and is therefore subject to a fall. Others think however that the figures of 17d. to 18d. will be reached.

*Leather.*—The improvement mentioned in our last report has only partially materialised. Uncertainty still reigns on the market, aggravated by a rise of about 20 per cent in European prices. All big leather merchants in Constantinople have consequently been obliged to raise their prices by 15-20 per cent. The result is that their sales have dropped. Consumers will not pay the difference, although the high rate of the sterling exchange and the new Custom charges will raise the cost of all future leather arrivals by another 20 per cent. Under the circumstances it is very difficult to foretell the future, especially as the price of local leather has remained stationary and tanners on this side have not increased the price of their products. Consumers are already giving preference to local production, and a rise will very shortly take place in this article. Such a rise will, however, be welcome and will permit foreign leather competition. There is some animation in the vachette line, but prices remain the same. The Black Sea ports being closed, the market for buffalo hides remains quiet, and the same can be said with regard to raw hides. Generally speaking, the situation is more or less the same as last month, but if prices in Europe are maintained, it is hoped that business will be much better in the near future. For the present, local leather has the upper hand and is doing very well.

## CURRENT PRICES.

*General Produce.*—Bacon (Continental), 131s. cwt. ; (Canadian) 107s. 6d. cwt. ; (American), 98s. 6d. cwt. ; butter (Danish), 236s. cwt. ; (Australian), 180s. cwt. ; (New Zealand), 205s. cwt. ; cheese (Canadian), 100s. cwt. ; (New Zealand), 88s. cwt. ; lard 70s. cwt. ; eggs (Danish), 37s. 6d. per 120 ; (Styrian), 21s. 6d. per 120 ; chillies, 162s. 6d. cwt. ; cloves (Zanzibar), 1s. 3½d. lb. ; cocoa (Ceylon, good to fine), 87s. cwt. ; coffee (Costa Rica), 152s. 6d. cwt. ; (East India), 130s. cwt. ; (Central American), 117s. 6d. cwt. ; (Jamaica), 67s. 6d. cwt. ; (Mocha longberry), 113s. cwt. ; (Santos superior), 62s. cwt. ; ginger (washed Cochin), 57s. 6d. cwt. ; nutmegs (110's to 80's), 11½d. lb. ; pepper (Singapore black), 4d. lb. ; (Muntok white), 8d. lb. ; pimento, 2½d. lb. ; raisins (Valencias), 141s. 6d. cwt. ; sultanas (Smyrna), 120s. cwt. ; currants (Vostizza), 77s. 6d. cwt. ; (Amalias), 53s. cwt. ; sugar (Tate's cubes), 55s. 9d. cwt. ; (Lyle's granulated), 49s. 10½d. cwt. ; (Mauritius crystals), 45s. 3d. cwt. ; (West India crystallised) 40s. 9d. cwt. ; (centrifugal), 16s. 2½d. cwt. ; tapioca (fair Singapore), 1¾d. lb. ; sago (small pearl), 26s. 6d. cwt. ; sago flour. 17s. 3d. cwt. ; rice (Rangoon No. 2), 19s. 6d. cwt. ; (bran Rangoon), £7 2s. 6d. ton ; cinnamon (firsts), 1s. 1½d. lb. ; mace (fair Singapore firsts), 1s. 1½d. lb. ; tea—Indian (common to good common) 9½d. lb. ; (medium to good) 1s. 4½d. lb. (fine to finest) 2s. 7½d. lb. ; Ceylon (common to good common), 10½d. lb. (medium to good) 1s. 4d. lb. ; (fine to finest) 2s. 7½d. lb. ; Java common to good common) 7d. lb. ; wheat (English white) 40s. qr. ; (La Plata ex-ship) 82s. qr. ; (Australian) 54s. qr. ; barley (malting) 57s. 6d. qr. ; (feeding) 37s. 6d. qr. ; oats (English) 28s. qr ; (La Plata) 25s. 6d. qr. maize ; (mixed American) 33s. qr. ; (La Plata) 29s. 3d. qr. ; flour 47s. 6d. sack.

*Metals.*—Aluminium £122 10s. ton ; antimony (English Regulus) £39 10s. ton ; bismuth 7s. 6d. lb. ; copper (standard) £66 2s. 3d. ton ; (electro) £74 ton ; gold bars 104s. oz. ; iron (No. 3 Cleveland) 120s. ton ; hematite (mixed number) 130s. 3d. ton ; galvanized sheets (24 G) £18 15s. ton ; lead (soft foreign) £23 17s. 6d. ton ; manganese Poti 1s. 2d. unit. molybdenite 40s. unit ; nickel £187 10s. ton ; platinum 380s. 6d oz. ; plumbago £20 ton ; quicksilver £9 17 6ds. bottle ; silver bars 40½d. oz. ; spelter (G.O.B.) £26 8s. 9d. ton ; tin (standard) £158 7s. 6d. ton ; wolfram 12s. 9d. unit ; zinc plates £35 10s. ton ; tin plates (20 x 14) 21s. box.

*Chemicals.*—Acids : Boric 66s. cwt. ; oxalic 9d. lb. ; citric 2s. 5d. lb. ; tartaric 1s. 5d. lb. ; ammonia sulphate £14 15s. 0d ton ; arsenic (white powdered) £38 15s. ton ; benzole (standard) 2s. 5½d. gallon ; bleaching powder (35 per cent.) £15 15s. ton ; borax crystals 31s. 6d. cwt. ; cream of tartar 130s. 6d. cwt. Potassium : bi-chromate 9¾d. lb. ; chlorate 6d. lb. ; caustic £31 ton ; nitrate £53 ton ; permanganate 1s. lb. ; prussiate yellow 1s. 2d. lb. ; sulphate (90 per cent.) £16 10s. ton ; Sodium Crystals 140s. ton ; bi-carbonate £12 5s. ton ; bi-chromate 7½d lb. ; alkali (58 per cent.) £9 5s. ton ; chlorate 4d. lb. ; caustic (70 per cent) £24 15s. ton ; hyposulphate £18 10s. ton ; prussiate 8¾d. lb. ; nitrate £14 16s. 3d. ton ; glycerine (crude 80 per cent £80 ton ; glycerine (industrial 1260 per cent.) £110 ton ; lemon oil 3s. 5d. lb. ; quinine 4s. 0½d. oz. ; red lead £38 5s. ton ; white dry lead £41 5s. ton ; white ground lead £51 ton ; sulphate of copper £30 10s. ton ; sulphate of iron 117s. 6d. ton.

*Hides and Skins.*—Ox and Heifer (first), 90 lbs. and up 10½d. lb. ; 80 to 89 lbs., 10½d. lb. ; 70 to 79 lbs., 10½d. lb. ; 60 to 69 lbs., 9¾d. lb. ; 59 lbs. and under, 8¾d. lb. ; (second), 90 lbs and up, 9½d. lb. ; Cows (first) 60 lbs and up, 8½d. lb. ; 59 lbs and under, 8d. lb. ; (second) 60 lbs and up, 6½d. lb. ; 59 lbs. and under, 6 1-8 lb. ; Bulls (first) 6d. lb. ; (second) 4½d. lb Kips (first) 7½d. lb. ; (second) 6½d. lb. ; (third) 4½d. lb Calcutta Market : Prices in rupees per 20 lb. :—Arsenic hides (cows) : Agras, 7 to 12.8 ; Durbhangas, 5 to 6 ; Patnas, 4 to 5 ; salted cows, 3 to 7 ; Arsenic hides (buffalo), 3 to 6 ; Skins : Calf, 8 to 10 per 20 lb. ; goat, 260 to 290 per 100 pieces.

*Miscellaneous.*—Cotton (American) 12.92d. lb. ; cotton (Egyptian Sakel) 22.95d. lb. ; Oilseeds : Linseed (La Plata) £13 7s. 6d. ton ; rape (Toria) £18 2s. 6d. ton ; soya beans £14 7s. 6d. ton. ; sesame seed (China) £32 ton ; palm kernels £18 5s. ton ; Oils : Linseed £28 5s. ton ; olive (Levant) £79 ton ; palm £34 17s. 6d. ton ; rape (crude) £52 10s. ton ; £36 15s. ton ; petroleum 1s. 4½d. gallon ; petrol 2s. 1d. gallon fuel oil (ex tank) £3 15s. ton ; coconut (Ceylon) £46 2s. 6d ton ; Rubber : Plantation No. 1 crepe, 10d. lb ; smoked sheet 10d. lb ; fine hard para 1s. 2d. lb.

# SHIPPING INTELLIGENCE

## FLAGS AT PORT SAID.

(*From Our Own Correspondent.*)

*Port Said, October* 18.

One of the results of the war has been the creation of new flags, and a rare one has just been seen in Port Said on the s.s. Srgi, which was flying the Yugoslavian ensign, consisting of horizontal stripes of blue, white and red. She is registered at Dubrovnik (Ragusa), and is the third ship that has passed through the Canal flying the Yugoslav flag. She loaded here a full cargo of salt for Chittagong.

H.M.S. Concord has been in port for some time, and to-day H.M.S. Centurion has arrived and it is believed will remain here until the H.M.S. Renown has passed through here with the Prince of Wales on his way to India.

## SHIPPING AT THE PIRAEUS.

(*From Our Own Correspondent.*)

*Athens, October* 15.

There were 608 arrivals of various steamers at the Piraeus during September, of the following nationalities:—Greek 517, Italian 30, British 23, American 8, French 7, Dutch 6, Roumanian 5, German 5, Norwegian 2, Spanish 1, Serbian 1, Swedish 1, Portuguese 1, Russian 1. The number of sailing vessels of various nationalities which entered the port during the month was 431.

## NEW OFFICES OF ELLERMAN LINES.

The Ellerman Lines, Ltd., announce that they will be moving into their new building in Leadenhall Street (Nos. 104, 105, and 106), early this month, and that the staffs to occupy these new premises will comprise Messrs. Ellerman and Bucknall S.S. Co., Ltd., Montgomerie and Workman (1920), Ltd., (Agents for the "City" Line), the Hall Line, Ltd. Agency, and also the Agency of the Ellerman and Papayanni Lines.

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses:—*

*Anchor Line.*—S.s. Olympia for Bombay (Liverpool, November 8).

*Anchor Brocklebank Line.*—S.s. Malia for Calcutta (Manchester November 5); s.s. Matheran for Port Said, Colombo, Madras and Calcutta (leaves London, November 5); s.s. Magdapur for Calcutta (Birkenhead, November 6); s.s. Imani for Port Said, Colombo, Madras, and Calcutta (London, November 19); s.s. Holywell for Port Said, Colombo, Madras and Calcutta (London, December 3).

*Bibby Line.*—S.s. Yorkshire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, November 9); s.s. Warwickshire for Marseilles, Port Said, Colombo, and Rangoon (London, November 9 and Birkenhead, November 23).

*Byron Steamship Line.*—S.s. Lord Harrington for Patras, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, November 15).

*Clan Line.*—S.s. Clan MacQuarrie for Bombay and Persian Gulf (Birkenhead, November 4).

*Cunard Line.*—S.s. Cypria for Genoa, Leghorn, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa (Swansea, November 15); s.s. Port Inglis for Piraeus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, November 19).

*Moss Line.*—S.s. Karnak for Gibraltar, Algiers, Malta, Alexandria (with transhipment to Morocco, Algeria, Cyprus, and Syrian Coast ports) (Liverpool, November 5).

*P. and O. Line.*—S.s. Morea for Bombay (London, November 11); s.s. Plassy for Bombay (London, November 18); s.s. Sicilia for Colombo, Madras and Calcutta (London, November 18); s.s. Mirzapore for Bombay (London, November 26).

*P. and O. British India Line.*—S.s. Mancla for Colombo, Madras and Calcutta (London, November 11); s.s. Mashobra for Bombay and Karachi (London, November 18); s.s. Nerbudda for Colombo, Madras and Calcutta (London, November 26); s.s. Canara for Bombay and Karachi (London, December 3).

## SOUTH INDIAN RAILWAY.

The report of the South Indian Railway Company Ltd., for the year ended March 31, states that the gross earnings were Rs. 5,07,28,036, while the working expenses were Rs.2,48,34,019 and the net earnings were Rs. 1,58,94,017. Compared with the previous year there was an increase of Rs. 5,78,521, or 1.44 per cent. in the gross earnings; an increase of Rs. 29,30,749 or 13.38 per cent. in the working expenses; and a decrease of Rs. 23,52,228, or 12.89 per cent. in the net earnings. The company's share of the surplus profits, less adjustments in respect of previous periods, amounted to Rs. 7,11,217. From this the following Indian taxes have been paid, Income tax, £Rs. 53,099; Indian supertax, Rs. 36,157—88,256; Rs. 622,961. To meet the 2nd instalment due for supertax for the year 1920-21, a further sum has also been left with the Agent in India of Rs. 22,961; balance remitted to England, Rs. 6,00,000; at exchange of 1s. 3.17-32. per rupee, realising £38,828 2s. 6d. The profits before India taxation were only Rs. 98,700 less than those of the previous year. But there was a serious fall from 2s. 1d. to 1s. 3.-17-32d. in the rate of exchange at which the amount available for remittance was brought Home, resulting in a large decrease in the sterling amount realised. The balance at credit of surplus profits account on March 31 was £134,940 19s. 6d. Since that date various sums have been received and expended, and the account as at end of October, 1921, stands at £160,544 10s. 9d. The board recommend a final dividend of 2½ per cent., making, with the guaranteed interest of 1¾ per cent., a total payment for the half-year ending December 31, 1921, of 4¼ per cent., less income tax. The total distribution for the year will then be 8 per cent. (4½ per cent. from surplus profits, and 3½ per cent. from guaranteed interest) as against 8 per cent. paid in the previous year. Meeting, 91, Petty France, S.W.1, November 9, 2 p.m.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Adana.

The report for September states :—Cotton picking commenced at the beginning of the month. It is estimated that the yield of the crop will be 8,000 bales as compared with 26,000 bales last year.

The project of advances to agriculturists against mortgages appear to have been agreed to in principle by the administration in Paris of the Banque Francaise de Syrie, but the amount to be advanced has not been fixed. The local branch of the bank hopes that £T500,000 will be advanced, but the Economic Bureau believes that the amount will not be greater than £T70,000. The advances will be made for 18 months at 9 per cent. and a commission of a like amount on the total of the interest, against mortgages on lands and farms.

The high prices and the demand for cotton have encouraged agriculturists to devote themselves to the cultivation of their lands abandoned since July, 1920. Unfortunately they lack resources and it is not very probable that their efforts will be crowned with success despite the zeal displayed by the Economic Bureau.

There is a shortage of cereals here, more particularly wheat and barley, as a result of the poor harvest, and orders of some importance have already been placed at Marseilles as well as in Palestine and Cyprus.

Because of the rise in cotton in the European markets orders have come here from all parts, which has given a strong fillip to local commerce. Quoted at the commencement of the month at Ps. 180-200 per *batman* the price of cotton has fluctuated considerably, rising to Ps280 towards the middle of September, but falling to Ps.260 at the end of the month. Notable transactions have taken place for Smyrna and Salonika, which centres have purchased between five and six thousand bales at various prices. The fluctuations have been caused and maintained because of the hesitation on the part of the holders who have regretted disposing of part of their stock at Ps. 200 and Ps200.

Stamboul, October 8.

The trade movement previously recorded has slackened to a certain extent ; despatches of goods for Russia and Roumania are decreasing.

The recent depreciation of the exchange has given rise to an outburst of speculation which has caused prices to rise. These fluctuations have naturally adversely affected importers causing them to delay giving their orders.

Prices of manufactures have risen. Cabots in particular, have increased by 40 to 50 per compared with the lowest prices, and are quoted at £T9.60-9.80. Large quantities of this commodity have been here a long time and other consignments are on the way.

*Produce.*—Sugar. The fall in prices in centres of production, and the lack of business on all markets is disturbing holders. The tendency is for prices to fall. Quotations are :—American, prompt delivery : — 8.80 dollars ; Dutch, November-December, delivery, £24 per ton ; Belgian, November-December delivery, £21 per ton ; here £22 per ton in transit ; in Customs, £T25 per 100 kilos.

Rice.—The market is weaker. It has been impossible to conclude transactions owing to the fluctuations in the exchange.

# Cotton & Cotton Goods.

## MANCHESTER REPORT.

*(From Our Own Correspondent.)*

*Manchester, Friday.*

It has again been a very poor week throughout the market, and no initiative has been displayed by traders. It is now apparent that the increased activity which was registered a few weeks ago was but a flash in the pan, and the market is again back to a state bordering on acute depression. There is one feature, however, that is worth attention, and that is the undisputed fact that our customers abroad are in urgent need of replenishing their supplies, but how can business be done when the majority of the offers are roughly 20 per cent. out in price? Still the fact remains that goods will have to be bought, but when that will be nobody can say. The general opinion is that no real buying movement will take place until after the new year. With regard to cloth inquiry for the outlets of the Near East only a few occasional transactions in a variety of fabrics have taken place for Egypt. Buyers for the Levant and Constantinople have not been altogether idle, but sales of any weight have not been mentioned. Spinners of Egyptian yarns have been full of complaints, and prices when tested have favoured buyers. Users have only bought sparingly to meet immediate requirements. Less inquiry has been about in piece goods for India, and only a few sales have been registered chiefly in light cloths. A tentative demand has been about in standard makes for China, and isolated transactions have taken place in bleaching descriptions. Business with South America has been on a very small scale. Quotations for American counts have been irregular, and it is possible to purchase at cheaper rates than a week ago. No increased demand has been about for export numbers.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date October 27:—

The past week has shown a slight improvement on the preceding one, inasmuch as there has been an increase in sales and a certain inclination on the part of the market to steady itself. The latter may be ascribed not, unfortunately, to any increased support accorded by the trade, but to the United States Ginners' figures of 5,477,000 issued on the 25th inst. This report was regarded as somewhat "bullish." The enquiry here has dwindled to very small dimensions, although Liverpool continues a cheap market compared to Alexandria; Sakel—Fully Good Fair to Good—has formed the bulk of it. White cotton has been attracting more attention, and a small but steady enquiry for Tokar and Sudan continues. The recent fluctuating markets appear to have completely deranged the whole trade—if we are to believe all the reports we hear—and yet, in spite of this, and also a further complicated political situation in Europe, a fair, steady business takes place here week after week. The edge has been taken off speculative buying for the time being, so that what business is reported may fairly reasonably be taken as being for the trade, and a daily average of 400 to 500 bales compares not unfavourably with the higher average prevalent about a month ago, when one has allowed for the speculative buying which was included in the totals, and this, although at that time the "trade" was supposed to be buying in some strength. For those who like to compare "pre-war" figures with those current to-day, it may be of interest to note that the "takings by spinners" in Great Britain from August 1 this year are almost identical with those covering the same period of 1913!

A great deal of cotton is coming into sight in Alexandria just at present. A considerable carry-over from the old crop had been held up country in the vain hope of a rapid rise in values before the marketing of the new crop, which is now forcing this old cotton on the market. The weight of cotton is bound to oppress the market at this time of the year, unless there is an extraordinarily good demand by the trade, which there certainly is not at present. Nevertheless, we are still inclined to the opinion that before very long every bale of the present supply will be absorbed, and that Egyptian spinners will find themselves asking for more, when their qualities are extremely difficult to obtain. There had been rather more doing in purchases for forward delivery, and we expect a further increase in the near future. Manchester reports have been consistently lifeless, and yarns are still reported as being a drug in the home market. Total sales 2,200 (includes 150 bales Sudan). Quotations all round are reduced 150 points. Fully Good Fair Sakellaridis 23.00d.

## REDUCED COTTON SHIPMENTS.

The total value of the exports of manufactured articles from the United Kingdom for the nine months ended September last, according to the Government statistics, amounted to £439,879,181 which compares with £311,217,054 for the same period of 1913. Cotton manufacturers, which head the list of the 20 sections into which the figures are classified, were responsible for £129,060,572, or 29 per cent. Machinery £57,001,729, or 13 per cent., occupies the second place. Iron and Steel manufactures £47,883,248, or 11 per cent., and woollen and worsted yarn and manufactures £42,950,032, or 9½ per cent., are the next in order of importance. The amount of £129,060,572 for cotton manufactures consists of piece goods £100,045,277, yarn £15,987,327, and finished thread £6,206,761, the remaining £6,821,207 being the value of lace and plain net, flags, etc., not in the piece, and sundries.

Although cotton values so far this year are 36 per cent. higher than those of 1913 the quantities are very much smaller. In the case of cotton piece goods the reduction is from 5,350,278,900 yards to 1,866,341,100 square yards, which, after allowing for the difference between linear and square yards, is equal to 37 per cent. The weight of cotton yarn shipments in 1913 was 134,701,700 lbs., whereas this year the exports only amount to 90,592,600 lbs., a fall of 58 per cent. This reduction in quantities is not confined to cotton manufactures, but is common to the remainder of the articles in the classified list.

## MANCHESTER "SPOT" COTTON.

*(From Our Own Correspondent.)*

Manchester, Friday.

The question of the development of the Manchester "spot" cotton market is being given additional support by both spinners and merchants. Spinners are displaying greater interest as evidenced by the enquiries being made in regard to supplies, and merchants are determined to ship increasing quantities of raw cotton direct to Manchester. At a well attended meeting of cotton merchants, members of the Manchester Cotton Association, held on Tuesday, at which Mr. F. A. Tomlinson, the President, presided, the question of bringing greater quantities of cotton to Manchester for sale on the "spot" was fully discussed. The merchants realise that the spinner will buy increasing quantities in Manchester granted there is a larger selection, and merchants—in view of the Manchester Port Authority's decision that if any importer of raw cotton direct to Manchester wishes to send a portion of it to Liverpool for tendering purposes the cotton will be carried down by the Port Authority and delivered at Liverpool free of charge—are determined to have shipped direct to Manchester larger quantities of raw cotton for sale on the "spot." Attention was again drawn to the financial saving mills effect on their Manchester "spot" purchases against Liverpool purchases. Taking a mill in Ashton the saving in forwarding and railway charges is £13 10s. 10d. per 100 bales; in Rochdale £10 5s. 2d. per 100 bales; and to a mill in Oldham, £12 11s. 9d. per 100 bales. These savings are too important to the mills to be ignored, granted that the merchants provide a good selection of the different qualities of cotton for the inspection of the spinner. The merchants present agreed to send to Mr. H. Robinson, the Secretary of the Association, particulars of cotton offerings so that any spinner desirous of being informed of the cotton being offered by merchants who have stocks in Manchester could be fully posted.

Anglo-Egyptian Oilfields.—Gemsah production (week ended October 21, 60 tons (last week 50 tons). Hurghada production (week ended October 21, 3,282 tons (last week 3,188 tons).

## ON 'CHANGE.

### Markets Generally Firmer.

(*From Our Own Correspondent.*)

London, Monday Night.

On the whole the tone of the markets has been rather better during the past week. There has been a good deal of liquidation in various directions, and the uncertainty with regard to the Irish negotiations has been an unsettling factor, but all the same a much firmer tendency is to be noted in a number of quarters than for some weeks past. It would be too much to say that we have seen the end of the depression, but present indications certainly inspire the hope that once conditions are really favourable the markets will make rapid strides towards convalescence. This belief is, of course, responsible for the investing tendency that has been in evidence during the week. There can scarcely have been a time when so many bargains awaited the buyer who has faith in his convictions, and it is surprising in the circumstances that there has not been a good deal more buying.

Gilt-edged securities have continued to show a fairly firm front. Consols are unchanged at 48,7-8, while War Loan Fives, ex-dividend, are about the same at 87½. Fundings are ½ lower at 71¼. The India 7 per cent. Loan is 104. In Near Eastern securities Egyptian Guaranteed 3 per cent. are unchanged at 68¾, while Greek Guaranteed 2½ per cent. 1898, and Turkish Guaranteed 4 per cent., 1855 are the same at 66 and 69 respectively.

**Industrials Brighter.**

The Industrial group generally has made a much better showing. Business is tending to widen, and when alterations of prices have taken place it has been in the upward direction. In Iron and Steel shares Armstrongs at 16s., and Vickers at 11s. were firm spots. Textiles were quiet, with Courtaulds showing weakness at 31s. Shipping securities have been dull. P. and O. Deferred are again five down at 335, while Furness Withy have shed 2s. at 21s. Cunards are 3d. lower at 16s.

There has been nothing of a spectacular nature in the Oil Market during the week. Broadly speaking the tendency has been for shares to appreciate, though in a few directions lower prices are to be recorded. The view is widely held that if in the main prices have not seen their lowest they have very nearly done so. Mexican Eagles after their heavy fall have recovered 1-8 to 3¼. In the Egyptian group Anglo-Egyptians have shed 1-16 at 1,3-16, while Gemsah Reefs are 5s. 6d. Among the Roumanian group Roumanian Consolidated are 9d. up at 8s., Steaua Romana are 3d. down at 8s. 3d., Dacia Romanos are unchanged at 13-16, while Phoenix, after being considerably lower, close unchanged at 6s.

Bank shares have been firmer. Agricultural of Egypt 3½ per cent. Bonds are unchanged at 54, but the 3½ per cent. Guaranteed Bonds are ¼ up at 55½. Imperial Ottoman Banks remain at 7, but National Bank of Egypt are lower at 18¾, a drop of ¼. Bank of Athens are unchanged at 2, while Ionians are the same at 3¼. Chartered of India are 14½, National of India are 37¼, while P. and O. Banks are 11¼. Imperial of Persia are 5,1-8, and Bank of British West Africa are 4¾.

**The Rubber Outlook.**

There has been practically no movement in the market this week. Interest is now concentrated on the statistics of the stocks here. For a few weeks now consumption has tended to outpace arrivals, and if, as is anticipated, a demand from abroad develops shortly a considerable hole will soon be made in surplus stocks. But it would be well as yet to entertain no undue optimism on the subject.

Greek shares are again down on balance. The 5 per cent. 1884 Loan is one down at 33, while the 5 per cent. 1881 Loan has shed a similar amount at 33. The 4 per cent. 1902 Loan is unchanged at 32, but the 5 per cent. Funding Loan is one down at 33.

Pronounced weakness has developed in Land Shares. Béheras are ½ down at 9, while Béhéra Prefs have shed 1-8 at 3,1-8. Egyptian Delta Lands are 9d. down at 8s., while New Egyptians are 1s. lower at 23s. Egyptian Consolidated Lands remain at 1s. Sidi Salems are 1-8 down at 1, while Sudan Plantations at 2,15-16 are 1-16 lower. Union Foncières are unchanged at 2,7-8.

Among Miscellaneous descriptions Alexandria Waters are 3-8 down at 6,5-8, but Egyptian Markets are 1s. 3d. up at 20s. Egyptian Salt and Sodas are unchanged at 34s., while Morums 7 per cent. Prefs are 6s.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated October 24 :—

Season.—October 18 and 19—rain general in North-West Frontier Province and parts of Baluchistan and Punjab; very little elsewhere. October 22 and 23—local rain in Bay Islands, Assam, south eastern Madras and Madras Deccan.

Crops.—October 26—Bombay—crops in good condition. Central Province—October 20—rice and cotton very good to excellent; sesamum very good. Assam—October 24—rice normal to good; tea, sugarcane, cotton, normal.

Markets.—Bombay cotton market, weak. Fine M.G. Oomras December—January Rs. 485, March Rs. 470. Bombay cotton arrivals from September 1 to October 14, 1921, 237,000 bales as compared with 79,000 bales in the same period of the last year. Bombay imported piece-goods markets showed improving tendency, specially in staple lines. Both Greys and Whites in fair demand. Calcutta jute market, October 22—steady. Hessians quiet but steady. Heavy goods very quiet. At tea sale on October 18 good selection from all districts. Quality showed decline except for a few Dooars. Prices for all grades up to 8 annas per pound showed irregular advance of 3 to 9 pies, this being most marked in leaf grades. All markets interested except Persia. Buying particularly keen for America. Special Straits quality rice—October 21—Rs. 642½. No change in bank rates.

## ALEXANDRIA EXCHANGE.

*Supplied by G. L. Mortera, Alexandria and Cairo.*

Prices on October 14 were as follows :—Agricultural Bank of Egypt, £4½; Alexandria Water Co., Ltd., £7 11-32; Anglo-American Nile Steam, £2½; Associated Cotton Ginners, £13-16; Banque d'Orient, Fr., 56½x; Behera Ord., £E 10 9-16; Brasseries d' Egypte, Fr., 75; Building Lands of Egypt, £11-16; Cassi di Sconto Priv. Fr., 100; Ciments d'Egypte Priv., Fr., 55; Ciments d'Egypte Div., Fr., 30; Comptoir Fin. et Com. d'Egypte, £29-32; Consolidated Land, Pt., 5½; Credit Foncier Fondateur, Fr. 850; Credit Foncier Act, Fr., 637½; Credit Foncier, 1886 Oblig., Fr., 341; Crown Brewery Priv., Fr., 110; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 81½; Eaux du Caire Jouissance, Fr. 108; Egypt and Levant, S.S. Ord., 26s. 6d.; Egyptian Delta Light Railways, £4½; Filature National d'Egypte, £12½; Immeubles d'Egypte Soc. an des., £5,7-16; Khedivial Mail S.S. Ord., 110s.; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi £5; Kom Ombo Ste An Fondateur £33 9-16 ex.; Land Bank of Egypt, Parts de Fond, £37; Lots Turc., Fr., 34½; Menzaleh Canal Navigation Pt., 270 Nungovich Hotels, £7,1-16; Ramleh Railways, £2,5-8; Salt and Soda, 35s. 3d.; Tram d'Alexandrié Priv., Fr., 44; Tram d'Alexandrié Div., Fr., 60; Union Fonciere d'Egypte, £3,3-32; Egypt Hotels, £2 7-32; Urbaines et Rurales, £2 7-8.

## ENQUIRY BUREAU.

*Readers abroad desirous of getting into touch with British manufacturers, export merchants, etc., are invited to insert a brief reference as to their requirements in this column free of charge.*

*Replies should be addressed "The Enquiry Bureau, "The Near East," 1, Devonshire Square, London, E.C.2."*

*ADVERTISERS in, and annual subscribers to, "The Near East" will be supplied with names and addresses of enquiring firms on application. All catalogues sent to "The Near East" for transmission abroad must be accompanied by stamps to cover postage.*

*No guarantee is given as to the financial stability of firms using this column, and enquiries as to status, etc., must be made by the firms concerned.*

119. Russian gentleman, age 34 years, speaking fluently English and French, offers his services to a British firm or company, with a view to becoming acquainted with any special line they intend to undertake in Russia, so as to be able to act in their interest in that country.

120. Import Merchant to Mersina, Cilicia, Asia Minor, wants to establish relations with British manufacturers of motor cycles, printing machinery, electrical instruments and generators, stationery articles, typewriters, steam turbines and other mechanical appliances. Send catalogues, prices and terms, First class representation.

## AGENTS WANTED ABROAD.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," The Near East," 1, Devonshire Square, London, E.C.2." when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

118. Well known Sports Goods House with factory in India, wish to appoint Agents in Near and Middle East where not at present represented.

## NOTES OF THE WEEK.

### *The Allies and Asia Minor.*

It is reported from Constantinople that the National Assembly at Angora has decided to dispatch missions to Great Britain, France, Italy, and the United States to explain the Nationalist aims and conditions of peace. So long as the Allied Governments hesitate to adopt the only possible solution of the Asia Minor *impasse* the Nationalists have a right to be heard; but it would be a matter for regret if the pending arrival of these missions were used as an excuse for postponing still further a settlement of the Turkish question. The delay only aggravates the situation; the Turks may have little to lose by it, but it is gravely prejudicial to the Greeks, and is embarrassing to British interests. If Greece has to evacuate Asia Minor, she will have to be compensated for the cost of her occupation mainly by the Allies, who were responsible for sending her there in the first instance, and by their indeterminate policy subsequently failed to prevent the resumption of hostilities against Angora. When any payments are entered up against the Allies, it is generally Great Britain who has to bear the brunt. The British taxpayer, therefore, has the right to expect that the Government which has led the country into the Near Eastern muddle will lose no time in cutting its losses.

### *Devotees of the Cock-Fight.*

A strange aloofness from realities characterizes some of the discussions of the Near Eastern question. In a letter to *The Times* Mr. Pember Reeves, chairman of the Anglo-Hellenic League, approaches the subject much as if he were urging the claims of a favourite bird to be allowed to finish a cock-fight. "To me," he writes, "it seems at least arguable to suggest that if the Greeks care to make the necessary sacrifices, they are well able to hold, not only Ionia, but a good deal more." And we are assured that Greece is by no means at the end of her resources. The game-cock apparently should be allowed to continue the fight until there is nothing left of it but the spurs. Greece, who had to admit control of her foreign debt before the Great War is urged to plunge yet further—into bankruptcy; she has already incurred to no purpose in Asia Minor 25,000 or more casualties on the top of her previous sacrifices and is to be encouraged to throw away yet more lives in the pursuit of an Anatolian will-o'-the-wisp. Mr. Reeves would seem to want Greece to occupy "a good deal more" of Asia Minor to save a considerable percentage of the Greek race from their fate "in an arrogant and triumphant Turkey dominated by Mustapha Kemal." But there are comparatively few Greeks in the territory occupied by the Greek army beyond the Smyrna district; and if the Turks are minded to kill Greeks resident in Turkey, Greece can bring no more influence to bear upon their evil intentions from Eskishehir than she could from Athens. The presence of her army on the Sakaria River did not save the Pontus Greeks. On the other hand, those same Greeks, as far as is known, were left to themselves, to trade and reside on Turkish soil, unharmed, until Greece declared war on Turkey.

### *Ending or Mending Turkey.*

If it were a feasible proposition that Turkey should be wiped off the map or the Turks deprived of their independence, it could be urged that Turkish crimes in the past had merited the punishment. But it is not a feasible proposition, and to place under Greek jurisdiction a certain number of Turks who would never have entered it of their own accord is neither a settlement of the Near Eastern question nor a means to the end which all desire, the safety of non-Moslem minorities in Turkey. As Turkey must remain a separate country and the Turks an independent nation, the only alternative is to protect the minorities by other means. The first steps in this direction have already been taken. The Ottoman Empire has been reduced to reasonable proportions and is no longer exposed to the menace of internal disruption that threatened incompetent rulers in the face of compact aggregations of alien peoples. Terrorism was the only method of rule known to the former Turkey; the Young Turks as a whole may not as yet have proved themselves to be much better, but they will have no incentive to practise this form of government, if the territorial integrity of the new Turkey is guaranteed by the League of Nations and if the Turkish Government is freed from international intrigue. The old Turkey has been fighting with her back to the wall continuously for eleven years; given her backward state, is it to be wondered at that she has indulged in the mediaeval practice of massacre? She claims to-day that she knows how to behave better, if she is not driven to desperation. She must be given the chance to prove the truth or untruth of her contention. The only policy that the Allies have sought to adopt is to continue to drive her to desperation. There will be no peace until it has been abandoned unreservedly. Turks of the mainland, for the most part, will not remain under Greek rule; either

Digitized by Google

they withdraw or they fight. Greeks on the other hand have in the past placed themselves voluntarily under Turkish jurisdiction, and in all probability will continue to do so, whether the Turks are driven into Central Asia or are transported to Central Africa. In the case of territories held by the Turks for five hundred years this national trading instinct of the Greek cannot be made a reason for dispossessing the Turk of his "homelands," at the very moment when the spirit of nationality has been made a guiding principle for the world. The solution of the Near Eastern question entailed in the withdrawal of Greek rule from Asia Minor is not prompted by any desire to whitewash the Turk nor by ignorance of his past record; it is put forward because it alone seems to offer a solution where all other suggestions have either failed to effect a settlement or make no pretence of aiming at one.

### *Serbia and Albania.*

It is to be feared that the success that attended the efforts of the Serbian military party in the forcible absorption of Montenegro has emboldened the same people to adopt similar tactics towards Albania. There would seem to be no other explanation of the recent course of events on the Serbo-Albanian frontier, for it is incomprehensible that an Allied Government, if it were capable of controlling the party in question, should expose itself to the damaging rebuke administered by the Conference of Ambassadors. Speaking in reply to a question in the House of Commons the Under-Secretary of Foreign Affairs stated that information had reached His Majesty's Government that Yugoslav forces have advanced into Albanian territory in the direction of Louria (Lioura). "This aggression," he added, "which, so far as our information goes, is entirely unjustified and unprovoked, has induced the Conference of Ambassadors in Paris to address to the Serb-Croat-Slovene Government the strongest remonstrances." There is reason to suppose that in Croatia and Slovenia Serbian action against Albania is viewed with considerable misgivings. One effect is bound to be to discount in advance the frequent allegations emanating from Belgrade of aggression on the part of Yugoslavia's neighbours, but it is also liable to intensify the new State's domestic difficulties.

### *The Egyptian Negotiations.*

The Egyptian negotiations are undoubtedly making substantial progress, though the anticipation, expressed ten days ago in usually well-informed quarters, that they would be completed within a week has been falsified. Adly Pasha had an interview with Mr. Lloyd George on November 2, and one of the great aims of himself and his associates has thus been secured; for it is no secret that they believe that they will be able to accomplish more with the Prime Minister than with the Foreign Office. Whether the Cabinet will have discussed the question formally by the time these lines are in print it is impossible to say; but whenever such discussion takes place, it is to be hoped that it will be unhurried and full, and that there will afterwards be no conflicting expressions of opinion or contradictory statements by members of the Government. It is possible that when the subject comes up for discussion in the House of Commons questions may be put regarding the declaration made by Mr. Balfour on November 17, 1919; and by then, we may hope, the Government will have its policy, on this subject at least, clearly defined. It hardly looks to-day as if the maintenance of British supremacy in Egypt is one of the 'cardinal principles' of his Majesty's Government.

### *Zaghloul Pasha Rebuked.*

For the moment, at any rate, Zaghloul Pasha's popularity seems to be in danger of eclipse. His recent tour in the South was a complete failure—and whatever the explanation may be, it shows that his power over the masses is not nearly as complete as it was represented—and now a majority of the members of the Legislative Assembly have administered a snub which he can hardly ignore. They accuse him bluntly of political blundering since his return from Europe; and declare their belief that the Official Delegation serves the best interests of Egypt. In a word, it looks as though the signatories of the letter in which these opinions are embodied have at last sized Zaghloul up as a demagogue. To outsiders the discovery may appear a somewhat belated one, but for all that it is a hopeful sign; and the letter referred to should strengthen considerably the position of Adly Pasha and his colleagues.

### *The Sudan.*

The Sudan Government announces that Abdullahi, the leader of the recent rising at Nyala, in Southern Darfur, has been tried and found guilty of waging war against the Government and inciting to murder, and that he was hanged at Nyala on October 28. This was clearly a case where prompt action was fully justified, and the Sudan may be congratulated on having got rid of an adventurer who might, if left at large, have been able to stir up very serious trouble. Somewhat disturbing rumours have been current lately about the risk of disturbances in the Sudan, and only the other day the London afternoon papers were giving prominence to reports of a great rising—which appear to have been due to an account of the Nyala disturbance finding its way to Paris about a fortnight or three weeks after the event. It is, therefore, all the more satisfactory to be assured from the best source that 'the disloyal element in the Nyala district does not appear to be large.' The Governor of Darfur has called on Abdullahi's accomplices to surrender, failing which punitive measures will be taken; but the assessment of taxes on the harvest is proceeding normally, which is an encouraging sign; and we may hope that there will no call for any punitive operations.

### *The Situation in India.*

Optimists and pessimists alike have been watching the cables from India without finding what they expected. The former hoped to read of definite progress in the suppression of the Moplah rebellion, but up to the time of writing their hopes have remained unsatisfied, and indeed a message published early in last week suggested a horrible extension of disorder, a prediction which happily has not been confirmed. The pessimists on the other hand were apprehensive of serious trouble in connection with the trial of the Moslem agitators at Karachi, but the report of the sentences of two years' imprisonment passed on the leaders has been followed by no news of disturbances either at the scene of the trial or elsewhere, and this fact may possibly be symptomatic of a change in the attitude of the urban masses such as some observers have predicted for this autumn. As for the Moplahs, we can see no reason to dissent from the view recently put forward with some degree of authority

Digitized by Google

that, supposing all goes well, the trouble ought to be over by Christmas, but not much earlier.

*Provincial Finance.*

There are signs that the financial arrangements concluded between the India Government and the various provinces are not going to work out just as was intended. To begin with, Bengal has pleaded bankruptcy or something like it, and has been relieved of its liability to contribute to Central funds. Then Bombay, headed by its Governor, is asking for help to finance the great scheme of irrigation in Sind; and no one who knows India will doubt that other claimants for relief will presently come forward. But the Central surplus has already vanished, a deficit is probable for next year, and consequently the boon to Bengal, and any others that may be given, must come out of new taxation imposed on the whole of India. That, as we understand, is precisely what the framers of the Constitution did not intend. Their idea was that, existing revenues being once allocated, each province must finance itself, and impose fresh taxes in the event of more money being required; and responsible government would become a reality only when a provincial council had faced the electorate which it had previously taxed. "Instead of which," the provinces want to be subsidised from taxes imposed by the Central Government, where responsibility, at least in the technical sense, does not yet exist.

*The Basic Problem.*

We have the utmost sympathy with the provinces in this matter. Bengal is now beginning to realise the true meaning of the Permanent Settlement, one of the three or four first-class blunders to the debit of English administrators of the past, which transferred to a few landholders the revenue she needs so much to-day. The Indus irrigation scheme is almost too big for a province of the size of Bombay, and it is beside the point to urge the example of the United Provinces, which are boldly facing the smaller, though enormous, Sarda project, and, we are glad to see, have successfully floated their first provincial loan. The truth is that every single province is desperately poor, when its resources are placed alongside of its needs, and in the long run it will make no financial difference whether taxation is spread out or localised. The provinces and the Central Government alike have to face the basic fact that, until the taxable capacity of the country is largely increased, there will not be enough money to go round; and the clamour for more subsidies which we expect to hear this winter will not be wholly unprofitable if it helps towards a more practical realisation of this unpalatable truth.

## THE WEEK AT HOME.

*London, Monday Evening.*

**The Irish Conference.**

The Conference in Downing Street continues, but unfortunately it has not reached a position in which success is assured. For that reason Mr. Lloyd George was compelled to cancel his berth in the *Aquitania*, and postpone his trip to Washington. It is still hoped that he may attend the later meetings, but the condition of the Irish negotiations was critical two or three times during last week, and while matters were better at the week-end, they may easily become critical again.

The Conference seems at this moment to have left the question of allegiance, which Mr. de Valera's telegram to the Vatican raised in an acute form; and the negotiations are understood to be concerned with the countries of Tyrone and Fermanagh—in other words, the old Ulster v. Rest of Ireland controversy, with its sectarian as well as religious flavour, of which we are most of us heartily sick. According to maps published in the *Daily News*, which is faithful to the Sinn Fein cause, the latter claim and hope to get a good deal more of Ulster than those two counties; indeed, it would be a very attenuated province if Sinn Fein had its way. The suggestion made is a series of plebiscites in the different areas, in some of which Sinn Fein has a majority, while in others the Unionists hold the advantage. It is obvious that this would split Ulster into a series of divided communities, and would make its Government impossible; it is self-determination reduced to an absurdity. Possibly that is the intention of the Sinn Feiners. The Radical papers meanwhile entreat Ulster to be generous and to compromise; it is to be noted they do not address similar appeals to Sinn Fein, which seems once again to be committing "the fault of the Dutch," giving too little and asking too much.

**The Die-Hard Debate.**

It was some feeling of this kind that induced a small group of recalcitrant and extremist Unionists to propose a vote of censure on the Government last week. They had no notable leaders, and they argued their case with more conviction than ability. Mr. Lloyd George easily disposed of them, and Mr. Austen Chamberlain buried the slain.

But the affair is by no means finished. The *Morning Post* congratulated the revolters on making a stand for conscience' sake—conscience being what the *Morning Post* approves of; the rebels, after being killed by oratory, have come to life again, and it is evident that they have a good deal of sympathy from other Unionists, if not active support. Their next move appears to be to make an attack on the India Office and Mr. Montagu; and they are watching critically the attitude of the Home Office in the *affaire* Basil Thompson.

**A Breach in the Coalition Walls.**

It is too soon to say, as some partisan papers on both sides of politics say, that this means the beginning of the end, and the break-up of the Coalition; the wish is father to the thought, no doubt, but the Coalition has still a good deal of vitality. The industrial interests, as distinguished from the political interests, are strong for its continuance, as was witnessed by a circular of the British Commonwealth Union, an industrial organisation which has many nominees in Parliament, appealing to members to continue to support the Government. The fact is that the great industrial interests see clearly that the real alternative to the Coalition is a Labour Government, and they are terrified at the prospect—much more so than the ordinary citizen, or even the Die-Hard Tory.

The weakness of the Die-Hards, on the other hand

is that they are *au fond* reactionaries, and they do not carry with them the younger and more progressive Tories — the school of constructive Conservatism— whom they are inclined to dub privately as Socialists. These latter are slowly working out a programme of social reform of their own, but their weakness is that they have no powerful organ in the Press. They will, however, count for more and more in Parliament as time goes on, and they, with a Liberal sprinkling, may become the true heir of the Coalition. The big business interests are not really popular on either side of the House.

**Scotland Yard.**

The resignation of Sir Basil Thompson of his post at Scotland Yard caused a great deal of excitement. For the past two or three years he has been in charge of a special detective department whose business it was to probe the work of Bolshevist and other spies and similar unsavoury gentry. The *Daily Herald*, our own Bolshevist organ, hated him, and with some reason, for it was he who exposed those curious financial arrangements of the *Herald* with the Bolshevists.

The Labour Party also seems to have objected to him, and both are triumphant at his departure. The Government story is that he worked badly with his chief at Scotland Yard—that is, independently—and that when that department came to be reorganised, he resigned. It is not a very convincing reply, but it holds the field until Sir Basil, who wields a trenchant pen, chooses to answer. There is no question that he was a very able man, and his work was very efficiently done ; and there are those who do not scruple to say that he, like General Dyer, was sacrificed for ulterior considerations. We shall probably hear a good deal more of this business.

**A New Industry.**

The political chronicle this week seems to suggest that England is full of nothing but discord. But as a matter of fact construction as well as destruction goes on all the time. A few days ago the new Sugar-Beet Factory in Nottinghamshire was opened, and we shall soon be eating our own sugar. The British beet has been remarkably successful in this its first year of growth, and to contain a rather higher percentage of sugar than its continental rival ; its use as a cleaning crop in agriculture is well known, and the new industry has the further advantage of providing rural employment in the winter, when it is most wanted.

The Government has taken a share in the factory, which has been built by Frenchmen, and it is hoped that this will prove the precursor of others in various parts of the country. This new industry is a direct legacy of the shortage of sugar from which we all suffered during the war.

**The Ethics of Suicide.**

While Labour leaders are talking about the Right to Live, the "gloomy Dean" of St. Paul's thinks it time to enliven the world by a few remarks on the Right to Die. An article by him on the ethics of suicide in a recent *Evening Standard* seems to have provoked a mild sensation. He appears to think that there is something to be said for doctors' putting their patients out of the way—to which, I take it, the answer is that they sometimes kill them already without meaning to. But in the main the critics have fastened on the following sentences : "I think a revolver or cup of poison should be placed in the cell of every condemned criminal. We get rid of our worst malefactors for the same reason that we shoot mad dogs ; we have no right to humiliate them unnecessarily." The Dean is too much of a pessimist for my fancy ; but all the same, if he wrote a treatise on ethics, I think it would be more stimulating than most of the dreary discussions that are at present accepted as moral philosophy.

**The Week's Books,**

"The Ideas of Einstein's Theory" (Methuen), by Professor J. H. Thirring, is an attempt to explain the celebrated hypothesis of relativity without mathematics —in other words, Einstein without tears. It is rather a *tour de force*, but within the limits possible I am bound to admit that the author succeeds.

"Europe—Whither Bound?" (Thornton Butterworth) is a series of impressions and sketches of the post-war Continent by Mr. Stephen Graham, whose first love, Russia, has rather deserted him. These pages are brilliant journalism ; not more. Mr. Graham must beware of writing too much. By that sin fell H. G. Wells ; and others may fall farther and fare worse.

"Keir Hardie" (Cassell) whose life has been written by William Stewart, was not an ingratiating person to talk to—a rather dour individual, whose dourness was often mistaken for sullenness. But he was the first Labour Member, and consequently has an importance in history which he would not otherwise have possessed. The beginning of his career as an agitator is instructive. He was a coal-miner, and half way down the shaft the cage stoppped and then ascended. On reaching the surface he was faced by the stormy-faced manager, who told him to get off the Company's grounds, and his tools should be sent home. "We'll hae nae damned Hardies in this pit," and he was as good as his word, for the two younger brothers were also excommunicated.

A very different person was "Viscount Rhondda" (Longmans) whose life has been written by his daughter and others. He will be best remembered as Food Controller. When he found that the orders against hoarding were being disobeyed, he set the law in motion without regard to class or position. Quite a number of the hoarders were well-known people, one of them an M.P., and both social and political pressure was brought to bear on him to spare them the ignominy of prosecution. His answer was peremptory—if there was to be any interference with the prosecutions, any shielding of offenders in high positions, he would throw up the Ministry and let the public know the reason. Incidentally this book recalls the story of the most ambiguous newspaper placard on record : Rhondda, who was then D. A. Thomas, was on the "Lusitania" when she was sunk by the Germans, and was one of those who were saved. A newspaper came out with the placard : 'Great National Disaster : D. A. Thomas Saved.' That is almost as bad as 'Flight of Mr. Balfour,' when that eminent statesman made his first trip in an aeroplane.

"The Defence of Terrorism," by Trotsky (Labour Publishing Co.) explains itself. Again one quotation will suffice. "As for us, we were never concerned with the Quaker—vegetarian prattle about the sacredness of human life, for this problem can be solved only by blood and iron."

OCELLUS.

## A PORTRAIT OF LORD ALLENBY.

A fund has been opened for the purchase of a portrait of Lord Allenby for presentation to Mrs. Allenby, his mother, as a mark of admiration for his work in Palestine and Egypt. Originally it was intended that the picture should be presented to the Field-Marshal himself, but he asked that it should be given to his mother, who is 90 years of age, and that it should become a family heirloom. The portrait, by Tennyson Cole, is a replica of that painted by him for the Turf Club, Cairo. It is on view for a week at the Mendoza Galleries at Selfridge's. Lieutenant General Sir Philip Chetwode, Lieutenant-General Sir Edward Bultin, Major-General Sir Steuart Hare, Colonel W. H. Bartholomew, and Lieutenant-Colonel Lord Dalmeny, who served in Palestine and Egypt under Lord Allenby, are the members of the presentation committee, which will appreciate small subscriptions from N.C.O.'S and men who served under Lord Allenby as much as larger sums. It is hoped to raise £500, and to make the presentation to Mrs. Allenby during the next few weeks. Cheques and postal orders should be made payable to "The Allenby Portrait Fund," and sent to the honorary secretary, 4, Cecil House, Marylebone High-street, W.1., or direct to Messrs. Barclay's Bank, Covent Garden branch.

## THE P.E.F. 'QUARTERLY.'

The October *Quarterly Statement* of the Palestine Exploration Fund contains two short reports on the work at Askalon, by Professor John Garstang and Mr. W. J. Phythian-Adams ; "Notes on Recent Discoveries," by Mr. Gerald M. Fitz-Gerald "Some Alleged Palestinian Pyxes," by the Rev. Père Ronzevalle; and "Pre-Philistine Inhabitants of Palestine," by Mr. Phythian-Adams. It is pleasing to note that the work at Askalon promises to be productive of very valuable results, and that it is evidently being conducted on thoroughly sound lines. Generous support is necessary if the work is to be carried on without delay and in such a way as to hold its own with excavations being conducted or to be undertaken in the near future by excavators of other nations.

*(From Our Own Correspondents).*

## EGYPT.

*Cairo, October 23.*

**Stormy Petrels.**

For the past week Egypt has had its miniature storm in a tea-cup—but a storm that left clouds on the horizon each fresh day. Zaghloul Pasha, with the members of his *Wafd*, has been touring the Nile between the provinces of Upper Egypt; but everything has not gone according to plan. Unfortunately for Zaghloul as the leader of a political party in Egypt, he is an old man—63 years of age, which is very old for the Orient. Also, he is surrounded by a knot of men who all have their own axes to grind. Some are men without the luxury they once possessed; others cherish resentment for things done to them in connection with the riots in the spring of 1919; others have had hopes of decorations disappointed, and are antagonistic to the Government in consequence; and yet others are place-seekers. You could count on the fingers of your two hands the number of his satellites who have the good of Egypt first and foremost at heart. As this is the case, those who are around and about him seek above all things to curry favour with him. They tell him what they think he wants to be told. They purposely delude him into seeing things through one eye—the eye of the Zaghloulist. They told him that the people of Upper Egypt were devoted to him, and that it would be a good idea to visit these people: let them see him, and by exhortation let him bind them securely to his cause. Never was advice more insincerely given, or more misleading.

It is perfectly true that the position of Zaghloul appeals to the fellahin. Is he not the man who is going to get them complete independence—complete independence mainly being the elimination of that strict disciplinarian the British inspector, who refuses to allow the poor cultivators to take their water when they want it? But in Upper Egypt there are also local notables, who are, in numerous cases, not enamoured of the Pasha. But the advisers of Zaghloul made no mention of this fact. Nor, apparently, did they see fit to mention that the present time was not opportnne for the attempt to stir up strong partisan feeling. With a typical Oriental weakness for evading the main issue, they blinded themselves and their leader to the main fact: that the Official Delegation is doing its best in London to get the country as much political freedom as possible, and that to embarrass that Delegation is to embarrass Egypt in her struggle for emancipation. These facts might displease the Pasha; therefore he must not be told about them. Rather must he be encouraged to make a sort of electioneering tour in the South. He has gone. The daily papers have told the result: determined opposition, the decision to kill Zaghloul if he landed—I am quoting an official report—clashes between the respective partisans, and finally an expensive effort by the Government to maintain the peace.

**The Position of Zaghloul.**

It is too early to say what the final result of the tour will be. Zaghloul and his party have yet to return down the Nile, and though as I write he is safe somewhere down south past Luxor, it is impossible to say what will happen on his return journey. Feeling against him is running high; and the Government is determined to maintain order. Meanwhile, he is doing his best to discredit the administration. He believes, or says he believes, that the British Government is instigating the Adly Cabinet to the Machiavellian tactics of arranging artificial opposition in order to impress the world. There again is the trace of what he has been told. Official circles, in possession of all the facts, state that they have not only protected the public at large, but that they have actually protected the lives of Zaghloul and his party, and the steamer as well. Zaghloul's reply is to rave against the Government and their agents. The next decisive stage in Zaghloul's political career will be reached on the conclusion of the negotiations. If they are successful, the old man, ill and weary as he is now, will be deserted because he will be practically powerless, and the lower classes will follow docilely their favourite captains.

The main news about the negotiations now is that they are on the verge of completion. I know not what has been responsible for the change, but I find among the majority of Egyptians and foreigners in Egypt a strong belief that success will be won, that a treaty acceptable to both parties will be made, and that Egypt will enter upon another era. A fortnight ago pessimism was in the air. To-day there is hopeful expectation. Reports from London state that the three thorniest questions, the position of the British forces in Egypt, the right of Egypt to make independent treaties with foreign powers, and authority over the Sudan as far as it refers to riparian rights, are being considered in detail, and that there is every hope of a satisfactory compromise on all three. *In'shallah!*

**Lord Allenby and Egypt.**

The rumour published in a London daily that Lord Allenby, the Commander-in-Chief of the Forces in Egypt and the Special High Commissioner, was about to change his post has caused considerable interest locally. Its official denial was by no means unexpected, for though Lord Allenby would doubtless be glad to get away from Egypt, since he is a soldier and not a diplomat, it is apparent that the British Government would not transfer him at this juncture, when Egypt is about to enter upon a delicate period, and when Lord Allenby's experience of the country and his prestige are invaluable factors. The same sort of rumour cropped up about this time last year. According to the latest news, the High Commissioner will be back in Egypt within the next few days, and the Residency is already preparing to return to Cairo to have everything ready for his arrival. The Ministry also will probably return to Cairo in the very near future.

**The Tourist Season.**

Fears have been expressed lately that the events in Upper Egypt would adversely affect the coming tourist season. It would be a thousand pities if those localised events were taken to indicate a spirit of unrest throughout the country: they have meant nothing of the sort, the excitement has always been momentary and localised. That the country is expectant concerning the fate of the London pourparlers is perfectly true; but beyond that hopeful expectancy, and a certain hostility to Zaghloul, who is looked upon as jeopardising the hope of an acceptable treaty, there is no reason whatever to believe that the country is not safe for the most timid tourist. Perusal of the guest-book at Shepheard's leads one to believe that the season has already begun. Those in residence at that famous hostelry include Prince and Princess Adil Ben Ayad, Prince and Princess Djemalledine—the bridegroom and bride—Prince Aly

Fazel, Prince Abbas Ibrahim Halim, Prince Djemil Tossoun, General Chamberlain, Youssef Sadek Pasha, and Mr. S. Vallin, the Diplomatic Agent for Spain. Other prominent social lights are booked to arrive both at Shepheard's and the Continental during the next week or two, and probably there will be a big influx during the first week in November, when the Renown, with H.R.H. the Prince of Wales aboard, will pass through Egyptian waters.

*Cairo, October 28.*

**"Negotiations" Rumours.**

As far as facts are concerned, there is little fresh to report this week. The feeling of expectation referred to in last week's letter has been intensified by reports from London that the end of the negotiations was drawing near. Reuter's Agency, usually well-informed on matters of State, sent a couple of optimistic messages earlier in the week, the gist of which was that the Foreign Office and the Egyptian Delegation, under Adly Pasha, had agreed upon the basic principles of the treaty between England and Egypt, but that there was some difficulty in drafting the agreement in accordance with the views of both sides. Then, this morning, came another apparently inspired message from Reuter's London office, stating that an immediate agreement was not likely, that there were still difficulties to be encountered, but that there was every possibility of agreement ultimately. There has not been time for this latest news to have had any effect on the minds of the native politicians, but in all probability it will cause a distinct reversal of the feeling of hope, and in place of the late cordiality there will come a sullenness which will doubtless be reflected in the native Press.

If this assumption be correct, it will be the natural sequel to the policy of silence which both parties to the negotiations have followed. In the absence of official news, all sorts of rumours have been in the air. Most of them obviously have been inspired by the wish that is father to the thought, but their effect has been, as I explained last week, to induce a general belief in the willingness of the British Government to concede the three main demands:—(1) the disposition of the British troops beyond the Suez Canal; (2) the right of Egypt to make treaties with other nations; and (3) the guarantee of Egypt's rights in the Sudan in connection with the waters of the Nile.

There have been, however, other rumours of an entirely different nature, one of which was that the negotiations would fail because of the refusal of the British Government to take its troops out of the country. It was alleged that the British Government would then issue an Order in Council declaring Egypt to be independent; withdraw all British Advisers; allow Egypt the right to dismiss all her British officials subject to the payment of adequate compensation; and, finally, would concentrate her troops in some zone near the coast, which would be declared to be no longer Egyptian territory. The troops then would be, legally and technically, outside Egypt, but would be at hand in case they were needed to quell serious disorders.

**Government Supporters Uneasy.**

This latest rumour, which appears to have some possible foundation in truth, since it was supposed to emanate from a reliable source, greatly intrigued the notables who are supporting the Government. They flatly refused to believe it, stating that their information was to the effect that an agreement was most likely. To-day's news, however, is causing them to ponder seriously. They have risked much on the venture headed by Adly Pasha in London, and now that the end is looming near, and a semi-official announcement states that there are still "difficulties in the way," they are reconsidering their positions. It is an ominous portent, since they are the backbone of the Cabinet; and if their sudden distrust of the British Government grows, it will be strong enough to cause a defection from the Cabinet which would leave the Ministry in a highly embarrassing position.

Zaghloul, for the time being, is out of the public eye. He is due back in Cairo next Sunday, and demonstrations for and against him were being arranged; but the Cabinet has prohibited both, on the grounds that any excitement may react against the public security.

**A "Nile Projects" Echo.**

Colonel Ralston Kennedy, who was charged in conjunction with Sir William Willcocks with having criminally libelled Sir Murdoch MacDonald and having published seditious matter, is again attracting attention to himself. It will be recalled that when the trial came on Colonel Kennedy became ill, and Sir William Willcocks was tried alone. Colonel Kennedy did not recover his health quickly, and during his convalescence the prosecution entered a *nolle prosequi*. Recently, however, Colonel Kennedy has felt better, and some time ago he sent a letter dealing with the famous Nile Projects to an eminent citizen in Cairo, who replied that, as he was not a technical man, he was afraid that he could not understand the various technical arguments embodied in the communication. Colonel Kennedy sent him another letter, a copy of which he forwarded to the *Egyptian Mail* in Cairo. That journal, however, refused to publish the letter in detail, merely giving a more or less innocuous extract from it. It is thought possible that Colonel Kennedy may be regarded by the authorities as provocative.

## YUGOSLAVIA.

*Zagreb, October 31.*

**Yugoslavia, Albania, and Hungary.**

Public opinion here has been very unfavourably impressed with the attitude of the Big Entente. Italy, it is understood, is virtually an open enemy. By the arrangement at Venice, she favoured Hungary's designs in the Burgenland, and now is wriggling to show an attitude consistent with that of the Great Powers. But the pro-Hungarianism of France and England has caused considerable disappointment. It is realised out here that in the west of Europe the true character of the Magyars is not known, that their word is taken at its face value, and that confidence is felt in Horthy; this is compared with the naive confidence of Britain, France and even of Russia in Bulgaria in 1915. Britain's reputation for diplomacy has never been high in Balkan countries—at least since she allowed Germany to replace her at Constantinople. Moreover, she is financially interested in Hungary, and, after all, business is business—which also accounts for British support of Italy in her equivocal intrigues in Albania, where we are credited with having secured an oil and a tobacco monopoly. Such, in brief, is the Yugoslavs' reading of the affair. We notoriously fail to see their point of view, which is very simple. As to the Hungarian question, they know the Magyars, having been their neighbours for so many centuries, and can pierce the outer skin of Europeanism in which they have clothed themselves. They have to live next to them, and must settle their relations once and for ever. They have fought all through the war to rid themselves of the Hapsburg menace and cannot now tolerate that a Hapsburg should again reign at Budapest. They maintain that the Big Entente is dilatory, incompetent, as is shown by its record in Fiume, Vilna and Silesia, undecided and biassed. The Little Entente, on the other hand, is directly interested in the most vital manner, is determined, knows its own mind, and has the will and power to get what it wants. The Big Entente Note is, therefore, looked upon as interference in their most vital interests and consequently, acknowledged, and the Little Entente will act as it thinks fit.

**The Unity of Yugoslavia.**

The Hungarian menace has had one good side, in that it has united the warring parties. There are indeed vague rumours of plots and intrigues in the Hapsburg interest, on the part of agents here in touch with Lehar, the Croatian Legion in Hungary, Gagliardi at Graz, and the Frankovist element in Austria, who have succeeded in keeping some of their myrmidons at large in the country. But had these discontented Hapsburgites had any following at all in the country, they would have

Digitized by Google

shown their heads, and the best proof of their ineptitude and real insignificance is the success of the mobilisation, and the patriotic action of the Narodny Club and of Raditch, which must have grievously disappointed interested parties across the frontier, who imagined that their dislike of the Serbs was greater than their hatred of the Hapsburgs.

**Changes in the Orient Express.**

It is reported that there is a probability that the Simplon-Orient Express will no longer run through Yugoslavia. The papers which give this piece of "news" are evidently of that sort known nowadays as "tendencious," for they go so far as to say that a Commission is sitting in Paris to settle the question on the grounds that the headquarters of the Wagons-Lits Co., have received so many complaints about the roughness and incivility of the Yugoslav frontier officials that they have decided to give the country a wide berth in the interests of through-travellers for Bucharest and Constantinople. This might effect Zagreb, for the Orient Express is a post-war luxury here, and it might return to its old route through Vienna and Budapest, but even the pre-war Orient, after Budapest, ran through Belgrade, having an objection to swimming or jumping the Danube, for there is no bridge below Belgrade. At the same time a much more respectable paper, the *Trgovinski Glasnik*, or Commercial Messenger, of Belgrade one of the best papers in the country, states that arrangements are being made to avoid the necessity of crossing a corner of Hungarian territory between Vinkovce and Bucharest, which will avoid a certain amount of delay. Temporarily, it will make things worse, as the train will have to run a few kilometres on a local branch line, and until that is made fit for heavy traffic, there will be no advantage, even rather the reverse.

**A Suggestion.**

A Zagreb comic paper, *Petskalo*, has suggested that Yugoslavia and Britain should exchange Prime Ministers. In both countries there are plenty of people who do not regard their Prime Minister as a demigod, and both sides should be pleased if M. Pashitch were sent to clear up the Irish Question, and Mr. Lloyd George came out here, to secure by his blandishments Fiume and Skadar for Yugoslavia.

*Zagreb, November 2.*

**The Return of the King.**

It was a great relief to everybody when the King returned, for important events are in the air, and his advisers have been sharply criticised for allowing His Majesty to stay so long abroad. The anomalous result of his long absence is that he has not taken the oath to the Constitution within the prescribed period. It is anticipated that he will take the oath immediately after visiting his father's tomb, and that the ceremony will be carried out in state.

**The Big Entente and Hungary.**

Considerable relief is felt that the Big Entente have taken a stronger line with regard to Hungary, and have adopted what is virtually the point of view of the Little Entente, although it is believed that the motive of the Allies was to steal the thunder of the Little Entente, partly to avoid being compelled to swallow a *fait accompli* and partly out of tender feeling for Hungary. For the Magyars will find it less undignified to comply with the demands of the Big than of the Little Entente.

## ROUMANIA.

*Bucharest, October 27.*

**Roumania and the Hungarian Coup.**

The return of the ex-King Charles to Hungary is considered here as an attempted violation on the part of the Hungarians of the Treaty of Trianon. This *coup d'état* is believed to have as a main aim the overthrow of the present *régime*, not only in Hungary but also in Austria, in order to bring about the re-integration of the former Hapsburg Empire. It is not thought that Admiral Horthy is an accomplice, but it is feared that he is not strong enough to resist alone successfully. Any change in Hungary, such as that aimed at, would be unacceptable to Roumania, and there is complete understanding between Roumania and the other Little Entente States regarding the measures to be taken to prevent the recurrence of a similar attempt.

**Birth of a Prince.**

On Tuesday, October 25, Princess Helen, Crown Princess of Roumania, gave birth to a son. The newly-born prince will be called Michael, which name was taken from a former Roumanian ruler, Michael the Brave, who in the 17th century held under his sway for a short period a territory equal to Greater Roumania.

**General News.**

M. Fitcheff, the new Bulgarian Minister at Bucharest, presented his credentials to the King with the usual ceremonial last Wednesday.

On Saturday at 7 a.m. an earthquake was felt at Bucharest and other parts of the country. The earthquake lasted for three seconds and had a west-east direction. No damage was caused.

Owing to the scarlet fever epidemic, which is still spreading throughout the country, the authorities have closed the schools for ten or fifteen days. The cinema theatres have also been closed.

The railway tunnel which will be built between Baia-Mare and Satu-Mare (Transylvania) will be the longest in Central Europe.

The Government is now studying the question of declaring part of Galatz a free-port for transit of goods.

Owing to the protracted drought, the water level of the Danube is continuously falling, thus greatly hindering the navigation on this river.

## BULGARIA.

*Sofia, October 31.*

**The Assassination of M. Dimitroff.**

The murder of the Minister of War has been the only topic of conversation here during the last week. The evidence of M. Neheles, the only survivor of the party, and also that of a peasant boy who was looking after some sheep close by, has not shed much fresh light on the case. From their combined statements it appears that the Minister's car was descending a steep hill, at about 15 miles an hour, when two men hidden behind a ditch some 50 yards away, suddenly opened rapid rifle fire on the Minister and his companions. The chauffeur and M. Mareck, a Czecho-Slovakian engineer were killed instantaneously, M. Dimitroff and his nephew were wounded, whilst M. Neheles immediately jumped out of the car, and, although pursued by a third bandit, managed to escape. Not being under control, the car crashed into a telegraph pole on the right of the road, and the murderers finished off M. Dimitroff and his nephew with daggers. Then they robbed the Minister of 100,000 levas, some valuable papers which he always carried on his person, his watch, chain, etc., and made off, gaily singing the while. There were three murderers in all, two on the road and one on the hill, the role of the latter being to give the signal to his confederates when the Minister's car came in sight. So far as is known, the murderers are still at large, and all that is known of their appearance is that two were young-looking, clean-shaven men. The Government has put the task of tracing the murders into the hands of M. Vicogradsky, ex-Chief of Police, and has given the latter full powers to take any steps that he may deem necessary in order that the murderers may be caught. Up-to-date about 200 arrests have been made, and it is understood that the majority of the arrests are Macedonians.

**The State of Siege.**

The aftermath of M. Dimitroff's murder has been very unpleasant so far as the population of Sofia, Kustendil, and Petrich is concerned. A state of siege has been proclaimed in these three towns, entailing the prohibition of circulation in the streets after midnight; the shutting of hotels, restaurants, and theatres at 11 o'clock; the use of the telephone only between the hours of 8 and 11,

Digitized by Google

and 2 and 6, and the censoring of telegrams and foreign newspapers. Whilst everyone, no matter what political party he may belong to, is agreed that the murder of M. Dimitroff was a dastardly piece of work, and trusts that the murderers will be run to earth, it is nevertheless hard to understand what the Government hopes to achieve by enforcing these measures, especially that relating to the use of the telephone.

**Speeches at the Funeral.**

M. Stambolisky made several speeches on the 26th, which was the day on which a memorial service was held for M. Dimitroff. Whilst speaking from the Ministry of Foreign Affairs he said amongst other things that the Government was determined that this would be the last assassination that would take place, and that instead of the Agrarian cause being weakened by the death of M. Dimitroff, the cruel murder of one of the most stalwart pillars of their party would have the effect of making the other members of the Party redouble their energy. He also said that he attributed the murder to the efforts that M. Dimitroff had made for a *rapprochement* with Yugoslavia. This is tantamount to accusing the Macedonians of being the authors of the crime.

On the following day the body of M. Dimitroff was taken by special train from Sofia to Kesnitza, the native village of the murdered Minister. Many speeches were made on the way, but the one made by M. Stambolisky at Kustendil was the most significant. Allowing for the wrath that the Prime Minister felt at the assassination of his colleague, there was at the same time such an absence of moderation in his language that one is forced to the conclusion that the future policy of the Government is likely to be more and more directed against the bourgeois. The appointment of two new Ministers to fill the places of M.M. Dimitroff and Boteff will serve as a criterion of the policy the Government intend to pursue, and although no announcement has yet been made as to who is to be appointed, it is known that there are two factions in the Agrarian Party who are each wishful that their nominees should be chosen. No names have yet been mentioned for the Ministry of Railways, but that of M. Manoloff, acting President of the Sobranye, is talked of for the War Ministry, although in some quarters it is believed that a soldier may be nominated.

## GREECE.

*Athens, October 29.*

**The Situation in General.**

Greece may now be said to be at one of the most critical periods of her existence, and the entire Nation is anxiously awaiting the result of M. Gounaris' *démarches* in the three European capitals which he is now visiting. It is fully realised that on the result of these *démarches* will largely depend the future of Greece. Should the Greek Premier succeed in his difficult mission, Hellas may look forward to a happy, peaceful existence, recuperating after the sacrifices which she has made, living in friendly contact with her neighbours, and acting as adviser to the Great Powers on matters relating to the Near East. On the other hand, should the mission meet with failure, what will be the result? As to political and diplomatic circles it is very difficult to say; but upon the population in general, the failure of its delegates will, to a certain extent, cause bitter feeling against the Allies, and in a far larger measure against the Government.

News of the progress of the mission so far received from abroad is very meagre, and is not from an official source. The Athens papers comment bitterly on the fact that no definite information has been communicated to them on the interviews which are known to have taken place in Paris. The fact that the Delegation was not officially met on arrival in Paris is commented upon; and in spite of the usual optimism prevailing in Government circles, little success is looked for in the French capital.

The *Nea Imera*, a Government paper, states that the French diplomatists were apparently too absorbed in rejoicing over the Convention concluded between France and the Kemalists, to take any notice of the Greek Delegation, while the *Athenai*, an Independent paper, bitterly comments on the lack of most elementary etiquette and courtesy on the part of the French, who did not even pay an official visit to the Hellenic Delegation. It is pointed out that M. Gounaris and M. Baltazzi have not visited the French capital as private individuals, but as the official representatives of the Greek nation and this lack of courtesy deeply wounds its *amour propre*.

**Royal Interviews Denied.**

Following the report of an interview stated to have been given by the Crown Prince and Prince Nicolas to the Italian paper *Giornale d'Italia*, Prince Nicolas has published, through the Press Bureau, a formal denial, stating that no such interview has been given by him to the above or any other paper. Furthermore, the Foreign Office telegraphed to the Greek Legations at London, Paris, Washington, Berne, and Rome, also denying the alleged interview of the Crown Prince.

**A Sad Anniversary.**

On Tuesday last, the anniversary of the tragic death of the late King Alexander, a Requiem was held at the Cathedral. The Metropolitan of Athens, assisted by the members of the Holy Synod, officiated. The Council of Ministers, the Mayor of Athens, the Chiefs of the Foreign Missions to Greece, and many others were present at the ceremony. At the same time a Memorial Service was held at the Royal Chapel in Tatoi in the presence of King Constantine, the Queen, and the late king's widow, Madame Aspasia Manos.

**New Traffic Regulation.**

Following the failure of the regulation brought into force by the Prefect of Police under the Venizelist régime, to the effect that pedestrians should keep to the right on the main thoroughfares to the capital, a new order has recently been issued by which no pedestrians are allowed to walk in the roadway, unless to cross the road, this being reserved exclusively for vehicular

traffic, which has increased considerably of late. The number of motor-cars at present at Athens exceeds 4,000, and averages one for every 75 inhabitants!

**A Census of Smyrna.**

The High Commissioner of Smyrna has just created a Statistics Department under Monsieur Drosopoulos. As soon as this Department is in working order, a census of the population and employment of Smyrna and district will be taken.

## ALBANIA.

*Tirana, November* 3.

**The Eastern Frontier.**

Difficulties are still far from being solved. A week ago an important skirmish took place on the Drin, involving severe losses both to the Albanians and to the Serbs, but these latter are more numerous and better equipped. The Serbian objective is Louria, a point of the highest strategic importance, commanding all the positions over Mirdita and Mati. A Russian soldier recently in General Wrangel's army, who has been taken prisoner (he is twenty-five years of age and comes from Teoriski) states that the Serbs directed against Albania four Russian regiments, each of six squadrons, and each squadron consisting of about one hundred and twenty men. The prisoner's regiment is commanded by Colonel Bajdokoff.

**Serbian Irregularities.**

Apart from the doings of the Regular Serbian Army, the Serbian Government is reported to be committing unwarrantable acts. For example, Commandant Miro Martinovitch has been instructed to recruit *komitajis*; six million dinars have been placed at his disposal, and he himself has promised to each of his men, if they succeed in entering Scutari, a reward of two thousand five hundred dinars.

The population of the regions invaded by the Serbs are fleeing to the West (Scutari, Tirana, Elbasan). Their condition is precarious, and epidemics are feared. The delegate of the International Red Cross of Geneva, M. Marcuard, who visited the refugees of the districts devastated by the Serbs last year, has stated that 10,000 of them have died from sickness and starvation. The present exodus will be still more appalling.

**Belgrade Against Tirana.**

I learn that Belgrade denies the attacks upon Albania, and that M. Pashitch has pretended at Paris that the Serbs have only been defending themselves against Albanian aggression. This argument is on a par with that of the armed burglar who, when found in somebody's bedroom, states that he is there in self-defence. Before the Serbian denial, the Albanian Government had asked the British Consul, Mr. Eyres, to make known the true facts of the case to the Foreign Office. M. Eugene Pittard, Professor of Anthropology at Geneva, who has recently visited Albania, has gone to make a declaration before the French Consul at Geneva. The Powers who do not wish to resume diplomatic relations with Albania can still find means in this country of defending themselves diplomatically and of making the truth known.

**An Albanian Consul Officially Recognised.**

M. Pecmezi, Albanian Consul at Vienna, has just been officially recognised by a decree, dated October 12, of the Austrian Republic. He is the first Albanian official abroad thus to be recognised. Albania at the moment has representatives in Paris, Rome, Washington, Alexandria, Constantinople and Vienna.

**The Acting British Consul.**

Mr. Eyres, British Consul, has just obtained leave for reasons of health. His successor, Mr. Heathcote Smith, is expected here to-day. Mr. Eyres leaves behind him excellent memories, and he has contributed much in making the name of Great Britain still more loved in Albania.

**The Albanian Boy Scouts.**

The Boy Scouts of London have just sent a gift to the Boy Scouts of this country, the centre of whose work is at Tirana. This work has been well and very zealously directed by a young Englishwoman, Miss Mosley Williams. This gift consists of clothing for fifty children. A Scout-master from the Boy Scouts Association of London is expected here very shortly.

**The Chamber of Deputies.**

Forty-seven deputies, all those of the popular party and many of the Progressive party, have just combined to form a new group under the name of "Sacred Union." The Government itself is supported by this group. The Opposition consists of deputies from Berat, Elbasan, Durazzo and Drin. It is the South and North of Albania, therefore, which support the Government against the centre.

A recent decision of the Albanian Parliament is worth noting: it is the abolition of the titles "Bey" and "Pasha," which are legacies of the Turkish domination. Another decision is to the effect that any Albanian coming from Turkey who has held a public office there shall be refused admittance into the Albanian Administration until two years after his return. These two measures are designed to cut short the accusation made by Albania's neighbours of her being in sympathy with the Turks. For the Albanians wish to have nothing in common with their old conquerors.

**Stamps.**

The postage-stamps at present in use are printed in Paris. As Albania was in need of fiscal stamps she first applied to Rome, but, having failed to obtain satisfaction there, she has just had them done at the State Printing Press at Vienna. The contract was for a series of 1,670,000 stamps for 474,460 crowns, or about £50.

**An Alarmist Report.**

The rumour has been circulating that Greece was concentrating along the frontier—to the south of Koritsa and of Argyrocastro—bands of *komitajis* and of regular troops to invade Albania, after the Serbian model. This news caused a certain uneasiness, and at once measures were taken to reinforce the Albanian troops in the Southern provinces. Despatches announcing energetic protests to Athens on the part of the Great Powers have, however, calmed matters down.

## CYPRUS.

*Nicosia, October* 18.

**The Coming Elections.**

In several of the towns representatives have already been chosen to attend the all-Greek meeting in compliance with the Archbishop's invitation for October 10 (O.S.). At Nicosia the Greek advocates have chosen M. A. Artémis, an able lawyer, who has acted for considerable periods as Hellenic Consul in Cyprus. He has convened a meeting at his office, in order to determine the views of that body, or at least of a majority of them; for the new opposition party is not likely to lack supporters. The Legislative Council should be dissolved this week.

Several of the present nine members, eight of whom seek re-election, have been visiting the larger villages, and making speeches. An address issued by M. Theodotou, a leading "Unionist," is typical of the standpoint from which these members endeavour to justify their foolish abstention from the meetings of the Council, and may be summarised as follows:—"We cannot suppose that the majority of Greek electors will approve any policy other than that which has been consistently followed since the mission to London was appointed. The Legislative Council has done and can do nothing worth mentioning as long as the Greeks are not represented according to their numerical preponderance in the island. A few years ago it was proposed and accepted that three additional members should be elected; but a condition imposed was that three more official members should be added, and to this the Greeks would not consent. It would be better that there should be no Council at all than one constituted as at present. But if it is destined to be, it would be better that the Greek members should refuse to sit

Digitized by Google

in it, for reasons of *amour propre*, and as a strong and emphatic protest against the strangling of their rights and majority. The small minority who think otherwise, and hold our policy to be injurious to the real interests of Cyprus, shut their eyes to the truth of the situation for it is only by local agitation and opposition by all lawful means that the Imperial Government can be moved, and that Greek persistence will bear fruit."

The Greek view begs the whole question, and the statement that the work of the Council can have no value while Greeks do not dominate it is ludicrous. No one imagines that the present members will change their attitude, so that the only hope of saner tactics is that men of more reasonable views will be elected, and it remains to be seen whether the farce of recent years will be allowed to continue. Meanwhile the opponents who are accused of blindness can certainly retort that it is a case of blind guides seeking to lead the blind.

**General News.**

His Excellency and the offices have come to Nicosia from Troodos, and winter hours are being adopted.

Mr. Bowring, Receiver General, goes to Aden and Somaliland on a mission from the Imperial Government, for two months.

A young Moslem employee of the Medical Department at Nicosia, has been found shot dead by a revolver. So far it is not known whether it is a case of murder or suicide.

## ARAB AND JEW IN PALESTINE.

( *From a Correspondent* ).

*Jerusalem, October* 17.

The Twelfth Zionist Congress has on the whole been regarded here as satisfactory. The whole organisation has been built up again, the Administration strengthened, and a programme of practical work adopted for the next two years, with a budget of a million and a half. It is understood that the High Commissioner is particularly pleased with the resolutions on the Arab question, in which Zionists again asserted their desire to live amicably with all sections. A telegram of good wishes was read at the Congress from His Excellency.

General Haddad Pasha, who has been the guest of the High Commissioner, and is going to Amman, granted an interview to the *Mokattam* while in Egypt. His mission in London, he said, concluded with the accession of King Faisal to the throne of the Irak ; he defended King Hussein against the rumour that he was merely actuated by selfish motives ; and regarding the French and British mandates he urged upon the Arab people not to take sides with either Power, but to work in friendliness with both. He preferred not to refer to the exit from Damascus of the Emir Faisal, whose government in Mesopotamia was proving most successful, and he hoped that France in Syria would be as liberal as Britain had been. Speaking of Palestine he said that Arabs could not ask Great Britain to withdraw the Balfour Declaration ; they would not care to have British pledges to themselves annulled. He believed Great Britain would act justly towards the Arabs in Palestine, and he was convinced that her policy could be carried out without infringing the rights of anyone. He suggested that a Parliament should be formed in Palestine.

This suggestion evidently refers to the new Constitution which has been drafted ; but it should be noted that the members of the Consultative Committee of Moslems and Christians ( which the High Commissioner formed as a parallel body to the Zionist Commission ) have already broken off relations with the Government, only seven of the forty-six notables invited having attended the last conference with His Excellency. This attitude has been adopted at the instance of the Arab Delegation. Moderate opinion, as voiced by Haddad Pasha, will certainly condemn this policy ; and one Arab paper, a supporter of the Delegation, has already criticised it as being both uncomplimentary to the High Commissioner and unfruitful. The Report of the Haycraft Commission on the May Riots emphasises the Arabs' grievance that they have no body to represent them, as the Jews have in the Zionist Commission. The Arab leaders themselves have now rejected the use of such a body after its formation, although as composed it could have been of great value not only in their own interests but in helping to arrive at an understanding with the Government.

## IN GEORGIA.

The Georgian Information Bureau, learns from Constantinople that the terror imposed on Georgia by the Bolshevist authorities is becoming more and more merciless. To avoid persecution and death thousands of citizens have to leave their homes and take refuge in the forests and mountains. These refugees include a great number of officers, former employees of the Republic, as well as all the officers of the People's Guard.

Recently 29 workmen were imprisoned at Borjom and others have fled to avoid the same fate.

Deserters from the Bolshevist army infest the country, pillage the districts, rob travellers on the highways, and make traffic almost impossible. Under pretext of fighting the bandits the Bolshevists send detachments of their troops in every direction, but the latter are a greater danger to the population than even the bandits themselves. A considerable increase in brigandage has been reported in Gouria, Mingrelia, and Ossethi. In the districts of Kislovodek and among the mountaineers also it is increasing. In this respect the general situation in Daghestan is very much aggravated. In Urmia, Makin, and other districts of Persia, brigandage has adopted a " mass " character.

In Kutais a great many merchants, accused of not having paid the tax levied on them, have been imprisoned. In Kakheti (Eastern Georgia), and the district of Doucheti a sanguinary struggle is in progress between the peasants and the Bolshevists, who are compelling the population to pay overwhelming impositions.

A new scourge has just fallen on the district of Signaki : the Bolshevists, reviving the Tsarist Government's old policy of colonisation, are transferring the famine-stricken inhabitants of the Volga and settling them there, to the detriment of the interests of the native population. The Georgian towns are burdened with fresh arrivals from Russia, clerks, " Red" soldiers, officers, Communist agents, and common famine-stricken peasants with their families. The Bolshevist authorities, in order to accommodate their own people, are compelling the Georgians to vacate their dwellings, and often throw them into the street.

The people's hatred for the invaders increases more and more while the famine, misery, and " Red " terror grow in intensity.

## RIOTS IN JERUSALEM.

On November 2, the anniversary of the so-called Balfour Declaration there were disturbances in Jerusalem. *The Times'* correspondent in that city reports : Afte. a demonstration by an Arab mob on the Jaffa road which the police broke up, the crowd proceeded to attack the Jewish quarter. A fight ensued between Jews and Arabs in which shots were fired and knives were used and a bomb thrown. The police saved the situation, but four Jews and one Arab were killed and 15 persons were wounded. Subsequently troops patrolled the city, and the Governor and G.O.C.,accompanied by Moslem notables, traversed the streets and order was restored."

# PRESS ON THE NEAR EAST

## Egypt.

Under the heading "Britain's opportunity in Egypt," the *Observer* of October 30 expresses its conviction that "the questions that are for settlement are now perfectly capable of settlement":—

At the present moment the Egyptian question is no longer a military question. Sometimes it is hard to localise a strategic object and detach it from political surroundings. But the Canal position stands out by itself. We need the assurance of complete security for this vital link in Imperial communications. The route to India must be unequivocally safe. That was the reason why we first went to Egypt. It is clearly quite possible to safeguard the canal without maintaining control of the whole of Egypt, Upper and Lower. Lord Milner, whose practical experience of similar questions in Imperial policy is at least as long and as successful as that of any member of the Cabinet, knew perfectly well what he was about when he and his fellow commissioners drafted their proposals.

If we remember that it was the importance of the Canal which first brought British troops into Egypt we shall see more readily that we have no interest in inventing other reasons for keeping them there. Forty years of British control have transformed Egypt. Western inventions and Western ideas have spread during this period of contact. Egypt, as a result, is to-day prosperous—and discontented. Quite apart from the abolition of the Protectorate and the angry burst of nationalism which that false step aroused, we have come to the end of the *status quo* in the country. Quite clearly, if the association of Egypt with the Empire is to be continued with success, it must be continued under new conditions. It is settled in principle that Egyptian independence is to be recognised in fact, as we have always recognised it in form. A permanent treaty between Egypt and Britain is to be concluded. It is not possible to see how a settlement on these terms is consistent with permanent cantonments of British troops throughout the Egyptian interior. There is no possibility of creating, or, rather, of re-creating, cordial relations between the two peoples while we insist on a safeguard which makes nothing of the change proposed. The presence of the garrisons would be a perpetual provocation of native hostility. Egyptian nationalism would protest, and we should have no answer to it, that it had never had a fair and open chance of showing its capacity for responsible government. It would still be a mixed régime under which neither the British nor the Egyptian element could show its best. What we give with one hand the other would threaten to take away. Every potential gain of the new position would have been squandered on a stipulation not strategically essential to us. The unique chance of a lasting settlement would have been wantonly thrown away.

And finally it asserts the old doctrine, that, a change having to be made, let that change be made boldly and thoroughly:—

A change has to be made in Egypt. No one denies it. Critics of the change have the onus of propounding the alternative. But if the change is to be made, let it be made thoroughly enough and boldly enough to assure to both countries its advantages. We ask nothing incompatible with Egyptian liberty in seeking the inviolability of the Canal. That problem solved, there remain the future of the Sudan and the maintenance of law and order in Egypt. The status of the Sudan is on quite a different footing from that of Egypt itself. It requires to be settled on other lines. Independent Egypt may properly require and can be given the guarantees necessary for its economic and political security, especially guarantees affecting the Nile water supply. But Egyptian liberty does not require the abrogation of British control in the Sudan, nor can anything in the history or prospects of Sudanese development justify any such course. We do not think that Egyptians would be foolish enough to show intransigence on this point as long as their legitimate demands under other heads had been met. As regards the future of public order and the protection of foreigners in Egypt, we do not overlook or seek to minimise the difficulties. The use of freedom has to be learnt. Its exercise is sure to be accompanied by mistakes and failures. There might be a renewal of the anti-foreign riots. It is a risk to be faced. But we must face it if the Egyptian is ever to have the chance of showing his capacity. In the event of serious trouble we should have to intervene at Cairo and at Alexandria, not a difficult operation if events compelled it. But this, after all, is a contingency. If we have to reckon with it we have to reckon also with the existing conditions in Egypt. Were the negotiations to fail altogether, foreigners would be exposed, as events have shown, to immediate and permanent risks from a people which has woken to the idea of its independence, and is exasperated by foreign control. We cannot better what is without risking what might be. But there is this deep difference—the one danger is unalterably inherent in the present state of Egypt; the other is not unconditionally inherent in Egypt under self-government. If self-government succeeds foreigners will live in greater security. Even its temporary failures will not expose them and their interests to jeopardy as great as the attempt to govern a recalcitrant country by force. The knowledge that it is an Egyptian and not a British Government which will be held primarily responsible for their safety is the best devisable check upon reckless racialism. It is the very doctrine of responsiblity which British rule aspires to teach.

And the *Westminster Gazette* of October 28 treats the question, in an article called "The Problem of Egypt," in much the same way. It says:—

What is now proposed, therefore, is to give the Egyptians the opportunity of making their Government in fact what it already is in theory. We have again and again declared this to be our aim and intention, and we could not for ever go on postponing the fulfilment of these assurances without destroying the belief in our good faith and combining the Egyptians against us in active or passive hostility. This being our resolve, we must give effect to it fully and generously and with as few reserves, mental or material, as possible. It is desirable in our interests as well as theirs that the responsibility of the Egyptians for the government of their own country shall be real and openly acknowledged, and that they shall reap the credit of success or the discredit of failure. But the Egyptian case is no simple one of internal administration. Egypt, without a powerful friend, would be at the mercy of European adventurers; we, without any settled relationship with the Egyptian people and their Government, would feel the spinal cord of our most vital Imperial communications to be in danger. This problem can only be settled by a friendly compact between the two peoples. A hostile and discontented Egypt held down by force would be an immense expense to us, and scarcely, if at all, less dangerous than an Egypt entirely outside our orbit. A permanent and peaceful relationship is essential to British interests and to Egyptian independence.

It then passes in review the consequences of the "unhappy attitude taken up by Zaghloul Pasha," which, though it has caused great difficulties, should not be a cause "for any hard driving" in the matter of a permanent garrison in Egypt. The article concludes:—

The Egyptians, if they are wise, will recognise that recent events in Egypt have created a difficulty for our Government which needs to be met by certain precautionary measures for the time being. But these measures need not be treated as part of a permanent arrangement between us and them, or stamped with the finality that incorporation in the Treaty would give them. If riots and disturbances between different parties and factions were treated as a disqualification for self-government, which country in East or West would be qualified? Abrupt transitions from the old to the new are as undesirable in Egypt as elsewhere, and it would no more be to the interests of Egyptians than to our interests that securities should be too abruptly withdrawn. But these transitional measures should go hand in hand with complete assurances on the principles agreed upon, assurances, for example, that we do not intend to make the British force in Egypt an "Army of Occupation" or to keep it permanently stationed in the towns of Egypt. The one guarantee for law and order in Egypt and peace between Egyptians and foreigners is the restoration of good-will between British and Egyptians. A friendly Egypt will be a far greater security to foreigners than the peppering of the country with small British forces which will be a constant source of irritation. Having chosen the friendly policy, let us go for it whole-heartedly and see that it is not marred by niggling reserves and petty timidity.

## THE ALBANIAN FRONTIERS.

Reuter's Paris Correspondent reports that on Saturday the Conference of Ambassadors approved the report of the Commission on Albanian Affairs and will sign at its next sitting the document embodying the decision of the Allies in regard to the Albanian frontiers. The Conference also considered the methods of procedure for the carrying out of the Venice Agreement governing the Austrian Succession States.

The *Temps* understands that the frontiers of Albania as fixed are identical with those fixed in 1913, with the exception of the following minor adjustments:

The Lim district goes in its entirety to Albania.

The whole of the Dibra-Struga road is assigned to Yugoslavia.

A frontier adjustment favourable to Yugoslavia will be made in order to combine Prizrend with its environs.

In the north of Scutari slight alteration will be made in the frontier so as to guarantee the approaches to Podgoritza.

## MUSICAL NOTES.

### Opera at Covent Garden.

The Carl Rosa Opera Company is pursuing its sincere way at Covent Garden, and is now well into its repertoire of Wagner operas. No one would pretend that this company excels in Wagner's operas, but that it should attempt him at all is something for which the ordinary man is grateful. On November 1 "Lohengrin" was given, and a performance was secured that was like the curate's egg. The orchestra, under Mr. Eugene Goossens was for the most part excellent—Goossens' musical resources are apparently inexhaustible—excellent, not merely when playing by itself, as in the overtures to the first and third acts, but also when supporting or maintaining the vocal parts. The playing of the strings in the "Swan Music" in particular was first-class. And there was not much seriously to complain of in the work of the principals: Mr. Harry Brindle, for instance, sang the part well, if he did not look it, of Henry the Fowler, and the opposite may be said of Mr. Booth Hitchin as Count Telramaud. Mr. William Boland as Lohengrin had many merits, though his somewhat earthly mould did not lend easy belief to the fact that he was half-divine; he had, moreover, a bad tendency to slur upwards to a note with a sudden intensity that bespoke only too convincingly his connection with the common world. Otherwise he is extremely competent. The parts of the sorceress Ortrud and of Elsa of Brabant were adequately done, without being distinguished. The one really bad stain in the presentation was the poor choral singing. So much depends in this opera on the dignity and spontaneity of the choruses that their uncertainty, both in rhythm and in intonation, was a great pity. Mr. Goossens did his all to infuse life into and to express tone from them, but they remained to the end consistently indifferent. An improvement in their mass singing is the first essential in that short step to imaginative greatness which we all hope the Carl Rosa company is shortly to take.

### A Roumanian Singer.

It was a hearty welcome that Mlle. Costopol Aïdonne d' Etolie, the Roumanian prima donna, received at her recital on November 2 at the Æolian Hall; both hearty and deserved. She has a powerful voice, of wide range, and flexible enough for most purposes. Perhaps her chief feature is the possession of a really musical intelligence, for everywhere she displayed individual and for the most part interesting ideas, though in one or two places those ideas were in advance of her technique. This musical intelligence was shown not only in the songs we already knew—by Brahms, Saint-Saëns, and Debussy, for example, but especially in her choice of song. Particular praise must be given to her inclusion of Roumanian and Greek songs in her programme—an enterprise all the more worthy as it is so rare. For there is musical stuff in the Balkan countries and in Roumania that Near Eastern artists, when they visit this country, seem strangely loth to exhibit. No one really wants to hear eternally the old hackneyed arie and songs, whoever the artist may be who is performing them: it is rather in the search into and the performance of new or unfamiliar music that the value of the singer is considered nowadays to lie. Mlle. d'Etolie, then, proved herself to be an interesting singer. It is true that she had faults, most noticeable of which was her tendency to mal-intonation, and, when once on a sustained note, to slip slightly from the true pitch. Again, she could so indulge in sentimentality (as in Brahms' "Immer Leiser," which, incidentally she sang in English) as to mar her rhythm; and her lack of consonantal attack and of characterisation of vowels made her words, especially in English, a little difficult to hear. But her mezzo-voice was generally exquisite; it was her subtle employment of this in Saint-Saëns' atmospheric "La Cloche" that made her interpretation notable. And she achieved tragic splendour in Ponchielli's "Suicidio." For neither of her Greek songs did I care greatly. The first, "Diati," had an unoriginal melody, and, moreover, seemed to be poorly arranged by Xantopoulo, with very thin harmonic support to the voice. Again, in the second, "Mana ke ios," which had been set by Samara, the climax to the sentimental story was left for the voice almost alone to tell. But Mlle. d'Etolie excelled herself in the two Roumanian songs, "Mi-e dor," and "Fluerasal," both by Andreescu-Jassy. Except for the fact that the top notes were too loudly focussed, the first had a beautiful interpretation, the triple repetition of "Mi-e dor" in the final lines being perfectly conceived. There was a very pretty fancy in the pianoforte accompaniment to "Fluerasul," in which, after florid and sometimes unsupported vocal phrases, the pianoforte would effectively break in with its suggestion of the flute. For an encore, Mlle. d'Etolie sang an extremely attractive Roumanian popular song. I hope that she will be encouraged and persuaded to give another recital in London, so that she may show us further examples of the musical art of her own and of neighbouring countries.

### The Royal Philharmonic Society.

The Royal Philharmonic Society began their 110th season at the Queen's Hall with an excellent programme on November 3, the works being Elgar's Enigma Variations, Brahms' pianoforte concerto in D minor, Ravel's "Ma Mère l'Oye," and Stravinsky's "Petruchka." Mr. Albert Coates was the conductor, and M. Cortot the solo pianist. Unquestionably the finest thing of the concert was the Elgar, in which Mr. Coates revealed unexpected sensitiveness and insight. The combination in these Variations of almost female delicacy with noble strength is a very subtle thing to interpret, but they were conducted with wonderful restrained perception. Of the Brahms it is not possible to say much except that it is a dull work, which not even the steely brilliancy of Cortot could make to glisten. The Ravel was delightful from beginning to end, with the orchestra revelling in the exquisitely rich effects. "Petruchka," an early masterpiece, was also excellent fun, though not so well conducted. Its impudent cheek is amazingly successful, and it says much for the Society's musical sense that they could be persuaded to include it in their first programme. The next concert is on November 17.

### M. Thibaud.

M. Thibaud, the greatest French violinist, has recently given two recitals at the Wigmore Hall, and has re-impressed everybody with the fact that he is the purest fiddler living. A Kreisler may be greater rthmically, an Ysaye lyrically, but for intellectual clarity and directness of interpretation there is no one to surpass M. Thibaud. Bach's "Chaconne" was extraordinary for the deliberate, calculated way in which this fiddler first held, bound, and finally entranced you. It was playing of the highest possible kind. Because his sense of form is so perfect he is one of the very few who excel in the longer kind of works, particularly in those of sonata-form. A Mozart sonata therefore was (with the alert and sympathetic Mr. Harold Craxton at the pianoforte) as exquisitely finished as it is possible to imagine. M. Thibaud is a supreme artist whose virtuosity is his first but least possession.

# NEAR EAST BOOKSHELF.

## BEHIND THE CURTAIN.

**"THE RAJAH'S DAUGHTER." By F. E. Penny. (London: Hodder and Stoughton. 7s. 6d. net). "MAKI." By R. J. Minney. (London: The Bodley Head. 7s. 6d. net).**

Mrs. Penny, whose stories of life in India are always enjoyed by her many readers, writes in her latest book chiefly of the conditions of life for Indian women. Princess Charma, daughter of the Rajah of Dharpur, has been sent to England on a visit, and, the war having begun soon afterwards, has been obliged to spend many years there, and has grown accustomed to the freedom of English life. Mrs. Penny shows very cleverly how terrible it is for her to return to the ordinary conditions of life in her Indian home, and at the same time how the training of the generations before her, her own character, and the subtly woven web of circumstance make it almost impossible for her to escape. The reader will be thankfully relieved that Mrs. Penny does in the end enable her to do so.

There is an English girl in the story too, Alma Beaufort, very modern and independent. She accompanies Charma to India in the capacity of chauffeur, but finds herself powerless to help the girl, as she had hoped, to free herself from the heavy chains of tradition. Even the Rajah's secretary, the well educated and broad-minded Raman Das, while sympathising with Alma's opinions can do nothing beyond assuring her that "it is the custom of the country."

There are two excellently described comic incidents in the book. One is in the opening chapters where Alma, very cool and capable, acts as chauffeur on a motoring tour to Downham who has been in India all through the war and cannot get accustomed to the new place taken by women in the scheme of things. The other is the description of the visit which Charma's betrothed, a fat and elderly Zemindar, accompanied by all his female relatives, pays to the Rajah of Dharpur's palace.

Mr. Minney also deals with the question of the tradition-bound lives that are spent by the women of India. Maki is the beautiful daughter of a rich merchant in Calcutta. We first find her craning her neck to see as much as possible of the world from the little window of her room at the top of her father's house. She is fifteen and, although betrothed, still unmarried. "An old maid almost according to Indian standards, but it was her parent's affection that kept her with him till so late in life." In spite of the absolutely uneventful chillness of her life, there is at this time a stirring of hope and interest in Maki's heart, but we are not allowed to see her happy, even in this negative way, for long. Presently her father decides to take her to live with his sisters and brothers' wives. There she is so miserable that she attempts suicide and brings upon herself a period of torment while the devil who is supposed to be in possession of her is exorcized. After this her father hastens her marriage, but she finds herself as unhappy as ever in the Zenana of her father-in-law's house. His family finally decide that she is mad, and she is returned to her father's house. Maki manages to run away and gains freedom, but only to find herself the unprotected victim of persecution on account of her beauty. At last she meets Hira, the son of the flute player, a boy who lived in the little court which she could see from the window of her childhood's days. In their mutual love they find for a time great happiness together, until Hira is imprisoned as a dacoit, and there follows another period of misery for Maki. She remains triumphantly faithful to Hira and after some years they meet again. But the last we see of her is as a blind disfigured beggar woman, sitting with her head against the brick wall at the corner of Zachariah Street and Chitpore.

The book achieves an atmosphere of unrelieved subdued gloom in which the tragic tale, with its descriptions of Indian stage life and "the perfumed underworld that fills so large a space in native Calcutta," is quietly and effectively unfolded. We are however, puzzled as to what the author means us to understand with regard to the love of Maki and Hira. Although she feels at the last, that he has failed her, their love does seem to rise to a great beauty of faithfulness and devotion, and to envelope them in sublime happiness in the midst of the squalid slum where they live. This being so, it would be more artistically true if it were made to blaze out in vivid colouring from the drab background; the author has allowed it all to be woven into the same grey pattern, and has we think lost an opportunity of giving his story an even greater power than it already possesses of compelling our attention and gripping our sympathy.

## A TALE OF IRAK.

**"A SONG OF ARABY." By John Guisborough. (London: Mills and Boon. 8s. 6d. net).**

In a note accompanying this book, the publishers express the hope that we shall find it a prize novel of exceptional merit; and we are pleased to be able to say that the hope is well founded. There is excellent material in the book; it avoids wishy-washiness and sickly sentiment in a way beyond praise; and if the author sometimes irritates us by wandering too far down attractive byeways, we are bound to acknowledge that they usually *are* attractive. What we like least about him, if we may say so quite frankly, is his air of appearing in print so entirely satisfied with himself; it may be merely an unfortunate accident, but it mars an otherwise wonderfully good novel.

Perhaps the book owes a good deal of its interest to the fact that the scene is laid in Lower Mesopotamia—a region which has as yet been used but little for such purposes, we think. The author seems to us to know this ground well, and we should not be surprised if we discovered some day that his interest in it was not that of the soldier only, that as an archaeologist he knew something of the excitement of 'digging for the gold beneath the rainbow.' His story seems to contain a good many references that we would expect from such an one. However — ! The main thing is that he has a story to tell, and a quite good one too. It concerns itself with the war, with spies and counter-spies, with a Hunnish engineer in the Mesopotamian marshes, a mystery gun, and—chiefly—with the adventures of an Englishman and an Englishwoman who, having before the war followed the calling of explorers in Arabian lands, now turn their somewhat rare knowledge to their country's advantage. We like this pair immensely, and if we refrain from saying much about their adventures here, it is in the hope that our readers will be tempted to read the book for themselves. It is worth it. But we warn 'Mr. John Guisborough' that the next time he writes a novel he will be well advised to avoid tempting byeways and lengthy digressions, such as that on pp. 80 and 81 (his apology at the end of the latter page is certainly called for!), and that he should not leave quite so many loose ends in otherwise good sound work. Having told us so much of 'Winkle' and 'Penthy,' for instance, why did he not tell us more, and round off the story? But we honestly congratulate hin on his first venture in the field of fiction, and wish it every success.

## PERSONAL AND GENERAL.

**To-day.**

November 10 (New Style).
October 28 (Old Style).
Rabia I, 10, 1340 A.H. of the Moslem Calendar.
Marheshvan 9, 5682 of the Jewish Calendar.

Sir Robert and Lady Aitken have left England for Bombay.

Sir Philip Grey-Egerton is leaving to-day for several months' shooting in India.

Lieutenant-General Sir Charles Harington and Lady Harington left London on Saturday for Constantinople.

Queen Olga of Greece has arrived in Paris on a visit to Prince and Princess Christopher of Greece.

A Reuter Alexandria telegram reports that a daughter was born to the Sultan of Egypt on November 5.

M. Athanasoff, formerly Minister of Railways, has been elected President of the Bulgarian Sobranye.

M. Radu Th. Djuwara, First Secretary to the Roumanian Legation, left London this week for Bucharest, on leave.

Field-Marshal Viscount Allenby, High Commissioner for Egypt, left London on November 5 for Egypt.

Earl and Countess Fortescue are shortly leaving for India to visit their son, Viscount Ebrington, who is stationed there with his regiment.

Sir Stanley Reed has left London for Bombay. Lady Reed will be at 62, Chester-square for the winter. (Telephone, Victoria 1824).

The marriage arranged between Lieutenant P. S. Cooper, R.N., and Miss Francis M. R. Clarke will shortly take place at Malta.

Sir Ronald Graham arrived in London on Saturday from The Hague. On the eve of his departure from Holland, the Anglo-Batavian Society of The Hague entertained him to a farewell dinner.

The marriage took place on October 12, at Multan, India, between Cuthbert King, I.C.S., and Elsie Vivienne elder daughter of Mr. and Mrs. J. R. Harris, 2, St. Aubyn's Court, Hove, late of Wrayfield, Reigate.

Our Bulgarian Correspondent writes from Sofia (October 31):—Mr. Rodd, Secretary to the British Legation, has left for England, on leave. Mr. Panaretoff, Bulgarian Minister in Washington, is spending a few weeks at Sofia.

The marriage was celebrated on October 24, at the Cathedral, Bombay, between Ernest Purton, youngest son of Mr. John F. Purton, of Fox-lane, Palmers Green, and Mary, second daughter of Mr. and Mrs. Thomas Melville, of Old Park House, Palmers' Green, London.

A marriage has been arranged, and will take place at Calcutta in December, between Ronald Malcolm, youngest son of Mr. and Mrs. Sydney Thompson, Farnaby, Sevenoaks, and Marie, youngest daughter of Mr. and Mrs. William Byrne, of Ingoldsby, Moseley.

The marriage took place on November 2 at Cairo, between William, elder son of the late W. Allard, J.P., and of Mrs. Allard, Crescent-road, Kingston-on-Thames, and Dorothea, youngest daughter of the late Charles Mann and Mrs. Mann, Talbot Road, Highgate, London.

The marriage was celebrated on October 18, at Christ Church, Simla, by the Bishop of Lahore, between C. L. Seton-Browne, the Leicestershire Regiment, surviving son of Mr. and Mrs. Seton-Browne, "Dumfermline," Grenada, N.W.O., and Agnes Majorie Bruce Heard, elder daughter of Colonel Heard, I.M.S.

The marriage was celebrated on October 31, at the Cathedral, Bombay, between Captain James Smyth, Indian Army, son of the late Mr. R. A. M. Smyth, Peasenhall, Suffolk, and Mrs. Smyth, Ipswich, and Dorothy Gunn, daughter of Mr. James Allan, Glenbourne, S. Oswald Road, Edinburgh.

A marriage has been arranged and will shortly take place, between Henry Monck-Mason Moore (Colonial Secretary-Designate, Bermuda, late Ceylon Civil Service) son of the Rev. E. W. and Mrs. Moore, of Stoke Doyle, Oundle, and Daphne, only child of Mr. W. J. Benson, C.B.E., and Mrs. Benson, of 76, Redcliffe Gardens, South Kensington.

The marriage was celebrated on November 1, at Christ Church, Newgate, E.C., by the Rev. R. Hine-Haycock, between Hugh Stanton Chatfield, Barrister-at-Law, Trevandrum, South India, youngest son of Kyrle Mitford Chatfield, of The Argoed, Monmouth, and Edith Mary Moore, youngest daughter of the late John Moore, of Wellington Park, Belfast, and Mrs. Moore.

The marriage was celebrated on October 31, at St. James's, Piccadilly, by Canon A. Sewell, assisted by the Rev. H. F. Webb-Bowen between Captain B. E. Chicheley Plowden, 82nd Punjabis, son of the late Richard Chicheley Plowden, Indian Police, and Mrs. Plowden, and Tempe Mary, daughter of the late Dr. Edward Bagot and of Mrs. Bagot.

Prince Nicholas of Roumania, on November 6, honoured M. Michel B. Boeresco, Minister Plenipotentiary and Roumanian Chargé d'Affaires, with his presence at luncheon at the Bachelor's Club. The other guests included M. A. Rizo Rangabé, the Greek Chargé d'Affaires, and Sir Harry Brittain, M.P., and Lady Brittain.

On November 2, M. A. Rizo Rangabé, Greek Charge d'Affaires, and Madame Rangabé entertained at dinner at the Legation, 51, Upper Brook-street, the Grand Duchess George of Russia, M. Gounaris, Greek Premier, M. Baltazzi, Greek Minister for Foreign Affairs, General Stratigot, Admiral Malikopoulos, the members of the Greek Mission, and the *personnel* of the Legation.

The marriage was celebrated on October 27 at St. Mary Abbot's Kensington, by the Rev. E. F. Walker, brother, assisted by the Rev. Colin Walker, cousin, and the Rev. E. P. Woollcombe, Head of Oxford House, between Northcliffe Fourness, of Calcutta, only son of the late Frederick C. Thompson, India Office, and Helen Vavasour, only daughter of the late Frederick Walker, Solicitor, of 18, Durham-Villas, Kensington.

The marriage was celebrated on November 1, at St. Peter's, Cranley Gardens, between Louis Reynolds, of the Air Ministry, late Major, 8th London Regiment and Royal Air Force, only son of the late Colonel E. S. Reynolds, Indian Political Department, and Mrs. Reynolds, and Peggy, only child of the late J. H.

SCHOOL OF ORIENTAL STUDIES.
London Institution Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs.

For particulars, apply to Sir E. DENISON ROSS, Director.

Digitized by Google

Middleton, D.C.L., Litt.D., &c., Director of the Art Museum, South Kensington, and Mrs. Middleton, of 19, Ashburn Place.

Our Smyrna Correspondent writes :—The Right Rev. Bishop Bury, Episcopalian Bishop of Central Europe, was the principal guest at Lady Lamb's "At Home" on October 27, at the British Consulate-General. The Greek and Armenian Bishops, the British American and Dutch Clergy, and representative members of the British and American Colonies had also been invited. Bishop Bury is staying with Mrs. Edward Whittall, of Bournabat, and intends to visit Ephesus and other places of historical interest in the neighbourhood.

## THE PRINCE'S TOUR.

After opening the Parliament at Malta H.R.H., the Prince of Wales, in the Renown, proceeded to Port Said, which was reached on November 5. He was visited by the Governor of the Suez Canal, the British Consul and other officials, and afterwards went ashore for a short time. The Renown passed through the Canal on Sunday.

## APPOINTMENTS, PROMOTIONS, Etc.

Rear-Admiral John Luce, C.B., took up last week the appointment of Rear-Admiral in charge at Malta, and Admiral-Superintendent of the Dockyard. He succeeds Rear-Admiral Brian H. F. Barttelot, C.B., M.V.O., who was appointed on April 1, 1919. Paymaster-Lieutenant N. H. Beall, O.B.E., will serve as secretary to the new Admiral-Superintendent, with whom he served in the Glasgow during the first part of the war, including the battles of Coronel and the Falklands and the sinking of the Dresden, and also at the Royal Naval Air Station at Cranwell. This is Rear-Admiral Luce's first appointment since his promotion to flag rank last year.

## OBITUARY.

The death is announced in a Reuter message from Arnhem of Baron Eric Mackey, heir to the Scottish titles of his uncle, Lord Reay, formerly Governor of Bombay, who died last August.

The death is announced of Viscount Sandhurst, who had been Lord Chamberlain since 1912. William Mansfield, first Viscount and second Baron Sandhurst, G.C.S.I., G.C.I.E., G.C.V.O., was born in 1855. In 1895, the Roxbury Ministry appointed him to the post of Governor of Bombay, which he held until 1900. He had held the position of honorary Colonel of the Bombay Rifles since 1895.

Mr. Edward Bothamley Freeman, I.S.O., formerly British Consul-General for Bosnia and the Herzegovina, and a Crimean veteran, had died at Exmouth at the age of eighty-three. He was assistant superintendent of the Dardanelles Depot of the Land Transport Corps in 1855, Chancellor in the Consulates of Diarbekir and Serajevo, 1858-76 ; Vice-Consul at Mostar, 1876 ; Consul at Sarajevo in 1879, and Consul-General for Bosnia and the Herzegovina from 1891 to 1905.

## NEWS IN BRIEF.

It is reported from Constantinople that the negotiations between the Sublime Porte and the Albanian Government for the resumption of diplomatic relations are nearly concluded, and that an Albanian Legation is to be created at Constantinople with Nezir Remzi Bey as Albanian representative.

In view of the imminent disbandment of the Russian Army refugees now in Turkey and the abolition of all the organizations of his civil administration, General Wrangel has issued a farewell order, in which he records the services rendered by the refugees and the various Russian organizations in Turkey.

The Athens correspondent of the *Morning Post* states that Prince George of Greece was expected to leave for Smyrna yesterday to represent King Constantine there, and that this move is considered to be of political importance as indicating the progress of M. Gounaris's mission in Western Europe.

The Ali brothers and Dr. Kitchlew have been sentenced to two years' rigorous imprisonment.

A seven-pointed red star, on a white background, is the sign which has been selected for the medical corps of the 'Iraq army. The name given to it is The Red Star.

Representative of the Bolshevist Governments of Azerbaijan, Georgia, and Armenia are conferring with Nationalist Turks at Kars.

On Armistice Day (to-morrow) the Arab Delegation in London will place flowers on the Cenotaph.

Sultan Fuad has signed a decree extending the mandate of the Egyptian Mixed Tribunals for an indefinite period.

A man named Marinkovitch, who is alleged to be the author of the attempt to assassinate King Alexander of Serbia last June, has been arrested at Athens.

The members of the International Commissions for the delimitation of the Serbo-Bulgarian and Greco-Bulgarian frontiers have left Bulgaria for Paris, where they will meet to investigate certain questions of minor importance regarding the frontiers which not been settled owing to differences of opinion. It is hoped that the Paris discussions will enable them to settle the questions : but if they are unable to come to an agreement, the Commissions will be obliged to return to Bulgaria next spring.

## ARAB PORTRAITS.

Art exhibitions are seldom held which deal with the Near or Middle East, and when they do intimately concern this journal their subjects as often as not are the stock ones of the ordinary tourist. It was with the keenest and unusual interest, therefore, that one visited Mr. Eric Kennington's recent exhibition of "Arab Portraits" at the Leicester Galleries. Here was the work of a young man who went and drew whither his art and his psychological insight impelled him. For it is not merely the attractive exterior of the Arab that he has seized ; he has at once exposed and discovered him.

In a wholly admirable preface to the catalogue, Mr. T. E. Lawrence, writing from Aden, thus describes the people whom Mr. Kennington has drawn :—"Old people, who are very impatient of those they think fools, men without ties, or duties, or chains, rank individualists who cling to their barren country that they may owe nothing to any man, and be owed nothing in return. Very difficult sitters they are." Many types have been represented, the prince, the military officer, the camel-boy, the descendant of the Prophet, and so on. The hard, direct line of character is wonderfully done in each, and apart from the colour the artist's line stamps the man who is his subject. In most it is intensity of purpose, sometimes good and often bad, rather than intellectual force that is reflected in the portraits of these men. If some must be particularly mentioned, one would choose Nos. 2 and 3, "Matar il Hmoud : min Beni Hassan ; Ibn Gallab Section," and "Fahad ibn Mohammed ; Nejd," as examples of a perfect fusion of line and rich colour ; No. 8, "Alayan : a spy," a study of a vile type, one would imagine, though Mr. Lawrence says he was "our most excellent informant in the War ;" No. 16, "Sindah al Harrass: Beni Etéba : Hedjaz,' perhaps the finest portrait in the exhibition, with the extraordinary beauty of its colouring, the noble visage with seer-like, deep-set eyes ; and No. 22 "Colonel Ghalib Bey Chalan, Adviser to the Emir Abdulla," a very faithful study of the officer with the Kaiser-like moustache who defended Medina during the war. And finally, one is very glad to mention the success Mr. Kennington has had in drawing the Englishmen who are best known in this part of the world: Mr. T. E. Lawrence, whose second (No. 16) is an exquisite representation of a fine head ; Mr. Charles Doughty, the nobility of whose face alone is enough to make him eternally remembered by the Arabs who are his friends ; Field-Marshal Lord Allenby, clear-cut and determined ; General Storrs, the second study (No. 28) of whom is full of mature dignity ; and Major-General Sir Edmund Ironside, a typical drawing of a typical fearless British officer.

## THE NEAR EAST CRISIS AND THE WAY OUT.

There can be no doubt that the agreement between France and the Angora Government calls for more explanation than has been given up to the present. It is, therefore, satisfactory to learn that a written communication from the Foreign Office has defined the British objections to the pact, and we may hope that the French Government in its reply will deal not only with the actual provisions of the Angora Agreement, but also with the reasons that prompted it to undertake separate negotiations with the Turkish Nationalists. If France can show that she had begun to despair of ever persuading the British Government to face the facts of the situation in Asia Minor, she had sufficient cause for coming to terms on her own account with Mustapha Kemal Pasha. The step from many points of view is unfortunate, but responsibility will attach in no small measure to Great Britain for clinging to a policy which had long since been proved impossible. Any disadvantages resulting from the clear indication that the Allies are not yet agreed upon a settlement of the Near Eastern question may, however, be negatived, if France's action has the effect of forcing a decision on the only lines possible from the British Government. The Angora problem can hardly be left as it now stands. Italy is understood to be trying already to follow in France's footsteps, and if she succeeds also in making a separate agreement, the Nationalists' quarrel will be with Great Britain alone, and the British position, apart from the serious reaction upon our relations with our Moslem fellow-subjects and the rest of the Moslem world, will have been completely undermined by our Allies. From this it does not follow that France's action has been right. In spite of the assurances of the French Prime Minister there can be little doubt that the agreement signed by M. Franklin-Bouillon does encroach upon matters that ought to have been dealt with only by the Allies acting in concert.

The Angora Agreement may prove to be less comprehensive in its provisions than report credits it; but if it should restore to Turkey any substantial section of territory entrusted to France under a mandate, and if it deals in any way with the Baghdad Railway, the French Government has clearly trespassed upon some of the larger issues that ought to be reserved for the joint consideration of the Allies. In any case the pact is equivalent to a separate peace between France and Angora, and to be consistent the French ought to withdraw from the Allied occupation of Constantinople. Consistency, however, has never been a weapon in the Allies' armoury, and they are unlikely to make use of it at this stage. The best that can be hoped for from the Franco-Turkish pact is that it will compel an immediate settlement of the whole Turkish question. Even if there should be no undertaking on the part of the French Government to press for a solution that will favour the Turks in regard to Asia Minor and Thrace, it is well known that the whole weight of French influence will be exerted to this end. Outside of Greece no serious fault will be found with this action, except among those who pose as the best friends of Greece, while being in fact her evil counsellors. They are playing the part, in circumstances very similar, of those who egged on ex-King Charles to his undoing in his recent effort to regain the Hungarian throne. With a little patience the exiled Monarch might have found himself firmly seated again on the throne of St. Stephen. He made a premature attempt and has failed, apparently for all time. Few will doubt that it is the destiny of Greece to play a conspicuous rôle in the ultimate development of the Near East, But a premature move on her part may jeopardise her chances of so doing, also for all time. She made a false move, when M. Venizelos insisted upon Thrace and a portion of Asia Minor being allotted to her by the Treaty of Sèvres. The costly advance into Anatolia merely brought her more rapidly up against the dangers to which M. Venizelos's policy had exposed her, but it may yet be the means of saving her from the gradual undoing which she would have experienced if the Treaty of Sèvres had been carried into effect. For Greece would have had both her physical strength and her administrative capacity taxed beyond her powers, and that way lie political chaos and national decay. It was not merely a question of gaining territory from the Turks and of holding it; she was establishing immediately beyond her frontiers one implacable foe, while on another front she had two potential enemies, always covetous of some of her possessions. Greece could not have dealt with such a situation single-handed; she must have become ward for all time of one or more of the Great Powers; foreign control of her Debt would have been permanently riveted upon her, and her own belief in her destiny as well as that of others must have vanished. The advice that we now tender her may not be palatable, but we are convinced that only by following it will she be able to work out her own salvation. If her future is of necessity to be linked up with the incorporation of Western Asia Minor and Thrace, and the possession of Constantinople, let her wait for them until she can hold them without imposing any undue strain upon her military resources or her administrative capacity.

A solution on these lines would serve Greece's real interests, would satisfy the Turks, and would restore to the Allies' policy in the Near East the semblance of agreement. A further, and by no means minor, consideration would be that it would go far towards undermining the agitation with which Great Britain is confronted in Moslem countries. As France has concluded a separate agreement with the Turkish Nationalists, the most dignified course for Greece to adopt would be to make a separate arrangement with Great Britain, to whom she could transfer the authority and responsibilities which the Treaty of Sèvres imposed upon her. By this means she will shift to other shoulders, stronger than her own, the burden of safeguarding the minorities of Asia Minor. However far afield Greek jurisdiction extended there would always be Christian minorities in Turkey, and there has never been a suggestion that Greece could protect them in any other way than by the threat of reprisals on Turks within her own territories. The end in view could not have been attained by such methods. A different course, therefore, must be tried. In the light of past history it may be held that the only policy open to the Allies—the one that France has adopted in her agreement with Angora—is doomed to failure. It will at least be tried under new conditions, if all provocation is removed from the Turks, and judgment may be suspended until it has been shown to have failed. Greece can secure in many other directions her *quid pro quo*. M. Gounaris may well find it possible to return from London with more than enough in the way of compensation to disarm the criticism of his political opponents on the question of his championship of Greek rights. Apart from having had to yield to *force majeure*, he will be able to show that his Government has done its best to make good in regard to the mistaken policy of its predecessor. There will be no difficulty in proving that the true interests of Greece have been consulted, and in this confidence no Prime Minister who claims to deserve well of his country will hesitate to subordinate personal considerations to duty. But Great Britain and France owe it to Greece to help her in every way possible to bear her disppointment without risk to the unity of the nation now happily restored.

## A MIXED BAG.

*By "Majnun."*

It was an evening of gentle breezes and grey clouds as the fisherman and I pushed off from the bank, the former, with an eye on the ruffled water, predicting that it was a grand evening for sport.

Our boat was a little black pitch-covered canoe, known in these parts as a *Mashoof*, with a high pointed stern like some uncouth beetle's horn, and a most contrary character; but the fisherman always insisted that it was my ignorance of ships, and not the boat's contrariness that caused the trouble.

Soon we were on our way through an irrigation channel too narrow for the use of paddles, and so we stood up and punted with our long bamboos, Arab-fashion, which looks easy, but is in truth a Blondin-like performance and in our case generally ended in a ducking.

The palm tops were just beginning to catch the green-gold light of the sloping sun as we emerged on to the marshes and our journey was nearly over, for it was somewhere out here that the fisherman had spotted the abiding place of "the real big 'uns." After about ten minutes more poling we came to a bank which divided the marsh from the flood water and here we tethered our contrary boat and got ashore, the fisherman laden with rods, fly-books and landing net and actually remembering his reel; this is mentioned as it was an unusual occurrence.

I left the fisherman fixing up his rod and walked along the bank wondering how far these apparently limitless marshes stretched, for as far as one could see lay mile upon mile of waste water and reeds and desolation.

Away in camp, a band was playing 'The Blue Danube,' the voice of a long forgotten existence that reminded one so dimly of shining floors and lights, and laughter—and other things of civilization; it seemed impossible that these could exist in the same world as the scene before me.

I was roused from my rather dreary thoughts by a shout from the fisherman, who had evidently got something on the other end of his line, and was in need of assistance. As I joined him there was a flash of silver some twenty yards out in the pool, and his reel gave a screech while the line sawed about in the water, taut as a wire.

Presently he began slowly to reel up, which produced more convulsions on the part of the fish, and periods of agonised suspense on my part, wondering whether all were lost! Gradually, much to my relief, the reeling-in process became more rapid, and finally we "grassed" him. I say "we" as I put in some expert work ladling him out with the net before he lay safe and sound at our feet.

For some time the sport continued in silence and was uneventful but for the brief excitement of landing two small fish and the fisherman's language when he lost a fly in the reeds; it seemed a peaceful occupation, though somewhat monotonous, and I became almost hypnotized as I watched cast after cast into the pool. But not for long.

Suddenly, out of the corner of my eye I saw a flash, and immediately afterwards a crash rent the air and shook the banks beneath us.

The fisherman turned quickly. "D—— those guns," he said, "that's done it."

For some 400 yards to our left was a battery of "heavies" and opposite them 6,000 yards away across the marshes was a low ridge of sand, where were Turks: and this was May 1915—all of which is enough to explain this interruption.

Again the guns crashed and a shell clattered away towards the horizon; then silence for an age it seemed, till far away we saw a dark spout of earth and smoke smudge the sky, and lazily over the water came the thud of the exploding lyddite.

Even the fisherman turned to watch; presently from the low ridge of sand there were two flashes. We waited—there came the two double reports, and soon after, high over the palms some 1,000 yards from where we stood, two star-like flashes and the long-drawn ping of shrapnel; "long bowls" for them, but they evidently meant to have a try.

We watched for some time and then the fisherman, with muttered curses, turned to his work again, and strange to say the frightfulness seemed to have little effect on the fish—though none appeared to be feeding on the surface, three more were caught in the next half-hour.

Presently there was a lull in the bombardment, and after the crash of the guns the silence seemed heavy and almost tangible, and the twittering of the birds sounded far away. Then sounded another voice, singing over the floods—something wild, yet gentle, pathetic yet commanding. The Muezzin was calling from his tower for true believers to hear; and in the eastern sky the violet shadow grew dark, so that all men might know the hour of evening prayer was at hand.

In the west a broad path of gold flamed over the water into the heart of the sun—here and there about it were pools of blue reflection from the sky, bars of green shadow from the reeds. We poled slowly homeward through the gloom of the palm trees, the fish shining like a heap of silver in the bows.

Just as we ran up to the bank, the bombardment re-opened, there was a star-like flash against the deep violet of the sky and immediately a sulphur tongue of flame and a crash from our batteries in answer.

"What's the bag?" said the fisherman, "Six? Now for camp and a bath."

Six fish, 'The Blue Danube' and its strange memories—the crash of heavy artillery, and last of all, trailing away into the sunset, the Muezzin's call to prayer—indeed a mixed bag.

# CORRESPONDENCE.

## "BEDOUIN."

*To the Editor of "The Near East."*

Sir,—Since your reviewer objects to the use of 'Bedouins' as an English plural, and we cannot admit 'Badawin' as the plural of 'Badawi,' it being neither English nor good Arabic, I suggest to him 'Badawis' or 'Badwis,' or the phonetic 'Bedwis,' which would satisfy the rules of both languages.

There is no other way for him, nor can we take exception to the French 'Bedouin,' which is also a regular French formation of 'Bedoui;' and so it remains true to Arabic and to French, whereas his 'Badawin,' would be true to neither English nor Arabic!

He may rest assured that London University knows as much of the Arabs and their language, religion, and history, as they themselves, have ever known.

I am, etc.,

A. Sefi.

## INEBOLI.

A corrrespondent sends us the following notes upon Ineboli, interesting in connection with the recent exchange of British and Turkish prisoners:—

Ineboli is a very important seaport of Asia Minor, situated on the south coast of the Black Sea, having a good anchorage, but is practically an open roadstead, being exposed to the gales from west, north and east. Its population is about 10,000. It is built on a hill and is a very picturesque little town, but of great commercial value. Its beach is just large enough to allow of small craft being hauled up at the least indications of a gale.

The remains of a sea wall, forming a harbour of limited dimensions, built by the ancient Greeks, are still visible under water. It is the port for the rich "vilayet" of Kastamouni, the exports consisting principally of minerals, especially copper, wool, mohair, sheep, cattle, poultry, fruit, etc., etc. Of apples alone the annual shipments pre-war amounted to about 200,000 tons, the season being from September to April, the greater proportion of which were shipped to Alexandria,

## NEAR EAST IN PARLIAMENT.

**Albania and Serbia.** *November 2.*

Mr. Aubrey Herbert asked the Under-Secretary for Foreign Affairs whether Greek troops are concentrating on the frontier of Southern Albania; if Albania itself has been invaded; and how many villages have been burned?

The Under-Secretary of State for Foreign Affairs (Mr. Cecil Harmsworth): According to official assurances received from the Greek Government, there is no truth in these allegations.

Lord R. Cecil asked the Under-Secretary of State for Foreign Affairs whether he had any information as to the alleged invasion of Albania by Serbia, and, if so, what steps the Government are taking in the matter?

Mr. Harmsworth: I have no actual information at the present moment.

**South Persia Rifles.**

Colonel Sir C. Yate asked the Under-Secretary of State for Foreign Affairs on what terms the men of the South Persia Rifles have been disbanded, and what has become of these men; whether the equipment offered to the Persian Government has been taken or not; what proportion of the guns, rifles, horses, mules, stores, and munitions supplied by the Government of India have been withdrawn to the coast; what have been destroyed locally; and what sum the Persian Government is to be called upon to pay to recompense the Government of India for its expenditure on this Persian force?

Mr. Harmsworth: The detailed information now asked for is not yet available, but I will not fail to inform the hon. and gallant Member when the necessary particulars shall have reached me.

## TOPICS IN PARLIAMENT.

The subjoined headings are those in the official report:—

Albania.—Egypt.—Turkey.—Russian and Armenian Refugees.—Kenya Colony (Indians).—Palestine (October 27).

India.—Army Officers. Village Industries (October 28).

Bulgarian Reparation.—Greece.—Turkey (Tobacco Fields).—Constantinople (Labour Dispute).—India.—Seditious Leaflets. Moplah Rebellion, Fire Brigade Superintendent, Lahore (October 31.) ..

India.—Budget (Council of State). Bokhara and Afghanistan Constantinople (Labour Newspapers).— Yugoslav Debt.—Syria (Currency). (November 1).

Albania.—South Persia Rifles.—India Office (Legal Department).—Sir Basil Zaharoff.—Greece.—Franco-Turkish Treaty.—King Constantine (Recognition). (November 2).

## THE PRO-JERUSALEM SOCIETY.

Since its foundation, just three years ago, the Pro-Jerusalem Society has accomplished a good deal of useful work in an unostentatious way. In the first two years of its existence, we learn from a report lately received, it raised about £5,000; and this has been spent on: Repairs of the South Qat-anin (£1,000), weaving enterprise (£250), Dome of the Rock repairs (£250), Citadel cleaning (£200), Citadel gardens (£500), Rampart Walk (£500), Children's playground (£100), Park and Garden system (£400), Town plan, including tree planting, etc., (£450), Registration of Monuments, Archaeological work and Records (£200,) Museum (£100), Technical Education (£500), and Repairs to the Citadel, the Gates and Guard Houses (£250).

To read this list is to understand something of the value of the Society, and its founders have every reason to be proud of their creation. Sir Herbert Samuel, High Commissioner of Palestine, is its Hon. President, Mr. Ronald Storrs, Governor of Jerusalem, its President, and Viscount Milner is an honorary member of its Council; and practically all the principal communities and interests in the Holy City are represented on the Council. Membership of the Society is secured by payment of an annual subscription of £5 or a donation of £25, or over, and there is also a class of Associates, who contribute according to their means. Applications for membership or associateship of the Society should be made to: The Hon. Secretary (Mr. C. R. Ashbee), the Civic Advisor, Governorate, Jerusalem.

Reports from Constantinople state that great activity is displayed by the Azerbaijan Nationalists, who are fighting the Reds. The Samur railway bridge has been blown up, and all communications between Azerbaijan and the Northern Caucasus has stopped

# COMMERCIAL & FINANCIAL SECTION.

## NOTES AND NEWS.

Devonshire Square,
E.C. 2.

### P. and O. Dividend Reduction.

In view of the conditions that have obtained for many months in the shipping trade it was scarcely to be expected that the distribution of the Peninsular and Oriental Steam Navigation Company would be the same as last year, but the final dividend of 6 per cent. making the total distribution for the year 12 per cent. tax free evidently disappointed the market, judging by the subsequent fall in the price of the Deferred stock. The total distribution last year was 12 per cent. and a scrip bonus of 3 per cent., making 15 per cent. free of tax. The present dividend, it will be noted, is payable on an increased capital, and represents a fraction over 12½ per cent. as compared with last year's declaration.

### Loan Offers to Bulgaria.

While certain countries are finding it a matter of considerable difficulty to raise loans abroad Bulgaria would appear to be in the happy position of having, to use our Sofia Correspondent's phrase, "a surfeit of 'loan offers.'" Briefly three financial proposals are stated to have been made, one of them being an offer by Messrs. Balfour, Beatty & Co., of £2,500.000 at seven per cent. Then the Franco-Belgian Syndicate have made a further offer of two hundred million francs, while an American firm are also understood to be engaged in negotiations. According to our Correspondent the British proposal is said to be very advantageous for Bulgaria. It is scarcely necessary to emphasise the beneficial effects that would accrue to British trade from the grant of credit by this country, and it may be hoped that the negotiations will be successful. The Bulgarian Government is at present considering the various offers, but the last word rests with the Reparations Commission.

### Constantinople Loan.

At the meeting last week of Bondholders of the City of Constantinople 5 per cent. Loan of 1909, a committee was appointed to safeguard their interests. The position with regard to the Loan was dealt with by Sir Henry Babington Smith, who pointed out that the assigned revenues of the loan had been paid to the National Bank of Turkey during the war, and were still being paid. Since the war began no coupons have been paid except to Ottoman subjects or the Allies of Turkey, and the accumulations at the bank total £T700,000. Unfortunately the exchange made it difficult to remit even at nominal rates. Sir Henry said it would be, therefore, a question of serious importance for the proposed committee to decide whether, and to what extent, the funds available should be remitted or retained for a more favourable opportunity.

### Imperial Ottoman Bank.

At the annual meeting of the Imperial Ottoman Bank, a report of which will be found in another column, the Chairman, Viscount Goschen, dealt at length with the adverse conditions under which the bank's business had been carried on during the past year. The non-ratification of the Treaty of Sèvres, political conditions in Turkey, renewed hostilities in Asia Minor, and local disturbances, had contributed, he pointed out, "to the continuance in the East of a state of instability and unrest, the effects of which, from the economic and financial point of view, have been aggravated by the world crisis."

### Activities Continued.

In the circumstances it speaks volumes that despite the difficulties of the position the operations of the bank should have continued to develop in the East. It is worthy of special note that important progress has been made in Constantinople and Smyrna, though in Anatolia naturally enough operations had to be reduced. In other countries the bank has progressed, and the Chairman was able to state that there had been "a large movement of business in Mesopotamia." Finally, encouraging results attended the first year's working of the Tunis branch of the bank.

### Morums Oriental Stores.

An apt commentary on the commercial conditions that have been obtaining in Egypt is afforded by the results of the operations of Morums Oriental Stores for the year ended June 30. There was a loss on trading for that period of £74,215, and with allowance for depreciation the total loss amounted to £164,333. For this result the world-wide economic depression, very greatly accentuated in Egypt, it is pointed out in the Chairman's speech, "by the prevalence of local disturbances, social, political, and financial, particularly inherent to the country" is responsible. From the Chairman's review of the position it is evident that the company has come very well out of the critical position arising from the "slump" in prices, and in view of the gradual improvement of the position in Egypt and elsewhere a very different report may be reasonably anticipated next year.

# Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

## EGYPT.

*Cairo, October 28.*

### Advisory Board for Agriculture.

Mr. C. E. Depuis, formerly of the Egyptian Irrigation Service, has just returned to Egypt to become the head of an advisory board, complementary to the Ministry of Agriculture. The intention is ultimately to re-organise this Ministry and incorporate the Irrigation Department, but the re-organisation is not to proceed immediately. In the meantime Mr. Depuis, with some of the senior members of the Irrigation and Agricultural Departments, is to investigate various schemes for the agricultural development of the country. Incidentally the Cotton Research Board issued its first annual report to the public a few days ago. The report shows the nature of the experiments that have been made to determine the best variety of cotton cultivable in Egypt, and adds that it does not wish to be pushed to form premature conclusions. Its work to date has been mostly negative, since it has been found that certain varieties cultivated here do not give the best results, but it has yet to discover—and doubtless will discover in time—just what varieties are most advantageous to the grower, and to the manufacturer.

*Bucharest, October 28.*

### Fiscal Reforms.

As the statements of M. Titulescu, Minister of Finance, to which I referred briefly last week, have an importance for a proper understanding of the financial situation, I am sending a fuller report of what he said. Dealing with the principal charges brought by the Opposition that the reforms are inapplicable and the taxes too onerous, M. Titulescu pointed out that part of the reforms have already been applied, i.e. the taxes on salaries, turnover, luxury articles, inheritances, etc. The tax on real and landed estate had always existed in Roumania, and by the new reform it had only undergone certain modifications; while the levy on industrial and commercial profits could easily be ascertained by checking the books of each firm. The brunt of the campaign was the tax on capital, but it only affected a certain minority, namely, the war profiteers, and moreover had been successfully applied in other countries. He denied that the taxpayers' declarations were too complicated, but he had appointed experts at every assessment office to assist the taxpayer in making out his declaration forms. With regard to the objection that the taxes were too high, he stated that he had repeatedly declared his readiness to reduce them, should they prove to exceed the Exchequer's requirements. The gist of the new fiscal reform was not so much the rate of the tax as the principle that it was desired to introduce, for the quotas could be modified every year by Parliament.

As for the Swiss Loan the Government had not pledged itself to import from a Swiss Consortium unnecessary goods to the value of 24 million Swiss francs. The extraordinary budget included expenditure for economic reconstruction, and if the material could not be obtained in the country Roumania was obliged to procure it from abroad. In the ordinary course the goods would have to be paid for in lei; but to make payments in lei abroad to-day would have meant a further depreciation in the Roumanian exchange; so other means of payment had to be found, and a credit from State to State was regarded as the best method. The conditions of the Swiss Loan are that the Swiss Government grants Roumania a credit of 40 million Swiss francs, of which 16 millions in cash will be at her free disposal, and not for payment of a debt, while 24 millions are also in cash, but destined to cover the orders placed by the Roumanian Government with Swiss factories, which orders, however, the Roumanian Government can place where she likes, and at the prices that suit her, with absolute freedom. The 24 millions will enable the Government to cover part of the extraordinary budget for reconstruction purposes. M. Titulescu added that he intended to propose that this credit should be used for improving the postal, telegraphic and telephonic services, and with the remainder to procure special material for the railways which he considered of paramount importance for the economic development of the country. The industrial capacity of Switzerland, he pointed out, was not generally recognised. The loan would be guaranteed by 7,500 waggons of wheat to be delivered up to May 1922, and by a further quantity of 7,200 waggons of wheat to be delivered from the 1922 crop, based on the price prevailing at Antwerp at the time of delivery. The contract with France, he declared, was about to be liquidated, as 13,000 waggons of wheat, out of a total of 15,000, had already been delivered. With regard to the rate of exchange, M. Titulescu continued:—

"I intend to propose to the Cabinet a series of measures destined to stop as far as possible the discrepancy between the buying power of the leu within the country and the buying power of the leu abroad. Nevertheless, I still maintain that the leu is a healthy currency. Our bank-note circulation, which will be gradually reduced, is much smaller per head than that of other countries with a higher rate of exchange. It must not be forgotten that the increase of the banknote circulation, from the Armistice on, is only due to the unification of the different currencies which existed in the country by its "aggrandisement," and that we do not belong to that category of States that found the financial solution in the printing machine. As far as this Government is concerned, it must further not be overlooked that when we came to power we found war debts unsettled, which we have settled by extensions; we have found unpaid coupons due to England and France, which have since been paid; and we have further found matured Treasury Bonds, which we have settled by paying at least the interest with great sacrifices. Unfortunately, not every one was satisfied only with the interest and hence the difficulties. I admit there is still a lot to be done in this connection, especially with our floating debt, in regard to which I shall propose to the Cabinet the necessary measures. At any rate, nothing would be more harmful for our credit than a Moratorium, to which I am absolutely opposed. Our expenditure in foreign currency must be reduced to strict necessities, and I will request the banks to stop granting credits in lei for payments of any kind abroad..

With regard to the financial situation for the fiscal year 1919-20 the expenditure amounted to 4,430,000,000 lei, and the revenues to 1,114,687,000 lei; showing a deficit of 3,315,313,000 lei. The definite figures for the fiscal year 1920-21 I shall be able to give shortly; they show a considerable decrease of the deficit. From April 1 to August 31 1,945,738,580.37 lei have been collected on account of the present budget, and 1,609,739,695.07 lei have been expended. We have, therefore, for the first five months an excess of about 335 millions, which indicates a very hopeful improvement in our State finances. Naturally these 335 millions have been used to cover, to a small extent, the deficits of previous years. In addition, the figures under the heading of collections do not show the railway revenues, although the railway expenditure has been shown in the respective figures. Therefore, the budget that we have voted can be borne without resorting to loans. It is true, one could say: Why these high taxes, if our situation is so brilliant? The explanation is that besides the ordinary budget we have also the extraordinary budget, which cannot be covered by loans. However, as soon as the direct taxes have been levied, we shall have to start reducing a good many of the indirect taxes, which cause the high cost of living, but the indirect taxes are the only quick and sure means of raising funds so urgently needed by the State."

### Trade Depression.

Local merchants are going through very critical times owing to the continuous depreciation of the Roumanian leu. On the one hand they are afraid to give orders for goods from abroad, and on the other hand, they have got to limit the sales of the stocks in hand, wholesale as well as retail, not knowing at what prices to sell. In consequence for the last three to four weeks transactions have been excessively reduced. Consumers are also adopting a very ostentatious reserve, and only buy what is absolutely indispensable. Prices of goods have risen by 30 to 50% and are soaring almost as fast as the Roumanian leu is dropping in value. Everybody is very gloomy especially those who have bills in foreign currency

Digitized by Google

falling due. To enforce payment at the present rate of exchange would mean wholesale bankruptcy.

## BULGARIA.

*Sofia, October* 31.

**External Loans.**

On October 28, M. Tourlakoff, Minister of Finance, announced in the Sobranje that the English firm of Messrs. Balfour, Beatty & Co., had offered Bulgaria a loan of £2,500,000 pounds at seven per cent. interest. He went on to say that the Franco-Belgian Syndicate who made an offer of a hundred million francs loan to Bulgaria last July, had renewed their offer, and were now offering two hundred million francs under better conditions. The Minister did not divulge what the new conditions were, but he said that an American firm were also engaged in negotiations which might lead to the offer of a loan. The Balfour Beatty and the Franco Belgian loan are both intended for furthering the construction of railways. Bulgaria thus seems to be suffering from a surfeit of "loan offers" but it is well to remember that no external loan can be accepted without the consent of the Reparations Commission. Another difficulty is the continual fall of the leva, which is to-day 640 for a pound sterling, as it will not be easy to raise money for a country whose currency is always depreciating in value. On the other hand it is said that the scheme put forward by Messrs. Balfour, Beatty contains many conditions which will be very advantageous for Bulgaria. It seems that M. Dimitroff, the recently assassinated Minister of War, arranged this loan with the firm whilst he was in Switzerland. The present position is that the Government are studying the various offers, and after they have decided which is the most favourable they will pass on the matter to the Reparations Commission for their consideration.

## GREECE.

*Athens, October* 29.

**Workers' Demand.**

The President of the Federation of Electric Transport has submitted a report to the Minister of Communications to the effect that the Syndicates forming the Federation demand an increase of 200 drachmae per month for the workmen belonging to the Syndicates, the increase to be temporary and in force until the Government takes the necessary steps to bring down the cost of living. The Minister promised to study the demand.

**Shortage of Flour in Crete.**

A telegram from the Governor General of Crete to the Minister of Supplies states that the population of Candia have been without white flour for over a month, and that protest meetings are being organised. The Governor General adds that he will not hold himself responsible for the upholding of law and order in the event of flour not being immediately forthcoming.

**A Mission to America.**

M. Spyro Papafrangos, a Director of the National Bank of Greece, is about to leave for America on a mission for the Government, with a view to negotiating the settlement of the balance of the loan of 33,000,000 dollars which the United States had granted to Greece.

**Miscellaneous.**

According to a telegram from the Commercial Attaché to the Greek Legation in London, the stock of Greek tobacco at present in England amounts to 34,000 bales, 10,000 of which are from Asia Minor.

A Royal Decree has just been signed forbidding all expropriations of rural and urban property in Thrace. Only the Council of Ministers has the right to give judgment against this Decree.

## CYPRUS.

*Nicosia, October* 18.

**Agricultural Outlook.**

There have been some heavy rains, and many of the torrents have come down in flood. Villagers are sowing potatoes and other early crops. The picking of olives has begun. The gathering of honey is taking place. Cyprus bees are celebrated in Europe and America, and the honey is of excellent quality, but the methods of hiving call for much improvement. The flavour of the honey in several parts bears a strong resemblance to that of the renowned Hymettus yield near Athens. The average output of a hive is given as about 15 okes, or 42 lb.

Complaints are being made by merchants of a shortage of trucks on the railway from Famagusta to Nicosia. This, if a fact, should be remedied.

## BAKU OIL INDUSTRY.

We are indebted to the Georgian Information Bureau for the following extracts from reports of the Soviet Economic Council of Baku :—

"Our position in Constantinople has been undermined, and we have been defeated on the Constantonople market owing to the fact that chaos prevails in Baku and that we have no economic system. The only country with which we can trade is Germany; but owing to absence of means of transport it is doubtful whether we shall obtain any orders worthy of mention, and even then we shall not be in a position to deliver the oil. Formerly, under normal conditions, 1,500,000 pouds (poud=36 lbs.) were transported in tanks on the railways. We are now unable to do this; the local situation is also becoming very much aggravated, and we are on the point of a catastrophe. It is true that we are not lost, but we are at the highest point of the crisis as regards the oil output, and have no technical equipment to improve the situation. The pumping machinery has broken down, and we are ruining the oil-wells by using unsuitable instruments. We must at all costs, get machinery or we shall be ruined. If we do not obtain the necessary machinery from Germany and America, Baku will not be able to exist even one year. The crisis is aggravated still more by the fact that the workers refuse to work. The Persians, who as skilled pumpmen are the most important workers in the Baku oil industry, are leaving the town; the Russians are unsuited to this work. If we do not get experienced pump-men the industry will be ruined at one blow. There are many causes for the refusal to work: the workers do not get sufficient salary, and one and a hali pounds of the blackest bread are inadequate absolutely for a man doing such heavy work; moreover, the Persians could not adapt themselves to the prevailing conditions.

The Italian State Railways and Steamship Lines announces that it is now possible to reach Alexandria from London, via Trieste or Brindisi, in less than five days, or in 4½ days of actual travel.

**BANQUE FRANCO-SERBE**

Capital - Frs. 20,000,000.

**London Office:—**
**30, COLEMAN STREET, LONDON, E.C.2.**

## THE 1921 MOTOR SHOW.

The great Motor Show at Olympia and the White City is not only a magnet which draws its enthusiasts and votaries from all parts of the world, but it is accepted as being a fashionable rendezvous of society. Crowded as it was last autumn, it is believed that the attendance this year will surpass all previous records, and from what I have seen I can confidently assert that the British motor trade has reached a higher pitch of development than that of any other country.

There is considerably more interest being taken by the general public in motoring than there was during even the boom year of 1919, incredible though this may seem. The number of cars of all kinds in use in the country to-day is 243,000 odd, an increase of over 18,000 during the past six months. And these figures show every indication of maintaining a steady rate, according to data furnished by manufacturers.

Contrary to what was the case before the war, this year's motor show is marked by the limited number of models produced by each manufacturer. Due to the steady improvements which have been made in design, and the increased flexibility of the engines, the improvement of gearing and transmission, and the use of higher quality materials, there is no longer any need for a number of models of different horse-power as in the past. At one time anything below 15 h.p. was looked upon as a good light car for knocking about in, but of little use for touring work. One of from 20 to 30 h.p. was supposed to be, and indeed was at that time, necessary for driving in hilly country, and the higher engined models were powerful, go-anywhere propositions that depended for their reputation on the size and power of their engines.

Now all that is changed, and it would seem that owing to the improvements that have been made a higher grade car of 15 or at most 20 h.p. is capable of taking an average load at a fair rate of speed up any gradient likely to be met with in any part of the country. There is no need for anyone to buy a car of higher engine power for utility alone. If he buys such a car it is because he wants a little better springing, a little finer quality upholstering, a little more nickel plating, or a rather better quality of varnish. The makers of the small power cars are competing with each other to supply all these, and the day is quickly coming, even if it is not already here, when the car users of this country will be in two classes, and the cars of this country will be in two classes also; the class of utility, which will be those products ranging as regards engine power from 10 to 20 h.p., and the "quality" class, comprising those which certainly have more powerful engines but which make their chief bid for favour by reason of their magnificent equipment.

The show demonstrates strikingly this year the remarkable efficiency of the modern productions. Designs have steadily progressed, the weight of reciprocating parts has been reduced, we show a more thorough knowledge of thermo-dynamics, and of the underlying principles of carburation. And one of the most interesting, although perhaps least obvious, features of the show is the way in which the modern iniquitous system of taxation has affected design.

It is common knowledge that the Treasury rating for motor vehicles depends on the bore of the engine cylinders and not upon their cubic capacity. There are many reasons why this should be; as things go no motorist would wish to see the Treasury system of rating altered for one which took regard of cubic capacity. But the actual brake horse power of an engine, apart from its taxable horse power, depends on the cubic capacity of its engine cylinders, that is to say, on their bore and stroke and not on the bore alone.

The heavy taxation of £1 per horse-power has naturally had the effect of inducing makers to cut down the apparent horsepower by keeping to as small a bore as practicable for the cylinders, and to increase the actual horse-power by lengthening the stroke. At one time it was considered by engineers that the best ratio of bore and stroke was as one to one, and there was considerable talk regarding the high efficiency of the "Square" engine, as it was called. In the exhibits at Olympia and the White City this year it will be seen that the stroke-bore ratio of the majority of the exhibits is in the neighbourhood of two to one. In particular British and French cars both show this tendency to a marked degree, but for some reason American designers have gone rather in the other direction, and most of the Trans-Atlantic exhibits have square engines.

**Accessibility.**

Another striking feature of the exhibits at this year's show is the improved accessibility of all the essential parts. The days when an owner-driver, in search of trouble, had to be down in the road under his engine, are gone for ever, and, instead, all he has to do now is to lift up some plate or other, or take off a cover or so. To-day, as never before in the history of motoring, is the day of the owner-driver, and makers, recognising the fact, have done all in their power to produce cars which under ordinary circumstances give no trouble, and which, should they do so, can be attended to without any discomfort or fuss.

The keynote of the exhibits may be said to be economy. Whilst one section comprises the luxury cars that will ever be in demand, another and numerically larger portion is devoted to cars that cost from a trifle over £100 to about £600 or thereabouts.

Of the latter there is a very wide choice, and, as I mentioned above, most of these are fitted out with every reasonable accessory. On the other hand the luxury or "quality" cars themselves may truthfully be termed economical, for never were such perfect carburation devices or such savings in unnecessary weight than are to be seen on the big Napiers, Rolls-Royce, Vauxhall, Daimler, Sheffield-Simplex, or Sunbeams. Fuel in cars of this type will now yield a mileage easily double what it would before the war; equable torque lengthens the life of tyres, and the cars are so free from mechanical troubles and defects and their subsequent expensive correction that the cost of motoring as regards these items to-day is considerably less than it was a year or so ago.

Another point evident to a visitor to this year's show is that comfort has been studied to a far greater degree. Coach-builders seem to have surpassed themselves; ample leg room for both front and back seats is universal, and the seats themselves can generally be tilted or moved backward or forward. Bodies are provided that will guard against any vagaries of the weather. Whilst the exhibition displays the popular open touring cars and the ordinary enclosed bodies, it is also of interest by reason of the large number of all-weather bodies shown. Concealed hoods have been generally adopted, whilst the majority of the town carriages are fitted with windows that can be raised or lowered.

**The Light Car.**

The feature, this year, is undoubtedly the supremacy of the light car. It is everywhere, on stands devoted solely to its existence, and on stands housing a larger, heavier, and more expensive model. Some members of the class are simple, with air-cooled engines of two cylinders; others are replete with almost all the refinements to be found on heavier models. But even in its cheaper form the light car as seen at Olympia and at the White City this year is a sound and reliable production, lacking the cheap appearance and rough finish of some of those shown at the recent Paris exhibition.

Digitized by Google

The 200 mile race held the other day at Brooklands has shown what the British light car can do, and there is no need at the moment to say anything further regarding this class of productions.

Incidentally electrical engineers will be interested to note that, contrary to the opinion held last year by so many, the magneto holds its own in popularity as a means of ignition. Here and there one sees dynamo ignition adopted, but the great majority of cars are fitted in the usual way with magnetos. Electric starters and electric lighting systems are even more popular than before, and only a very few of the cars shown, and those only of the lowest power have to be started by hand.

In our next issue, following our usual custom, we shall deal with some of the most interesting models shown, and give a detailed description of the various engineering innovations that were noticed.

### The Norton Motorcycle.

Mr. Victor Horsman, probably the best known motorcyclist in the competition world, has finished up this year's succession of notable performances in a manner most fitting both to himself and his mount, the redoubtable "Norton." On October 7 he secured that most coveted record, the "Hour" in the 500 C.C. class by covering no less than 73.38 miles in that time. During this run he also broke the 50 miles record at a speed of 74.14 m.p.h. At the last Motorcycle Racing Club meet at Brooklands, which concluded the season, he ran second to Mr. D. R. O'Donovan in the 600 C. C. Championship Sidecar race, this time capturing the 10 miles standing start record for Class "F" his speed on this occasion being 62.35 m.p.h.

He cannot speak in too high terms of the reliability and speed of the "Norton" and the famous C.A.V. magneto which is invariably fitted to these popular machines.

## UNSECURED BONDS OF FORMER AUSTRIAN GOVERNMENT.

The attention of holders of unsecured bonds of the former Austrian Government is drawn to the provisions of the Annex to Article IX of the Treaty of St. Germain, according to which holders of unsecured bonds of the old Austrian Government Debt held outside the boundaries of Italy, Roumania, Czecho-Slovakia, Poland, or the Serb-Croat-Slovene State, or Austria as it exists to-day, shall deliver through the agency of their respective Governments to the Reparation Commission the bonds which they hold, and in exchange therefor the Reparation Commission shall deliver to them certificates entitling them to their due proportionate share of each of the new issues of bonds.

British Nationals who have not already lodged their bonds are requested to send them, together with the relative coupons, by registered post to the Administrator of Austrian Property, Cornwall House, Stamford Street, S.E. 1, not later than 3 p.m. on Monday December 5, accompanied by a memorandum stating the name and address of the holder, the distinctive numbers and denominations of the bonds, and the date when the bonds were acquired.

Reuter's Smyrna correspondent in a message dated October 28 states that British merchants there, who have already been suffering greatly owing to the depression in trade and the high exchanges, declare that things are now going from bad to worse, partly owing to obstacles placed in the way of commerce by the Greek administration. The slump is apparently being equally felt by all the foreign colonies, and the various Chambers of Commerce are sending a petition to their respective Ministers for Foreign Affairs demanding the removal of the Greek restrictions on local export trade, especially on grain and wool, so as to relieve "the precarious situation of foreign merchants.

A long list of articles has been published the export of which is forbidden until further notice owing to the partial mobilization of the Czechoslovak army (says Reuter). The list includes various foodstuffs, straw, hay, cattle and other animals, raw hides, olive and sesamum oil, spirits, ores, mineral oil, rubber, dressed furs (not made up), old iron and steel, various bridge and railway material, wire, weapons, ball bearings, non-precious metals, various electrical instruments and material, vehicles, medical and scientific instruments, opera glasses and telescopes, sulphur, phosphorus, mercury, various chemicals and drugs, fertilizers, explosives, etc., etc.

## BRITISH CHAMBER OF COMMERCE IN ROUMANIA.

### INAUGURAL MEETING.

The first general meeting of the British Chamber of Commerce, Bucharest (Incorporated) was held on October 22, at the Hotel Boulevard. The officers of the Chamber are: *Honorary President*, His Majesty's Minister; *Honorary Vice-President*, H.M. Commercial Secretary; *Vice-President*, H. R. Saltmarsh, Esq.; *Treasurer*, D. Aschkenasy, Esq.; *Honorary Secretary*, Louis Johnston, Esq. (An appointment to the office of President has not yet been made). *Members of Council*, John Back, W. M. Watson, J. Young, M.G.S. de M. Rogers, A. Mendl, H. J. McGaffin, and Harry Mejor. The Honorary Vice-President, Mr. Alexander A. Adams, opened the meeting, and called upon Mr. Saltmarsh, to read the Report of the Council. Mr. Aschkenasy then read a statement showing the financial position of the Chamber. On the proposal of Mr. Mendl, a resolution that the report of the Council, together with the Treasurer's report be approved, was carried unanimously.

Mr. Aschkenasy proposed the following resolution: "With the view of facilitating economic relations between nations, and especially between the British Empire and Roumania, the need for the entire abolition of the present *Visa* formalities which form a vexatious obstacle to free intercourse be urged upon the competent authorities. The Chamber further directs that copies of the Resolution be forwarded to: The Foreign Office, the Department of Overseas Trade, the Board of Trade, the Roumanian Ministry of Industry and Commerce, the Passport and Postal Reform Committee, the British-Roumanian Chamber of Commerce and the Bucharest Chamber of Commerce together with a letter begging these last two bodies to associate themselves with the Resolution."

This Resolution was carried with one dissentient voice.

Mr. Johnston proposed that:

"For the furtherance of British trade with Roumania it is desirable to re-instate at the earliest possible moment a parcels post service, by rail, if possible, between the United Kingdom and Roumania. The Chamber further directs that copies of this Resolution be transmitted to:—His Majesty's Postmaster General, the Department of Overseas Trade and the British Roumanian Chamber of Commerce together with a request to the latter Chamber to put forward a similar resolution to the competent authorities." This resolution having been carried unanimously, the Honorary Vice-President declared the meeting closed.

**Inaugural Banquet.**

After the meeting the official inauguration of the Chamber was celebrated by a banquet in the Marble Hall of the Hotel Boulevard under the presidency of His Majesty's Minister, Sir Herbert Dering. Among those present were: His Majesty's Commercial Secretary, Mr. A. A. Adams; M. Zane, President of the Bucharest Chamber of Commerce, ; M. Deleanu, Secretary-General of the Ministry of Commerce; Colonel Duncan, Military Attaché; Mr. Keyser, British Consul; the Rev. C. Hinscliff, and Messrs. Saltmarsh, Johnson, Pitts, Back, Mendl, de M. Rogers, Griffith, Aschkenasy, Young, Rogers, Cihoski, Theodoridi, Friedman, Frenkian, Arditti, F. Masterson, McHaffie, Hillard, Baggalay, Middleton, Bolton, Carr, Jacobs, Hayward, M. Pauker ("*Argus*"), Huzzar ("*Bursa*"), Coryn, May, Nielson, Baggalay, Innocent, Smith, Embury, Nadejde, Birkle, Coats, Lane, Buhagiar, Kettlewell, Marson, Rutherford, Murray and Griffiths. Grace was said by the new Chaplain, the Rev. C. Hinscliff.

After the loyal toasts had been honoured, Sir Herbert Dering in proposing the toast of "The British Chamber of Commerce" said:—

For a number of years the representatives of British Commerce in Bucharest have wished to found the Chamber whose inauguration we celebrate to-night. It chief aim will be to cultivate intimate business relations between the British Empire and the hospitable country of which Bucharest is the capital Everyone knows that frank and cordial relations in commerce are a powerful factor in helping the people of two nations to understand and appreciate each other. The new Chamber should be helpful in affording commercial information in Roumania useful to Roumanian merchants, and in Britain for the use of British merchants throughout the Empire. It will be its duty, I apprehend, to safeguard the interests of the stream of trade which should flow between our respective countries, the volume of which will, I trust, increase year by year. There are in fact healthy signs of that increase already, for since 1913, measured in pounds sterling, trade from England to Roumania

Digitized by Google

is now three times what it was then. As Roumanians are also welcome members of the new Chamber (and some I am glad to see here this evening) I have confident hopes that its foundation will be a powerful aid to the development not only of commerce, but also of good fellowship (*camaraderie*) between our two countries which have always been friends. I feel equally certain that this British Chamber of Commerce will ever be willing to lend cordial co-operation to its colleague and elder sister, the very active Bucharest Camera de Comert, of which the honoured President is with us to-night. In anticipation of the fact that Anglo-Roumanian relations cannot fail to be fostered by the creation of the new British Chamber of Commerce. I have gladly accepted its Honorary Presidency, and it is in this capacity that I raise my glass and beg you all, Gentlemen, to drink to the prosperity of this newest enterprise in Bucharest.

Mr. Saltmarsh replied on behalf of the Chamber in a particularly happy vein, concluding his speech with a reminder to the members that the success of the Chamber depended largely on their individual efforts.

Mr. Adams, then proposed the "Health of the Organising Committee. He said:

"When the foundation of the Chamber was first mooted a general meeting of all people interested was called and Messrs. Aschkenasy, McGaffin, Humphries, Johnston, and Masterson, were elected, together with myself as Chairman, as an Organising Committee. Later on the Committee decided to co-opt Messrs. Back, Mejor, Saltmarsh, and Watson, as members, in order that their work might reach a wider area. This band of devoted workers has not laboured in vain. To-day we stand in the presence of an accomplished fact—the British Chamber of Commerce of Bucharest. Thus the labours of the Committee have been crowned with a magnificent success, and I think the thanks of every member of the Chamber are due to those who have given both of their time and of their money to this end. As Commercial Secretary of the Legation you will probably expect me to touch upon the one question of interest to all of you—I mean the rate of exchange, but this is not the time nor the place for me to enter into this question with any detail. To those of you who wish to read the facts of the position as regards this country, and also to get some idea of the judgment that may be formed thereon I would suggest that you procure a copy of my recent report on economic conditions in Roumania. I cannot leave the subject, however, without insisting upon one great truth, that is, that the rate of exchange is not an isolated phenomenon. It is merely a mirror in which is reflected the sum of the conditions obtaining in any two countries. For instance, the rate of exchange between Bucharest and Paris is a reflexion—perhaps inadequate and distorted—but it is the best reflexion that our present monetary and financial system can give us of the daily—yes, hourly—comparison between the conditions obtaining in each country. And under the word conditions is included, of course, the situation of the currency.

In thinking about any return to pre-war conditions, or even an approach towards normal conditions one must take into consideration the economic state of Europe to-day. Let us compare it with the state of Europe after the Napoleonic wars. The last little skirmishes and out-fightings of the Napoleonic war period might be said to have ended definitely in 1819. How long did the recovery take? In 1830 sporadic revolutions burst out in many parts of Europe. In England which had been preserved to a great extent from damage by its insular position it was in the forties that there broke out the Chartist riots, and any of you who have heard from your grandfathers what happened during that exceeding troublous time will know what a terrible difficult and anxious time it was in England, and what hardships the people were called upon to endure. This, gentlemen, was a quarter of a century after the final end of the Napoleonic wars.

Again in our own country in 1846 matters had reached such an *impasse* that the Government of the day was obliged to repeal the Corn Laws, and all who read history know that this measure was very necessary. Two years later still, all over Europe, even in Roumania where we are to-day, in 1848, the Dragon's teeth sown by the Napoleonic wars sprang forth into revolutions, and this I would remind you was *thirty* years after the end of the war. The final turning of the ways in our own country did not come till the late fifties, more than *thirty* years after the end of the war. At the present time our civilisation has progressed considerably since those days. Our financial and industrial state is founded upon a more stable basis, infinitely more machinery is in use to-day than then, science we have been taught to apply industrially, thanks to Germany and the United States of America, and the energies of mankind are directed in greater measure towards the ends and aims of material existence than in those days. It is possible. therefore, that the work of reconstruction will be quicker than after the Napoleonic wars, but as counterweight to this fact we must remember that the damage and devastation wrought by the late war was infinitely greater in extent, to say nothing of the millions of human lives sacrificed, than that of the Napoleonic Wars. At an optimistic count we cannot reckon on restoring the property destroyed, actually destroyed, before twenty years, and the restoration of our civilisation, its bringing back to anything like pre-war conditions in which material ease obtained and speculative thought flourished, depends on the impetus, on the momentum gained by the reconstructive forces. It depends upon this impetus whether a return to what we call pre-war conditions will be made, nay can be made, within half-a-score of years from then. Politicians sometimes promise us a quicker return to normal conditions, and their promises are usually veiled in some such phraseology as that rates of exchange will be adjusted in the near future. Gentlemen, we all know what reliance can be placed upon the promises of politicians! There is only one gospel of salvation, there is only one solution for the existing state of affairs, there is only one remedy for our present difficulties, and that is *work*."

After Mr. Louis Johnston had responded, Mr. John Back proposed the health of "The Guests" and read a letter from M. Take Jonescu, who expressed his regret that absence from Bucharest prevented him from being present; but wished the new Chamber of Commerce prosperity. Other speeches were made by M. Zane, President of the Bucharest Chamber of Commerce, and M. Deleanu, Secretary General of the Ministry of Commerce, who represented the Government. M. Zane referred to the critical position of Roumanian merchants with regard to their debts in pounds sterling and solicited the assistance of the British Minister and of the new Chamber of Commerce in co-operating with the Roumanian Government and the Bucharest Chamber of Commerce with a view to finding a solution to alleviate the present crisis. M. Deleanu emphasised the economic relations of Great Britain and Roumania, the political alliance of latter years between the two countries, and expressed the hope that these relations would develop to the benefit of both nations.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated October 31:—

Season.—October 25—Rain has fallen in the South of Madras, it being heavy on South Coromandel Coast. October 26—Rain in Orissa; and October 27—on North Madras Coast. October 28—Heavy rain on Chittagong Coast. October 29 and 30—Monsoon active in the South of Peninsula.

Condition of Crops.—October 27—Punjab—conditions unchanged. October 28—Bengal—Sugarcane and rice normal. Central Provinces—rice very good, but suffering in unirrigated areas. Cotton and sesamum very good. Bombay—crops good, but rain urgently required. Burma—weekly crops report for October 21, shows destruction of rice by floods over 50,000 acres.

Markets.—Bombay cotton market, steady. Fine M.G. Oomras December—January Rs. 434, March Rs. 429. Bombay cotton arrivals from September 1 to October 21, 1921, 261,000 bales as compared with 92,000 in the corresponding period of the last year. Bombay piece-goods market—demand small.

## CARDS AND GIFTS FOR CHRISTMAS.

Like the proverbial early bird, it is the early purchaser of Christmas cards who secures the prizes, and it is not too early to make one's selection now, especially for cards intended for friends overseas. Messrs. Raphael Tuck and Sons, Ltd., are well to the fore again this season with their greeting cards calendars, and other seasonable productions, and judging from specimens which they have sent us they seem to have surpassed even the high record they had already set themselves. The Royal cards are particularly beautiful. The subject of the King's card this year is "The Kings of England and France setting up their Standard in Acre, Palestine, 1191"—a picture of strong Near Eastern interest, be it noted. "Queen Elizabeth knighting Francis Drake on board the Golden Hind, 1580," is the subject of the Queen's card; while the Prince of Wales has chosen "Captain Cook hoisting the British Flag on the 'Great South Land' of Australia 1770." Queen Alexandra and Princess Mary have both selected garden scenes:—"Summer's Glory," and "An Old World Garden." These cards have been reproduced in different sizes, and any one who is undecided which cards to choose for his or her own use can surely do no wrong in following the Royal taste. For those who prefer post cards for their greetings these is a great variety of choice, including many very remarkable reproductions of oil paintings by the "oilette" process. In calendars again Messrs. Tuck have excelled themselves; while in regard to the picture books, special illustrated editions of old favourites, and other gift books, they can surely hold their own against all comers.

## AGENTS WANTED ABROAD.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," The Near East," 1, Devonshire Square, London, E.C.2." when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

118. Well known Sports Goods House with factory in India, wish to appoint Agents in Near and Middle East where not at present represented.

# Near East Markets.

## LONDON PRODUCE REPORT.

### Markets Irregular.

Sugar.—British refined has been in fair demand at unchanged prices. West Indian crystallized has shed 2s. 6d. at 38s., while Czecho-Slovakian at 19s. 9d. is unchanged. White Mauritius is unaltered at 44s., as also white Java at 47s.

Coffee.—The market has been dull. Costa Rica has remained at 130s., while Indian at 112s. has dropped 2s. Other transactions include Jamaica at 144s. and Nairobi at 106s. Futures are :—December, 48s. 9d., March 56s., May 50s. 6d., July 51s.6d., September 52s.

Oilseeds.—Steadiness has prevailed, Indian Linseed at 17s. 3d. is 9d. up, while La Plata at 16s. is 2s. up. Rapeseed has been firm with Toria unchanged at 18s. 6d. and brown Cawnpore the same at 18s. Cottonseed has been variable, with Indian 6d. up at 9s. and Sakellarides 4s. up at 14s. 6d., while Egyptian black has gained 3s. 6d. at 14s. 6d.

Seed Oils.—A harder tendency has ruled. Linseed is 1s. 6d. up at 27s., while for November-December 28s. 3d. is quoted, and for January-April 28s. 9d., advances of 1s. in both cases. Rape oil has remained firm, the crude variety being the same at 56s., and refined unaltered at 55s. Cotton oil has been weak. Refined common edible is 5s. down at 59s., and Egyptian crude is 2s. lower at 42s., while deodorized at 55s. has shed 3s. Turpentine has lost 3d. at 68s. 3d.

Oilcakes.—The market has been steady. Linseed cake is 10s. up at 150s., while cottonseed cake is unchanged at 160s. Arachis cake at 229s., and palm kernel at 110s. are both unaltered.

## ROUMANIA'S AGRICULTURAL POSITION.

Our Bucharest Correspondent writes (October 20) :—According to the latest reports on the agricultural situation of the country, the farmers are very much in arrears with the autumn sowings, owing to lack of rain. In certain mountain districts the sowings have had to be stopped completely.

Grain prices on October 18, f.o.b. Braila were : maize 22,500 lei per waggon (10 tons), barley, 25,000 lei per waggon.

According to the *Cesky Denik* the Czech Industrial Bank is negotiating with the newly-founded Anglo-Czech Bank with a view to close co-operation.

It is reported from Prague that Austrian financial circles are contemplating the possibility of applying to Czecho-Slovakia for a credit grant of four milliard Austrian crowns, on a scheme providing for the development of commercial relations between Austria and Czecho-Slovakia. Should this plan materialise, Austria would open its markets extensively to Czecho-Slovak export goods.

## ASIA MINOR FRUIT REPORT.

Messrs. G. J. Giraud and Co., Smyrna, report as follows for the week ended October 15 :—

Sultanas.—The total estimated arrivals to date amount to 131,735 bags compared with 73,505 bags for the corresponding period of last year. The total estimated sales are 124,735 bags as against 65,505 bags for the same period last year, and the estimated stock unsold amounts to 7,000 bags as compared with 8,000 bags for 1920.

Figs.—The total estimated arrivals to date total 145,000 loads as against 146,300 loads for last year. The total estimated sales are 143,000 loads as compared with 142,300 loads as compared with 142,300 loads for 1920, and the estimated stock unsold amounts to 2,000 loads as against 4,000 loads for last year.

Shipments.—The s.s. Borodino is now loading, and sail for London on the 29th. instant.

**Markets.**

Exchange fluctuations have entirely dominated the market. Sterling rates on the 15th inst. closed at 680/695, and during the current week have, with occasional reactions, advanced to 860/865. Costs of sultanas and figs in foreign equivalents touched at a given moment the lowest point recorded so far this season, but with the strong demand that speedily developed, dealers rushed up their prices in local currency, more than offsetting the temporary setback caused by the exchange rates. Both sultana and fig markets are firm, and many dealers have withdrawn their sample trays, hesitating to sell until the exchange outlook becomes more settled. Fluctuations in both exchange rates and market values have been so rapid and unexpected that shippers are experiencing unusual difficulties in establishing quotations and accepting business, nor is the situation likely to right itself for the time being.

## DRIED FRUIT REPORT.

Messrs. J. C. Houghton and Co., report as follows under date November 1 :—

October, the month in which we look for the greatest activity of the year is past, and the Xmas trade has yet to be done. Several reasons are given in explanation of the slowness of the demand. Undoubtedly the principal factor is, that we are passing through the worst period of unemployment for nearly a century, and added to this is the exceptional prolongation of the long spell of summer weather. The widely held opinion that prices would be lower made buyers very cautious in operating, heavy purchases in August having undoubtedly provided them with stocks for their immediate requirements, while the continued depreciation of the drachma has certainly influenced the position. The whole situation is abnormal, and cannot continue without a change.

Currants.—The market has been a steadily declining one, and with lower quotations for forward shipments day by day from Greece, principally due to the rise in the Greek exchange, trading has been extremely difficult, buyers displaying absolute indifference, and where business has taken place it has only been made possible by concessions in price on the part of sellers. Pyrgos, which was selling at one time at 45s., has recovered to 48s., Patras growth is very good, and the best parcels sell readily at 60s. to 65s., Gulf and Vostizza are disappointing, the latter grade being small. Shade dried parcels which stand out meet a quick sale at 80s. to 85s. No further arrivals were marketed before the closing days of the month, this fact creating a record, as only two cargoes have landed, against a possible half dozen in normal times. The few samples ex the Gerano and Trentino available met a ready sale, and with further supplies ex Inneroy momentarily expected, a better selection is looked for and more activity in consequence. Quotations are :—Pyrgos, 45s. to 48s. ; Amalias, 50s. to 54s.; Patras, 52s. to 58s.; Zante, 52s. to 58s. ; Gulf, 52s. to 56s. ; Panariti, 65s. to 70s. ; Vostizza, 60s. to 85s.

Valencia Raisins.—Many parcels being devoid of keeping qualities, sellers are meeting buyers, and although progress is slow transactions are taking place daily. Stocks are extremely small, and shipments being very light, it looks as if we should

Digitized by Google

soon be out of supplies. Quotations are :—Half boxes, 120s. to 127s.; quarter boxes ordinary, 123s. to 130s.; good to fine, 135s. to 150s.; seedless, 100s. to 120.

Sultanas.—We have felt all along that the scarcity of stock in this country would be felt before Xmas, and if the economic position had been normal this article would have boomed. The majority of the merchants realised the position, and have been content to exercise patience. The lower values for forward shipments coming through from Smyrna caused one or two holders to unload their stock, and the cheaper grades were forced down to 95s., quickly recovering to 103s., and some good sulphured varieties were sold down to 120s., rebounding to 135s.; and 145s. Trentino is discharging additional supplies.

Figs.—Lower prices had to be accepted for the Malatian and the Karnak, and much of the fruit in skeleton cases landed in tender condition. On the whole a satisfactory clearance has been made. Large boxes selling at 120s. to 140s.; small boxes selling at 140s. to 150s.; locoums selling at 140s. to 180s. Quality of bags naturals appears to be lower than last year's standard. Prima selling at 55s. to 57s. 6d. Genuine selling at 63s. 6d.

## CURRENT PRICES.

*General Produce.*—Bacon (Continental), 117s. cwt.; (Canadian) 107s. 6d. cwt.; (American), 90s. 6d. cwt.; butter: (Danish), 240s. cwt.; (Australian), 160s. cwt.; (New Zealand), 192s. cwt.; cheese (Canadian), 99s. cwt.; (New Zealand), 88s. cwt.; lard, 70s. cwt.; eggs (Danish), 39s. 6d. per 120; eggs (Styrian), 24s. 6d. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 3¾d. cwt.; cocoa (Ceylon, good to fine), 89s. cwt.; coffee (Costa Rica), 152s. 6d. cwt.; (East India), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha, longberry), 113s. cwt.; (Santos, superior), 61s. cwt.; ginger (washed Cochin), 57s. 6d. cwt.; nutmegs (110's to 80's), 1s. lb.; pepper (Singapore, black), 4d. lb.; (Muntok white), 8d. lb.; pimento, 2½d. lb.; raisins (Valencias), 145s. cwt.; sultanas (Smyrna), 120s. cwt.; currants (Vostizza), 75s. cwt.; currants (Amalias), 53s. cwt.; sugar (Tate's cubes), 55s. 9d. cwt.; (Lyle's granulated), 49s. 10½d. cwt.; (Mauritius Crystals), 43s. 3d. cwt.; (West India crystallized), 40s. 9d. cwt.; (centrifugal, in bond), 16s. 9d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 26s. 6d. cwt.; sago flour, 17s. 3d. cwt.; rice (Rangoon No. 2), 19s. 6d. cwt.; (bran Rangoon), £6 7s. 6d. ton; cinnamon (firsts), 1s. 1½d. lb.; mace (fair Singapore), 1s. 3d. lb.; tea—Indian (common to good common), 10d. lb.; (medium to good), 1s. 4½d. lb.; (fine to finest), 2s. 7½d. lb.; Ceylon (common to good common), 11d. lb.; (medium to good), 1s. 5d. lb.; (fine to finest), 2s. 7½d. lb.; Java (common to good common), 6¾d. lb.; wheat (English white), 46s. 6d. qr.; (La Plata ex-ship), 82s. qr.; (Australian), 53s. 6d. qr.; barley (malting), 57s. 6d. qr.; barley (feeding), 42s. 6d. qr.; oats (English), 28s. 6d. qr.; oats (La Plata ex-ship), 24s. 6d. qr.; maize (mixed American), 33s. qr.; maize (La Plata), 29s. 3d. qr.; flour, 47s. sack.

*Metals.*—Aluminium, £122 10s. ton; antimony (English regulus), £37 10s. ton; bismuth, 7s. 6d. lb.; copper (standard), £65 16s. 3d. ton; copper (electro), £73 ton; gold bars, 104s. 5d. oz.; iron (No. 3 Cleveland), 120s. ton; hematite (mixed number), 132s. 6d. ton; galvanized sheets (24G), £18 7s. 6d. ton; lead (soft foreign), £23 17s. 6d. ton; manganese Poti, 1s. 2d. unit; molybdenite, 40s. unit; nickel, £188 10s. ton; platinum, 382s. 6d. ton; plumbago, £20 ton; quicksilver, £9 17s. 6d. bottle; silver bars, 40s. oz.; spelter (G.O.B.), £26 3s. 3d. ton; tin (standard), £156 2s. 6d. ton; wolfram, 12s. 9d. unit; zinc sheets, £35 10s. ton; tin plates (20 by 14), 22s. box.

*Chemicals.*—Acids: Boric, 66s.; oxalic, 8¾d. lb.; citric, 2s. 4¾d. lb.; tartaric, 1s. 5d. lb.; ammonia (sulphate), £15 ton; arsenic (white powdered), £38 15s. ton; benzole (standard), 2s. 5d. gallon; bleaching powder (35 per cent.), £15 15s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 129s. cwt.; Potassium: Bichromate, 9d. lb.; chlorate, 6d. lb.; caustic, £31 ton; nitrate, £50 ton; permanganate, 1s. 0½d. lb.; prussiate yellow, 1s. 2d. lb.; sulphate (90 per cent.) £16 10s. ton; Sodium: Crystals, 140s. ton; bi-carbonate, £12 ton; bi-chromate, 6¾d. lb.; alkali (58 per cent.), £9 10s. ton; chlorate, 4d. lb.; caustic (70 per cent.) £24 15s. ton; hyposulphite, £18 10s. ton; prussiate, 8¼d. lb.; nitrate, £14 16s. 3d. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial 1260 per cent), £110 ton; lemon oil, 3s. 4½d. lb.; quinine, 4s. 0½d. oz.; red lead, £38 5s. ton; white dry lead, £41 5s. ton; white ground lead, £50 17s. 6d. ton; sulphate of copper, £30 10s. ton; sulphate of iron, 117s. 6d. ton.

*Hides and Skins.*—Ox and Heifer (firsts), 90 lbs. and up, 10½d. lb.; 80 to 89 lbs., 10¼d. lb.; 70 to 79 lbs., 10¼d. lb.; 60 to 69 lbs. 9d. lb.; (second), 90 lbs. and up, 9d. lb.; 80 to 89 lbs., 9d. lb.; 70 to 79 lbs., 9d. lb.; 60 to 69 lbs. 8d. lb.; Cows (first), 60 lbs. and up, 6¼d. lb.; 59 lbs. and under, 6¼d. lb.; (second), 60 lbs. and up, 6¼d. lb.; 59 lbs. and under, 6,1-8d. lb.; Bulls (first), 6d. lb.; (second), 4,5-8d. lb.; Kips (first), 7d. lb.; (second), 6d. lb.; (third), 3¾d. lb.; Calcutta Market.—The quotations on the hide and skin market are as follows (in rupees per 20 lb.) :—Arsenic hides (cows): Agras, 7 to 12; Durbhangas, 4.8 to 6d; Patnas, 4.8 to 6. Salted cows, 3 to 6.8. Arsenic hides (buffalo), 3.8 to 5. Skins: Calf, 8 to 10 per 20 lb.; goat, 260 to 290 per 100 pieces.

*Miscellaneous.*—Cotton (American), 12.70d. lb.; (Egyptian Sakel), 22.10d. lb.; Oilseeds: Linseed (La Plata), £14 10s. ton; rape (Toria), £18 2s. 6d. ton; soya beans, £14 ton; sesame seed (China), £28 ton; palm kernals, £18 ton; Oils: Linseed, £28 ton; olive (Levant), £78 10s. ton; palm, £34 17s. 6d. ton; rape (crude), £50 10s. ton; soya, £35 10s. ton; petroleum, 1s. 4½d. gall; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £45 12s. 6d. ton; cotton (crude), £14 10s. ton; ground nut, £48 10s. ton; Rubber: Plantation (No. 1 crepe), 10d. lb. smoked sheet, 10d. lb.; fine hard Para, 1s. 4d. lb.

## TENDERS INVITED.

*Tenders are invited for the following contracts, and must be made by the dates mentioned.*

(*Particulars of tenders marked* (*D.O.T.*) *are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.*)

**Egypt.**

General Stores.—The Egyptian Postal Administration at Alexandria invites tenders for the supply of various stores for six months or the whole year of 1922-23. The schedules enumerate the following articles required:—1,500 pairs of boots, 7,000 mail bags (canvas, calico, jute grain sacks), 12,000 kilos calcium carbide, 1,000 candles, 84 chairs, 10 tables (various, to be manufactured locally), 60 files, 40 locks, 20 copper pans, 30 spirit lamps, 750 various metallic filament bulb lamps, lead seals, basketware, 18 trolleys, 15 carrier tricycles and miscellaneous stationery. Local representation is essential. November 15 (D.O.T.).

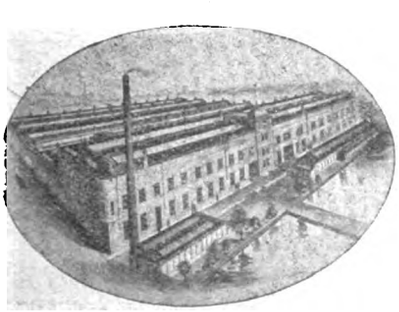
**Yugoslavia.**

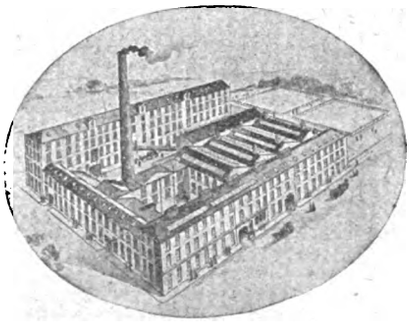
Telephone Cable.—The Ministry of War and Marine of the Serb, Croat, Slovene Kingdom invites tenders for the supply of 1,000 kilometres of Field Telephone Cable. Local representation is desirable. November 15. (D.O.T.)

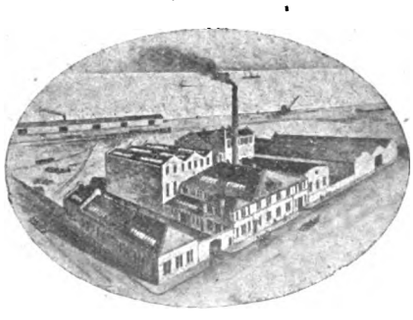
Khaki Drill.—The Army Clothing Department of the Serb, Croat, Slovene Ministry of War and Marine invites tenders for the supply of 825,000 metres of Khaki Cotton Drill for summer uniforms. A translation of the conditions of tender and a small sample of the cloth required have been received from the Commercial Secretary to His Majesty's Legation at Belgrade, and may be inspected by United Kingdom manufacturers on application at the Department of Overseas Trade (Room 58) 35, Old Queen-street, Westminster, S.W.1. Local representation is essential when competing for Government contracts in the Serb, Croat, Slovene Kingdom. November 20.

Cable Address: "Lobo, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** All Cable Codes used.

Manufacturers of JUTE SACKS and JUTE CLOTH for all purposes
Also of WATERPROOF CANVAS and TARPAULINS, YARNS, TWINES, ROPES, etc.







Shippers of all classes of JUTE, LINEN and COTTON FABRICS,
also of CALCUTTA SACKS.

# Company Meetings.

## IMPERIAL OTTOMAN BANK.

The annual general meeting of the shareholders of the Imperial Ottoman Bank was held on November 3, at Winchester House, Old Broad Street, E.C., the Viscount Goschen, C.B.E., presiding.

The secretary (Mr. Charles E. L. Corthorn) having read the notice convening the meeting,

The Chairman, reviewing the conditions under which the bank had been working during 1920, said that non-ratification of the Treaty of Sevres, the political conditions existing in Constantinople and at Angora, the renewal of hostilities in Asia Minor, and local disturbances had contributed to the continuance in the East of a state of instability and unrest, the effects of which, from the economic and financial point of view, had been aggravated by the world-wide crisis. The severance of relations with Anatolia deprived Constantinople of a very important market, not only for its imports but also for its exports. In consequence, Constantinople had to import from abroad to a much larger degree articles of first necessity—food, etc.—which it was impossible to obtain from neighbouring localities owing to the successive closing of the Russian ports on the Black Sea and Thrace, districts on which they had relied in the past.

In spite of the difficulties of the situation and the unfavourable circumstances ruling, the bank had continued to be extremely active; and through its prestige and its powerful connections in the East and elsewhere their establishment had been able to continue to develop its banking operations. In particular, important progress had been recorded in Constantinople and Smyrna; in Anatolia, however, operations had been naturally reduced, and a few of their branches had of necessity been closed, or temporarily transferred to other localities, pending a return to more normal conditions. The activity of the bank's branches in Greece, Syria, Palestine, Cyprus, and Egypt had been satisfactory, and there had been a large movement of business in Mesopotamia. The agencies in London and Paris, together with the two offices established in Manchester and Marseilles, had done all possible with a view to develop trade between their respective countries and the Orient. The Tunis office had given encouraging results from its first year. In the balance-sheet the assets and liabilities were valued at the rates current on December 31, 1920, when, as they would remember, the franc was quoted at 60 to the £ sterling as against frs.41 to the £ at the end of 1919. The consequence was that they had had to carry in an account "Balance of Difference of Conversion" a sum of £702,569 5s., arising principally from the effect of this exchange on their assets in francs. They had devoted to this account the £305,056 6s. 2d., together with the amount carried forward from 1919, i.e., £206,404 14s. 10d., making in all £511,461 1s., leaving an insufficiency of £191,108 4s. against the statutory reserve. It should be remarked that this did not constitute a realised loss. This insufficiency decreased proportionately as the francs improved below 60.

They drew special attention to this, and considered that the results registered under such conditions would permit them to have good hopes for the future.

In conclusion he said he was convinced that he would interpret their sentiments in addressing their warmest thanks to the direction générale in Constantinople, to their managers in London and Paris, and of their various branches, as well as to the staff of all grades, for the efforts which they had made, and which had allowed the results they had put before them to be arrived at. The staff of the bank in Asia Minor had on many occasions been face to face with a difficult and at times dangerous situation, and he would ask them to address to them a special message of sympathy and encouragement. He then moved the adoption of the report and accounts.

M. le Baron de Neuflize, C.V.O., seconded the motion, which was carried unanimously.

A resolution was then passed authorising the transfer of the bank's Syrian branches to the Banque de Syrie.

Comte Frédéric Pillet-Will, the Earl of Bessborough, C.M.G., and the Earl of Chichester, O.B.E., were elected members of the General Committee.

Baron Henri Hottinguer, Comte Frédéric Pillet-Will and General the Hon. Sir H. A. Lawrence, K.C.B., were re-elected members of the General Committee, and a vote of thanks to the chairman, the committee, the officers and staff of the bank at home and abroad, proposed by Mr. A. Hood and seconded by Mr. J. Rosselli, was unanimously accorded, and after a brief acknowledgment by the chairman the proceedings terminated.

## ASSAM RAILWAYS AND TRADING.

The ordinary general meeting of the Assam Railways and Trading Company, Ltd., was held on November 2, at Winchester House, Old Broad-street, E.C., Mr. Sydney S. Hawkins, A.M.I.C.E., presiding.

The Secretary (Mr. S. Maclean Jack) read the notice convening the meeting and the report of the auditors.

The Chairman in moving the adoption of the report and accounts, said that the result disclosed was not good, but for that Lord Ribblesdale had prepared the shareholders at the last general meeting when he told them that, owing to various troubles culminating in the strike, the expenses of the company had been largely increased. The large increase in expenditure was the actual reason for the poor result obtained during the year. The Board had not been able to improve the earnings side of the railways account as much as had been hoped. The revised tariff, asking for the same percentage increase as all Indian railways, had been submitted to the Government of India for approval, but they understood it was not to take effect until April 1, 1922. In the previous year, also, they had been able to make up profits considerably from the exchange. In the year under review exchange had not been so much in their favour. The actual earnings of the year were admittedly not sufficient to pay the full amount of the dividends, but there were certain outside recoveries in hand, among them £15,000 recovered from the Inland Revenue under the Stevens v. Boustead decision, which had been previously paid in the form of income-tax, and, with other sums, this had enabled the Board to bring into account £21,621 and to recommend the usual dividends to all classes of shares. With regard to the new timber concessions and colliery leases, a 30-year concession of the former had been granted and signed covering blocks which contained very valuable timber, while the Government of India had granted them not only the Lekhapani colliery lease, but a lease of additional coal areas known by the name of Tipangpani, forming together an additional reserve of coal nearly, if not quite, as big as the original lease of the company. They should prove an asset of the very greatest value. Thanks to the financial arrangements made towards the end of last year, the company was now in a fairly strong financial position. In conclusion, he wished to say that while the "B" shareholders should not assume that their dividends might not have to be reduced under the present difficult circumstances, so far as the Board could see at present, there was no reason to suppose they would not be able to maintain the Preference dividends.

Mr. G. Turner M.E., seconded the motion, which was carried unanimously, and the remaining formal business of the meeting was completed.

## MORUMS ORIENTAL STORES.

The second ordinary general meeting of Morums Oriental Stores, Ltd., was held on November 4 at Winchester House, Old Broad Street, E.C., Mr. F. H. Manley presiding.

The Chairman: Gentlemen,—My first duty is to convey to you the deep regrets of our Chairman, Mr. Crowther, at his enforced absence from this meeting. Mr. Crowther has been taken seriously ill, and his doctor has forbidden him to transact any business whatsoever for at least a month, and it is for this reason that I have to take his place in the chair. Mr. Crowther had already prepared his speech, and I propose, therefore, with your permission, to read it in his absence. I am sure you will all join the Board in wishing Mr. Crowther a complete and speedy recovery. I propose, with your permission, to take the notice convening the meeting as read, and will therefore call upon the secretary to read the auditor's report.

The Secretary (Mr. P. Nichols) then read the report of the auditors.

Digitized by Google

The Chairman then read the speech prepared by Mr. Crowther of which the following are extracts :—Taking the profit and loss account first you will notice interest and discount charges and London office expenses, together about £15,000. Then we have £3,764, which has been allocated in respect of depreciation on buildings, fittings, etc., at the same rates as we instituted last year. Turning to the debit side of the balance sheet, our share capital account remains the same as in the previous balance-sheet at £500,000.

Debtors and debit balances appear at £53,033. Last year they figured at £117,000, but then there was included an amount of approximately £27,000 in respect of claims for damages against the Egyptian Government, as a result of damages and loss from riots. These claims, I am glad to report, were settled in full prior to the closing of the accounts now under review. Cash in hand is represented next at £9,757.

We then come to the last item, which shows that the year's operations have resulted in a loss, as shown by the profit and loss account of £164,333. If you will again refer to the debit side of the profit and loss account, you will see that the actual loss on trading amounts to £74,215, and to this has been added such amount by way of depreciation as we have thought adequate. We have further deemed it advisable to take back the reserve of £9,593 provided last year, which reduces the amount to the figure shown in the balance-sheet—namely, £154,739.

Naturally, we are bitterly disappointed with the results submitted to you. Practically all industrial undertakings have suffered from the unprecedented fall in prices, the world-wide business stagnation and resulting diminution of purchasing power. In January, 1921, not only were the warehouses and stores throughout Alexandria and Cairo filled to overflowing, but practically every shop or store had bales of cotton goods and similar merchandise stacked in the streets owing to it being impossible to find storage room. When it was realised that there was a definite falling off in trade and a heavy fall in prices many of the shopkeepers and merchants threw these goods on the market at practically any price they would fetch. Until then we had maintained more than our turnover, and, in view of the prevailing conditions, had secured a not unsatisfactory profit.

Mr. Ottley and Mr. Manley, who were then in Egypt, after very full consultations with the local management and Egyptian bankers and other authorities, cabled to us in London informing us of the prevailing conditions and asking for the authority of the Board to press sales at the best prices obtainable. It was clear that this would have the dual advantage of satisfying the demands of our customers at prices which it was within their power to pay, and so consolidating and strengthening the goodwill of the business, maintaining the efficiency of our organisation, and at the same time disposing of high-priced goods and providing the necessary funds to replace them by goods bought at reduced prices. Consequently the necessary authority was cabled out to Egypt.

The same policy was followed by other local stores, and, notwithstanding the very unsatisfactory result from the point of view of trading results, the policy has been amply justified; our turnover for the year reaching a figure slightly in excess of the previous year, during which, of course, considerably higher selling prices prevailed, so that the sales of the year under review represent an appreciable increase in the volume of our trade. We had thus by the end of the year actually realised a great part of the depreciation which had to be faced. The remaining stocks have been written down by approximately 20 per cent.

A discussion ensued, in the course of which questions were asked as to the present value of the stock, standing at £299,122, and the sufficiency of the amount written off.

The Chairman, in reply, said that the Board believed that the goods stood in their books at their replacement value or under, and that a profit should be realised on their sale.

An amendment was moved for the appointment of a committee of shareholders, but it was supported only by the mover and seconder, and the Chairman's motion was carried with only one dissentient.

The retiring directors, Messrs. R. B. H. Ottley, C. M. Higgins and J. D. Steen, were re-elected, and the auditors, Messrs. W. B. Peat and Co., were reappointed.

A vote of thanks to the Chairman terminated the proceedings.

## SHIPPING INTELLIGENCE.

### Forthcoming Sailings.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses* :—

*Anchor Line.*—S.s. Scindia for Bombay (Liverpool, November 25).

*Anchor-Brocklebank Line.*—S.s. Imani for Port Said, Colombo, Madras and Calcutta (leaves London, November 19); s.s. Mandasor for Calcutta (Birkenhead, November 23); s.s. Holywell for Port Said, Colombo, Madras and Calcutta (leaves London December 3); s.s. Masirah for Port Said, Colombo, Madras and Calcutta (leaves London, December 17).

*Bibby Line.*—S.s. Merton Hall for Rangoon (Middlesborough, London, November 18); s.s. Warwickshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, November 23).

*Byron Steamship Line.*—S.s. Lord Harrington for Patras, Pireaus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila (Liverpool, November 15).

*Clan Line.*—S.s. Clan Ogilvy for Bombay and Persian Gulf (Birkenhead, November 16); s.s. Clan Stuart for Colombo, Madras and Colombo (Birkenhead, November 17).

*Cunard Line.*—S.s. Cypria for Genoa, Leghorn, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa (Swansea, November 15); s.s. Pavia for Gibraltar, Ceuta, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Swansea, November 30).

*Ellerman Line.*—S.s. Trentino for Gibraltar, Malta and Alexandria (Liverpool, November 12); s.s. Gerano for Gibraltar, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas and Varna (Liverpool, November 12).

*Ellerman's "City" Line.*—S.s. Kosmo for Bombay and Karachi (Birkenhead, November 21); s.s. City of Poona for Calcutta (Birkenhead, November 24).

*Ellerman's "Hall" Line.*—S.s. City of Marseilles for Bombay, Karachi, and the Punjab (Liverpool, November 12); s.s. City of London for Bombay, Karachi, and the Punjab (Liverpool, November 29).

*Glen Line.*—S.s. Glenade for Port Said, Port Swettenham, Singapore, etc. (London, November 24); s.s. Glenamoy for Port Said, Port Swettenham, Singapore, etc. (London, December 8); s.s. Glentara for Port Said, Port Swettenham, Singapore, etc. (London, December 22).

*Johnston Line.*—S.s. Port Inglis for Piraeus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, November 19).

*P. and O. Line.*—S.s. Morea for Bombay (London, November 11); s.s. Plassy for Bombay (London, November 18); s.s. Sicilia for Colombo, Madras and Calcutta (London, November 18); s.s. Mirzapore for Bombay (London, November 26); s.s. Khyber for Colombo, Madras and Calcutta (London, December 2).

*P. and O. British India Line.*—S.s. Manela for Colombo, Madras and Calcutta (London, November 11); s.s. Mashobra for Bombay and Karachi (London, November 18); s.s. Nerbudda for Colombo, Madras and Calcutta (London, November 26); s.s. Canara for Bombay and Karachi (London, December 3); s.s. Nuddea for Colombo, Madras and Calcutta (London, December 10).

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Aleppo, September 7.

The market remains quiet despite the small business that has resulted from the arrival of some merchants from the interior. Cotton goods and cotton thread have risen by from 10 to 15 per cent. The grain market remains firm ; the arrivals of cereals from Damas are very considerable.

Prices in Syrian piastres per kilogramme are :—Washed wool 37½, market quiet ; cotton from Idlib 19, tendency to rise ; gall-nuts 17 ; pistachio nuts—white 31, red 27—there is a strong demand for this commodity in America ; apricot kernels 8½ ; sweet almonds 68. The export of opium has been absolutely prohibited. Stocks of bees wax are exhausted, and the crop appears to be small.

Panderma, October 11.

Conditions have not been favourable for work in the fields. The rain that has fallen has naturally been very welcome. During September 1,000 kilos of skins were imported from Europe, and 1,000 cases of oil. The commodities despatched from here for Smyrna are as follows in kilos :—Wheat 130,000, oats 50,000, chick peas 55,000, lentils 50,000, beans 50,000, kidney beans 13,000, and for the Piraeus 40,000 kilos of grains of flax.

The disposable stocks are as follows in kilos (the figures in brackets representing the present price per kilo) :—Wheat 100,000 (5½—5,7-8) ; maize, 1,270,000 (4,5-8) ; barley, 130,000 (3½) ; German wheat, 130,000 (6½) ; lentils, 650,000 (3,7-8) ; oats, 130,000 (7,3-8) ; grains of flax, 25,000 (7½—10,7-8) ; kidney beans, 325,000 (5,7-8) ; beans, 130,000 (7,3-8—8,5-8) ; chick peas, 3,500 (5—5½) ; rye, 90,000 (10—12½) ; flour, 25,000 (14,3-8) ; American flour, 1,000 (7½) ; mustard, 23,000 (480) ; cocoons, 2,000 (109½—148½) ; oil, 1,000 cases (430—615).

## THE YIELD OF EGYPTIAN COTTON.

In the current number of the Bulletin of the Imperial Institute Mr. Gerald C. Dudgeon, C.B.E., lately Consulting Agriculturist to the Government of Egypt, discusses the causes which have led to the decline in the yield of cotton in Egypt. Whereas during the six years ending 1899 each acre under cotton produced on the average an annual crop of over 500 lb. of cotton, during the eight years ending 1913, the average yield had fallen to just over 400 lb., and in 1920 it was as low as 320 lb. per acre, the reduction in twenty years thus amounting to 36 per cent. Such a decline, if not checked, must in time have a serious effect on the prosperity of Egypt which depends so largely on the cotton growing industry. It is pointed out that although the chief causes to which the decline is due have been recognised, the proportionate share of each in the result is often so unduly emphasised as to produce a misleading impression, and this is apt to lead to the adoption of incorrect procedure. In the article in question, Mr. Dudgeon places in their true perspective the different factors involved, such as the degeneration of the productive powers of the soil, the ravages of insect pests, and agrarian disturbance.

## MANCHESTER REPORT.

*(From Our Own Correspondent).*

*Manchester, Friday.*

The past week has probably been the worst we have experienced in this market this year. The only feature of interest has been the reduction in the bank rate to five per cent., which will help to ease the financial position somewhat. The marked improvement which was anticipated a few weeks back has not taken place, and the general opinion now is that the market will continue in a very dragging state of affairs until after the new year. Too many disconcerting factors are present for any progress to be made towards better times. There is no confidence whatever in current rates, with the result that buyers have displayed an utter lack of initiative. With regard to cloth only a small inquiry has been about for Egypt, the Levant, and Constantinople, and sales have been few and far between and not of any weight. Spinners of Egyptian yarns have been full of complaints, and a patchy offtake has been registered. Prices on the week show a decline, and in certain instances ridiculously low rates have been accepted by needy sellers. Only a small piece goods demand has been about for India, with occasional small sales in light cloths. Hardly anything worth mentioning has been done for China. Buyers for Java, Singapore, and South America have not been altogether idle. Prices for American yarns when tested have favoured buyers, and sales have been unsatisfactory. Taking the position as a whole the market conditions are causing no enthusiasm.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date November 2 :—

The four days covered by this report have witnessed steady markets, but, at the same time dull ones. The enquiry has fallen away again, and sales have been small; only on one day has a 500 figure been reached. And yet, taken all round, the situation would seem to be clearer and technically sounder than it has been for several weeks past. No doubt the wish, to a certain extent, is father to the thought, but a fairly extensive view on the market seems to be that the stage is now set for a revival of business. In support of this view, we are now passing through a session of fairly steady markets, and there are signs about that India is at last beginning to take a little more notice of things. Against it, however, there stands a most formidable stock of yarn, which will have to be moved before the weight of fresh business can really be felt in our market. And yarns, particularly Egyptian yarns, are not moving off as they should.

Patience is a virtue, which nowadays is subjected to the most exhaustive tests. Month after month we have been told that trade is *bound* to improve. Now, if ever, one would think, the time is ripe for this to come about. With both the American and Egyptian crops reduced to the lowest figures known for many years, and the former particularly (if we are to believe the various accounts which have come through) very deficient in staple, surely the Egyptian side of the trade should now come into its own? Our view still inclines this way, and we are of the opinion that present possessors of old crop, good staple cotton, will materially benefit by holding, as higher prices would seem most probable. In this connection, it is as well to remember that considerable quantities of staple "outsiders," for example Tanguis cotton, are offering at what seems a very reasonable basis compared with, say Upper Egyptian. This style of cotton is constantly finding a wider outlet, and may even become a serious rival.

One rather interesting piece of news has recently come to hand. The temporary tariff of 7 cents. imposed by the U.S. Custom, on the importation of inch-3-8ths cotton has been extended for a further three months. This will restrict the buying for America which a short time ago was such an important feature of the Alexandria spot market, at all events until the date when this measure expires. The small enquiry here has been of a fairly general character, with a slight bias in favour of Uppers. One or two fair lines of cotton have been sold for forward delivery. Manchester reports, with the exception of the Indian news referred to above, display no special features and, generally speaking, have been dull and weak, easy sellers of yarn and cloth being much to the fore. Reliable crop news is somewhat guarded in the views expressed, but at least it can be said that there is nothing remarkable about the staple of the new crop, and there are very many adverse reports upon it, which may be taken for what they are worth. Total sale 1,000 (includes 80 bales Sudan). Quotations, with the exception of Extra Fine Sakel, which is reduced 25 points, show an upward tendency, Sakellaridis being raised 50 points, Brown and Upper 75 points.

## COTTON TRADE DEPRESSION.

*(From Our Own Correspondent).*

*Manchester, Friday.*

Owing to the absence of fresh business during the past fortnight Lancashire cotton spinners and manufacturers are losing ground again, and in some cases rather rapidly. It was expected that the state of trade would be discussed yesterday at the ordinary monthly meeting held in Manchester of the general committee of the Federation of Master Cotton Spinners' Associations, but at the close no official statement was issued. It is understood, however, that the question of organised short time was not considered. Both spinners and manufacturers, however, are not clearing the output of the machinery, and in an irregular way production is being curtailed on a larger scale than a month ago. It was stated on the Manchester Royal Exchange yesterday that if trade does not improve quickly the Master Spinners' Federation will be asked to take a ballot of the members as to taking concerted action with regard to working the mills fewer hours each week. In weaving districts there is a tendency for unemployment to increase.

## COTTON CLOTH PRICES ADVANCED.

Messrs. Horrockses Crewdson and Company, Ltd., the well-known cotton manufacturers, of Preston, Bolton and Manchester sent out a revised list of cloth prices last week. The quotations show a rise of about 10 per cent. compared with the previous list published on August 1. For plain bleached sheets the advance is from 11s. to 02s. 3d. per pair to 12s.-68s. per pair, and for twilled bleached sheets 11s. 6d.-69s. 9d. per pair to 12s. 6d.-69s. 3d. per pair. For sheeting 50 yards there is a rise from 16½d.-51d. per yard to 18d.-56d. per yard. For nainsooks 40 ins. 12 yards, from 13s. 3d.-28s. 9d. to 14s. 6d.-31s. 9d. Longcloths have been advanced from 10d.-28¾d. per yard to 10¾d.-31¾d. per yard. For shirtings the advance is from 9d.-20d. per yard to 12d.-22d. per yard, for flannelettes from 11d.-17d. per yard to 12d.-18¾d. per yard, and for fine white sateens from 17¾d-35¼d. to 19½d.-38¾d. per yard.

A branch of the Anglo-Egyptian Bank, Limited has been opened at Suez.

The traffic receipts of the Smyrna-Aidin Railway for the week ended October 29, amounted to £10,089.

Bullion gold to the amount of 700 kgs. extracted from Roumanian mines left Braila last week for London.

# Stock and Share Markets.

## IRREGULAR TENDENCY PREVAILS.

(*From Our Own Correspondent.*)

London, Monday night.

It has been a week of diverse influences and rather irregular markets, but on the whole the tone has shown some improvement. The success of the Local Loans issue and the further reduction in the Bank Rate came as a welcome tonic. It is surprising that the rate was not lowered some time ago, and it may be noted that the change when it came followed the reduction of the New York Federal Reserve Bank's rate to 4½ per cent. On the other hand the critical Irish situation continues to exercise a depressing influence on markets, while there is at any rate the possibility of untoward developments in more than one centre abroad, and any general improvement in prices need not be looked for until the economic and political situation at home and elsewhere is a good deal more stable than it is at present.

The gilt-edged group have been fairly firm. Consols at 48⅝ have shed 1-8, but War Loan Fives are ½ up at 88 xd., while Fundings have gained ¼ at 71⅝. The India 7 per cent. Loan is unchanged at 104. In Near Eastern securities Egyptian Guaranteed 3 per cent. are the same as before at 68⅛. Turkish Guaranteed 4 per cent. 1855 are unchanged at 69, but Greek Guaranteed 2½ per cent 1898 are 2 up at 68.

The renewed weakness of the mark has had a depressing effect on foreign securities. French War Loan 5 per cents. are 37, while Italian Rentes are 23. German 3 per cents. are 2,7-16 after being down to 2¼.

**Industrials Firm.**

While there has not been a great deal of business the tone has on the whole been rather more confident. Textiles have been steady, with Courtaulds 2s. 6d. up at 33s. 6d., and Bradford Dyers harder at 1½. The orders for the new battleships have given a firm appearance to the leading lines in Engineering and Iron and Steel Shares. Armstrongs are 6d. up at 16s. 6d., while Vickers have gained 9d. at 11s. 9d. Guest Keens have hardened to 28s. 3d., and Cammell Lairds are firmer at 13s. 6d.

The fluctuations in P. and O. Deferred have been the feature of the Shipping market. On the news that, while the dividend would be maintained at its previous rate, there would be no bonus, the shares dropped 75 to 260, but buying then set in, and the price rose to 280, a fall of 55 on the week. Other shares were dull in sympathy. Furness Withys are 3d. down at 21s. 9d., while Cunards are unchanged at 16s.

**Oils Irregular.**

Oils have shown a distinctly irregular tendency. A firm undercurrent is, however, to be noted, which is the result apparently of the bullish appearance of oil shares in Wall Street. Certainly it is not due to any increase in public interest, which would make for an all-round improvement in values for which there is ample room. Mexican Eagles are 3-32 lower at 3,5-12, and it seems that we must wait for the annual meeting before looking for any substantial recovery. Burmahs have been in steady request, and have risen to 5,11-16. Anglo-Egyptians are unchanged at 1,3-16, but Gemsah Reefs are 6d. down at 5s. Roumanian Consolidated are 9d. down at 7s. 3d., Steaua Romanas are unchanged at 8s. 3d., Dacia Romanos are the same at 13-16, but Phoenix, which have been one of the firmest features of the market, are 1s. 3d. up at 7s. 3d.

Mining descriptions improved temporarily on the reduction of the Bank rate, but there was subsequently a relapse, and prices are generally at the old levels. A feature of the week has been the activity is Chartereds, which rose to 11s. 6d., closing 4⅛d. lower.

**Banks Steady.**

Bank shares have been steady. Agricultural of Egypt 3½ per cent. Bonds are ½ up at 54½, but the 3½ per cent. Guaranteed Bonds are unchanged at 55½. Imperial Ottoman Banks are the same at 7, but National Bank of Egypt are ¼ up at 19. Bank of Athens are unchanged at 2, but Ionian Banks have gained 1-16 at 3,5-16. Chartered of India have hardened to 14,11-16, an advance of 3-16, but National of India are unchanged at 37½, as are P. and O. Bank at 11½. Imperial of Persia are the same at 5,1-8, while Bank of British West Africa remain at 4⅜.

The Rubber market is unchanged. The tone is generally steady, but business is on the smallest possible scale, and it is perfectly evident that investors intend to hold aloof until they can see their way more clearly. The price of the raw commodity remains round about 10d., and it will obviously have to go far above that before dividends that are worth having can be paid. And that brings one back to the question of existing stocks, as to the amount of which there seems to be some uncertainty, though there is no doubt that consumption is now well above the amount of arrivals.

Greek shares have hardened, presumably on the prospect that a loan will be forthcoming. The 5 per cent. 1884 Loan has gained a point at 34, while the 5 per cent 1881 Loan is a similar amount up at 34. The 4 per cent. 1902 Loan is unchanged at 32, while the 5 per cent. Funding Loan is the same at 33.

**Land Shares Weak.**

Land shares have again displayed weakness. Béhéras are 1-8 down at 8,7-8, but Béhéra Prefs are unchanged at 3,1-8. Egyptian Delta Lands have shed 3d. at 7s. 9d., but New Egyptians are 6d. up at 23s. 6d. Egyptian Consolidated Lands are 1s. Sidi Salems are unchanged at 1s., while Union Foncières are the same at 2,7-8. Sudan Plantations are 1-16 lower at 2,7-8.

Among miscellaneous descriptions Alexandria Waters are unchanged at 6,5-8, Egyptian Markets remain at 20s., Egyptian Salt and Sodas are 6d. up at 34s. 6d., while Morums Prefs are unchanged at 6s.

## A USEFUL YEAR BOOK.

The sixth annual edition of "The International Mercantile Diary and Year Book" (The Syren and Shipping Ltd., 7s. 6d.), has just been issued. This year book is designed to provide in a readily accessible form the information required by exporters, merchants, and shippers. A brief reference to the contents will serve to show the invaluable character of the publication. It includes a variety of conversion tables, freight calculation tables, measures, multiplication tables, and foreign exchange conversion tables, covering all currencies, the value of which at the present time scarcely needs to be explained, while another feature of special interest is the "International Section," in which is given a variety of useful information regarding the various countries. The year book can be cordially recommended to the business man who requires to have by him in convenient form a reference book to which he can turn when in doubt.

Mr. Kawasji Dinshaw Dubash, a prominent merchant and citizen of Bombay, died suddenly in Paris on November 1, after undergoing an operation five days earlier. He was the head of a well-known Parsi family and of the firm of Messrs. Dadabhoy Hormasjee and Co., which carries on extensive shipping and commercial operations in Western India.

According to Reuter's Constantinople correspondent the Sublime Porte has addressed a Note to the Allied financial establishments in order to ensure the adoption of the measures recommended by the meeting of Ottoman and foreign Chambers of Commerce on October 16, which measures are intended to check speculation and include the restriction of the importation of articles of luxury. The Sublime Porte hopes that the adoption of the said measures will put an end to the rise brought about by various illicit means to the detriment both of the interests of Turkey and the commercial interest of the Great Powers.

## NOTES OF THE WEEK.

### *The Egyptian Negotiations.*

The negotiations between the British and Egyptian Governments are nearing an end, and, as is almost inevitable in such cases, there is little chance of both parties being completely satisfied. What should be avoided at all costs is that the negotiations should be broken off without some agreement being reached. Better a tentative arrangement than none at all. If the Egyptians should feel that they have not secured all that they considered themselves entitled to, they have the certainty that, given a period free from untoward incidents in Egypt, they can soon count on receiving all they want. The moment has not been very opportune for the negotiations; Ireland, India, Turkey, Egypt, all these countries constitute grave preoccupations for the British Government, and it is possible that their cumulative effect has been to emphasize the supposed need of safeguards in regard to such a key-position as that which Egypt occupies in the geographical scheme of the British Empire. Any considerations that may have actuated the British Government in the course of the negotiations will have been appreciated by a statesman of the calibre of Adly Pasha, and all that is required is that he should impress his views on the Egyptian nation as a whole. The task may be hard; but there can be little doubt that, conscious himself that he is in the right, the Egyptian Prime Minister could, by a bold unflinching stand, carry the moderate section of the nation with him, and secure acceptance for the terms that he can take back with him. He will know, and the nation can be given the assurance, that in due course all will come well, if Egypt remains true to her real interests.

### *The Angora Treaty.*

France's Treaty with Mustapha Kemel Pasha may have increased her popularity at Angora, but it has done so nowhere else. If her original idea was to bring an impossible situation to an end, it was in a large measure sound. She imagined, no doubt, that by making terms with the Nationalists she would force Great Britain to recognise them as well, and peace would be ushered in throughout Asia Minor. Ever since the Armistice, however, French foreign policy has been characterized by crudeness and inconsistency. In dealing with the Angora Government she has not realized that there must be a point at which an agreement might overstep the limits of a local arrangement and become in effect an international treaty. This is precisely what has happened. The Allies must come to terms with the Turkish Nationalists; but when they do, the understanding should embrace Turkey as a whole and provide for a future unified State. France has practically accorded to the Angora Government recognition as the Sovereign Power of Turkey, oblivious of the fact that there is a Sultan in Constantinople, against whom the Kemalists are in revolt, on account of the Sultan's so-called submission to the Allies. The Angora Treaty represents a thoroughly crude effort in amateur diplomacy, and it is not difficult to understand that it has seriously embarrassed the British Government.

### *The Need for a Settlement.*

It is to be hoped that no time will be wasted in an exchange of recriminations between Great Britain and France. The one thing necessary is to bring about a settlement of the Turkish question; and if France's *gaucherie* and constitutional inability to play the game have complicated the situation, the greater the need for immediate action before the evil effects of the Angora Treaty have time to develop. France's engagements with the Kemalists have left the British Government free to clear up the present *impasse*. The Angora Government wants to see Turkish territory evacuated by the Greeks; the treaty with France has not effected this, nor can the National army bring it about. On the other hand, Great Britain can. If there be any truth in the rumour that the Greek Government will not be unwilling to leave itself in British hands, the ground has been prepared for a settlement. Until this has been reached, however, the worst effects from France's misguided action may be feared. The panic into which the Christian population of Cilicia has, not unnaturally, fallen is in itself an incentive to the worst elements in Asia Minor to take vengeance on the people who, trusting in France's word, allowed themselves to be recruited for the army that was to operate against the Turks. In any negotiations that may now be set on foot, it seems clear that the Constantinople Government as well as the Kemalists should be a party; for the British Government does not want to repeat France's mistake, by leaving Turkey a country divided against itself. Even if Mustapha Kemal Pasha falls into line with the Allies' requirements as far as the minorities in Asia Minor are concerned, it does not follow that he will prove equally accommodating in Constantinople, unless he is made to realise that ordered Government in Turkey is to be a *sine qua non* of any settlement of the Turkish question.

### *Serbia and Albania.*

The representations of the Allies in Belgrade appear to have led to the withdrawal of Serbian regular troops from Albania, but large numbers of irregulars are stated to have been left in the country. It would be well if the Yugoslav Government could realize what prejudice has been caused to Serbia's good name by its indefensible action in Albania. Perhaps the eyes both of the Government and of the people will be opened by the resolution passed by a number of Members of Parliament, to which Dr. Seton-Watson has accorded his support, endorsing the policy of the British Government in the Albanian question, and expressing regret that Serbia should be using the strength and riches which she largely owes to the Allied and Associated Powers to attack a neutral State, forgetful of her own appeals for help in 1914 against a greater neighbour. Nothing in regard to Albania can be left to chance. It will be necessary for the Commission appointed by the League of Nations to remain on the spot until the last Serbian irregular has been withdrawn, and some guarantees have been extracted from the Belgrade Government that there will be no further aggression against the Albanians. The modifications to be introduced into the 1913 frontiers have been almost exclusively in favour of Yugoslavia, and the old plea that the Albanians have always been the first to attack will no longer hold good.

### *The Situation in Bulgaria*

A telegram from Sofia states that the Congress of the Agrarian Party which was to take place on November 21 has been postponed *sine die*. This congress of the Agrarians, or Zemledeltzi—the political group actually in power, with M. Stambolisky, their leader, as Prime Minister—takes place every year on November 21 (Archangel Day of the Orthodox Church). The present postponement may be attributed to the political wisdom of the Prime Minister, who has realized that the moment is not propitious for the public discussion in Bulgaria of matters which are primarily party questions, but which in view of the special position of the Party are apt to become invested with national significance, and, therefore, may trench upon the sphere of international politics. Such a step on the part of M. Stambolisky is in keeping with the policy that he has endeavoured to carry out since he assumed office. He has set his face against all adventures that would clash with the strict observance of the Peace Treaty, and according to the lights of the Party with which he is associated has worked for the economic development of Bulgaria at peace with her neighbours. With so many other countries pursuing a different policy, not altogether without success in some instances, credit may be given to the Bulgarian Government for not having added to the preoccupations of the Entente at this time.

### *Riots in Jerusalem.*

The disturbances in Jerusalem on November 2, the anniversary of the Balfour Declaration, have led to a demand on the part of the Jews of the city for the removal of Mr. Ronald Storrs, the Governor, on the ground that he was responsible for the failure to prevent or control the outbreak. In view of the fact that no official could have done more for the Holy City during a short tenure of office than the present Governor has done, it would seem as if political views were the main motive of the action of the Jewish representatives. There will, presumably, be an inquiry into the disturbances, and if the experience of the past is repeated, it may be found that the fault does not rest altogether on one side. To the onlooker at a distance, it seems an act of doubtful wisdom on the part of the Jews at this particular moment to engage in any formal celebrations of the anniversary of the Balfour Declaration. It was well known that a certain amount of soreness prevailed among the Arabs, because the high hopes formed of the Arab Delegation to London showed no signs of being realized, and the fear had been expressed in some quarters that disturbances might be welcomed as a possible means of distracting attention from the Delegates' failure. Celebrations in honour of the Balfour Declaration at such a time could only be regarded by the Arabs as deliberate provocation. It is stated that a special Moslem service was arranged in order to draw Arabs away from the Jewish quarters during the celebrations, and it is admitted that the police saved the situation when the collision took place. In these circumstances to attempt to place on the Governor responsibility that really belongs to those who arranged the provocative celebrations may have been considered a shrewd move by the latter, but it would be a matter for regret if the demand for Mr. Storrs' removal were acceded to. The British Government has the right to expect assistance from the Jewish organisations in the difficult task of administering the country at this juncture. To organize celebrations on November 2 was not the way to render such assistance.

### *The Transjordania Problem.*

Colonel Lawrence is reported to be in Transjordania, where it is much to be hoped his presence will have a tranquillising effect upon a somewhat disturbed situation. Reports from that region have lately been invested with so much mystery, and have been so often contradictory, that it is only natural to infer that all is not well: that here as elsewhere the clash between Zionist and Arab views has led to friction which may easily become dangerous. Quite recently it was reported that the Emir Abdullah, apparently finding it impossible to reconcile all the conflicting interests in Transjordania, had withdrawn himself to the Hejaz; and according to one version, he had actually resigned his post. The latter version was promptly denied; and if we may trust reports current at the time of writing he is now in Transjordania. In any case, Colonel Lawrence is definitely stated to be there; and there are indications that an attempt is to be made to settle the future status of Transjordania without further delay. In this matter the advice of Colonel Lawrence would be invaluable, and the fact that he has been sent to the spot is a hopeful sign that the problem is to be tackled on practical rather than on 'idealistic' lines. We regret that there is as yet no news of King Hussein of the Hejaz modifying the attitude which he had taken up. It is possible, however, that the "scrapping" of the Treaty to which he objects may yet put an end to an awkward situation.

### *The British Prisoners from Turkey.*

It is very regrettable that the Turkish Nationalists' treatment of their British prisoners should have been such as to give rise to many unpleasant reports and rumours, for some of which, at least, there appear to be good grounds. The case of Colonel Rawlinson especially has been attracting a great deal of attention, largely by reason of some vigorously worded letters on the subject addressed to *The Times* by Admiral Sir Percy Scott. The first of these letters drew from Lord Curzon in the House of Lords a reply in which he set out the Govern-

Digitized by Google

ment, or official, point of view at some length. This statement will be found on another page, and probably most readers will think that Lord Curzon made out a very good defence against the charges brought by Sir Percy Scott against the Foreign Office and the War Office. Unfortunately, while nobody will dispute Sir Percy Scott's ability to state his own views with unusual force, he too often seems to be quite incapable of seeing the other side of the case at all ; and after Lord Curzon's statement, he returned to the charge with a second letter to *The Times*.

### *"The Polite Letter Writer."*

In this second letter Sir Percy Scott states positively that "Colonel Rawlinson was put into a common Turkish gaol in June, 1920," and asks : "Why did not the Foreign Office take the trouble to find out where he was and how he was being treated ?" The letter is largely occupied with such statements as "they (the Foreign Office) cannot muzzle me," and "I do not write to *The Times* without well knowing the basis of my convictions," as to the value of which each reader must form his own conclusions, but it gives one piece of evidence, in the form of an "extract from a letter from Colonel Rawlinson, dated Erzerum Prison, August 21, 1921 :—

"Our treatment is disgraceful—disgusting conditions, solitary confinement, starvation, and misery. All literature is deprived us. (sic). For the last two months we have been allowed out in the prison yard once a day, never out before that. No news received since June, 1920, 14 months.—A. RAWLINSON."

Those facts are certainly a disgrace to the Kemalists, and calculated to rouse any Englishman's wrath. But when Sir Percy Scott adds, a little lower in his letter : "Lord Curzon points out that he had an unabated desire to extricate Colonel Rawlinson from his cruel position," and comments : "I am inclined to believe that if the matter had been left entirely in the hands of the Foreign Office, Toby Rawlinson and the others would be in prison still,' he surely weakens his case by his violent method of stating it.

### *Italy and Egypt.*

A committee of prominent Egyptians, we learn from the Cairo correspondent of the *Morning Post*, has issued an appeal to French, Italian, American, and Greek subjects in Egypt, asking them to publish statements denying the report that it is necessary to retain British troops in Egypt for the protection of foreigners. What kind of response the appeal will meet with we do not know, but there can be little doubt that the French, Americans and Greeks will receive it none too enthusiastically. As to the views likely to be expressed by the Italians in Egypt, or by those in Italy, we are less able to make a guess. We saw not long ago that on this subject the former are not indifferent to certain pressure by the Egyptians, and Italian policy regarding Egypt and Great Britain's relationship to Egypt has been difficult to follow ever since the war. In this connection we may note the reported intention of the ex-Khedive to take up his residence in Italy, and the mystery which actually surrounds that very Anglophobe schemer's present movements. That is, however, at most only a straw which shows the drift of the current. Far more important is the fact that a section of the Italian Press shows an inclination to forget lessons learned quite recently, and to lend itself to spreading the views of the Egyptian extremists, and to provocative writing regarding this country. It would be interesting to know what Italian instructed opinion thinks would be the effect on Italy's North African possessions of Great Britain's complete withdrawal from Egypt.

### *The Indian Services.*

The India Office has been prompt in fulfilling the promise, given in the recent debate in the Lords, of an early announcement of the terms on which officers employed in India might withdraw from their service owing to inability to work effectively under the new Constitution. As to the terms on which retirement is permitted, we must speak with some reserve, for the Regulations on the subject are very intricate, and it is by no means easy to grasp at first sight the implications of some of the detailed provisions now added to them, but it can safely be said that the orders do not err on the side of generosity. Whether they can be described as "not ungenerous," to use Lord Lytton's expression, is a more doubtful matter, and one on which we are not disposed to commit ourselves until we have heard the views of the other side. Even the full pensions authorised by the Regulations are, as so many of our readers know to their cost, inadequate for anything like reasonable existence in this country, and the offer of a proportion dependent on length of service will not remove this fundamental difficulty ; it looks rather as if the senior men will be compelled to stay on, while the concessions will be welcomed by those who are young or energetic enough to contemplate a new career.

## THE WEEK AT HOME.

*London, Monday Evening.*

### Interludes and Episodes.

It has been a distracting kind of week, full of more or less irrelevant episodes "to be continued in our next." The Bigland-Bottomley business at the Old Bailey, which has filled the newspapers for weeks past, ended in Bigland's being committed for trial on a charge of criminal libel, while the magistrate made some scathing remarks on Mr. Bottomley, the prosecutor. The Basil Thomson affair fizzled out after all, and Sir Basil is now writing his reminiscences in *The Times*, and we are all waiting to see how many of our respectable friends were shadowed as suspects by Scotland Yard. On the other hand the anthropologists have been vastly excited by the discovery of a primitive human skull in Rhodesia among a case full of animal bones; the theory that the skull belongs to a meat trust profiteer who was holding frozen mutton for a rise is popular, but a little dubiously received in high scientific circles. Incidentally we have suffered the first really bad fog of the season, but as it happened on Lord Mayor's Day, and saved us from pretending we had seen that absurd procession, we are really grateful.

### The Exodus of Washington.

For the time being London feels a little out of the limelight, and rather like a provincial city, as so many distinguished citizens have gone to Washington for the Conference. It has really been rather like a race meeting. Mr. H. G. Wells got there first ; Mr. Arnold Bennett and Mr. Harold Cox were fairly level seconds at New York ; Mr. A. Spender a moderate third, and Mr. Bernard Shaw is explaining in a weekly paper why he is a non-starter. All these good folks are telling us what the Conference ought to be, and presently the ordinary reporters will tell us why it is not doing it; and then the distinguished people will tell us how much wiser statesmen great authors are than mere politicians, and we shall all shake our heads and feel that things might have been worse. As to the Pacific problem and the future of China, which is what the Conference is to discuss, I cannot find that the literary propagandists have given much space to it. These dull geographical details are so much less interesting than Mr. H. G. Wells himself.

Digitized by Google

All the papers, as in duty bound, have designated the American proposals for limiting armaments as a "bombshell." They are in fact a fairly exact replica of Mr. Winston Churchill's suggestion ten years ago of an annual holiday between Britain and Germany; they are propounded in greater detail, but the principle is precisely the same. It is, of course, too early as yet to say whether the idea is practicable, and it will obviously need careful working out between the three great naval Powers; but the preliminary impression in this country appears to be favourable, at any rate as regards the next ten years. It would, perhaps, be rather difficult for Governments to commit their successors for a longer period.

**Parliament Ends.**

The session is over, and Westminster is a desert once more. But the House parted in better humour than it met, for Sir Robert Horne declared that revenue was coming in well, and that there will be no deficit next year. In every club and train one hears that nobody has any money, but it seems that income tax is still being paid, and the yield on Customs and Excise shows that people can still afford luxuries like wine and cigars. The fall in the cost of living has probably helped in this respect. But the Chancellor of the Exchequer was also able to assure us that trade is looking up, and diminished costs of production and harder work by master and man are helping to pull the country together. Meanwhile the experts are disputing the causes and consequences of the fall of the German mark, and students of foreign affairs are still discussing the effect of the possible bankruptcy of Prussia.

**Ireland.**

The eternal Irish negotiations continue. This week Ulster has been called in, and the Cabinet has handed the Ulster Government a series of proposals. These are to to be considered in Belfast; there is no doubt that they will be declared unacceptable, but it is believed that Ulster will then submit counter-proposals, which will have to be examined by the British Government. This does not seem on the face of it to indicate any particular progress towards a settlement, but in fact the omens are rather hopeful.

In the first place it is clear that the Sinn Fein delegation have avoided, at least for the present shipwreck on the matter of allegiance and independence; and that they have not definitely rejected the British Government's position towards Ulster. In the second place it means that the Unionists in the British Government are satisfied that here is a basis for negotiations with Ulster which will not be unjust to that province. This is important, as Lord Birkenhead was a prominent supporter of Ulster in 1913, and Mr. Austen Chamberlain has always been a strong Unionist. If they are satisfied then presumably the Unionist party can follow them without dishonour.

It is well known that in the event of a breakdown of the negotiations over the question of allegiance, Mr. Lloyd George would remain Prime Minister; but if they broke down over Ulster, he would not be a party to coercion on that ground, and would resign. With him, of course, would resign the rest of the Cabinet; but it has been suggested that the Unionist section of the Coalition would then take office. In view of the situation outlined above, however, it seems doubtful whether Lord Birkenhead and Mr. Chamberlain would do so. There remains Mr. Bonar Law, the dark horse of current politics, who is back in London but not in office. He has always been strongly pro-Ulster, but whether he would or could form a Government in such extraordinarily difficult circumstances is extremely problematical. Of course he could count on the support of the Die-Hards, and a certain number of other Unionists; but there would have to be an election almost at once. On the whole, in spite of gloomy prognostications and portentous shaking of heads, I fancy the Government will remain in office. Not many men envy Mr. Lloyd George his job, but I have yet to meet the man who envies his successor.

**London Traffic.**

The Government have turned down Lord Ashfield's suggestion that the Underground Railway and General Omnibus Company should be given a monopoly of London traffic in return for constructing fresh suburban lines as a means of assisting the unemployed. Indeed, the Cabinet could do little else than reject the scheme, despite its support by the trade unions; for its adoption would have permanently antagonised the London County Council, which is a very powerful body. It is still proposed, however, that the Government might guarantee the Company against loss of its capital, which would probably enable the directors to construct the extensions of their system, which are in fact urgently required. It is pointed out in some quarters that the Company has already practically a monopoly of omnibus and railway traffic, but that is by no means the same thing as a legally recognised monopoly. Incidentally, there is said to be some prospect that fares will be reduced. They are not excessive, but there always seems to be an odd halfpenny somewhere, which is a nuisance.

**The Morning "Westminster."**

The successive disappearance of the *Globe* and *Westminster Gazette* has sadly depleted London's choice of evening newspapers; nor can I get used to the new morning *Westminster*. There are obvious difficulties in the change-over, not all of which have yet been successfully surmounted; and I am afraid the new Liberal morning paper will have a hard fight for life. Unlike the old *Westminster* it does actually contain news, but like Bottom in *Midsummer Night's Dream*, it is translated indeed in its new small type and narrow column, with a serial story and a lady's page, and all the modern accessories. Mr. Spender has had many good wishes in his courageous venture, and we can only hope that we shall all get accustomed to the change in time, but I doubt whether the *Daily News* has so much to fear from its new competitor as seemed at one time probable.

**The Week's Books.**

"An Introduction to Psychology" (Methuen) by Susan S. Brierley, is a very useful summary of the elements of the subject, with the minimum of technical terms and—what one does not always find in more pretentious times—a sly piece of wit. The best chapters give a succinct description of psycho-analysis.

"Gambetta" (Methuen) by H. Stannard, is an admirable biography of the great French statesman, with some survey of the difficult years during which he was in the forefront of politics in France. The book, which is obviously the result of long study and research, should become the standard work on its subject in this country.

"Men I have Painted" (T. Fisher Unwen) by J. McLure Hamilton, is a light and amusing series of pen-portraits by an artist who generally works in another medium. It seems that Prince Bismarck once told him "that his doctor had said that a man might drink between the ages of twenty and seventy, fifty thousand bottles of champagne without offending the laws of health or the strict rules of temperance." Three bottles a day for fifty years seems rather heroic, but Bismarck confidentially informed the author that he might have exceeded the number, "to say nothing of a few other liquors, such as beer and brandy." It seems that Mr. Hamilton is not a golfer, for he remarks: "Men who golf much can never make up their minds, usually hold no opinions upon serious things, and assume that life, religion, and politics are like golf, an uncertain and unsteady game. Their mentality is in strong contrast to that of sportsmen who shoot big or small game."

I am glad to see that the popular "Everyman" series of reprints, suspended for some years owing to the high cost of production, have resumed publication, at half-a-crown instead of the original shilling. All but one of the ten new volumes are classics, and I shall look forward to others being added from time to time.

OCELLUS.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents).*

## EGYPT.

*Cairo, November 3.*

**"Negotiations" Rumours.**

There is still the same tense expectation as reported in my two previous letters. Word was received this morning that Adly Pasha, head of Egypt's Official Delegation in London, had had the fateful interview with Mr. Lloyd George yesterday, and that, from the Egyptian viewpoint, "it was satisfactory." This message, in conjunction with the rapid swing of the British Press in favour of the ending of the occupation by British troops of the interior of Egypt, is regarded as implying that the days of the military occupation are at last numbered. It is, indeed, inevitable, if the British Government sincerely desires to make Egypt independent. It will be unfortunate for everyone except the British tax-payer. The *Egyptian Gazette* in a leader on the matter this morning, stated: "With the withdrawal of the Army of Occupation from Cairo and Alexandria, the entire edifice that we have built up in Egypt will collapse. That collapse may be rapid or slow, but it is inevitable." That represents British opinion in Egypt. The Egyptians, of course, professing a vast faith in themselves, indignantly repudiate such sentiments. Time alone can reveal whether their faith is justifiable.

**Looking Forward.**

There is still a possibility that agreement may not be reached, however, as to-day's message states that the Treaty, which apparently is being drafted by British draughtsmen alone, and not in collaboration with the Egyptian legal experts, has not yet been presented to the Egyptian Delegation. This is the sort of report that makes everything so tense here. It is no secret that if the negotiations fail, the extremists will be out for reprisals, and official fountain-heads are fully aware that their organisation, which has been perfected since the troubles in the Spring in 1919, is prepared for united action when the moment comes. Precautions, however have been taken, and no disorders will last many hours: the authorities also learnt a lot in the 1919 disturbances and will not be caught napping again. They have their fingers on the pulses of the storm-centres, and any changes will be met by the guardians of the peace. I am not endeavouring to spread any alarmist views. It is far better to see where we are, knowing that, given certain conditions, a small amount of trouble is inevitable. But it is also gratifying to know that preparations have been made to check it.

It is frankly realised in Egypt that the pending political developments in this country may cause a number of people who intended to visit Egypt during the coming season to hesitate. Such hesitation is perfectly right and proper, but intending tourists should, at the same time, remember that conditions to-day are very different from 1919. It is by no means certain that there will be any trouble. All the news goes to show that there will be an agreement between England and Egypt, and if it does materialise then Egypt will be even more interesting than usual, because of the big State functions that will ensue during the winter. And if, perchance, disturbances may be attempted, they will not be allowed to spread. They will be over quickly—and they will certainly be over before Christmas. Consideration of these acts should convince potential visitors that there is no necessity to change their plans. Formerly the agitator found the masses fairly pliable. But now the prominent Egyptians have re-asserted their influence, and these notables realise that they have far too much at stake to have it jeopardised by embarrassing outbreaks on the part of the lower classes.

**Zaghloul Pasha Jettisoned.**

One of the most significant phases of the vigorous re-entry of the notables into public life has been the renunciation, at the psychological moment, of Saad Pasha Zaghloul and his policy. Last night an absolute majority of the members of the Legislative Assembly sent a letter to Zaghloul Pasha, stating that, as, since his return from Europe he had committed a series of political blunders, due to the exclusion from his councils of some of his colleagues—the dissentient members of the original Wafd—who had shared the people's mandate with him, and as the signatories had full confidence in the Official Delegation and desired the best interests of the country, they felt it their "imperious duty regretfully to revoke their mandate to Zaghloul Pasha." Coincidentally the Procureur-General's report on the recent disturbances at Assiut during the visit of Zaghloul to that province was published, and it constituted another blow to the Pasha's prestige. It emphasised that Zaghloul had been requested, by a majority of the members of the province, to refrain from making the visit. It stated that the local authorities at Assiut had done their duty efficiently and well, and had they not done so the result would have been "appalling." Since Zaghloul's return to Cairo last Sunday afternoon he has been confined to his house by a bad cold.

**Bad News from Jerusalem.**

This morning's news from Jerusalem is rather disquieting. An unofficial report states that as yesterday was the anniversary of the Balfour Declaration, the Arabs rose up against the Jews in the Holy City, beat them with sticks and threw stones at the Jewish shops, breaking windows and causing other damage. An official message received this morning stated that a bomb had been thrown and exploded, killing four Jews and one Arab, and wounding 15. The same message reported that calm had been restored. It had been rumoured in Egypt for some days prior to November 2 that the Arabs were meditating a demonstration on the anniversary of the Balfour Declaration. Another message this morning to the local Press advises that the Moslem-Christian Arab Delegation is endeavouring to get a delegation of Members of Parliament to inspect the country and consider its fitness for emancipation from Zionist domination. Parliamentary membership apparently is daily becoming more attractive!

**Preparing for Armistice Day.**

The members of the British community in Egypt are making preparations for commemorating Armistice Day. In addition to the special Church services, wreaths are to be laid in the Cairo and Alexandria British military cemeteries, on individual graves where possible, otherwise on the respective Stones of Remembrance. The British community in Egypt is ultra-conservative, and when it does combine for some such movement the action bespeaks a lot more thought than appears on the surface.

---

*Port Said, November 7.*

The visit of the Prince of Wales, though unofficial, has been voted a great success. The Renown was in

Leaders of the World's Office Equipment and Filing Systems.

sight about noon on Saturday the 5th inst., and when off the entrance to the channel she returned the salute of the battery on shore. As she steamed slowly up the channel she was escorted by eight aeroplanes, and H.M.S. Calypso following, and by 2 p.m. she was safely in her berth, opposite the Canal Office, which had been specially lengthened to take her. There were large crowds at every point of vantage, and most were able to recognise the Prince on his own special platform above the bridge, and later when he was receiving the various visitors on his private deck aft. His Excellency the Governor of Port Said, and El Miralai Archer Bey, Commandant of the Suez Canal Police, went on board and were received by the Prince, who chatted for some time with them. Later Mr. Were, Acting British Consul and Monsieur Chateauminois, Chief of the Suez Canal Company in Port Said, Captain Elliot, Captain of the Port, and others were presented to the Prince.

Shortly after the Prince came ashore, acknowledging repeatedly the cheers which were raised, and drove off in a car to return the call of the Governor. In the evening the Governor, Archer Bey, Mr. Were, and the Sultan's representatives from Cairo, had dinner with the Prince, and afterwards he received, as representatives of the British commercial community, Messrs. Tweedie, Broatch, Bristow, and Lloyd Jones.

On Sunday morning at 6.45, the Renown entered the Canal accompanied by the Canal Company's tugs, Titan and Hercule. Happily, however, their services were not needed, and although the Renown is one hundred feet longer than any ship that has yet gone through, she made the transit without the slightest hitch, in what was practically average time. Four aeroplanes also accompanied her down the Canal and she was followed by H.M.S. Calypso, who is to be her escort as far as Aden. Sunday night was spent at anchor in the Great Bitter Lake, and the Renown proceeded on Monday morning, when the tide permitted, to Suez where she arrived at 1.30 p.m. She then took oil fuel and steamed away down the Red Sea. Those who were fortunate enough to speak to the Prince were, as every one else, charmed with his unaffected and natural bearing.

**Armistice Day Celebrations.**

Last week a meeting of the British residents was called together at the Consulate to discuss measures for the celebration of Armistice Day. After some discussion and various proposals had been made, it was decided by a large majority to carry out practically the same programme as last year, and have a memorial and thanksgiving service at the English Church, and the two minutes' silence observed as part of the order of the service.

**Japanese Consular Reception.**

A week ago the Japanese Consul invited the leading residents of Port Said to a reception at the Casino Palace Hotel in honour of the birthday of the Emperor of Japan. The guests were received by the Japanese Consul and Mme. Mashike, who was dressed in national costume, and looked as pretty as any lady of Sir Edwin Arnold's or Lafcadio Hearn's imagination. Tea was passed round in the very beautifully decorated dining room and later the Japanese Consul made a short speech in English and loyal and complimentary toasts were drunk in champagne. Altogether it was a most enjoyable function.

## YUGOSLAVIA.

*Zagreb, November 7.*

**Yugoslavia Relieved.**

In spite of the terrible slump of the dinar, with all its disastrous economic effects, the political situation causes less anxiety than it did a week ago. Karl is in safe custody, and has passed through Yugoslav waters under the British flag, and the Hungarian Parliament has passed the Bill dethroning the whole ill-omened dynasty bodily, and Yugoslavia and her young allies can breathe a sight of relief. The West could never appreciate the menace that Karl personified to these young States, including those with an older kernel, and was perhaps impatient at their insistence, but, all the same, the firm attitude of the Little Entente has undoubtedly increased its prestige in the councils of Europe, and gratification is felt that the Big Entente has accepted the vital points of the little one's demands which, after all, consisted really in the complete and unqualified execution of the Peace Treaty. And the decisive factors, which showed that the Little Entente was in earnest, were the mobilisation and the united front presented by all parties in the face of the common danger.

This is gratifying, as also is the unofficial news from Paris that the Council of Ambassadors has accepted the demarcation of the Albanian frontier at least to a degree in favour of protecting Yugoslav territory against border raids: the road from Dibra to Struga is allotted to Yugoslavia, the frontier near Prizren is modified favourably, and to the north east of Skutari a substantial alteration is made to protect Podgoritsa.

**Administrative Provinces.**

The Government's scheme for the division of the country into new provinces is now published. The changes are great, and the new provinces are as follow:—

1. Bachka, with seat at Novi Sad. 2. Belgrade, including the whole of the present "okrug," or county of Belgrade, together with Zemun, Panchevo and parts of the county of Smederevo. 3. Bitolj, that is, Monastir with several of the surrounding okrugs and parts of others. 4. Branichevska, with seat at Pozharevats. 5. Varazhdin with most of the Zagorje country and Medjumurje. 6. Vrbaska, with seat at Banjaluka. 7. Dubrovachka, with seat at Dubrovnik, that is Ragusa, and the adjacent parts and islands of Dalmatia. 8. Zagrebachka, that is the country round Zagreb. 9. Zetska, with seat at Cettigne, including Montenegro and the district of Kotor, that is, Cattaro. It should be noted that Zeta is the ancient name for the old kernel of Serbia now occupied by Montenegro. 10. Kossovska, with seat at Prishtina. 11. Krajishka, with seat at Karlovats, including the greater part of southern Croatia. 12. Liublianska, with seat at Liubliana, including the town of that name and the greater part of Southern Slovenia. 13. Mariborska, with seat at Maribor, with the towns of that name and of Celje and northern Clovenia. 14. Mostarska, with seat at Mostar and the greater part of Herzegovina. 15. Nishka, with seat at Nish and parts of the adjoining okrugs. 16. Osijechka, with seat at Osijek, covering that part of Slovenia. 17. Podrinska, with seat at Shabats, including the okrugs of Podrinje, Valjevo and Uzhitsa. 18. Botiska, with seat at Bechkerek, including the Banat. 19. Sarajevska, including Sarajevo and southern Bosnia. 20. Rashka, with seat at Novi Pazar, covering the old sandjak of that name, and the old Rashka that was the kingdom of Stepan Nemanya, who founded united Serbia a thousand years ago. 21. Splitska, with seat at Split, covering northern Dalmatia. 22. Skopska, with seat at Skoplje, with the surrounding country. It will be remembered that Skoplje was the capital of Stepan Dushan. 23. Tuzlandska, with seat at Tuzla. 24. Shumadinska, with seat at Kragujevats, the ancient Shumadia, the heart of Serbia. 25. The province of the city of Belgrade, including Zemun. 26. The province of the city of Zagreb.

Digitized by Google

The basis of the division is to arrange that each province has a population of not more than 800,000.

*Zagreb, November 9.*

**The King's Return.**

After a prolonged absence abroad under most depressing conditions, the King has returned to his country, to the delight and relief of his subjects. His first act was to hold a Council meeting to discuss the foreign situation created in Hungary, and on Sunday he took the oath. As he drove in semi-state to the Skupshtina, His Majesty looked decidedly pulled down by his long illness, but happy to be once more in Belgrade amid the loud and prolonged cheering of the crowds that lined the streets. He took the following oath before the Skupshtina :—" I, Alexander the First, on mounting the Throne of the Kingdom of the Serbs, Croats, and Slovenes, and receiving the Royal Power, swear by Almighty God that I will cherish the Unity of the People, the independence of the State and the Entirety of the State Authority, that I will rule by it, and by the Laws, and that I will hold the good of the People before my eyes in all my Aspirations. So help me God ! Amen ! "

## BULGARIA.

*Sofia, November 7.*

**M. Stambolisky's Declarations.**

Last Thursday I was received by the Prime Minister, who in the course of conversation informed me that the Government were in possession of proofs showing that the assassins of M. Dimitroff were Macedonians, and that the authorities knew the names of the actual assassins, but for obvious reasons would not disclose them. It was in order to aid the civil and military authorities in their task of tracking the murderers that the present state of siege had been declared at Sofia.

The Prime Minister said that after the Dimitroff matter had been cleared up, the Government would examine the question of the payment of Reparations, about which there was talk of a delay being accorded by the Great Powers. When this was settled the Government would devote itself entirely to internal policy, and would take steps to attract foreign capital to Bulgaria in order that the great mineral wealth of the country might be more fully developed.

Questioned as to the possibility of one of the external loans being accepted, the Prime Minister said that the matter would shortly come before the Cabinet for consideration, and added that the conditions offered by the Franco-Belgian group seemed to be the most favourable. He said that there was no fresh news as to the much talked of Serbo-Bulgarian *rapprochement* ; and in conclusion he announced that the Cabinet would in the near future be completed by the appointment of two new Ministers to fill the places of M M. Dimitroff and Boteff.

**The Postponement of Reparations.**

In an interview that M. Stambolisky gave to a Swiss newspaper at Geneva he referred to the question of the postponement of reparations, and is even reported as having said that the postponement had been agreed on. As far as is known the matter has not yet come up officially between the Government and the Commission of Reparations, but there is every reason to believe that it will do so shortly. If the Allies agree to a delay of some years in the payment of the war indemnity, it is certain that they will want some guarantees from Bulgaria, whereby they can be assured of receiving something when the period of delay is at an end. It is idle as yet to speculate as to what these guarantees will consist of ; but it is very likely that the Commission will be called upon to enforce the annex of Article 131 of the Peace Treaty, which provides for the taking over of certain of Bulgaria's financial departments by the Reparations Commission.

**Vacant Portfolios.**

With the appointment of M. Nedelko Athanassoff, an ex-Minister of Railways, to the post of President of the Sobranye, one of the candidates for the two vacant Ministerial posts has disappeared. A partial reconstruction of the Cabinet seems probable at the same time, in which case M. Daskaloff, Minister of Commerce, may become War Minister, M. Oboff, Minister of Agriculture, may replace M. Daskaloff, whilst a change may be made at the Ministry of the Interior, which is at present presided over by M. Thomoff.

The most likely selections are M. Manoloff, ex-vice President of the Sobranye, and M. Yaneff, who is the Public Prosecutor in the Radoslavoff trial. Both are young, and M. Manoloff in particular represents the best section of the Peasant Party in Bulgaria.

**Personalia.**

King Boris has received from the State of New York a present consisting of four volumes which contain the history of the birds and wild flowers of New York.

Mrs. Bruce, the wife of Mr. Bruce, the Secretary-General of the British Delegation on the Reparations Commissions, has arrived in Sofia.

The Sobranye will shortly be asked to pass a vote of credit for 200,000 levas, which sum will be used in erecting a monument over the tomb of Mr. James Bourchier, the late correspondent of *The Times* in the Balkans.

On the occasion of the Anniversary of the Emperor of Japan's birthday, the Japanese officers belonging to the various Military Commissions in Bulgaria gave a dinner party at the Union Palace Hotel, Sofia. It is understood that the proceedings did not terminate till 6 a.m. the following day, and that 150 bottles of champagne were consumed. The guests numbered 60, but is is satisfactory to be able to add that the bill was paid by the Japanese and not by the Bulgarian Government !

## GREECE.

*Athens, November 5.*

**The Crown Prince's Return to Smyrna.**

It is announced that the Crown Prince, accompanied by Princess Elisabeth, the Marshal of the Court, M. Soutsos, his A.D.C's, and all his household, will leave next week for Smyrna, where he will remain on a prolonged visit. From information received it would appear that His Royal Highness, as heir to the Throne,

Piræus

and not, as during his last visit, as Colonel of the Headquarters Staff, will review the troops at the front immediately after his arrival at Smyrna. The Crown Prince and his household will take up their residence at Cordelio.

**M. Stergiadis.**

Free mention has lately been made of the name of M. Stergiadis as a possible Prime Minister in the near future. In this connection it is well to note that M. Stergiadis, apart from his high political qualities, is also inclined to take risks whenever he considers them necessary. At the present moment he is well considered both by the Venizelists, to whose party he really belongs, and the 'Antis.' The *Politia* states that the Venizelists would like to see M. Stergiadis as Prime Minister because he would then re-establish the Venizelist policy, and might be considered as a forerunner of M. Venizelos himself. On the other hand, the 'Antis' would not object to M. Stergiadis as Prime Minister in view of the fact that, under him, relations with the Allies would probably become more friendly.

**Unrest in the Dodecanese.**

It would appear from information received here, coming from a good authority, that in Rhodes and the islands of the Dodecanese much unrest has been caused as a result of the expulsion by the Italians of the Greek Metropolitan and the attitude of the Italian authorities. The Demogerontia has resigned *en bloc* after having demanded, in a very violent letter the return of the Metropolitan and the cessation of the measures applied by the Italians, which are causing much ill feeling amongst the population.

**Communications between Athens and Bucharest.**

Negotiations have commenced between the Ministries of Communications of Greece, Serbia, and Roumania, and the railway company concerned, with a view to the establishment of a direct line and the running of special trains between Athens, Belgrade and Bucharest. The only obstacle at the present moment is the lack of rolling stock.

## TURKEY.

*Constantinople, October 31.*

**The Rift in the Clouds.**

Nothing has occurred during the past week to dispel the feeling of optimism that has arisen as a result of the conclusion of the treaty between the French and Angora Governments. On the contrary, there are many indications of a genuine desire on the part of the Angora Government to abandon definitely the uncompromising attitude hitherto observed, and to come to an understanding with both Italy and Great Britain. The virtual cessation of Anglophobe propaganda in the Anatolian press is merely one of the straws which indicate the direction of the wind; but only a genuine desire for peace can be the motive for the missions which, it is reported, the Great National Assembly has decided are to visit the capitals of the Allied Powers. Nothing is yet known as to the composition of these missions, but there can be little doubt that they will not consist solely of propagandists. In the meanwhile the journey of General Franks to Ineboli in connection with the exchange of prisoners is being made the basis for rumours of impending negotiations between the British Government and the Angora Government. It is even asserted that General Franks has received secret instructions to "feel the ground," but it may be confidently stated that there is not the faintest foundation for any of these rumours. The possibility of negotiations between the British Government and the Angora Government is, however, a subject of almost feverish interest in Turkish political circles, and there is little doubt that this time, the Angora Government would welcome the opportunity to discuss matters. Curiously enough, the prospect of such negotiations and of the agreement which might eventually result is causing considerable perturbation in two widely different circles—the Turkish Opposition politicians on the one hand, and the Bolshevists on the other. The Turkish Opposition dislikes the prospect of a general peace based upon preliminary understanding between the Allies and the Angora Government, because this would spell "Tammam shud" for their hopes of getting into power within the lifetime of the present generation. For the moment, however, the Opposition is practically powerless, but its opportunity will certainly come if the Angora Government maintains its intention of modifying the Constitution by abolishing the administrative prerogatives of the Throne. This point, it should be noted, is for the time being in abeyance, but it will certainly become a most important factor eventually in the definite conclusion of peace between Turkey and the Allies. According to the Constitution no Treaty can be valid or binding without the consent of the Sultan, and this aspect of the question cannot be ignored.

**Moscow and Angora.**

The dissatisfaction of the Bolshevists is an even more important matter, for it contains the germ of dramatic developments in the East. There is reason to believe that through their envoy in Angora, the former schoolmaster Nazaranos, the Soviet Government of Moscow has already asked the Angora Government for explanations, and it may be inferred that the request was not unaccompanied by veiled threats. According to statements emanating from Turkish sources in Constantinople, the explanations given to the Soviet Government by Mustapha Kemal Pasha and Yusuf Kemal Bey have been accepted as satisfactory, but if that was really the case, then the policy of the Angora Government towards the Allies cannot be so sincere as many people are inclined to believe. If, on the other hand, the Angora Government is really determined to make a sincere effort to obtain peace, it is difficult to see how a break with Moscow can be avoided, and "explanations" can only postpone the crisis that will be inevitable when that determination becomes unmistakable.

It is possible that the economic factor has commenced to exert a decisive influence upon the policy of the Angora Government. The burden of providing for the needs of the army is beginning to tell heavily upon the already exhausted population of Anatolia, and the shrinkage of production owing to the almost total mobilisation of the man-power of the country has still further aggravated the situation. Moreover, in spite of subsidies of Bolshevist gold—the amount of which has probably been greatly exaggerated—the financial situation of the administration is becoming increasingly difficult, as is demonstrated by the non-payment of salaries to certain sections since the month of July. After all, money provides the sinews of war, and it is the want of money that has probably brought the Angora Government face to face with the dilemma of either risking defeat by the Greeks next spring, or of accepting the "help" of Red armies in Anatolia. The only way out of the dilemma is obvious, and too much importance need not be attached to statements to the effect that even if Smyrna *and* Thrace are given up by the Greeks, the Angora Government will not make peace unless an indemnity

is also forthcoming. It should be added, however, that some assistance will have to be given to the Turks to assist them to restore the towns and villages devastated during the fighting. It is known that a good deal of deliberate damage was done by the retreating Greek army, but it must also be remembered that a good deal of deliberate damage has also been done by the Turks themselves to the Greek villages in the coastal area of the Black Sea, where as a reprisal for the action of the Greek army and to smother the Pontus agitation, the Angora authorities let loose a savage of Laz nationality, named Osman Agha. The Angora Government will therefore be best advised to leave the matter of reparations to be merged into the general question of the reconstruction of Anatolia.

**Italo-Turkish Negotiations.**

No further information is yet available with regard to the negotiations between the Angora Government and Signor Tuozzi on behalf of the Italian Government. The following announcement from an Italian source, of the nature denoted *officieuse* may, however, be of interest.

"As is known, the Italian Government is very favourably disposed towards the Turks and the Angora Government, and it has given proofs of this since the Armistice up to the present day. Italy, devoid of territorial ambitions in Turkey, views with a sympathetic eye the efforts made by the Turkish nation for its interior reorganisation. Italy desires to see Turkey enjoying the benefits of peace as soon as possible. Thanks to her sincerely pacific policy, Italy has been able to play the part of mediator between the various opposing interests in the Orient. What my country desires is to establish a cordial co-operation in the domain of economic matters with the Turks. Likewise, we are persuaded that it will be possible in complete agreement with our Allies to arrive at an equitable solution of the problem of the Orient."

He who runs may read.

**A British Weekly.**

The first number of a British weekly, the *Aurora*, was published to-day, and although it opened with a leading article entitled "Our Apology" one may say without flattery that no apology was needed. The founders of the enterprise deserve every encouragement, for the lamentable state of affairs that existed prior to 1914 is a most unhappy memory. The only local organ of British public opinion in those days was the *Levant Herald*, which rarely contained more than a couple of columns in English. To this the Germans opposed the *Lloyd Ottoman* in French, and the *Osmanischer Lloyd* in German, both admirably edited and produced, and replete with advertisements, often illustrated, of important German industrial enterprises. The propaganda value of these two organs cannot be over-estimated, and it is a thousand pities that the British Government cannot, out of the thousand millions or so of its revenue, find £100 a month for a certain period, at all events, to establish the *Orient News* and the *Aurora*. It should be added that there is also a French edition of the new weekly, which is in every way as creditable a production as the English version.

## CYPRUS.

*Nicosia, October 22.*

**The Coming Elections.**

The day of the nomination (and election, should a poll not be required) is fixed for November 3. For the moment interest is centred in the meeting of town and village representatives who are to discuss the situation and adopt a "policy." Should their number not exceed 600, it is to be held in the Greek theatre (called that of Papadopontos after its founder); if it exceeds that number in the church of Phanevoméne. Referring to the split in opinions regarding the attitude of members, the majority of papers and speakers contend that any differences which exist relate to minor matters of quite secondary importance, and that on the dominant and essential question of "union" all Greek Cypriots are agreed. One large group of villages, situate partly in the Limassol and partly in the Nicosia District, has decided to take no part at all in the approaching elections. As their object is probably to avoid disturbing local harmony, the decision seems a very sensible one.

The Nicosia member, M. Theodotou, in his latest appeal to electors, urges that the island must continue the policy of the "empty seats" (*i.e.* of the Greek absentee members). The empty seats, he says, speak with a force that reaches those who direct affairs on the Thames. They utter with a voice of thunder what lips are forbidden to say. They declare clearly to England that the Cypriot people cannot live under a yoke, even if the yoke be that of England. England is but a stepmother and cannot love Cyprus like a mother. They proclaim to all the civilized world that the Cypriot people prefer Greece, poor though she is. They portray the economic condition of the island, and bitterly reproach the British Government for collecting over 3½ millions of pounds from the Cypriots, to pay Turkish bondholders, instead of from British taxpayers (this refers to the "tribute" to Turkey of £92,800 a year since 1878).

M. G. Ioannides, a Nicosia advocate, who is contributing a series of letters to the *Phonetes Kyprou* advocates a much more efficient organisation. Very little, he says, has been really done hitherto. A small beginning of work has, it is true, been made through the deputations to London, which got into touch with the British Government, with members of Parliament, and others. But since then matters have drifted and been left to their fate. The campaign is one not only for members of Council, or Central Committees to wage. Much more is required. He considers that efforts should now be centred in England, and advocates the establishment of a paper in London, which should be fully inspired and controlled by a Central Committee in Cyprus, but directed by a Cypriot who would organise a political office (a kind of Greek Cypriot Legation).

**General News.**

The Loan Commissioners have granted advances of £3,000 to Larnaca, and £1,000 to Papho, towards the electric light of those towns; and will shortly lend £1,000 as an instalment of a loan, for school buildings at Nicosia. They hope similarly to be able to grant loans for building various village schools.

The British Detachment from Troödos has taken up winter quarters at Polemidia (Limassol District) in the camp that was allocated to the Armenian refugees, and close to the part now occupied by the Russians.

# CORRESPONDENCE.

## "BEDOUIN."

*To the Editor of "The Near East."*

Sir,—The "Bedouin" question does not seem to me to present any difficulty. At the present day the Arabs of the desert are commonly spoken of collectively in Arabic as *bidw*—when they are not spoken of as '*urban*—and the individual is called *badawi*—or ibn 'arab, but badawiyin is also in use as the plural of badawi and was, perhaps, the only plural of that word heard by the Crusaders and early travellers in the Near East—and note that it is not only the genitive and accusative form but, colloquially, the only form of the nominative (corresponding to the Hebrew plural *im*). A people or sect, as a collective body, will be more frequently spoken of than will an individual of that people or sect, and so, in comparison with *badawiyin*, *badawi* would rarely be heard by the Crusaders, and the plural might come to be used for both numbers at first and then, to make a distinction, the European plural terminations would be added to the Arabic plural. A struggle was apparently made for some time to maintain the word as plural in literature, for an author of the 12th century, quoted by Littré, wrote "E li bedowin li sont venu aidier . . ." but another in the 13th century wrote "Un Bedwyn estait venu . . . et quant les chevaus aus Sarrazins et aux Beduins avoient. . . . ." and an English writer of the year 1400 speaks of the "Bedoynes." The individual became *beduinus* in low Latin and the plural *beduini*, and Italian and other European languages followed suit.

But 'bedouin' is not by any means the only Arabic plural in *in* which has met with this distressful fate. Historians write of the 'Murabitins' (Arab sing. *murabit*, pl. *murabitin*), also called Almoravides, who held empire from 1099 to 1146, and the "Assassins" (Ar. sing. *hashshash*, pl. *hashshashin*), the men who, as the Crusaders reported, intoxicated themselves with hashish before committing their murders. These are anomalies such as abound in all languages, and it is futile to attempt to correct them. They are now part of our speech. Even Johnson in his Persian and Arabic dictionary published in 1852 translates *badawi* 'a Bedouin.' If we are to speak of a *badawi* (a word hardly known except to students of Arabic and a certain percentage of travellers in the East) we must do many other things besides. We must, to be consistent, speak of an 'assass' and two or more 'assassin'! Bedouin is not, strictly speaking, an Arabic word any more than assassin. They are both Frenchified and Anglicized forms of Arabic words. Those who want to keep to the Arabic plural should keep to the whole Arabic words and write and say *Badawiyin*, *Hashshashin*, etc., but there is nothing incongruous in saying 'Badawis' (or 'Badawees').

I am, etc.,
J. S. Willmore.

The Athenaeum, London, Nov. 7.

We regret that we are unable to reproduce the accents used in our correspondent's letter. Ed.

## ACCUSATIONS AGAINST BULGARIA.

*To the Editor of "The Near East."*

Sir,—Your Sofia Correspondent in his letter of September 25, asks for a reasonable settlement of the Bulgarian Army question. I can supply a few important details bearing on the subject further to demonstrate the unreasonableness of the Powers in their method of handling this question. The concession that Bulgaria may have one-third of her force conscript, the balance being made up of volunteers, can only lead to disorder. The conscripts receive practically no pay; the volunteers, because of the difficulty of obtaining them, receive pay of 700 levs a month, and the privilege of four months leave yearly on full pay. This privilege is accorded to induce good men to volunteer, the four months securing them sufficient time to see to their personal agricultural interests. Ninety per cent. of the Bulgarian population are agriculturists, small landowners. The pay of these volunteers, taking into account the four months of leave on full pay, is higher than the pay of their officers. Of the 20,000 men allowed to Bulgaria for a military force the Government has succeeded in enrolling not more than 3,500 volunteers, and these of an untrustworthy class. There has never been a military voluntary system in Bulgaria, and the Bulgarian peasant is far too much attached to his land to entertain any idea of voluntary military service. The high pay and long leave offer no inducement to him to join up.

The concession offered to Bulgaria because of her inability to obtain the necessary recruits, can lead only to trouble. There can never be proper co-operation between the volunteers and the conscripts. The former are of a good class, the others untrustworthy. The task of the officers is rendered simply impossible. A few days ago the volunteer recruits received their month's pay and immediately marched into the town to carouse. The competent authorities have to shut their eyes: they dare not be too correct with these men lest they be accused of intentionally attempting to prove the impossibility of the volunteer recruit system in Bulgaria. Such accusations have already been rife against her, but suspicion and distrust of Bulgaria have no *raison d'etre*.

A few days ago a fresh accusation was launched against Bulgaria. The Greeks asserted that Bulgaria had enrolled soldiers of Wrangel's army in the Thracian frontier service guard. A commission composed of English, Bulgarian and Greek officers is actually visiting this frontier to verify this Greek accusation.

No Bulgarian is allowed to travel through Thrace; even boys and girls on their way to the American colleges in Constantinople have to take the steamer at Bourgas for their destination. The Greeks see evil intentions, military operations where they are impossible. That such tactics on their part must turn out in favour of Bulgaria they are too blind to see. What provoked this last groundless accusation is this:—It was decided that Wrangel's army be removed from Gallipoli. A few thousands were received in Serbia and there enrolled, under Serbian officers, in the Albanian frontier guard. Several thousand have been received in Bulgaria, in Bourgas and elsewhere, and lodged in unoccupied military barracks. Their arms have been stored away, the officers alone keep their swords and revolvers. The men continue under the command of their officers. The staff of the Army has guaranteed the keep of these men. The Government may employ them in companies under their own officers, in public works. In such cases the Government is to provide for their keep, and something more.

Now this arrangement has been made with the approval of the foreign military missions in Sofia, and the carrying out of it is under their control. What it means is no concern of Bulgaria. Notwithstanding the past there is great willingness of the Bulgarians to help the Russians in their misery.—I am, etc.,

P. M. Mattheeff.

Sofia, October 19, 1921.

## THE BALKAN COMMITTEE ON YUGOSLAVIA

*To the Editor of "The Near East."*

Sir,—I beg to enclose a Memorandum setting forth the policy adopted by the Balkan Committee which aims at allaying the unrest in the Balkans, more especially in Yugoslavia and Albania. I shall be very much obliged if you will kindly publish the statement on behalf of the Committee.

I am, etc.,
N. Buxton.
Acting Secretary, the Balkan Committee.

12, Rutland Gate, S.W.7., November 4.

At the last Assembly of the League of Nations attention was drawn to the dangers affecting the integrity of Albania from Serbian and Greek encroachment, and to the oppressive conditions prevailing in Macedonia consequent upon its partition.

Digitized by Google

The position at the present time both in regard to Albania and to Macedonia, far from having improved, has taken a turn for the worse. In these circumstances the Balkan Committee desires to call attention to one of the main causes of the unrest, namely the unconstitutional development of the Yugoslav State.

The main factor upon which the Chauvinistic policy of Serbia thrives lies in the excessive Centralism of the present administration of Yugoslavia. This administration, centralised at Belgrade, tends to provoke discontent and create a sense of injustice among the non-Serb peoples of Yugoslavia. These have for centuries led varied national lives and been subject to different methods and systems of government. While they welcome the principle of union in one State, they cannot consent to their being merged in a stereotype mould, be it Serbian or otherwise. By refusing to sit in the Belgrade Parliament, the Croats have declared their wishes in no uncertain voice. The Slovenes for their part have cast their votes against the existing Constitution, which therefore derives its authority from the combined votes of the Serbs and Musulmans alone, the latter's support being secured by open bribery.

To persist in enforcing the present Constitution plainly endangers the future of Yugoslavia. On the other hand a federal solution while preserving intact the Yugoslav State with a Central Parliament at Belgrade or Zagreb, would given to the Croats and Slovenes the peculiar position to which their history and present demands entitle them. The Balkan Committee is conscious that in supporting this policy it is not unduly stressing the principle of self-determination. The claims of the Croats are not a modern theoretical growth, but derive from independent history of eight centuries. Under the present régime their national rights are not secured, but are being sacrificed to a policy which aims at the creation of a Greater Serbia. The triumph of Eastern over Western culture would prove detrimental to progress and development in the Balkans.

Devolution would obviate this possibility and would alone be capable of bringing about a real union of Yugoslav people. Moreover, by placing the Serbs on an equal footing with the non-Serbs, its adoption would provide an effective check on Serb aggression in Albania and Macedonia, and thus prove an important factor in maintaining peace and stability in the Balkans.

## THE CASE OF THE ARCHBISHOP OF RHODES.

*To the Editor of "The Near East."*

Sir,—I have just received very interesting news from Athens, too long to give *in extenso*, regarding the arrest and the deportation of the Archbishop of Rhodes, whom Dr. Skevos Zervos, the President of our Delegation, disguised as a sponge diver, visited secretly at Patmos. The Metropolitan had been on a pastoral visit to the interior of the island of Rhodes when the Italian Crown Prince arrived. He was at the remotest parts of the island, namely the villages of Apolakia, Mesanagros, and Kattavia. He immediately apologised by letter to the Prince and instructed his Protosyncelus to call and greet the Royal visitor on his behalf. In his letter to the Prince the Archbishop respectfully tendered his welcome on behalf of his spiritual flock of the islands of Rhodes, Telos Halki, Nissyros and Symi, "who are provisonally under the sceptre of the Prince's August father and who, along with the other Dodecanesians long to be united with their Motherland, Greece."

The Metropolitan also complained to Dr. Zervos that the Italians left him at Patmos without any money, and assured him that the Italian authorities promised 3,000 lire to any Italian soldier who would marry a Greek girl and settle at Rhodes. It is not true that the Archbishop incited the Rhodians to abstain from the reception of the Prince. The Rhodian Greeks were angry at seeing the arrogant motto of the Savoy House exhibited on every triumphal arch erected to the honour of the Prince. This motto is the well known F.E.R.T. *Fortitudo Eius Rhodum Tenuit*, that is, Its(the Italian Crown's) strength took possession of Rhodes.

I am, etc.,
Theodore D. Moscona.

32, Oxford Street, Manchester.

---

According to the Athens newspapers, the Greek Cabinet has asked the French Government to postpone until November 20, the date of the departure of the French troops from Cilicia, in order that the Greek population in this district may have time to emigrate.

One thousand six hundred and seventy-four out of a total of 1,780 persons convicted in connexion with the Punjab disturbances of 1919 have already been released, and 20 more are to be released.

## SWARAJ IN INDIA.

### AN INDIAN VIEW,

(By S. B. Banerjea.)

Mr. Gandhi declared some little time ago that if his advice were followed, India would have *swaraj*, or complete self-government, within a year. Briefly put, he wants his countrymen not to co-operate with the rulers in any way, and his goal will be reached. He believes that national education and the "chanka" (spinning-wheel) will lead to *swaraj*, very soon.

Mr. Gandhi's scheme has been taken up by a large number of Indians, with more or less enthusiasm; but they have evidently forgotten the fact that complete self-government, free from British control, means anarchy in and conquest of India by some foreign Government.

The scheme means a break-up of homes, which no sane Indian will be able to put up with. It means the rising of the masses, and a clean sweep of swarajists and non-swarajists. "Pooh" the swarajist will sneer; but let him, for a moment, consider the signs of the times. Let me illustrate my meaning.

Mrs. Annie Besant was about two years ago, an idol of the people. She was elected President of the Congress and given a right royal welcome by the Calcuttaites on her visit to their city. But now she has lost "caste;" as is proved by the fact that she was howled down at a Bombay meeting, because her views on certain matters did not appeal to a section of her audience. This event plainly signifies that a disorderly force has been created, which is bound to do mischief—nay, harm to the country.

Mr. Gandhi preaches non-violent non-co-operation; but the result has been that a large number of people have got out of hand and are creating mischief, saying they have his sanction for violent methods. I do not wish to recall unpleasant matters, but a moment's cool thinking will enable one to realise that the masses do not—will never—realise the ideal of Mr. Gandhi. I should not be surprised if after what has happened to Mrs. Besant, the Hon'ble Mr. Parajpe, and other leaders, Mr. Gandhi himself is mobbed, one day, by the very people of whom he is now an idol.

Passive (non-violent) non-cooperation is impossible in any country. After hundreds of years of mis-rule, we have been enjoying peace and rest under the rule of England. No more are our women dragged away; no more are our temples destroyed or polluted. To an Indian, his women and gods are the dearest of all possessions, and he will go to any length to protect them. Now that their most sacred possessions are assured, three-fourths of their desires are met.

In the Government of India there is but a handful of whites. Indians occupy all the subordinate and many of the leading positions. The magistrates and the subjudges and munsiffs are all Indians. Turn to any department, and we find Indians there. So, one fact is clearly established, that the Indians are practically ruling their own country—with the help of a handful of whites.

If the English had taken away money from the country for their own benefit, they could have been charged with motives of a selfish nature. The little money that does go out is directly connected with the government of the country and cannot, by any stretch of imagination, be called "tribute." Indians raise the necessary funds for carrying on the government of the country. These are realised from the taxes, cesses, etc.; and spent in the country by the natives themselves. So the charge that India is being exploited for England's benefit is false.

The potential wealth of the country is immense. The Indians prefer ease, and will not venture their capital. No wonder, then, that the British, who are enterprising, exploit the mineral wealth of the land; but they leave a portion of their justly earned money to the children of the soil, in the shape of salary, bonus, wages, etc. For allowing others to tap our mineral wealth, we alone are to blame, not the rulers.

Digitized by Google

The country is moving with the times. We must adapt ourselves to the times. The Vedic days were all right from a certain point of view ; but we are now living in the Iron Age. I do not ask my countrymen to denationalise themselves—to adopt European manners and customs. Let us move with the times, not forgetting the fact that we are Indians.

India has already got *swaraj*. Her Government is practically carried on by Indians. Indians are here, there, and everywhere. The education of the country is mainly in Indian hands. The examinations are held by Indians, who confer degrees and diplomas upon their countrymen. The police service is practically manned by Indians. To be brief, in whatever direction we turn, we see Indians occupying 99 per cent. of posts, subordinate and high.

It is clear that India has *swaraj*. She is independent. She has been recognised as a nation by the League of Nations. After this, no man in his senses will say that India is a dependency. The reform scheme has advanced matters very far. In fact, *swaraj*, as preached by the Gandhi school, is in sight. We all shall now have to put our shoulders to the wheel and see that we can march towards our goal with steady swiftness. Let us not dream the impossible. Let us fit ourselves for retaining our position in the scale of nations, with the help of the British. Non-co-operation means our death. Why should we commit suicide, just to satisfy somebody's whim or fancy ?

## THE FRANCO-TURKISH PACT.

The *Manchester Guardian* publishes the text of the Agreement between France and the Nationalist Turks which was signed at Angora on October 21. The Agreement is signed by M. Franklin-Bouillon, ex-Minister, on behalf of France ; and by Youssuf Kemal, Minister of Foreign Affairs of the Government of the Great National Assembly at Angora. The text is as follows :—

Art. I.—The High Contracting Parties declare that with the signing of the present agreement the state of war that has existed between them will come to an end ; the armies, the civil authorities, and the population will be at once informed of this.

II.—Prisoners of war, as well as all Turkish or French persons detained or imprisoned, shall be liberated at once after the signature of this agreement, and conducted, at the expense of the party by whom they are detained, to the nearest place that will be designated to that end. The benefit of this article will be extended to all the prisoners or detained persons belonging to the two parties, whatever the date and place of detention, imprisonment, or capture.

III.—Within a period not exceeding two months from the signature of this agreement the Turkish troops shall withdraw to the north and the French troops to the south of the line fixed by article 8.

IV.—The evacuation and transference of possession that are to take place within the period prescribed in article 3 shall be effected in a manner to be arranged by a mixed Commission appointed by the military commanders of the two parties.

V.—The two parties will proclaim a complete amnesty in the evacuated regions as soon as they take possession of them.

VI.—The Government of the Great National Assembly at Angora declares that it will confirm the rights of minorities that were solemnly recognised in the National Pact, on the same basis that was established by the Conventions concluded between the Powers of the Entente, their enemies, and certain of their Allies.

VII.—A special administrative régime will be established for the district of Alexandretta. Inhabitants belonging to the Turkish race in this district will enjoy every facility for their cultural development. The official language will be Turkish.

VIII.—The line mentioned in article III. is fixed as follows :—

The frontier line will extend from a point to be chosen on the Gulf of Alexandretta immediately to the south of the locality of Payas, towards Meidan-Ekbes (the railway station and the locality remaining in Syria), thence south-east, so as to leave to Syria the district of Marsova and to Turkey that of Karnaba, as well as the town of Killis, and rejoin the railway at Choban-bey. Thence the line will follow the Baghdad Railway, which will remain on Turkish territory up to Nisibin ; thence it will follow the old route between Nisibin and Jezireh-Ibn Omar, where it will rejoin the Tigris. The localities of Nisibin and Jezireh-Ibn Omar, as well as the route, will remain in Turkey ; but the two countries will have equal rights to the use of this route.

The stations between Choban-bey and Nisibin will belong to Turkey, as forming part of the foundation of the railway.

Within one month from the signing of this agreement a Commission representing the two parties will be set up to fix the line mentioned above. The Commission will begin its work within a similar period of time.

IX.—The tomb of Suleiman Shah, the grandfather of Sultan Osman, the founder of the Ottoman dynasty (a tomb known under the name of Turk Mekari), situated at Jaber-Kalessi, will remain, with its dependencies, Turkish property. Turkey may keep there a guard and fly the Turkish flag.

X.—The Government of the Turkish National Assembly agrees to the transfer of the concession of the section of the Baghdad Railway between Bozanti and Nisibin as well as various branches constructed in the vilayet of Adana to a French group designated by the French Government with all the rights, privileges, and advantages attaching to the concessions, in particular those connected with the exploitation of the traffic.

Turkey will have the right of transporting troops by the railway from Meidan-Ekbes to Choban-bey in the Syrian region, and Syria will have the right to transport troops by the railway from Choban-bey to Nisibin in Turkish territory.

On that section and its branches no differential tariff shall be permitted in principle. But the two Governments reserve to themselves the right to consider eventually, of common accord, any departure from this rule that may become necessary.

If agreement should prove impossible, each party shall regain complete freedom of action.

XI.—After the ratification of this agreement a mixed Commission will be set up for the purpose of concluding a Customs Convention between Turkey and Syria. The conditions and duration of such a convention shall be determined by the Commission. Until the conclusion of such a convention the two countries will retain freedom of action.

XII.—The waters of Kuveik will be distributed between the town of Aleppo and the region that has remained Turkish to the north, so as to give fair satisfaction to both parties.

The town of Aleppo, to satisfy the needs of the region, may also tap, at its own expense, the waters of the Euphrates in Turkish territory.

XIII.—The settled or half-nomad inhabitants enjoying rights of pasture or having property on one or the other side of the line fixed by article 8 shall continue in their rights as in the past. They shall be allowed to transport freely, according to the needs of their business, and without having to pay any Customs duties or pasture fees or any other taxes, their cattle from one to the other side of that line, as well as their instruments and implements, their seeds and produce, it being understood that they will have to pay the respective duties and taxes in the country in which they are domiciled.

The following is the text of the letter addressed by Youssouf Kemal Bey to M. Franklin-Bouillon :—

Angora, October 20, 1921.

Excellency,

I entertain the hope that the agreement concluded by the Government of the Great National Assembly at Angora, and the Government of the French Republic with a view to realising a definite and lasting peace will result in the consolidation of the close relations that have existed between the two nations in the past, the Government, of the French Republic endeavouring to settle in a spirit of cordial entente all the questions concerning the independence and the sovereignty of Turkey.

The Government of the Great Assembly, on the other hand desiring to encourage the development of economic interests between the two countries, has instructed me to inform you that it is willing to grant the concession of the iron, chrome, and silver mines in the Harchit Valley to a French group for a period of 99 years. Within a period of five years from the signing of this agreement that group shall begin the exploitation of that concession through a company established in accordance with Turkish laws in which Turkish capital shall participate up to 50 per cent.

The Turkish Government, moreover, is ready to consider with the greatest goodwill other demands that may be made by French groups for concessions relating to mines, railways, harbours and rivers, provided that such demands shall be consistent with the reciprocal interests of Turkey and France.

On the other hand, Turkey is desirous of having the co-operation of French specialists in her technical schools. She will communicate at a later date to the French Government her needs in that respect.

Finally, Turkey hopes that the French Government will at once after the conclusion of the agreement authorise French capitalists to enter into economic and financial relations with the Government of the Great National Assembly of Turkey.

## NEWS FROM KABUL.

A Correspondent writes :—

Sirdar Aziz Khan is bringing three Afghan boys to Europe one of them a boy of eight is Amir Amanullah Khan's son, the two others are the son of the late Amir Habibullah Khan's. It may be noted that their guardian is Sirdar Aziz Khan, and not Sirdar Asif Khan as indicated in your columns some days ago.

Sir Sher Khan has also left Kabul, with his staff and Afghan envoy for Italy.

M. Suritz, who represented the Soviet Government at Kabul, has left Afghanistan, and M. Raskolnikov, has taken the place. It seems that M. Suritz, who is a Jewish journalist, was appointed chiefly to put the Russo-Afghan treaty through, and as soon as that was done, he was to go and join his proper work at the Eastern Institute at Tashkent. During his absence Mollana Barkatullah of Liverpool fame was the head of the above mentioned Institute.

## MUSICAL NOTES.

**The Russian Ballet.**

The Russian Ballet of M. Serge Diaghileff, has, as is well known all over Europe, brought to an unparalleled perfection the fusion of the four component parts of ballet—music, dancing, miming, and *décor*—it has made beloved by us a new form of ballet, a form at once intimate, unconventional, and artistic; and we take now almost for granted such things as the virtuosity of its dancers and the unceasing originality of its scenic artists. It was, therefore, rather a shock to find in "The Sleeping Princess" (which I visited at the Alhambra Theatre on November 7), an undue and unusual reliance on these last two factors for the success of the production. Tchaikovski's ballet, which is founded on Perrault's "La Belle au bois dormant," is now produced by Leon Bakst; in a few places it has been orchestrated by Stravinsky, and Petipa's choreography has been retained. But in spite of some most fascinating costumes and scenery the tale has not enough sustained impetus in it to make the entertainment consistently interesting. The first scene is very good, and the last excellent, but in the others there is little significant movement; in the second and third indeed the story almost comes to a standstill. Scene four was only relieved by the exquisite painting of the Polunins. But the artistry of some of the individuals was amazingly finished. First of all was Lopokova, as the Lilac Fairy—a part that suited her absolutely; then there were Nijinska, a perfect Pierette, Tchernicheva, as Ariana, Vladimiroff, as Prince Charming, Woizikovsky, as Innocent Ivan, and many others. The weakest points in the production were the uneven playing of the orchestra under M. Fittelberg, and the representation of Princess Aurora by Mlle. Egorova. Tchaikovski's music is of the serviceable kind; it is hardly ever distinguished. But to those who revel in exquisite colours and do not too highly appreciate artistic consistency "The Sleeping Princess" should make a very strong appeal.

**Goossens and New Music.**

Although not all the music that Eugene Goossens conducted at his orchestral concert at the Queen's Hall on November 9 was new, most of it was unfamiliar. Rossini's "Siege of Corinth" overture is very seldom performed nowadays—why, goodness knows, for it proved under this magnificent orchestra to be a gloriously spirited thing, bubbling over with irresistible jollity. Arthur Bliss' "Mêlée Fantasque" was extremely interesting from the technical point of view, but it owed too much to Stravinsky to stir the musical sense greatly. Successful experiments do not often of themselves cause great experiences. In J. R. Heath's "Builders of Joy" there was much fine stuff, and it was a pity that so many wealthy inventions and poetic conceptions should not have been given better shape, for the work as a whole was too long, and some of the orchestration less happy than it might have been. Of all the evening's pieces the most purely beautiful was "On Hearing the First Cuckoo in Spring" of Delius; but here again the work was overlong, despite those ever-changing harmonies, so that one almost felt as one does to the real bird—like throttling it. Ravel's "Alborada del Gracioso" is an orchestrated piano-piece, glittering brilliantly: it was in this, perhaps, that Goossens and his orchestra reached their highest mark. Of Schönberg's "Five Orchestral Pieces" there is only one which is more than a technical experiment, viz. "Vergangenes," in which the composer's undoubted genius comes serenely and unperplexedly through. After all these things came Strauss' tone-poem "Thus Spoke Zarathustra," a work in which there are at once noble passages and ignoble condescensions to the spurious.

**Old English Song.**

John Coates' song recital at the Chelsea Town Hall on November 8 was made up of old English songs of the Tudor, Elizabethan, and Stuart periods (before Purcell). Such a choice as this made consistent excellence quite possible, and in truth there was not a bad song in the whole programme. There is no one who can sing these songs as Mr. Coates, for apart from his virtuosity (which was in Morley's "It was a lover and his lass" quite incomparable) he has such pliancy and subtlety in his command of line as to make each one of these songs interesting. He began with two most admirably suitable songs composed by Henry VIII (written, as the genial singer hinted, before the habit of marriage had grown upon him)—"Grene groweth ye holy" and "Pastime with good companye," titles which alone are enough to make all good Englishmen stir and chortle; and he ended (if we accurately remember a long list of encores) with "Maulte's come down" and "Here's a Health unto His Majesty," the connection between which we of the present day are unluckily unable to establish. Mr. Coates is supreme in these songs, but I think his finest singing was in two songs of more serious intent, "Caleno custureme," and John Gamble's "A Kiss I begged," which were interpreted with the most perfect qualities of tone and of phrasing imaginable. There was in fact only one flaw in this recital, and that was in a few of the pianoforte accompaniments; in "When from my Love I lookte for Love," for example, and in "Since first I saw your face," where the harmonies were of the barest poverty.

**Singers.**

It is an extremely interesting series of recitals that Mr. Philip Wilson, the Australian tenor, is giving at the Wigmore Hall. He is tracing the development of the English song historically, and his first recital, on October 31, reached to the end of the seventeenth century. He had then the assistance of Mr. Gerald Cooper, who played the harpsichord (with an attention to the singer that was by no means close) and of Dr. E. H. Fellowes, who gave a short address on the "Lutenist Song Writers." Dr. Fellowes is of course our first authority on the subject, though on this occasion he said nothing new, merely reminding the audience of their ignorance of the period when their country was musically supreme in Europe. Mr. Wilson is an accomplished singer, who, if he were to rid himself of a nasal tone and to develop a sharper attack on his consonants, would vastly improve his art. He sang with a fine freedom of rhythm and ease of delivery, so that the delicate purity of his old songs came practically unsullied to us.

On the same evening, and in contrast to Mr. Wilson's serious intent, Miss Winifred Holloway was rampageously conducting herself in the singing of folk songs, in the playing of old harpsichord tunes, and in the caricature of well-known singers of folk-song. It was a most pleasant evening's entertainment. Miss Holloway is an artist of much and versatile talent; at times, indeed she shows genius. Her various gifts were the most excellent foil to the "straighter" singing of Mr. Plunket Greene, who for the most part sang the old French carols and Stanford's Irish songs in which he is still unrivalled. And finally, to support them both, there was Mr. Samuel Liddle at the pianoforte—as competent a trio as you will find for the provision of an hour's artful jollity.

**Miss Dorothy Moulton.**

When Miss Moulton is singing a song that suits her she has a most beautiful voice; but those songs are few. At her recital at the Wigmore Hall on November 11 she did not prove the international reputation which she has apparently won. For the most part she made an excellent choice of programme, but of all the songs which I heard there were only two in which really consummate artistry was shown: Ravel's "La-bas vers l'Eglise," and Bax's "The Piper," in both of which a beautiful quality of mezzo-voice was consistently sustained. For the rest, a tendency to untrue intonation, a lack of impetus in interpretation, and poor tone in the pianoforte accompaniments were not over-balanced by good rhythm and diction.

**Mr. Herbert Fryer.**

The third of this pianist's recitals, at the Æolian Hall on November 9, was devoted to Bach and Beethoven. Unfortunately I missed his "Preludes and Fugues," for these are the things in which the purity of his style best comes out. The "Italian concerto" was not well done. And in two Beethoven sonatas, Op. 78 and Op. 81a, there was not much depth and a good deal of careless phrasing.

**General News.**

M. Leon Eustratiou, the Greek pianist, is giving a recital to-day, November 17, at the Æolian Hall.

The Royal Victoria Hall, (everywhere known as "The Old Vic.") is in need of funds. It wants £30,000, has secured £10,000, and is making an appeal, signed by all sorts of public and right-minded men, for the remainder. There is no need for me to emphasize the necessity for keeping "The Old Vic" going, for this place, where Shakespeare and opera are produced continuously, is the most important artistic institution in London. The appeal accurately states that the cessation of these performances "would be regarded as a disaster generally, and not least by the Vic's many friends in the Dominions over-seas." Among which last I hope, are included many readers of "The Near East." Contributions should be sent to the Secretary of the Old Vic Appeal Fund, Royal Victoria Hall, Waterloo Road, S.E.1. Cheques should be made payable to Sir W. P. Herringham (Chairman of the Governors).

# NEAR EAST BOOKSHELF.

## SIR VALENTINE CHIROL ON INDIA.

**"INDIA OLD AND NEW." By Sir Valentine Chirol. (London: Macmillan. 10s. net.)**

The standpoint taken in this book will be familiar to those who studied the letters contributed last winter by the author to *The Times*, but it would be a great mistake for anyone to pass it by as a mere reprint. Portions of those letters indeed re-appear, but in a setting which vastly enhances their value, and the book can justly be described as substantially new. The opening chapters are devoted to a sketch of the history of India from the earliest times to the end of the nineteenth century, a sketch which strikes us as a really remarkable achievement. We have noticed a very few slips on matters of too little importance to be detailed here, and a somewhat larger number of statements which specialists might possibly question, but taken as a whole the sketch is accurate, well-balanced, and interesting. The author has concentrated attention on the essential facts; he gives a just idea of the origin and nature of the forces now in conflict; and in this way he puts his readers in a position to understand the situation with which he proceeds to deal. The story of the last twenty years is then told in much greater detail. The narrative is vivified by the author's personal observations, and in this connection we may refer in particular to the account of his interview with Mr. Gandhi, which throws a flood of light on the most interesting, if most inconvenient, individual now prominent in India. The book closes with a cautious appreciation of the various factors in the present complicated position, and a chapter insisting on the importance of the outcome not merely for the British Empire, but for the future of the world.

The essence of the position so presented is the persistence of the distinctively Hindu system of privilege and ascendancy. The rigidity of caste, and the absolute supremacy of the Brahmin, institutions which had grown up during the centuries of Hindu rule, proved sufficiently stable to resist the disintegrating influences of Moslem domination, and were still intact when the country came under the milder British régime. But as in the old fable the sun succeeded where the wind had failed, so Bentinck and Macaulay proved more effective than Aurangzeb. Western education brought a flood of new ideas, which in due course resulted in a definite, though partial, change in the mentality of the intellectual classes; and the new ideas were reinforced by Western example, a factor for which Sir Valentine Chirol perhaps makes inadequate allowance. These classes then began to move, but almost simultaneously there was a powerful reaction in favour of the old régime, and thus India came to experience a cleavage of opinion of a kind with which the West had long been familiar. It would be a mistake to regard the conflict simply as one between East and West. For a short time indeed there were signs of a Western party, but they quickly passed away, and the battle is now fairly joined between the men who want to go back to the old system in its integrity, and those who wish to effect a synthesis between old and new. As Sir Valentine shows, the bulk of the educated classes are on the latter side, and their strength can be estimated with some approach to accuracy; but the forces of reaction are less easily reckoned, and of late the tendency has been for this cause to be strengthened by the adhesion of everyone with a grievance or an unsatisfied want, a formula which covers a large proportion of the population. The reactionaries, having failed with the intellectuals, have been driven to seek the support of the unenlightened masses, and in the long run it is the masses who will decide.

In these circumstances the question of leadership is of the utmost importance. Sir Valentine pays well-deserved tributes to the great Moderates, Gokhale and Mehta, but they are dead, and at the moment there is no one on this side to set against Mr. Gandhi, the very essence of reaction, who, aided by an extraordinary combination of circumstances, undoubtedly succeeded in capturing the imagination of the country as a whole. Can he retain and develop this advantage? Our author does not give a formal answer to this question. The reactionaries have had several reverses, but the movement is by no means dead, and it will not die of itself. It has of late been on an inclined plane, leading inevitably to disorder, and a point may be reached where the Government will be forced to interfere, but no forecast of the result of such interference is attempted. We should have been glad if Sir Valentine had told us more in this connection of the working of the Peace Leagues which in some parts of the country have been engaged in counteracting the reactionary organisations. If there has not been brilliant leadership on this side, there has been a good deal of solid staff-work, which may count for much in the long run, and already it can be said that in some of the most important areas the masses are hearing both parties, whereas a few months ago they knew of only one; since it is the masses who will eventually decide, the fact that the issue is being placed before them must be given its due weight.

Such is the outline of a remarkable book. We must not follow the writer into the various topics with which he deals. Apart from the exception just mentioned, he has taken every factor duly into account, from the influence of the weather to the attitude of some of the Dominions and while in some cases there may be differences of opinion regarding his estimates, their nature is explained so clearly that the book may well serve as a first introduction to readers in this country who, without previous knowledge of the subject, desire to understand the struggle now in progress between Old India and New.

## THE EXPANSION OF ISLAM I.

**"THE NEW WORLD OF ISLAM." By Lothrop Stoddard, A.M., Ph.D. (Harvard), (London, Chapman and Hall. 15s. net.)**

The American student of world-politics has an immense advantage over his colleagues on this side of the Atlantic. His country has emerged almost scatheless from a war which brings Europe to the verge of bankruptcy, and inspires dire forebodings as to the future. If "distance lends enchantment to the view," it gives him a broader outlook than is open to men whose eyes are blinded by the smoke of political and industrial strife. Professor Lothrop Stoddard is well known to European readers as the author of "The Rising Tide of Colour," a work which adumbrated an approaching struggle for the mastery of the world. He has now produced one of even greater importance, dealing as it does with the rise, decline and regeneration of Islam.

In the 7th Century of our era, Arabia was seething with unrest. The Semitic tribes inhabiting that huge peninsula had outgrown their gross idolatry; and the times were ripe for the advent of a Teacher able to voice aspirations which had germinated in the ardent Arab's breast. So that seed sown by Mohammed fell upon fruitful soil, and his appeal to the combative instinct—which no League of Nations will ever eradicate—found an eager response from his followers. No battle-cry is so inspiring as "God with us!" After their Prophet's death the tribesmen of Arabia set out in organized might to propagate his creed by fire and sword. Their onslaught encountered a vacuum throughout the civilised world. The strength of Persia and Byzantium had been sapped by superstition and theological hatred; Imperial Rome had succumbed owing to misgovernment and the attack of barbarian hordes. These facts explain the meteoric rise of Islam, which in less than a century brought Western Asia and Northern Africa to heel. But for the issue of a single pitched battle, Islam would have reigned supreme in Europe. The ninth, tenth, and eleventh centuries were its golden age. It studded

Digitized by Google

the vast region which lies between Samarkand and Cordova with splendid cities and learned universities. While a pall of ignorance hung over Christendom, the countries which owned the beneficent sway of Islam stood prominent in all the arts that adorn and sweeten life.

Mohammed's ideal of civil government was a theocratic democracy; and the earlier Khalifs encouraged the free expression of thought which is an indispensable factor in advancing civilisation. As centuries rolled by the dynasty founded by the Prophet became increasingly intolerant; and an Asiatic despotism took root which robbed its empire of every element making for progress. Powerless to cope with a chronic state of rebellion, the decadent Khalifat called Turkish mercenaries to its aid. Now the Ottoman Turks were a dull-witted race; soldiers indeed, of the highest quality, but destitute of organizing power. They were not content to remain the Praetorian Guard of a dying régime; and by dint of military might they succeeded in dominating the Islamic world. Expressing the religion of their former masters with a convert's zeal, they persecuted the Christian pilgrims who flocked to the Holy Places of Palestine; and forced the barbarous princes of Europe to embark on the Crusades. In that struggle between the East and West the intellectual force of Islam disappeared; and its ruin was consummated by the Mongol invasion, which drowned its fairest provinces in blood. But the perennial warfare which desolated Europe enabled the Turks to establish themselves on its eastern confines; and their capture of Constantinople led to the migration of many Byzantine scholars, who revealed the glories of classical literature to the western world. Thus began the 16th century Renaissance, which banished the obscurantism of the Dark Ages. And the results flowing from a vast intellectual revival were reinforced by maritime adventure. Europe received a flood of wealth from the discovery of America, and that of a sea route to India enabled its seafaring nations to outflank their eastern foes. While Islam sank into stagnation, Europe was energized by commerce and an industrial revolution. By dint of organization, enterprise and greed the West was able to bring all Asia under its influence.

During the 18th century Islam was at its lowest ebb; but Arabia, which had witnessed its birth, became the nucleus of a reformation which freed the Prophet's gospel from a noxious overgrowth of tradition. Its founder, Abdul Wahab by name (1700-1787), built his faith on the Quran alone, and preached war to the knife with unbelievers. Although the Wahabis were crushed by a soldier of genius who founded the Egyptian dynasty, the teaching of Abdul Wahab breathed new life into the dry bones of Islam. They have given 222,000,000 Moslems a new sense of unity, and a common ideal which is diametrically opposed to European interests. At the same time Pan-Islamism is unconsciously absorbing conceptions current in the West; scientific education, party-government, Industrialism, Socialism, and Bolshevism to boot—have been taken to heart by the Moslem intelligents everywhere. They see the nations of Europe weakened by suicidal war, and long to free themselves from a detested yoke. If our politicians were not deaf to history's teachings, they would group the unquestionable fact that the nations of the West are confronted by a recrudescence of the forces which only 240 years ago brought Islam to the very gates of Vienna. Such a crisis demands united counsels in the Western camp, but such, alas, are far to seek. Professor Stoddard concludes a brilliant survey of the situation in the Near East with the following pregnant words :—

"The darkest portent in the Near East is the continued intransigence of France. Steeped in old traditions, her policy apparently refuses to face realities. If an explosion comes as come it must unless France modifies her attitude; if some dark day thirty or forty French battalions are caught in a Simoom of Arab fury blowing from the desert, and are annihilated in a new Adowa, the regretful verdict of many versed in Eastern affairs can only be—'French policy has deserved it.'"

F.H.S.

# SERBO-CROATIAN SELF-TAUGHT

**By J. J. O'BEIRNE.**

For learning the language by the Natural Method, with Phonetic Pronunciation. Containing the Serbian and Croatian Characters, Phonetic System, Comparison of the Alphabets, Vocabularies, Travel by Rail, Road and Sea, Conversational Phrases; Naval and Military Terms. Outline of Grammar; Money, Weights, Measures; etc., etc.

**Crown 8vo, 112 pp. Red Duxeen, 4s. 6d. net. Blue Wrapper, 3s. 6d. net.**

**London: E. MARLBOROUGH & CO., 51, Old Bailey, E.C.**

## "ESPERANTO."

**"ENGLISH-ESPERANTO DICTIONARY." By Fleming Fulcher and Bernard Long, B.A. (London: E. Marlborough and Co. 7s. 6d. net.)**

Esperanto, long regarded as a freak and a subject for merriment only, has long since proved its usefulness in its own particular field, and now has its adherents all over the civilized world. To English Esperantists, and their name is legion—the appearance of this neat and well-printed "English-Esperanto Dictionary" is sure to be welcome; and its sterling qualities should make it the more valued the more it is used. The editors appear to have done their work carefully and well, and the publishers have followed suit. The list of proper names is not the least useful part of the book, although the editors inform us that "the translation of proper names into Esperanto is not compulsory, and that it is sometimes preferable to retain them in the original form." Here are a few Near Eastern names in alphabetical order: Alban'ujo; Aleksandrio; Arabujo, or Arabio; Armenujo; Balkano; Bengalo; Bombajo; Bulgarujo, or Bulgario; Kajro (Cairo); Karpatoj (Carpathians); Efeso; Hindujo (Hindustan); Mezopotamio; Rumanujo; and Teherano. All these will be easily understood by readers in this country, of course, and if any reader of *The Near East* abroad finds difficulty in recognising them, we shall be greatly surprised.

## TEACHING MODERN HEBREW.

The subject of Modern Hebrew has now been added to the curriculum of the School of Oriental Studies, and Mr. A. S. Doniach, D.Litt., of Wadham College, Oxford, has been appointed to lecture on the language. Students who are about to proceed to Palestine, Syria, and Iraq may now avail themselves at this School of the opportunity of acquiring a knowledge of the recognised vernaculars of Palestine, Arabic and Modern Hebrew. All particulars may be obtained on application to the Director, School of Oriental Studies, Finsbury Circus, E.C.2.

## PERSONAL AND GENERAL.

**To-Day.**

November 17 ( New Style ).
November 4 ( Old Style ).
Rabia 1, 17, 1340 A.H. of the Moslem Calendar.
Marheshwan 16, 5682, of the Jewish Calendar.

Queen Olga of Greece has left Paris for Switzerland.

The daughter born to the Sultan of Egypt on November 5 has been named Fewzie.

The Earl of Bessborough has returned to London from South America.

Prince Nicholas of Roumania, who came to London on "long leave" has returned to Eton to resume his studies.

Lady Massey Blomfield, who left London last week for Rome, will remain abroad for a year.

Viscount Chelmsford is suffering from overstrain of work, and has been ordered a complete rest.

Sir Henry and Lady Bax-Ironside have returned to 22, Grosvenor Place from Northern Europe.

The Diadoch and the Duchess of Sparta have arrived at Smyrna.

M. Georges Picot, the French Minister, and Count Aldrovandi, the Italian Minister, have returned to Sofia from Paris and Rome respectively.

The marriage arranged between Captain G. L. Stratton M.C., R.F.A., and Miss Ruthie Mardon will take place in Bombay at the beginning of December.

The marriage arranged between Mr. R. M. Crofton I.C.S., and Miss Olive Stewart Cox will take place on December 15, at Holy Trinity, Brompton.

The offices of the Military Attaché to the Roumanian Legation will be transferred from 3, Marble Arch to 4, Cromwell-place on December 1.

The Aga Khan embarked on November 11 in the P. and O. mail steamer at Marseilles for Bombay, his departure having been delayed for a fortnight by a serious accident.

M. Gennadius, Envoy Extraordinary and Minister Plenipotentiary for Greece, left Liverpool for New York on November 12 by the White Star liner Cedric, and is proceeding to the Greek Legation at Washington.

A despatch from Delhi says that the Maharaja of Bikanir has been re-elected Chancellor of the Chamber of Princes, and the Jam Sahib of Nawangar, K. S. Ranjitsinhji, elected Pro-Chancellor.

Mr. L. S. Amery, M.P., and Mrs. Amery have returned to London from Malta, where Mr. Amery has been representing his Majesty's Government at the inauguration of the new Maltese Legislature.

The engagement is announced between Mervyn A. Hughes, of Calcutta, youngest son of the late Philip Hughes, of the War Office, and Betty, youngest daughter of the Rev. Dr. A. J. Graham, C.I.E., of Kalimpong.

Earl and Countess Fortescue, Lady Brooke, Sir Cyril and Lady Butler, and Lady Cleveland were among the passengers who embarked for Eastern destinations on November 11 in the P. and O. s.s. Morea, bound for Bombay.

M. Stambolisky, Prime Minister of Bulgaria, has stated that in view of the Washington Conference, his visit to America, which had been arranged for this autumn, has been postponed to a more favourable moment, and will probably be made early next spring.

The marriage between Brevet-Major Frederick Corbett Hickie, Indian Army, youngest son of the late John Hickie, and Margaret Annie, eldest daughter of the late Cuthbert MacDonell ( Keppoch ), will take place at the Oratory on November 28.

The marriage took place on November 5 at St. Elizabeth's, Richmond, between Martin L. Axworthy and Marie Dorothy ( Dolly ), third daughter of Captain Cottrell, C.M.G., O.B.E., Divisional Manager, Eastern Telegraph Coy., Athens, and Mrs. Cottrell.

A marriage has been arranged and will take place this month, between Major P. G. Benson-Cooke, Indian Army, only son of Dr. J. Benson-Cooke and Mrs. Benson Cooke, of Worthing, and Margaret D. Mather, youngest daughter of the late Robert Mather and Mrs. Mather, of Worthing.

The Bishop of Peterborough announced at the Diocesan Conference on November 10 that next October he was going to India as a member of the Mission of Help, and that Mrs. Woods was officially accompanying him also as a missioner. They would be away four months from the diocese.

The Greek Chargé d'Affaires and Mme. Rangabe entertained at luncheon at the Legation on November 11 M. Gounaris, the Greek Premier, M. Baltazzi, the Greek Minister for Foreign Affairs, the Hon. W. Pember Reeves, Sir Arthur Crosfield, Sir Harry Brittain, M.P., Sir Edward Boyle, and Mr. T. P. O'Connor, M.P.

The marriage took place on November 5, at St. Mary Abbot's, Kensington, between Flying Officer Henry Lawrence Christie, R.A.F., only son of the late Lawrence Christie, of Rawai, Pindi, India, and Mrs, Christie, and Helen, only child of C. E. Theodosius, late H.M Inspector of Schools, and of Mrs. Theodosius.

A marriage has been arranged and will take place shortly, between Major Hay Stewart Mitchell, D.S.O., 32nd Sikh Pioneers, son of the late Mr. and Mrs. Alexander Mitchell, of St. Aubyn's, Bournemouth, and Winifred Alice, elder daughter of Mr. and Mrs. Goodwin Norman, of Norwood, New Barnet.

A marriage has been arranged and will take place at the Brompton Oratory early in January, between Frederick L. Griggs, R.E., F.G.A., of Dover's House, Campden, Glos., and Nina, youngest daughter of the late Julius Muir, Indian Civil Service, and Mrs. Muir, 47, Grand Parade, Eastbourne.

The engagement is announced of Frank Herbert Sprott, Nairobi, Kenya Colony, only surviving son of Sir Frederick Sprott, late chairman Bombay Port Trust, and Lady Sprott, to Helen, eldest daughter of Lieutenant Colonel W. Wingate Gray, of Nunraw, East Lothian, and the late Mrs Wingate Gray, J.P.

The engagement is announced, and the marriage will shortly take place, between Neville, eldest son of the late Colonel William Garrow Waterfield, C.S.I., and Mrs. Waterfield, and Margaret Grace, only daughter of the late William Secundus Collins, and Mrs. Collins, formerly of Waye, Ashburton, South Devon, and now residing at Allerton, Loddiswell, South Devon.

The marriage was celebrated on November 5, at St. Paul's, Knightsbridge, by the Lord Bishop of Sheffield, assisted by the Reverend Prebendary F. Leith Boyd, between Captain Humphrey Payne, Royal Field Artillery, only son of Colonel E. H. Payne, C.I.E., Indian Army, and Mrs Payne, and Anthea Penne, younger daughter of Mr. and Mrs. Bernard Firth, of Clifton Maubank, Dorset, and Norton Hall, Sheffield.

Among the passengers enbarking at Marseilles in the P. and O. steamer Caledonia, which left that port for Bombay on November 11, were Lady Alexander, Lady Congreve, Rear-Admiral and Mrs. Clinton Baker, Major-General Sir John Davidson, Sir Philip Grey-Egerton, Brigadier-General W. S. and Mrs. Leslie, Sir Northrup and Lady McMillan, Sir Thomas Owen, and Sir George Sutherland.

Marquess and Marchioness Curzon of Kedleston were present at a luncheon party given on November 9 by Sir Adly Yeghen Pasha at the Carlton Hotel, at which the other guests included the Hon. Mrs. Greville, Sir Ronald and Lady Sybil Graham, Sir Rennell and Lady Rodd, Lieutenant-Colonel Sir Henry and Lady McMahon, the Hon. Ronald Lindsay, Lady Dawkins, Major Sir John Baird, M.P., and Lady Ethel Baird, Sir Vincent Caillard, Lady Cunard, Sir William Garstin, Ismail Talaat Pasha, Ismail Sidky Pasha, Yousuf Soliman Pasha, and Colonel J. K. Watson Pasha.

According to a Constantinople report the Commissar Chicherin, at the head of a special Bolshevist Mission with plenary powers, will visit Angora in February.

## THE PRINCE'S TOUR.

The Prince of Wales arrived at Aden on November 12, and is now on his way to Bombay.

## APPOINTMENTS & PROMOTIONS.

Lord Methuen has been appointed a Deputy Lieutenant of the County of Wilts.

Sir Chettur Sankaran Nair, C.I.E., is, for private reasons, resigning his seat on the Council of India with effect from November 18. The Secretary of State for India has appointed Mr. Dadiba Merwanjee Dalal, of Bombay, to the vacancy thus created.

## THE PALESTINE DELEGATION AND THE CENOTAPH.

One of the most striking of all floral tributes laid at the foot of the Cenotaph on Armistice Day was that brought by the Members of the Palestine Delegation. Very appropriately it was in the form of a large Jerusalem Cross, the big cross being in white chrysanthemums and the four crosslets in crimson, supported in the curve of a large Crescent of laurel leaves; the two symbols of Christian and Moslem Palestine being thus happily blended. In laying this tribute before the Cenotaph the Palestine Delegation, representing the people of Palestine, had no doubt in mind the great company of British Dead who fell in the struggle for the liberation of Palestine, and whose bodies lie in many parts of the Holy Land as well as in the big cemetery on the Mount of Olives. Of them, and of their ungrudging sacrifice, the people of Palestine bear a grateful and a lasting remembrance.

## NEWS IN BRIEF.

In Calicut, the centre of the disturbance in the Moplah area, refugees have fled from the surrounding country to the Y.M.C.A. which has been converted into a refugee camp. Boy scouts trained by Y.M.C.A. leaders are assisting in the feeding of the refugees.

Leaders of the Egyptian Independence Party have appealed to foreign communities in Egypt to express their confidence in a purely Egyptian administration by way of counterblast to British "militarist" statements.

The Armenian Patriarch was enthroned in Jerusalem on November 8 in the presence of the High Commissioner, Bishop MacInnes, and many local notables.

A large number of Turkish postage stamps of the earlier issues have been discovered in the Ministry of Finance at Constantinople.

Marko Giorni, the former Mirdite leader, has transferred the seat of the Government of Mirdita to Oroshi, the capital of Mirdita. Marko Giorni has been staying at Prizrend.

Serbia and Albania have been invited to appoint representatives to take part in the extraordinary session of the Council of the League, which is to be held in Paris on November 18.

Yakub Hasan, the Caliphate leader, who was recently sent to gaol at Malabar for refusing to stop his campaign, has now been sentenced at Tanjore to two years' imprisonment for sedition.

According to the *Pioneer*, Kurds have massacred 500 Persian *gendarmes* at Sujbulak, in revenge for the action of Colonel Malik Zadeh in arresting some of their chiefs whom he had invited to dinner.

The Ambassador's Conference has now informed the Albanian, Yugoslav and Greek Governments of the new Albanian frontiers, and has called on the Yugoslav Government to withdraw its troops to the frontier.

A proclamation has been issued by the General Commanding the Allied Forces of Occupation in Turkey stating that justice will be administered by French, British, and Italian military tribunals in their various sectors in cases of crime by Turkish subjects against Allied subjects and other Europeans, and *vice versa*.

As a result of recent accelerations it is now possible to reach Alexandria from London *via* Trieste or Brindisi, in less than five days.

It is stated from Cairo that the Egyptian Zaghloulist newspaper, *Al Ahalay*, has been suspended for six months for insinuating that the Minister of Finance was dishonest.

Negotiations between the Italians and the Emir Idriss in Cyrenaia have resulted, says the Rome Correspondent of the *Morning Post*, in the realisation of the El Regina agreement whereby the Senussite troops are disbanded, except in four zones for police purposes, and an Italian civil administration is substituted for the Senussite.

A Zionist delegation, headed by Mr. N. Sokolow, has left England for the United States. The other members are Professor O. Warburgh, Mr. V. Jabotinsky, and Mr. A. Goldstein. The main purpose of the mission is to secure financial support for the Palestine Foundation Fund.

A tram strike began in Cairo on November 11, says Reuter, largely as a result of intimidation of the employees by persons who had been carrying on an agitation for some weeks.

In accordance with a decision by the High Commissioner at Constantinople, the Greek flag, which floated together with the flags of the Allied Powers from the building which is the Headquarters of the Allied Naval Commission, has been lowered.

## THE DOWNWARD SLOPE.

Our readers will not have been greatly surprised at the news that the forces of revolutionary reaction which afflict India have decided on a further step along the road they have been following since the time when their anxiety was seriously aroused by the introduction of the new constitution. Some such action was indeed inevitable, for, as Sir Valentine Chirol has pointed out in his admirable survey of the present position, the road which they have chosen is an inclined plane, and it is inclined at such an angle that a movement once started can be arrested only by interference from outside. The step which has now been authorised by the junta which styles itself the Committee of the National Congress has been labelled "civil disobedience," and it differs from the earlier prescription of non-cooperation in that it involves active, rather than passive hostility to the Administration. The non-cooperator was called on merely to abstain. If he was a student, he had to absent himself from the lessons for which his parents had paid; if he was a lawyer, he had to abandon the practice for which he had toiled; and the idea was free from objection on strictly legal grounds, though it was futile from the standpoint of the practical politician, and though the attempt to propagate it has demonstrated the impossibility of restraining its advocates within the limits laid down by its inventor. The new move differs from the old in that it involves definite acts of disobedience to definite rules of law. The precise laws which are to be broken will doubtless vary with local circumstances, but it is significant that the non-payment of taxes is formally included in the programme, which thus strikes at the foundations of civilised government. The menace to India is thus grave, but, according to the scheme formally announced by the promoters, it is not at present general. The executive of the Congress in each province is to decide what shall be done within the area which it supposes itself to represent, while the central body has laid down sundry conditions, which, if there were any prospects of their realization, would certainly confine the effects within very narrow limits. According to these conditions, civil disobedience is not propounded as a luxury in which anyone may indulge, but as an act of renunciation to be justified by proof of previous self-discipline. The man who undertakes to disobey must have shown by his acts that he has abandoned the use of foreign goods, and must wear nothing but homespun; with his soul thus delivered from the canker of the West, he may be allowed to undergo the higher discipline of suffering for his breaches of the law, provided always that they are accomplished without the use of violence, and that his views are sound on a variety of doctrines, including religious unity, the Caliphate, and the denial of untouchability.

The absurdity of these conditions will be obvious to our readers. They were doubtless laid down with the best intentions by the visionary by whom they were announced, but we cannot suppose that they are intended seriously by the astute agitators who shelter behind him, and their practical value is indicated by the fact that a small committee is empowered to dispense with any of them. The result of the movement can only be that large numbers of people, many of them poor and ignorant, will be led, if not driven, to withhold the dues of the Government, or in practice the land-revenue on the punctual payment of which depends their retention of their holdings, or in other words their means of livelihood. The law will then take its wonted course: the defaulting peasants will find themselves threatened with ruin, the ground will thus be prepared for the agitators; and we can see no possible outcome but widespread rioting and disorder. The limitations imposed by the central body may possibly be mentioned by its local agents, but it is inconceivable that they should be observed by people in the mass. Refusals to pay revenue is an attractive idea at first sight, and once started it is almost bound to spread; the agitators are sufficiently clever to start it, but, even if we could assume their goodwill, the task of limiting and directing it would be utterly beyond their power.

As yet we have no information regarding the attitude to be adopted by the Government in view of this new threat to the peace of India. The policy of restraint which has been pursued towards the apostles of non-cooperation has been widely criticised, and the critics can at least claim that it has failed to secure tranquillity, since there have been numerous outbreaks of violence, and one grave rebellion, which unhappily is still unsubdued. Recognition of these facts does not, however, involve condemnation of the policy, for its supporters can argue, and, in our opinion, with substantial justification, that vigorous action at the outset would have failed to win the approval of the bulk of that moderate opinion which predominates in the Legislature, and might well have resulted in alienating it to such an extent that the practical working of the new Constitution would have been rendered impossible. During the last few months there have been distinct signs of a change in this respect. Moderate opinion has made some progress towards recognition of the danger to itself and to the country; the action taken against some prominent Moslem agitators has been generally approved; and there have even been demands for increased vigour in quarters where, a short time ago, the ordinary precautions of the Administration were looked on with suspicion. We think it is probable that this change will be accentuated by the threat of civil disobedience. Moderate statesmen, and even moderate politicians, must recognise that a movement aiming at the refusal to pay revenue strikes at the very base of their own position, and the men who are most anxious for increased political power must be the first to demand that the demoralisation of the taxpayer should at all costs be prevented, because they realise that demoralisation, once it is established, will be very difficult to cure. The strength of the British administration as compared with its predecessors has lain very largely in the fact that under it the payment of revenue has become a habit, and default has been a rare exception. The new aspirants for political power have assumed, perhaps too lightly, that they would be able to take over this great asset, along with others, from the bureaucracy at which it is their pleasure sometimes to gibe; and even the boldest of them might hesitate to assume responsibility for Government if it still involved, as it involved in the eighteenth century, the collection of revenue at the cannon's month. We believe, then, that in the face of this new threat the Administration can count on a measure of political support which it would have sought in vain against the early non-cooperators, and in view of this fact it is bound to take definite action to prevent the demoralisation of the revenue-payers, and not merely to enforce the usual penalties on those who actually default. It would serve no useful purpose to examine in detail the nature of the action which is required. The conditions will vary from place to place, and the agitation can be handled effectively only by the local authorities who understand the circumstances. What is wanted now is a clear lead from the central Government, a formal announcement that the demoralisation of the revenue-payer must not be allowed to occur, and an assurance that the measures taken for its prevention will be supported by the full weight of the Administration. Given such a lead, the executive machinery, weakened as it is, is strong enough to avert the danger which now threatens.

## TANGLED POLITICS.

### The Self-Determination of Hungary,

*By "Watakshi."*

I was crossing the Channel some days ago when I met an old friend of mine. He had just returned from Central Europe, and he spoke frankly and without reserve.

"I am a tourist," he said, "only different from other tourists in that I have made the same journey many times and know a multitude of people, great and small. You are interested in the Emperor Charles? I will tell you as far as I can, how the present situation came about.

The Emperor Charles himself is an amiable, well-meaning young man, who has plenty of courage. He gives one the same sort of sense of antiquity of race that you sometimes feel in a Highland Scotsman. His enemies accuse him of not telling the truth. It may be so, but it comes more from a careless habit of mind, than vice. He married Princess Zita of Bourbon-Parma, a lady of a great deal of character and much attraction, a good wife, an excellent mother, and, given the chance, an admirable queen.

The death of Franz Ferdinand made Charles heir-apparent to the Throne and subsequently Emperor. The mind of the Emperor Charles was very different from those both of Franz Josef and of Franz Ferdinand. Franz Josef had had a long and dolorous education, where loss followed loss, but still the Imperial splendour remained. He grew accustomed to disasters that did not affect him. He was a conservative old man, patriarchal in appearance, but in the main selfish. Franz Ferdinand was obstinate, positive, proud, but he could accommodate himself to circumstances. He grasped the fact that home rule must be given to the Southern Slavs; as you probably know, there are many who ascribe his death to this tolerance. A concession under the old order was hated by the Slav extremists, because it preserved the the old order. They preferred unyielding conservatives, whom they hoped one day to smash. Those gentry wanted no elasticity about their chains.

Well, Franz Ferdinand was murdered by the Slavs at Serajevo and there came the war, during which Franz Josef died. Then the Emperor Charles succeeded, and on succeeding did all in his power to bring about peace. He worked for peace for sufficient and obvious reasons. He saw that his Empire must tumble to pieces without it. He wanted to go down to history as a success and not a failure, and perhaps more than all, his wife was half French and half Italian, and though she was completely loyal to her adopted country, Austria, which she understood very well, she wanted reconciliation. So twice the Emperor initiated negotiations. His brother-in-law, Prince Sixte of Bourbon, fighting with the Belgian Army, went to Paris and there talked with the Prime Minister, Monsieur Clemenceau, but he did not succeed. In England, we had our Mr. Wickham Steed, and our Mr. Lloyd George, who from different motives, preached Sinn Fein in Austria, resurrected old hatreds and, in the end, successfully pulled down the "Ramshackle Empire" that it had required eleven centuries to weld into an economic unity. So the attempts of Charles to make peace failed. He was not alone. Count Czernin, who differed from him, was also for peace, but they were beaten by Conrad in Austria, as Kuhlmann and the other German civilians were beaten by Ludendorff in Germany.

The war ended. An English officer was sent to protect the Royal Family of Austria. He did it and, in the end, took them to Switzerland. That is a curious story, which will one day be historical. The Emperor Charles left without abdicating. He remains Emperor of Austria and King of Hungary. There are many who believe that, if he had been crowned in Prague, he would be King of Czecho-Slovakia to-day. At any rate, he went to Switzerland with what belongings he could collect, and stayed there with his family.

His first attempt to regain his Crown was in March, 1921. That attempt was made on the initiative of the French Government. In two Cabinet meetings in Paris, during Charles's actual presence at Szombarthely nine out of thirteen were in favour of the Emperor Charles' returning to the throne of Hungary. On the French initiative he went; his journey ended in failure. Hungary as a whole, I think, wanted him, but the price that they had to pay was too high. Hungary had to meet the hatred of the Czecho-Slovaks, the Roumanians and the Yugoslavs. The Hungarians were a beaten and a disarmed people, who had to put up with the insults of their *nouveau riche* neighbours, the real profiteers of the war, and so the Emperor Charles returned to Switzerland.

But meanwhile other complications had ensued. French policy had dug pitfalls for France. It is important for us to remain allies with the French, but they make it very difficult for us, because their policy is both arrogant and inconsequent. France needs peace, but wants trouble. A peaceful Europe would make French life cheaper, but a broken Europe makes France stronger. It was French policy that insisted upon giving the Burgenland to Austria. The Burgenland had been Hungarian for more than a thousand years. It was associated with most of the great Hungarian names. It is a beautiful land in itself and it made a rare and romantic appeal to the country to which it belonged. The French hoped to make a permanent quarrel between Hungary and Austria by giving the territory of one broken country, Hungary, to another broken country, Austria, that had been its ally. Later, they saw that their policy of crushing Austria had gone too far; that the provinces of famishing Austria would have no alternative but to join Germany, and they regretted the gift of the Burgenland, which they saw might ultimately go to Germany and attempted, too late, to reverse their policy. The Burgenland had to be evacuated by the Hungarians, but as a set-off to this confiscation of territory, the Yugoslavs had also to evacuate the area of Pecs.

There are few people in this world who are more reluctant than the Serbs to give up anything, however trifling, that they have once possessed, but the Serbs saw that they could not avoid the surrender of Pecs. They therefore determined to make its occupation as difficult to its legal owners, the Hungarians, as possible, and with this object they encouraged the migration of all their Bolshevists and Communists into that area, in the simple hope that these people would later protest against the aristocratic government of Hungary. All might have worked well, but the Bolshevists and Communists, being men of active mind, did not allow their energies to sleep until the appointed hour at Pecs. They killed one Yugoslav Minister; they were reported to have tried to assassinate King Alexander, and they generally behaved in a turbulent way, that got upon the nerves of the Serbian Government. Over fifty deputies were arrested, labelled as Communists, and the evacuation of Pecs was successfully accomplished.

It was during those troubles that the Emperor Charles made his second attempt, which failed again. How far the French Government was behind that attempt, it is difficult to say, and Paris, of course, will never admit responsibility. No French Republic in clamorous pursuit of democratic ideals will ever admit that it has tried to restore an Emperor to his throne because his wife happened to be half French.

It is a simpler plan to curse the Emperor for breaking his parole. When Charles went to Switzerland in 1919, he gave his word to the Swiss Government that he would not indulge in political propaganda in Switzerland. That was all; nothing else. I know nothing about his word given after the failure of his first attempt in 1921; it was not given in Hungary; he may have given it in Switzerland, but I have never seen any evidence to the effect that he did.

"Of course," concluded my friend, reflectively, "if one's country wants one, it is a great temptation. There are few people, in those circumstances, who, rightly or wrongly, do not say: 'My country first.'"

# PRESS ON THE NEAR EAST

## Egypt.

In the *Daily Herald* of November 1, Mr. H. N. Brailsford writes on "Our Promises to Egypt." He begins by stating that the granting of independence to Egypt would be a cheap concession, for "none of the real interests of British Imperialism incur the slightest risk." He continues with a list of imaginary dangers :—

What fleet is going to bear down past Gibraltar and Malta from the one side, or past Singapore from the other? Who threatens the Canal? Which ally of yesterday can it be, since the enemies are beaten to the ground? We have, in short, everything requisite for a heroic defence of the Canal, save only an enemy to attack it. Nor will it be otherwise with the financial interest. In one form or another it is agreed that the special status of the Outlanders in Egypt is to be retained. That is the only kind of "protectorate" which seriously concerns the immense foreign capital invested in Egypt. The stream of tribute will go on flowing as steadily as the Nile, and the traveller who turns aside from antiquities to glance at a fellah village, will still hear, if he listens intently, the real riddle of the Sphinx. How comes it that this peasant, who labours seven days a week from dawn to dusk with incessant industry, in fields of rich alluvial soil, which bear in that generous climate three crops in the 12 months accumulates nothing, and possesses nothing, not even his wretched hovel of mud, unless it be the mat which serves him for bed, the gown of blue cotton on his back, and the earthen jar which holds his maize? Independence will alter nothing in that picture, and with some help from the native landlords, the foreign banks, the brokers and usurers who handle the cotton crops will continue to reap their profits.

And he discusses the obstacles in coming to terms :—

What in the name of sanity is the difficulty in coming to terms with the Egyptians? The difficulty is mainly that our military authorities are not content that British troops shall guard the Suez Canal, while British warships enjoy the use of a naval base at Alexandria. They must needs keep a standing garrison of British troops at Cairo and Alexandria as well. Mr. Churchill has said so in public, and it seems that this demand is vexing even the tame official deputation under Adly Pasha which is now negotiating with Lord Curzon. Adly Pasha, I take it, represents only part of the small upper class in Egypt, which is largely of Turkish or Circassian origin. He owes his position to the support of the British Government, and he maintains himself against Zaghlul Pasha and the popular party only by means of martial law. He could not face an election, unless, indeed, it were "made" by methods of intimidation and chicane. None the less, there are limits to the concessions which even Adly Pasha may make. He dare not return from London with a settlement which the simplest and least literate working man or peasant will recognise at a glance as make-believe.

Now there is one test which the simplest and least "extreme" of Egyptians can and will apply. Does the new status of Egypt make an end of the occupation? If the British garrison remains in Cairo, then, plainly, independence is an idle word, and even the most modest autonomy an illusion. While we keep our bayonets there, our officials will still address the Egyptian Government in tones of command, and ultimately they will have to be obeyed. The Army was always in the past the "sanction" behind our advisers.

He concludes with the knotty problem of the Sudan :—

The other contentious issues, though they have their importance, are secondary to this. I do not myself think that we can satisfy Egyptian claims to the Soudan. Neither we nor the Egyptians have any right there, save that of conquest. Our conquest was effective, theirs was not. One may doubt their military ability to hold the Soudan unaided, and certainly the direct rule of our officials is likely to be much more enlightened and efficient than theirs. We do better in handling a black race, which is plainly and consciously our inferior, than in handling peoples who have begun to aspire to equality, and to approach it. Our motive may be the exploitation of the natural riches and labour of the Soudan, but there are some by-products of the process, in the shape of orderly government and material progress. On the other hand, in all the financial aspects of the Soudan question, Egypt has a very strong case. We have used her resources to pay for our conquest.

A settlement with Egypt is remarkably easy. But there is one concession which no Egyptian party dare make, and that is the continuance of the military occupation.

## Palestine.

The *New Statesman* of November 5, contained an article called "The Situation in Palestine," which, though written from the Zionist standpoint endeavoured to aim at impartiality. After having traced the events which led up to the recently published "Interim Report on the Civil Administration of Palestine," the writer concluded :—

The situation is to-day somewhat easier than it was when the report was written, but it is still not free from anxiety. The events of the past few months have not only impaired, for the time being, the authority of the Government; they have seriously militated against the Arab-Jewish entente which is indispensable to peaceful progress. The Jews, uneasy and embittered, are in no mood to parley with the authors of destructive attacks on Jewish life and property, for which no reparation has yet been made. The Arab extremists, secure in the illusion that if the Government is not with them it is not or dare not be against them, have little motive for modifying what has proved to be a not unprofitable intransigence. If the Arab Delegation now in Europe accurately reflects the Arab frame of mind, the prospects of an accommodation are, for the moment, unfavourable. The Delegation has been sufficiently ill-advised to demand nothing less than the withdrawal of the Balfour Declaration and the open repudiation of a pledge as binding as any to which Great Britain, in common with the other Allied Powers, has set her hand. That such a demand will not be entertained needs no assertion. It was indeed only last month that the Declaration was formally reaffirmed by the British Minister in Prague at the opening of the Zionist Congress, which responded with an impressive assertion of its implicit faith in British good-will and its firm resolve to play its allotted part in the task of reconstruction.

Even to-day there are Arabs in Palestine who are conscious that the establishment in Palestine of a national home for the Jews will not only involve no displacement of the Arabs but will result in a general quickening of economic and social life. For the moment moderate opinion is discouraged and silent, but it will make itself heard once the Government gives unmistakeable indications of knowing its own mind. When it does, it will find a ready response from the overwhelming majority of intelligent Zionists, who are fully aware that there can be no question of riding rough-shod over Arab susceptibilities, still less of invading Arab rights, and that, assured of their unquestioned right to enter their historic home within the limits of its capacity to absorb them, they need ask no more than a fair opportunity of succeeding on their merits.

So much, from the Zionist point of view, for the present position of Palestine. In an article called "Jews and Arabs," *Palestine* of November 5, enables us to estimate from the same point of view, the future of Palestine. The concluding paragraphs of this latter article are as follow :—

It is sometimes asked what we mean by speaking of Palestine as a future Jewish nation, and there is no reason why the answer should not be perfectly candid. We expect that with Jewish immigration restricted only by the openings to work and brains offered by the country, the Jewish civilisation will become predominant. It will no doubt be modified to some extent by intercourse with the Arabs and by residence in the country. The new Palestinian nationality will be a blend, and the Palestinian Jew, in the second generation, will be a very different sort of person from the raw immigrant. For all that he will be a Jew. Perhaps one ought to say that he will be a better Jew because of that, for it is is in the open-air life of Palestine rather than in ghettos of Russia and the Ukraine that the true racial type will develop. With expect, therefore, that the Jew will in time give its characteristic colour to Palestinian nationality. But that does not mean that there will be any infringement of Arab rights or that there will politically be anything but equality between the rights of the two peoples. Zionists are perfectly prepared to be on an absolutely equal footing with the Arabs, and if their civilisation predominates in time it will not be by reason of any artificial preference, but solely because it has the stronger individuality and has more with which to endow the country. Should the Arab individuality be the stronger and have more to give the country, it would in these equal conditions of opportunity become the dominant type. But we expect the first result, not the second. That is what is meant when people speak of Palestine as the home of a future Jewish nation, not the oppression of Arabs nor the grant to Jews of privileges denied to Arabs. The sole condition on which Zionists must insist is that they should not be subjected to disabilities because they are inferior in numbers, but that the present minority must be regarded as the representatives of the great Jewish race and that a place must be kept in Palestine for as many Jews as the country has openings for, there to found a national home and to be free to develop their Palestinian nationality. That in effect is what the Balfour Declaration amounts to.

It is, as we have said, very desirable that those Arabs who have a sufficient regard for the future of Palestine to welcome this prospect should organise against the extremists who are threatening to ruin the country by fomenting disorder. Zionists would welcome the prospect of working with a representative Arab committee which is prepared to accept the Declaration and to join in forming a new Palestinian nationality on the basis of equal rights and equal opportunities for both races.

# PALESTINE IMMIGRANTS WELFARE COMMITTEE

## Objects.

It has appeared to various persons in Palestine—official and unofficial—that there is useful work to be done among the immigrants who have been, and are now, arriving in the country. Much is being done for them by their own organisations, but visits made to their places of reception at the Ports, to their road camps, and elsewhere, have revealed that there are certain directions in which still further assistance might be given. Such assistance, it is known, would be welcomed both by the immigrants and by their organisations. It has also been observed that there is need for co-ordination and co-operation between the various bodies interested in the question. This need, it was felt, should be supplied by a local body which, in the interest of all subscribers, would attempt to obviate overlapping on the one hand, and the occurrence of *lacunae* on the other, in the field of

Digitized by Google

work, while avoiding anything in the nature of intervention in the activities of other bodies working for immigrants in Palestine or abroad.

This Committee has then established for itself three primary objects :—(1) Further assistance to immigrants, and collection of funds to this end. (2) Co-ordination of efforts amongst all bodies similarly engaged in Palestine or abroad. (3) Assistance to immigrants in acquainting themselves with the conditions and customs of Palestine.

**Organisation.**

In forming the membership of the Committee an attempt has been made to obtain the nomination of persons who are specially qualified for the various activities in which it is proposed to engage. The names of members and the task allotted to them will give the best example of what is here intended.

| *Name.* | *Task.* |
|---|---|
| Sir Wyndham Deedes | Chairman. |
| Mr. Robert D. Kesselman | Treasurer. |
| Mrs. Norman Bentwich | Secretary. |
| Mr. H. M. V. C. Morris | Sports. |
| Mrs. Harold Solomon | Finance. |
| Mrs. M. D. Eder | Kitchens. |
| Dr. Hugo Bergman | Culture. |
| Miss Sophia Berger | Child and Women Welfare. |
| Mr. S. Tookovsky | Reception. |

As to the organisation within the Central Committee itself, it has been decided that each member should, for the performance of the particular task allotted to him or her, form a sub-Committee of members expert in it. Through these sub-Committees it is hoped to ensure the well-being of the immigrants in body and mind. Popular lectures and musical concerts will be given in the camps, libraries stocked, the means and the stimulus for games and sports provided. Trained kitchen supervisors wil be introduced. Female welfare will be the care of a special women's sub-Committee, who plan to establish Girls' Social Centres, Hostels, and Convalescent Homes, etc.

In respect to securing co-ordination and co-operation in Palestine between Bodies interested, the Committee feel that they can properly go no further than to invite such bodies to acquaint the Committee with their respective activities and intentions, in order that the latter may in turn advise them to what extent other bodies are similarly engaged or intentioned. It is hoped that the description of the mode of procedure above given will absolve the Immigrants Welfare Committee from the accusation of undertaking something which is already being done, and that sufficient confidence will be inspired in its membership and intentions to enable funds to be obtained for the laudable objects which it has in view.

## ROUMANIAN SUPERSTITIONS.

Lecturing on November 9, at King's College, London, Mr. Marcu Beza said that midsummer had been celebrated in pagan times with festivals, and that these lingered on in certain countries still. Somini de Magnoncourt, writing of his travels more than a century ago, said that in Greece, at this season, the girls formed themselves into parties and sent a boy to fetch water from a spring. This boy was forbidden to speak on the way, for which reason the water was known as "speechless" water. It was put into a jug, and each girl dropped an apple into it ; then the jug was covered and left for the night in the open air. The following day each girl took out her apple, bathed her head with the water, and went into the road, where she took the first name that she happened to hear as that of her future husband.

The lecturer said such methods of divination were common in antiquity, and that, in a modified form, the custom described obtained in Greece to-day. But it was regarded as merely an amusing game. Quite different was the case with the Roumanians of Macedonia, where he had himself seen the festival at a village within sight of the abode of ancient gods. The maidens and young women assembled in groups, and went out in search of a creeping plant called casita, singing as they went. When each young woman found the plant she tied it with red ribbon and concealed it under green leaves. Besides this, garlands of mignonette and other sweet-scented flowers were gathered. On the return home a jug called the galeata was scalded out and decorated with flowers, and into this each girl threw a silver coin or trinket. Then a procession was formed, and three springs were visited in turn. At the starting of the procession a song was sung identical with that used when a bride left the house of her parents. As the procession went along another song was sung, "Where are you off to, my little one, with your bridal veil, and your gold threads on, and your fingers full of rings ? I go to my nine brothers—nine unmarried brothers." At each fountain the galeata was filled and emptied three times while the girls sang. " Fill sister, empty brother, to give water to the thirsty one." Then the galeata was fastened with a padlock. Next morning each girl fetched the casita she had hidden the night before and tied her hair with it. Afterwards the procession walked through the village from house to house, the galeata being now guarded by young men with drawn wooden swords. In the evening the trinkets were taken out of the galeata.

The lecturer explaining the ceremony said it was connected with the Eleusian and Orphic mysteries of the ancient world, and that it symbolised a wedding—the mystic nuptials in which all Nature took a share, that of Death's goddess Persephone with Adonis.

## NEAR EAST IN PARLIAMENT.

### HOUSE OF LORDS.

**Colonel Rawlinson.** *November* 9.

Lord Newton asked the Secretary of State for Foreign Affairs whether his attention had been called to a letter in *The Times* from Admiral Sir Percy Scott with regard to the recent imprisonment of Colonel Rawlinson by Mustapha Kemal in Asia Minor, and whether there was any foundation for the charges against his Majesty's Government of having allowed this gallant officer to be treated in such a cruel and barbarous manner.

Marquess Curzon, Secretary of State for Foreign Affairs.—I have read the letter of Admiral Sir Percy Scott with the most profound astonishment and regret. It contains charges against his Majesty's Government for which there is not the least foundation, and it is written in evident ignorance of the facts. I will give these as briefly as possible to the House. The distinguished officer referred to, Colonel Rawlinson, who was on a mission from the War Office to Erzeroum, is believed to have been first placed under restraint—we had no knowledge of confinement—by Mustapha Kemal in the early part of 1920, but neither the War Office nor the Foreign Office had any certain information on the subject. As soon as the Turkish delegation came to London in March 1921, one of the first subjects that came under discussion with the delegates from Angora was the release of the British prisoners who were in Turkish hands. Of these there were believed to be 22, including Colonel Rawlinson. So anxious were we to secure their speedy release that the Foreign Office concluded a special agreement with Bekir Sami Bey, the principal Angora delegate, by which we engaged in return for these 22 to surrender all the Turkish prisoners in our hands at Malta, numbering 64, excepting only certain Turks who were held for trial there for grave offences against the laws of war, or for participation in massacres. As soon as the Turks had left England they began, in violation of the agreement, to raise difficulties about the surrender of the Turkish remainder—about 60 in number—and to refuse the fulfilment of the bargain unless these, too, were sent back. In our anxiety, however, to complete the transaction, we commenced by the release of 40 out of the 64, who were handed over to the Turks at an Italian port in the expectation that when Bekir Sami Bey returned to Angora the release of the British prisoners would begin and that the agreement would be carried out in entirety. No British prisoners were, however, released, and the agreement concluded in London by Bekir Sami Bey was repudiated by the Angora Assembly. In the month of June the Angora Government showed signs of relenting and released 10 British prisoners against the 40 Turkish prisoners whom they had already recovered, and offered to exchange the remainder against the whole of the Turks remaining at Malta. In our unabated desire to effect the release of our remaining prisoners, even on these extravagant terms, before the winter came on, we resumed negotiations at Constantinople, and decided to yield to the Turkish demand and to release the entire number of Turks for the sake of our men. The total exchange forced upon us by the *mala fides* of the Turks eventually turned out to be 118 Turkish prisoners returned in exchange for about 30 British prisoners. I wish the transaction could have been completed earlier, but the utmost energy on our part was for a time powerless against the bad faith of the Turks. As regards the treatment of Colonel Rawlinson in the interval since March last—for we knew nothing at an earlier date—we have had little information. The British prisoners who were released in June brought a message from him stating that he was not being well treated, and that letters were not reaching him. From other sources we heard indirectly that he was well, and was being treated with the consideration due to his rank. Colonel Rawlinson will himself give us more exact information on the subject when he returns. I hope I have said enough, however, to show that the charges of negligence and inhumanity brought against the War Office and Foreign Office are wholly without justification. I may add that knowing Colonel Rawlinson myself I have interested myself greatly in extricating him from his cruel position, and have been in constant communication with his brother, the Commander-in-Chief in India, who was aware of my solicitude in the matter.

(*This subject is referred to in our Notes of the Week.*)

### HOUSE OF COMMONS.

**Christians in Turkey.** *November* 7.

Mr. T. P. O'Connor asked the Leader of the House whether, in view of the change in the situation in the Near East created by the Treaty concluded between the Kemalists and the French Government, and especially in view of the possible effects of this Treaty on the lives of the Christian Greek, Armenian, and other inhabitants of these regions, the Government would find a day for a discussion of the subject.

Mr. A. Chamberlain.—It is not possible for me to find a day within the limits within which we hope to keep the present session. Discussions are still proceeding with the French Government, and we could not answer fully the purpose for which the debate is desired before those discussions are finished.

Mr. T. P. O'Connor.—With a full desire to respect the susceptibilities of France and to maintain the Entente, would it not be desirable to let the French people as well as the Government know the feelings of apprehension which this Treaty has created among the people of this country ?

Digitized by Google

Mr. A. Chamberlain.—The hon. gentleman will realise the reserve imposed on the Government when conversations have just begun between his Majesty's and the French Governments on matters of this kind. The anxieties of this country on the subject are plain and manifest. The Government are fully alive to the considerations which the hon. member wishes to bring before the House, but I hope that the anxiety of the House will be shown sufficiently by the questions put to-day.

Earl Winterton asked if on the Consolidated Fund Bill the right hon. gentleman would not make a statement on the position of this country in the Near East, especially with regard to the serious military danger to our position in Mesopotamia if the Treaty was as alleged.

Mr. A. Chamberlain promised to consult the Foreign Secretary and the authorities of the House as to whether at the present state of negotiations the information could be given..

**The Arab Delegation.**

Sir W. Joynson-Hicks asked the Colonial Secretary whether he proposed to submit any conclusions at which he might arrive with the Arab delegation from Palestine for the approval of Parliament; and when and how it was proposed that the draft mandate for Palestine was to be dealt with by Parliament.

Mr. Wood.—No conclusions of the kind indicated in the first part of the question have yet been reached, and I think it would be premature for me to make any statement on the subject. With regard to the second part of the question, the text of the draft mandate for Palestine has already been laid before the House. If the hon. member wishes to ask for time for its discussion I must refer him to the Leader of the House.

**Italy and Angora.** *November* 10.

Sir M. Conway asked the Under-Secretary for Foreign Affairs whether his Majesty's Government had any information respecting the presence of an Italian representative at Angora, and whether there was reason to believe that the Italian Government had any intention of following a recent example and concluding a separate agreement with the Angora Government.

Mr. Cecil Harmsworth.—The answer to the first part of the question is in the affirmative. As regards the second part, the Italian Minister for Foreign Affairs has categorically denied that there is any truth in the suggestion, and has assured his Majesty's Ambassador in Rome that his Majesty's Government will be kept informed of everything that passes at Angora.

**Christians in Turkey.**

Mr. Cecil Harmwsorth, in reply to Mr. T. P. O'Connor, who asked, *inter alia*, whether it was a fact that the Armenians, Greeks, and other Christians in Cilicia had been given 20 days' notice in which to leave the country, which was to be occupied by the Kemalists on the departure of the French, said:—His Majesty's Government have no other information beyond a statement, originating in Athens, which is reproduced in this morning's Press. They have on many occasions reminded the French Government of their obligations towards the minorities in Cilicia, and have the safeguards afforded by the Franklin-Bouillon Agreement do not appear adequately to satisfy these obligations. The reply of the French Government to these representations has not yet been received. It may be noted that the French High Commissioner recently concluded an interview published in the Constantinople Press with a serious admonition to Turkey regarding her future treatment of the minorities and her fulfilment of the Treaty; it was by this, he added, that the world would judge her, and any further outrages would raise an outcry against her in Europe.

**Topics in Parliament.**

The subjoined headings are those of the Official Report:—

Egypt.—Turkey (British Prisoners).—Albania.—Yugoslavia (British Debt.).—Albania.—Peace Treaties: Turkey (British Claims).—India: Government Officials (Passage Rates).—Malta (Elections).—(November 3).

India: Law and Order. Basante Kumar Roy. Auxiliary Force. Prosecution (Bhagalpur).—Albania.—Palestine: Electric Power Concession. Arab Delegation.—Near East. France and Turkey.—India: Civil Service Pensions (Premature Retirement).—Egypt (Prince Aziz Hassan).—Arabs (British Undertakings).—Roumanian Loans.—(November 7).

India: Married Officers. Press Legislation. Amritsar Shooting.—Trade Unions. Seditious Leaflets(Indian Army). Colonel Aitken. Railways and Transport Service. Government Printing. Agitators (Birthplaces). Moplah Rebellion.—Ex-Service Men. India Office (Legal Advices Department).—France and Turkey.—India: Karachi Aerodrome (Detention Allowance). Finance.—(November 8).

## THE BRITISH ARMENIA COMMITTEE.

The British Armenia Committee has learned with consternation of the Agreement come to between France and the Kemalists, under which the Christian inhabitants of Cilicia are to be handed back to Turkish rule. It demands that the British Government shall fulfil the pledges which during the War it repeatedly made to its Armenian allies, and shall call upon France to abide by the pledges for the protection of the non-Turkish people of Cilicia which she gave to the British authorities when she took over the province from them. The Committee recalls that thousands of these unhappy people returned to Cilicia after the war from places of safety at the instigation of the British and French authorities.

## WINTER TRAVEL PROSPECTS IN THE NEAR EAST.

We expressed in our issue of October 6, the good hope that Egyptian political extremists will do nothing to reduce our estimate of "hundreds of millions of piastres" which should fall into the lap of Father Nile this coming winter, under the tourist arrangements of Messrs. Thos. Cook and Son, and other agencies on both sides of the Atlantic. Subsequent news from Egypt shows that these extremists have had the good sense to muddy the waters of the Nile a good six weeks before the Egyptian Season begins. We can well imagine that the people of Assiout, Luxor, Assouan, and Wadi Halfa are more anxious just now about the prospects of the Nile tourist traffic than about the cashless blandishments of the so-called Egyptian Nationalists. We have yet to discover the Oriental Bazaar, such as that of Cairo for instance, which yearns for the rules and prescriptions of Bolshevism in preference to the open purses of tourists from the Occident, and we are confident that all responsible Egyptians will unite to assist the Government in ensuring for this winter a bumper tourist season. Our Cairo Correspondent informed us lately that over five thousand visitors are booked to invade Egypt, between February and April—that is to say, in the latter two-fifths of the regular season. As any one of these will doubtless spend more money in Egypt than did all the recent parliamentary guests of Zaghloul Pasha together, it may be calculated, by simple rule of three, that one ordinary tourist, male or female is worth more to the people of Egypt than half-a-dozen wandering political minstrels.

## PALESTINIAN NATIONALITY.

Persons who (a) were born in Palestine; or (b) whose fathers were born in Palestine and who in either case are now demobilised in Palestine and make a declaration that they intend to acquire Palestinian nationality when the opportunity offers, will in future be described as "Palestinians" on their laissez passers. This description is, however, only a temporary measure and is without prejudice to the provisions of any future law dealing with Nationality in Palestine.

An attempt is being made, under the auspices of Khalifate agitators, to boycott the Howrah police, and many people are being terriorized into refusing to sell to them.

## NOTES AND NEWS.

Devonshire Square,
E.C. 2.

**The Proposed Bulgarian Loan.**

It is to be presumed that we shall not have to wait long to learn the decision of the Bulgarian Government with regard to the various loan offers that have been made to it. M. Stambolisky has informed our Correspondent that the Franco-Belgian Syndicate's offer appears to be the most advantageous. It will be interesting to know what the actual terms were in view of the fact that Messrs. Balfour Beatty and Co., named so low a rate of interest as 7 per cent. It is obvious what the result would be if an attempt was made to float a loan here at that rate. I imagine that it would cost at least twelve per cent. if there were to be any chance of the money being subscribed.

**A Yugoslav Loan.**

Yugoslavia is also engaged in negotiations for a loan, and in this case also proposals have been forthcoming from a British group, the offer being one, it is understood, of £15,000,000 bearing 9 per cent. interest conditional on the greater part of the amount being expended on the construction of a railway to the Adriatic. As the money would be expended in this country in the purchase of material the importance that would attach to a satisfactory conclusion of the negotiations needs no emphasis. Unfortunately our Correspondent states that the Opposition is displaying considerable hostility to the scheme, on the ground apparently that British prices are higher than German. But those who take this attitude surely do not imagine that Germany is in a position to grant loans, and for the matter of that is Yugoslavia likely to obtain a loan elsewhere without the same stipulation. ? Not from France at any rate.

**The Falling Leu.**

The fluctuations of the leu in recent months have been little short of remarkable. At the beginning of September the rate for sterling was 319, while it is now in the neighbourhood of 600 ! The explanation of this phenomenon is not to be found in the slow progress made in reconstruction; on this point the fact that the shipments of grain to the end of September were three times as large as in the corresponding period of 1920 speaks for itself as to the gradual improvement of internal transport. The reason why the export of grain has had no effect on the leu, it is pointed out in a report which we give elsewhere in this issue, is because practically the whole of the exportable wheat surplus was sold in advance to France, " and the proceeds used up at a time when the French franc was worth a much smaller number of lei than to-day."

**The Outlook.**

But that fact while it explains the lack of support for the leu does not account for its present weakness, which I suppose must be attributed *inter alia* to purchases of machinery etc. for the oil and other industries, and the general replenishment of stocks. But a counterbalancing factor should have come into operation as a result of the great stimulus to Roumania's export trade, resulting from the depreciation of the leu, reference to which is made in the report to which I have referred. This has been particularly the case with regard to timber. " If the exchange remains anywhere near its present level," says the report, " the exports of wood next year will only be limited by the capacity of the railways to bring it down to the ports." But so far this movement has evidently had no effect on the leu. Still it is bound to influence the position materially in the end, and this factor and the increased export of grain and oil that may reasonably be anticipated next year make it as certain as anything is in these times that before long the leu must stand at a very different figure.

**Conditions in Cyprus.**

The White Paper on Cyprus in 1920-21, which is reviewed elsewhere in these columns, shows that, broadly speaking, the position in the Island during that period was far from being unsatisfactory. The welfare of Cypriots hinges on the harvest, and as that of 1920 was particularly good in most respects, it naturally follows that they had little at which to complain for the abundant crops brought prices down. Trade again expanded as regards imports, and the revenue returns were the best on record, but despite this fact the year ended with a substantial debit balance owing to the growth of expenditure due to increased salaries and other factors. This result after three substantial surpluses is disappointing

**Bengal-Nagpur Railway.**

The effect of the adverse conditions that have prevailed in India is to be seen in the results obtained by the Bengal-Nagpur Railway for the year ended March 31. While the gross earnings were slightly below the previous figure there was a considerable rise in working expenses, and the net earnings amounted to Rs2,18,57,718 as compared with Rs2,72,60,622. The surplus profits amounted to Rs56,56,969, the company's share of which is Rs6,56,701, or approximately at the present rate of exchange £45,148. In addition to the second half of the guaranteed interest at £1 15s. less tax the directors recommend a further dividend of ¾ per cent. less tax at 4s. 9d., and a bonus of 10s. per cent. less tax making the dividend 6 per cent. less tax for the year compared with 8 per cent. for the previous period.

REPORTS FROM OUR OWN CORRESPONDENTS.

## EGYPT.

*Cairo, November 3.*

### The Cotton Crop.

The semi-final official estimate of the cotton crop appeared early in the week: 3,300,000 kantars. The average yield is by far the worst on record: 2.56 kantars per feddan, against 3.6, the previous lowest, in 1917. The weather conditions were far from favourable, but the agricultural experts declare that the main cause of the bad yield is two-fold: late sowing and careless cultivation, owing to the low prices obtaining for the staple at the time of sowing and early cultivation. These authorities also declare that it is more necessary now than ever to increase official fostering of the crop, as the fellahin have drifted into a period of slackness which, if left unchecked, means economic disaster. The Ministry of Agriculture needs more money—but given generous treatment in the next budget, the Ministry will see that the ensuing crop will give much more satisfactory returns.

## THE SUDAN.

*Khartoum, October 23.*

### Provincial News.

The latest news from the Blue Nile Province is to the effect that rains during the month have been very slight, with the result that cultivation has suffered considerably. The total rainfall for the month was only 30 millimetres as compared with 94 millimetres last year. Prospects in general are the reverse of encouraging, although the area sown and the condition of the crops south of Hag Abdulla are much better than in the north. Local opinion is that the crop results will be less than 25 per cent. of those of last year. The price of labour in Wad Medani has fallen considerably, and is now returned as PT. 5 to PT. 7 per diem. There is a lack of demand owing to the small area under cultivation.

Kordofan reports that crops throughout the Province are good, with the exception of Bara District where the lack of rain has had bad results.

In Kassala cultivation is progressing normally, though in certain districts the crops are much below the average, owing to lack of rain, pests such as birds and mice, and the early *kharif*.

Reports from the Red Sea Province regarding the Baraka floods are discouraging. Owing to the lack of dams and earthworks most of the water went down the Khor Sharieit to the extreme south east of the Baraka Delta. No land is flooded within eight miles of Tokar town, and the area watered this year is inferior soil and inconveniently far from Tokar.

## YUGOSLAVIA.

*Zagreb, November 9.*

### The Opposition and the Proposed British Loan.

M. Pashitch has tendered his resignation to the King, who has asked him to continue provisionally for another ten days until the more urgent foreign matters have been settled. It is suggested that the Radicals will press M. Pashitch to form a new Cabinet of entirely new material, to the exclusion of all the present ministers. Certainly, the Radicals are most anxious to hold in their own hands the portfolios of Foreign Affairs, Finance, and the Interior; but these are the three critical posts. It is not likely that the Democrats would consent to play second fiddle to such an extent. But is it certain that M. Pribichevich has got himself very much disliked outside his own party, and his policy is extremely unpopular in Croatia. Nobody attacks the Minister of Finance, M. Kumanudi, on personal grounds, rather an unusual phenomenon in this country, but the Opposition blame him for the present appalling slump of the dinar, which is very natural, though many of the multiple causes of the fall are quite outside his control. No official news is yet through as to the results of his visit to London, but the Opposition is full of violent attacks on a scheme which is reported from London to be part of the conditions of a loan which he is stated to have negotiated, to the effect that Boltons Bank and Armstrong, Whitworth and Co., will arrange a loan of fifteen millions sterling at 9 per cent. on the condition that the greater part be expended on a contract to construct and supply a new railway line to the Adriatic. Public opinion objects to this, as British prices owing to the exchange must necessarily be much higher than German prices in marks.

### The Exchange Crisis.

Meanwhile, with the dinar depreciating to about 400 to the pound, and falling heavily every day, there is a panic in financial circles, and the merchants are in despair. The Government is discussing a series of protective measures, but these can have at the best a tonic effect, and all will cause great inconvenience to traders. But the fear of war has passed off with the quiet removal of Karl and his promised internment in the sunny climate of Madeira and the dethroning of the Hapsburg dynasty; demobilisation has indeed begun, and this should restore confidence to a certain extent, and it is probably more lack of confidence than any actual economic cause that has caused the slump, which can never be properly counteracted until exports more evenly balance imports and the Government has no further need to be a heavy buyer of foreign credits to meet its obligations abroad.

## BULGARIA.

*Sofia, November 7.*

### An International Bank.

The scheme of Mr. F. Vanderlip, the American banker, for restoring the finances of Central and South-Eastern Europe by the foundation of an international bank, has aroused considerable interest in local financial circles. Mr. Vanderlip was at Sofia during October, and had conversations with various public men. All financiers agree that it is essential for either America or one of the other Great Powers to take steps to restore the shattered currencies of Europe, and Mr. Vanderlip's scheme, suggesting as it does the organisation of an international gold bank which would issue dollar currency in order to form a uniform basis for a new money circulation, may be the beginning of an idea that can be worked out in detail by a committee of international financiers A great deal will of course depend on the ready co-operation of the foreign Governments concerned, but in the case of Bulgaria it is to be imagined that the Government will lend all its support to any scheme that will give them a chance of putting the country in a better financial position.

## GREECE.

*Athens, November 5.*

### M. Papafrango's Mission to America.

M. Spyro Papafrango, one of the directors of the National Bank of Greece, left for New York last Thursday. Prior to his departure he conferred with M. Cartalis, who is acting as Minister for Foreign Affairs during M. Baltazzi's absence, on the details of his mission to America It would appear that this mission is not one of purely economic interest, but will possibly comprise other questions of a political character on which it is understood that Washington differs from the other Allies.

### The Consortium of Banks.

Since the promulgation last June of the Law sanction-

Digitized by Google

ing the creation in Greece of the Consortium of Banks, certain modifications have been effected to the regulations of the syndicate. These are as follows :—

1. The payment of documentary drafts and accepted drafts can only be effected for drafts or bills of lading not exceeding L100, or the equivalent in any other currency ; the payment of drafts and bills of lading for amounts exceeding L100—or the equivalent must be authorised by the committee of the Consortium of Banks, to whom an application should be submitted together with the necessary proofs supporting the application.

2. The committee has decided that in future it will only grant the necessary exchange for the payment of goods (settlement of bills of lading, drafts, invoices, etc.) when the goods have been imported with the previous permission of the committee.

3. The sale of foreign exchange, or the withdrawal of deposits in foreign currencies, can only be effected by orders of payment and not by cheques, unless a special permission of the Committee is obtained for exceptional cases.

4. Remittances of Greek bank-notes abroad may be made freely without limitation of amount ; the import of same without the permission of the Consortium is forbidden. Travellers arriving in Greece may not import more than 500 drachmae per person.

5. The remittance abroad of foreign bank-notes without the previous consent of the Consortium is forbidden. A person leaving Greece however, is permitted to carry foreign bank-notes to the value of 1,500 francs—or its equivalent.

6. Foreign bank-notes may be freely imported. (Under existing laws, however, the import of lei, crowns, Turkish pounds and marks is forbidden).

7. The remittance abroad of securities coupons, and other deeds in foreign currencies is only allowed for the purpose of their sale, and on condition that the proceeds be converted into drachmae at the rate of exchange quoted by the Consortium within one month of the receipt of the advice of sale by the party concerned : such remittances abroad must always be made through a bank being a member of the Consortium.

8. All banks in Greece authorised to undertake exchange operations are bound to apply to such operations the rates fixed daily by the Consortium, which rates are uniform for the whole of the Kingdom of Greece.

9. The export of goods is only allowed through one of the banks affiliated to the syndicate. The exporter may be exempted from this obligation of the committee on guaranteeing that the proceeds of the goods in foreign exchange will be converted into drachmae within the period to be fixed in every case by the said committee. This does not apply in cases where raisins are concerned.

10. If the sale of the goods is effected against a simple or confirmed credit, opened in Greece from abroad, the bank through which the credit is opened is required to convert into drachmae immediately the value of the goods in foreign exchange upon delivery of the relative documents.

11. If the sale is effected against drawings on foreign countries negotiated, partially or as a whole, by the bank, the latter is required to convert into drachmae immediately, for account of the Consortium, that part of the foreign currency drawing negotiated by it, the conversion of the balance being adjourned, where necessary, until the completion of the transaction. Should the draft not be negotiated on delivery to the bank, the latter is required to convert into drachmae, for account of the Consortium, upon receipt of the advice of payment, 70 per cent. of the proceeds of the foreign draft, and to effect the conversion of the balance of 30 per cent. on final liquidation of the operation.

12. The export abroad of goods on consignment is only allowed through a bank affiliated to the Consortium, and the latter is obliged to convert into drachmae, to the credit of the party concerned, the proceeds of partial or total sales upon receipts of the advice of sale.

13. It is understood that conversions are effected at the rates fixed by the Consortium for the date of the operation.

14. Re-shipment of goods is only authorised when—(a) Same have been imported "in transit." (b) it is proved that same have not already given rise to the export abroad of foreign currency in settlement of their value. In this latter case, the previous permission of the Consortium is required.

15. It is imperative that any amount of foreign currency which may have been remitted abroad for expenses be re-imported into Greece.

15. The regulations of the Consortium are not applicable to Smyrna and the other regions in Asia Minor occupied by the Greek troops.

**Commercial Agreements.**

The Swedish Minister here, accompanied by M. Ilander, a well known Swedish merchant, and deputy, paid a visit to the Ministry of National Economy with a view to obtaining information on the commercial movements in Greece. It is understood that during the visit the project of a commercial treaty between the two countries was discussed, and it is further added that a provisional agreement will shortly be concluded for the exchange of Greek and Swedish products.

The Chamber of Commerce at Helsingfors, has written a letter to the Ministry of National Economy asking for information on the commercial movements in Greece, and giving details with regard to Finnish commerce.

**Greek Tobaccos.**

From reports received at the Ministry of National Economy it appears that 600,000 okes of Agrinion tobacco remained unsold during the last year, and that the quantity remaining unsold during the present year amounts to 650,000 okes.

## ASIA MINOR.

*Smyrna, October 24.*

**High-handed Greek Action.**

The owners of carpet factories at Ushak have been advised that their premises will be commandeered to be used as cloth factories for the Greek army. Most of these factories are partly owned by European carpet firms, who advance the necessary capital for the works and take over the finished product. Vehement protests have been made by the firms to their respective Consuls in Smyrna to prevent the Greeks from carrying out the proposed measure.

**Horses Commandeered.**

To-day the Greeks have commandeered all the horses for the needs of their army. This measure it is feared will entail serious losses for the owners because for some time the Greek Military Base has not been able to pay accounts due so that there is consequently, small hope that the owners will ever get compensation.

**"Slump" in Exchange.**

The news that the Constantinople "Bourse" was quoting Ps. 940 to the £ sterling caused a panic on the Smyrna market, and the sterling exchange rose from Ps.738 on Thursday to Ps.890 on Saturday last.

*Smyrna, October 28.*

**The Import Duties.**

The following notice has been issued by Sir Harry Lamb, K.C.M.G., H.B.M.'s Consul, Smyrna :—"The Allied High Commissioners in Constantinople have now consented to the reintroduction of the 11 per cent. *ad valorem* import duties as from the 18th October, from which date the delays provided for in the Decree Law of 13th September, and described in the Notice posted in this Consulate on 18th September, will be regarded as commencing." This means that on all goods in the custom-house and those shipped before October 18, the 11 per cent. *ad valorem* duty will not apply. After that delay the old Turkish tariff of 11 per cent. *ad valorem* will apply to all goods passing through the Smyrna Custom-House.

*Smyrna, November 5.*

**Transport of Grain to Smyrna.**

The Greek Authorities, having announced that permission would be given to bring grain to Smyrna from Ouchak, a British firm applied for and obtained a permit to bring down 21 waggons. They made all the necessary arrangements at Ouchak to bring down this quantity, but the first four waggons despatched have been stopped by the Greek authorities at Alascheir for the last four days, owing, it is stated by the authorities, to a misunderstanding!

## PALESTINE.

*(From a Correspondent.)*

*Jerusalem, October 17.*

**Miscellaneous.**

A sign of growing commercial development is the Trade Marks Ordinance which is now in draft and has been approved by the Jerusalem Chamber of Commerce with the recommendation that this body should keep the register rather than the Law Courts.

The Germans have not yet appointed a Consul here, but, pending the ratification of the Mandate, a representative has arrived in Jerusalem and assumed his duties at the Spanish Consulate. A large amount of German goods are now entering the country, mainly from those firms who before the war held the market.

The Egyptian and Palestine Governments have renewed their discussion regarding rail transport of goods. Each Government will now accept responsibility and pay compensation for loss.

## CYPRUS IN 1920-21.

### Great Increase in Imports

The White Paper on Cyprus in 1920-21, which has just been issued, shows that on the whole the community enjoyed a greater measure of prosperity than in the previous year. In Cyprus everything depends, of course, on the harvest, and that of 1920 was fairly satisfactory, the wheat crop being the fourth best in the past decade, while the barley crop was above the average, the olive crop was the best on record, and the carob crop was up to the average. The result was that produce prices began to fall with a consequent benefit to the poorest classes. As showing the general economic position it is worth noting that during the past two years 200 motor cars were imported into the Island.

If the general position was rather more satisfactory than in the previous twelve months the same cannot be said of the Island's finances. The revenue amounted to £668,518, a notable advance on the record established in 1918-19 of £610,499, and with the usual grant in aid the total was £718,518. On the other hand the expenditure rose from £485,400 to £691,780, and with the Cyprus share of the Turkish debt charge amounted to £784,580. There was thus a deficit of £66,062, as compared with a surplus of £74,727 for 1919-20, and one of £73,024 for 1918-19. The large increase in expenditure was mainly due to higher salaries, the abnormal prices of goods, and enhanced freight charges. The result is disappointing in view of the substantial surplus that accrued during the three previous years, but as its causes are of an ephemeral nature, and as the revenue has continued to expand in such a remarkable manner there is obviously little reason for disquiet at the position. It is simply an example of the vicissitudes that must be expected as the consequence of post-war conditions.

**Imports and Exports.**

Exports slightly decreased in the year under review, but there was a great increase in imports. The value of the exports was £1,200,449, a decrease of £170,000 while the value of the imports was £2,068,756, an increase of £543,339. There was thus a very large adverse trade balance against Cyprus. The reasons for the increased excess of imports over exports were the trade revival, the replenishment of stocks, and the effect of various restrictions on exports. As usual the trade was mainly with the British Empire. Of the exports the share of British possessions, colonies, and protectorates was £434,550, while that of the United Kingdom was £257,449, or about two-thirds of the total. Greece was the next most important customer, taking goods to the value of £132,550, while France was fourth with £55,349. As regards imports the share of the British Empire was 68.9 per cent. as compared with 81.2 per cent. in the previous year. Italy was the leading competitor with 6.4 per cent., France being next with 5.5 per cent.

The demand for agricultural machinery, noted in the previous report, continued during the year, and motor tractors and ploughs, harrows and planters, and a corn dressing machine were imported by the Agricultural Department, and were hired out to farmers. It is stated that several farmers have the intention of purchasing implements, but have been deterred for the present by the high prices. During the year officials of the Department gave a course of instruction at the principal centres of the wine producing districts of Limassol and Paphos. The exports of wine amounted to 1,250,000 gallons. Egypt being the principal purchaser, while 80,000 gallons of spirits were exported. There was a great increase in the exports of terra umbra from 2785 tons to 8,000 tons, the respective values being £6,255 and £28,000.

---

According to Reuter's Cairo correspondent the movement of Manchester goods in Egyptian bonded warehouses during October was as follows:—Entries 701 bales or cases; deliveries 1,804 bales or cases. Stocks on October 31, amounted to 4,057 packages. These figures show that stocks have decreased over 5,000 since May 31.

## THE WINE INDUSTRY OF PALESTINE.

### Growing Market Abroad.

Although wine making is an ancient industry in Palestine, the present commercial industry (says an American Consular report) has been built up during the last 35 years by Jewish colonists to Palestine, who have propagated foreign wines. The Palestine vineyards are healthy and withstand diseases well. The Jewish colony at Rishon-le-Zion is the centre of the industry, but considerable quantities of wine grapes are grown at the colonies of Zichron Jacob, Rehovoth, Petach Tickvah, and Katra, and the German colony at Sarona.

The vineyards utilized in the wine industry (300 to 400 acres) are practically all on the Plain of Sharon and mostly in the Province of Judea. Grapes for eating purposes grow in all parts of the country, and in Transjordania is a considerable area devoted to the growing of raisin grapes, or sultanas. The wine-grape vineyards receive no rainfall during the growing and bearing season and are not irrigated, there being always a sufficient supply of sub-surface water.

Most of the wine grapes of the Jewish colonies are pressed at Rishon-le-Zion. The German colony of Sarona, near Jaffa, formerly produced considerable wine, but the industry was closed by the war. The wine-grape harvest begins about July 18 and lasts for about six weeks, the earlier grapes being used for dry wines and the last and ripe ones for sweet wines.

About 80 per cent. of the production is of the dry, red claret wines; 8 to 10 per cent. of white dry wines; 8 per cent. of red sweet wines; and about 2 per cent. of white sweet wines. An average of about 6,600 gallons of cognac is distilled in normal years from the wine at Rishon-le-Zion. From 13,000 to 15,000 pounds of tartar are obtained per season. The stems and residue from the press are used for fertilizing purposes.

The principal markets are Egypt, other parts of the former Turkish Empire, and neighbouring eastern Mediterranean countries. Small quantities go to England and the Continent, but Palestinian wines can in no sense compete in these markets with European wines.

The cost of wine production has increased, but it is stated that twice the present quantity exported could be sent abroad. Palestine vineyards pay a *warko* or land tax, which amounts at the present exchange rate to about one dollar per acre (5½ piasters per dunum of land). On grapes a tithe tax of 12½ per cent. of their value is paid to the Government. On wine there is paid an excise tax of 15 per cent *ad valorem*, of which one-half is refunded to the wine manufacturer upon production of a landing certificate or other documentary evidence that he has actually exported the wine upon which a drawback is claimed. The alcohol or spirits made from excess wine pays an excise tax of 30 per cent. *ad valorem*, upon which there is no drawback if exported. No actual export duty is paid on wine exported.

The equipment of wineries and cellars is practically all European, and, as the industry at present is not a prosperous one, it is unlikely that there will be a market for new equipment during the next few years. Barrels for exporting wine are usually obtained from Europe, but wineries have a sufficient supply for their export trade, as facilities now exist for the return of barrels used in previous years. Barrels of various sizes are used, but the largest size is best liked, having a capacity of 6 hectoliters (132 gallons). A comparatively small quantity of the wine is bottled for local use and for export to Syria. A large share of the bottles used are refills collected from various local sources, and there is no apparent demand for any appreciable supply of new bottles.

---

The traffic receipts of the Smyrna Aidin Railway for the week ended October 22, amounted to £10,855.

---

A recent report from Athens states that the 1921-22 tobacco crop of Greece will amount to about 63,775,900 lbs. This will result in a total shortage, it is estimated, of about 28,225,000 lbs. as compared with last year's crop.

---

The sugar production in Czecho-Slovakia during the season 1920-21 amounted to 7,155,000 quintals of raw sugar from which 3,420,000 quintals of granulated and 2,800,000 quintals of various kinds of refined sugar were produced. Up to July 31, 3,320,000 quintals of sugar were exported against 3,283,000 quintals for the previous year. On August 1, stocks showed an increase of 630,000 quintals over 1920.

## ROUMANIA'S EXPORT TRADE.

### Stimulating Effect of Exchange.

We are indebted to Messrs. Watson and Youell for the following information on economic conditions in Roumania dated November 5 :—

The sudden and enormous depreciation of the Roumanian leu recently has had a powerfully stimulating effect on exports.

From the end of the war until this last summer the shipments of wood from this country were very few and very small. Probably not more than 30,000 tons were exported altogether in the 2½ years ending June, 1921. During the five months since then however, about 40,000 tons have been shipped, and the recent fresh currency depreciation has made the export so attractive that it is expected that another 20,000 tons may be got away during the next five or six weeks, if the Danube navigation remains open so long. Although the sterling price of wood on foreign markets is very low, yet when this is multiplied by an exchange of 600 or 700 to the £ it produces about four times the price the wood fetches in the country, and therefore even after paying freight etc. in sterling there is still a very large profit. If the exchange remains anywhere near its present level, the exports of wood next year will only be limited by the capacity of the railways to bring it down to the ports. The railway service has very much improved ; had it not done so the increased exports of the last five months would not have been possible. If circumstances are favourable it may be possible to ship 200,000 tons of wood next year.

One or two steamers have lately been loaded with benzine at Constantza, and, in view of the large profit yielded by the present rate of exchange, no doubt every effort will be made to increase it. Hitherto, difficulties both of transport and in other matters have kept the production down to little more than home consumption. The price in the country is very much below the price obtained abroad.

The quantity of grain shipped from January 1, to end of September, 1921, is officially given as 1,194,666 tons, compared with 337,665 tons in the same period in 1920. Of this year's export, 700 000 tons were maize, 300,000 tons barley, 90,000 tons oats, and 53,000 tons rye.

Since the free export of cereals was stopped on August 17, practically nothing was shipped except in a few cases where exporters were able to get special consideration from the Government for certain engagements in course of execution when the decree was issued. As is known, export was reserved to the Government except where the private exporter could make up his mind to deliver to the Government a ton of grain at a price much below the market for every ton he wished to export. This paralysed private export until a few days ago, while the Government monopoly organisation took a similar time to get into working order. The latter has now shipped its first two cargoes, while the recent depreciation in the currency has made it not only possible but also highly profitable for the private exporter to let the Government have half his holding of grain at a heavy loss for the sake of exporting the other half at a very much greater profit. Merchants are therefore at the present time, the first week in November, shipping all they possibly can ; but it is a question whether, when once they have shipped their old holdings, they will be able to buy fresh stuff at prices which will enable them to give the Government half of it at a loss which would be much heavier than hitherto ; this in face of the Government monopoly which has to make no such sacrifice. Merchants are doubtless now regretting that they did not buy larger quantities before, but of course they were afraid to do so in view of the constantly changing Government decrees. Another impediment to grain export is the fact that the Danube is unprecedentedly low, with patches of the river bed showing that were never seen before, and the river which is the principal artery of transport for grain is now not available for this purpose. On the other hand, the railways, although showing considerable improvement, are totally unable to handle any great quantity of grain yet. A large part of the grain in the country is therefore unavoidably held up until the spring.

The fairly large export of grain this year ought, one would think, to have had some effect on the Roumanian exchange. Unfortunately practically the whole of the exportable wheat surplus had been sold in advance by the Roumanian State to the French Government, and the proceeds used up at a time when the French franc was worth a much smaller number of lei than to-day.

There is a very large demand from abroad for sleepers, and Roumania might export very large quantities of beech sleepers but unfortunately the forest owners are afraid to produce them for fear of their being requisitioned.

It is announced that the bridge over the marshes leading up to the great bridge over the Danube at Cernavoda will be ready for traffic in another fortnight. This will place the port of Constantza again in direct railway communication with Bucharest and Europe generally.

## NEWS FROM ALL SOURCES.

The Indian Electric Supply and Traction Company has declared an interim dividend of 3 per cent. on Ordinary shares, payable November 28.

His Majesty's High Commissioner at Constantinople reports that the sanitary measures in force against arrivals from Adalia and Rhodes have now been removed.

It is proposed that iron and timber materials intended for the reconstruction of Salonika shall be exempt from the payment of import duties.

The India General Navigation and Railway Company has declared an interim dividend of 2 per cent. on ordinary shares and 21s. per cent. on Preference, both free of tax, payable November 30.

The Imperial Ottoman Bank, 25, Austin Friars, E.C., is prepared to receive from British holders of the Bulgarian Six per cent. Loan of 1892 coupons and drawn bonds due July, 1917, and January, 1918.

It is reported that representatives of a British shipping group have arrived at Prague for the purpose of terminating the negotiations started some time ago for the foundation of an Anglo-Czecho-Slovak shipping concern.

It is understood that the Czecho-Slovak Government has purchased from the Town Council of Komarno, on the Danube a site for 1½ million kronen, and the preliminary work for the establishment of a port is to be started at once.

The Motor Exhibition at Calcutta will open on December 19, and will continue up to the 24th. The exhibits will include practically every make of motor-car and motor-cycle on the Indian market, and also a full collection of accessories.

The Bombay, Baroda, and Central India Railway has received the sanction of the Railway Board to the carrying out of a further survey to determine the possibility of aligning the proposed Agra-Karachi broad-gauge connexion railway through Ajmar.

The Postmaster-General announces that uninsured parcels may now be sent by post to Roumania *via* Germany and Czecho-Slovakia. The rates of postage are 2s. 9d., 3s. 6d., and 4s. for parcels not exceeding 2 lb., 7 lb., and 11 lb. in weight respectively.

The Cunard Steam Ship Company announces that Major Fredk. Alan Bates, M.C., partner in Messrs. Edward Bates and Sons, and a director of the Royal Insurance Company, and Thos. and Jno. Brocklebank, Ltd , has been appointed a director of the company.

Mr. J. C. Montgomerie, the engineer sent out to Russia by the Anglo-Maikop group of companies to investigate the present condition of the group's properties in the Caucasus, reports that the oilfields and works are practically intact, and that the production of oil is proceeding.

The new Commonwealth Line service, London to Australia, via the Suez Canal, will be opened next month by the s.s Moreton Bay, built by Vickers, which arrived in the Mersey recently after undergoing her speed trials. Two similar steamers are being constructed at Barrow and two on the Clyde.

H.M. Minister at Belgrade reports that the export from the Serb-Croat-Slovene State of 30,000 rams and 20,000 sheep will be permitted through certain Customs Houses, subject to the payment of the prescribed export duties and to a guarantee being given for the disposal of the foreign currency received.

The India Office issues the following statement showing the form in which the balance of the gold standard reserve was held on October 31, 1921 ; In India, £1. In England ; Cash at the Bank of England, £1,074 ; British Government securities (value as on September 30, 1921), £30,528,905 ; British Government securities since purchased (cost price), £9,662,357. Total, £40,192,335.

## EXHIBITS AT THE MOTOR SHOW.

There is no doubt that this year not only British engineers but British coach-builders have surpassed themselves, and although as a general thing the cars shown this year are rather simple, as regards their engineering details, they are, taken altogether, much finer products than have ever been seen before at Olympia.

One of the most noticeable developments is in connection with accessibility, and the day has gone when owner drivers or chauffeurs had to perform all sorts of gymnastic feats to get at any part that requires attention. There is a story told of a make of car where it was necessary to unship the body and dissemble half the engine before a sparking plug could be changed. That was most certainly an exaggeration but the story had some germ of truth. To-day, we have changed all that and the accessibility of engine parts in particular is a thing to marvel at.

As I think my readers are aware I have always regarded the Rolls Royce and the Napier as being two of the finest examples of British motor engineering, and a lengthy examination of the exhibits staged by these two firms this year has comfirmed that opinion.

Taking the Rolls Royce for example the post war chassis has definitely established its superiority over any Rolls Royce model built before the war. This seems a bold thing to say, but I am certain that the makers will agree with me when I maintain that the models shown at Olympia, although nominally of the same horse-power, were far superior to those shown in 1913. I mention this because it has become rather the fashion to contrast post-war productions, to their demerit, with those turned out before the end of 1914.

Improvements are continually being made in the engineering side of the car, although comparatively few of them are manifest except under examination by an expert eye. For instance, the greatest improvement that has been introduced into the chassis since the war is the use of material of a better quality. The employment of lighter pistons and connecting rods and the greater average horse power now obtained from the engine are all improvements which do not reveal themselves except in the performance of the car, and it is in the direction of all-round performances that one can best appreciate the many improvements of the latest Rolls Royce chassis over its predecessors.

As regards the coach work of the three cars shown at Olympia this year, it can be said that this has revealed the highest possible standard of the body builders' work. The company have, I know, long recognised the fact that to improve a car from year to year means not only to improve the chassis, but the comfort and beauty of the bodywork, and in this instance a great deal of time seems to have been devoted to ensure that the coach work, both in its quality and its comfort, shall be fully in keeping with the chassis to which it is fitted, with every regard to the ultimate cost.

The carriage work shown consisted, firstly, of a superb Pullman limousine by Barker, secondly of an extremely handsome landaulet by Hooper, and thirdly, an open 4-seater by Mulliner, of Chiswick, all household names in the body building section of the motor industry.

The first of these, an interior drive Pullman limousine to seat six or seven passengers, was painted maroon and black, with plain cloth upholstery of a light shade. The body was fitted with frameless windows operated by mechanical lifters. A dictograph, roof ventilator, ladies and gentlemen's companion trays of beautiful silver design, all added to the comfort of this interior. In the driving compartment all the instruments were mounted on a walnut instrument board, and the body was fitted with four doors whereby access was provided to both the front and back seats from either side. A special ventilator at the top of the scuttle enabled the occupants of the front seat to regulate the temperature of the car at will.

The limousine landaulette has a most useful detachable extension over the driver's seat, and the body, which is painted a rich shade of dark blue with black wheels and mudguards, has accommodation for four or five passengers. Special attention has been given to the provision of adequate head room within the body, whilst maintaining, at the same time, a design having low and graceful lines.

The 4-seater open body, which has four doors by which the body or the driving seat can be entered from either side, is painted cream with a polished aluminium bonnet, and the whole car has a smart and attractive appearance. Special protection is afforded to the passengers, particularly at the back by giving more height to the sides of the body in relation to the back seat. The instrument board is of aluminium, and everything necessary in the way of equipment is provided.

The Rolls Royce engine, which is of the 6-cylinder type giving 40 to 50 nominal horse-power, has cylinders of 114 by 121 m.m. bore and stroke respectively, giving a Treasury, and therefore a taxation-basis, horsepower of 48.6. Water circulation is by centrifugal pump, forced lubrication is provided to all parts, there are two complete and independent ignitions, by high tension core and high tension magneto, and the firm fit their own well-tried and highly efficient speeds and reverse, side change, internal fabric to metal clutch of the cone type, bevel final drive, Dunlop detachable wire wheels, with Dunlop cord tyres which are, as all the world knows, of the highest possible quality, and whilst a Lucas lighting dynamo and wiring is fitted, the Rolls Royce provide their own make of electric starter. Altogether one of the soundest engineering propositions in the Show.

The Napier exhibit is just as striking, just as typical of all that is best in British motor engineering practice. Indeed so satisfactory has the new 40-50 h.p. six cylinder Napier proved in the hands of users that it will remain unaltered for 1922, beyond improvement in matters of detail to give greater convenience to owners of this super-excellent car. This is the chassis which has just recently satisfactorily completed a very arduous trial over the Alps under the official observation of the Royal Automobile Club.

The exhibit consisted of three complete carriages, ready in all respects for the road, and in each of these the coach work was by that famous London firm of coachbuilders, The Cunard Motor and Carriage Co., Ltd. In each case the body design struck a very high note, and the colour scheme was in every way excellent. The chief attraction was the Napier landaulette in which the body is divided into two, the driver's, or front seat, being separate from the main body of the carriage, the latter being arranged on "C" springs. These, in addition to the usual comfortable and flexible cantilever springing of the 6 cyclinder Napier, give to the occupants a singular ease of riding.

The main body is built to seat two, and the back half of the car is made to open. A canopy over the driver is operated on the roller blind principle, and the car was certainly one of the chief centres of attraction in the show. Other Napier exhibits were a sporting torpedo body on standard chassis, and a handsome royal saloon by Cunard.

The Napier engine of 40-50 h.p., 6-cylinders, with bore and stroke of 102 by 127 m.m., giving a Treasury rating of 38.4 h.p. is an extraordinary fine piece of work, down to the very smallest detail. I have not and never had anything but the highest measure of praise for the Napier, and in saying this I am speaking not only as a motorist, but as an engineer of over 35 years' experience. There is, as a matter of fact, no need to deal with either the engine or the chassis in detail. In every respect the detail work not only conforms with, but actually surpasses all ordinary standards of excellence.

Next week I hope to be able to deal with other striking exhibits examined personally at Olympia.

# Cotton & Cotton Goods.

## MANCHESTER REPORT.

(*From Our Own Correspondent.*)

*Manchester, Friday.*

We have again experienced a dull and featureless week. Throughout the market there has been nothing to stimulate buyers to further activity. The continued weakness in raw cotton circles has proved disconcerting, and, as is only natural in a falling market, buyers have held aloof. Varied opinions have been expressed with regard to a curtailment of production in the spinning section of the industry, and next Tuesday the Masters' Spinners' Federation are to meet to discuss the state of trade, and the advisability of taking a ballot of their members as to whether or not short time working should again be introduced. The cloth demand for Egypt, the Levant, and Constantinople has only been on an extremely small scale, and sales have been few and far between. Leading shippers believe that no increased business will be done until after Christmas. Sellers of Egyptian yarns have had a very poor week, and prices have been dropped. Only a few isolated transactions have taken place. With regard to India only a few offers have been about with occasional sales in light cloths. There is no expectation of a revival of demand for our Dependency until the Gandhi boycott is lifted. Buyers for China have not been altogether idle, but the rather encouraging advices being received from that outlet have not been reflected in the sales on this side. Not much business has been done for the republics of South America. A few transactions have taken place for our Colonies, and the home trade, but buying on the whole has been patchy. Quotations for American counts have been very irregular, and weak sellers have predominated. More spinning mills are gradually being stopped.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date November 9 :—

There is no improvement to record during the past week ; in fact, the market has displayed a sagging tendency throughout. Business at the Manchester end has gone steadily from bad to worse, yarns dragging, and sellers losing ground. A number of mills are gradually curtailing production, and to-day the Oldham master spinners are holding a meeting to decide on a definite policy on similar lines.

The United States Ginners' fourth report has just come through with a figure of 6,646,000 bales, and this, temporarily, at any rate, is regarded as a further " bear " factor in the situation, although, taking a long view, it is difficult to reconcile this attitude with the probable needs of the world. Coming just when the maximum weight of cotton is felt by the markets, and also at a time when the offtake by the trade has dwindled to very small proportions, the above figure will naturally be made the most of by those who incline to the " bear " side at the moment. Estimates of the total Egyptian crop have crystallised in the neighbourhood of a little over 3½ million kantars, as against 5,030,000 last season, and an average figure for the years immediately preceding the war of over seven million ! The news from India, to which we referred last week, continues to contain a crumb or two of comfort, although, so far, nothing very material seems to have come of it. The two greatest clouds at present in sight, namely, the erratic state of the Continental exchanges, and the widespread unemployment, are problems which, unfortunately, still remain to be solved. However, we see no reason to depart from our previous opinion that, in the long run, a shortage of cotton is likely to be experienced, and that holders, particularly of staple cotton, will see better prices than those ruling to-day.

The actual enquiry here has been small and featureless, with the exception of that for Sudan cotton, the sales of which make up a third of the week's total. The enquiry for this cotton during the last day or two, however, seems to have completely died away. C.i.f. business, for the greater part of the week, was of very small dimensions, but yesterday rather more was reported. Deliveries to spinners last week showed a big falling off from the previous high figures reported, and the stock of Egyptian cotton in Liverpool on November 4, was estimated at 71,970 bales. Total sales, 1,800 bales (includes 580 bales Sudan). Quotations of Sakellaridis are reduced 175 points, with Fair exceptionally 125 points lower, and Extra Fine 100 points lower. Brown and Uppers are reduced 150 points. Fully Good Fair Sakellaridis 21.75*d*.

## HOW TO BEAT THE BOLL WEEVIL.

The paramount problem in the Southern Cotton Growing States of America is how to destrov the boll weevil. Advices from Columbia S.C. state that the American Cotton Association has suggested the following plans for meeting the situation :— 1. Three-fourths of all open lands to be devoted to food and feed crops and to pasturage for live stock ; 2. One-fourth of the cultivated land to be planted in cotton, well fertilized and worked so as to produce the best yield under the most economic conditions of labour and other expenses ; 3. The encouragement of the rapid organisation of State-wide co-operative marketing associations for handling cotton and other farm products ; 4. The adoption of economic reforms and efficiency in the future baling, warehousing, financing, and marketing of the cotton crop upon the most approved and advantageous modern methods of orderly marketing.

## INCREASING TEXTILE MACHINERY SHIPMENTS.

The fact that textile machinery makers in Lancashire have now been able to shake off the effects of the coal stoppage during the summer months is proved by the official statistics for the month of October which show that 13,656 tons were shipped abroad, which is the highest monthly total since May last. In October, 1920, only 3,758 tons were exported, whilst in October 1913, the figure was 16,600 tons. For the period of ten months ended October last 125,293 tons were sent abroad compared with 39,574 tons in October 1920, and 147,125 tons in October 1913.

The difference between the amount for the current year and that for 1913 is not large, and shows that Lancashire firms to a great extent have recovered their pre-war trade, If the coal trouble had not been experienced it is more than likely that the 1913 figures would have been exceeded. So far this year buyers in India have taken 36,479 tons more, and larger quantities have also been purchased by the following countries, Japan 13,675 tons, China 11,406 tons, France 7,767 tons, United States of America 3,971 tons and South America, 3,399 tons.

## ACCIDENTS IN AMERICAN COTTON MILLS.

According to the estimate of the American Mutual Liability Insurance Company, Boston, Mass, 69 per cent. of the accidents in the cotton manufacturing industry resulting in lost time are due to non-mechanical causes, and only 32 per cent. to so called mechanical causes. The results are based upon data representing the exposure of 43,782 employees. Looms were responsible for 8.8 per cent. of the accidents, cards, 4.5 per cent., transmission 2.6 per cent., mules 1.9 per cent. and speeders 1.5 per cent. The principal non-mechanical causes of accidents were falls 22.4 per cent., handling material 13.2 per cent. infection 13.5 per cent., and contact with objects 7.9 per cent.

## AIR MAIL TO BAGHDAD.

The Postmaster-General announces that the air mails for Irak (Mesopotamia) which were dispatched from London on October 13, and 20 reached Baghdad by air from Cairo on October 31. In future, dispatches for onward transmission by the fortnightly Cairo-Baghdad air service will be made from London fortnightly on Thursday evenings, instead of weekly as heretofore. Correspondence included in them for Bushire and for all place in Persia north and west of it as well as for Irak, should gain from at least three days (Bushire) up to 14 or more days (Baghdad, Ispahan, &c.) in time of transmission. A special air fee of 1s. an ounce is charged, in addition to ordinary Imperial postage. Each packet should bear in the top left-hand corner the " Air Mail " label obtainable at any head or branch post office, and be clearly marked immediately below it, " Cairo-Baghdad." Parcels and insured packets are not admitted. The next Cairo-Baghdad air mail will be dispatched from London this evening.

---

According to Reuter's Athens correspondent a group of Greek financiers has founded, with the backing of the National Bank of Greece, a new financial institution called the " Securities Bank."

# Near East Markets.

## LONDON PRODUCE REPORT.

### Market Rather Unsteady.

Sugar.—Home refined has continued in fair demand at unchanged rates. West Indian crystallised has been done at 40s., a rise of 2s., while Czecho-Slovakian is unchanged at 19s. 9d. White Java is the same at 47s.

Coffee.—The market has been quiet. Costa Rica is unchanged at 130s., while Indian is the same at 112s. Jamaica remains at 144s., while Nairobi is unchanged at 106s. Futures are:—December 47s. 9d., March. 48s. 9d., May 49s., July 49s. 1½d., September 49s. 3d.

Oilseeds.—A weak tone has prevailed. Indian linseed is 9d. down at 16s. 6d., while La Plata has shed 1s. at 15s. Rapeseed has been dull with Toria 3d. down at 18s. 3d., and brown Cawnpore 3d. down at 17s. 9d. Cottonseed has been variable. Indian is unchanged at 9s., but Sakellaridis is 1s. 9d. down at 12s. 9d., while Egyptian black is 1s. 6d. down at 13s.

Seed Oils.—Prices have been steady. Linseed is 6d. up at 27s. 6d., while for November-December 26s. 9d. is quoted, and for January-April 27s. Rape oil has been dull, the crude variety being 2s. down at 48s., while refined is unchanged at 53s. Cotton oil has been very weak, refined common edible being 9s. down at 5c. Egyptian crude is unchanged at 42s., but deodorised is 3s. down at 52s. Turpentine is 3d. up at 68s. 6d.

Oilcakes.—The market has been fairly firm. Linseed cake has been done at 250s., while cottonseed cake is unchanged at 100s. Arachis cake has come to business at 220s., while palm kernal is the same at 110s.

## EGYPTIAN CROPS.

The Bulletin of the Egyptian Ministry of Agriculture gives the following particulars of crop conditions in October:—

Cotton.—The notation figures for this month are even lower than those for last month which were the lowest on record. The drop is principally in the Mudiriyas of Daqahliya, Minufiya, Beni Suef, Faiyum, Minya, and Girga. From the data now available, the crop is provisionally estimated at 3,300,000 kantars. It has been more difficult than usual to estimate the crop due to the fact that returns from farmers all over the country have differed abnormally. The Ministry is in possession of evidence which clearly shows that the poor returns have been largely due to late sowing and careless cultivation. When good seed was used and care taken over the cultivation of the crop, the results, though below last year's, have been far above the very low average of the country. There are no doubt many other factors contributing to low yields, one of them being the long rotations between mid-June and end of July. This is borne out by the fact that on well managed estates where farmers have artesian wells and could choose their time for watering, they have obtained better results than others who had not the same facilities.

Maize (Nili).—In some provinces the weather was reported to have been cold and unfavourable, affecting to some extent the growth of the crop. The water supply was sufficient. The formation of cobs is progressing in late-sown areas, while some harvesting has already been done in early-sown fields. Very slight attacks of Prodenia (in Beheira Province) and Sesania cretica (in Gisa, Minya, and Qena) have been reported. The crop has very slightly improved since September, but the yield is still expected to be below the average.

Millet.—The condition of the crop is fairly satisfactory, but the yield is expected to be below the average. There were very slight attacks of the Stalk-borer in Qena and Aswan.

Rice (Sefi).—The weather was favourable and there was an ample supply of water. Harvesting, threshing, and winnowing were the chief operations in progress. The crop is below the average.

Rice (Nili).—The cold weather has affected the growth of the plants and the ears are small.

Sugar Cane.—The weather was favourable except in Faiyum and Beni Suef where cold and damp have affected the growth of the plants. Elsewhere the condition of the crop was satisfactory. Cutting for human consumption was progressing in early-sown areas. The stalk-borer has been reported from almost all provinces and the mealy bug has been noticed in Asyut, Girga, Qena, and Aswan, the attack being slight. The crop is expected to be a little below the average.

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended October 28:—

Sultanas.—The total estimated arrivals to date amount to 140,525 bags as against 75,960 bags for the corresponding period of last year. The total estimated sales are 130,525 bags as compared with 67,960 bags for the same period last year, and the estimated stock unsold amounts to 10,000 bags as against 8,000 for 1920.

Figs.—The total estimated arrivals to date total 155,000 loads as compared with 152,000 loads last year. The total estimated sales are 150,000 loads as against 148,000 loads for 1920, and the estimated stock unsold (mostly inferior and damaged) amounts to 5,000 loads as compared with 4,000 loads for last year.

Shipments.—The s.s. Belgravian for Liverpool has on board 24,893 boxes sultanas, 463 cases figs, 69 boxes figs, and 2,939 bags figs. The s.s. Borodino for London and Hull, the s.s. Gulf of Suez for Liverpool, the s.s. Hermes for Amsterdam, and the s.s. Braga for New York are loading.

Markets—Prices for sultanas and figs in local currency have been entirely subordinated to exchange fluctuations, but with exchange for sterling (dollars, francs, and florins in like proportion) jumping about hourly with a maximum variation from 895 to 735 over the week, it is easy to realise the difficulty facing shippers in cabling out offers in foreign equivalents and having to await replies before operating. Business is absolutely a gamble on exchange, prices for fruit in local currency being generally slow to follow the sharp variations of exchange rates for the various foreign currencies in which shippers have to work their costs out. Market uncertainties have been greater this week than at any time since the opening of the season.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 7:—

Season.—October 31—Monsoon extended slightly northwards in Peninsula. November 1—active to the south of Peninsula. November 2—extended over most of Peninsula. November 3—active in Peninsula, except northern districts. November 4—weakened appreciably in Peninsula. November 5—retreated temporarily from northern half of Peninsula. November 6—further decrease in rainfall in Peninsula.

Condition of Crops.—November 2—Burma—unchanged. November 4—in Bengal, rice good, except Western Bengal, where rain needed. In Bombay, crops good. Spring crops assured over most of Presidency, owing to satisfactory rainfall. In Sind, crops generally good. Central Provinces—cotton, sesamum and rice very good. Punjab—November 3—cotton deteriorating, especially American. Otherwise crops generally good. Assam—November 7—sugarcane, tea and cotton normal. Rice normal to good.

Markets.—Bombay cotton market, November 3—steady. Fine M.G. Oomras December-January Rs. 421. March Rs. 416. Bombay cotton arrivals from September 1 to October 28, 278,000 bales as compared with 107,000 in the same period of the last year. Bombay piece-goods market, November 4—inactive on the whole. Divali week disappointing. Local goods moving steadily. Calcutta jute market, November 5—dull. Hessians very quiet; rates unchanged. Heavies steady. Some enquiry for Cees. At tea sale on November 1, quality offered was good, particularly from Dooars. Prices advanced three to nine pies for common and medium kinds. Better class teas firm. All markets interested, Persia showing more interest than for long time past. 327,466 packages sold to date at an average price of 9 annas per lb. November 5—special Straits quality rice, Rs. 610. November 4—shellac, T.N., R.s. 155.

No change in Bank Rates.

---

The traffic receipts of the Egyptian Delta Light Railways for the week ended October 20 amounted to £E14,446; total for year £E201,886. For the corresponding period of last year receipts amounted to £E18,224 and £E266,451.

---

The representatives of the Czecho-Slovak timber industry have decided to draw up a scheme for the establishment of a timber exchange. The plan has been submitted to M. Novak, Minister of Commerce, who has promised to institute an enquiry into the matter.

## ADVANCES IN RAW FUR PRICES.

The report of the London Fur Trade Association on the October Raw Fur Skin Sales states :—The attendance at the sales just completed has been very large and fully representative—buyers coming from the United States of America, Austria, Belgium, France, Germany, Holland, Italy, Scandinavia and elsewhere. The competition was well distributed ; it was very gratifying to note that France bought more freely than for some time past, the United States securing the larger part of the offerings in beaver, marten, blue fox and squirrel. Germany bought very considerably notwithstanding the very unfavourable exchange. The home trade was quiet throughout the summer, but experienced better demand during the past few weeks, and, having cleared a quantity of old stock, was able to support various articles such as skunk, American Opossum, white red, Japanese and kitt fox and wolf. Chinese and Japanese skins experienced good demand for raw red fox, Japanese fox, etc., but in kid and Thibet the demand was not so good, though a fair quantity was sold. Australian skins were fairly well upheld, the greater part being secured for Germany. Had the exchanges been more normal, it is possible that prices would have been still higher, but as it is the advance all round is rather greater than was generally anticipated. The comparison of prices given is with those of April—May last.

Badger, unaltered ; black bear, declined 10 per cent to 15 per cent. ; brown bear, slightly lower ; grizzly bear, unaltered ; beaver, advanced 25 per cent. ; civet cat, unaltered ; chincilla, advanced 15 per cent. ; ermine, advanced 10 per cent. ; fisher, advanced 10 per cent. ; fitch, advanced 20 per cent. ; blue fox, declined 20 per cent. ; cross fox, declined 10 per cent. ; grey fox, advanced 15 per cent. ; red fox, advanced 20 per cent. ; silver fox, declined 10 per cent. to 15 per cent. ; white fox, advanced 25 per cent. ; South American fox, advanced 15 per cent. ; white hare, no demand, nearly all unsold ; kolinsky, unaltered ; Persian lamb, advanced 15 per cent. to 20 per cent. ; lynx, declined 10 per cent. ; American marten, advanced 25 per cent. ; baum marten advanced 20 per cent. ; stone marten, advanced 20 per cent. ; mink, advanced 20 per cent. ; mole, advanced 30 per cent. to 40 per cent. ; monkey, unaltered ; black musquash, declined 10 per cent. ; brown musquash, first advanced 25 per cent. ; others advanced 50 per cent. ; southern musquash, not much alteration ; nutria, unaltered ; American opossum, advanced 20 per cent. ; otter, advanced 20 per cent. ; raccoon, advanced 10 per cent. ; Russian sable, unaltered ; skunk, as usual in October, a stale collection ; advanced 20 per cent. ; squirrel, advanced 15 per cent. to 20 per cent. ; wolf, advanced 25 per cent. ; wolverine, unaltered ; fur seals, Cape of Good Hope advanced 20 per cent. ; other sorts mostly withdrawn, limits being too high.

## CURRENT PRICES.

## IMMIGRATION INTO PALESTINE.

In regard to the cost of immigration into Palestine it is officially announced that none of the cost of the Department of Immigration and Travel is being paid by the tax-payers of Palestine. Fees are charged to immigrants and these fees have lately been raised to L.E.1. per head, except for children under 16, for whom the fee is 20 P.T. Fees are also charged to travellers in respect of passports. Owing to the suspension of immigration from May 2 to June 3, and its closer restriction subsequently, the fees from immigrants have not yielded any considerable revenue during the present financial year. Nevertheless, for the period from April 1, 1921 (the beginning of the financial year) to September 30, the revenue collected by the Department has been as follows :—Immigrants' fees, L.E. 2,249,250 ; passport fees, L.E. 5,752,230 ; miscellaneous fees, L.E. 21,628 ; making a total of L.E. 8,023,108. During the same period the cost of the Department has been L.E. 6,782,117 ; showing a surplus of L.E. 1,240,991. This sum has been carried to the credit of the general revenue of Palestine.

## ALEXANDRIA EXCHANGE.

*Supplied by G. L. Mortera, Alexandria and Cairo.*

Prices on October 28 were as follows :—Agricultural Bank of Egypt, £4,9-32; Alexandria Water Co., Ltd., £7 ; Anglo-American Nile Steam, £2¼ ; Associated Cotton Ginners, £23-32 ; Banque d'Orient, Fr., 56¼x ; Behera Ord., £E 9¼ ; Brasseries d' Egypte, Fr., 75 ; Building Lands of Egypt, £11-16 ; Cassi di Sconto Priv. Fr., 100 ; Ciments d'Egypte Priv., Fr., 90 ; Ciments d'Egypte Div., Fr., 24 ; Comptoir Fin. et Com. d'Egypte, £1; Consolidated Land, Pt., 5¼ ; Credit Foncier Fondateur, Fr. 850; Credit Foncier Act, Fr., 633 ; Credit Foncier, 1886 Oblig., Fr., 328 ; Crown Brewery Priv., Fr., 110 ; Crown Brewery Div., Fr., 130 ; Eaux du Caire, Capital, Fr., 81½ ; Eaux du Caire Jouissance, Fr. 104; Egypt and Levant, S.S. Ord., 26s. 1½d. ; Egyptian Delta Light Railways, £4¼ ; Filature National d'Egypte, £11 ; Immeubles d'Egypte Soc. an des., £5,7-16 ; Khedivial Mail S.S. Ord., 110s. ; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi £4¾; Kom Ombo Ste An Fondateur £33 9-16 ex. ; Land Bank of Egypt, Parts de Fond, £37 ; Lots Turc., Fr., 30 ; Menzaleh Canal Navigation Pt., 270 ; Nungovich Hotels, £7 ; Ramleh Railways, £2,5 8 ; Salt and Soda, 34s. 10½d. ; Tram d'Alexandrié Priv., Fr., 45 ; Tram d'Alexandrié Div., Fr., 56 ; Union Fonciere d'Egypte, £2,13-16; Egypt Hotels, £2 7-32; Urbaines et Rurales, £2 7-8.

# SHIPPING INTELLIGENCE.

## FUTURE OF PORT OF BUSREH.

### Suggested Loan.

A recent issue of the *Times of Mesopotamia* contains the text of a speech made by a representative of the Ministry of Commerce of the Government of Irak on the future of Busreh to a representative assembly at the office of the Mutasariff of Baghdad. We give the following extracts from the speech from which it will be seen that interesting developments may be expected :—

As the letter which recently issued from the Ministry of Commerce on the subject of a loan for the purchase of the Busreh Port appears to have given rise to some misapprehension, I thought it desirable, with the approval of the High Commissioner to invite you to a meeting here, in order to give me an opportunity of explaining the intentions of the Irak Government in the matter.

The object of the proposition was, as stated in the letter, to enable the Government, by becoming owners of the Port property to free itself from the inconveniences attached to a condition of affairs in which the local Government was responsible for the management of the Port, without having put its liability for the capital cost on to a definite or business-like footing. At present the Port remains the property of his Majesty's Government, and though it is contemplated that the ownership will be transferred to the Mesopotamian Government no formal transfer has yet taken place, no valuation of the property has been decided, and no arrangements have been made for the liquidation of the debt.

Our present intention is to manage the Port departmentally for a period of three years—an interval which should serve to clarify what is at present a very obscure commercial situation, during which it is hoped that what may be regarded as the normal year will occur, on the basis of which it would be possible for the Government to decide on a more permanent policy.

It is mainly to hasten the arrival of the normal period that we wish now to complete the transaction for the transfer of the Port, and in such a way as to secure that the administration of this local institution will be essentially under local control. That was the primary object of the proposal contained in the letter to which I am referring.

There is also another factor which makes the proposal a timely one, and which should, I think, commend it to your sympathetic consideration. The present uncertain tenure of the Port presents opportunities favourable to the invasion of interests which perhaps conflict with those of the business community in Mesopotamia. I believe that the general opinion of the commercial community in Mesopotamia is opposed to the creation of a transport monopoly.

Rumour has been prevalent that negotiations have been in progress for the transfer of the Port and Railway to a well-known group in London. I should like to emphasize that this Government has had no share whatever in any such negotiation, which are entirely opposed to its policy, nor have they had any knowledge that such negotiations were on foot.

On being informed of the rumour regarding the group in question, the High Commissioner telegraphed to the Secretary of State to enquire whether there was any truth in it, and has received an assurance that there is not. That is very satisfactory but at the same time we must remember that there are strong interests in existence which may attempt to secure a position in this country in connection with the Port which may be in direct conflict with the interests of local traders.

It is primarily then in connection with the protection of your own interests that the Government wish you to consider this proposition for a loan. Subject to the reservation of the principle of departmental administration for three years, which in itself precludes any idea of admitting a monopoly, the Government are anxious to make arrangements to ensure that the administration of the Port is conducted entirely in the interests of the community.

**ANCHOR LINE**

**First-Class Passengers only.**

**LIVERPOOL TO BOMBAY.**

**KARACHI via Bombay calling at Gibraltar & Egypt**

*Papayanni Line.*—S.s. Flaminian for Tangier, Malta, and Alexandria, (Liverpool, November 19); s.s. Belgravian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 26).

*P. and O. Line.*—S.s. Plassey for Bombay (London, November 18); s.s. Sicilia for Colombo, Madras and Calcutta (London, November 18); s.s. Mirzapore for Bombay (London, November 26); s.s. Khyber for Colombo, Madras, and Calcutta (London, December 2).

*P. and O. British India Line.*—S.s. Mashobra for Bombay and Karachi (London, November 18); s.s. Nerbudda for Colom bo Madras and Calcutta (London, November 26); s.s. Nuddea fo Colombo, Madras and Calcutta (London, December 3); s.s. Hatimura for Colombo, Madras and Calcutta (London, December 10); s.s. Mudura for Bombay and Karachi (London, December 16).

## FINANCIAL POSITION OF THE SUDAN.

In the House of Commons on November 9, Major Glyn asked the Under-Secretary for Foreign Affairs whether the Government had come to any decision in regard to the present financial position of the Sudan, especially the financing of the works now in progress for the completion of the Gezirah dam.

Mr. Harmsworth: It is anticipated that, as in the past, the accounts of the Sudan Government will close with a surplus at the end of the current financial year. It will, however, be necessary for that Government in due course to raise further funds for the completion of the Gezirah scheme, and this matter is receiving their consideration.

Major Glyn also asked the Under-Secretary for Foreign Affairs whether the security for the investment of British capital in the development of the Sudan would be in any way unfavourably affected as a result of any treaty or agreement come to between the Egyptian delegation now in this country and the British Government; whether it was the policy of the British Government to urge upon the Sudan Government the importance of encouraging British capital to be invested in the development of the Sudan both by providing transport and bringing more soil under cultivation; and whether it was necessary for British would-be investors to be discouraged from getting their schemes advanced by the Government of the Sudan pending the settlement of the financial difficulties of the Sudan Government's irrigation schemes.

Mr. Harmsworth: The reply to the first part of the question is in the negative. As regards the last two parts, the Sudan Government are well aware of the desirability of attracting capital to the Sudan, but the development of the country must proceed gradually, so that it may not be burdened in the early stages with loan charges in excess of its capacity.

Major Glyn further asked whether the Government of the Sudan, faced with a serious financial position on account of the liabilities incurred as a result of the Gezirah dam, were unable to grant any concessions or trade agreements that ultimately depended upon the security offered by the revenues of the Sudan as to payment of interest, etc.; and whether under these circumstances the British Government could take any steps to assist in the development of the Sudan by British capital.

Mr. Harmsworth: I would point out that the Sudan Government, having regard to its existing liabilities, is unable to grant concessions likely to diminish its future revenue. With regard to the last part of the question I would refer the hon. and gallant member to the terms of the Trade Facilities Bill.

The Anglo-Egyptian Bank recommends a dividend of 10s. per share, free of tax, making 15 per cent. for the year, and bonus of 2s. 6d. per share, writing £4,000 off premises account, carrying forward £31,457. Meeting, November 29.

The Burma Railways announce a final distribution of £1 5s. per cent., together with a bonus of £1 per cent., both subject to income tax, on account of surplus profits, to be distributed with the guaranteed interest payable on January 2 next, making in all a return of 7 per cent. for the year 1921-22.

The report of the Bengal Dooars Railway for the year to March 31, state that capital expenditure amounted to £4,579. The net earnings (less Indian tax) were £37,053, plus gain by exchange, £9,843. The amount available was £59,974, less 3 per cent. interim dividend paid on Ordinary stock, leaving £57,974. The directors recommend a final dividend of 3 per cent. on Ordinary stock (subject to tax), carrying forward £45,974.

## TENDERS INVITED.

*Tenders are invited for the following contracts, and must be made by the dates mentioned.*

*(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)*

**Egypt.**

Paper, etc.—The Controller of Printing and Stationery, Ministry of Finance, Dawawin P.O., Cairo, invites tenders for the supply of paper, bristol board, and strawboard, required by the Egyptian Government Press, Cairo, for the year 1922-1923. Representation by a local resident agent is essential. December 17. (D.O.T.).

General Stores etc.—The Secretary General, Port and Light houses, Arsenal, Alexandria, invites tenders for the supply of general stores, electric gear, chemicals, oils, paints, ropes, canvas hoses, etc., required for the first half of the financial year 1922-1923. Offers will be valid for twenty days from December 21, and delivery effected within three months from date of order. Samples for analysis should be submitted fifteen days before the date fixed for accepting tenders. Conditions of Tender and Specifications are obtainable from the Stores Department, Arsenal, Alexandria. December 21.

**Syria.**

Road Rollers.—The Direction des Travaux Publiques, Grand Liban, Beyrout, invites tenders for the supply of five road rollers weighting 4—6 tons on the road, having 20—30 b.h.p. oil engines, with a radiator of large surface, a minimum speed of four to five kilometres per hour on a 7 per cent incline, and a maximum speed of seven kilometres per hour. They are required to be equipped with two powerful brakes, and ballast boxes made from steel sheets, having a construction capacity of 1.3 cubic metres. All component parts to be interchangeable. Plans and specifications, catalogues, prices and full particulars, including date of delivery, should be submitted to the Direction Des Travaux Publiques, Grand Liban, Beyrout, Syria. The closing date for the receipt of tenders is apparently not fixed.

**India.**

Laminated Springs.—The Great Indian Peninsula Railway Company invites tenders for the supply of (1) laminated springs, and (2) pig iron. (Specifications, £1 each, Secretary, 48, Copthall-avenue. November 22.)

Railway Material.—The Bombay, Baroda and Central India Railway Company, invites tenders for the supply of (1) material for construction of bogie carriages (2) parts for construction of bogie carriage underframes, (3) wheels and axles, (4) laminated bearing springs, and (5) helical springs. (Specifications, Offices of Company, 91, Petty France.) November 25.

Steel Boiler Tubes.—The High Commissioner for India invites tenders for the supply of (1) steel boiler tubes, and (2) brake truss bars. (Specifications, Director General, Indian Store Department, Belvedere-road, Lambeth). December 1.

**Yugoslavia.**

Khaki Drill.—The Army Clothing Department of the Serb, Croat, Slovene Ministry of War and Marine invites tenders for the supply of 825,000 metres of Khaki Cotton Drill for summer uniforms. A translation of the conditions of tender and a small sample of the cloth required have been received from the Commercial Secretary to His Majesty's Legation at Belgrade, and may be inspected by United Kingdom manufacturers on application at the Department of Overseas Trade (Room 58) 35, Old Queen-street, Westminster, S.W.1. Local representation is essential when competing for Government contracts in the Serb, Croat, Slovene Kingdom. November 20.

**Bulgaria.**

Telephonic material.—The Bulgarian Direction of Posts, Telegraphs and Telephones invites tenders to be adjudicated in Sofia on January 10, 1922, for the supply of material for 60 fifty line telephone exchanges and 15 hundred line exchanges. Tenders are desired from manufacturers direct. Full particulars of the contract can be obtained from the Bulgarian Legation in London, 3, Queensberry Place, S.W.7.

## AGENTS WANTED ABROAD.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," The Near East," 1, Devonshire Square, London, E.C.2." when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

118. Well known Sports Goods House with factory in India, wish to appoint Agents in Near and Middle East where not at present represented.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank.

Stamboul, November 5.

The market has been adversely influenced by the considerable depreciation of the exchange and the sharp daily fluctuations that have followed. Some purchases of a speculative character have given a certain activity to the market. At the same time no consignments are being made to Roumania, and those for Batoum have greatly decreased on account of the stagnation and the difficulties connected with this kind of trade.

The rise in the price of manufactures and the rate of the exchange have had the effect of decreasing orders. On the other hand holders are showing no eagerness to realise their stocks.

*Produce.*—Sugar. The tendency is always for prices to decline; the total business is again smaller. A new fall in Cuba is to be noted, and Czecho-Slovakia is making offers at lower prices. Stocks here are estimated at about 10,000 sacks. Quotations are:—American sugar 8 dollars per 100 kilos; Belgian sugar £20 per ton; in Customs. £T26.27 per 100 kilos.

Coffee.—Profit taking by German holders and other speculators has influenced the Rio market and prices have fallen. Very little business has been transacted. Stocks here being short arrivals have been disposed of at remunerative prices. Quotations are: Rio No. 1, 62s. per 100 kilos; here Ps. 62-70 per oke in transit.

Mamouret-ul-Aziz.

The report for September states:— Merchants are continuing to hold aloof from business because the cost of merchandise bought in Constantinople would be increased by from 40 to 50 per cent. by the Customs duties and the expenses on their arrival in the warehouse. But as on the one hand it would be impossible to obtain stocks in winter because of the poor means of transport, already so dear at this time (30 piastres per kilo from Samsoun to Mamouret-ul-Aziz), and on the other the peasant, who has sold his crop, has money to spend, merchants are entering into some small transactions. The autumn sowings have not yet commenced for lack of rain. Wheat costs two gold piastres per kilo.

## GIANT GRASSES FOR PAPER MAKING.

Hitherto tropical and sub-tropical countries have relied mainly for their supplies of paper-making materials on the forests of the northern temperate regions. Wood pulp, prepared from spruce and other timbers in the United States, Canada, and Scandinavia, is, for example, imported into India and Australia for the manufacture of the cheaper kinds of paper, whilst countries such as those of tropical Africa, in which manufacturing industries are in a less advanced state, import practically all their paper ready-made. In almost all these countries, however, there are native products which could be used for making paper.

Bamboos appear to be the most promising source of paper-pulp in India, and the Far East, whilst in other countries large grasses, many of which are similar to bamboos in appearance, exist over extensive areas and could be used for the same purpose.

In the current number of the Bulletin of the Imperial Institute a comprehensive account is given of these giant grasses. Preliminary trials have proved that many of them give a satisfactory yield of pulp, which produces good paper. In the case of the so-called Elephant grass of eastern tropical Africa, these results have been confirmed by large scale trials and the material has been used in Uganda for Government printing paper, which is of excellent quality. Such grasses, owing to their bulk, could not be exported to Europe at a profit, but it is suggested that they might be employed locally for paper-making or for conversion into pulp for export.

# Stock and Share Markets.

## TONE FIRM : BUSINESS RESTRICTED.

*(From Our Own Correspondent.)*

London, Monday Evening.

A distinctly better turn has been taken by the markets during the past week, and in a number of directions higher prices are to be recorded. The Prime Minister's speech at the Guildhall has helped to restore confidence, and with the feeling growing that the worst of the trade slump has been passed the general public is beginning again to look out for likely investments, which it may be added do not take very much finding at the present time. Of course the Irish situation is still exercising a depressing influence, and a settlement of that problem would give a great fillip to the markets.

Gilt-edged securities have on the whole been extremely firm. Consols are 3-8 up at 49,1-8, but War Loan Fives are 3-16 down at 87,1-8 xd. Fundings are ⅜ up at 72½. The India 7 per cent. Loan is unchanged at 104, while the Sudan 5½ per cent. Loan is 94,3-8. In Near Eastern securities which rank among British funds Egyptian Guaranteed 3 per cent. are unchanged at 68¾. Turkish Guaranteed 4 per cent. 1855 are the same at 69, while Greek Guaranteed 2½ per cent. 1898 are unchanged at 68.

The fluctuation of the mark has again had a considerable influence in the foreign market. German 3 per cent. were at one time down to 2, and are now 2,1-8 after having been somewhat higher on an improvement in the mark. French War Loan 5 per cent. are 37¾, a rise of ¾, while Italian Rentes are unchanged at 23. Japanese securities have been firmer, the 4 per cent. 1899 issue being 61½, while the 4 per cent 1910 issue is 61.

Greek securities have been steady. The 5 per cent. 1884 Loan is unchanged at 34, while the 5 per cent. 1881 Loan is the same at 34. The 4 per cent. 1902 Loan remains at 32, while the 5 per cent. Funding Loan is unchanged at 33. The 5 per cent. 1914 Loan is 36.

### Industrials Steady.

A firm tone has been in evidence in the Industrial section generally, but business has been on a very small scale. Textiles have, however, been rather dull on reports from foreign markets. Courtaulds are unchanged at 33s. 6d., but Bradford Dyers are 1-16 up at 1,9-16. Iron, Steel, and Engineering Shares have continued to present a firm appearance. Armstrongs are unchanged at 16s. 6d., while Vickers are the same at 11s. 9d. Guest Keens are 3d. up at 28s. 6d., while Cammell Lairds at 14s. are 6d. up. The American proposals with regard to armaments came too late to influence prices, and it will be interesting to see what effect they will have this week.

There has been an improved demand for Shipping shares, and the tendency has been for prices to rise. P. and O. Deferred are unchanged at 280. Furness Withy are 3d. up at 22s., while Cunards are 1s. up at 17s. Royal Mails were also a firm spot at 79.

### Oils Buoyant.

Oils have developed considerable strength, and have, in fact, provided the outstanding feature of the week, though closing prices are below the best as the result of profit taking. Burmahs have been in steady request, and are 1-8 up at 5,13-16. Shells have been a specially firm spot, closing at 4,27-32, but Mexican Eagles are about the same at 3,9-32. Anglo-Egyptian have been in some demand on favourable reports regarding the prospects of increased production, and are 1-8 up at 1,5-16. Roumanian Consols are 6d. up at 7s. 9d., while Steaua Romanas are unchanged at 8s. 3d. Phoenix are 6d. up at 7s. 9d., but Dacia Romanos have shed 1-16 at ¾. The Trinidad group have shared in the general improvement of the market, Trinidad Centrals being 3,1-32, and Trinidad Leaseholds 1,13-16. Anglo Persian 1st and 2nd Prefs are both 22s.

Mines have been fairly steady. Kaffirs showed weakness as a result of General Smut's speech regarding the effect on the industry of the cancellation of war debts by America unless working costs were reduced, but subsequently improved somewhat. Chartereds were again in some request, and are 3d. up at 11s. 9d.

### Banks Firm.

Bank shares have shown a firm tone. Agricultural of Egypt 3½ per cent. Bonds are unchanged at 54½, while the 3½ per cent. Guaranteed Bonds are the same at 55½. Imperial Ottoman Bank remain at 7, but National Bank of Egypt are 1-8 down at 18,5-8. Bank of Athens are unchanged at 2, as are Ionian Banks at 3,5-16. Chartered of India have advanced sharply to 15, a rise of 5-16, while National of India are ¼ up at 37½. P. and O Bank are unchanged at 11½, while Imperial of Persia are the same at 5,1-8, and Bank of British West Africa remain at 4¾.

Land shares have shown a rather variable tendency. Béhéras are 1-8 up at 9, while Béhéra Prefs are unchanged at 3,1-8. Egyptian Delta Lands are 3d. down at 7s 6d., while New Egyptians have shed 1s. at 22s. 6d. Egyptian Consolidated Lands remain at 1s. Sidi-Salems are unchanged at 1, while Union Fonciéres are 3-8 down at 2½. Sudan Plantations on the lower dividend declaration lost 1-8 at 2¾.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

(1) The Modern Chaotic Exchange Situation
(2) The French Exchange Position.
(3) German Industry and the Mark.
(4) The Italian Lira.
(5) The United States Dollar.
(6) Miscellaneous Exchanges
(Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

## LAND TRANSFER IN PALESTINE.

### Conditions of Purchase.

The following communique has been issued by the Palestine Government :—It is believed by some that sales of land above 300 dunams in area or L.E.3,000 in value cannot be made, or can only be made with difficulty. That is not so. The only rule is that the Governor of the district can give permission for sales, below those limits, on his own authority ; but sales above these limits can be made with approval of the High Commissioner. Permission for the sale of land above 300 dunams in area or L.E. 3,000 in value has been given between October 1, 1920, and September 30, 1921, in 26 cases. In no transaction has the High Commissioner's permission been refused. Out of over 2,000 applications for transfers of property which have been received during the year that the Land Registries have been open 59 only have been refused. The refusal was based on the following reasons :—27 cases—ownership disputed. 14 cases—Bei Bel Wafa, an illegal form of mortgage. 7 cases—absence of other means of maintenance. 7 cases—no title. 4 cases, insufficient consideration.

It appears to be thought that land can only be bought by a person residing in Palestine, and that Palestinians who are absent temporarily from the country, in America or elsewhere, or other non-residents, cannot acquire land in their own name. This also is not so. A land purchase can be carried through on behalf of a non-resident in Palestine, and can be registered in his own name, in the same way as in the case of a resident, except that he will have to appoint an attorney to act for him. The purposes of the restrictions in the Land Ordinance are, first to prevent land being bought for speculative purpose and held back from building or other use for long periods in the hope of a rise in price ; and, secondly, to protect the present cultivators of agricultural land from being treated unfairly when the land is transferred from one owner to another. When the purchaser can satisfy the Government on these points and if the title to the land is good, there is no difficulty in obtaining sanction to the sale, whether the area be large or small, and whether the purchaser resides in Palestine or elsewhere.

## ZIONIST PROJECT TO EXPLOIT JORDAN WATERS.

In the House of Commons last week Sir W. Joynson-Hicks asked the Colonial Secretary whether the Palestine Government had given a contract for the erection of a large plant for electric power supply to Mr. Rutenberg, a Russian Jew ; whether tenders were obtained from other firms ; and whether it was intended to employ Jewish labour in carrying out this work in exclusion of Palestinian labour.

Mr. E. F. L. Wood (Under Secretary, Colonies)—Mr. Rutenberg, acting by the consent and with the co-operation of the Zionist Organisation, applied to the Palestine Government for the grant of a concession for the utilisation of the waters of the Rivers Jordan and Yarmuk, and other rivers in Palestine for generating electrical power, and for the distribution of that power throughout the country. The project was examined exhaustively both by the Palestine Government and by the Colonial Office, and it was decided that it would be advantageous to Palestine and its population generally that the project should be carried out. An agreement has therefore been entered into with Mr. Rutenberg, by which the Palestine Government binds itself to grant him a concession, subject to his fulfilling certain conditions. No other applications for such a concession have been received from other parties, and having regard to all the circumstances of the case, apparently no other person or organisation was in a position to apply for such a concession, or to carry the project out satisfactorily. Mr. Rutenberg, so far from intending to exclude Palestinian labour, may be expected to give employment to Palestinians in large numbers.

Sir W. Joynson-Hicks—Is the Government providing any of the money ?

Mr. Wood—I would rather have notice of the exact terms of the arrangement.

---

A recent Budapest message states that a Government Decree is promulgated for the organization of the office for the supervision of the liquidation of pre-war debts between Hungarian and Allied subjects.

## TRADE WITH INDIA.

### Economic and Commercial Conditions.

There will shortly be published by the Department of Overseas Trade a review by Mr. T. N. Ainscough, O.B.E., H.M. Senior Trade Commissioner in India and Ceylon, of the conditions of British trade in India during the years 1919-20 and 1920-21, revised to October, 1921, and the prospects for the future. This report covers one of the most interesting and abnormal periods in the recent history of British trade in India, and the mass of information (the report covers over 350 quarto pages) together with a few general suggestions made by Mr. Ainscough will go far towards assisting traders to form their conclusions from the general tendencies which are gradually shaping themselves and which will in due course crystallise into the future normal position.

One fact that emerges with striking clarity is that conditions have, in many instances, undergone radical changes, and that a new India, in a commercial sense, has been and still is in the course of development. The predominant importance of the Indian market to the commercial community of this country, and the wide general interest in the recent developments which have taken place there, make it reasonable to anticipate an extensive public demand for this report.

## COMPANY NOTES AND REPORTS.

### Bengal-Nagpur Railway.

The report of the Bengal-Nagpur Railway Company for the year ended March 31 states that the amount of capital raised to March 31, 1920, was £31,267,132, the Secretary of State's open line capital was increased by £2,975,390. and his advances for unopen lines were increased by £350,155, making a total of £34,592,677. The expenditure during the year was £3,255,601, stores and other amounts in suspense on March 31 amounted to £2,469,170, making the total expenditure £36,061,465. During the year the stock of the 5 ft 6 ins gauge was increased by 44 locomotives and 1,350 goods vehicles. and decreased by five coaching vehicles, and the stock of the 2 ft. 6 ins. gauge was increased by five locomotives. 70 locomotives and 1,034 goods wagons of the 5 ft. 6 ins. gauge, and 40 wagons of 2ft. 6ins. gauge were shipped to India during the year, and, in addition, 46 locomotives and 1,182 goods wagons are under supply or order ; five locomotives of the 2ft. 6 ins. gauge are also under supply.

The gross earnings totalled Rs6,42,66,227, a decrease of Rs14,90,745, and the net earnings were Rs2,18,57 718, a decrease of Rs54,02,904. The proportion of working expenses to gross receipts was 66 per cent., compared with 58.54 per cent. in the previous year. The excess of net. earnings over interest was Rs56,87,027, less outstanding earnings Rs30,658, leaving surplus profits Rs56,56,969. The company's share of these surplus profits amounted to Rs.6,56,701, or approximately, at the present rate of exchange, £45,148. The shareholders have received as guaranteed interest for the first half of the year under report £1 15s. and an interim dividend of 15s. per cent., together with bonus of 10s. per cent. less tax. In addition to the second half of the guaranteed interest at £1 15s. less income tax at 6s. in the £, the directors now recommend a further dividend of ¾ per cent. less income tax at 4s. 9d. in the £, together with a bonus of 10s. per cent. for the year ending March 31, 1921, less income tax at 4s. 9d. in the £. After providing for income-tax, corporation tax and for the annual contribution to the compassionate grant fund, the balance at credit of the surplus profits account at the end of 1921 will be about £183,500.

### Sudan Plantations.

The report of the Sudan Plantations Syndicate for the year ended June 30, states that cotton crops dealt with at ginning factories were as follows :—Zeibab, 1,684 bales ; Tayiba, 1,237 bales ; Barakat, 1,646 bales ; total of 4,567 bales compared with 6,670 bales for previous year. Owing to the depressed state of market no sales had been made at June 30 last, and cotton is shown in balance-sheet either at cost or at brokers' valuation. During the visit of the Chairman to the Sudan last winter arrangements were made by him to purchase jointly with the Sudan Government a considerable portion of Tokar cotton crop. The total of the joint purchases somewhat exceeded 7,000 bales. For the reason stated above their value likewise figures in the balance-sheet at cost. The pumping station at Hag-Abdullah has been completed and is providing irrigation for 6,000 feddans, which area should yield an important addition to this season's production. The net profit was £38,968, plus £176,812 brought in making £215,780. In view of the considerable carry forward last year and of improvement in the cotton market the Board recommends a dividend of 15 per cent. equal to 3s. per share, less tax, carrying forward £170,780. Meeting, Winchester House, E.C., November 23, noon.

---

Reuter's Prague correspondent announces that the following commodities have been cancelled in the export free list, their export being conditional upon a licence from the Ministry for Foreign Trade :—Colonial produce, spices, tropical fruit, ropes, coverings for wagons (Plachen), raw wood, wool, asbestos goods, locomobiles, certain salts and liquefied gases.

## NOTES OF THE WEEK.

### *Great Britain and Egypt.*

The failure of the British and Egyptian Governments to arrive at an agreement regarding the future of Egypt is a keen disappointment to those who hoped that among the various questions awaiting adjustment which are preventing the world's return to more settled conditions this one at least was about to be eliminated. A statement issued by the Foreign Office announces that "the proposed agreement drawn up by His Majesty's Government, together with the reply of the Delegation thereto, have been dispatched by post to Egypt, and will be handed with an explanatory note by Lord Allenby to the Sultan." Simultaneous publication of the documents in the two countries is then promised, and until this takes place, final judgment on the break-down of the negotiations must be withheld. It is difficult to believe that the military problem alone should have been allowed to wreck the negotiations. But whatever the distance that may be shown to have separated the British and Egyptian points of view, the Egyptians have the certain knowledge that a great step forward has been taken towards the attainment of their aspirations. They can adduce no better evidence of the justice of their claims than scrupulously correct behaviour in the face of their present disappointment. We can only hope that Adly Pasha will still keep control of the situation, as proof of his confidence in himself and in the line of policy that he has adopted. Now more than ever he can show Egypt and the world the difference between a statesman and the irresponsible demagogue of the Zaghloul type.

### *The Situation in Roumania.*

The rapid depreciation of the *leu* in Roumania has inevitably caused grave heart searchings in political and financial circles in that country. Audiences given by King Ferdinand to the leaders of the Opposition Parties were regarded as a sure prelude to a Ministerial crisis, coming as they did after one resignation from the Cabinet. But the King's action has been explained as having been prompted by a desire to be informed of the Opposition point of view, in the face of the refusal of the National Liberal and the Transylvanian deputies to attend the sittings of the Chamber. Parliament will shortly meet again, and it is only natural that every effort should be made to enable the country to present a united front to the crisis through which it is passing. Although General Averescu's Government, as a result of the abstention of two of the Opposition parties, is assured of an overwhelming majority in the Chamber, its position in the country would be strengthened by more cordial relations with its opponents. In some quarters it is felt that only a Coalition Government of all the chief parties will meet the situation; but it remains to be seen whether the present Cabinet is willing to share its responsibilities to this extent.

### *Holding up the Mirror.*

The picture of Roumanian politics given by the Chairman of the congress of the Conservative-Progressist Party recently held at Jassy was not overpainted. "Calumnies, insults, and passion," he declared, "take the place of ideas and programmes. Political strife as indulged in by our parties is absolutely outrageous; and if the world were to judge us by what we say of one another, it and we would have to despair altogether of the future of the country." In these circumstances the prospects of a genuine Coalition Ministry would not appear bright; but it is a step in the right direction when the Roumanian politician begins to see himself as others see him. M. Marghiloman, the leader of the party, speaking at the same congress, also struck a more dignified note than a Roumanian Opposition leader always feels called upon to adopt. If the example thus set could be generally followed, and if the political leaders would compel their organs in the press to be more restrained in their language when referring to their political opponents, Roumania would probably find it easier to bring the talent and the resources that the country possesses in such a marked degree to bear upon its present difficulties.

### *The Allies and Asia Minor.*

If France intended that the Angora Treaty should be the means of hastening the Turkish settlement, she has signally failed in her purpose. Its first effect has been to concentrate attention on the rift that it is supposed to have made in the Entente lute; the second, to give precedence to measures for the protection of the Cilician minorities rather than to the terms of the settlement of the Asia Minor problem. Whatever the French Memorandum to the British note of protest against the Treaty may try to prove, there can be no doubt that the French Cabinet has been guilty of a criminal act in causing a stampede among the peoples who had been told to rely

Digitized by Google

upon her protection. It may be possible to represent their panic as premature and exaggerated; but it was France's duty to see that there was no cause for the least uneasiness. Her supreme selfishness has betrayed her into a grave breach of trust. We are inclined to believe that the most effective way of stopping massacres and oppression in Turkey is to cease driving the Turks up against a wall; when they no longer regard themselves as struggling for their existence against a hostile world, they will abandon any belief that they may previously have entertained in the efficacy of massacres and deportation as a method of self-preservation. But to place the Turks at their ease in this respect, they must be freed from attack or pressure in every direction. The French have deliberately left the Cilician minorities at the mercy of the Nationalists, while the latter are smarting under a sense of indignity at having a Greek army on Turkish territory, and the mere panic into which the unhappy people have fallen invites excesses on the part of the Turkish lower orders. If the Allied Governments do not wish to witness the tragedy so carefully staged by the French, they had better cease to wrangle over the betrayal of the Christians in Cilicia and set to work to bring about a general settlement with Turkey.

## *A Treaty with Irak.*

The British Government last week notified the Council of the League of Nations of an important decision to which it has come regarding its relations with and duties towards Irak. Through Mr. H. A. L. Fisher it announcd that it had come to the conclusion that its obligations *vis-à-vis* the League will be most effectively discharged if the principles governing them are embodied in a treaty between His Majesty's Government and King Faisal. This decision, Mr. Fisher explained, had been reached as the result of a march of events so rapid that it had not admitted of consultation with the Council before acting; the recognition of a local sovereign had modified the position of the Mandatory Power; and it was to meet the modified situation that the Treaty was proposed. Subject to certain conditions, the British Government holds that such an instrument will provide a more satisfactory definition of the relations between the Mandatory Power and the Mandated State than any other device. It must not, of course, contravene either the spirit or the letter of the League of Nations; and in addition it must provide for: (1) British control over the foreign relations of Irak, (2) due fulfilment of the international obligations incurred by the British Government, and (3) such measures of financial control as may be necessary.

## *King Faisal's Attitude.*

Inasmuch as it makes for direct dealing between this country and Irak, the arrangement proposed is doubtless a good one; but Mr. Fisher's statement insisted that it was not intended as a substitute for the mandate, which will remain the operative document defining the obligations undertaken by His Majesty's Government on behalf of the League of Nations. This should satisfy all parties: Irak will have an arrangement with Great Britain which it will easily understand, and no third party can have any reasonable ground for suspecting any 'British perfidy.' King Faisal, as Mr. Fisher reminded the Council, has already expressed his willingness to include in a Treaty all proper provisions that the government of Irak shall be carried on in strict conformity with the spirit of the Covenant of the League; and there should be little or no difficulty about drafting the Treaty and getting it signed, sealed and ratified in a very short time. Reports recently received in this country show that King Faisal on his visit to Mosul and the North has been received with no less enthusiasm than he was in Baghdad and the South. A noteworthy feature of his reception at Mosul was the honour done him by Kurds as well as by Arabs, and by Christians of many sects as well as by Moslems. Even the Yezidis of Sinjar, the "devil-worshippers," are reported to have acclaimed him. Irak has undoubtedly made a good start under its new ruler.

## *Malicious Rumours.*

Quite apart from the negotiations between the Marquess Curzon and Adly Pasha, Egypt last week provided two rumours, both mischievous and both utterly false. One, set about by supporters of Zaghloul Pasha, was to the effect that the trial of persons concerned in the recent riots at Alexandria was being conducted by the standing military court in secret. As a matter of fact special accommodation has been provided for Press representatives, at least one paper is reported to have been represented at all the sittings of the Court, and no objection has been raised to the widest publicity being given to the Court's proceedings. The other rumour was probably floated by parties interested in diverting travellers and winter visitors from the Nile valley to other parts, and unfortunately it gained currency in circles which are usually better informed. Briefly, it was to the effect that very large quantities of ammunition, and at least a considerable number of rifles had found their way into the hands of the extremists, who might be expected to use them if they did not get their own way over the London negotiations. The worst part of the lie was that the cartridges had been sold recklessly by the Disposals Board, who thus undid the work of the military authorities. The story has now been denied on good authority; and it is to be hoped that it will be traced to its source, and that suitable steps will be taken to prevent any repetition or fresh edition of it gaining currency.

## *The Prince in Bombay.*

The accounts of the reception of the Prince of Wales in Bombay show that the welcome offered by the great city was worthy of the occasion. It is, of course, difficult at this distance to attach a precise value to the superlatives with which the cables have been loaded, but the fact that the size and demeanour of the crowds carried some of the correspondents off their feet is in itself good evidence that the foreground of the picture was in accordance with the loyal traditions of the country. In the back ground, Mr. Gandhi was sacrificing other people's shirts on the altar of his fantastic dream, and the roughs of the city were playing the game they knew best. These features show that the old unanimity of India has gone, never probably to return, but they serve also to remind us that the sincerity of the welcoming crowds has stood a test to which their predecessors were not exposed. Vigorous efforts had been made to organise a boycott of the whole affair, and if Bombay has resisted the domination of a noisy and unscrupulous clique, its resistance marks a long step forward on the road leading to democracy.

## *The Moplah Rebellion.*

At last it seems possible to speak of a definite improvement in the situation in Malabar. The most noteworthy

Digitized by Google

features of the latest *communiqués* are the references to surrenders, for the reason that the idea of surrender is wholly repugnant to the Moplah mind. Their tradition requires them to fight to the death, and it will have been noticed that in several small engagements practically the whole force has been accounted for in the casualty lists. Of late, however, we have been allowed to know that considerable numbers of insurgents, including some leaders, have been surrendering in certain areas, that larger numbers are showing signs of willingness to take the same course, and that the time has come for offers of leniency to the rank and file with a view to accelerating the movement. It is permissible to infer that this is the beginning of the end, but the information supplied to the public does not as yet suffice to indicate precisely when the end will be. In any case we fear there will remain bands of irreconcilables, the very smallness of whose numbers will increase the difficulties of rounding them up, but which will have to be exterminated before the country can have peace.

### *Parties in India.*

The latest news from Lucknow seems to indicate the approaching fulfilment of a prediction we ventured on some months ago, that parties grouped on economic rather than religious or racial lines might emerge in the course of the pending agrarian legislation. A Liberal League came into existence during the summer, and began operations by vigorously espousing the cause of the Oudh tenants. More recently a very influential gathering of the landholders of both Oudh and Agra has called on all supporters of the landed interest to withdraw from the League, and has initiated a strong counter-propaganda. The League consists mainly of lawyers and other dwellers in the cities; town and country are about equally represented in the provincial legislature; and if parties actually crystallise out on the lines indicated, we may reach the unexpected result that the balance of power will rest for a time with the handful of official members. Undoubtedly those observers are right who maintain that the new Constitution is alive and growing fast, but this development at least does not seem to have been foreseen by any of its builders.

### *Indian Finance.*

The movement of the provincial Governments to deplete the Central Treasury proceeds apace. We recently noted that Bengal had been relieved of its liability to contribute, and that Bombay was pleading for assistance towards raising necessary capital. Since then we have learned that Madras, with Lord Willingdon at its head, is asking loudly for relief; Bengal, not satisfied with its exemption from contributing, is talking of a subsidy; while in the United Provinces Sir Harcourt Butler has described the contribution as "dacoity *in excelsis*." Already then the four principal provinces are suppliants for aid from a Treasury the impending deficit of which is being talked of up to twenty crores of rupees, and which is threatened by the Railway Commission with the permanent loss of one of its few sources of revenue. A writer in *The Times* suggests that the whole scheme of reform is threatened by the prospect of a financial breakdown; and without going quite so far as that, we think it may be fairly said that the outlook is decidedly unpleasant for an administration which has not of late inspired the public with confidence in its financial abilities.

## THE WEEK AT HOME.

*London, Monday Evening.*

### The Liverpool Conference.

The Conservative Party still lives, but it is no longer Unionist. That, I think, is the general verdict on the most important political event of the week, the Liverpool Conference of the Conservative and Unionist Party. It was a trial of strength between the Die-Hards and Compromisers, and the Compromisers won all along the line. They had the heavier metal, in the support of Lord Derby, Mr. Austen Chamberlain, and the recognised leaders of the party; but the Die-Hards had no real leader at all. They had had hopes of Mr. Bonar Law, but he was not there.

The Die-Hard case was in effect the Ulster case, but this does not make quite so strong an appeal as it did ten years ago, and it was seriously weakened by the fact that the Southern Irish Unionists, led by Lord Midleton, are definitely for peace. There is much to be said for two dominions in Ireland, and I think that the Sinn Feiners are open to very effective criticism by their refusal to give the self-determination (which they claim for themselves as a divine right) to Ulster. But this point does not seem to have been emphasised. The upshot is that Conservatism stands for peace in Ireland, if it can be obtained without the actual coercion of Ulster; and it hopes privately that Ulster will be reasonable; while the Die-Hard minority hopes that Ulster will not.

### The Coalition to Continue.

Behind the actual Irish question, however, was the larger problem of whether the Coalition should continue. It was not definitely discussed, but it was present in everybody's mind. The Die-Hards profess themselves to be not so much against a Coalition in itself as against a Lloyd George Coalition. What they want is a Coalition in which Conservatism counts for more and Liberalism for less, but whether that could be still called a Coalition or not I am very doubtful.

It was this same section of the party which raised the cry "Balfour must go" years back; that was followed by "Bonar Law must go"; and they would like to shout now "Lloyd George must go." But a party that is always rebelling against its leaders never gets a leader worth having—the job is too precarious. For that reason alone I think the Coalition will continue for some time.

### A Downing Street Interlude.

The Irish negotiations were practically suspended while the Conservatives discussed the state of their soul, for everybody knew that, if the Die-Hards won Ulster, further negotiations would be useless. Mr. Lloyd George therefore snatched a day or two at Bournemouth

while all the correspondents went to Liverpool. No doubt he smiled at the paper which obtained the news of his purchase of a piece of land near Hindhead, and published it with the remark that he was getting ready to leave Downing Street. Unless the Irish Conference collapses altogether, this is not in the least likely; and even if he did resign office on that ground—as he would in certain eventualities—the fact that his successor would have no majority in the country or the House would almost certainly bring him back again within a few weeks.

**Washington.**

The Washington Conference has had a good press, and everybody here believes in the naval holiday principle, and on the whole regards the proposals as fair for the next ten years; there is, however, a very distinct reluctance to bind ourselves for a longer period—or rather, I should say, a feeling that it is quite useless to look more than ten years ahead.

Apparently some of the correspondents in Washington like the American papers, have got swept off their feet by a wave of enthusiasm; rather like the converts at a Salvation Army meeting, who are never more surprised in their life than on waking up next morning to find themselves pledged never again to touch a drop of beer. Some of the cooler heads at home seem to think that things are going almost too smoothly, and that we shall find a good many real difficulties have been made light of; this is notably the case with regard to the open door in China. It suits us, and it suits America; whether it will really satisfy Japan, and whether she will not attempt to get round the agreement in some legitimate way, is another matter.

The question of the military forces of Europe has still to be discussed, but it is doubtful whether America will take much interest in these matters, as she has neither knowledge of, nor interest in, the details of European affairs. The success of the Conference is assured apart from these problems; what it has actually succeeded in doing is in making a definite agreement between Great Britain and America. Again, this suits us and it suits America, but there are a few other countries in the world which may not be quite so pleased. One notices incidentally that the German Press is in its most captious and bitter mood.

**Reparations.**

After ships, money. It is suggested in many quarters that when we have an agreement on armaments we shall settle down to talk hard common sense on finance. Britain believes it would be the right thing to cancel the French and Italian war debt to ourselves—and, moreover, that it would be good business to do so. France and Italy naturally agree. It is possible that in the end we may cancel it, even if America refuses to follow suit; for the money is really owing by France and Italy to America, with Britain as guarantor.

It is understood that this is the subject which really disturbs the United States; having advanced the money, she does not want to cancel the debt. That is, of course, understandable, but in the long run it will prove neither good politics nor good business for America to dun France and Italy. There is no question, of course, of her dunning Britain, as our own debt in the States is relatively small, and can be paid off in a few years; but it would be a very hopeful person who anticipated that either France or Italy will ever be able to return the millions they borrowed through New York. No doubt it was for that reason that President Wilson insisted on our backing their bills—which shows that his mentality was not so entirely in the clouds of idealism as has been imagined—but what then seemed a business precaution has now been found an added obstruction to a settlement, or rather to any approach to a settlement.

The Germans are also making a great push to be let off their indemnity, and the newspapers here are discussing the subject with the maximum of disagreement and the minimum of financial knowledge. But on this matter France is likely to make her voice very definitely heard, and there is no doubt that she has the popular sentiment of England behind her.

**A Question of Comment.**

Two very amusing libel actions were fought out in the courts before Mr. Justice Darling last week. The *Morning Post* was sued by a Labour leader for having said that he was a revolutionary who took money from Scotland Yard for spying on his own comrades. As he had to admit the truth of the allegations, he lost the day, and it is difficult to understand how he can have thought he had even a sporting chance of success.

The *Sunday Times* was less fortunate. Its dramatic critic had remarked that Miss Ethel Irving, a celebrated actress, so overdid her part that she bit her own toe-nails with rage. I remember reading the notice, and wondering how the lady achieved the feat, seeing that she had shoes and stockings on. The evidence was very lively—incidentally it came out that Mr. Patrick Hastings, whom one had not suspected of a desire for fame as a dramatist, had had two plays rejected by Mr. Arthur Bourchier—but the lady won, and was handsomely acquitted by the *Sunday Times* of supping off her own toe-nails. I hope it is not libellous to wonder whether the dramatic critic is now biting his finger-nails.

**A London Sky-Scraper.**

London is being steadily rebuilt, and many old houses are being pulled down and whole terraces transformed into blocks of modern offices. Of those so far erected, perhaps the most notable is the new building of the Port of London Authority, but it seems that even this is to be eclipsed. A real sky-scraper is to be put up near Billingsgate, ten or twelve storeys in height; and if Macaulay's New Zealander cares to come and stand on London Bridge he will soon be able to see "London's largest" rising from its foundations.

Another big scheme which seems likely to go through is the building of St. Paul's Bridge, from the Churchyard, over Queen Victoria Street, and thence across the river. It appears that the reconstructed Southwark Bridge is not much used after all, and it is rudely said that it leads from nowhere to nobody

**London Fares.**

The penny is coming into its own again. Tram fares in the London County Council are to be reduced from the exasperating three-halfpence to the convenient penny; and omnibus fares will probably follow suit as soon as the General Omnibus Company has made an agreement with its men. The trade union leaders advised their men to accept the terms, but they voted against them, and the project, therefore, is held up for the present. It is, however, believed that, when a few minor alterations are made, the plan will go through. And there is some talk of a reduction in railway fares early in the new year which will help the companies in the desperate struggle with the motor-charabancs.

**The Week's Books.**

The book of the week, perhaps of the autumn, is the "Life of Robert, Marquis of Salisbury" (Hodder and Stoughton) by his daughter, Lady Gwendolen Cecil. Unfortunately it only comes down to 1880 at present, so that his Premierships and the most important part of his public work remain untouched. These two volumes, therefore, contain no political secrets, and only one political surprise—that Lord Salisbury felt his "honour not safe" under Disraeli's leadership. It was known, of course, that he disliked "*der alte Jude*" intensely, but it was not quite realised before how completely he distrusted him.

But the book is a revelation in its picture of Lord Salisbury's boyhood. He was a delicate child, and he was bullied both at the first private school he attended and afterwards at Eton. He seems to have hated both. He showed no particular signs of ability, let alone brilliance, as a youth, and his first years in the House of Commons discovered nothing remarkable. It was only later that he became the "master of gibes and flouts and jeers;" he was one of those men of massive character who mature slowly. But his letters from Australia, written when only twenty-two or three, show that even then he was already a confirmed Tory. Perhaps nothing else can grow at Hatfield.

*(From Our Own Correspondents).*

## ROUMANIA.

*Bucharest, November 4.*

**Political Movements.**

Various interpretations are given to the audiences accorded by the King to the two Opposition leaders, M. Bratianu, Chief of the Liberal Party, and M. Maniu, head of the Transylvanian National Party, as well as to the President and Vice-President of the Senate, General Coanda and M. Mihaly. There are rumours that M. Marghiloman and other political leaders will also be called to the Palace. Particulars of these audiences are not yet known, but it is generally thought that, in view of the approaching opening of Parliament, the King wishes to be informed on the internal political situation, and especially to learn whether the Opposition, which has withdrawn, intends to reoccupy its seats in Parliament; the more so, since General Averescu has not as yet succeeded in settling this question during the recess. Should the Opposition still persist in its recalcitrant attitude, there will be more than a hundred seats vacant, so that the question arises whether a general election might not be preferable to over 100 by-elections. There is no doubt that the governmental crisis is approaching its climax. The wish of the King as well as of the country is that a Coalition Government should be formed, comprising the best elements of all parties.

**M. Marghiloman's Speech.**

It may be interesting to give a summary of M. Marghiloman's speech delivered the other day at Jassy at a meeting of the Conservative-Progressist party, of which he is the leader. M. Marghiloman, despite his pro-German attitude during the war, which has considerably reduced his former popularity, is still considered, as far as statesmanship is concerned, one of the foremost men of the country. He said, in touching on the critical economic and financial situation of the country, that the different parties had devoted their time more to politics than to work. It was time that war between the new and old parties as well as personal animosities should cease, and that all competent men in the country should join hands to co-operate for its salvation. A single party could not carry on a Government; only by a collaboration of all parties could the country attain the Government it needed. The speaker then proposed a series of measures and solutions, which, in his opinion, would remedy the present difficult situation. In the first place, he advocated economy. Then in regard to the new taxes, he would cancel M. Titulescu's Fiscal Reform Bill, and would re-establish the old fiscal régime, with increases in proportion to the present needs, plus a progressive income-tax. For improving the rate of exchange he declared that there was only one solution, namely, entire freedom of trade and exports, with certain restrictions on imports. To remedy the transport question he would cede the railways to Roumanian companies, allotting to each company a certain province, for these could raise the necessary capital more easily than the State.

In conclusion M. Marghiloman said that the measures advocated would have to be carried out concomitantly with a proper administration, in order to ensure the successful issue of the task of unification and reconstruction.

**Suspension of Russo-Roumanian Negotiations.**

It is reported that the negotiations between Roumania and Soviet Russia at Warsaw have been suspended *sine die*, and that the delegates are now returning to their respective countries for instructions. In connection with these negotiations it is now thought here that Roumania has been tricked, for she was originally invited to discuss the question of resuming commercial relations by settling the navigation question on the Dniester. Instead of this, the Soviet delegates started off by demanding the evacuation of "occupied" Bessarabia. The broaching of such a question, in view of the facts that Bessarabia was first an autonomous republic and then by self-determination decided to join Roumania (not to mention the Entente's consent), proves to Roumania that Soviet Russia is affirming its imperialistic tendency and has no intention whatever of resuming commercial relations.

**Forests on Fire.**

During the last few weeks it has been repeatedly reported that large tracts of forests were burning in different parts of the country, the damages amounting to millions of lei. There is no doubt that a good many of these fires are due to the very dry state of the wood owing to the protracted drought, for very often a spark from a passing locomotive is sufficient to set the wood on fire; but investigations have brought to light the fact that some of these fires have been purposely caused by shepherds in the mountains, who perpetrate these deeds in order to obtain larger grazing fields for their sheep and cattle. The Government, with the help of the army, is taking the necessary steps to stop such malignant acts, so detrimental to the riches of the country.

**Roumanian Students Abroad.**

Hitherto the Government has been subsidizing the Roumanian students abroad by providing them with foreign currency at a very reduced rate of exchange but, owing to the continuous depreciation of the leu it cannot support this expense any longer, and has decided to stop this subsidy. Exception, however, will be made in the case of students who are studying special subjects that cannot be acquired at the Roumanian Universities. It is thought here that this measure, although unfortunately necessary, should have been applied first to a number of missions abroad that are not indispensable to the welfare of the State.

**General News.**

On Friday last the birthday of Queen Marie of Roumania was celebrated by a *Te Deum* held at the Cathedral in the presence of the members of the Cabinet and other high dignitaries.

A marriage was celebrated on Sunday, October 30, in the strictest privacy between M. Argetoianu, Minister of the Interior, and Mme. Valentina Boamba at M. Argetoianu's country seat in Dolj.

*Bucharest, November 12.*

**Ex-King Charles' Journey through Roumania.**

Ex-King Charles and his Consort on their journey of exile travelled through Roumania. On the morning of November 4 they arrived by boat at a small Roumanian port called Moldova Noua, 20 kilometres from Orshova. Owing to the low water level of the Danube, the river voyage could not be continued, and they were then conveyed by motor-car, belonging to the Roumanian War Office, to Orshova. They were escorted by four other motorcars and accompanied by the Marquise Borovocini, formerly Lady-in-waiting to ex-Queen Zita and Count Esterhazy, formerly Chamberlain of the

Leaders of the World's Office Equipment and Filing Systems.

Hapsburg Court, both of whom were appointed by the Hungarian Government to accompany the royal prisoners as far as Galatz. The escort further consisted of Commander Snagge of the British Navy, Major Chirculescu, representing the Roumanian Government, and six British sailors of H.M.S. Cardiff. At Orshova a special train was waiting for them, and immediately on their arrival the train started on its journey to Galatz, which took place without any incidents on the way. The train was guarded by the British sailors, while the Roumanian military authorities took all the necessary precautions to guard the line and to keep the public away from the stations *en route*. Ex-King Charles was reserved and taciturn during the journey ; the ex-Queen, however, was more talkative and showed special interest in their destination.

On arrival at Galatz the train ran straight down to the docks, and stopped in front of the Roumanian passenger boat *Principessa Maria*, which had been commissioned to take the royal exiles to Sulina, whence a British cruiser, H.M.S. Cardiff, will convey them to their destination.

At Galatz the first person to alight from the train was Count Esterhazy, who helped ex-Queen Zita to descend. The Queen did not appear downcast, and smiled her acknowledgments to the passers-by who saluted her.

Then followed ex-King Karl, who appeared rather sombre, and responded to the salutes with a forced smile. The royal couple, however, seemed very touched to meet Count and Countess Huniady, who will accompany them into exile. On arriving on the boat ex-King Charles and his wife immediately retired to their cabin, and later, it being Sunday morning, attended a short service conducted by a Catholic priest, specially called in for the occasion. Before the departure of the boat ex-King Charles expressed his thanks to the representative of the Roumanian Government for the courteous manner in which he and his wife had been treated while travelling through Roumanian territory.

Count Esterhazy and Marquise Borovicini then left Galatz for Bucharest to return to Budapest ; and H.M.S. Cardiff, with the royal prisoners on board, left Sulina on Monday morning, November 7.

It may not be out of place to remark that recent events in Hungary in connection with the Karlist adventure, for some reason or other, did not seem to stir public opinion in Roumania as much as it did in the other Little Entente countries.

**The perpetrators of the Senate Attempt.**

After a lapse of ten months the police have succeeded in discovering the scoundrels who caused a bomb to explode in the Senate last December. A few weeks ago I reported that a nest of communists had been discovered in Bucharest and that 30 of them were arrested. While the authorities were examining these prisoners, one of them, named Osias Saul, a student, 20 years old, turned King's evidence, declaring that he and Max Goldstein and Leon Lichtblau, the former a commercial clerk, 30 years old, and the latter a student of 22, were the principal authors, that they had 14 accomplices, and that they were carrying out orders received from their chiefs in Ukrainia. The two other principal authors and some of the accomplices managed to escape to Russia soon after the attempt. It was further elicited that these same communists are responsible for many terrorist attempts in Roumania of late.

**M. Ghica's Suicide.**

The financial embarrassment of the Banca Natiunei has had a very sad sequel. M. Ghica-Comanesti, President of the Bank, committed suicide in very tragic circumstances. On Tuesday morning he was visited by several of his friends and collaborators to discuss means of saving the Bank. His wife was also present at these conversations. Despite the assurances on the part of his friends that his prestige was not involved, M. Ghica was very despondent, and while one of his secretaries was talking on the telephone with a prominent lawyer, he left the room. A few minutes later a shot was heard. It was found that M. Ghica had gone straight to the bath-room, fixed a rifle to the handle of the door by means of the bath-chain and shot himself in the head. The news quickly spread through the city and caused a great sensation.

No suspicion has been cast on the honesty and straight forwardness of M. Ghica, but the opinion is expressed that he allowed himself to be carried away by others in regard to the exaggerated hopes entertained of the multifarious activities of the Bank. It would be unfair to say that he dreaded the material responsibility attaching to his position, for it is generally understood that he could easily have supported bigger blows without serious financial embarrassment to himself—he passed as one of the richest, if not the richest, man in Roumania. What, however, he could not survive, it is supposed, was the idea of facing his numerous friends in Roumania, and abroad, whom he had induced, in all good faith, to invest their money in the Banca Natiunei. He was well known in Great Britain, France and Italy, and only a week before his death he returned from a shooting party in Scotland. Recently he had established two banks abroad, one in Paris and another in Milan, with participation of Roumanian, French and Italian capital. M. Ghica leaves a wife and four children, who are at present in Switzerland for their education.

It is of pathetic interest to recall a similar tragedy which happened in his family fifty years ago. His grandfather, Prince N. Ghica-Camanesti, in drawing up an inventory of his fortune, found that his liabilities exceeded his assets. Without any further investigation he went into the public park of Jassy and committed suicide. His family, in checking the books which he left open on the table in his library, to establish the cause of his desperate act, found that Prince Ghica had made a mistake in adding the figures, for on closer examination his assets were found to exceed by far his liabilities.

**Miscellaneous.**

A circular order of the Roumanian General Staff instructs the different Army Corps in the country to retain under arms the 1920 class, which should have been released on November 1. The men of this class from Transylvania, Bukovina, and Bessarabia, will have, however, from 30 to 60 days' leave, but those of the Old Kingdom will only receive the usual holidays' leave.

According to the last official bulletin from Sinaia Palace, Princess Helen's health is approaching complete recovery, and the young Prince Mihail is developing very satisfactorily.

Queen Sophie left Bucharest on Tuesday last for Athens via Yugoslavia. She was accompanied by Prince Carol as far as Temesvar.

Mr. Cyril Herbert Alfred Mariott has been appointed British Vice-Consul at Braila.

It is reported that the re-organisation of the Roumanian Navy will be carried out according to British methods. For this purpose a number of British Naval officers are expected to arrive here soon. A large ship has already been bought in Italy to be used as a naval school.

## GREECE.

*Athens, November 12.*

**The British Colony.**

A successful dance was held at the British Club on Saturday, October 29, by the British Colony in Athens. The rooms were artistically decorated with flags of the Allies and chrysanthemums and roses. Among those present were to be noted, Earl Granville, G.C.V.O. and Lady Granville; H.M. Consul, Mr. R. E. W. Chafy, the Military Attaché and Mrs. H. Nairne; the Commercial Attaché, and Mrs. Rawlins; Captain and Mrs. E. G. Hayes, of the British Naval Mission to Greece; and many prominent members of the British Colony, including Major and Mrs. R. Murray Meikle, M. Calphoglu, Mr. and Mrs. H. H. Rowe, Mr. R. G. Knox, Mr. A. E. Watkinson, and others.

**The Situation.**

The political situation continues to be very unsettled, and there seems to be little prospect just yet of a clearer atmosphere. We are still without any official news whatsoever with regard to the doings of the Hellenic mission in London, and naturally public opinion is kept in a state of extreme nervousness. Interviews with Lord Curzon and dinners given to the members of the mission by important personages in London are announced almost every day by the Press. These, however, though viewed with extreme satisfaction by the followers of the Government Party, who point out with unconcealed joy that Monsieur Gounaris is no longer an "undesirable," do not, it is realised, solve any of them any problems which the country is facing at present. Though the papers are trying to attach much importance to the Anglo-French controversy over France's treaty with the Kemalists, there are in reality few people who believe that this incident might prove in any way beneficial to Greece. The treaty in question was a very bitter blow to the Greeks, who now realise quite clearly that, in the event of a new conference on the Near Eastern question, they have absolutely nothing to hope from the French.

It would appear that M. Gounaris will eventually have to place his country's cause unreservedly in the hands of the Allies, and may probably find himself obliged to agree to an autonomous Smyrna; but it is difficult at present to conceive what effect this decision will have on the internal situation; although it is fairly certain that the Cabinet would be compelled to resign on its Chief's return to Athens.

**Internal Troubles.**

The Directors of the Gas and Electricity Companies, also those of the Athens-Piraeus Railways and Athens-Piraeus Tramways have visited the Ministry of Communications and conferred with the Minister on the demands formulated by the employees. The Directors stated that they could not grant the increase or indemnities demanded by the employees, unless the Government in turn granted the companies compensation. The Tramway Company in particular pointed out that despite the increase in tariff, it ran at a loss last year to the extent of 1,500,000 drachmae.

The hotel employees have submitted to the Minister of National Economy a demand for 100 per cent. increase of salary, also an obligatory 15 per cent. on the bills paid by the hotel residents.

**The New Patriarch.**

Relations between the Greek Government and the Patriarchate of Constantinople have been rather strained of late, owing to the refusal of the former to sanction an immediate election of a Patriarch. The Patriarchate on the other hand absolutely refuses to comply with the Greek Government's wishes, and points out in a memorandum that the critical state of the national affairs at present makes the election of a head of the Greek Orthodox Church indispensable. The Government has not yet replied to this memorandum, but it is believed that it will insist upon its original views, which will undoubtedly result in a complete breaking off of relations—a very bad thing for the nation just now, when unity is so essential.

## ALBANIA.

*Tirana, November 15.*

**The Conference of Ambassadors.**

At last! After three years of delays the Conference of Ambassadors at Paris, which has replaced the Peace Conference, has just brought forth a decision, on the 5th inst. On the 9th inst, the protocol relative to this decision was signed, and communicated to Albania, Serbia, and Greece.

According to this protocol, the southern frontiers of Albania will be left untouched, as they were traced in 1913. In the East it has been decided to make a territorial concession to Serbia: the region of Gora, south-west of Prizrend, with a population of 40,000. North-east of Scutari, the frontier will be modified in such a way as to assure the defence of Podgoritza, without endangering the defence of Scutari itself! In the region of Dibra there will also be a rectification, so as to leave to Serbia the whole of the road between Struga and Dibra.

Against these sacrifices Albania receives the small and insignificant village of Lin—on the western side of the Ochrida Lake—a village of 14 houses, which the protocol, doubtless in irony, refers to as a town.

**Feeling in Albania.**

These rectifications at the expense of Albania have created a very bad impression in the country. It is considered here that the Conference of Ambassadors has shown but one care: to impose sacrifices on Albania, for the aggrandisement of Yugoslavia. A country already too small and too weak has been further weakened and reduced. It is asked what Albania would have stood to lose if she had fought against the Allies, instead of having aided them by collaborating with the French and Italian forces.

Digitized by Google

The sacrifices imposed on Albania are also useless; for the Serbs will be encouraged by them, and the Radical party, of M. Pashitch, will only double its activities against Albania.

More serious still, the frontiers as traced in the North and the East leave almost all mountainous Albania without roads, without communications with the towns, and thus condemn it to perpetual misery.

The Albanians still cherish a last hope: that the Commission which is to be sent to Albania by the Ambassadors' Conference, to demarcate the frontiers, may yet fix the frontier in accordance with the essential needs of the people. According to the protocol, this commission will be composed of four representatives of the Great Powers, who will be assisted in a consultative capacity by an Albanian expert and a Serbian expert.

The other Commission, appointed by the League of Nations, and made up of a Luxemburger, a Norwegian, and a Finlander, has left Geneva, and is expected to arrive at Tirana on the 19th inst.

**Recognition of the Government.**

Although recognition *de jure* was accorded to Albania in 1914, and though she has established diplomatic relations with the Great and lesser Powers, she waited in vain for the resumption of these relations. The Great Powers had forgotten. It was a strange case of loss of memory! And the Government of Tirana daily expected full recognition. Happily this recognition as an independent and sovereign State has come with the decision of the Conference of Ambassadors. It was the British Consul, Mr. Eyres, who first notified this recognition on the 7th inst., and he was followed by the French and the Italian representatives. If only this recognition had been accorded earlier it would have saved Albania much suffering. Serbia would not have attacked her, thousands of lives would have been spared, and countless people would not now be homeless.

**The Yugoslavs.**

In the district of Bunja, north-east of Scutari, at Lurja and at Mirdita the damage caused by the Serbs has been incalculable. Cannon have done their work everywhere, and thousands of people have been driven from their homes. When the decision of the Ambassadors' Conference is communicated to them, will the Yugoslav troops quit the country? It is to be hoped they will; but already there is talk of the organization of 'bands' and of Serbian soldiers and officers disguised as *Komitajis*, who are to remain in the country. Time will show whether the Belgrade Government will be strong enough to follow a frank and honourable policy.

**Albanian Red Cross.**

In order to save the children from lingering agony and certain death there is need of a lot of money and a powerful philanthropic organization. Up to the present the American Junior Red Cross has distributed soup, and the Government has given bread; but the Junior Red Cross is shortly ceasing its work in Albania owing to shortage of funds. On the other hand, the number of refugees increases daily. In view of these circumstances there has just been created in Albania a Red Cross. That of Valona was the first organised; then that of Tirana, where the presence of M. Eugène Pittard, a professor at Geneva University, and of Mme. Pittard—whose pen name is Noelle Roger—has exercised a very helpful influence. Mme. Pittard has established a committee at Geneva, which collects funds and comforts for the poor little ones of Albania. May I appeal to readers of *The Near East* for help for this very excellent work? Any one who gives may rest assured that any donation to the Tirana Red Cross will be used to save some unhappy mother's little one. Money and gifts in kind may be addressed direct to: The Albanian Red Cross, Tirana, Albania, *via* Italy.

## BULGARIA.

*Sofia, November 7.*

**The "Boteff" Case.**

It will be remembered that M. Boteff, the ex-Minister of Railways, resigned a few months ago under what were considered to be rather peculiar circumstances. It was said that he had been guilty of irregularity in connection with the ordering of some railway material. In view of this M. T. Theodoroff, leader of the Nationalist Party, lodged a request with the Sobranye some weeks ago, asking that the Government might furnish an explanation of the affair. On the 3rd inst., M. Daskaloff replied for the Government. He said that M. Boteff had retired purely and simply because he was not in agreement with his colleagues over certain matters; and added that M. Boteff's resignation was a private matter, and that the Government had no intention of giving any further explanation. This reply did not satisfy the Opposition. The Government, however, refused to grant this request and forthwith closed the debate. The affair is now closed, but it would seem that the Government's interests would have been better served if they had made a fuller explanation of the matter, and thus cleared M. Boteff from the odium that still hangs over him. M. Dimitroff was understood to have been instrumental in first bringing the case to light, and if he had been still alive, it is not likely that the matter would have been hushed up as it has been.

**The Greek Frontier Commission.**

Yesterday the members of the Inter-Allied Military Commission, whose duty is to carry out the demarcation of the new Greco-Bulgarian frontier, left for Paris. Their work has of late been somewhat impeded by the existence amongst them of divergent views regarding the procedure that they should adopt in the creation of the new frontier line. The opinion of at least one of the countries whose frontiers have to be marked, appears to be that the work should be finished as soon as possible, in order that the Commission should cease being a burden on its exchequer. The Commission, however, took up a different standpoint, and it will not be surprising if they return to Sofia endowed, first, with a new President, and, secondly, with considerably increased powers.

The British representative, Colonel Allcard, has pronounced the opinion that the whole summer had been wasted in useless arguments and discussions, which had led to the failure to accomplish the Commission's work.

*Sofia, November 14.*

**Changes in the Cabinet**

The King signed the Decree on November 9, authorising the appointment of two new Ministers, and the interchange of two Ministers at present holding office. M. Manoloff and M. Yaneff, who were mentioned in last week's letter as being the two probable newcomers, have been appointed Ministers of Railways and Justice respectively. M. Manoloff succeeds M. Boteff who resigned, but M. Yaneff's appointment necessitates M. Radouloff's leaving the Ministry of Justice for the Ministry of the Interior. M. Thomoff in his turn leaves the Ministry of the Interior and becomes Minister of War, *vice* M. Dimitroff. The new appointments meet with general approval, as both M. Manoloff and M. Yaneff are known to hold moderate views and are regarded as being among the best products of the Agrarian Party. M. Manoloff, in particular, is a fine example of the peasant who, although a strong advocate of the Agrarian cause, recognises that brains and intellectuality are also required. He has taken over a Ministry which in many ways is the most important of all the Ministerial posts. The railways of Bulgaria are sadly in need of reorganisation, and although M. Karakacheff, the able Director of Railways, is doing all he can to repair the rolling stock and to put things on a better basis, he has been greatly handicapped by a constant change in Ministers. Under M. Manoloff the Railways should prosper, and thus enable the country rapidly to export the stocks of cereals that are lying at different depots, but that cannot be moved owing to a lack of wagons.

The internal changes in the Cabinet do not call for much comment, although it is understood that M. Radouloff is none too pleased at being obliged to leave the Ministry of Justice; the post of Minister of the Interior is no sinecure, and the lack of a sufficient

Digitized by Google

number of gendarmes is a great drawback in the task of maintaining law and order.

**Final Reduction of the Army.**

The Minister of War has now only 4,000 voluntary soldiers at his disposal, as the Inter-Allied Military Commission of Control have received orders from the Conference of Ambassadors at Paris for the demobilisation of all "Conscript" soldiers by November 14 (today). Apart from the 4,000 voluntary soldiers mentioned above there are approximately 8,000 gendarmes and frontier guards still under arms, so the total strength of the Bulgarian Army, all branches included, is 12,000. The Government seem to have realised that it is hopeless to expect any further concessions from the Allies concerning the question of the Army, and in the words of the Prime Minister a few days ago "We must just face facts in the face, and do our best to get along without an Army." Although it may not be much actual satisfaction to Bulgaria, it is at least worth while recalling that she is the first European State to do without an army, thus even anticipating the results that are hoped to accrue from the Washington Conference.

**Payment of Reparations.**

A certain amount of apprehension exists in Government circles regarding the question of reparations. The Inter-Allied Commission at Sofia held a meeting on November 7 to consider the possibility of extracting any payment out of Bulgaria. The results of their deliberations were, of course, not made public, but it is generally believed that the Commission will recommend to Paris that the payment should be postponed for a certain period, which is estimated at anything from three to five years. The Government's first idea was that this postponement would be in the nature of a boon and a blessing, but more mature consideration has shown them that a postponement, if it is granted, will entail a new system of financial legislation. The Allies are not going to renounce their claims for three or five years, without obtaining some guarantee by which they may feel sure of eventually touching some of the money due to them. Wild rumours are afloat concerning the nature of these guarantees, and the taking over of the Pernik Coal Mine is said to be under consideration. It can, however, be stated on good authority that no definite line of action has yet been decided on, because the Commission at Sofia is under the orders of the Reparations Commission at Paris, and cannot either sanction the postponement of the payment of reparations, or exact guarantees without the consent of Paris.

**Democrats and Liberals.**

M. Malinoff, the chief of the Democratic Party, opened the new Democratic Club at Rustchuk last week. It was interesting to note that representatives of other bourgeois parties in Bulgaria attended the opening, and this is regarded as a very distinct step forward in the long striven after *rapprochement* between the bourgeois parties. The Narodno-Progressists, the Liberals, and the Radicals were all represented and it is understood that in addition to the latter *i.e.* the Radicals, the Liberals have also decided to give their support to the Democrats. The Liberal, or National Liberal Party, as it is more commonly called, is passing through somewhat of a crisis, owing to the fact that its leaders, who constituted the Cabinet when war was declared, are now all on trial. Nevertheless the party has about 10,000 adherents in the country, and although their Deputies number only six, it is thought that they will double or even treble this number at the next election. The various Opposition parties are gradually coming together, for their only chance of success lies in co-operation. It now rests for the Naro dniaks and the Democrats to come to a working agreement, and if this is achieved the bourgeois bloc in the Sobranye will represent about a third of the country, and will constitute the main opposition to the Government.

## TURKEY.

*Constantinople, November 9*

**The Franco-Kemalist Agreement.**

The signature of the Franco-Kemalist Agreement has been followed by a loud chorus of mutual congratulations on the part of the two sides interested. General Pellé has granted several interviews to local journalists, and made certain statements which are worthy of deeper attention than official interviews usually deserve. The General's remark concerning the precedent created by the French in ignoring the unwritten law of European diplomacy to the effect that the Cross should never be again supplanted in territory wrested from the Crescent, aroused considerable comment; but this was merely an elaboration of the General's remarks upon the antiquity of Franco-Turkish friendship. The following passage, published in the *Journal d'Orient* on November 3, was of much deeper significance.

> The limited nature of the agreement cannot be too strongly emphasised, affirmed His Excellency. From the moment of the conclusion of the armistice convention, the state of war had ceased to exist between Turkey and France. Subsequently there was a resumption of hostilities in Syria between part of Turkey and France. The new agreement puts an end to this partial war, *and brings us back, for the whole of Turkey, to the state of affairs established by the armistice convention.* We could not, or rather we did not desire to touch the body of the general peace conditions, which can only be settled with the participation of our Allies, and with regard to which we only intend to enter into engagements in agreement with them.

As the article was passed by the censor before being published, there can be little doubt that it reproduces the exact statements of the French High Commissioner, and in view of its importance, the above paragraph has been translated as literally as possible. The italicised passage is of especial importance, for the Kemalists certainly consider themselves definitely at peace with France, and in any case repudiate all community between the Angora Government and the Sublime Porte. This point is of capital importance as may be deduced from the following paragraph.

**Is Peace Yet Possible?**

When General Pellé stated that the agreement concluded between the French Government and the Angora Government restored the state of affairs established by the armistice convention, two important factors were overlooked. In the first place, so far as the disarmament clauses are concerned, the armistice conditions are by no means restored, and in the second place, the single authority of the central Government which signed the armistice, has not been restored. Thus, the Franco-Kemalist agreement only restores the post-armistice conditions in so far as the French and the Kemalists are no longer fighting each other.

There is, however, another aspect of the Agreement which is of capital importance, for according to the Constitutional Law of Turkey, no agreement or treaty is valid without the assent of the Sultan. Therefore, unless the Sultan himself abandons his attitude towards the Angora Government, no agreements made with the latter can be binding upon Turkey. The Angora Government has made several attempts to coerce the Sultan, but without success. At the present moment, the issue is being raised once again, for if the existing current in the direction of peace continues, negotiations between Turkey and the Allies may be resumed. In this event, which Government is to select the delegates who will represent Turkey? The Angora Government insists that it constitutes the sole legal Government of Turkey, and that the Sublime Porte has therefore no right whatever to send representatives to a general peace conference. Unless the Sultan gives way, it will be difficult to find a solution of the problem.

Meanwhile further complications have arisen in another direction. The Anatolian press recently announced that the Unionist leaders under Enver have started a National movement of their own, under the title of the Union and Progress Popular Soviet Party. The Unionist leaders are stated to have recently addressed a request to the Great National Assembly for the recognition of this queerly named association, and for permission to work in Turkey. The Angora Government has responded with a request to the newly formed Government of Ajaria for the expulsion of the Unionist leaders from its territory, which comprises Batoum and the neighbourhood.

It is common knowledge that Enver has the support of

Digitized by Google

the Soviet Government of Moscow, and the question therefore arises whether the present activities of Enver and his friends are not connected with the dissatisfactoin of the Soviet Government at the apparent inclination of the Angora Government in the direction of an understanding with the "Imperialist and Capitalist Powers of the West." If the Moscow Government really means business, and intends to place Enver at the head of an army for the liberation (sic) of the "Turkish proletariat," Mustapha Kemal's difficulty would be the Sultan's opportunity *if the Sultan were supported by the Allies.*

As may be deduced, the situation is by no means so simple as the French High Commissioner would have us believe, and there are far more serious obstacles to peace than those which were surmounted before the hostilities in Cilicia were definitely terminated.

## CYPRUS

*Nicosia, October 24.*

**The Nicosia Municipality.**

This body is in the fortunate and very unusual position of rejoicing in a surplus of over £1,000. The Council propose to devote it to the enlargement of the market and the establishment of a petroleum store, both revenue-producing institutions. But the project has been at once challenged. Loud protests are being raised by some citizens, who desire that the money should be devoted to the repair of streets, which are described, by no stretch of imagination, as intolerable from mud in winter and dust in summer. Complaints have been endless, and it is certainly a discreditable fact that the streets of the capital are deplorably neglected. The municipality might well learn a lesson from some of the other towns. Moreover the failure to collect rates regularly, and to levy rates for various necessary purposes, continues to reflect blame on the Corporation.

**The Turkish Community and the Elections.**

The large Moslem section of the people see no cause to regard the approaching elections and the Greek village propaganda otherwise than with their customary equanimity. Nothing beyond a flood of rhetoric or threadbare propositions is anticipated. Throughout the agitation of recent years they have preserved a temper which has recognised no need of counter-demonstrations. At every succeeding "crisis," so laboriously engineered, they have maintained complete reliance on the promise made by Mr. Churchill when he visited Cyprus, and repeated since he has been Colonial Minister, that the interests of the Ottoman community will always be fully considered and protected.

This is not to say that they are not fully prepared to act at once should need at any moment, in their opinion, arise. They are well represented by their members in the Legislative Council, and have, under the leadership of the Hon. Irfan Bey, his colleagues, and other prominent men—in their respective classes—invariably preserved a dignified and completely confident, but resolute, attitude. They have continued to co-operate with the Government in carrying on the work of legislation during the misguided and "reactionary" line of proceedings adopted by their Greek fellow members.

**General News.**

The 700 Russians, whose only priest has left for Jerusalem, being now without one, have petitioned the Greek Archbishop to consecrate a suitable member of their community. His Beatitude is in consultation with his bishops, there being some doubt as to the authority of the Church of Cyprus in such a matter. Meantime he has directed the Bishop of Kition to send the Archimandrite Juvenal, who is a Russian scholar, from time to time to minister to the camp.

The Oecumenical Patriarch has written to the Archbishop asking for the help of the Cyprus Greek Church for the Russian distress; and a similar appeal has been received from the Bishop of Kieff as representing the Russian Patriarch, who is unable to communicate with the outer world.

## ITALY'S YUGOSLAV SUBJECTS.

*Liubliana, November 5.*

Not long ago we learned from the papers that the King of Italy had abandoned his project of visiting Venezia Giulia. A friend who has just arrived from Gorizia gives an account of conditions down there which throws a good deal of light on the King's decision. The prospective Royal visit roused no enthusiasm among the public in general, though the Government parties and press did their best. The *Piccolo* in particular sent out a circular, summoning all the mayors in the province to voice their views in declarations of loyalty, thereby providing a kind of "plebiscite of love"! The Slovenes refused point blank, as was pretty well to be expected, and the Italian "Republican" paper *La Liberta* suggested that black flags would be a suitable decoration wherewith to greet the King. Still it was not Gorizia that decided the change in the Royal plans, but Trieste, which has fallen on hard times since the union with Italy. Trade has vanished, business is dead, and the unemployed workers declared that if the King wanted to visit Trieste, he would have to go to see the harbour! All this was scarcely encouraging, and so, although all was prepared, down to the necessary police precautions, it was thought wiser for the King to cancel his trip.

I think that in Great Britain it was never sufficiently realised that the whole of the Gorizia district was just as much a "devastated region" as the battlefields of France, and that owing to the complications entailed by the armistice with Austria practically nothing was done to repair the havoc of war in that part of the world. The Reparation funds were paid to the Italian Government, which handed them on to the Land Mortgage Bank (l'Istituto Fondario) in Gorizia. At first only 65 per cent. of the allotted sums were spent in rebuilding, the property was burdened with a mortgage up to the half of the *full* amount, and the owner had to pay the interest. The result was that in many cases the peasant free-holders ended by preferring life among the ruins to saddling their land with a debt which they would never be able to repay, and which would place them in a position more dependent than that of mere tenant farmers. Housing conditions throughout Gorizia became so impossible that Slovenes and Italians joined to form committees to petition the Government for improvement in the regulations. It is noteworthy that it was found expedient to employ *both* languages—Slovene and Italian—at the meetings of these committees, even in the town of Gorizia. They were successful in obtaining the concession that henceforth 90 per cent. of the reparation money was to be spent on the property, the mortgage not to exceed 40 per cent., and the Government to pay the interest, instead of the owner. In view of these more equitable arrangements it is unfortunate that no more reparation monies are being paid out now.

Meantime prices in Gorizia are still rising; the peasants round about are making their purchases in Udine, where things are cheaper; there is nothing being done except in the building trade. But the worst feature of all is the disgraceful lack of public safety throughout the country. Farms are attacked; people are afraid to venture out after dark. A shocking crime, and doubly so in a Catholic country, was committed recently not far from Caporetto, near the old Italo-Austrian frontier. A parish priest, Cadenaro, was found murdered one morning; his throat had been cut and the house robbed. The murderers had escaped, and have not been found. The Slav colours are the only offending element that is prosecuted with unfailing success. Even dresses the colour scheme of which suggests the Slav tricolor are forbidden.

This public insecurity, which paralyses local trade and enterprise, reflects very badly on the Italian administration, especially as it contrasts disadvantageously with the orderly conditions we are enjoying here, such a very little way off, in Yugoslav Slovenia.

# PRESS ON THE NEAR EAST

## The Entente in the Near East.

The *New Statesman* of November 12 contains an article called "The End of a Sham," which is a discussion of the Franco-Turkish Peace Treaty. After a brief note disapproving the attitude both of the Foreign Office, and of the Quai d'Orsay on the matter, it details the main features of the Agreement, and continues :—

It is a first-class treaty, which affects the interests of all the world. In so far as it establishes peace with Turkey, by a direct pact with the *de facto* government of Turkey, the Angora Nationalists, it is substantially right. In certain of its details and in the manner of its execution, it is open to grave objection ; we are not interested to defend it. But neither are we interested in the wordy warfare which is swaying backwards and forwards between Paris and London. The vamped-up indignation of the British champions and the special pleadings of the French ring equally hollow. The greater part of the arguments on both sides are based on an utterly false assumption—the assumption that the Triple Entente in the Near East was a reality, with a united and an honourable policy, striving disinterestedly to make peace with justice in Asia Minor. In point of fact, it has not for the past two years been anything of the sort. It has been the flimsiest *facade*, behind which each of the three Great Powers has been fighting for its own national interests. To the promotion of those interests France and Italy have been as ready to subordinate the welfare of the Greeks as we have been to subordinate the welfare of the Turks. From the days of San Remo, when Mr. Lloyd George, amid French and Italian protests, threw an empire across the table to M. Venizelos, we have used Greece as a pawn. The Greeks, it is true, have been only too willing to play the part assigned to them, but that is irrelevant here. France and Italy, sore at the establishment of British hegemony in the Near East, have been bickering with us and intriguing against us ever since in Constantinople and in the Levant. Last spring they made their own private arrangement with the Angoran envoy, Bekir Sami Bey. Italy got a strong economic foothold in Southern Anatolia, France came to terms which, we are now told, were in all essentials very little different from those of the present Agreement. Throughout the summer the Greeks have been extending their empire in Anatolia, till they were brought up with a bump a few weeks ago on the Sakaria river. The three Great Powers, of course, maintained an attitude of "strict neutrality" in this conflict ; that is to say, the British Government favoured Greece and the French and Italian Governments Turkey, while everybody outside this country believed that British munitions were being supplied to the Greeks, and everybody here believed that French and Italian munitions were being supplied to the Turks. And, finally, the French, their patience exhausted, desperately anxious to balance their budget by getting troops out of Cilicia and to regain their old commercial and cultural influence in Turkey, stole this march upon us, and left us, with our defeated Greeks, protesting on the wrong side of the fence. A breach of faith and decency ? Of course it is ; and therein it is all of a piece with most of the Allied activities in the Near East—those that we have mentioned and others that we have had no space to mention. By all means let the British Government and its henchmen in the Press show their annoyance, but do not let them contrast French naughtiness with their own virtue. Satan rebuking sin is an unedifying spectacle.

It goes on to describe the futility of keeping up idealistic pretences. There is no point in lamenting the Treaty ; it is now an accomplished fact ; and the British Government "will have to make the peace with the Turks that they ought to have made long ago." Of the task before us, of repairing "the damage done in the last two years to British prestige throughout the Moslem world," it says :—

It will not be an easy task, for not only in Turkey, but in Persia and in Mesopotamia (despite King Feisul), in Afghanistan, in Egypt, and in India, our reputation is at this moment lower than it has ever been before. Evidently it will not be the best possible beginning of the recovery of that reputation to follow reluctantly after France and make what will be represented as a capitulation to the Turks. But what is the alternative ? A perpetuation of the Graeco-Turkish war, more British troops in Asia and less money in the British taxpayers' pockets, a sharpening of our quarrel with France, and in all probability a general blaze-up in the Near and Middle East. It is unthinkable ; there is nothing left to us but to get out as best we can from the pit which we have dug for ourselves. But the Angora Treaty has done something else besides exposing the sham of a united policy and common interests in the Near East. It has dealt a heavy blow at the Entente itself. That awkward machine may be patched up and a new start made. But what if it proves unmendable ? There would be difficulties in the settlement of Constantinople and the Straits and various important joint undertakings involved in the Treaty of Sèvres. On the other hand, it might be an advantage for all of us, now that we are no longer under any Wilsonian illusions about "the world after the war," to be done with shams, and to have a free hand to pursue our own interests in the East. The peoples with whom the Entente has experimented for three years could hardly be worse off by its dissolution—not even the Cilicians, whom France has abandoned, or the Armenians, whom we have all abandoned; while France and Italy and Britain might all succeed in establishing themselves in something like their pre-war positions, instead of thwarting one another in their joint council. It is even conceivable that, with a British Government that was both capable and honest, we might not only extend our commercial interests but play a principal part in defending the peace and civilisation of Western Asia. At any rate, the possibility of this break-up of the Entente has to be faced. If it breaks in the Near East, it will speedily break in Europe, and what France has done with Turkey, we may well do with Germany. For ourselves, we can see advantages as well as inconveniences in that. But those who want to preserve the Entente, had better study the Angora omens, and put it on a new and sounder basis.

## Turkey, Great Britain and France.

The *Morning Post* of November 14, has an article, written by "Crusader," entitled "Turkey's Future : France and the Arabs." It begins with the self-evident statement that "if we and the French want peace in our Moslem dominions we must allow no fancy map-painting in Turkey in Asia," and continues with the less evident statement that "Turkey needs both economical and political reconstruction, and is perfectly willing to accept it at the hands of one of the Allies, preferably England or France, so long as the integrity of Turkey is maintained, and peace is given to a land that has been crying for it for ten years." It proceeds :—

Now it may be urged that England is not in a position to take on fresh responsibilities in the East. She has quite enough on her hands as it is, nor has she vital interests in Turkey in Asia to protect. The case of France is different. Not only has she large interests, particularly in Syria, but she was for many years closely associated with Turkish political affairs, and would be still had she not been ousted by the Germans. Six out of every ten Turkish officers and nine out of ten Armenians talked French. Were France to superintend Turkish finance, there is no doubt that both would benefit enormously thereby, particularly with English administrative co-operation. Further, the main objects, which both England and France desire, would be assured : (1) The integrity of Turkey and peace with the Moslem world. (2) The economical development of a country with enormous possibilities ; (3) The protection of the Christian and Jewish communities in Turkey from internal oppression and external aggression. But, again, to ensure this both England and France must work together.

There are two main factors which demand consideration. The Baghdad railway on leaving the Eastern foothills of the Taurus enters, at a station called Katma, the Aleppo plain, and from here onwards runs through a country exclusively inhabited by Arabs ; secondly, among one of our promises to the Arab Kingdom was an outlet to the Mediterranean, which, like others, has not been fulfilled. Alexandretta is an Arab town, but it is cut off from Syria proper by the southern part of the Taurus range, and is connected with the Baghdad railway only by a branch line which runs north along the coast, on the western slope of the Taurus and joins through purely Turkish territory. If a boundary is to be drawn it would be no difficult matter, for the geographical features divide the races ; the Arabs in the plain, the Turcomans and Kurds in the hills. The western boundary of Arabia would run from Killis south of Aintab, cross the railway at Katma, and then follow the course of the river Afrin into the Orontes, past Antioch to Jebel Akra. Here would be the outlet for the Arab nation to the Mediterranean, for the next possible harbour, Tripoli, belongs by right to Syria, and there would be no proposal or need to remove it from the French zone. A harbour would have to be constructed at Jebel Akra and a railway run to Aleppo, but here would be a great chance for someone (perhaps Lord Cowdray ?) to pour oil on troubled waters (the waters of the river Afrin are always troubled, but could be stilled) and show himself a benefactor to both the Christian and the Moslem world.

The article ends with a modest proposal :—

It is of supreme importance, however, that the Baghdad railway should not fall into the hands of the Kemalists. It is hinted that under the terms of the Angora Treaty this will eventually take place as soon as the French have withdrawn from Cilicia. Does that mean that the French intend to give up Aleppo and Muslimieh too ? If so, would it not be better that the wrongs of the Arabs should be righted by giving them certain concessions in return for the advantages which France would obtain by helping Turkey to restore her shattered finances.

## France and Turkey.

In the *Nation and Athenaeum* of November 12, there is an extremely gloomy article called "Nemesis in the Near East." Its text is the Franco-Turkish Agreement, which, it says, "can hardly fail to mark a new phase of detachment in our relations" ; but it prefers to avoid recriminations on this ground, because, to it, "the alliance is morally obsolete." It continues :—

How to adjust our respective interests and policies in the Near East is going to be an exceedingly difficult problem. It is rendered none the easier because the conduct of foreign policy on our own side is as shifting and opportunist as that of France is logical and persevering. Nothing on our side is foreseen, nothing reckoned on a long calculation. Event after event

Digitized by Google

shows either that our statesmen do not listen to their experts, or else that the experts are incompetent. They blundered all the time in Russia by underestimating the capacity of the Bolsheviks and overestimating the power of the Whites. They cherished absurd delusions about the popularity of M. Venizelos in Greece. They lost Persia by listening to the corrupt little clique round the Shah. They lost Turkey by mistaking a handful of Anglophil Pashas for the Turkish nation. Always in this life of narrow coteries which is diplomacy, any person or any group, however abject and unrepresentative, which knows how to play upon our national vanity, can mislead our experts. The power of objective thought, which can see the ability and strength of human forces which it happens to dislike, seems utterly wanting. This mental failure underlay the breakdown of the Foreign Office policy in Turkey, and what the French have done is to take pitiless advantage of our mistakes. Anyone who knew the Turks could have told Lord Curzon and Mr. George (as we did at the time) that though it might be possible to find in Constantinople a clique of feeble and elderly grandees who could be cowed or wheedled into signing away their country's independence, the mass of the nation would not follow them. The French and the Italians both knew better, and neither of them shared our official illusions about the military power of the Greeks. The Treaty of Sèvres was an iniquitous document in itself, and it was doubly foolish because it could not be enforced. The broad result of these miscalculations is that France is now unquestionably the dominant Power in the Near East. The treaty with the Kemalists is very much more than a mere peace settlement by which France retires from a burdensome complication. On the contrary, it seems to provide for her future participation as an active force in Turkish affairs. Her economic interests will be considerable, and widely scattered, in the shape of railway and mining concessions. It is almost certain that she has pledged herself to back Turkey in recovering Smyrna and Thrace. That is the kind of obligation which she is apt to hold scrupulously, and the Turks will have every reason to be satisfied if she supports them as she supported the Poles in Upper Silesia.

The article concludes with a suggestion of three Bradshaws "to stop the ruin," the first of which is:—"The Greco-Turkish war must stop, and the Greeks, as invaders in unquestionably Turkish territory, should be called upon to retire, on pain of forfeiting every sort of British support."

## Militarism and Serbia.

The *Contemporary Review* of November contains an article written by "O. de L." on "The Prospect in Jugoslavia." It traces historically the growth of the Pan-Serb idea, in which sketch the author gives his opinion that it is in Slovenia rather than in Croatia that Separatism has any chances. It goes on to point out that Yugoslavia is not a West European country, but a country of peasants who are brought into touch with their Government only by the annual levy of recruits for the Army. But that institution the Yugoslav peasant does understand, and the writer of the article has some instructive comments on this subject:—

> But there is one Department of State with which the peasant is in very close touch. That is the Army. He understands the Army. It is something ever present to him, in which he has part and lot, like God, and the Land, and Tsar Lazar, and St. Cyril and St. Methodius—and perhaps the King. Not only is he proud of the achievements of the Army in the late War, and in the two previous Balkan Wars, but he is convinced of the necessity for its existence in the present and future. The Army has done more for him than all the Ministers of Public Health and Social Welfare who have ever held office. When the waters of affliction closed over Serbia in 1915, and for three long years it seemed that flood would never subside, it was the Army which preserved, and cherished, and at last brought to fulfilment the national hope. It has become to him, to a degree which can be predicted of the Army of no other European people, the expression of the national idea. The idea of Jugoslav Unity is not "politics" to the Jugoslav peasant. It is not new or foreign to him. It seems to him the natural thing, which God intended. He has been waiting for nothing else ever since Kossovo Polje. And now God by the hand of the Serbian Army has brought it to pass, he conceives that it ought not to be let go. In the West, and especially in the heated atmosphere of Paris, there is a tendency to regard any one of the new States in Central and Eastern Europe as being very much like any other. They ask, it is felt, put forward preposterous demands, which only require to be settled by a diplomatic compromise. This attitude is writ large in every line of the Peace Treaties. The world is already beginning to learn its shortsightedness. One lesson, which the future has still to teach, is the difference between those States whose existence is due to their own efforts, and those who owe their existence to the Allies. Of the first category are two only, Jugoslavia and Roumania.
>
> The chiefs of the Army are pursuing consciously the ends for which the people is unconsciously striving. They are militarist in the sense that Germany was militarist before 1914: but rather in the sense that Bismarck was militarist before 1870. They believe, as Bismarck believed, that war with a powerful and aggressive neighbour who blocks their national expansion is inevitable, whether they desire it or not: and they believe that such a war, if crowned with success, will precipitate and crystallise, as nothing else could, the solute and floating elements of unity, which have not been gathered together in the melting-pot. They have no illusions as to the magnitude of the task before them. They have twice thrown their influence on the side of peace at moments of tension in 1920 and 1920; and they are primarily and personally responsible for the temporary understanding attained at Rapallo. But Rapallo did not settle, and no Conference held on the basis of the present situation could settle, the future of the East coast of the Adriatic. The Army chiefs believe that, unless Italy is broken up by internal Revolution, war alone can settle that problem; and they are preparing accordingly. The military reorganisation, which they are carrying out, is accepted without demur by the non-Serbian races as the reorganisation of Moltke was accepted by the South German peoples in the years 1866-1870. The Army is the strongest unifying force in Jugoslavia to-day; and if events continue to move in their present direction, it will be the most powerful factor in the shaping of South-Eastern Europe in the future. It is not a situation in which the friends of peace, in or outside Jugoslavia, can find much satisfaction.

## BISHOP MACINNES ON ZIONIST METHODS.

In our issue of October 20 we published a brief report of a speech delivered by Bishop MacInnes at a meeting of the Jerusalem and the East Mission. In a letter received last week a correspondent informs us that "In the speech, as reported, there were allusions to the Zionist Movement which were read with surprise and regret by many who were familiar with Bishop MacInnes' tolerant and fair-minded attitude on this and other public questions." Our correspondent also directs our attention to a letter which we had already read, with interest, in the *Palestine Weekly*, from the Bishop. From this it appears that the Bishop had been unfortunate enough to be not very well reported in the *Palestine Weekly* and that he wrote his letter in order to correct some misstatements and to reply to certain editorial criticisms. The views of the Bishop are so interesting that we reproduce below the most important parts of his speech as given by himself in the letter referred to. After mentioning "a very interesting set of visits to Jewish institutions, schools, colleges, and so on," which he had had, and to the impression created on him by a visit to the Rothschild Hospital, Dr. MacInnes went on to say:—

> "In addition to these visits I spent two days motoring round several of the Jewish colonies near Jaffa with Dr. Ruppin. Now I knew a good deal about these colonies already, but greatly valued the opportunity of seeing them myself. The work they are doing and voicing the ideal surpasses all I have previously heard, and I wish there were many more colonies throughout the country. At the same time I more than ever feel sorry for the methods adopted by the British Government at home and the Zionists in endeavouring to establish a national home for the Jews in Palestine. I do not oppose that creation on the contrary I heartily support it, but it required both tact and wisdom and strength to do it. Neither have been conspicuously employed. The result is that nine-tenths of the natives of the country have been more and more stirred up into active and bitter opposition of the whole movement. Palestine is seething with discontent, and even Mr. Churchill in his speech in the House of Commons said: 'The cause of unrest in Palestine arises from the Zionist movement, and from our promises and pledges in regard to it.' But for these promises, and this movement, there is no doubt that the gathering hatred of the British exposed in Palestine could be speedily reduced. I cannot hold out any hope of doubling this force in the immediate future. On the contrary it may require some slight reinforcement.'
>
> "So the strange anomaly is presented—on the one hand we see these wholly admirable colonies, many of them the largest possible hopeful to the country in an almost unbelievable degree, and on the other hand there is no room for the development and the establishment of many like these. On the other hand, we find that the Zionists by their statements and by their demands, by their intolerance and by their lack of sympathy with the people of the country, have alienated them to such a degree that it will take years of prudent effort to counteract the effect. Meanwhile the country is impoverished and the Zionists' own cause is set back, both of which I very deeply deplore. However, I still believe that all may turn out well in the end if both sides make the endeavour.
>
> "I am thankful to know—for I have high authority for saying it—that the High Commissioner's speech of June 30 does represent the policy of the British Government. His Excellency said that the Balfour Declaration about the establishment of a national home for the Jewish people does not mean that a Jewish Government will be set up to rule over the Christian and Moslem majority, but that the Jews, a people who are scattered throughout the world, but whose hearts are always turned towards Palestine should be enabled to find their home here, and that some among them, within the limits that are fixed by the mandate and the interests of the present population, should come to Palestine in order to help by their resources and efforts to develop the country to the advantage of all its inhabitants.'
>
> "I agree with that statement. But it is most regrettable that the British Government has allowed three and a half years to elapse since Mr. Balfour's Declaration was published, during which time it has never explained what it meant until now. Indeed I have a suspicion that the British Government has not the slightest idea what it did mean! Since then the Zionists

Digitized by Google

have read their own interpretations into it. They have based on it the most extravagant claims. They have said that they intend to make Palestine "as Jewish as England is English." I regard it as most natural that the natives of the country have been very deeply alarmed and are still.

"Nevertheless, I believe that Sir Herbert Samuel's statement is a fair and proper statement, and that—*given the hearty desire of all parties to make it such*—it should be a practical and practicable ideal for Palestine. But the Zionists must realize that this ideal is absolutely impossible of attainment, and that Zionism as now manifested, will collapse as a terrible failure, if they do not drastically change their ways, I shall therefore seek every opportunity of appealing to natives, Moslems and Christians as well as to Jews, to give up clamouring for their own sectional interests and to start working for the common weal of Palestine. That is a higher and greater thing than the rights and the position of any one party or community."

After replying in spirited fashion to the criticisms of his inaccurately reported speech published in the *Palestine Weekly*, Bishop MacInnes concludes his letter :—

"Whenever I speak, the Zionist papers publish articles headed "The Anglican Bishop against Zionism," they never demonstrate or prove it. They merely asseverate. But I am not against Zionism nor have I ever been against it. I challenge any man to produce a single sentence in any speech or writing of mine during the last three years in which I have ranged myself against Zionism. It is not Zionism that I oppose, but the methods and statements of many of its adherents."

## MUSICAL NOTES.

### The Royal Philharmonic Society.

The second concert of this Society's season was given at Queen's Hall on November 17, when the principal items were a new Concerto for viola and orchestra by Arnold Bax, Holbrooke's orchestral poem. "Ulalume," and Brahms' Third Symphony in F, Mr. Albert Coates being the conductor. The viola concerto was played with marvellous skill by Mr. Lionel Tertis (the greatest viola-player in the world), and was conducted with insight; but it was more poetical than musical, more of a nebulous rhapsody than a formal concerto. There is any amount of beautiful writing in it, but the composer seems to have wandered into too many by-paths, pondering the while on his wistful Celtic fancies. The work had, however, a great reception. Mr. Coates' reading of "Ulalume" was excellent, sometimes even suggesting that there was more in Holbrooke's poem than there actually is. In Brahms' Symphony both his strength and his weakness came out; it had virility and purpose as well as a heavy pointedness. And there was very fine analysis in Delius' "On Hearing the First Cuckoo in Spring," though the *tempo* was dragged unduly and the haunting melodic movement might have been a little more flowing.

### Albert Sammons.

One had no doubt, even before the orchestral concert of Albert Sammons at the Queen's Hall, on November 16, that he was England's finest violinist, and one knows now that he is a class apart, like Kreisler or Ysaye, Thibaud or Manen. With Frank Bridge conducting the London Symphony Orchestra in Elgar's concerto in B minor and in Brahms' in D, Sammons had a supreme evening. He has a most glorious richness, breadth and purity of tone, an amazing though unostentatious technique, and a power of interpretation which, in the Elgar at any rate, one felt to be perfectly just. The lyrical grace of this concerto, its appealing tenderness, and its noble dignity were alike caught and translated by this young English violinist, and a more perfect performance than his one cannot even in dreams imagine. It is only fair to point out that great credit belongs to the conductor, who supported Sammons with magnificent perception and responsiveness. In the Brahms there was not quite this degree of unanimity, particularly in the last movement where the soloist's rhythm seemed to be cramped. Mr. Bridge is neither a striking nor a showy conductor, but he is an extraordinarily fine musician, and the brilliant way in which he never failed Sammons in the Elgar proved that he is a greater conductor than his holding of the orchestra in the "Magic Flute" overture or in the second of his own Richard Jeffries poems would suggest.

### Mr. Leonard Borwick.

Mr. Leonard Borwick, an admirable English pianist, gave the first of a series of three recitals at the Æolian Hall on November 16. He is a player of a very high type, one with whom you often agree and sometimes disagree, but whom you always revere. There is a simple sincerity in his readings that savours of a bygone day, making one almost blush for the hypocrisy of so many modern "interpretations." But it is easy and superfluous to praise him: let us state our disagreements. First of all (I think) one bumps against his love of variations. Last year, I remember, he made us sit through the whole of the "Diabelli" variations, and now, at his last recital, he served us with an even crueller trick in the second movement of Schubert's Sonata in A minor (Op. 42). This leads up to the second grievance: his passion for Schubert's pianoforte pieces. Obviously no one can believe more fully in these pieces than Mr. Borwick (because he plays them on the slightest provocation), and if he can't persuade us that they are not thin and dull, no one else can. (Moreover no one else will). And lastly, his device of not playing the notes of his two hands together, while perfectly justifiable in some places, is apt to become monotonous in Chopin. But what a fund of delights he has to set against these things! He played some Couperin pieces, and notably the "barricades mistérieuses," with the most charming restraint and spirit, and a very merry "Gigue" of Graun was perfectly finished. Unaffectedness was again the mark of his Chopin group. He achieved in the prelude in D. minor a tremendous lift, at the expense, however, of good tone; but the C sharp minor Scherzo was gloriously and dazzlingly done. One sometimes feels that Mr. Borwick's successes depend on whether the music he is playing is good or not (though this is not so), so content is he to let the composer speak for himself.

### The Classical Concert Society.

The Classical Concert Society began its season at the Wigmore Hall with the first of eight concerts on November 2. The occasion was made notable by the presence of Cortot, the great French pianist, for the Allied String Quartet, who, with him, played Fauré's second Quintet and Schumann's Quintet in E flat major, were not playing in their best form. He, without any forced prominence, kept these players together, held them and led them. True, nothing that he could do or persuade his colleagues to do could make the Fauré work sound important: it was merely a composition of pleasing insignificance. But there was some beautiful playing in the Schumann, the pianoforte part, which of course is the main part, being perfectly done. Here there was neither sentimentality nor lingering caress nor fond idealism, but the sheer beauty of the thing was unostentatiously and exquisitely reflected. Some of the *tempi* adopted were strange, but that is a matter for the individual. Cortot's playing of Debussy's "Children's Corner" was amazing in its deliberate, almost cold, clarity. Here every value was focussed with an intense, unruffled intellect; and the resultant tones and shades came through as clear as crystal. Without any doubt he is one of the greatest pianists living.

### Pianists.

The last thing of which one could accuse M. Marcel Ciampi, who gave two pianoforte recitals at the Wigmore Hall recently is lack of individuality. Whatever he does has an original impress, though whether that originality is always artistic is open to doubt. In a curiously-chosen programme on October 31, he was a mixture of good and bad. He achieved some fine pedalling effects in the first movement of d'Indy's "Poeme des Montagnes," while in the second he failed to draw out the fine tone-colours of which his Pleyel pianoforte was capable. Whether it was merely a desire to be in touch with the modern movement to revive Mendelssohn or really a genuine belief in its merits that made him bring forward the preposterous "Prelude and Fugue in E minor," I cannot guess: in any case, the choice was unwise. Again in half-a-dozen of Brahms' waltzes there was an adoption of *tempo* that was sometimes nearly unintelligible; also a proclivity for emphasising inner melodies that did not need it. And yet in Chopin's Scherzo in C sharp minor, there was a very vivid display of technique, with the possession of which M. Ciampi ought to be a finer player than he is.

There was a certain amount of disappointment in the orchestral concert which Miss Olga Carmine gave with Sir Henry Wood and his orchestra at the Queen's Hall on November 2. For though she has neatness, unaffectedness, and facility, her charm was on this occasion rather superficial. Apart from one or two slips, she did not make the pianoforte part of Mozart's C minor concerto stand out as it should, and seemed content, (quite possibly through nervousness) to subordinate the importance of her part. However, we know her worth and are confident of her future.

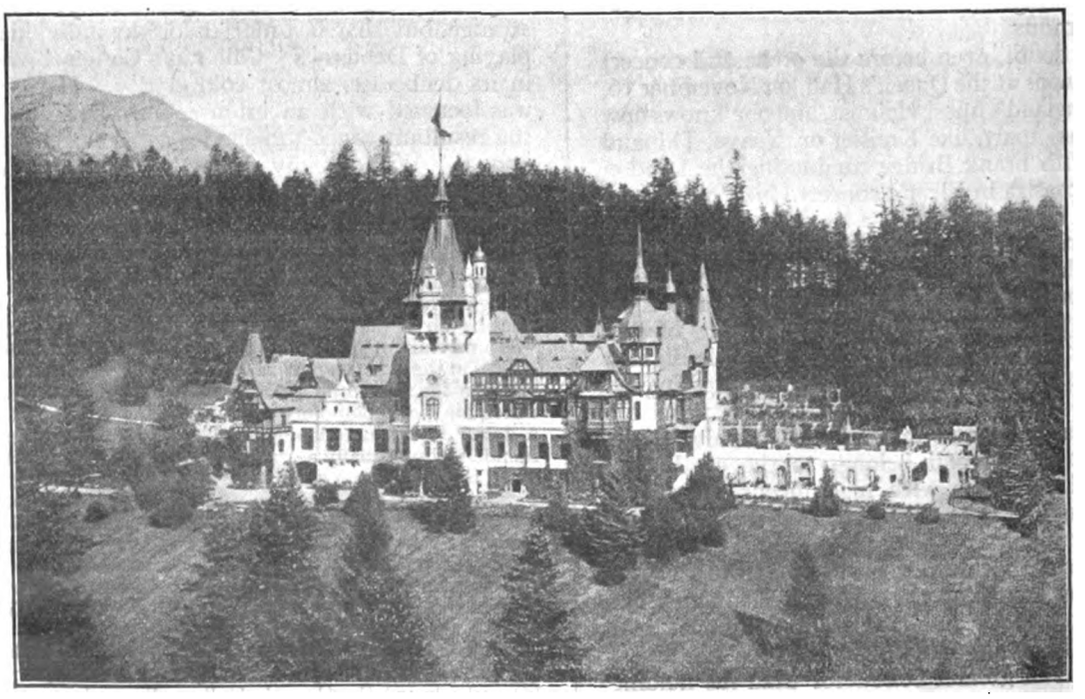
# NEAR EAST BOOKSHELF.

## ROUMANIA FROM WITHIN.

**"ROUMANIA IN LIGHT AND SHADOW." By Ethel Greening Pantazzi. (London: T. Fisher Unwin, Ltd. 30s. nett).**
**"TWENTY YEARS IN ROUMANIA." By Maude Parkinson. (London: George Allen and Unwin, Ltd. 10s. 6d. nett).**

That two striking books on Roumania should appear simultaneously is a coincidence and, we may hope, an earnest of increasing interest being taken in Roumanian affairs by the English speaking public. Both volumes may be warmly commended, as they give, each from a different angle, a real insight into Roumanian life. In "Roumania in Light and Shadow." Mme. Pantazzi, Canadian-born, married to a Roumanian naval officer, sets forth in diary form her experiences from the time of her first arrival in the country in April 1909 until the end of the war. It is a very human document throughout, arresting in the simple unaffected way in which the author presents her pen pictures of everyday life and scenes, and towards the end acquiring the dignity of a valuable historical narrative when she relates the little-known story of the imprisonment of a number of Roumanians by the Soviets in Odessa and the dramatic circumstances of their liberation and escape. In the course of the nine years Mme. Pantazzi saw much of Roumania, and was a conscientious diarist; but there is nothing monotonous in the way the chronicle of her doings is reproduced, and the reader, in spite of the thickness of the book, will be tempted to regret some of the wide gaps that mark, it may be, a whole month skipped. Of the early part of the diary suffice it to say that it brings the parts of Roumania that it describes: Galatz, Sulina, Bucharest, Sinaia, and the itineraries of motor tours—very vividly before the eye. Not a page should be missed, but here we conceive it to be a duty to call special attention to the author's graphic description of her Odessa experiences under the Soviet régime. When the Roumanian Court and Government left on the approach of the Germans, removed from Bucharest to Jassy, Commander Pantazzi was sent to Odessa to superintend the transport of munitions which were being sent from England to Roumania *via* Russia. His family went with him, and a few days after their arrival in Odessa came the news of the outbreak of the Russian Revolution. Then followed the Soviet régime, and Bolshevist doctrines not only spread to Odessa, but made headway among the Roumanian soldiery in the town. There was by this time a considerable Roumanian Colony there, and a house had been taken for the Royal family. Eventually the Bolshevists assumed command of Odessa, and Roumanian deserters formed a "Battalion of Death." A reign of terror was started. Roumanian officers and the leading members of the community were arrested. Mme. Pantazzi gives a vivid account of those days of peril. There can be little doubt that the fate of the seventy-one prisoners would have been sealed, had not Lieut.-Colonel J. H. Boyle, of the Canadian Army, who was in Jassy at the time, taken upon himself the task of rescuing them. How it was accomplished and the type of man who did it we may leave our author to tell. The story deserves to rank among the outstanding deeds of the war. Mme. Pantazzi's narrative may be supplemented on one point. Asked how he managed to get his own way with the Soviet Committee of Odessa, Colonel Boyle, who is not easily persuaded to be communicative on these matters, explained that he had been helped by his experience in handling dog-teams in Canada. There is always one top-dog in a team, and until you have mastered him, you will have trouble. It is generally the same with a body of men. Confronted with the Bolshevist Commissars Colonel Boyle marked down the top-dog and left the others to themselves. Mme. Pantazzi, who rendered invaluable assistance to her fellow-Canadian, tells of the outcome of this mastery of Racovski, and pays a well-deserved tribute to a remarkable man.

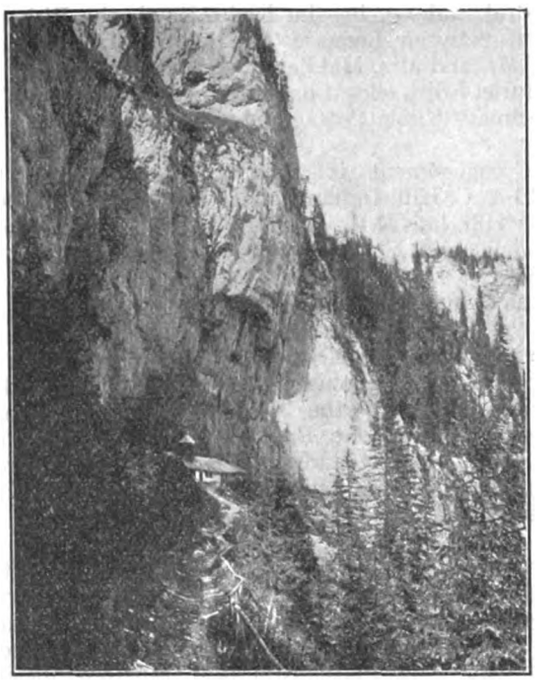
Miss Maude Parkinson approaches her subject in a different way. She has spent twenty years in Roumania and during that period has given, as became an educationalist, close study to the people and their customs. A keen sympathy with and love of her surroundings, happily combined with an Irish sense of humour, has resulted in a very readable book, full of interesting information, but never dull. "If anyone feels curious as to how the story gained publicity." says the author, in one passage, I can only say that my long residence in the country taught me, among other things, that there are no secrets in Bucharest." And the reader will be grateful to her that she has given further publicity to so many of them. We are introduced to many celebrities, but we agree with Miss Parkinson that the



**PELESH CASTLE: The Royal Residence at SINAIA.**

Digitized by Google

Roumanians also have a sense of humour and will not take offence over her anecdotes. Many will be familiar under various forms to those who know Roumania well, and in some instances the version in this book seems to rest on such good authority that it can hardly fail to



The JALOMITZA Hermitage, Roumania

become the "official" text in future. It is surely too an original "howler" that our author has to her credit in a pupil's translation of a portion of the fourteenth chapter of St. Mark: "The ghost is agreeable but the meat is feeble," a rendering which, in the second part at least, might be held to have a special application in Roumania.

## ALGERIA AND TUNISIA.

**"THREE TRAVELLERS IN NORTH AFRICA." By the Hon. Emily Ward, with photographs and a chapter on Southern Tunisia by Lord Leigh, and preface by the Hon. Agnes Leigh. (London: The Bodley Head. 6s. net.)**

The companions who describe their happy three months in North Africa do so in a very simple and unpretentious manner, and we feel that they are writing as much for the pleasure of reminding themselves of their journeys and the pleasant things they saw as with a desire to help those who want to follow their excellent example and to spend a winter motoring in Algeria and Tunisia. Miss Ward is responsible for the actual story, which she has re-written from a carefully kept dairy; Lord Leigh occasionally describes expeditions for shooting or sight-seeing which he undertook without the others, and he contributes the illustrating snapshots.

The party had their headquarters at Algiers, and started out, with their French chauffeur, for the first expedition on December 19, 1919. They spent a fortnight exploring Southern Algeria and the country of the Mozabites, who are one of the original Berber races of North Africa. The three travellers were much impressed by the peaceful atmosphere of Ghardaia, the Mozabite chief city, where they spent Christmas. Miss Ward gives an amusing account of the camel races which they were fortunate in seeing at Laghouat. When the car set out again from Algiers it travelled eastwards along the coast to Tunis and the accounts of the country through which the travellers passed, and of the places at which they stopped are varied and pleasant, and give a clear impression. From Biskra to Touggourt they were obliged to travel by train on "a single line of railway . . . through the sandy waste."

Miss Ward devotes a long chapter to Timgad and its very interesting Roman remains; the signs of the busy lives spent there so long ago caught her fancy, and she felt that she had made two new friends in Marcus Sertius and his beautiful wife, Valentia, the great benefactors of the city.

This little account of a picnic at Bone when the three were nearing Tunis, is typically reminiscent of enjoyment. "The day was so delicious that we chose the seashore for our picnic, a lovely strand, with the town brilliantly white on higher ground and beyond the sandy beach, the waters of the Mediterranean at her bluest." We are given vivid glimpses of Tunis, with the startling contrast that it presents between the modern and ancient quarters, and of Carthage with its memories of vanished greatness.

Lord Leigh's account of his little tour in Southern Tunisia is interesting, especially the description of Troglodyte dwellings, of one of which there is a photo graph. The travellers motored back to Algiers, which they left for the homeward journey with regret, carrying with them many happy memories. This is a cheerful, enjoyable book, and should—with its excellent map—prove of real use to those who think of spending a holiday in these parts, in order to experience "a sense of space and peace and greatness in these desert regions." They will be relieved to learn that only once did the car stick on a desert road and have to be pulled out of the sand by the contemptuous camel.

## "A MAN'S A MAN FOR A' THAT."

**"DAVID THE SON OF JESSE." By Marjorie Strachey. (London: Jonathan Cape: 7s. 6d. nett.)**

*Malecho pow Elijohu*? Such was the somewhat disdainful comment of a Jewish friend who, rapidly handling this book, found that it was the work of Miss Marjorie Strachey. "What doest thou here, Elijah?"—or, paraphrased, "What doest thou here, young lady?" The life of David, the son of Jesse, as sketched in the Jewish Scripture and amplified in Talmudic lore, is a full one, an epitome of varied experiences; or as Nathan is said to have said, "Thou art the Man!" It is this man, this ancient salient of the great fortress of literature whom our authoress aspires to reduce to plain, prosaical proportions. David, she has convinced herself, was a mere man, a tribal King, a petty chieftain, a fairly inferior sort of hero, looking upon his Jahweh, or Jehovah, as a portable, useful, anthropomorphic God, but obviously superior to Dagon, Bel, and others. She tables quite earnestly a close arithmetic of David's *amours*, which we know were all inferior to his love for the son of Saul. Where her arithmetic seems to us faulty is when she tackles military, geographical and strategical measures; ten miles or two hundred miles, between the River of Egypt and the Rivers of Damascus, are covered in her book by the forces of Israel, Judah, Philistia, Syria, or Moab, equally easily in space of two or three days. The publisher provides a map as though to emphasize these solecisms. But—mankind has acquiesced long enough in traditional adherence to the letter of "Scripture," whether Jewish, Christian, Moslem, Buddhist, or other, and our authoress is ambitious for the spirit, not the letter—in a word she strives to induce people to think, and not to have their thinking done for them by priests, or parents. She has made here an iconoclastic picture with no little scholarship and skill, and Hebrew, Christian and Moslem will find no acerbity in her conception of David, the son of Jesse.

## BOOKS RECEIVED.

"An Administrator in the Making; James Saumarez Mann, 1893-1920." Edited by His Father. With Illustrations and a Map. (London: Longmans Green and Co. 16s. net.)

"The Flag of the Adventurer." By Sydney C. Grier. (London: Wm. Blackwood and Sons. 7s. 6d. net.).

"An Introduction to Mahayana Buddhism." By Dr. W. M. McGovern. (London: Kegan Paul, Trench, Trübner and Co., Ltd. 7s. 6d. net.).

*La France* is the title of a weekly paper pubiished in London, which contains extracts from the French Press. It is intended to promote the study of French in this country, and undoubtedly the wide range of subject matter covered by the extracts provides most interesting reading. *La France* is well printed and contains a number of illustrations each week. The office is at Montague House, Russell Square, W.C.1.

## PERSONAL AND GENERAL.

**To-Day.**

November 24 (New Style).
November 11 (Old Style).
Rabia I., 24, 1340 A.H. of the Moslem Calendar.
Marheshvan 23, 5682 of the Jewish Calendar.

Lord Somerleyton has left London for India.

M. Frederic Nano has been promoted Second Secretary of the Roumanian Legation.

M. Ivan Stancioff, Hon. Attaché to the Bulgarian Legation, has left London for Switzerland on leave.

The Hon. Mrs. Ronald Greville has left for Marseilles on her way to India, where she will visit the Viceroy.

The Hon. Mrs. Patrick Macnaghten has left 71, Knightsbridge, for India, where she will be for the winter.

Mr. Sidney H. Goldsmid has left London on a short visit to Ceylon, and no correspondence will be forwarded. He will return to 35, Chesham Place on February 1.

Sir Thomas and Lady Bennett have returned to Harwarton, Speldhurst, where they will stay until the middle of December, when they will leave for India.

The marriage was celebrated on November 9, at the Greek Church of St. Sophia, by the Very Rev. The Great Archimandrite, between Manoli Tombozi and Nancy Rodocanachi.

The marriage took place on November 15, at Christ Church, Down-street, between Sir Charles Henry Kesteven, of Calcutta, and Annie Lauder (Nancy) Wilson, daughter of the late James Wilson.

The marriage arranged between Neville A. Dyce Sharp, late of Abyssinia, and Flora Macdonald, of Waternish, Skye, took place at St. John's Church, Outwood, Surrey, on November 22.

Sir George Buchanan, K.C.I.E., left England for India by the P. and O. s.s. Morea, for his annual tour in the East. He expects to return to this country about March.

An engagement is announced between Constantine P. Zochonis, only son of Mr. P. B. Zochonis, and Mrs. Zochonis, of Bowdon, Cheshire, and Nitza, eldest daughter of Sir John and Lady Stavridi, of 33, Lennox Gardens, S.W.1.

The marriage arranged between Captain G. C. Sloane Stanley, late Grenadier Guards, of Ury Estate, Badulla, Ceylon, and Miss Hilda Leach, of 34, Elm Park Gardens London, S.W., will take place in Southern India towards the end of January.

The marriage was celebrated on November 10 at the Cathedral, Lahore, by the Right Revd. the Bishop of Lahore, between Leonard Middleton, I.C.S., younger son of Mr. and Mrs. Middleton, Acacia House, Shanklin, and Muriel Edith, eldest daughter of Mr. and Mrs. W. G. McKechney, Knole Cottage, Wimbledon.

The engagement is announced between Captain Ronald A. C. Hill, Indian Police, younger son of Colonel Arthur Hill, late R.E., and Mrs. Hill, 18, The Common, Woolwich, and Shelagh, only daughter of the late Andrew Orr Deas, advocate, Edinburgh, and Mrs. Orr Deas, 26 Chapel Street, Belgrave Square, London.

The marriage was celebrated on November 16 at the Greek Church, St. Sophia, by the Great Archimandrite Pagonis, assisted by the Archimandrite Maschovakis, between Everard John Boothby How, second son of Major John Herbert and Mrs. How, of St. Andrews Fife, and Fanny, only child of the late Theodore Zarifi and Mrs, Zarifi, of 25, Berkely Square.

It is stated that Mr. H. St. L. Philby, the expert on Arabia and British adviser to the Ministry of the Interior at Baghdad, has been appointed in a similar capacity to the Emir Abdullah in Transjordania. He is expected soon to reach Amman, the capital of Transjordania, after seeing Sir H. Samuel at Jerusalem. Colonel Lawrence who is now on a visit to Transjordania, after a mission to King Hussein at Jeddah, will then return home.

The Council of the Senate of Cambridge University have elected Mr. Alfred Chilton Pearson, Litt. D., of Christ's College, into the Regius Professorship of Greek in succession ot the late Dr. Jackson. Dr. Pearson was a first-class classic in 1881-3, gained the Hare Prize in 1889, and is at present Gladstone Professor of Greek in the University of Liverpool. He has lately edited, in three volumes, the fragments of Sophocles, in continuation of Jebb's edition of the Plays.

The Countess of Hardwicke, Lord and Lady Willoughby de Broke, Major the Hon. B. A. Forbes, Sir Robert Henderson, Sir Charles Kesteve Kesteven, Sir Arthur Priestly, and Sir Treverdyn Wynne were amongst the passengers who left London by the P. and O. express for Marseilles to join the steamship Morea for Bombay. Sir Allan Horne, Sir Wilfred and Lady Stokes, the Mahraja of Cutch and Prince Karam, Prince Amarjit and Princess Amarjit Singh of Kapurthala, also joined that vessel at Marseilles.

## OBITUARY.

The death has occurred of Mr. Edward James Standen. He was born in 1836, and served as a lieutenant with the Turkish Contingent Engineers at Kertch and Yenikale, in the Crimea, 1855-6. From 1857 to 1872, he was Secretary to the British Commissioner on the European Commission of the Danube, and he served as Resident Director in Paris to represent the British Government on the Council of the Suez Canal Company from 1876 to 1891, being appointed a member of the Managing Committee in 1888.

## THE GREEK NAVY.

The Admiralty announce that the torpedo gunner required for service with the Greek Naval Mission has now been selected. It is also notified that salutes of foreign men-of-war will be returned at the following Greek ports :—Piraeus, Patras, Nauplia, Corfu, Kavalla, Poros, Salonika, Salamis (Royal Arsenal), and Suda (Crete). Salutes to the Moorish flag will also be returned at Tangier.

Belgium will take care of 200 Russian children, at present in Constantinople, who are to be brought to Antwerp.

Two Arabs have been sentenced to 15 years' imprisonment apiece for having been found in possession of a bomb and arms during the riots of November 2 in Jerusalem.

## ARMISTICE DAY IN SMYRNA.

Our Smyrna Correspondent writes:—

On Armistice Day in response to an invitation sent out by Captain S. D. Wilson, the S.N.O., a representative gathering of the British colony took place on the quarter deck of the H.M.S. *Tumult*. The guests included Lady Lamb and the Misses Lamb, Mr. Symonds (Ottoman Bank), Mr. C. E. Winter (National Bank of Turkey) and several ex-Service officers. At 10.55 the warships hauled down their gay dressings and the *Tumult* ran up a black cone on the foremast. Precisely at 11 this signal was dropped, and all ships in the harbour lowered their ensigns half-mast. On the British, French, Italian and Greek destroyers, the crews stood to attention for the two minutes' silence, which was respectfully maintained by the hundreds of spectators lining the Quay. Meanwhile a bugler on the Italian ship sounded the "Last Post" impressively.

The Churchwardens and congregations of St. John's Church assembled at the Caravan Bridge Cemetery and, laid a wreath on the graves of the Kut prisoners and R.A.F. officers and men who lost their lives in Smyrna during the Great War and were buried near their comrades who fell, fighting *for* Turkey, in the Crimean War.

In the evening an ex-Service officers and men's dinner was held in Costi's Cafe, when some 30 old comrades enjoyed an excellent dinner and much "bonhomie." Major-General Raymond de Candolle, C.B., C.E., presided, and was ably supported by Mr. T. R. Treloar, son of Sir. Wm. Treloar, who organised the dinner; Major Johnston, *liason* officer with the Greek Army; Mr. F. S. Cole; H.B.M.'s Vice-Consul Edwyn Hole; Paymaster Lieut.-Commander Duncan G. Wallace, R.N.R.; while Commander Gelis, of the *Centre-Torpilleur* Hovas, represented the French, and Vice-Consul Wallace R. Treat, the American forces. The gathering was such a success that it was decided to form a permanent Committee to help to keep together ex-Service officers and men and look after their mutual welfare.

## PICTURES OF MOROCCO.

There is now being held at Walker's Galleries, 118, New Bond Street, an exhibition of very interesting water-colours by Mr. Romily Fedden. Last year Mr. Fedden stayed seven months in Morocco, and was moved to paint upwards of twenty pictures. For the most part they are direct and faithful representations, at once vivid and accurate, but in a few of his best efforts the painter has gone farther, and penetrated into the essence, as it were of his subjects. Particularly in the reproduction of a crowd, especially of the movement of a crowd, is he successful, a high example of this being No. 28, "Fanatacism," in which the dusty frenzy of strict Mohammedans is excellently suggested. We meet this intense directness of purpose again in No. 12, "Dance of the Assiou," and in No. 52, "A Religious Procession, Tangier," where the ordered life of the thing is beautifully kept. Mr. Fedden appears to paint with a rather wet brush, but for all that he is in no way afraid of colour, and much of the interest in this exhibition lies in the method by which he has, without going to extremes, preserved the colours of the East. There is a wonderful kind of nondescript mauve in No. 13 "Twilight in the Kasbah," in No. 34, "In the Souks, Rabat," he has admirably caught the velvety richness of the carpets; and No. 49, "Marrakesh," is a very bold and brilliant treatment in colour—for in the background stands a tower and, in startling but quite just contrast to it, trees in a blue light. This, indeed, is probably the finest picture of them all. A very subtle use is made of twilight and of moonlight effects; notably in No. 18, "A Grey Evening, Rabat," in No. 30, "Tangier Bay, Moonlight," which has a most exquisite thinness, and in No. 50, "The Little Shop, Twilight." Then again, there are pictures that stand by themselves in excellence; No. 10, for instance, "A Corner of the Soko, Tangier," which is finely characterised with deep-set detail; or No. 20, "Rabat, Rose and Green," of very happy neatness; or the low-priced (12 guineas) No. 43, "The Place of the Dead, Tetuan," which is a tombed hill that sad women are slowly ascending; or the highly-conceived No. 51, "Tetuan," in which the literal contrast is extraordinarily well done. This exhibition, which remains open until November 29, should be visited by all those who know Northern Africa.

## PERSIA SOCIETY MEETING.

The Persia Society which had not held any meetings for some time previously, assembled on November 15, at 74, Grosvenor Street, London, W., to hear an address by Mr. Gregoshch, Honorary Secretary of the Georgian Legation. Lord Lamington presided. The meeting was well attended, and several notable people, including Prince Sumbatoff, were present. The Society proposes to have meetings at regular intervals in the future.

The paper read by Mr. Gugushvili was a lengthy one. In the course of it he said that to Russia the Middle East had always been a goal of ambition. She naturally looked in that direction for expansion, and in this matter Revolutionary had followed in the footsteps of Tsarist Russia. At first the Red Army had been handicapped by lack of men experienced in handling guns, but this had now been remedied. To-day two-thirds of the officers of the Red Army were men who had previously served in the Tsarist Armies. Generally speaking the Red Army was red only in name; in reality it did not differ from the imperialist armies that had gone before it. Officers in the Red Army did not say they were fighting for Bolshevism but for the honour of Russia. He had not met a Russian of any shade of opinion who was opposed to the Bolshevist policy in external matters, and, in spite of irreconcileable differences, all elements were for this purpose now rallying round the Communist flag. It might be asked how could the Bolshevists carry out their campaign with a famine raging in the country. But the desire to restore their ruined industries, and to obtain food for the Army and population, compelled the Bolshevists to embark on imperialistic campaigns. The industrial centre of Russia had formerly got oil from Baku, cotton from Turkestan and flour from the Ukraine by exchange. To-day there was nothing to go in exchange, and the endeavour was to get these things by force. In one way the famine itself was assisting in Russia's expansion; entire villages from the famine stricken areas were being settled in Central Asia. What could not be achieved under the Tsarist régime was being realised by the Bolshevists.

Mr. Tcherkesoff supported the remarks of the Lecturer; but another speaker, Mr. Allen, said there was a tendency in this country, dating back to the Crimean War, to exaggerate Russian imperialism, and to misinterpret the Russian national movement. Russia had been to a great extent a civilising force in the Middle East.

A vote of thanks was accorded to the Lecturer.

## NEWS IN BRIEF.

A Nairobi telegram says that the Convention of Associations has decided to send a deputation to Mr. Churchill on the subject of Indians in Kenya. The Convention maintains its objection to the grant of equal rights to whites and Indians.

Permission has been given for 7,000 more Russian refugees to enter Bulgaria from Gallipoli.

An Arab rising in the Deir-ez-Zor district on the Euphrates has been suppressed by the French.

According to a newspaper telegram from Belgrade, the Italian Military Attaché there called at the offices of a newspaper, which, he alleged, had spoken of Italy in offensive terms. The editor refused to withdraw, and a scuffle ensued, in which the Attaché was badly hurt.

A Greek *communiqué* states that an enemy aeroplane attempted to bomb Afium Karahissar railway station. The only bomb which exploded fell in a prisoners' camp. The aeroplane was chased and compelled to make a forced landing.

The Cairo Correspondent of *The Times* is able to deny rumours which have recently been circulating in Egypt to the effect that many thousands of rounds of ammunition had got into the hands of civilians in Cairo owing to the carelessness of officials in the Disposals Board.

General Gouraud, the French High Commissioner in Syria, has been visiting the British, French, and Mussulman military cemeteries in Palestine.

The Athenian newspapers published cordial farewell articles on the occasion of the departure for Copenhagen of Lord Granville, former British Minister.

## THE LEAGUE OF NATIONS ACTS.

In decreeing a "naval holiday" for ten years the Washington Conference will not have to its credit a more practical contribution to the cause of peace than that which the League of Nations has made in compelling the Yugoslav Government to withdraw its troops from Albania and to respect the frontiers prescribed by the Conference of Ambassadors. The fighting on the Serbo-Albanian frontier may have been confined to a relatively small area, and while it lasted Europe may not have considered that its rest was being unduly disturbed; but at any moment the trouble might have involved other countries. Moreover, a grave principle was at stake, and if the League had not taken decisive action its continued existence must have become a farce. Already it or its sponsors, the Supreme Council, had remained indifferent far too long to an open scandal, and we can but hope that the machinery so tardily put into motion on this first occasion will be more easily started in the future, if the need for it should arise. The unsatisfactory situation on the northern boundaries of Albania has been common knowledge for the last two years, and it ought not to have been necessary for the League of Nations, as guardian of the world's peace, to delay action until Albania was admitted to membership. During the last few months, however, the fighting between Serbs and Albanians assumed more serious proportions. The Albanian Government seized the earliest opportunity of appealing for the protection of the League, but did not at first meet with any practical response. An excess of caution prompted the League to shield itself behind the fact that the frontiers of Albania had not been formally decided upon by the Ambassadors' Council, and it was left to the British Prime Minister to bring directly to the League's attention the fact that the Serbians were carrying on military operations in Albania, and to ask it to consider the question of an economic blockade of Yugoslavia, under Article 16 of the Covenant, unless the Serbian troops were withdrawn from Albanian territory. At a meeting held in Paris on November 18, after the British case for setting the machinery of the League in motion had been stated, the Yugoslav representative challenged the action of Great Britain in the matter, but announced that his Government had decided to conform to the ruling of the Ambassadors' Council in regard to the frontiers and would withdraw its troops. At a subsequent session the Yugoslav and Albanian developed their cases in detail, but the point had been gained and the League's authority vindicated with the decision of the Yugoslav Government to respect the Albanian frontiers in order to avoid the risk of having the penal clauses of Article 16 enforced against it.

To all the Allies, and in particular to Great Britain, it is a matter for regret that Yugoslavia should have adopted a line of action that compelled intervention on the part of the League. The Allies' indifference to the tragic fate of Montenegro would seem to have led the militarist party in Serbia to believe that they could indulge with equal impunity in the same tactics against the Albanians. But the fact that the Allies turned a blind eye did not imply that they were not aware of what was happening to the Montenegrins, and they were not prepared to see similar measures meted out to Albania. To what lengths their dilatoriness was carried may be inferred from the statement made to the League of Nations that, as a result of the Serbian invasion, a hundred and fifty Albanian villages had already been burnt, forty thousand Albanians driven out, and large quantities of cattle carried off. That Great Britain should have been the agent by whom Serbia has been brought to account will not, it is to be feared, enhance British prestige, already on the wane, in Yugoslavia. But this was a matter in which the Serbians had to be saved from themselves. No one has had better opportunity than the British of learning the worth of the Serbs, and it is doubtful whether any help was of more practical value to the cause of Yugoslav unity than that given by Great Britain. It is not, however, the act of a friend to remain silent while a Belgrade Government commits mistake after mistake, which not only lowers its standing among the Allies, but also threatens to undermine the solidarity of the Yugoslav State. THE NEAR EAST dissociates itself from any attempt, such as was recently made by the Balkan Committee, to dictate the terms of the Constitution of the Triune Kingdom; but it requires only a slight knowledge of the internal affairs of the country to realize how a régime which rendered Serbian aggression against Albania possible may cause resentment even to the point of political disintegration among the more enlightened and less bellicose parties to the union in Croatia and Slovenia. The rebuff administered to the Belgrade authorities by the League of Nations can hardly fail to benefit the cause of real union in Yugoslavia; for the attempt made by the Serb representative before the League to justify Serbian action was so weak that it proved conclusively that the Albanian policy could never have commended itself to a Cabinet claiming to govern on Western lines. Not a single argument advanced by M. Boshkovitch, as far as the abbreviated reports of his long defence enable us to judge, could have carried conviction with the League, and if the meeting had had to gauge the intellectual standards of the Belgrade and Tirana Governments from the speeches delivered by their representatives, it must have been left with a very poor opinion of the new Yugoslav State. It is to be hoped, however, that the League is better acquainted with conditions in Yugoslavia. The dragooning of Montenegro and the wanton aggression against Albania are only possible with a state of affairs that compels Croats and Slovenes to dissociate themselves from the present régime. The good sense of the Yugoslav peoples will work out their own salvation. While they need no prompting from without, they can hardly fail to be grateful to the support given to the cause of ordered and progressive, as against arbitrary and reactionary, government, by the action of the League of Nations, and they will not, it is to be hoped, endorse the attempt to distract attention from shortcomings at home by stirring up feeling against the country that has once again come to their help.

Apart from the relief felt at justice having been done to Albania, the most satisfactory aspect of the incident is that the League has been shown to be an effective instrument for compelling States into the path of rectitude. Even if it might still hesitate to measure its strength against that of a refractory Great Power, it has certainly established its claim to be regarded as a court of appeal for the smaller countries. In the present instance it has had to deal with a crude case of aggression but there is no reason why its aid should not be invoked for a dispassionate verdict on a number of points where the attempted settlement of the Near Eastern question has merely served to perpetuate old injustices or to create new ones. We do not recommend an immediate rush of claimants to the League's portals, for there can be no other case as pressing as Albania's. But where any country in the Near East feels itself aggrieved by the settlement laid down by the Peace Treaties, it will do well to realize that it has in the League a far more useful advocate of the right than is to be found in any warlike efforts or underground intrigue on its own part. The lesson of the Serbo-Albanian incident suggests that no country in future will be allowed to benefit by the doctrine Might is Right; whereas an aggrieved State, if its cause is just, has only to bide its time, marshal its evidence and carefully prepare its case in order to obtain justice far more effectually and at less expense than if it trusted to its own armed strength.

## BRITISH PRISONERS IN ANATOLIA.

### The Release of British War Criminals.

In our last issue we referred to Admiral Sir Percy Scott's letters to *The Times* on the treatment of Colonel Rawlinson by the Kemalists; and gave Lord Curzon's reply to his denunciation of the Foreign Office and the War Office. Lord Newton, who raised the question in the House of Lords on November 9 without associating himself with Sir Percy Scott, severely criticised the Government on the following day for failing to try the Turkish war criminals who have been in British hands since shortly after the Armistice. It appears that early in 1919 the British Military Commission in Constantinople handed the Turkish authorities a list of Turkish officers and men who were wanted for various war crimes—mainly ill-treatment of British prisoners—and about 64 of them were arrested and sent to Malta. They were still awaiting trial, however, when the Peace Treaty with Turkey was signed at Sèvres in the summer of 1920. This treaty provided for Allied military tribunals to try Turks accused of violating the laws of war, but it was never ratified, and the 64 men continued to languish in Malta. In the meantime Mustapha Kemal had established his authority throughout most of Asia Minor, and about 35 British officers and men fell into his hands. Some, including Colonel Rawlinson, were Intelligence officers who in the eyes of their captor had no right to be in Anatolia; one or two, perhaps, had accompanied the Greek army, and a few were civilians. These captives were an enormous asset to Mustapha Kemal, and, as mentioned by Lord Curzon in the speech which we reported last week, he did not fail to make the most of it. After much bargaining, and after 15 or 16 Turks had escaped from Malta by the simple expedient of breaking their parole (Why were men charged with crime ever allowed liberty on parole?), the British Government agreed to hand back unconditionally all the men under arrest, in exchange for the 35 British prisoners. Thus it has now released scot free the men deemed responsible, or partly responsible, for the appalling fact that of all the British and Indian officers and men taken by the Turks during the war, over 38 per cent., and of the British rank and file led away as prisoners from Kut over 70 per cent., perished in captivity.

We give Lord Newton's remarks on these facts in his own words:—

> "The charges against these men included murder, the manslaughter of hundreds, if not thousands, of British prisoners by neglect, merciless flogging, gross cruelty of various kinds, unnatural offences committed upon British prisoners, and wholesale theft of their property. Why were these men, when they were in our possession, not tried immediately after the Armistice? There was nothing whatever to prevent their being tried nearly three years ago. They had committed offences against International Law, and if it was in our power to arrest them I presume it was equally in our power to try them. There was any amount of evidence available against these men. Every prisoner who came to this country during the war—and they numbered thousands—was subjected to an elaborate examination as to his experience and as to his treatment, and when the Armistice was proclaimed every single man had an opportunity afforded him of making any complaints that he chose to formulate against the Government whose prisoner he had been. What was there to prevent this evidence being immediately used and supplied to the military authorities in Malta, who were in a position to try these men? All the labour and all the expense incurred in preparing this elaborate evidence has been absolutely and completely wasted.
>
> "I ask your Lordships to mark what this so-called exchange means. These men who were in our possession were the worst type of criminal. The British who have been obtained in exchange were ordinary prisoners of war who had committed no crime at all. They had been taken prisoner merely through the treachery of the Turks, or through their own misfortune, and in order to recover these perfectly innocent men we have had to give up these criminals. It is perfectly plain that someone has blundered in the most inexcusable manner."

On this occasion Lord Curzon was not present, and Lord Crawford was put up to reply. His defence was that until the Treaty of Sèvres had been ratified the trial of the Turkish war criminals was not legal. But that eminent lawyer Lord Parmoor swept this plea on one side:—

> "The difficulty regarding war criminals is, as a rule, of course, to get them into your possession at all. That was the difficulty as regards the Kaiser. But these are quite different cases. These are cases where the criminals did not need handing over to us, but were in our possession. Now, if anything like the crimes which Lord Newton has referred to have been committed, undoubtedly they could be tried and ought to be tried, and that entirely independent of whether the Treaty of Sèvres has been ratified or not."

On a legal question, we prefer the opinion of Lord Parmoor to that of Lord Crawford, and the Government's explanation of its own inaction reads very much like an afterthought, designed to conceal at best a great oversight, at worst a gross neglect of duty. These Turkish war criminals were not arrested in the exercise of any power given Great Britain by the Armistice terms, which were, indeed, silent concerning war crimes, but in pursuance of the right of a beligerent to punish offences against the laws of war. If Britain did not need a peace treaty to allow her to arrest them, why did she need one to allow her to try them?

Lord Newton suggested that if and when the British Government comes to make terms with Mustapha Kemal it should insist that the worst of the war criminals be handed back, or else that they be tried and punished by their own Government. But if the Turks failed to punish these men during the war, will they be disposed to punish them now? A demand for their trial could, we think, have no other result than to delay the conclusion of a treaty of peace with the Angora Government, a treaty which, as we have often pointed out, is urgently required by our interests in the East. We are afraid that the damage done by the failure to avenge the British prisoners who died in Turkey is irretrievable, and it will not be surprising if Turks continue to ill-treat Englishmen who fall into their hands.

Since we wrote last week, further facts have emerged regarding the British prisoners just released by the Kemalists. At the time when some, if not all, of them were captured, over 40,000 of the Turks taken prisoner by the British during the war were, owing to the delay in concluding peace, still detained in Egypt and elsewhere. Why was the release of Colonel Rawlinson and others not made a condition precedent to the release of these men? Possibly the Foreign Office will plead that it had promised the Constantinople Government to

release all war prisoners, and could not make use of them to bargain with the Angora Government. But if Angora could use Colonel Rawlinson and his comrades to get back the men in Malta (who had been handed over by the Constantinople Government), surely Great Britain could use the 40,000 war prisoners to get back Colonel Rawlinson. Angora, even more than Constantinople, was interested in the return of the 40,000 men. If Great Britain was at war with Kemal, she was entitled to keep them until he released Colonel Rawlinson. If she was not at war, he had no right to detain Colonel Rawlinson at all. It is difficult to believe that strong action by the Government, accompanied, if necessary, by a threat to bombard a Kemalist port, could not have procured the release of all the British prisoners.

It appears also that no effective steps were taken for the well-being of our men while they remained in captivity, in spite of the knowledge of the sufferings and enormous mortality among prisoners in Turkey during the war. We are informed that although clothing, food, and medicines have been sent from France to the French prisoners for months past, through the Ottaman Red Crescent in Constantinople, nothing was done for our men (some of whom have been prisoners for over 18 months) until a few weeks ago, when the Foreign Office allowed the Red Cross to despatch supplies through the same channel.

It seems to us that the Government's failure to try the Turkish war criminals, and its failure to protect the interests of our officers and men who fell into the hands of Kemal, call for further inquiry,

## MUSSULMANIA!

In what the Turks no doubt regard as the happier days of a century ago non-Moslem subjects of the Sultan met with scant respect from the Faithful during their lives; and when they were unfortunate—or fortunate!—enough to shuffle off this mortal coil, Moslem scorn still pursued them. When such an one died it was necessary to obtain special authorization to bury him in Turkish soil; and this had to be procured by the Church, or head of the religion to which he had belonged. It would be thought that such permission would be accorded in terms free from offence, but in point of fact the representatives of the Padishah seem to have gone out of their way in order to make them as brutal as possible. Below we give specimens of such authorizations, translated from the Turkish of three actual letters issued by the authorities, sanctioning the burial of an Orthodox Christian, of an Armenian, and of a Jew, respectively. These were discovered by a correspondent, among some treasured souvenirs of an old Constantinople family. They contain expressions which are highly objectionable; but we reproduce them, in order that our readers may be able to estimate more correctly the spirit which actuated the "Proud Osmanlee" of those days, and which is doubtless responsible for much of the hatred felt for him to-day by the peoples who were formerly under his rule.

It will be observed that the date of the Letter of Authority to the Armenian Priest is missing; but our correspondent informs us that the letter may be regarded as having been written at about the same time as the other two, or between the years in the Turkish Calendar 1223-1239 (A.D. 1808-1824).

The following are translations from the three letters:—

To the Greek Priest.—Oh! Thou, whose cloak is as black as the devil, and whose garment is the colour of tar, detestable monk, fat, filthy, and crafty priest, who art deprived of the grace of the Holy Jesus Christ, take notice:—

Authorization has been accorded to dig a grave and to hurl inside, the repulsive putrid flesh (which even the earth shrinks from) of the infidel Constantin, who belonged to thy race and has just died.—Le 21 Chaban 1223.

To the Armenian Priest.—Thou who wearest the crown of the devil, who art clothed with a garment of the colour of tar, fat, cunning, and filthy priest, and deprived of the divine pardon, here is the object of our present communication:—

The infidel, Kirkor, who belonged to the detestable herd that constitutes thy filthy race, has just died. It is true that the earth does not wish to have this pig's carcase; but in order to prevent its stink from infesting the Mussulman quarter, I order thee to dig a grave immediately, to throw it inside, and to beat down, without ceasing, the earth with which thou shalt cover up this blashemous pig's hole.

To the Jews.—O thou, Rabbi of the traitorous nation, which denies the coming of Jesus Christ, and does not recognize Holy Moses, take notice:—

One of the individuals of the encumbering herd of thy community established at Salonika has just rendered his soul to the pitiless devil, and thus plunged it into the flames of Hell.

The venerable Chéry authorizes thee, traitrous Rabbi, to find, somewhere, a latrine, which you will fill by throwing into it his stinking carcase.—Le 15 Redjeb, 1239.

## THE KING'S MESSAGE TO INDIA.

His Royal Highness the Prince of Wales has, on his arrival at Bombay, delivered the following message on behalf of His Majesty the King-Emperor:—

On this day, when my Son lands for the first time upon your shores, I send through him my greetings to you, the Princes and people of India. His coming is a token and a renewal of the pledges of affection which it has been the heritage of our House to reaffirm to you. My Father when Prince of Wales counted it his privilege to see, and seeing to understand, the great Empire in the East over which it was to be his destiny to rule; and I recall with thankfulness and pride that when he was called to the Throne it fell to me to follow his illustrious example. With this same hope and in this same spirit my Son is with you to-day. The thought of his arrival brings with a welcome vividness to my mind the happy memories I have stored of what I myself have learned in India; its charm and beauty, its immemorial history, its noble monuments, and above all the devotion of India's faithful people, since proved as if by fire in their response to the Empire's call in the hour of its greatest need. These memories will ever be with me as I trace his steps. My heart is with him as he moves among you, and with mine the heart of the Queen-Empress, whose love for India is no less than my own. To the friends whose loyalty we and our fathers have treasured, he brings this message of trust and hope. My sympathy in all that passes in your lives is unabating. During recent years my thoughts have been yet more constantly with you. Throughout the civilised world the foundations of social order have been tested by war and change. Wherever citizenship exists it has had to meet the test, and India, like other countries, has been called to face new and special problems of her own. For this task her armoury is in the new powers and the new responsibilities with which she had been equipped. That with the help of these, aided by the ready guidance of my Government and of its officers, you will bring those problems to an issue worthy of your historic past and fraught with happiness for your future; that all disquiets will vanish in well-ordered progress, is my earnest wish and my confident belief. Your anxieties and your rejoicings are my own. In all that may touch your happiness, in all that gives you hope and promises your welfare, I feel with you. In the spirit of sympathy my Son has followed from afar your fortunes. It is now his ambition by his coming among you to ripen goodwill into a yet fuller understanding. I trust and believe that when he leaves your shores, your hearts will follow him and his will stay with you, and that one link the more will be added to the golden chain of sympathy which for these many years had held my Throne to India. And it is my warmest prayer that wisdom and contentment, growing hand-in-hand, will lead India into ever-increasing national greatness, within a free Empire—the Empire for which I labour and for which, if it be the Divine will, my Son shall labour after me.

SCHOOL OF ORIENTAL STUDIES.
London Institution, Finsbury Circus, E.C. 2

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East and of Africa, and on Oriental and African Religions and Customs

## THE CARAVANSERAI

*Think in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day*
*How Sultan after Sultan with his Pomp*
*Abode his Hour or two and went his way.*

OMAR KHAYYAM—

I learn from a friend that the death of King Peter of Yugoslavia caused quite a flutter in a certain small Cornish seaside resort. Suddenly a rumour flew round the place that the German flag had been hoisted above the British; and though no one believed it, no one in the place could make out what the strange flag flying at the signalling station, on the cliff, really was. Finally a distinguished military officer who was in the place on a visit, went up to the station to ask. The coastguard on duty told him that as they had no Serbian flag at the station, he had used a French one, turned the wrong way. And that is a true story, my masters.

A witty person once made a remark—in words which I cannot, unfortunately, recall—to the effect that Truth was always plagiarizing Fiction's plots and situations. I am told that one of the latest illustrations of the truth of this saying comes from Egypt, where—at Behera, I fancy—a certain brigand, escaped from gaol, was recently appointed *nazir* of a big *esba*. Having regard to the fact that this took place in Egypt, it may be well to state that the new *nazir* had changed his name, and thought he had covered his tracks. But he had not forgotten his old habits; and ere long he found a gang of choice spirits after his own kind, and started brigandage on a wholesale scale. For once in a way, however, the authorities got wind of the truth quite early, raided the *esba* and arrested the enterprising *nazir*, who will now have an opportunity to show whether he can repeat his success in the gaol-breaking line. And if these facts are not "bagged" from one of Mr. Pickthall's stories, my memory is even less trustworthy than I suppose it o be. Sheer plagiarism!

In his letter on the subject of the deportation of the Archbishop of Rhodes, that vigorous champion of Dodecanesian freedom, Mr. J. D. Moscona, mentioned that Dr. Skevos Zervos in visiting the exile found it advisible to disguise himself as a sponge diver. Now, I may be entirely in error, but I was under the impression that the costume of the sponge divers of those southern seas was extremely simple—indeed, that in most cases it might be described as The Altogether; and if that be so, it seems to me that the interview between the Metropolitan and the Doctor must surely have been quite striking. If only an enterprising cinema man had been there, we might have had a fine film with an alliterative title, "The Bishop and the Bather." But I fear the movies were caught napping for once, and anyone who is thinking of going to a fancy dress ball as a sponge diver will have to look elsewhere than to the intrepid Dr. Zervos as a model.

The mention of the cinema reminds me that that modern form of entertainment, which, owing to its abuse and mishandling, has made many bitter opponents in this country, has lately been coming in for some pointed criticism in the East. A friend home from India tells me that its popularity is by no means unmixed out there, and similar reports have reached me from Mesopotamia. Now, I note, the *Times of Mesopotamia* reports that a proposal for a film censorship is under consideration in Basrah; and adds that far more is to be said in favour of such a scheme than for the existing press censorship. It proves its case, too, up to the hilt, by quoting a case in which "some ambitious rascals in Basrah" turned the education which they had acquired at a local picture house a week earlier to account in entering, robbing and escaping from a house in quite approved Western ways. Yo ho, my lads, yo ho! Why was not the cinema winking its way in the days when I sailed the seas in pursuit of my former calling. I was never above taking a hint; and I might even have earned an honest *para* by lending myself, my gallant ship and my crew of ruffians (now 'Andante,' 'Ocellus' 'Commentator' and Co.), for a reel or two. Only, after the operator had filmed us all, I should have run him up to the yardarm and got *all* the profits for myself. (Yo ho!) And if 'Andante'—who is an ingenious and adaptable fellow—had learned enough, by watching, to film the final act, so much the greater our profits. And who would pity the 'movieman'?

**Corsair**

## THE NYALA RISING.

The Sirdar and Governor-General of the Sudan has sent the following telegram to Brig.-General Sir Herbert Jackson in Khartoum.

I have just seen telegram of Oct. 14, from Governor Darfur to Civil Secretary, giving details of action at Nyala. There can be no doubt that the stand made by this small force against overwhelming numbers was not only a very conspicuous achievement in itself but averted what might have been most serious and far reaching consequences. I deplore the loss of so many brave lives, among them McNeill and Chown, whose gallant example inspired the defence. The initiative and presence of mind shown by El Yuzbashi Belal Rizk and Moawin Hassan Mohammed Zien at the critical moment of the action after the death of these British leaders are worthy of the highest praise. When I receive the full written report I shall take steps to bring the action into more prominent notice but in the meanwhile I beg you will convey to all the survivors of the fight my thanks, and express to them my high sense of the results achieved by their courage and devotion to duty.

## NOTES AND NEWS.

Devonshire Square,
E.C. 2.

**Bulgarian Loan Negotiations.**

The statement of M. Tourlakoff, the Bulgarian Minister of Finance, in an interview with the Sofia correspondent of *The Times* that he has asked Messrs. Balfour, Beatty and Co. to increase their offer to £4,000,000 suggests that the advantageous character of the proposal—7 per cent., it will be remembered, was asked—has not been overlooked by Bulgaria. The present offer of Messrs. Balfour, Beatty, is for £2,500,000, and the amount to which they are asked to raise it is the same as the offer of the Franco-Belgian group. Should the latter group be successful, Great Britain would apparently still participate, inasmuch as, according to M. Tourlakoff, the loan would be raised equally in France, Belgium, Italy, and England.

**Cotton Freight Settlement.**

Since it was clear, as I pointed out in a recent issue, that there was no longer any real point at issue between the United States Shipping Board and the Liverpool Conference Lines over the Egyptian cotton freights question there was excellent ground for hoping that a settlement of the unfortunate dispute would be reached. This has happily proved to be the case. An official statement was issued last week announcing an agreement on terms satisfactory to both parties. It is believed that the settlement recognises the right of the Shipping Board's claim to participate in the transport of cotton to America, the contract for which had been obtained by the Liverpool Conference Lines, who, however, had expressed their willingness to permit the participation of the Shipping Board.

**Palestine and the Tourist.**

To Palestine as to Egypt the tourist in his numbers is an indispensable factor for economic well-being, a fact which is fully recognised by the authorities there, as will be seen from the memorandum which we publish this week on the development of the tourist traffic which throws an interesting light on the measures that are being taken to make the country attractive to the visitor. In pre-war days the number of tourists in the season often reached 6,000, and in view of the special appeal that Palestine makes to the imagination—an appeal which has been added to enormously as a result of the war—it may be taken for granted that when conditions are more normal that number will be easily passed.

**Competition.**

As to the prospects at the present time it is difficult to write with any confidence. While it is possible for the would-be tourist to enjoy a holiday very cheaply on the Riviera and elsewhere and with the certainty of comfortable conditions it is obvious that, as a result of the handicap under which they labour in consequence of the high rates for steamship passages, centres like Palestine and Egypt will be to some extent neglected unless, as Egypt is doing, special steps are taken to bring the local attractions before the attention of likely visitors. It would appear from the memorandum in question that the Palestine authorities do not fully appreciate the importance of publicity. But it was essential before the war, while now it is either that or a poor season.

**The Rupee.**

At this period of the year the normal tendency should be for the rate of the rupee to harden, but as a matter of fact for some weeks rupee exchange has displayed pronounced weakness, and now stands at the low figure, judged by the new standard, of 1s. 4¼d. It is worth noting that the downward movement has coincided with the great depreciation of the mark. Germany was one of India's most important customers before the war, and had again begun to purchase a certain amount of produce, and it is to be presumed that the weakness of the rupee arises from the anticipation that unless something unexpected happens the German market may be practically closed to her for a long period because of Germany's inability to pay for commodities with the exchanges at their present rates.

**India's Trade Outlook.**

India is admittedly in an unfortunate position as a result of the war for, besides the loss of the German market, other countries of Central Europe and Russia, who were substantial consumers of her produce, are no longer in a position to make purchases. This being so it is evident that the authorities were at least somewhat optimistic in standardising the rupee at 2s. If it does reach that rate it is unlikely to be for a very long time, and in view of the general outlook it would seem at least possible that the rupee may see a lower level than it has yet touched, particularly in view of India's requirements of machinery, and other similar commodities.

**Holidays in Basrah.**

The question of Bank holidays in Busreh is raised in a recent issue of the *Times of Mesopotamia*. The banks mainly obtain their staffs in the district, and the consequence is that they close on all the religious festivals of the various sects. All who have been in the East will appreciate what that means, and the inconvenience to business that is caused. The writer of the article points out that the view is held that the banks should disregard all but very general holidays, and urges that the matter should be placed on a satisfactory basis. "No one

objects," he says " to the London bank clerk's day off on Easter Monday, because that is a legal holiday. Let us have a few 'legal' holidays in Busrah." Whether the inhabitants, and, in particular, those immediately affected, would take to bank holidays in the sense in which we understand them is a moot point. I fear they would regard a few general holidays as a poor exchange for those they have at present.

**Bengal-Nagpur Railway.**

In his speech at the general meeting of the Bengal Nagpur Railway, the chairman, Mr. Robert Miller, commented on the way in which the traffic of the line had readjusted itself since the war. From this point of view last year's decrease in the gross earnings was, in his opinion, not a matter of importance, particularly in view of the trade depression and the partial failure of the monsoon. As against this decrease expenditure rose, due to the enhanced cost of labour, fuel and upkeep, and the same conditions are operating in the current year it was pointed out, so that unless there should be a great expansion of trade this autumn the next report is not likely to be very much more favourable. Mr. Miller takes a favourable view of the general conditions in India. He emphasised the point that India is a very rich country, with money ready for industrial enterprise, and said that as soon as the world's trade began to improve India would quickly respond to it.

**Commentator.**

---

The traffic receipts of the Smyrna-Aidin Railway for the week ended November 12, amounted to £8,883.

Interest on the Six per Cent. First Debentures of the Aboukir Company due December 1 will be paid at the offices of the company on presentation of coupon No. 6.

Reuter's Athens correspondent in a message dated November 19 states that in view of the difference between the official rates and the Smyrna free market resulting in secret transactions on an extensive scale the Consortium has raised the pound to 100 drachmae, the French franc to 181, the dollar to 25, and other currencies accordingly.

An extraordinary general meeting of the Steaua Romana-Societe Anonyme pour l'Industrie du Petrole is to be held in Bucharest on November 30 to authorise the earlier redemption of certain bonds of the company. Shareholders may deposit their shares at Messrs. Stern Brothers, 6, Angel Court, E.C., in connection with the meeting.

## TENDERS INVITED.

***Tenders are invited for the following contracts, and must be made by the dates mentioned.***
*(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)*

**Egypt.**

Glass Panes.—The General Manager, Egyptian State Railways Telegraphs and Telephones, Cairo Station, invites tenders for the supply of glass panes during one year. November 28.

Cleaning Articles.—The Director-General, Mechanical Department, Ministry of Public Works, Cairo, invites tenders for the general supply of cleaning articles such as aprons, brooms, cloths, dusters, polish, soap, etc., for the Ministry of Public Works, during the year 1922-1923. December 5.

Miscellaneous Stores.—The Director-General, Ports and Lighthouses Administration, Alexandria, Egypt, invites tenders for the supply of ropes, canvas, bunting, oils, paints, and general miscellaneous stores (including asbestos, chemicals, brushes, electric lamps, files, etc., etc.), for the first half of the financial year 1922-23. The tenderer must be a person residing in Egypt or have a representative in Egypt. December 21. (D.O.T.).

**India.**

Steam Coal.—The Bengal and North-Western Railway invites tenders for the supply of 100,000 tons of steam coal for twelve months beginning April 1 next. Tenders may be submitted for the whole amount or for a portion only. Forms with the specification for the coal are obtainable from the agent for the North-Western Railway, Gorakhpur. December 1.

Axle Boxes etc.—The Bombay, Baroda, and Central India Railway Company, invites tenders for the supply of (1) axle-boxes for wagons, (2) steel fish bolts, nuts, and washers, (3) steel dog spikes. (Spec., 10s. each, Secretary, 91, Petty France). December 7.

Stoneware Pipes.—The Madras Corporation invites tenders for the supply and delivery of about 58 miles of stoneware pipes and specials, 4in. to 18in. in diameter. (Spec., 5s., Messrs. James, Mansergh and Sons, 5, Victoria-street, S.W.1.) January 23.

**Bulgaria.**

Concrete Grain Elevator and Drying Shed.—The Agricultural Bank of Bulgaria gives notice that on February 15, 1922, at 3 p.m., tenders will be examined for the construction at the port of Varna of a concrete grain elevator (capacity 30,000 tons), and drying shed. Tenders should be in the Bulgarian or French languages, and may be submitted for both buildings or for each building. Only such firms as have already undertaken similar construction are eligible. For the grain elevator in particular tenderers must show that they have erected similar buildings of a capacity of not less than 10,000 tons. If the actual tenderer has not done similar work it must be shown that the firm who will erect have done so.

A guarantee of 750,000 leva for the elevator and 150,000 leva for the drying shed must be deposited by all tenderers at the National Bank of Bulgaria or the Agricultural Bank of Bulgaria. The conditions of tender, specifications and plans may be obtained from the Banque Agricole de Bulgarie (Room 39), Sofia, on payment of 500 leva. (D.O.T.).

## YUGOSLAV MARKET FOR PAINT.

Only a small percentage of the paint used in Yugoslavia is sold ready mixed, and of that sold the larger part is manufactured locally, says an American Consular Report. There is no factory at present in the country which manufactures varnish, but one is in course of construct on in Zagreb. Most of the paint materials are imported. Lead white, however, is neither manufactured nor imported to any extent, since its use in paint is now prohibited. Zinc white and lithopone are used, instead of lead white, as paint bases. Zinc white is manufactured by a State-owned and operated factory at Celje, but a larger amount of it is imported. Paint colours are not manufactured locally, but are now imported principally from England, France, and the Netherlands. Some of the linseed oil used is manufactured locally, but most of it is imported, the greater portion coming from the Netherlands, but some is now obtained from Argentina and Brazil. Ready-mixed paints are not imported into Yugoslavia to any great extent at the present time.

According to Reuter's Prague correspondent in a message dated November 13, the following goods, the export of which is permitted without licence or fee, have been added to the export free list:—Syrup (from Sugar), candy-sugar, hops, artificial honey, medicinal and pharmaceutical wafers, coffee substitutes and burnt chicory, cocoa-butter, cocoa-powder, cocoa-pulp, chocolate, chocolate substitutes, chocolate products, preserved fruit, fruit juice, confectionery, sweetmeats, soup-spices (in cubes, etc.), graphite, certain kinds of magnesite etc.

# Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

## ROUMANIA.

*Bucharest, November 4.*

**The Financial Crisis.**

A very important public meeting attended by a very large number of merchants and bank representatives, took place last Saturday at the Bucharest Chamber of Commerce, for the purpose of discussing the question of payments in foreign currency at the present very unfavourable rate of exchange. It was decided that in cases where the foreign creditors could not come to an arrangement with local debtors, and intend enforcing payment by legal proceedings, the State should step in and decree a fixed rate of exchange or at least the rate which existed at the time when the order was booked.

It was ascertained that the total amount of merchants' liabilities due in foreign currency represented at the time when the orders were booked about six milliard lei, while to-day, on account of the great depreciation of the leu, they would represent about 20 milliard lei, which sum it is considered materially impossible to be met.

A delegation of the Chamber of Commerce has since submitted the above resolution to the Ministers' Council, who, fully realizing the desperate plight of the merchants, has promised official intervention with the respective foreign Governments to induce their nationals to grant extensions of payment until the rate of exchange improves somewhat.

It is true that a certain number of foreign creditors are granting extensions, but many others, probably in tight straits themselves, are demanding immediate payment.

**The Banca Natiunei.**

The sudden news of the financial embarrassment of the Banca Natiunei, one of the largest banks, though of recent formation, has caused great uneasiness in the financial and commercial circles of Bucharest. This embarrassment was brought about by the fact that the Banca Natiunei's cheques, drawn on their Paris Correspondent, were not honoured. The bank's books are now being checked by experts in order to establish whether it is a case of speculation or due to the adverse rate of exchange.

A momentary panic set in on 'Change, but has been alleviated by the official announcement that the State and the other large banks intend giving their support. It is further rumoured that M. Ghica, the chairman of the Banca Natiunei, who is one of the wealthiest men in the country, is willing to make personal sacrifices in order to save the bank.

**Oil Industry's Progress.**

Roumania's oil industry has shown lately a marked improvement both as regards production and export. Many of the large oil companies have procured with great sacrifices the necessary machinery and purchased material to increase their production work and refinery plants. The electric current, which hitherto was poorly supplied by the Campina Power House, has been supplemented by their own plants with petrol engines.

Recent eruptions of wells belonging to the two leading oil companies, Romano-Americana and Astra Romana, have also largely contributed to the increased daily production, which is now more than 4,000 tons per day. Exports have increased thanks to the reduction of the export tax on petroleum and its by-products, which tax did not allow Roumanian producers to compete on the world markets. Enquiries for Roumanian oil are now growing daily especially for lamp-oil, while the available quantities of petrol are booked for three months ahead.

With regard to prices, in August the price for lamp-oil, f.o.b. Constantza, was 0.80 to 1 lei, per kilo; to-day it has risen to 1.80 to 2 lei. The price for petrol on August was 2 lei per kilo; to-day it is 5 to 6.50 lei.

**The Weather and Autumn Sowings.**

Despite a few rain showers at intervals in different parts of the country the drought is still prevailing. There has been no really heavy rain for almost four months. The soil has become so hard that in many places the plough-shares cannot penetrate into the soil, and in consequence the autumn sowings have been somewhat retarded. The lack of rain has also caused a shortage of fodder, so that farmers are very anxious about their cattle especially with the winter coming on.

**Export of Salt.**

The Roumanian Government has closed a contract to export 20,000 tons of salt to Bulgaria. The price for 5,000 tons is to be 725 lei per ton, and for the remainder 800 lei per ton, delivered at Port Ramadan (Giurgiu).

---

*Bucharest, November 12.*

**The Banca Natiunei.**

At first the creditors of the Banca Natiunei were of the opinion that the institution should be saved, despite the alleged guilt of its managers, but since the tragic end of M. Ghica, President of the Bank, the creditors have withdrawn their confidence. Accordingly, the board of directors decided to hand over the books of the bank to the Tribunal and to ask for a six months' moratorium, on the ground that within that period they would be able to cover all liabilities, as some items of their assets represent certain enterprises which are quite prosperous. From a rapid inspection of the books the appointed experts ascertained a deficit of about 100 million lei. It is true that should the leu improve this deficit would correspondingly diminish, so that there is still a chance that the creditors may come into their money.

Two of the principal managers of the bank, M. Stoian and M. Craciun, who have since resigned, are now being cross-examined by the Attorney General, to answer to the indictment of having negotiated foreign cheques without having the corresponding cover in lei. It is further stated that speculation on the part of the bank has largely contributed to the present depreciation of the leu on the Paris Bourse.

**Financial Crisis.**

The financial crisis is the principal topic of the day. What with the continuous drop of the leu and the Banca Natiunei affair, commercial and financial circles are alarmed, and something approaching a small panic took place during the middle of this week. The crisis was made worse by a large number of people withdrawing their deposits from various banks, not knowing how far the other banks are involved in the failure of the Banca Natiunei.

The different Chambers of Commerce of the country have again held a meeting in order to urge the Government to take immediate steps to solve the question of payments due in inflated foreign currencies. The representatives of the principal local banks, at the instance of the Banca Nationala, also met and drafted a memorial putting forward various remedies for the solution of the present economic and financial crisis. This memorial the representatives of the banks then handed to the King, who fully agreed with them and promised his support.

Among the proposals made by the banks are: the consolidation of the Treasury Bonds and floating debt abroad; the abolition of the tax on capital, which would enable Roumanian capital that has found its way abroad to return to the country; the reduction of imports to a minimum for a certain time, in other words, to allow only machinery and raw materials indispensable to the country to be imported; the removal of all export restrictions; and in order to obtain a large external loan that the Government should be less stringent with

Digitized by Google

the concessions for the exploitation of the country's riches.

The banks have further demanded that the deposits in lei which foreigners possess at local banks should not be allowed to be used for speculation in exchange. Therefore, a Control Committee has already been appointed to investigate each case of transfer from one bank to another and to allow only such transfers which have as a basis a purely commercial transaction.

M. Titulescu's sudden departure for Paris is in connection with the measures to be taken for the improvement of the rate of exchange and the settlement of other financial questions, with a view to helping the country out of the present *impasse*.

**The Czecho-Slovak Exhibition Train.**

On November 5 the Czecho-Slovak "Sample" train arrived in Bucharest, and was quartered at Filaret Station. This is, for this part of the world, a novel and practical idea for the exhibition of Czecho-Slovak products. The train consists of 20 carriages, of which 15 are fitted out with samples of a very large variety, including agricultural machinery, cement presses, circular saws, brewing appliances, household and kitchen utensils, guns, sanitary installations, building material, glass and glassware, cutlery, fancy goods, optical instruments, products of sugar and chocolate factories, boots and shoes, textiles, motor-cycles etc.

The train has so far visited Oradia-Mare and Cluj, and orders aggregating 12 million Czecho-Slovak kronen have already been booked. From Bucharest the train will proceed to Bulgaria, and will return from there *via* Galatz, Jassy, Chernovitz and Poland to Prague.

**Miscellaneous.**

The Ministry of Communications has closed a contract with the German firm, Henschel and Son, of Cassel, for the purchase of thirty locomotives, Pacific type, at the price of 4,300,000 German marks each.

The Ministry of Finance has been authorized to dispose of the 2,800 kilograms of gold, which it has in stock in the Treasury vaults. Most likely this stock of gold will be bought by the Banca Nationala.

A mission headed by M. C. Teianu, Chief of the Public Debt Department, left last Friday for Berne to carry out the final formalities in connection with the Swiss loan recently concluded by M. Titulescu. This mission is accompanied by a delegate each of the War Office and of the Post Office Department for the purpose of purchasing the necessary material for their respective departments, in accordance with the stipulations of the Swiss Loan.

## BULGARIA.

*Sofia, November* 14.

**The Rate of the Leva.**

Although one cannot write encouragingly about the rate of the leva, there are at any rate some grounds for consolation in the fact that up to the present there have been no signs of a headlong downfall as has been the case with the German mark. At the time of writing the rate on London is 750 levas, and 70 levas equal 100 marks. The Government have not taken any steps to arrest the fall, because, as they point out, the artificial measures adopted in Greece and Roumania have not been productive of any efficacious results.

Almost every banker or business man has his own particular theory as to the depreciation of the leva, but all agree that the continued excess of imports over exports is one of the chief influences. Whether the new scale of import taxes that is at present under consideration will check this excess remains to be seen, but it would appear that a whole-hearted encouragement of exports is the means most calculated to make exports and imports equal each other. The export of cereals is free, but notwithstanding there are a certain amount of restrictions and obstructions put in the way of the grain merchant when he wants to export. The lack of railway waggons is one difficulty, the occasional stopping of export for a period of a week to ten days is another, and as a prominent wheat merchant said to me the other day, "By abolishing the Consortium, we have stepped out of the frying pan into the fire. With the Consortium in existence one at least knew the difficulties that one had to encounter, whilst now they spring up unexpectedly from all sides." This hindrance of the export trade, and particularly the grain trade, is always explained away by the argument that if too much export takes place, the price of bread will rise. On the assumption that this argument is correct, there is another side to the question, and that is, that the less export there is the more will the value of the leva fall, and the purchasing value will also diminish. Thus the cost of living is bound to become dearer, and nothing will have been gained by holding large stocks of grain in the country which will probably command a poorer price abroad next year.

**The Czecho-Slovak "Sample" Train.**

The Czecho-Slovakian "Sample" train has arrived at Varna from Roumania, and will shortly proceed to Sofia.

## ASIA MINOR.

*Smyrna, November* 9.

**The Exchange.**

In spite of the strenuous efforts of the banks and Chambers of Commerce in Constantinople to "bear" it, the rate of exchange still hovers around Ps.750 for sterling, aad there are very few who do not believe that the rate will bound up another Ps.100 very shortly and fail to come down again. Importers have somewhat recovered from their despair now that prices of all commodities have increased correspondingly (and a little more of course) to the rise in the rate of exchange.

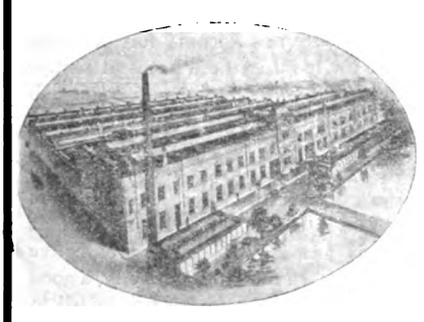
*Smyrna, November* 12.

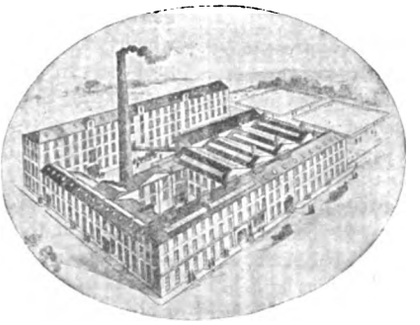
**Embargo on Grain Removed.**

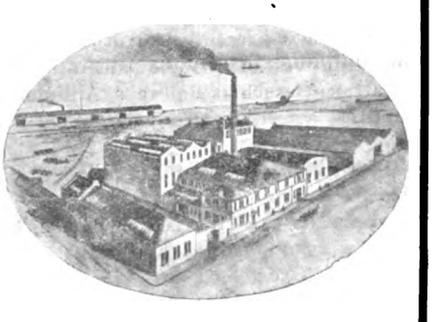
The Greek authorities have now removed the embargo on the transport of grain from Ouchak, and six waggons of barley have reached Smyrna.

Cable Address: "Lobo, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** All Cable Codes used.

Manufacturers of JUTE SACKS and JUTE CLOTH for all purposes
Also of WATERPROOF CANVAS and TARPAULINS, YARNS, TWINES, ROPES, etc.







Shippers of all clasess of JUTE, LINEN and COTTON FABRICS, also of CALCUTTA SACKS.

## PALESTINE AS A TOURIST RESORT

### Provision of Facilities.

At a meeting of the Advisory Council of the High Commissioner of Palestine on November 1, a memorandum was read on the question of the development of the tourist traffic. We give the following extracts :—

In the days before the war, notwithstanding the difficulties of access and entry, the primitive methods of transportation, the scarcity of communications, the lack of hotels and inns, and the discomforts of those that existed, there was a constant influx of tourists into Palestine, the main season extending from February to April, and the numbers during the year often reached six thousand. In addition to tourists, there must be reckoned the mass of pilgrims, often no fewer than twenty thousand, drawn hither by the fervour of religious impulses and whose sojourn contributed appreciably to the prosperity of the inhabitants.

The war interposed a gap of almost five years during which no tourists visited the country. The devastation of a long campaign, culminating in the destructive retreat of the Turks, inflicted upon those who gained a livelihood from tourist traffic, crippling losses, recovery from which was, of necessity, a very slow process.

The first enterprises of the Civil Government tended towards the improvement of Palestine in aspects which would render it more inviting to the traveller, viz. : the remaking of old and construction of new roads, the extension of the railway system, the reorganisation of the Police Force, of Quarantine, of Customs control. Private initiative was also working to the same end, for example in the wide use of hired motor transport, the renovation of hotels, the opening of tea gardens and cinema-theatres ; and the work of the Pro-Jerusalem Society, which does in fact receive direct Government assistance, in preserving the picturesqueness of the Walled City, and in promoting native arts and crafts, deserves special commendation.

The operation of the Department of Antiquities, too, are of immense value, for archaeological museums and excavations, historical sites and monuments *in situ* are a source of inexhaustible interest to visitors. Individuals have been resuming, in so far as exceptional post-war conditions permitted, the conduct of the trade, manufacture or calling ancillary to the tourist traffic, in which they formerly engaged.

But a more direct stimulus needs to be applied if Palestine is to be equipped within and advertised without to the desired degree of completeness and efficacy. The difficulties in the way of rapid and efficient action are many, and the greatest of these is the world wide financial stringency, which has tied the hands of many who are anxious to establish new facilities for tourists and cater in more adequate manner for their tastes and requirements and purses, and has delayed the Government Loan by the help of which it was hoped to accomplish many public works of a nature calculated to make things smoother for tourists, their conductors, and their hosts. The situation has been further complicated by abnormal political conditions which have reacted adversely on the investment of outside capital in local undertakings, retarded the ordinary rehabilitation of the country from all aspects, and may have proved a deterrent and discouragement to the intending tourists.

Notwithstanding, the advance bookings through tourists offices and through the agencies of the Palestine Railways indicate that for the coming season as many as 4,000 tourists may be expected. The Administration desires to provide as many facilities as are possible in the immediate present both for the companies who organise the tours and for the tourists themselves.

A meeting was recently held in Jerusalem at which were present representatives of the Administration, particularly of those Departments, such as Railways, Antiquities, and Commerce and Industry, which are closely interested in the tourist question, and of the tourist agencies which are represented in Jerusalem. The figures furnished at this meeting made it clear that sufficient accommodation was available in all the main centres likely to be visited by tourists, viz. : Jerusalem, 650 beds ; Tiberias and environs 400 ; Nazareth, 65 ; Haifa, 60 ; Jaffa and Tel Aviv, 120 ; Nablus, 30 ; Safed, 30 ; while the larger Jewish Colonies have small but adequate hotels. It was agreed that the provision of more elaborate and more modern hotel accommodation in the future was entirely a matter for private enterprise.

The advertising of Palestine, as the Administration can at present effect it, is being done from the publicity department of the Railways, which has the opportunity of reaching the attention of would-be visitors through the medium of similar railways bureaus which work in co-operation with it. It was felt that, combined with the Railway Company, the wide advertising of Messrs. Cook and Co., and other tourist organisations was doing as much as was for the moment required to present to the public at large the appeal of Palestine.

With respect to direct simplification of travel and entry to Palestine, it has already been arranged that tourists will enjoy the benefit of the notification system of quarantine, which will be in operation in Palestine by January, 1922. By this system the daily reporting to the Public Health Offices will be unnecessary for the individual tourist, group reporting alone by the dragoman or agent being required, and it may be found possible also to allow first-class passengers at all times to report themselves by some form of proxy. Customs formalities will be operated in such a manner as to involve the minimum of inconvenience and delay, and this information has been circulated abroad with the object of acquainting all who might be interested with the method now adopted.

The difficulties of visas and the scrutiny of passports will be considerably lessened, and negotiations are in hand with the French and Syrian Authorities with a view to modifying and accelerating the procedure necessary to travel from Palestine to Syria and vice versa. The Public Works Department are paying particular attention to the repair of such roads which are of special importance as tourist travel routes. Landing charges in the ports have been abolished. The Wakf Committee has been approached with a request to throw open, in so far as is possible, to tourists, those places of interest which are under its control.

A discussion followed the reading of the memorandum. Mr. Eisenberg said the Government might be congratulated on the fine lead it had given in this matter. As an old resident of Palestine he knew how much life was introduced by the tourist movement. Besides the ordinary attractions for tourists, there was also the important health asset of the hot-springs in Tiberias, which are known all over the world, but it was not so generally known that there were also hot-springs in Judea, Galilee, and Trans-Jordania near the boundary. These springs had excellent health-giving properties, and there were few in any part of the world that could compete with them, but they were in such a neglected and abandoned state that not only could they not be expected to attract tourists from abroad, but they were not even used by Palestinians. If reconstruction was carried out, there was no reason why they should not become popular resorts. If the Government would grant facilities, funds might be secured from some of the banks, either by private individuals, or companies, to undertake the work of renovation and restoration.

Mr. Kalverisky said that the stories of insecurity deterred tourists from coming to Palestine. There were perhaps some people who, for political reasons, were interested in spreading such rumours. The truth was that security reigned in the country particularly in comparison with conditions prevailing in neighbouring countries. It would be wise for the Government, or individuals, to make the truth known in this respect through the medium of the Press.

Sir Wyndham Deedes remarked that the Director of Public Health had stated that the medicinal properties of the waters at Tiberias were as good as anywhere. Baths in this country could probably be run at a profit all the year round ; in the spring from the patronage of visitors from all over the world, and for the rest of the year from that of Palestinians and Syrians. He doubted whether the baths were being fully exploited to-day, which was a pity. If private enterprises came forward with proposals to the Government for making these baths attractive to tourists, the Government would meet them more than half way. He quite agreed that it was essential that public security in the country must be such as not to deter people from coming to Palestine. The Committee referred to in the memorandum, over which he presided, had considered this aspect of the question and had felt they were justified in causing it to be known that there was nothing under this heading to debar prospective tourists from coming to Palestine. In regard to publicity, a good deal had been carried out during this year, and it was hoped to do more in the next .

# Engineering Topics.

## FURTHER EXHIBITS AT THE MOTOR SHOW.

Amongst the light cars one of the most interesting was the A.C., in chassis, all weather body, sports model, and coupé form, in the 11.8. h.p. size. The 15 h.p. was shown as a stripped chassis and also fitted with a 2-seater body.

Amongst the heavier propositions, the Metallurgique people were showing an 18 h.p., 4-cylinder chassis as well as their 14 h.p. in stripped chassis, with tourer and all weather bodies.

I find I have missed dealing fully with the Wolseley productions, and I am afraid a detailed description of these must be reserved for a future date. The 15 and 20 h.p. models are thoroughly sound pieces of work, but the chief interest at the stand of this firm was undoubtedly centred in the new 7 h.p. proposition, with 2-cylinder water-cooled engine. This was closely examined, and a large number of orders were booked.

Those in search of a good body builder must have found plenty to interest them in the work of the Cunard people who make a large number of Napier bodies. Their products represent a very high stage of the coach-builders' art.

Messrs. H. J. Mulliner and Co., of Chiswick, were also showing some striking examples of the highest class of body building. There was a fine coupé on a Napier chassis, a sports torpedo on a Delage, and a beautifully finished all weather cabriolet body as a 19.6 h.p. Crossley.

From my notes I see that I intended to say something nice about the products of the British Lighting and Ignition Co., Ltd. The Blic lighting, starting, and ignition equipments are not only British made but British designed.

The Moss Gear Co., another Birmingham firm, were showing spiral bevel driven back axles, light axles, gear boxes with various speeds, and a good deal of gearing, including differentials and bevels.

The Stanley steam car with a 23-inch vertical fire tube boiler, giving a Treasury rating of 16.5 horse-power, has a twin cylinder double acting engine with D-slide valves and Stephenson link motion. Many years ago I had some little experience with the White and also the Serpollet steam cars. I never tried the Stanley, and so cannot speak as to its performance on the road.

The Albert, with 4-cylinder engine rated at 11.9 horsepower, which was also shown, is a thoroughly sound proposition. I was struck by the smart appearance of the all weather body. I should imagine Messrs. Gwynnes Engineering Co. must be rather proud of this production which is on thoroughly sound engineering lines.

I was also struck with the 40-h.p. 8-cylinder Leyland car, which has a Treasury rating of 39.9. It was shown in sporting chassis, and in saloon and in 5-seater touring bodies by Vanden Plas. They are very fine productions and well finished, but in my opinion the price asked was rather too high.

The Ogston Motor Co. have quite a good thing in the Deemster. Some day I would like to go over the Ogston Works at Acton, and see the Deemster assembled. It is a good road car, and has also shown what it can do on the track.

The Singer and the Coventry Premier, which were shown in various models with 15, 10, and 8 h.p. engines respectively, are each thoroughly good little cars, and the man on the look out for a reliable car at a cheap price might do worse than spend a little time inspecting these productions.

Bentley and Bentley, Ltd., were showing the D.F.P., Treasury rating 12.1 h.p. The sporting 4-seater is a neat and really high class looking car, as also is the all-weather coupe. Every exhibit on this stand was quite up to what one has come to expect from the exhibitors.

Vandy's Ltd. were showing the S.P.A., of which I have had such good things to say at various times. The S.P.A. doesn't seem to have been heard of quite so much lately. It was at the White City, however, in chassis, and with all weather and touring bodies. There is a 4, and also a 6-cylindered engined S.P.A.

I was glad to see the Chenard-Walcker 15 h.p. at the White City. One of my earliest motoring recollections is connected with a Chenard Walcker car, an obnoxious bridge, and a very muddy stream, all weeds. There is no need to go into details. They put the bridge back all right. I was unable to examine the 4-seater torpedo model as I would have liked, but hope to have an opportunity of doing so at a later date.

The bodywork of the Regent Carriage Co., as shown on a 6-cylinder Napier and other chassis was of an extremely high order. The crimson Morocco leather on the first named was of the finest quality I have ever seen used even for such work, and the firm are to be congratulated on the excellence of their handycraft.

I was interested in the Jeavons spring gaiter shown by Messrs. Ramsdens (Halifax) Ltd., which is a patent cover, constant spring lubricator, and protector. It provides means for adequate and efficient lubrication, and, in the form of a gaiter, fits neatly and closely round the spring from the V-bolt to the shackle. The firm also supply a special lubricant for use with this device.

I think I have dealt with Road Guides, Ltd., in these columns some little time ago. The exhibit in the White City thoroughly demonstrated the elasticity of the tape service, and the standard mileometer on view came in for very favourable comments. I may have more to say regarding the practical utility of the Road Guides' productions.

R. D. Nicol and Co., Ltd. were showing their "Dragon-fly" oils which I have personally tested and found of excellent quality. In my opinion they are quiet suitable for the purposes for which they are offered.

### Cable Tyres.

The Michelin cover just placed on the market under the name of the Cable is certainly a very fine production, and one which, in my view, will enhance considerably the high reputation of the firm. It is larger in section than an ordinary canvas cover for a given air space, and must therefore be fitted on a rim of its own dimensions. In the building up of the cover an entirely new process is used. The warp consists of a number of stout threads of high grade cotton, which, after impregnation with dissolved india-rubber, are twisted together into cord, or small cable form. The woof is designed on rather different lines and there is no chafing of the warp and woof which is the real cause of the heat set up in tyres during fast running. This chafing by the way is more pronounced when the tyres run in an under-inflated condition. One of the things few motorists seem to understand is that the harder a tyre is pumped up the longer it will last.

# Near East Markets.

## LONDON PRODUCE REPORT.

Sugar.—Home refined has been in steady demand at unchanged rates. West Indian crystallized is the same at 38s. to 40s., while Czecho-Slovakian has gained 9d. at 20s. 6d. White Java is the same at 47s.

Coffee.—The market has been steady. Costa Rica and Indian are unchanged at 130s. and 112s. respectively, while Nairobi is quoted at 105s. Futures are :—December, 47s. 9d. ; March, 48s. 9d. ; May, 49s. ; July, 49s. ; and September, 49s.

Oilseeds.—A weak tone has prevailed. Indian linseed at 16s. 9d. has gained 3d., while La Plata has remained the same at 15s. Rapeseed is lower with Toria eighteenpence down at 16s. 9d., and brown Cawnpore 3d. lower at 17s. 6d. Cottonseed is unsteady. Indian at 9s. is unaltered, while Sakellaridis has shed 1s. 9d. at 11s., but Egyptian black has risen 3d. to 13s. 3d.

Seed Oils.—Prices are lower. Linseed has shed 1s. at 26s. 6d., while for November-December 25s. 6d. is quoted, and for January April 26s. Rape oil has been firm, the crude variety at 48s. and refined at 53s. both remaining unchanged. Cotton oil has been quiet, refined common edible being 1s. down at 50s. Egyptian crude at 38s., is 5s. lower and deodorised at 50s. has lost 2s. Turpentine is 3d. up at 68s. 9d.

Oilcakes—The market has been brisk. Linseed cake has shown an improvement of 10s. at 200s., and cottonseed cake has gained a like amount at 170s. Arachis cake at 230s. is 10s. up, as also palm kernal at 120s.

## OPIUM MARKET REPORT.

Messrs. Barker Brothers, Smyrna, report as follows under date November 5 :—

Our last report was dated September 19, since when 193 cases changed hands at Ps.700 to Ps.1,050, per oke according to quality and morphia render. The equivalent in sterling per lb. of above piastre prices solely depends upon the exchange, which during the past seven to eight weeks fluctuated from Ps.550 per pound sterling to Ps. 575, then down again to Ps.550, then followed a continual rise for two weeks, which reached the unprecedented figure of Ps.895. Since a week ago, however, we have had a drop again down to Ps.700, and now it is about Ps.755 for first class cheque and 0.52 dollars for one Turkish pound. Our quotations stand to-day as follows :—Fine selected Carahissar, 8s. 9d. to 9s. 3d. per lb. C.I.F. ; current low grades, 7s. 6d. to 8s. per lb. C.I.F. ; fine selected Yerlis, 10s. to 12s. per lb. C.I.F. This season's crop it is presumed will not exceed 1,200 cases of 160 lb. per case. The arrivals are c/s 670 against c/s 597 at same date last year, and our stock in first and second hands is now 1,349.

## TRADE DEPRESSION IN BULGARIA.

The Bulgarska Banka in its report dated November 1 states :—

Trade continues to be at a standstill. A very marked abstentim on the part of consumers because of the dearness of living is to be noted. The moratorium liabilities have not yet been regulated. The payment of English debts present great difficulties, and English merchants are very anxious that payment should be facilitated. The British Government is going to send a high official here to deal with the question.

Imports are more and more limited ; materials for construction, metals, machinery, and produce predominate. The taxes on exports, the lack of railway rolling stock, and the low prices on foreign markets constitute serious obstacles to the export trade. In general, exports are small : skins, attar of roses, and seeds cannot find a market. The export of cereals is not very large. Merchants buy in the interior market, and warehouse the grain waiting for better times. The Centrale des Devises has fixed the rate of levy for exporters as follows (in levas per kilo) :—Wheat 5, oats 5, rye 6, maize 6, beans 7, lentils 8, peas 5.

Tobacco.—Enquiries are again being made in Germany, Roumania, and Holland. In Greece and Turkey the crop is worse than that of the past year. This state of things and the depreciation of the exchange should facilitate exports.

Attar of Roses.—There have been scarcely any transactions. The price is round about 80 levas per *mouscale*. Orders from France and England at steady prices are reported, but at the moment there are no stocks ready for export.

## ROUMANIA'S GRAIN STOCKS.

The Bucharest newspaper, the *Orient* gives figures stated to have been procured from the Statistical Department of the Roumanian Ministry of Agriculture regarding the estimated surplus for export from this year's harvest of some of the principal grains. According to this estimate the surplus of wheat, rye, and barley, and oats is 1,400,000 tons. The surplus of maize available for export is not estimated as the time has not yet come for such estimates to be made with any prospect of even approximate accuracy. The Commercial Secretary to H.M. Legation at Bucharest in forwarding the above to the Department of Overseas Trade as an indication of the position draws attention to the fact that the export of wheat and rye is in the hands of the Government. It must also be remembered that these estimates do not take into consideration whatever surplus there may have been still available for export from the harvest of 1920.

The Watson and Youell Shipping Agency, of Constantza report as follows under date November 7 :—

No grain shipments for the United Kingdom and the Continent have so far been effected this season, but steamers for these destinations are expected this month from the Danube to complete loading at our port and occasionally there have been shipments to Constantinople and Smyrna. Exporters are however looking forward to doing a fair business this winter when navigation on the Danube is closed and the Cernavoda Bridge will have been repaired. The rails are now being laid across it, and it is stated on competent authority that it will be open for traffic by the end of this month.

At the end of October the visible stocks of grain at various towns in the Dobruja including Constantza, Baltchik, and Carvarna, were as follows (in tons) :—Barley, 20,290 ; oats, 1,050; maize, 950 ; milletseed, 250 ; beans, 12,800 ; rapeseed, 5.750 ; mustard seed, 190 ; wheat, 4,100 ; rye, 840 ; flour, 1,300 ; total, 47,520 tons.

In a later report dated November 10, the Agency state that the long drought has broken at last, and that during the previous 48 hours heavy rain had fallen, which as far as they could ascertained at the time of writing had been general all over the country They add that there was every indication of a further downfall. In any case they considered that it had been enough to moisten the soil sufficiently to permit of field work being continued.

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows for the week ended November 5 :—

Sultanas.—The total estimated arrivals to date amount to 144,320 bags as compared with 79,925 for the corresponding period of last year. The total estimated sales are 134,320 bags as against 69,925 bags for last year, and the estimated stock unsold amounts to 10,000 bags as against the same amount for 1920.

Figs.—The total estimated arrivals to-date amount to 167,000 loads as compared with 154,000 loads last year. The total estimated sales amount to 165,000 loads as against 154,000 loads for 1920, and the estimated stock unsold amounts to 2,000 loads as compared with 3,000 loads.

Shipments.—The s.s. Borodino for London and Hull has on board 78,934 boxes sultanas, 491 cases figs, 1,505 boxes figs, and 10,696 bags figs. The s.s. Gulf of Suez for Liverpool has on board 37,410 boxes sultanas, 235 cases figs, 220 boxes figs, and 3,686 bags figs. The s.s. City of Smyrna for London, the s.s. Luque for Bristol, Liverpool, and Glasgow are loading and sailing about November 15.

Markets.—Sultanas are firmer with upward tendency, dealers owing to uncertainties of exchange and the depreciation of Turkish currency, preferring to hold their stocks until outlook becomes clearer. Demand absorbed 500 tons over the week. Stocks of figs are practically exhausted. Last year at this time some 20 to 25,000 bags existed up country, and supplied all requirements into the spring months. Existencies this year are practically *nil*, and business may be considered at an end for the season. A few stocks in shippers' hands are held pending shipment against outstanding engagements. Exchanges are ruling at a lower level, having at one moment declined to 710 with a subsequent recovery to 740-745.

## CURRENT PRICES.

*General Produce.*—Bacon: (Continental), 127s. cwt.; (Canadian), 94s. cwt.; (American), 85s. cwt.; butter: (Danish), 261s. cwt.; (Australian), 160s. cwt.; (New Zealand), 192s. cwt.; cheese: (Canadian), 97s. cwt.; (New Zealand), 90s. cwt.; lard, 76s. 7½d. cwt.; eggs: (Danish), 37s. 6d. per 120; (Styrian), 24s. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 7¾d. lb.; cocoa (Ceylon, good to fine), 92s. 6d. cwt.; coffee: (Costa Rica), 152s. 6d. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha, longberry), 113s. cwt.; (Santos, superior), 60s. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs, (110's to 80's), 11d. lb.; pepper, (Singapore black), 3½d. lb.; (Muntok, white), 8d. lb.; pimento, 2¼d. lb.; raisins (Valencias), 145s. cwt.; sultanas (Smyrna), 125s. cwt.; currants (Vostizza), 74s. 6d. cwt.; currants (Amalias), 53s. cwt.; sugar: (Tate's cubes), 55s. 9d. cwt.; (Lyle's granulated), 49s. 10½d. cwt.; (Mauritius crystals), 43s. 3d. cwt.; (West India crystallized), 40s. 6d. cwt.; (centrifugal), 10s. 3d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 26s. 6d. cwt.; sago flour, 17s. 3d. cwt.; rice: (Rangoon, No. 2); 18s. 9d. cwt.; (bran, Rangoon), £6 7s. 6d. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 3d. lb.; tea: Indian (common to good common), 1s. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 9½d. lb.; Ceylon (common to good common), 2s. 9d.; (medium to good), 1s. 7d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8d. lb.; wheat (English white), 49s. 6d. qr.; (La Plata, ex ship), 82s. qr.; (Australian), 51s. 9d. qr.; barley (malting), 60s. 6d. qr.; barley (feeding), 39s. qr.; oats (English), 31s. qr.; oats (La Plata ex-ship), 25s. 4½d. qr.; (mixed American), 33s. qr.; maize (La Plata), 32s. qr.; flour, 46s. sack.

*Metals.*—Aluminium, £122 10s. ton; antimony (English Regulus), £37 10s. ton; bismuth, 7s. 6d. lb.; copper (standard), £66 11s. 3d. ton; copper (electro), £75 ton; gold bars, 104s. 6d. oz.; iron (No. 3 Cleveland), 110s. ton; hematite (mixed number), 126s. 3d. ton; galvanized sheets (24G), £18 10s. ton; lead (soft foreign), £23 18s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 40s. unit; nickel, £190 ton; platinum, 382s. 6d. oz.; plumbago, £20 ton; quicksilver, £9 17s. 6d. bottle; silver bars, 39s. oz.; spelter (G.O.B.), £26 1s. 3d. ton; tin (standard), £158 2s. 6d. ton; wolfram, 12s. 9d. unit; zinc sheets, £35 ton; tin plates (20 by 14), 21s. 9d. box.

*Chemicals.*—Acids: Boric, 60s. cwt.; oxalic, 9d. lb.; citric, 2s. 5d. lb.; tartaric, 1s. 5d. lb.; ammonia (sulphate), £14 17s. ton; arsenic (white powdered), £39 10s. ton; benzole (standard), 2s. 5½d. gallon; bleaching powder (35 per cent.), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 120s. cwt.; Potassium: Bi-chromate, 8d. lb.; chlorate, 6d. lb.; caustic, £31 10s. ton; nitrate, £40 ton; permanganate, 1s. 1d. lb.; prussiate yellow, 1s. 2¼d. lb.; sulphate (90 per cent.), £15 10s. ton; Sodium: Crystals, 140s. ton; bi-carbonate, £11 10s. ton; bi-chromate, 6¾d. lb.; alkali (58 per cent.), £8 13s. 9d. ton; chlorate, 4d. lb.; caustic (70 per cent.), £24 15s. ton; glycerine (crude 80 per cent.), £80 ton; glycerine (industrial, 1,260 per cent.), £110 ton; lemon oil, 3s. 2d. lb.; quinine, 4s. 0½d oz.; red lead, £38 5s. ton; white dry lead, £41 5s. ton; white ground lead, £50 17s. 6d. ton; sulphate of copper, £29 15s. ton; sulphate of iron, 80s. ton.

*Hides and Skins.*—Ox and Heifer (first), 90 lbs. and up, 8d. lb.; 80 to 89 lbs., 8d. lb.; 70 to 79 lbs., 8¼d. lb.; 60 to 69 lbs. 7¾d. lb.; 59 lbs. and under, 6¼d. lb.; (second), 90 lbs. and up, 7.1-8d. lb.; 80 to 89 lbs., 7d. lb.; 70 to 79 lbs. 7d. lb.; 60 to 69 lbs., 5¾d. lb.; 59 lbs. and under, 5d. lb.; Cows (first), 60 lbs. and up, 6¼d. lb.; 59 lbs. and under, 6¼d. lb.; Bulls (first), 5.5-8d. lb.; (second), 4¼d. lb.; Kips (first), 6¾d. lb.; (second), 5¼d. lb.; (third), 3¼d. lb.; Calcutta Market. Prices in rupees per 20 lb.:—Arsenic hides (cows); Agras, 7 to 12; Durbhangas, 4.8 to 6; Patnas, 4.8 to 6.; Salted cows, 3 to 6.8. Arsenic hides (buffalo), 2.8 to 5. Skins: Calf, 8 to 10 per 20 lb.; goat, 250 to 280 per 100 pieces; Bombay Market:—Dressed buffs, 10 to 14 annas per lb.; dressed cows, 10 to 14 annas per lb.; goat and sheepskins, 1.4 to 1.12 rupees per lb.

*Miscellaneous.*—Cotton: (American), 11.29d. lb.; (Egyptian Sakel), 19.52d. lb.; Oilseeds: Linseed (La Plata), £14 15s. ton; rape (Toria), £17 7s. 6d. ton; palm kernals, £17 15s. ton. Oils: Linseed, £27 12s. 6d. ton; olive (Levant), £78 10s. ton; palm, £36 17s. 6d. ton; rape (crude), £48 10s. ton; soya, £34 10s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £43 10s. ton; cotton (crude), £42 10s. ton; ground nut, £49 ton; Rubber: Plantation (No. 1 crepe), 11¼d. lb.; smoked sheet, 11¼d. lb.; fine hard Para, 1s. 2d. lb.

## AGENTS WANTED ABROAD.

*ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," The Near East," 1, Devonshire Square, London, E.C.2." when they will be re-directed to the firms concerned. It must be understood that "The Near East" accepts no responsibility in connection with such replies.*

111. Agents wanted in the Near East, with good connections in the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.

**118. Well known Sports Goods House with factory in India, wish to appoint Agents in Near and Middle East where not at present represented.**

## NEWS FROM ALL SOURCES.

It is anticipated that there will be an excellent almond crop this year in Morocco.

Experiments in Ceylon have shown that tractors are very useful on coconut plantations.

The Bombay and Baroda Railway are taking 50,000 tons of coal from Wales and 25,000 from Durham.

It is reported that a rich oil well has been struck at Egbell, in Slovakia, where a new boring produced a spurt 250ft. high.

The export of hops from Czecho-Slovakia has been entirely released as from November 11, no fee whatever being payable.

It is officially stated that the Customs duty on tea and coffee imported into Czecho-Slovakia will not be increased in the new tariff.

It is proposed to create a free zone near the port of Galatz for merchandise to be entered in bond to cover an area of about 100 hectares.

From January to September this year Algeria's imports from Great Britain included 194,290 tons of coal, 406 tons of tar, and 18,006 tons of general merchandise.

Exports from Yugoslavia during the first quarter of 1921 amounted to 569,000,000 dinars in value, against 228,000,000 in the first quarter of 1920.

The Bank of British West Africa Limited, announce an interim dividend to September 30, of three per cent., less income tax, payable December 1.

It is understood that the Anchor Line have instructed Messrs. Alex Stephen and Sons, Glasgow, to resume construction of the new vessel, California.

The Roumanian Electra Company is reported to have given large orders for transformers, high-tension plants, &c., to the Siemens-Schuckert works in Berlin.

Traffic at the port of Casablanca amounted to 50,387 tons in September, of which 34,070 tons represent exports, chiefly of cereals. In August the total was 41,372 tons.

Anglo-Egyptian Oilfields—Gemsah output for week ended November 11, 53 tons (previous week 58 tons). Hurghada—Week ended November 11, 3,629 tons (previous week 3,762 tons).

It is announced that from January 1, 1922, the maximum draught of water permitted for ships passing through the Suez Canal will be increased from 30 feet (the present maximum) to 31 feet.

A convention has been signed by the leading German, Czech, and Slovak textile associations, according to which the sale and payment for goods of the whole Czecho-Slovak textile industry will be unified, except in the case of carpets, rugs, and ladies' material.

H.M. Agent and Consul-General at Tangier reports that at a recent meeting of the Conseil du Gouvernement the Acting Director of Information announced that regulations governing transactions in land in zones where local tribal customs were acknowledged to prevail were under consideration, and that, pending their publication, Europeans would be unable to acquire such property in those zones.

The first indigo forecast for 1921-22 of the Indian Department of Statistics, shows that the total area sown is estimated at 237,300 acres, which is 31 per cent. above the estimate at the corresponding date of last year. The total yield of dye is at present estimated at 41,000 cwt. (excluding 1,500 cwt. reported by Bombay and Sind), as against 24,800 cwt., the revised estimate at this time last year.

Owing to the continued military activities by the Turkish Nationalists in Anatolia, and the attendant disturbed political conditions, the tobacco crop of Samsoun and Baffra will be smaller this year than ever before (says a recent American Consular Report). The normal crop in these districts is about 16,000,000 lb. The 1921 crop, however, will not exceed 4,000,000 lb. or a reduction of 75 per cent. as compared to normal years and 50 per cent. as compared with the crop of 1920.

H.M. Consul at Damascus recently furnished a list of articles in favourable demand in his district, and asked for copies of the catalogues issued by United Kingdom manufacturers of these goods. He now informs the Department of Overseas Trade that the response to his request was gratifying, and adds to the list of goods drapery, haberdashery, bed linen, etc., catalogues of which—*if possible with price indications*—will be useful to him in his efforts to stimulate a demand among local buyers. Such catalogues should be addressed direct to H.M. Consul, British Consulate, Damascus.

# Cotton & Cotton Goods.

## MANCHESTER REPORT.

(*From Our Own Correspondent.*)

*Manchester, Saturday.*

The tone of the market during the past week has decidedly been the worst we have experienced since the slump in the cotton industry commenced. With the fluctuations in raw cotton rates prices have fallen away, and even some ridiculously low offers have not tempted buyers. There appears to be no bottom to quotations. More machinery is gradually being brought to a standstill, and there is now a greater possibility of short time working in the spinning section being adopted. With regard to the cloth demand for Egypt only a few small sales have resulted. The financial position out there is stated not to be all that could be desired. Buyers for the Levant and Constantinople have operated within very small limits, and the amount of orders booked have been practically unworkable. Quotations for Egyptian yarns on the week are distinctly easier. Weak sellers have predominated, and it has been possible to purchase requirements at much below the present market values. Only a small piece goods demand has been about for India with a few occasional sales chiefly in light cloths. Buyers for Java and Singapore have not been altogether idle. Discouraging advices have been received from China, and the tightness of money is stated to be very acute. Sales have been few and far between. South America has been extremely dull. In the American yarn section prices have been a great deal easier, and spinners are at their wits end as to how to meet the situation. Export numbers have been practically entirely neglected. With regard to the future course of events it cannot be stated that the market is in a very hopeful mood. No real movement towards freer buying is anticipated until after the new year. The outlook for the cotton operatives in Lancashire is very gloomy.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date November 16 :—

Yet another disappointing week has been experienced, and as we write the trade outlook is anything but cheerful. Prices again display a downward tendency, and seem to be entirely ruled by " futures," which, to-day, after a comparatively steady week, have shown a considerable decline. The small enquiry has been of a fairly general character, white cotton and Sudan again claiming their share of attention. A certain amount of re-cleaned cotton is finding its way on to our market, both Sakellaridis and Upper descriptions, and in some cases it is even being sold as, and entering into competition with, the ordinary " straight " cotton. It may interest shippers of this re-cleaned cotton to know that it has been decided that it is not tenderable against Liverpool contracts.

Lack of confidence seems to be the keynote, and after to-day's market, one cannot wonder at it. Here and there an opinion is voiced that the market has touched bottom, but little business seems to follow. Yarns are dragging, and the basis continues to weaken. It was reported in Manchester a few days ago that a very large line of cloth had been booked for India—the first important business which has been done for a very long time with that much " agitated " country. This cloth, it was reported, is manufactured from Egyptian yarn. A " bonne bouch" also fell to Liverpool, one large firm of spinners buying a fair line of cotton to-day—for forward delivery. Apart from this c.i.f. business has ruled quiet. The Master Spinners' Federation, which met yesterday, decided to take a ballot of users of American, cotton, with the object of curtailing production by 50 per cent. to the end of the year. It is somewhat doubtful whether a sufficient majority will be obtained to sanction this measure. No action is to be taken with regard to the Egyptian section. It is an unfortunate fact, however, that a certain amount of machinery is already idle, and there is likely to be more still unless a speedy improvement in trade takes place. We can only repeat that at the moment the immediate outlook is not a cheerful one. Total sales 1,300 bales (includes 130 Sudan). Quotations on the week show a reduction of 75 points. Fully Good Fair Sakellaridis 21,00d.

## BRITISH COTTON EXPORTS.

### Comparative Figures.

The recently published official return relating to the trade of the United Kingdom shows that during October this year cotton yarns and manufactures shipped abroad amounted to £16,523,873 compared with £32,306,455 for October last year, and £11,315,806 in October 1913. For the ten months to the end of October the figures are: 1921, £145,584,445; 1920, £341,642,617; and 1913, £106,223,007. The total of £145,584,445 for the ten months ending October is made up as follows :—Cloth, £112,334,364 ; yarn, £18,619,754 ; finished thread etc., £14,630,327.

Owing to the wide fluctuations in values during the past few years the only real basis of comparison is that of quantities. The shipments of yarn during October were larger than these for any other month this year, the figure being 18,644,800 lb., against 10,376,500 lb. in October, 1920, and 19,959,100 lb. in 1913. For the period of ten months to the end of October however, the aggregate of 109,237,400 lb. is less than for the corresponding period of 1920, when the total was 128,824,200 lb. and much lower than the 1913 figure which was 174,720,800 lb. Sixteen markets show decreased takings so far this year compared with last year, and the more important of these are France 11,097,000 lb., United States, 6,383,000 lb., Netherlands, 5,049,000 lb., Belgium 4,767,000 lb., Sweden, 3,557,000 lb., Turkey, 3,412,000 lb., Denmark, 1,727,000 lb., Norway, 1,593,000 lb. and Canada, 1,183,000 lb. The following five markets took larger quantities, Roumania 5,829,000 lb., Germany 5,566,000 lb., Bombay, 3,349,000 lb., Bengal, 1,752,000 lb., and Bulgaria 1,499,000 lb.

The statistics concerning the export of cloth are less encouraging than those relating to yarn. Although in this case also the October shipments of 342,411,500 square yards were greater than those for any previous month this year, and in addition show an improvement on those for October last year when the figures were 304,911,900 square yards, the drop compared with the 1913 total of 630,937,100 yards is considerable. A clearer idea of the fall however, is obtained from a glance at the comparative figures for the period of ten months to the end of October In 1913, 5,981,216,000 square yards were shipped; for 1920 the total was 3,845,589,000 square yards. This year the figure is as low as 2,208,752,600 square yards. So far this year compared with last no less than forty-three outlets have reduced their consumption. The chief declines in square yards are Bombay 277,388,000, China 237,868,000, Turkey 184,303,000, Egypt 117,420,000, British West Africa 77,531,000, Straits Settlements 59,147,000, Argentine Republic 58,054,000, United States, 58,024,000, Sweden 53,343,000, Dutch East Indies 50,814,000, Burma 45,972,000, and Colombia and Panama 43,393,000. In a few instances increased takings are recorded and these are Roumania 14,773,000, Bengal 12,326,000, Morocco 12,001,000, Germany 3,725,000. and Mexico 1,839,000.

## COMPANY MEETINGS.

### Bengal Nagpur Railway.

The sixty-third ordinary general meeting of the Bengal-Nagpur Railway Company, Ltd., was held on November 16 at Gresham House, Old Broad-street, E.C., Mr. Robert Miller (the Chairman) presiding.

Sir T. R. Wynne, K.C.S.I., K.C.I.E., (Managing Director), read the notice convening the meeting.

The Chairman, in moving the adoption of the report and accounts, said that the gross earnings for the year under review were Rs. 6,42,56,227 as compared with Rs. 6,57,56,972 for the previous year. The stockholders might consider it extremely fortunate that on the cessation of warlike operations the traffic of the railway had readjusted itself so well as to maintain and, indeed, slightly to improve on the immense stride in the volume of gross earnings which was reached during the war. From this point of view the break in progressive increase of gross earnings was not a matter of importance, especially when they bore in mind the existing world-wide disorganisation and slackness of trade, and also the fact that during a portion of the year there was a partial failure of the Indian monsoon, which resulted in conditions of considerable scarcity in the tracts affected, and especially in the normally very productive Central Provinces through which the railway ran.

The working expenses during the year were Rs.4,24,08,509, and absorbed 65 per cent. of the gross earnings, as compared with Rs. 3,84, 96, 350, absorbing 58.54 per cent. of gross earnings in the previous year. They were now making good, in larger annual instalments and at a greatly increased cost, the renewals of permanent way and rolling stock which were suspended during the war, and, in common with all other railways in India, they now disbursed in salaries and wages of staff considerably more than was formerly the case owing to the general revision of rates of pay throughout India on account of the increased cost of living. The full effect of that revision was only now being felt, and accounted mainly for the increase in the working expenses. The result of the increase in the working expenses, without a compensating rise in the gross earnings, was a falling off in net receipts of Rs.54,02,904, or nearly 20 per cent.

The decrease in net earnings, together with increased interest charges on capital expenditure, had reduced the surplus profits to Rs.56,56,969, of which the company's share was Rs.6,56,701. If they had been able to remit their share to this country at the same rate of exchange as that at which the remittance of last year's share was made—namely, 2s. 0⅜d.—they would have realised £66,920. Exchange, however, was then on the decline and at the time when their present share of surplus profits was paid it had reached the low point of 1s. 3¼d per rupee, making the sterling value of their share of profits £41,728. In these circumstances they had deferred remitting to this country, pending some measure of recovery in exchange, which it was hoped would be realised as a result of the plentiful rains received by India this year, and the good harvest secured therefrom.

Dealing with the general situation, he said he wished the stockholders to bear in mind that India was a very rich country, with money ready for industrial enterprise, and as soon as the world's trade began to improve, India would quickly respond to it. With the loyalty of India beyond question and with the effective establishment of representative Government assured, the period of agitation and disturbance must pass away, and would be followed by an era of political peace and domestic progress, in which full scope would exist for the exercise by the Indian of his natural instinct for trade, and during which the industrial and commercial prosperity of India would rise to a level higher and more stable than any thought in the past to be ever likely or even possible. In conclusion, the Chairman referred to the report of the committee appointed by the Secretary of State for India to inquire into the administration and working of Indian railways, and remarked that the Commission to India was not required to tell the world that Indian railways had not been provided with all the capital for extensions or for the equipment of existing lines which was necessary for efficiency. His comment on the report was that by direct omission and by indirect imputation the admitted and proven starvation of the railways was laid at the door of the Guaranteed Indian Railway Company.

Mr. Frederick Schooling seconded the motion which was carried unanimously.

## OILFIELDS OF EGYPT.

The report of the Oilfields of Egypt for the thirteen months ended March 31, states that an important stage of development has been reached and the prospects are considered by expert advisers to be distinctly encouraging. On the completion of the preliminary work an active drilling programme was immediately put in hand on sites selected by Mr. Cunningham Craig, as a result of his visit to the field in January 1921. The Ras Dhib area was selected to be first developed, and although well boring was not sufficiently advanced at the date of the balance-sheet to form any definite opinion regarding it, yet considerable progress has since been made. Small shows of oil at shallow depth have been encountered, and other favourable indications, chiefly of geological character, have been met with. The rate of drilling at Ras Dhib has been somewhat slow owing to the extremely hard formation, consisting largely of limestone, anhydrite and gypsum. This type of formation, however, is considered to be an excellent geological feature, as in many fields it has been found to form an impervious cap to oil deposit immediately, or almost immediately below it. Meeting, Winchester House, E.C. November 28. noon.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

(1) The Modern Chaotic Exchange Situation
(2) The French Exchange Position.
(3) German Industry and the Mark.
(4) The Italian Lira.
(5) The United States Dollar.
(6) Miscellaneous Exchanges
(Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Stamboul, October 29.

The exchange crisis continues to overshadow the commercial market. The fall of sterling to 740—750, after being quoted at 830 and even higher, has improved the position of importers, but the exchange bought at higher prices in a moment of panic. as well as the uncertainty arising from the instability of the exchange are paralysing commerce. Consignments for Roumania have completely ceased.

Prices of manufactures are lower. Cabots have fallen from £T12½ to £T10. The arrivals are of very little importance.

*Produce.*—Sugar.—This article continues to be offered without takers. Some purchases of Java are to be noted for India. Czecho-Slovakia, Holland, Germany, and Belgium are continually making offers, but in view of the lack of buyers they are compelled to make new concessions in prices. Quotations are:—American, 8 dollars per 100 kilos ; Java, £20 per ton ; in Customs £T31—32 per 100 kilos. Stocks here are very large, and their disposal is most difficult for lack of outlets.

Coffee.—The market is quiet. Germany, which had purchased large quantities of Rio and Santos, is reselling at lower prices than those of Brazil.

Rice.—Prices are lower on the principal markets. Saigon No. 1 is quoted at Marseilles at 90 francs per 100 kilos. Rangoon, shipment Alexandria or Port Said, is £20 per ton. Here the price is 17-19 piastres per oke.

## INSECT PESTS OF RAW COCOA.

Most foodstuffs when stored are liable to be attacked by insects, and the damage thus caused amounts in the aggregate to millions of pounds every year. Perhaps the best known pest of this kind is the grain weevil, which destroys enormous quantities of wheat and other cereals, particularly in countries such as Australia and Canada, where vast stocks of grain are stored while awaiting shipment. The depredations of such insects extend even to raw cocoa, and it has been estimated that the proportion of "grubby" beans in the world's production of cocoa is on the average from one to two per cent. This subject was considered at the Rubber and Allied Industries Exhibition, held in London this year, when Mr. A. W. Knapp, of Messrs. Cadbury Bros., Ltd., read an interesting paper on Insect Pests in the Cocoa Store, which is printed in the current number of the *Bulletin* of the Imperial Institute. The most frequent pests are the caterpillars of small moths, particularly those of the Mediterranean flour moth, which are often found in mills and granaries ; minute beetles too are commonly present. Various methods have been tried for destroying the insects attacking the cocoa, including fumigation with chemicals and spraying with insecticides. The most effective method, however, appears to be the application of heat, since this kills the eggs as well as the larvae and adult insects, whilst provided the temperature of 160.F is not exceeded, the cocoa is not detrimentally affected.

# Stock and Share Markets.

## SOMEWHAT IRREGULAR TENDENCY.

*(From Our Own Correspondent.)*

London, Monday Evening.

During the early part of the week the markets were rather dull as the result of uncertainty regarding the Irish negotiations, but later they showed a distinct improvement. The proposed naval reduction has strengthened the gilt-edged group, but has naturally had the opposite effect on armament shares. On the whole the outlook now seems more favourable, though it is to be feared that in several directions the position is not what it might be. But it would seem that the principal political and economic difficulties resulting from the war have already been passed, and that now we can look forward to brighter markets, though there are bound to be many fluctuations.

Gilt-edged securities have been firm. Consols are unchanged at 49,1-8, while War Loan Fives are 7-8 up at 88. Fundings have advanced sharply to 73,1-8, a rise of 5-8. The India 7 per cent. Loan has shed ¼ at 103¾, but the Sudan 5½ per cent. Loan is ¼ up at 94,5-8. In Near Eastern securities which rank among British funds, Egyptian Guaranteed 3 per cent. remain at 8¾. Turkish Guaranteed 4 per cent. 1855 are unchanged at 69, but Greek Guaranteed 2½ per cent. 1898 are 6 down at 62.

A rather irregular tendency has been in evidence in the foreign market, as a result *inter alia* of the exchange fluctuations. French War Loan 5 per cent. at 36⅝ xd. are 1¼ down, but Italian Rentes are unchanged at 23. German 3 per cent. have fluctuated considerably, but close a shade harder at 2,5-16. Japanese securities have again been firm. The 4 per cent. 1899 issue is ¾ up at 62, while the 4 per cent. 1910 issue is 1 up at 62. Bulgarian 6 per cent. have been a firm spot rising to 36.

Greek securities have been fairly steady. The 5 per cent. 1884 Loan is the same at 34, while the 5 per cent. 1881 Loan is unchanged at 34. The 4 per cent. 1902 Loan remains at 32, but the 5 per cent. Funding Loan is 1 down at 33. The 5 per cent. 1914 Loan is 2 lower at 34.

**Industrials Irregular.**

On the whole a rather irregular tone has ruled in the industrial group, but, as last week, business has been on a very small scale Textiles have been dull. Courtaulds are unchanged at 33s. 6d., but Bradford Dyers are 1-16 down at 1,17-32. Fine Cotton Spinners have declined to 31s. on the reduced dividend. In Iron, Steel, and Engineering Shares chief interest has naturally centred round the armament group. As was to be expected the American proposals had the effect of creating weakness in these shares, most of which are substantially lower on the week. It is maintained that the firms concerned will be able to find ample scope in peace time activities, and several of them have been engaged for some time in endeavouring to arrange contracts abroad for railway and other construction works. But to obtain sufficient outlets for their activities to compensate for the loss of work on armaments is bound to take a considerable time in present circumstances, and no doubt this view is responsible for the declines that have taken place. Armstrongs are 1s. 9d. down at 14s. 9d., while Vickers have shed 2s. 3d. at 9s. 6d. Guest Keens are 6d. down at 28s., while Cammell Lairds are 3s. lower at 11s.

The firmer tendency in Shipping Shares noted last week has continued. P. and O. Deferred are 3 up at 283, while Furness Withys have gained 6d. at 22s. 6d. Cunards are 1s. 6d. up at 18s. 6d., but Royal Mails are unchanged at 79.

**Oils Variable.**

Oils have been irregular, the proposal to obtain powers to pay Royal Dutch dividends in scrip are proving a bear point. Burmahs at 5¾ are 1-16 down on the week. Mexican Eagles are 1-32 up at 3,5-16. Anglo-Egyptians have been firm, and are 1-16 up at 1,3-8, while Oilfields of Egypt are 3s. 10½d In the Roumanian group Roumanian Consols are 3d. up at 8s., but Steaua Romana have shed 3d. at 8s. Phoenix are 9d. down at 7s., while Dacia Romanos are 1s. 3d. lower at 13s. 9d. The Trinidad group have again been fairly firm. Trinidad Centrals are 13-32 up at 3,7-16, but Trinidad Leaseholds are 1-16 lower at 1¼.

Mines have been a much brighter feature as a result of the settlement of the South African wages question and Kaffirs are higher on the week. Chartereds are unchanged at 11s. 9d.

**Banks Dull.**

Banks have been somewhat dull. Agricultural of Egypt 3½ per cent. Bonds are unchanged at 54½, while the 3½ per cent. Guaranteed Bonds remain at 55½. Imperial Ottoman Banks are ¼ lower at 6¾, while National Bank of Egypt are 1-8 down at 18½. Bank of Athens remain at 2, but Ionian Banks are 1-8 down at 3,3-16. Chartered of India are unchanged at 15, while National of India are the same at 37½. P. and O. Banks are 1-16 up at 11,5-16, while Imperial of Persia are unchanged at 5,1-8. Bank of British West Africa are ¼ down at 4½.

Land shares have displayed weakness. Béhéras are ¼ down at 8¾, while Béhéra Prefs are unchanged at 3,1-8. Egyptian Delta Lands are 9d. lower at 6s. 9d., while New Egyptians are 6d. down at 22s. Egyptian Consolidated Lands are 1s. Sidi Salems remain at 1, but Union Fonciéres are 1-16 down at 2,7-16. Sudan Plantations are 3-8 up at 3,1-8.

**Rubbers Steady.**

After a good week as the result of the rise in the price of the raw commodity following purchases for America, rubber shares have reacted somewhat, and are now somewhat below the levels reached a week ago. Still the tide has evidently turned, and from now we may anticipate a slow improvement in prices provided the companies are in no undue hurry to relax the restricteness on output.

In Miscellaneous descriptions Alexandria Waters are 6,11-16, Egyptian Markets are 19s., and Egyptian Salt and Soda are 32s.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 14 :—

Season.—November 7 to 10—Rainfall limited to Burma. November 12 and 13—limited to Baluchistan. Condition of Crops.—November 5 to 10—Burma, Punjab and Bombay—unchanged. Central Provinces, November 11—cotton, sesamum and rice very good. Bengal, November 12—situation normal except in Western Bengal, where rice crops suffering from drought. Markets.—Bombay cotton market, November 10—weak. Firm M.G. Oomras, December January Rs. 308, March Rs. 356. Bombay cotton arrivals from September 1 to November 4, 293,000 bales as compared with 117,000 bales in the same period of the last year. Bombay piece-goods market very dull. Local goods moving quietly. Calcutta jute and gunny markets, November 12—very quiet. At tea sale on November 8, exceptionally good Dooars with autumnal character offered. Quality from other districts also good. All grades up to 8 annas slightly dearer. Others firm, except high-priced Tippy Brokens, which declined. All markets interested. 347,862 packages sold to date at an average price of 9 annas 1 pie per lb. Crop returns show outurn during October about £7,000,000 less than October last year. November 8—Very steady with fair demand. T.N. Shellac, November, Rs.157; December, Rs. 155. November 11—Special Straits quality rice, Rs.615. Authorised capital of new companies registered in September 1921, Rs. 208 lakhs against Rs. 1,000 lakhs in September 1920. No change in bank rates.

## ALEXANDRIA EXCHANGE.

*Supplied by G. L. Mortera, Alexandria and Cairo.*

Prices on November 4 were as follows :—Agricultural Bank of Egypt, £4,5-16; Alexandria Water Co., Ltd., £6,31-32; Anglo-American Nile Steam, £2½; Associated Cotton Ginners, £23-32; Banque d'Orient, Fr., 56½x; Behera Ord., £E 9,3-8; Brasseries d' Egypte, Fr., 75; Building Lands of Egypt, £11-16; Cassi di Sconto Priv. Fr., 100; Ciments d'Egypte Priv., Fr., 90; Ciments d'Egypte Div., Fr., 24; Comptoir Fin. et. Com. d'Egypte, £1,1116 £1,11-16; Consolidated Land, Pt., 5¼; Credit Foncier Fondateur, Fr. 850; Credit Foncier Act, Fr., 638; Credit Foncier, 1886 Oblig., Fr., 337; Crown Brewery Priv., Fr., 112; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 81½; Eaux du Caire Jouissance, Fr., 104; Egypt and Levant, S.S. Ord., 31s.; Egyptian Delta Light Railways, £4,1-8; Filature National d'Egypte, £11,3-16; Immeubles d'Egypte Soc. an des., £5,11-32; Khedivial Mail S.S. Ord., 110.; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi £4,27-32; Kom Ombo Ste An Fondateur, £33 9-16 ex.; Land Bank of Egypt, Parts de Fond, £27; Lots Turc., Fr., 31; Menzaleh Canal Navigation Pt., 270; Nungovich Hotels, £6,23-32; Ramleh Railways, £2,15-16; Salt and Soda, 34s. 7½d.; Tram d'Alexandrie Priv., Fr., 45; Tram d'Alexandrié Div., Fr., 57½; Union Fonciere d'Egypte, £2,7-8; Egypt Hotels, £2 7-32; Urbaines et Rurales, £2,15-16.

It is understood that two Bulgarian merchants are to visit London to confer with British creditors of Bulgaria for the purpose of regulating accounts in consequence of the arrangements made by Mr. Grey, the Administrator of Bulgarian property sequestrated in Great Britain.

# SHIPPING INTELLIGENCE

## THE DANUBE AND THE DROUGHT.

The Watson and Youell Shipping Agency Ltd., of Braila, report under date November 8 as follows:—We have had a long spell of very dry weather and the water in the Upper Danube is very low, preventing loaded lighters from arriving at overseas shipping centres. Although no rain has fallen in our district it has rained in the West of the country which has caused a slight increase in the depth of water. In the Lower Danube the depth of water at the 83rd. and 13½ mile-posts is 23 feet, and over Sulina Bar 24 feet. The average depth of water in Braila Dock is 11 to 12 feet.

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses :—*

*Anchor Line.*—S.s. Vitellia for Bombay (Liverpool, December 7).

*Anchor-Brocklebank Line.*—S.s. Holywell for Port Said, Colombo, Madras and Calcutta (leaves London December 3) ; s.s. Mangalore for Calcutta (Birkenhead, December 3) ; s.s. Maidan for Calcutta (Birkenhead, December 17) ; s.s. Masirah for Port Said, Colombo, Madras and Calcutta (leaves London, December 24) ; s.s. Maimyo for Port Said, Colombo, Madras and Calcutta (leaves London, January 7).

*Bibby Line.*—S.s. Leicestershire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, December 7).

*Byron Steamship Line.*—S.s. Lord Hartington for Patras, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila (Liverpool, November 30).

*Cunard Line.*—S.s. Pavia for Gibraltar, Ceuta, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Liverpool, December 3) ; s.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa (Liverpool, December 22).

*Ellerman Line.*—S.s. Grodna for Genoa, Leghorn, Naples, Palermo, Messina and Catania (Liverpool, December 1).

*Ellerman's "City" Line.*—S.s. City of Poona for Calcutta (Birkenhead, November 30) ; s.s. City of Florence for Calcutta (Birkenhead, December 8) ; s.s. City of Baghdad for Calcutta (Birkenhead, December 21).

*Ellerman's "Hall" Line.*—S.s. Kathlamba for Bombay, Karachi, and the Punjab (Liverpool, November 29) ; s.s. City of London for Bombay, Karachi, and the Punjab (Liverpool, December 12).

*Ellerman's Westcott and Laurance Line.*—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

*Glen Line.*—S.s. Glenamoy for Port Said, Port Swettenham, Singapore, etc. (London, December 8) ; s.s. Glentara for Port Said, Port Swettenham, Singapore, etc. (London, December 22).

*Henderson Line.*—S.s. Burma for Port Said and Rangoon (Birkenhead, November 30) ; s.s. Mandala for Port Said and Rangoon (Birkenhead, December 14).

*Holt Line.*—S.s. Ningchow for Port Said, Port Swettenham Singapore, etc. (Swansea, December 7).

*Johnston Line.*—S.s. Aviemore for Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 10).

*Moss Line.*—S.s. Assiout for Gibraltar, Algiers, Malta, and Alexandria (Liverpool, November 26).

*Papayanni Line.*—S.s. Belgravian for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna (Liverpool, November 26).

*P. and O. Line.*—S.s. Mirzapore for Bombay (London, November 26) ; s.s. Khyber for Colombo, Madras, and Calcutta (London, December 2).

*P. and O. British India Line.*—S.s. Nerbudda for Colombo Madras, and Calcutta (London, November 26) ; s.s. Nuddea for Colombo, Madras, and Calcutta (London, December 3) ; s.s. Hatimura for Colombo, Madras and Calcutta (London, December 10) ; s.s. Mudura for Bombay and Karachi (London, December 16) ; s.s. Nirvana for Colombo, Madras and Calcutta, (London, December 23).

*Prince Line.*—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, and Beyrout, (Manchester, November 28).

## NOTES OF THE WEEK.

### *Princess Mary's Engagement.*

Britons overseas will share with their fellow countrymen at home the keen pleasure that has been caused by the announcement of the engagement of Princess Mary to Viscount Lascelles, elder son of the Earl of Harewood. The ties between the Royal House of Windsor and the people these days are too close to have allowed the only daughter of the King and Queen to leave the country for a foreign throne without causing the nation a sense of personal loss. In its place there is the knowledge that in giving her hand to an Englishman Princess Mary has followed the dictates of her own heart, and over that the whole world can rejoice. May the union be blest with all the happiness that will be wished for it from every corner of the British Empire.

### *Allied Co-operation.*

In a review of foreign affairs it was inevitable that the Marquess Curzon should have devoted a considerable portion of his remarks to the position in the Near East. That in this connexion he should particularly emphasize the need for harmonious co-operation among the Entente can hardly be wondered at in view of the complications that have been caused by the Angora Treaty. If public opinion in France takes exception to the words used—"They (terms of settlement) will never be arrived at, if any Power, whether ourselves or any other, tries to steal a march on others and to conclude independent reforms on its own account. Such plans may flatter the pride, and may even benefit the interests of the parties conceived, but they do not lead us to a solution"—it must gauge from this unusual directness of speech the measure of British dissatisfaction with French action in Anatolia. But with the conclusion of the visit of M. Gounaris and the Greek Foreign Minister to London, there is no time to be wasted over recriminations between the British and French Governments. Whether the Angora Treaty is ratified or lapses, the need of the moment is to arrive at a settlement of the Turkish question, and this cannot be done until the Entente Powers as a whole are in official touch with Angora.

### *Greece and Turkey.*

Although Lord Curzon refrained from mentioning any concrete basis for peace in the Near East, it was not difficult to discover from his words that the British Government had definitely abandoned the policy underlying the Treaty of Sèvres. It is now recognized that British interests require a friendly Turkish power on the Empire's flank in relation to India, Mesopotamia, Palestine and Arabia. The terms of the Treaty of Sèvres were prompted by indifference to the future relations between Turkey and Great Britain; there was no deliberate intention to antagonize the Turks, but the British horizon as seen by the British representative on the Supreme Council did not stretch beyond Greece. Wiser counsels now prevail in Downing Street, and it devolves upon Great Britain to bring about peace between Greece and Turkey. There can be no doubt that, as Lord Curzon pointed out, the interests of both parties call for peace. For Greece the prolongation of the struggle places a still greater strain upon her resources, both in money and men; for Turkey it means further destruction for "the fairest and most productive part of her kingdom of the future." The visit of M. Gounaris and M. Baltazzi to London will have convinced the Greek Government that it can no longer challenge the new British reading of the situation, and that probably the most effective way of safeguarding minorities in Turkey is to remove from the Turks all fear of aggression from without or within. To satisfy Turkey the British Government must state its own case in Angora. If its representative for this mission be wisely chosen, we are confident that a satisfactory settlement of the Near Eastern question can yet be achieved.

### *Egypt Expectant.*

The news of the breaking-off of the negotiations between Adly Pasha and Lord Curzon naturally caused some disappointment and depression in Egypt, but upon the whole the Egyptians have taken it very well; and if left to themselves instead of being stirred up by mischief makers, they will probably continue to do so. The general feeling appears to be that, if the British explanatory Note proves to hold out any promise of a resumption of the negotiations in the near future, it will still be possible for the Moderates to carry on; but if no such hope be held out, a very serious situation will arise. Happily, the tendency at the present time seems to be towards strengthening the hands of Adly Pasha, rather than towards flying off to the extremists in a fit of rage. But until the various documents are published and time has been allowed for their consideration, it is obviously impossible to make any trustworthy forecast of the direction which Egyptian public opinion will take. In the meantime it is satisfactory to note that, contrary to certain rumours current last week, the British authorities in Egypt do not consider that any increase

Digitized by Google

of our military force in that country is called for at present for the protection of British interests.

### *The Permanent Mandates Commission.*

The Permanent Mandates Commission provided for in the last paragraph of Article 22 of the Covenant of the League of Nations held its first session at the beginning of October in Geneva, and the report of the proceedings submitted to the Council of the League has now been published. As a year had not elapsed since the first Mandates were confirmed, the Commission had no annual report before it to consider, but a number of reports on the proposed administration of some of the mandated territories had been submitted, and these were studied. Among them were the reports of Palestine and Mesopotamia, but the Commission were of opinion that the state of uncertainty still prevalent with regard to everything concerning Class A mandates rendered study of the two reports of little use at this juncture. Consequently the session was devoted to a consideration of mandates of the two other classes and some useful preliminary work was done in preparing *questionnaires* for the Mandatory Powers to adopt as a basis for their annual reports. The British representative on the Commission is the Hon. W. G. Ormsby-Gore, M.P.

### *Wahabite Activities?*

The news of fighting in Arabia between Sultan Abdul Bin Saud, of Nejd, and Ibn Rashid, the Shammar ruler, will not have caused any surprise among regular readers of *The Near East*. The feud between Riadh and Hail is one of very old standing, and ever since his return from exile and his recapture of Riadh it has been tolerably certain that the ruler of Nejd would endeavour to wipe off old scores, as he now seems to have done, by the capture of the Shammar capital. As a friend and ally of the British in the Great War, Ibn Saud—to give him the name by which he is probably best known to our readers—will be congratulated on his success, which is doubtless due as much to his own powers as a leader and organizer as to the fanatical courage of the modern Wahabites. Their armament may also have been superior to that of the Shammar, if it be true that much of Ibn Saud's allowance from the British Government has been invested in such things. In any case the victory is Nejd's, and as it appears to have been gained after a stiff and prolonged struggle its effects may be lasting.

### *An Interesting Situation.*

It is to be hoped that the Sultan of Nejd will not allow the keenness of his subjects to push him into any fresh scheme of conquest. He has accepted the new situation in Irak, and we may trust him to stand by his word; but it would be interesting to know whether he still cherishes any desire to secure a good port for the use of his subjects, free from customs dues and trans-shipment expenses. It will be remembered that about a year ago there was trouble between the Wahabites and the Sheikh of Koweit, and that what looked uncommonly like an attempt by the former to gain possession of the port by a surprise attack was frustrated only by the appearance of British warships and a British aeroplane at Koweit, in response to an urgent appeal for help from the Sheikh. That was not the first time that Koweit, proving a temptation to an expanding Power, was saved by the White Ensign. Our friendship with the Sheikh of Koweit, begun in M'barak's time, presumably holds good in these days of his successor; and that being so, it is to be hoped that our two friends will not bring about an awakward situation for us by falling out between themselves.

### *West Arabian Bickerings.*

As to Western Arabia, the situation appears to be still not quite satisfactory, and it is certain that it would not be improved by any renewal of the differences between King Hussein and Sultan Ibn Saud, or by any further bubbling over of the Wahabite spirit. The Idrissi, too, has been causing some little anxiety; and a special mission lately left Aden for Sanaa to present a motor-car as a present from the British Government to the Imam Yehia. The significant point about this mission is that the British envoy (the chief vizier of the Sultan of Lahej) was accompanied by a representative of the King of the Hejaz who had previously been on a mission to the Idrissi; so that it looks as if an attempt is to be made to compose the Sanaa—Asir dispute. In view of developments further East that certainly seems advisable.

### *The Prince in Western India.*

The visit of the Prince of Wales to Western India has been a conspicuous success, and we are not prepared to say that it was seriously marred by the disturbances which resulted in some parts of Bombay from the inflammatory language of the preachers of non-cooperation. The significance of these occurrences lies rather in the fact that the masses preferred the Prince to the preachers, and the rioting, deplorable as it was, was the work of more or less organised bands of youths, not of the population as a whole. The most puzzling feature of the disturbances is the dead set made against the Parsees. If ten centuries of domicile count for anything, Parsees are Indians, and they have not openly sided against Hindus in the racial agitation of the last year or so; yet the bands of which we have just spoken attacked Parsees as readily as Europeans, and we are glad to see that the Parsees, like Europeans, defended themselves with vigour and effect. It is possible that a change is in progress in the orientation of the lawless elements, and that as time goes on, their antagonism will be more and more directed against the rich, to whatever community they may belong; if that is so, the task of the police will tend to increase in magnitude, but there is no reason to suppose that they will prove unable to perform it.

### *The Shivaji Memorial.*

Of the numerous ceremonies in which the Prince took the leading part, that which appeals most strongly to the imagination is the inauguration of the memorial to Shivaji the Maratha leader. There are of course two Shivajis known to impartial historians. One of them is a myth of the last few decades, an inspired Hindu leader, created to be the rallying-point of anti-English sentiment, extolled as prophet, priest and king, if not as deity, and popularised by a mass of forged historical documents. The real Shivaji was a successful soldier of fortune, ruthless, and at times unscrupulous, as soldiers of fortune are apt to be, but a big figure in the troubled politics of the seventeenth century. The kingdom which he founded did not last, torn to pieces as it was by the intrigues of generals and ministers, but he accomplished something more important, for his activi-

Digitized by Google

ties may be said to mark the beginning of the Hindu renascence, which has made such progress under British rule that if he could return to earth he would probably have the greatest difficulty in recognising his native country. The memorial is a fitting tribute, and its inauguration by the Prince should convince India that European sentiment respects the man, though it will continue to smile at the mythical demi-god.

*The Treaty with Afghanistan.*

Everyone is glad to know that Sir Henry Dobbs has surmounted the difficulties of his task, and brought back to India a treaty of friendship with the Ameer of Afghanistan. In essence the Treaty merely confirms the recognition of the Ameer's independence which had already been granted, and provides for normal relations between two sovereign States. But normal relations are just what India and the Empire want, and if their maintenance is assured, the absence of formal safeguards or any sort of concessions is not a matter for the least regret. It is well to remember, however, that the Treaty is a product of Asiatic diplomacy, which is the old European diplomacy multiplied a hundredfold. It cannot by itself remove anxiety for the safety of the Indian frontier and it certainly does not justify any immediate reduction in our military strength. Its value lies rather in the evidence it affords that the disposition of the Ameer is for the present friendly, and it will be the task of the new diplomatic representative at Kabul to strive for the confirmation of that attitude—or to give timely warning if unhappily it should show signs of changing.

## THE WEEK AT HOME.

*London, Monday Evening.*

**Semper Ireland.**

The Irish negotiations hang by a thread, and the feast of passionate unreason continues. Ulster will concede nothing; Sinn Fein will concede nothing. Sir James Craig, the Ulster Premier, said the other day that Ulster was not a cheese to be nibbled at; the trouble with Sinn Fein is that it wants to be the bread on which Ulster is toasted, but is afraid of getting done brown itself in the process. The result is that its delegates have adopted the absurd course of putting nothing into writing, so that they can repudiate the conference at any momen t Meanwhile both Ulster and Sinn Fein are organising, and each is frightened of the other.

Sinn Fein, too, admits in its heart that it cannot get independence, but it refuses to say the word with its lips; and in the name of a national unity which does not exist and which it cannot enforce, it still wants an All-Ireland Parliament with Ulster inside.

If the Irish negotiations were like any other political problem, one would say that the position was hopeless; but as a matter of fact, bluff plays a large part in this business, and, therefore, both sides are still searching for guarantees and formulae. Perhaps tha most important part of the situation is that the Die-Hards on both sides have been unable to attain a renewal of civil war. After all, peace is a habit that sometimes grows on people.

**Disarmament or Disagreement?**

The first week of the Washington Conference was roses, roses all the way. It was too idyllic to last, and the ingenuous Americans have now made the surprising discovery that roses, particularly French roses, have thorns. M. Briand says that France will not disarm, and that the naval figures must be revised. If, he says, Britain wants capital ships to fish for sardines, France must have submarines to examine the deep-sea flora. The joke—it was evidently nothing more—seems to have given more offence in America than England; but the French Premier was unwise in remarking that "the disarmament of Italy was brought about not by law, but by the moral disintegration of the Italian Army." The Italian papers are now saying what they think about French tact, and the prospects of a triple alliance of the three Powers seems a little remote.

Our own reaction has been a storm in a tea-cup by comparison. Mr. Balfour, following M. Briand at Washington, spoke in favour of the French sacrifice for the cause of freedom, and declared that Great Britain stood by her then, and will stand by her again, if need be. Whereupon Lord Curzon seized the opportunity of making a speech in the City of London, in which he lectured France on the folly of her ways. Admirable advice, no doubt, but directly contradictory to Mr. Balfour. The upshot of all this is that appeals from both sides of the Atlantic have redoubled, asking that Mr. Lloyd George should go over to Washington and save the Conference. Of course, only the cynical would suggest that our Prime Minister, utterly devoid of guile or strategy, foresaw the possibility of such a situation.

The immediate result of the Conference has, therefore, been to exacerbate international rivalries, and to make Americans more determined to have no European entanglements. It has also had something of the same effect in England, too, and one or two responsible writers are warning us that the Entente must now be regarded as at an end. "Tis true, 'tis pity; and pity 'tis, 'tis true."

**A Journalistic Bout.**

Washington has, incidentally, given us a very amusing squabble. Mr. Wells is there for the *Daily Mail*, recording his impressions, and the *Daily Mail* does not like his impressions. First, he attacked the British Empire, which is an old foible that nobody takes any notice of; but when he proceeded to attack France as well, the Editor thought it beyond a joke, and sent an angry cable to Mr. Wells, telling him to moderate his language, and to write more on Carmelite House lines. Other papers have taken up the quarrel; the *Westminster*, with some echo of its old pro-Germanism, sympathised with Mr. Wells for denouncing France; elsewhere opinions were divided between the desire to score off the Northcliffe Press and the wish to maintain the theory that editors are *ex officio* infallible. In this case the Editor of the *Daily Mail* was obviously not infallible, or he could easily have foreseen, from Mr. Wells' earlier writings, what would happen; and personally I doubt whether the articles are up to the usual level of Mr. Wells' journalism. They strike me as the tired effort of an able man who is really not cut out for politics.

**Liberals in Conference.**

As an impartial historian of the week I am bound to record the fact that the Liberals held a Conference at Newcastle. It adopted the Manchester programme of semi-State Socialism under protest, and Mr. Asquith pointedly ignored the subject. The Liberal papers assure us that this means the turn of the tide. I take leave to doubt it. It looks more like the beginning of a sea-fog.

**Faith-Healing.**

A distinguished French psychologist has been attracting large audiences in London this last week with some lectures on auto-suggestion. He declares that the best way to improve your health is to say to yourself every morning when you get up, "I am getting better," twenty times, and the thing happens. I fancy that Christian Scientists hold much the same doctrine; it is the proverbial "If I say a thing three times, it is true." No doubt it is excellent for imaginary ailments, but a friend of mine who has tried it for rheumatism assured me that the only result was that he got sciatica as well. But perhaps he only said it nineteen times, and it is the last trick that really counts.

**Princess Mary's Engagement.**

The announcement of Princess Mary's engagement to Lord Lascelles has given genuine pleasure to the public, first, because the King's daughter is very popular, and secondly, because it is not a dynastic alliance that means her practically permanent departure from this country.

Digitized by Google

Lord Lascelles is a Yorkshireman of the sturdy West Riding variety—he comes from between Leeds and Harrogate—and he has inherited the lands of Lord Clanricarde.

The wedding is to take place in January or February, and ladies are already discussing at afternoon tea the problem of bridal costumes. Fortunately, it is no part of my functions to pretend a knowledge of these mysteries.

**Actors v. Critics.**

The recurrent battle of dramatic critics and theatre managers has broken out again. The failure of Mr. Bernard Shaw's play, "Heartbreak House," has been attributed to the critics, who have answered vigorously that the public did not like it and would not have it, because it was only brilliant in parts but not good as a whole. The retort reminds me of the aggrieved tourist who said to the hotel manager: "Sir, there are things in this pudding which should have made it a good pudding, but the pudding, considered as a pudding and not as an incongruous series of conglomerate ingredients, is a perfectly damnable pudding."

I have not seen Mr. Shaw's play, but I have read a good deal of the entertaining controversy about it, and I notice that a good many people have had the candour to say that they are getting tired of Mr. Shaw and his quips and cranks and calculated follies. What a pity he does not write a play, "Too clever to be wise," and cast himself for the title-role! It would fill the house.

**Service and Other Clubs.**

The daily papers are making an absurd fuss about the difficulties of the Service Clubs, which are suspending their entrance fees in order to get members. As a matter of fact, almost every club is faced with the same trouble; waiting lists have disappeared, and in some desperate cases the members are asked to tout for newcomers—quietly and discreetly, of course, but none the less effectively. There is talk of one or two amalgamations before long, but these things are always difficult, as every club makes it a point of honour to sneer at the membership list of another club. Everybody knows the story of the club which happened to have an unusual number of Semitic members; a visitor who one day consulted its list remarked, "Hullo, this can't be the roll of members—it must be the wine list."

**The Week's Books.**

I need do little more than mention "The Meeting of Extremes in Contemporary Philosophy" (Macmillan) by Bernard Bosanquet; it would be absurd to attempt to analyse so closely written a book in a few lines. So far as I have read it, it shows all the power of thought which has made the author's previous books famous.

"The Economics of Communism" (Macmillan), by Leo Pasvolsky, is an attempt to make an impartial examination of the ideas underlying this system, and to inquire into its practical working. As its conclusions are in the end adverse to the Communist theory, it will no doubt be denounced by those enthusiastic for Lenin and Trotsky, but I do not think the author can fairly be charged with prejudice one way or the other.

The first volume of a "Text Book of European Archaeology" (Cambridge University Press) by R. A. S. Macalister, has reached me. The author is an acknowledged authority, and although I have been unable at present to do more than dip into the book, it is evidently the stuff of which standard works are made. These preliminary pages cover only the palaeolithic period.

"Belief in God" (Murray) by Bishop Gore, is a noble and moving work which will be widely read and must inevitably exercise great influence. It will be remembered that Dr. Gore resigned the Bishopric of Oxford, in order to write a work on the Reconstruction of the Christian Belief, and the present is the first of three or four volumes on the subject. In an autobiographical preface he makes the surprising confession that he is by nature a pessimist and a free-thinker, who has been driven to examine the very foundation of his creed by an intellectual necessity, and always with a native tendency "to fear the worst." Each volume will be devoted to one Person in the Trinity; and although I dissent from many of his arguments and should not care to endorse all his conclusions, I can only say that if the two remaining volumes reach the level of this one, he will have added a great landmark to Anglican theological literature. Dr. Gore, of course, takes the High Church position, and he rejects the views of the Modernists.

"The Emperor Francis Joseph and His Times" (Hutchinson) is by Baron von Margutti, an old member of the Imperial Household. It gives a graphic picture of that aged monarch, a slave to routine. The description of the way in which he received the Serbian answer to the Austrian ultimatum is interesting: "He read it with shaking hands, then he put the note down, and sat silent for a long time, lost in thought. All at once, probably involuntarily, he raised his arm in a kind of defensive movement. In so doing the ring on his right hand caught a glass tray on which there were pins and pencils, and there was a harsh, discordant sound. The Emperor started. So did I. It may sound far-fetched, but that screech which broke the silence and sounded as if something had burst or been smashed will ring in my ears for ever." One more quotation. During a critical moment of the war, he was heard to say, "If only King Edward were alive now! He would know exactly what to do; with genius like his he'd never have let this terrible war break out, I'm certain of that! He ought to have lived a little longer to control this awful situation. I realise more and more every day that he is no longer with us." A pathetic figure, this old unhappy man.

"Bishop Percival" (Macmillan) by the Rev. W. Temple, the young Bishop of Manchester, had a troubled episcopate. Hereford, to which Lord Rosebery appointed him, was an intensely Conservative district, and Percival was an ardent Radical—the only real Radical on the bench. It was once called the "Dead See," but it more nearly resembled a boiling cauldron in Percival's time. He was a rather gritty person, with a genius for getting on the wrong side of quite excellent people who were as sincere as himself on the other side. The fact is that it was a bad appointment, for Percival was a better schoolmaster than bishop, and the Asquith Government were quite right in refusing to translate him to York, although their not doing so was a cruel disappointment to the old man. "Bishops," said a sarcastic rector once, "are visitations sent by Providence to try the faith of the clergy." It is not quite as bad as that, I hope, but Percival would have done better in a more Radical diocese.

"Unknown Kent" (John Lane) is a beautiful colour-book of the second most beautiful county in England; and the artist, who will be remembered as the author of "A Painter in Palestine," "A Dweller in Mesopottamia," and "The Last Crusade," can write as well as sketch.

OCELLUS.

## THE ANGLO-AFGHAN TREATY

An announcement to the following effect has been made by the Government of India:—Satisfactory written assurances that no Russian Consulates will be permitted in the Jalalabad, Ghasni and Kandahar areas, having been received from the Afghan Government, the treaty of friendship with Afghanistan was signed in Kabul on November 22.

"Under the treaty which, though subject to ratification, is immediately operative, Great Britain reaffirms her recognition of Afghanistan's complete independence, and there is to be an interchange of Ministers in London and Kabul, and of Consuls in India and Afghanistan. Afghanistan reaffirms her acceptance of the existing Anglo-Afghan frontier with a slight realignment of boundary demarcated by the British Commission in autumn of 1919, and misunderstanding between the two Governments over the tribes on either side of the border having been removed, each Government engages to apprise the other beforehand of any major operation it may find it necessary to institute for the maintenance of order near the frontier. Subject to the continuance of friendliness and the provisions of any general Arms Traffic Convention that may hereafter come into force, the privilege formerly enjoyed by the Afghan Government of importing munitions of war through India is restored, and customs duty is remitted under the usual conditions regarding goods in transit on goods that pass through India from ports into Afghanistan. Provision is made in the treaty for the conclusion of separate Trade and Postal Conventions.

## EGYPT.

*Cairo, November 11.*

**Armistice Day.**

It is Armistice Day. The British communities in Cairo and Alexandria have not forgotten. They have honoured the memory of those who fell in defence of those who have remained behind, to carry on the work that needs to be done, if the efforts of those who fell are not to be wasted. There were touching Church Services in the two chief cities this morning, and later there were pilgrimages to the British cemeteries and the offering of wreaths to mark the graves of fallen loved ones. It is pleasing to be able to record that the number of wreaths sent in was far too great for all the graves that could be identified, revealing that those whose fallen are buried abroad desired to pay, quietly and humbly, their tribute to those buried here, as a reflection of the spirit of remembrance. And during the last few days there have been unostentatious visits of families to the graveyards. British mothers have taken their small children to the graves, and, in that solemn atmosphere, taught them the lesson inherent in Armistice Day. It is a wholesome practice.

**The Prince of Wales's Tour.**

H.M.S. Renown arrived at Suez on Monday, and after lunch the Prince led a numerous cavalcade a merry gallop over the sands of the desert, clearing the sand-bank, bush-fence and triple bar in excellent style, returning to clear them again. He had tea with the Indian officers at the Transit Camp and lunched with them the next day. Those who were fortunate enough to be able to be at Suez, says a writer in *The Sphinx*, were astounded at the manner in which the Indians, officers and men alike, idolised the Prince. The Sepoys, on Tuesday morning, trudged miles through the heavy sand lining the Canal to cheer His Royal Highness into Suez, and when later in the afternoon he moved amongst them, talking to them all genially and tactfully, their usually inscrutable faces were lit by a look akin to loving reverence. He struck exactly the right note with them.

They waited for him to make the first advance, but once they understood him they literally worshipped him. They would then, and they would now, go through anything for him. It was a happy augury for the success of his mission to India. If he can capture their compatriots in India in the same way he will equal the success of his Colonial tour last year. And the British community in Egypt were not unmoved by the visit, albeit few of them saw him. General regret was expressed that the community did not have an opportunity to show their affection for the Prince, but the hope is everywhere felt that on his return conditions will be different and that he will be able to make a brief official visit to the Valley of the Nile to enable his father's subjects to accord him the demonstration they wish to give.

**The Negotiations in London.**

Politically, we are still on the brink of the unknown. Everyone is still waiting for news from London. But the week has been remarkable for one or two not entirely insignificant local developments. Last Friday the Council of the British Union in Egypt met and sent a telegram to London to the effect that the contemplated withdrawal of the British troops from Egypt would be a mistake, as it would be tantamount to abandonment of the Sultanate and would open the door for the return of the ex-Khedive, the avowed enemy of Great Britain. The supporters of Adly Pasha were quick to seize the opportunity to issue an appeal to the foreign communities in Egypt to dissociate themselves from this protest and declare their confidence in the fraternal feelings of the Egyptians, thus r[illegible]utting the British militarists' theories that the foreign communities demanded the protection of the British troops. To date there have been no official replies, though the French papers have stated that the French community is sympathetic towards the ideals of the Egyptians, while desiring that there shall be no further manifestations of xenophobia. It was an exceedingly tactful reply.

**The Winter Season.**

The winter season is being ushered in under many portents, some positively bright, others potentially gloomy. The political uncertainty is still acute, and the cotton market, which to a large extent reflects the state of the business community, is depressed. There is, however, a very strong connection between the business depression and the political uncertainty—a connection that is becoming more visible daily. It is useless to attempt a forecast until there is some tangible basis to build upon. Meanwhile, social activity is increasing. The races at Gezira and Heliopolis have commenced, with, incidentally, a new totalisator system at both courses. The first race of the season at Heliopolis last Saturday, with this new system, saw the winner, a horse with something of a reputation, returning the nice price of 117 to one. The opera season begins in the first week of next month. Dancing is already strongly in vogue. The first Nile dahabia went up the river a few days ago. It is understood that the latter part of the season at least will be extraordinarily bright, as many tourists who are going to India for the celebrations there during the Prince's visit are returning to Egypt for the last month of the winter.

**At the Residency.**

The High Commissioner and Lady Allenby, accompanied by Mr. Keown-Boyd, Oriental Secretary to the Residency, and Captain Hindley, A.D.C., returned to-day. The party came out on H.M.S. Caradoc, landed at Alexandria this morning, and the High Commissioner had an immediate audience with the Sultan. The special train left Alexandria at 11 a.m. and came straight through to Cairo, arriving here at 3 o'clock. There was a large and representative gathering on the station to welcome the High Commissioner and Lady Allenby back to Cairo. Rumours of an immediate transfer of Lord Allenby have been rife, but as far as I can gather the truth is that, if Egypt secures her independence, the position of the British representative in Egypt will not need a man of the status of Lord Allenby. Upon that assumption rumours have been built up; but there can be no truth in them, because there is no certainty as to the future.

---

*Cairo, November 19.*

**A Week of Rumours.**

The last week has been one of many thrills. Cables from different sources in London inspired a general belief that the meeting on Tuesday last between Lord Curzon and Adly Pasha, the head of the Egyptian Official Delegation, was to be the final interview, and that, in all probability, an announcement would follow to the effect that the negotiations had been ruptured. On the next morning—Wednesday—a Reuter cable

Digitized by Google

stated "it is reported that the Egyptian negotiations have broken down." A few hours later the same agency cabled that Lord Curzon and Adly Pasha were to meet on the following Saturday. The next morning—Thursday—an Egyptian correspondent in London, intimately connected with the Official Delegation, cabled: "We do not attach any importance to the meeting between Lord Curzon and Adly Pasha on Saturday. The Delegation is remaining firm. God save Egypt independent." Almost on the heels of this pessimistic message came the Reuter announcement that Adly Pasha was to meet Mr. Lloyd George early the following week.

Then yesterday there came an urgent Havas agency message, quoting *The Times* as forecasting the possibility of an agreement. We have had to rely on London for news, and from the inconclusive and contradictory messages we have been unable to determine what the position has been. Naturally, local opinion has fluctuated with each succeeding message. Now many are wondering whether these pessimistic reports from the Egyptian correspondents in London have not had an ulterior motive: whether they have not been designed to create a certain misgiving which, if the negotiations should end satisfactorily, would, if properly handled, cause a reaction in favour of the terms offered to the Official Delegation by the British Government. I have no substantial foundation for this inference. It might be entirely wrong. It is merely an inference drawn by certain sections of the community from the general confusion. But if the inference is right, the procedure is wrong. The tendency towards pessimism has helped the extremists.

**Independence Day.**

Last Sunday was "Independence Day." On November 13, 1918, four prominent Egyptians called at the Residency and requested the High Commissioner to advise them of the British Government's intentions towards Egypt. It was two days after the Armistice, and the date has since been cherished by the Egyptians as the beginning of the country's latest and most vigorous Nationalist movement. It was celebrated in Cairo on Sunday last by small demonstrations by truant schoolboys and two large meetings in the afternoon. The "Egypt Independent Party," which is the chief organisation behind the Adly Cabinet, held a mass meeting at the Continental-Savoy Hotel. It was remarkable for two things: first, that the various speakers were careful never to mention the name of Zaghloul Pasha, and, secondly, for the passing of a resolution that, if the present Anglo-Egyptian negotiations broke down, the Egyptians would not consent to resume pourparlers while one British soldier remained in the country. Zaghloul Pasha at his meeting spoke for two and a half hours—150 minutes of invective against the present Cabinet. Otherwise the day passed off quietly enough.

**Two Alarmist Reports.**

During the last two days sensational cables quoting extracts from the *Morning Post* and the *Daily Express* have been received. The first message epitomised an article in the *Morning Post* to the effect that through the laxity of the authorities some of the extremists had been able to possess themselves of several thousands of rounds of British ammunition. I have since learned, from a reliable source, that the figures quoted were, to say the least, grossly exaggerated. Some few rounds were inadvertently sold, but the matter was soon discovered, and prompt action resulted in the recovery of practically all the cartridges. With regard to the story of the Rome correspondent of the *Daily Express*, I understand that some Egyptians in Italy have attempted to devise means to smuggle arms into Egypt by shipping the rifles from Turin to Tripoli and having them conveyed across the Western Desert, but the Cairo civil police learned of the scheme, and in co-operation with the Frontiers Districts Administration, soon made arrangements to capture the contraband and force the business into involuntary liquidation.

**The Inaction of Suspense.**

Until there has been some definite news from London it is improbable that there will be anything stirring in Egypt. The Government is simply acting as an administration. The commercial community is inactive, waiting to get a glimpse into the future before making plans. The economic situation remains about the same. Social life is becoming slightly more active, but all plans for the season are contingent upon the outcome of the official discussions between the respective plenipotentiaries in London. Briefly, the whole life of the country is stagnant. And until the political horizon clears, no developments are likely in any phase of existence here.

---

*Port Said, November 19.*

**An Eventful Week.**

We have had rather an exciting week. On November 16 General Joffre arrived on the Porthos on his way to the Far East. He was met on the wharf by some of the leading French residents, and received a great ovation from the French Colony. Children from the French schools sang the "*Marseillaise*," and then the General drove with the French Consul to the Governorate to

call on His Excellency the Governor; thence to the French Consulate, and finally to the Casino Palace Hotel, where he received the French residents. In the afternoon he went by the Canal to Ismailia, and held a reception there, returning to Port Said by the Canal Company's fast motor-boat in time to board the Porthos before she left.

On the 15th inst. there was a most enjoyable "At Home" and dance given by the Captain and Officers of H.M.S. Centurion, which has been in port for some weeks. She left the following morning, but it is understood that she will return in a week or two and stay over Christmas.

**Fifty-Two Years Ago.**

The anniversary of the opening of the Canal fifty-two years ago passed without notice in the place. On November 16, 1869, there was an inauguration ceremony in Port Said, and next day there started the first convoy down the Canal headed by the "Aigle," with the Empress Eugènie aboard. She cut a silken cord stretched across the Canal near Lake Timsah, where the present Canal Company's hospital is situated. The ships of this convoy arrived in Suez on the third day after they left Port Said. Ships now frequently transit in twelve hours.

**The French "Foreign Legion."**

Last week a large French steamer passed through the Canal bound for Saigon. She had on board several hundred of the men of the French "Foreign Legion." A very large proportion of them were Germans, with a few Englishmen, and the rest—anything. German songs were sung, and it is said that the officers, who of course are French, are obliged to be able to speak German. When men enlist, the only question asked are name and age (for they are only accepted between 18 and 60), and needless to say the answers given are even more mendacious than such answers usually are. The men during the passage through the Canal, were wearing full marching kit with accoutrements; it is said that this was to increase their chance of being drowned if they attempted to desert by jumping overboard. This sort of thing used to happen in Turkish transports before the war. In fact on occasion the pilot has been obliged to inform the Captain that it was against the Canal Company's regulations to shoot at a man who had jumped over board.

## YUGOSLAVIA.

*Zagreb, November* 16.

**The Belgrade Race-Course.**

Belgrade has the advantage of a very pretty little race-course, where charming meetings are held, and, often enough, some quite sporting events are witnessed. The course is the property of the Danube Racing Club, and extends over some 42 hectares. The club has decided to improve the course and bring it quite up to date, the plans are ready, and work will be begun in the spring.

**A Remarkable Article.**

A writer in the *Nova Europa* is going to get himself disliked. He has written a suggestive article, the burden of which is that the young State is suffering from a scarcity of trained and first-rate statesmen at this period in its career, which would test the quality of the politicians of the old States of Europe. Serbia could only contribute a small proportion, as so large a proportion of her intelligentsia fell in the war. The former Austro-Hungarian provinces cannot contribute a full proportion, for in the bad old days, Vienna and Budapest took care that only Germans and Magyars held the highest posts, and so there was an insufficiency of properly experienced Croats. Bosnia and Herzegovina were ruled almost entirely by foreigners, that is, by Austrians and Hungarians. But the sting comes after this. Serbia, the writer maintains, is suffering from a surfeit of "elder statesmen," who are, by reason of their age, excessively conservative and quite unable to adapt themselves to modern and unfamiliar conditions. The suggestion is that all old politicians should be pensioned and make way for the younger generation that is knocking at the door. But in Croatia, the trouble is more than that. It is true that many of the political leaders are too old, and too deeply imbued with ideas of a pre-war generation; but besides that, the cult of the grape is too much developed, so that the politicians tend to an excess of flowery rhetoric, to the detriment of constructive action.

*Zagreb, November* 23.

**Coalition Rumours.**

There has been an underground crisis going on for a long time, owing to the permanent difficulty of Democrats and Radicals working together in one Cabinet. The instinct of self-preservation has kept them together so far, but the independent action of M. Stoyan Protitch has upset everybody. The Radicals want the portfolio of the Interior, but as this is considered the key of the political situation out here, the Democrats refuse. It will be remembered that a coalition broke down two years ago on similar grounds, when M. Protitch was Prime Minister and could not get on with M. Pribitchevitch. M. Pashitch and the Democrats have been trying to come to an understanding for a long time, but now M. Pashitch says that, unless they come to terms by Thursday next, he will tender his resignation to the King. What would happen is difficult to say. The Belgrade *Pravda*, a Democrat paper, comes out with the startling news that M. Pashitch and his old ally M. Protitch have come to an understanding, and that the latter will bring in the Croatian Narodny Club, and, wonder of wonders, Raditch and his party, and so form a Government which would exclude the Democrats. Dr. Koroshets denies that his Slovene Clericals will have anything to do with the business. M. Pashitch is a very subtle politician, bred in the Byzantine tradition of politics, but it would test even his elasticity to exchange the Raditch party for the Democrats.

**Frontier Delimitation.**

After the unpleasant incidents connected with the Allied Mission in the Baranya, it is cheerful to read an account of the popularity of the frontier commission on the Yugoslav-Hungarian border in the north. The Frontier Commission held a kind of small plebiscite in order to ascertain the views of the inhabitants. Across the Mur, in the district known as Prekomurje, where the population is very mixed, all had not proceeded quite smoothly for the Yugoslav interest and the result in Mur Island, Medjumurje, that is the land between the Drava and the Mur, was awaited with some anxiety. But Medjumurje spoke out with no uncertain voice, and the people's delegates declared that not more than one per cent. of the population were Magyars, and that even the Lutherans, of whom there are plenty, are Croats and speak Croat in their own homes. It is gratifying to find that Magyar propaganda had not met with its usual success on this soil, and that after a stay of over two months in Varazhdin, the Inter-Allied Commission parted on the most cordial terms with the inhabitants. A farewell dinner was given by the local authorities to Colonel Cree, head of the Mission, at which cordial speeches were made.

**Golf at Belgrade.**

The amenities of Belgrade have been increased by the formation of a golf club. The links are on the flats across the Save, and the strange behaviour of the players provokes considerable curiosity on the part of the native population, which in the immediate neighbourhood consists chiefly of pigs and neatherds. The elegant public of Belgrade gaze from afar from the promenade of the Kalemegdan, from the spot where the Emperor William is said to have sat and dreamed of dominion, while gazing over the expanse of the Save and the Danube. There are fifteen holes, with characteristic names, most of which will convey more to those with local knowledge, though most are fairly expressive. They are, in order, the Jungle, Vimy Ridge (with trenches), Topchider (facing that pretty park), the Valley, Overland, the Shanty, the Meadows, the Ruins

Digitized by Google

(a war souvenir again), the Piggeries (with succulent roots), Land's End, the Bog, Hell (all bunkers), the Kalemegdan (facing that park), the Devil's Corner, and the last hole is appropriately called "Laku noch," the Serb for Good Night. The Serbs have keenly taken up tennis and, especially, football. Now they have a fine chance of learning and supporting the Royal and Ancient Game. As the Danube is the home of the grisly superstition, perhaps instead of Colonel Bogey they will have Colonel Vampire.

## ALBANIA.

*Paris, November 22.*

### Albania and the League of Nations.

I came to Paris in order to follow the Albanian debates before the Council of the League of Nations. The sitting was held in a fine drawing-room of the "Petit Luxembourg," and on the 16th inst., Mr. Fisher, the delegate of Great Britain asked—quite justly—that the meeting should be public. On the first day nothing of importance was said. On the following afternoon Mr. Fisher made an eloquent speech, throwing into prominence the Serbian attacks on Albania, citing passages from a report of the British Consul in Albania, Mr. Eyres, in which are described the vast regions laid waste by the Serbs in September and October of last year. Mr. Fisher spoke calmly and with conviction, and concluded with an affirmation of Great Britain's goodwill towards Albania in her difficulties with Serbia. Whereupon M. Boshkovitch, the Serbian delegate, asked that his reply might be deferred until the following day, to give him time to receive documents due to arrive from Belgrade. He contented himself with merely protesting against the procedure adopted by Great Britain in regard to Serbia by the convening of the Council, and by expressing a desire to see applied the sanctions mentioned in Article 16 of the Covenant. He afterwards added certain observations on the famous Line of Demarcation, and denied that the Serbian Army had entered Albanian territory; he declared that the fighting in Albania originated with the Mirdites, who were unwilling to submit to the Tirana Government.

In reply to this, M. Midhat Frasheri, the Albanian delegate, proved that Serbian attacks had taken place well beyond the Armistice line, and pointed out that the Catholic chiefs of Albania, the notables of Mirdita, and all the Catholic deputies had come out spontaneously on the side of Albanian unity, as against the actions of Marco Gjoni, who was only a Serbian agent.

On November 18 a third session was held in which both M. Boshkovitch and M. Midhat Frasheri again spoke.

The last session was held on November 19. M. Hymans, the President read the resolution in which was made known to the Council M. Pashitch's despatch promising the retirement of Serbian troops from Albanian territory. The Council decided to empower the Mission which had already been sent by the League of Nations to Albania to supervise the evacuation of the Serbian troops.

It may, therefore, be said that an effective peace between Albania and Serbia dates from November 19 1921, at a quarter past twelve p.m. It may be recalled that this war has lasted for the Albanians eleven years,—since 1910, when they revolted against the Turks.

### Two Ominous Signs.

In M. Pashitch's Note to the Council of Ambassadors there were several protestations against the alteration of the frontiers of Albania without Serbia's being consulted, and he said distinctly that trouble would continue until it was shown that Serbia was right.

Similarly Greece has presented a Note to the Conference of the Ambassadors and to the League of Nations protesting against the decision upon the Albanian frontiers, and saying she would not recognise this decision because it does not bear the signature of the United States of America. But it must not be forgotten that the same Greek Delegates protested at Geneva last July that they could not submit to the decision of the Council of the League of Nations, the Conference of Ambassadors alone being competent to determine the Greco-Albanian frontier.

### Albanian Demands.

Albania has demanded, in a Note sent to the Conference of Ambassadors, the complete evacuation of Albanian territory comprised in such southern frontiers as have been defined in the protocol of Florence and in the session of August 8, 1913, of the London Conference, and incorporated in paragraph No. 2. Also the Albanian delegate stated that his Government reserved to itself the right of calculating the amount of damage done by the Serbs—irrespective of the 7,000,000 francs due to military mobilisation—and of claiming payment by Serbia.

## ROUMANIA.

*Bucharest, November 7.*

### The Political Situation.

Despite the fact that Parliament is expected to re-open in about one week's time, the internal political situation is to-day still as unsettled as it was three months ago when Parliament was closed and the entire Opposition withdrew. But it cannot be said that the different political parties have been idle during the recess; on the contrary, meeting has followed meeting, negotiations between the different political parties have been succeeded by audiences of the King; and yet so far no visible result has materialised.

The present Government's situation is far from enviable, and might be regarded as unstable; for it has become rather unpopular owing to the present financial crisis, and to its wavering economic policy, not to mention its new Fiscal Reforms, which are not to the people's liking. Yet its lease of life continues for the simple reason that so far other political parties have not succeeded in forming a coalition which would enable them to take over the reins of office. Nevertheless, a sudden change is not out of the question, in view of the fact that the King may use his privilege of changing the Government of his own accord. This in fact is more probable since the expressed desire of the King is that the future Government should comprise the leaders of the various parties, in order to extricate the country out of the present *impasse*. The main difficulty in the realization of this scheme lies in inducing the opposing leaders to collaborate. Efforts in this direction have so far proved unsuccessful.

Should the above plan fail, the next possible combination would be a coalition between the Liberals on the one hand and the Transylvanian National Party and the groups under MM. Jorga, Nistor and Inculetz on the other. It is true that the negotiations between these parties have been broken off for the second time, but as the discrepancy is more of a formal character than one arising from difference of principle, there is still the possibility that an understanding may ultimately be reached. And yet, in spite of all this, the Government, banking on the disagreement existing between the Opposition parties, feigns to be sure of its ground, and is imperturbably proceeding with the preliminaries for the opening of Parliament on November 28.

It would not be fair to omit mention of the Tzaranist Party, who have lately been strengthened by the peasant Parties of Transylvania and Bessarabia, and are keeping aloof from these different combinations by devoting their entire energies to their internal organisation.

### Russo-Roumanian Relations.

M. Filality, the Roumanian Delegate at the Russo-Roumanian conference recently held at Warsaw, has now returned to Bucharest, and in the course of an interview made the following statements. He said that the negotiations remained fruitless because the Soviet

Digitized by Google

delegates started the discussion with the Bessarabian question, which he at once dismissed. M. Filality further gained the conviction from the elusive answers of the Soviet Delegates that the Roumanian Treasure at Moscow does not exist any more. They proposed, however, that in exchange for the recognition of Bessarabia as a Roumanian province, the Roumanians should waive their claim for the restitution of the Treasure, and of any other outstanding accounts. The Russians further demanded that a special Convention should be made between the two States with reference to the Russian minority in Roumania, independent of similar treaties now in force.

M. Filality understood from the outset that the chief aim of the Soviet Government was to open diplomatic relations with Roumania in order to establish one of their Missions in this country.

**Magyar State Officials in Transylvania.**

When Transylvania joined Roumania the entire staff of the former Civil Service were allowed to retain their old positions on condition that the officials took the oath of allegiance to Roumania. A large number have complied with the order, while the more chauvinistic preferred to resign, but there are still a certain number of them who did neither, still hoping that the old *régime* will return. The Roumanians have been lenient enough when it is considered that this state of things has been dragging on for almost three years. The Roumanian Government has now decided to give these officials a last chance of thirty days, and if, within this period, they still refuse to take the oath of allegiance, they will be made to resign.

**Roumanian Students Abroad.**

In order to curtail expenses in inflated foreign currencies, owing to the present further depreciation of the leu, the Government has decided to reduce the subsidy granted to Roumanian students studying abroad from 385,000 to 220,000 French francs per month. For this purpose Legations have been provided with funds, as follows: for France 120,000 frs., Great Britain 40,000 frs., and for Italy, Switzerland, and Belgium each 20,000 frs. Each student will get 400 frs. in exchange for 600 lei, and this subsidy will be granted only to students who are in their last years of study. Out of the 950 students residing in Paris only 300 will be subsidized.

**The Weather and Grain Sowings.**

This week the weather has undergone a sudden change. After a spell of over three months of dry weather, during the last seven days we have been having intermittent copious rains throughout the country. Should no frost set in for a few weeks, farmers would have a good chance to make up for lost time and resume autumn sowings under most propitious conditions. In this connection the Government is doing its best to encourage the farmers, especially in wheat cultivation, by the official announcement that next year's wheat crop will be exempted from export restrictions, requisitioning and maximum prices, but only for such qualities weighing 76 kilograms to the hectolitre, and containing only one per cent. admixture. Thanks to the last rains the water level of the Danube has risen to its normal height, and navigation has been made easier.

## BULGARIA.

*Sofia, November 21.*

**Bulgaria and the Angora Agreement.**

Bulgaria is interested, if not directly, at least very considerably indirectly in the agreement made by France with Mustapha Kemal Pasha. Next year should see a settlement of the Anatolian war, and the activities of the Turks are then bound to be turned towards the question of the ownership of Constantinople and Eastern Thrace. Several prominent Kemalists have already declared that they will never rest content as long as Eastern Thrace is under the Greeks, and the latter's hold on this slice of territory cannot fail to be affected by the friendship which the Turks will now enjoy at the hands of the French. Although the policy of the present Bulgarian Government is one of absolute neutrality in the Greco-Turkish war, the sympathies of Bulgaria are very naturally with the Turks. In these circumstances an early recrudescence of mixed Turko-Bulgarian *Komitaji* activity in Eastern Thrace is greatly to be feared. The Kemalists do not receive support from M. Stambolisky's Government, but they try nevertheless their utmost to intrigue in Bulgaria. Jevad Abbas, one of their principal agents, was expelled from the country only a few months ago, and Fuad Bey, another well-known Kemalist, was recently at Sofia, and is now believed to be at Monastir. The signing of the Franco-Kemalist Agreement has been the signal for an increase in the quiet propaganda carried on by and amongst the dissatisfied factions in Bulgaria, and it is pointed out that Turkey, by means of armed resistance appears to have every chance of securing the revision of the first Treaty of Sèvres. The propaganda goes on to point out that Bulgaria should do the same thing, *i.e.* show armed resistance, and at the same time obtain the aid of one of the Great Powers. She would thus, it is argued, be able to create a situation parallel to that which Kemal has succeeded in creating in Asia Minor. This kind of propaganda is, of course, highly mischievous, but is too clumsy to give rise to any serious apprehension.

The relative positions of Bulgaria and Turkey are quite dissimilar, and any outbreak by Bulgaria would at once draw two, if not three, of her neighbours down on her. In addition the intervention on Bulgaria's side of any one of the Great Powers is unlikely in the extreme, as the gains involved thereby are trifling in comparison with the interests at stake in Asia Minor. Nevertheless the Franco-Kemalist Agreement has had a disturbing effect in Bulgaria, and it behoves the Allies to see that no untoward consequences result.

This can only be achieved by doing justice where justice is due, first by incorporating in the revised Treaty of Sèvres provision for an economic outlet to the Aegean Sea for Bulgaria at Dedeagatch, and secondly by insisting that the rights of the Bulgarian minorities are more strictly safeguarded.

The Allies will only have themselves to thank if any trouble breaks out on Bulgaria's frontiers, as by insisting on the establishment of a voluntary army at the expense of a conscript one, they have taken away almost all executive power from the Government. In addition they expect Bulgaria loyally to carry out the terms of the Peace Treaty, but do not fulfil their own part of the compact.

**Radoslavoff's Cabinet on Trial.**

After over a month devoted to questions of procedure and other matters of detail, the trial of the Radoslavoff Cabinet has begun in earnest. It will be remembered that the members are on trial for having caused Bulgaria to participate in the world war. Last week M.M. Popoff, Pecheff, and Toncheff, Ministers of Interior, Public Instruction, and Finance respectively, were cross-examined. M.M. Popoff and Pecheff both expressed ignorance of the existence of an arrangement with Germany, whereby Bulgaria would enter the war on the side of the Central Powers. They declared that M. Radoslavoff, the then Prime Minister, did not inform them of what was going on, and that the first information they had of approaching hostilities was when the Prime Minister read out at a Cabinet Council a telegram, stating that Serbian troops had invaded Bulgaria. On learning this, the two Ministers in question both signed a declaration, which provided for military action being taken against the Serbian troops who were in Bulgarian territory. M. Popoff only became Minister of the Interior four days before the above declaration was signed, and his line of defence was that he was ignorant of what had previously transpired in the Cabinet. M. Pecheff also pleaded ignorance. In the course of his evidence he stated that the real cause of Bulgaria's being forced into the war on the side of the Central Powers, was that the latter offered her certain definite advantages, if she cast in her lot with them. On the other hand, the Entente only made her vague promises, which contained no guarantees that they would ever be fulfilled. Besides this, it was known in Bulgaria, that at least one of the Allies, *i.e.* Serbia, did not approve of the Allies' promises, and it was considered highly problematical whether these promises would mature when the war came to an end. M. Pecheff also referred to the part played by Sir Henry Bax-Ironsides, who was at that time British Minister at Sofia. He stated that the British Minister handed a Note from his Government to M. Radoslavoff, which contained the promises of help referred to above; after M. Radoslavoff had read the Note, Sir Henry Bax-Ironsides whispered in the Bulgarian Premier's ear that it would be advisable not to accept the advice contained therein, but instead to remain neutral. This statement, it is hardly necessary to point out, lacks corroboration. M. Toncheff, ex-Minister of Finance, is at present being interrogated, and his case promises to be the most interesting of all. When asked why, shortly before the war, he accepted a 500 million leva loan from Germany and not from France, M. Toncheff stated that France insisted on certain political concessions before advancing a loan, but that Germany gave the loan without any conditions. The cross-examination will continue, and it is estimated that the trial will run well on into the New Year.

**General News.**

The special train in which ex-King Ferdinand fled from Bulgaria in October, 1918, has arrived back in Sofia. It is in a deplorable condition.

Serbian and Czecho-Slovakian representatives of the "Green" Peasant International, have arrived in Sofia.

## GREECE.

*Athens, November* 19.

**Meeting of the Cabinet Council.**

A meeting of the Ministers was held at the Ministry of Foreign Affairs last Monday evening. M. Tsaldaris, Minister of Communications, communicated the demands of the Railway employees, and it was decided that the Minister should invite the Committee which these had appointed, and advise them that the Government agreed to pay the half of the monthly salary for a thirteenth month as well as an additional indemnity of 50 per cent. and not 80 per cent. as demanded by them. The Council also discussed the question of Thrace and decided to apply to that Province the Rents Moratorium Act, as applied in Athens. Finally the Council of Ministers decided to send three boats to Mersina for the purpose of removing from that town the Christian population of Cilicia. These refugees were originally intended for Cyprus, but, as it appears certain objections were raised by the British Government, the Greek Government is now arranging with M. Stergiadis for their conveyance to Smyrna.

**British Club "At Home."**

A very enjoyable evening was passed on Saturday, November 12, when the members of the British Club here gave an "At Home," the guests of the evening being the Earl and Countess Granville. As usual, the rooms were decorated with much taste, and over two hundred persons attended. Shortly after dancing had commenced, an interesting ceremony took place, in the presentation to Lord and Lady Granville of a large silver rose bowl, from the members of the British Club, on the occasion of their departure from Athens.

The presentation was made by Mr. G. Calphoglu, Chairman of the British Club and the Chamber of Commerce, who, in a short speech, said:—

The members of this club wish to express to you and Lady Granville their deep regret at your departure from Athens This club, which was founded at your suggestion, owes its success chiefly to you, and we all feel that if it has fulfilled, and continues to fulfil the object for which it was founded, this is largely due to the lively interest you have always taken in its affairs, and to your kind and effective assistance on several occasions. As a mark of our appreciation for all you have done for this Association and of our gratitude for your many kindnesses to us, its members, we beg you and Lady Granville to accept this souvenir, with our best wishes for your happiness and success in your future career."

Lord Granville in replying appeared to be deeply touched; he was acclaimed with loud cheers, and a full-hearted rendering of "For he's a Jolly Good Fellow."

A great hit was made by the introduction of a Jazz Band, ably led and conducted by Mr. R. G. Knox, with Mr. W. E. Goodhall doing prodigious deeds on various instruments, including the kettle drum.

**Anniversary of the 14th of November.**

The anniversary of the electoral victory of November 14th, 1920, was celebrated on Sunday last by the

various political Syllogues and their members. At 9.30 in the morning the groups paraded in Omonoia Square with their banners flying. A large crowd awaited their arrival and then formed up and marched to the Cathedral where a special Service was held by the Metropolitan.

The Ministers who were present at the Service were loudly acclaimed both on arrival at and on departure from the Cathedral. Subsequently the organising committee proceeded to Old Phaleron where the statue of King Constantine was crowned. In the afternoon a further demonstration took place in Omonoia Square, and the crowd subsequently paraded the principal streets. In the evening a large political banquet was held at the Café de Paris, where the toasts of the King, the Army, and the Royal Family were drunk.

No incident occurred either in Athens or Piraeus.

**General News.**

The ex-Chief of the Army Recruiting Department, Colonel Spyropoulos, who, over a month ago, had been placed by the Government on the retired list for publishing an open letter accusing the Commandant of the Military region of Athens of arbitrarily arresting persons whose military status had been satisfactorily established, and sending them to the Asia Minor front, has, by decision of the Minister of War, been recalled and replaced on the active list.

A commission has just been formed by the Minister of National Economy, to take delivery of the new one and two drachmae notes which have been received from London.

The Chief of the British Naval Mission to Greece, Rear-Admiral Aubrey Smith accompanied by the Minister of Marine, M. Mavromihali, left Athens for Constantinople in order to inspect the Greek Fleet there. From Constantinople the Admiral and the Minister will probably proceed to Broussa, Afion Karahissar, and Smyrna to inspect the Naval aerodromes.

## TURKEY.

*Constantinople, November 17.*

**No Compromise.**

The most notable development in the political arena during the last week or so has been the struggle in Angora between the partisans of a policy based upon the strict letter of the National Pact with the exaction of an indemnity into the bargain, and the courageous minority who believe that nothing more is to be gained by fighting. Unfortunately for all concerned, and particularly for Turkey, the advocates of an uncompromising policy seem to be getting the upper hand, if indeed they have not already triumphed completely. The Great National Assembly in a recent debate decided that one of the peace conditions should be the payment by Greece of an indemnity totalling £Tqs.290,000,000. The Assembly made the calculation upon an estimate of £Tqs.200,000,000 for the damage done by the Greek army, and £Tqs.90,000,000 incurred by the Angora Government itself for the transport of refugees from the occupied areas. Whether the latter figure includes the amount expended for the transfer of Christians also is not known. The upshot of the struggle has been the withdrawal from the Angora Administration of Hamdullah Subhi and Omer Lutfi Beys, Commissioners for Education and Public Works respectively.

It is perhaps of some significance that the balance should have been turned soon after the arrival in Angora of the Turkish prisoners who have recently been released from Malta. One of them, Ahmed Emin Bey, is expected to succeed Hamdullah Subhi Bey as Commissioner for Education. Readers of *The Near East* will require little information with regard to the political sentiments of Ahmed Emin Bey, since they were evinced in a manner that rendered comment superfluous in a letter published in *The Near East* a month or so ago. It is possible, however, that the report is without foundation, since Ahmed Emin Bey has resumed his journalistic activities in connection with the well-known Constantinople newspaper, *Vakit*, of which he is the principal director.

In another case, however, there is no room whatever for doubt as to the nature of the influence that is being exerted in Angora by a returned prisoner. Ali Ihsan Pasha, who is held by the British to have broken his parole in escaping from Malta, has been publishing in the Angora press the foulest abuse imaginable against British officers personally, as well as against the British nation in general. This gallant soldier denies: (a) that he gave his parole, and (b) that a promise given to rascals is binding. In order to defend himself still further, he maintained that he had only followed the example of such famous soldiers as Lord Methuen who, he stated, made three efforts to escape after having been captured by the Boers during the South African War, and was finally branded by his captors in order that he should make no further attempts! Ali Ihsan's remarks with regard to other officers whom he mentions by name are equally fantastic and as grossly libellous, but unhappily such are the oracles in which the Turks believe to-day. The law of criminal libel in Turkey is particularly severe, and Ali Ihsan would do well to keep away from Constantinople until he has made his peace.

**Mustapha and Enver.**

Another interesting item in the latest budget from Angora is the news of another campaign against the partisans of Enver. Yonus Nadi, the editor of the *Yeni Gun*, who accompanied Bekir Sami Bey to London last March, and who has distinguished himself as one of the most rabid politicians in Turkey, has apparently made himself insufferable even in Angora. At all events he has been arrested with some thirty others who no longer find favour in the eyes of the Anatolian dictator, and has been marched off to Sivas. The *Yeni Gun* has been closed down, and it is stated that the Angora Government is resolved never to allow it to see the light of a new day. R.I.P.

**The Kurds.**

The situation in Kurdistan appears still to be serious, in spite of Nationalist assurances to the contrary. Mustapha Pasha, who was president of the Court martial under Damad Ferid Pasha's administration, and who did his best to exterminate the Unionist-Kemalist clique in the capital, went to Kurdistan some months ago, and is now at the head of the insurrection, which is causing considerable anxiety in Angora. The Kurds are demanding autonomy under the auspices of the Khalifat, but refuse absolutely to recognise the Angora Government. In spite of the utmost endeavours of the Kemalists, who have tried brutality on the one hand and propaganda on the other, the revolt is spreading, and several of the most powerful Kurdish tribes are now on the war path. Although it is reported that the dismissal of Nureddin Pasha, the Commander of the Central Army at Sivas, and of Nihad Pasha, commanding the Irak army, was due to their being suspected of partisanship for Enver, it is more probable that their disgrace was due rather to their failure to stamp out the rebellion, as it is called. (It should be remembered, however, that the famous *fetvas* by which the Kemalists were outlawed last year have never been annulled, and the Kurds are, therefore, acting strictly in accordance with the injunctions of their religion). It is possible that this failure has been attributed to a deep-laid plot; for ever since the last attempt of the Enverists to overthrow the Kemalist Government, the Angora authorities have had plots on the brain. The official explanation of the Kurdish rising, however, according to the Angora Government, is that the Emir Faisal has suborned the Kurds, and stirred them up against the saviours of Islam.

### The Franco-Kemalist Agreement.

Whilst General Pellé has been at some pains to explain the purely local nature of the Franco-Kemalist Treaty, the Turks persist in regarding it as a definite treaty of peace between Turkey and France. Just as the Italians at a not very distant date were always hailed in the Anatolian Press as "our very dear friends" so the French have become "our old friends." The scene would of course be incomplete without Pierre Loti, and neither the Angora Government nor its agents in Constantinople have forgotten the tribute which is due to Art. Whilst Ferid Bey is speeding to Marseilles with a magnificent Anatolian carpet and an address of gratitude to the author of "Les Désenchantées," the Constantinople Municipality has decided to name two streets in the capital after Claude Farère and Pierre Loti. Incidentally the Municipality will meet on the 19th to celebrate officially the conclusion of peace with France.

In the meanwhile the evacuation of Cilicia by the French Army is proceeding apace, and according to Hamid Bey, the Kemalist representative on the spot, will be completed on December 20—according to plan. The Christians of Cilicia, mostly Armenians, seem to have considerable doubts whether it would be wise to spend Christmas in that country, in spite of the "guarantees" securing the rights of minorities which the French thoughtfully exacted from the Angora Government, before agreeing to accept the concessions which were offered. The Christians are doubtless unreasonable to distrust the intentions of those who claim to be in the forefront of civilisation, but it is interesting to note that General Dufieux in a recent proclamation announcing that the evacuation would shortly be completed, added that the Christians were free to emigrate. It would have been still more interesting if General Dufieux had stated how and whither the two hundred thousand odd non-Moslem inhabitants of Cilicia should emigrate. The Armenian Patriarch of Constantinople, at the request of the Catholics of Adana, has approached the British with a view to obtaining assistance, and permission for the unhappy inhabitants to emigrate to Mesopotamia or Cyprus. But it is impossible now for any considerable proportion to leave the country, and one can only echo the pious hope of General Pellé that the Kemalists will refrain from ill-treating the Christians who are shortly to be once again at their mercy.

## CYPRUS.

*Nicosia, November 7.*

### "All-Greek" Meeting.

The all-Greek meeting convened by the Archbishop took place on October 23, at Nicosia in the Papadopoulos theatre. It included the 28 members of the "Central Committee," 12 editors of newspapers, and about 480 representatives of towns and villages. The Mayor of Nicosia was unable to attend, owing to indisposition. There were two questions before the assembly: first, whether qualified Greek electors should abstain altogether from elections to the Legislative Council, and second, whether they should proceed to propose and elect representatives who would engage neither to sit in the Council nor to co-operate in any way with the Government. The Archbishop, after offering a prayer, was the first to address the meeting. Loud shouts were raised for "union with Greece," and it became at once manifest that the vast majority of the 521 representatives were in favour of boycotting the elections altogether. No speeches were in reality needed, but the meeting was next addressed by a large number of orators. The first was Dr. Zannétos, late member for Larnaca and mayor of that town, who was in favour of proceeding to elections, but of declining to sit in the Council. The numerous speakers who followed either took the other view or agreed to adopt it and swim with the stream. One ex-member stated that they were up against a situation in which they were slaves of the English and underslaves of the Turks. It was a humiliation for Councillors to attend a Council which was "a counterfeit coin devised by infernal diplomacy." Finally a resolution was passed to the following effect:—

This meeting proclaims before God and man the unalterable claim of the (Greek) Cypriot people to union with Hellas, and their irreconcilable feeling towards any alien régime: it condemns and abolishes in its conscience the Legislative Council as unworthy of the Greek Cypriot people; and it decides that the Greeks shall neither nominate candidates nor take any part in elections to the Council.

In compliance with the resolution, no nominations by Greeks have taken place. All who were intending to stand have withdrawn in all the three electoral divisions. In the Nicosia-Kyrenia division two Maronite priests were proposed by a Maronite and seconded by Canon F. Newham, but on a scrutiny it was found that the name of the latter did not appear in the list of qualified electors, and the candidates were consequently disqualified. There will, therefore, be no non-Mohammedan members. As regards Moslems, there are three candidates in the Nicosia-Kyrenia division, three in that of Larnaca-Famagusta, and two in that of Limassol-Papho. The polling will be on November 10. A copy of the resolution, in triplicate as required, has been taken to Government House, for transmission to the Secretary of State. A Sub-Committee of seven members, including the Archbishop, has been appointed to draft organic rules by which the local committees are to be guided in their new campaign. The idea is taking shape that the work is to be two-fold, first, local, and second, abroad, especially in England. The proposal finds favour that there should be a newspaper in London, either in English or in English and Greek, and that lectures should be given in different parts of the United Kingdom in order to enlighten the British public. There have been many references to the Ionian islands. One leading paper writes:—

"From the beginning of the war every Englishman boasted that he was a Gladstone, and—surpassing all—were the Great Premier of England, Lloyd George, and the wise statesman and ex-Premier Asquith. Gladstones and Super-Gladstones, they proclaimed to the world the principles of national rights and the freedom of peoples. But as regards Cyprus they remain Gladstones in words only. Will they remain such to the end, that is not true Gladstones?"

It was also resolved, amidst thunders of applause, that greetings should be sent from the meeting to M. N. Katalanos, who was expelled from Cyprus, and is now at Athens. He is about to publish there a new paper, under the title *The Hellenic East*, which will appear next January. Greetings were also sent to the Cypriot Cavalry-Major in the Hellenic Army, who is now being fêted throughout Cyprus, and is the hero of the hour.

## ASIA MINOR.

*Smyrna, November 16.*

### A Greek Appeal.

The Greek Archbishop of Smyrna has issued an urgent appeal to all clergy, elders, directors of philanthropic institutions, clubs, guilds, and all employers and employees, asking for subscriptions to purchase warm clothing for the Asia Minor army. Numerous committees have been formed, and the plan is to induce all employees to give one quarter of a day's wages; scholars to give Ps.5 each; clergy to give up four days' fees; cinemas to give one-fourth of their Sunday receipts; and all other businesses to subscribe one quarter of a day's receipts.

### Naval Movement.

H.M.S. Torch (Commander Butler) has taken the berth of H.M.S. Tumult, which has sailed for Constantinople.

## SYRIA.

*Beyrout, November 11.*

### Rivalries in Syria.

A good deal of ink has lately been spilt by the local Press over the question of the autonomous municipal régime with which it was proposed to endow the towns of Beyrout and Tripoli, the Christians of the Grand Lebanon fearing that the scheme was an attempt on the sovereign rights of their new State. The discussion reached an acute stage after it was known that the High Commissioner had granted an audience of several hours to a delegation of Moslem notables, all declared advo-

Digitized by Google

cates of the unity of Syria. The Moslems of Beyrout and Syria are, in fact, unanimously opposed to the idea of the Greater Lebanon, inasmuch as it means their absorption in a State which was the only Christian Province of the late Ottoman Empire, and which, after the extension of its frontiers, is still likely to retain its Christian preponderance. When later it became known that the Moslems in Beyrout were to be allowed to describe themselves in the new census forms as "Beyroutines" instead of "Lebanese," the fears of the Christian leaders who looked on the Greater Lebanon as their proudest achievement became still more acute, and the subsequent publication by the Press Bureau of the following *communiqué* was not of a nature to allay these fears:—

"On the solemn proclamation of the State of the Greater Lebanon the General High Commissioner declared that the towns of Beyrout and Tripoli would be endowed with a wide municipal autonomy. This promise could not be fulfilled until now, owing to the prolonged absence of General Gouraud, and to the tours that he has been making for the last two months in the territories under the Mandate. Moreover, the municipal organisation for these two towns was a subject for careful consideration, and it is only now that the General High Commissioner has been able to sign the two *arretes* conferring on Beyrout and Tripoli an autonomous administrative status."

At the beginning of the occupation the Haut Commissariat here openly championed the militant Christian party. After the fall of King Faisal, however, they initiated a pro-Moslem policy. It looks as though France is now committed to the rôle of a coquette dallying between two discontented lovers. The recent treaty with the Kemalists has lent a sort of consecration to her pro-Moslem policy, and to-day there was a small demonstration with a display of Ottoman flags. Another larger one is said to be contemplated for Sunday.

## CORRESPONDENCE.

### THE ANGLO-AFGHAN TREATY.

*To the Editor of "The Near East."*

Sir,—After waiting ten long months—during which time the prospects of an Anglo-Afghan Treaty swayed from success to failure—Sir Henry Dobbs has been able to have a treaty signed between Great Britain and Afghanistan. Few would know the difficulties cast in the way of the progress of the British Mission at Kabul, for although as a son of Islam, one thing has ever been clear to me that the men of my faith, whether Turks, Persians, Afghans or Indians, will never cheerfully accept the absurd doctrines of Lenin, nevertheless it was obvious that much diplomatic skill was required to oust the Bolshevist influence from Afghanistan. Sir Henry Dobbs has proved equal to the task, for, to have a treaty prepared despite the presence of that remarkable journalist politician, M. Suritz, is no small achievement, and deserves the highest praise.

Another matter should also be noted; it is that without the active support of the Home Government, the members of the British Mission would have been able to do little, if anything at all. And as in many other concerns, Mr. Montagu has shown statesmanlike sagacity in this respect also. From my way of thinking the people of Afghanistan and the Uzbeks of Bokhara ought to be thankful to him, as I have good reason to believe that it was entirely through his exertions that facilities were granted in Anglo-Afghan negotiations, and now I have hopes that the unfortunate people of the Khanates may have a chance of being dragged from under the teeth of the Bolshevist Colossus.

With the signing of the Treaty with Great Britain a new era has dawned upon Afghanistan. An Afghan Minister will now be in London, and a British representative at Kabul; thus a point which Amir Abdur Rahman Khan fought for many years ago has at last been won. The door to India has been opened too, and through this the Afghans will find a great deal of help in putting their new territories in order. It may be news to most of your readers that the provinces of Roshan, Durwaz and Shignan, for which I put in a claim in my article in the *Edinburgh Review* some years ago, now belong to Afghanistan. Also the district of Yulatun, in the north of Herat, is in possession of the Afghans, and is likely to remain so. In this regard I recollect a pleasant conversation which I had now some time ago with my respected friend Lieut.-Colonel A. C. Yate, when he was good enough to remark that it would be advisable for the Afghans to possess the Yulatun region. Fully one year after that conversation I was glad to hear that the whole of the Murghab valley was in the hand of the Amir's troops. Thus the old Afghan possessions beginning from Old Sarkh in the West to Yulatun, thence to Khoja Salar, are again forming Afghan provinces. That remarkable foresight of my friend shows so well that cultured Englishmen who have made early associations with Afghanistan always look kindly to the interests of the Amir's dominions.

Lastly I am hopeful that some thing might now be done for Syed Mir Alim—the exiled Khan of Bokhara—on whose behalf the Afghan Government is said to have made representations to the Soviets of Central Asia. It is both cruel and unjust that a system of government which is not suited to the East, should be forced upon the poor Uzbeks. The unfortunate Bokharans, however, must bear with their troubles until such time as outside help is given to them or another Abdullah Khan is born.

I am etc.,

Ikbal Ali Shah.

### "RIOTS IN JERUSALEM."

*To the Editor of "The Near East."*

Sir,—In the Notes of the Week in your issue of November 7, there are two passages on which I trust you will, with your customary fairness, permit me to comment.

In dealing with the rioting in Jerusalem on November 2, you remark that the local Jews were unwise in engaging, at this particular moment, in "formal celebrations of the anniversary of the Balfour Declaration."

There were, in fact, no such celebrations. The Jews, at the instance of the Zionist Commission authorities, deliberately abstained from them. The Jewish demonstration to which you refer is purely imaginary, and there is not a word of it in the official report. The Government of Palestine expressly states, what is the fact, that nothing untoward occurred until the appearance in the streets of "a crowd of Arab roughs." These were the first and only demonstrators of the day. They have since, it is gratifying to learn, been publicly disavowed by the heads of the Moslem and Christian communities.

Your note on Transjordania appears also to call for comment. If there is, unfortunately, disorder in Transjordania, it has nothing whatever to do with "the clash between Zionist and Arab views." There is no Jewish settlement in Transjordania and there is no Zionist problem there. It is not for me to analyse the causes of the anarchy towards which Transjordania is drifting. They are not unfamiliar to those who have been in close contact with that troubled area, and they have not the smallest connection with Zionism.

I am, etc.,

The Zionist Organization, Leonard Stein.
77, Great Russell Street, W.C.

### THE STATE OF SALONIKA.

*To the Editor of "The Near East."*

Sir,—Concerning a letter which appeared on page 340 of your issue of September 22, 1921, I beg to advise "A Wanderer" to wander round the slums of any large town in England, London included. He will then find material for his reforming zeal nearer home than Salonika. I would also advise "A Wanderer" to remember that Greece has not seen a single year's peace since 1912; and last *but not least* to study a certain proverb concerning motes and beams.

I am, etc.,

Adrianople, Nov. 5. Th. Stephanides,

## MUSICAL NOTES.

### Modern Music.

Eugene Goossens has now raised his orchestra to so high a pitch of excellence that it seems almost a pity that their efforts should be chiefly expended on such works as the conductor believes to be most representative of modern thought. Some of these rarely performed or new works are, without doubt, what Goossens claims them to be—neglected masterpieces; but with others, the chances of their being known fifty years hence are remote. It was unhappily to this impermanent class that the majority of the things done at the Queen's Hall on November 23 belonged. First of all, however, came the sparkling and now well-known "Fugue in C Minor," of Bach-Elgar, its dazzling brilliance being demonstrated with almost incredible perfection. It was the most fascinating and exhilarating cocktail preparatory to a repast imaginable. But after this, the rot, if one may so call it, set in. It began with Holbrooke's "The Wild Sea-Fowl," which, though it contains traces of genius in its representation of a lonely, gull-guarded strand, would inevitably, had it been written by a younger man, have been damned as "promising." Then came "Prometheus," a Symphonic Poem by the most highly-endowed impostor in all music, Liszt, in which the really dramatic and powerful passages of the composer are obscured by the ranting and the frothy eloquence of the wizard. One's hopes were low indeed after this, but another wicket fell for nothing when Cyril Scott's "Aubade" was performed. Cyril Scott is an amazing disappointment, for he has created in this morning song, by stock-in-trade devices if you insist, the clear, fresh and potent atmosphere of morning, and, instead of thereupon saying something vital, has continued to the end his barometric tricks, with never a hint of personality coming through! However, some sort of stand was made when Goossens proceeded to play three numbers of Manuel de Falla's "El Amor Brujo," the Introduction and Dance of Fear, the Pantomime, and the Fire-dance, to drive away evil spirits. This music is very exciting and insidious; it is written and it was performed with extraordinary and effective brilliance, but I felt, except in the second number, which is made with beautiful and original simplicity, that these seductive Spanish ways were either like a passion or a drug, their fascination could not last, or if it did, it was not good for one's musical self-respect. Still, I admit that the power of intoxication in this stuff was great; and it would have been greater had the composer selected some other instrument of percussion than a pianoforte, the tone of which fitted ill with the rest of the instruments. The concert ended with a glorious performance of Rimsky Korsakoff's Symphony "Antar." It is an unequal work, for although the first two movements are supremely excellent, there is a decline of interest in the last two. Not that they are in any way dull, but the exquisite gorgeousness of the "Largo" and "Allegro" is but inconsistently sustained. This symphony, with its profuse wealth of colours, the unceasing originality of its orchestration, and the spacious certainty of its themes, gave Goossens' orchestra the fullest opportunities for showing their worth; and they were indeed magnificent, strings, woodwind, brass, and percussion alike.

### Jelly d'Aranyi.

Mlle. Jelly d'Aranyi, who I believe is one of Joachim's nieces, is a very great violinist. At her recital at the Wigmore Hall on November 24, she proved, in addition to those qualities which one already knew she possessed, —romantic glow, impetuous rhythm, surpassing technique and so on—such command of pure line and such dignity in the statement of melody has made her for me the finest woman fiddler I have ever heard. This recital, in which she was supported by Mrs. Ethel Hobday, was a triumph for her from beginning to end. It is true that in Mozart's "Andante, Menuet, and Rondo," from Haffner's Serenade she had not quite the purity and delicate finish of a Thibaud, and that she took the "Rondo" at so fast a speed as to outpace Mrs. Hobday, but hers was nevertheless a real interpretation, reasoned and beautiful. Vivaldi-Nachez's Concerto in A minor was played perfectly, and the "Largo" especially was done with a mature richness that conquered through its very inevitability. In Schubert's Sonatina in G minor (Op. 137) there was not great interest, and the pianoforte part, excellently enough played, seemed rather to emphasize its thinness. Probably for sheer fiddling and for poetic insight the *pièce de résistance* of the evening was Szymanovski's "La Fontaine d'Arethuse;" it is full of extraordinary difficulties, and had any of them not been overcome it would have sounded futile. But as it was, the bubbling trills of its double-thirds and the double-stopped *glissandi* in its liquid rise and fall, made it marvellously effective. No playing of this could possibly have been finer than Mlle. Jelly d'Aranyi's. And in another piece of the same Polish composer, "Tarantelle," she proved anew how wonderful a thing is her sense of rhythm, and how real and natural her abandon. The little "Cherubins" of Couperin-Salmond is perhaps not quite the kind of piece that suits her best, but her delightfully fresh outlook was again shown in Kreisler's arrangement of the Ballet Music from Schubert's "Fair Rosamond." Altogether she showed herself as one of the most captivating artists now in this country.

### Mr. Leonard Borwick.

There were two unwelcome factors in Mr. Leonard Borwick's pianoforte recital at the Æolian Hall on November 23: he himself was not in good form, and the instrument he was using was a very poor one. In the beginning of Bach's Partita in C minor he made mistakes, and there were times in his Beethoven, Schumann, and Ravel alike when his tone was unusually hard and dry. It says much, therefore, for the purity and diversity of his musical abilities when one confesses that throughout his recital he maintained interest. By the time he had arrived at the "Rondeau" of the Bach he had struck something like his true form, and both this and the final "Gigue" romped home with the most merry elasticity. In Beethoven's "Les Adieux" sonata his architectural sense, which, though founded on the best and classical authority, is very personal, seemed to me arbitrary in the way it made him depart from customary phrasing, and his use of *rubato* overstepped the region of individuality and became, particularly in the first movement, almost wilful. But in his Schumann group he was nearly his old, perfect self; the "Bird as Prophet" and the "Canon in B minor for Pedal Piano," were done with very delicate and persuasive chastity.

**Andante.**

## MUSIC IN PALESTINE.

M. Benno Moiseiwitsch has founded two scholarships for proficiency in pianoforte playing at the Jerusalem and Jaffa School of Music respectively. The Scholarships are of the annual value of £25 each, and they have just been awarded for the first time. M. Moiseiwitsch is also organising a concert in aid of the Jerusalem School of Music, which will take place, by kind permission of Sir Oswald Stoll, at the London Coliseum, and will be under the patronage of the Colonial Secretary and the High Commissioner for Palestine. Messrs. Chappell and Co., are presenting to the Jerusalem School a grand piano which is being specially constructed to suit the climatic conditions of Palestine.

# NEAR EAST BOOKSHELF.

## A HISTORY OF SINAI.

**"A HISTORY OF SINAI." By Lina Eckenstein. With Maps and Illustrations. (London: S.P.C.K. 8s. 6d. net.)**

The triangular peninsula of Sinai, lying between the much visited lands of Egypt and Palestine, is comparatively little known. Yet all through the ages it has played no small part in the religion of mankind. Before the days of Moses the moon-goddess was worshipped in the sacred caves of Serabit. According to the Old Testament the Hebrews here received their law and much of their religious training; during some sixteen Christian centuries it was the abode first of many hermits, and later the Holy Shrine of the legendary Saint and Martyr St. Katherine gave it a new sacredness.

The land presents three well-defined regions. First, the sandy coastal region through which but yesterday the Egyptian Expeditionary Force fought their way to Palestine along what was a military highway in the earliest historic periods. Secondly, a great central plateau, rising to 4,000 feet, the traditional "Plain of the Wandering." This is largely drained by the Wady-el-Arish, known in the Bible as the 'River of Egypt.' This district is traversed by the very ancient Darb-esh-Shur, the great commercial route in Egypt in the days of the Patriarchs. A broad belt of sand separates this plateau from the third and most interesting mountainous region of Southern Sinai. In this are we learn, in the northerly past the site of the ancient turquoise and copper mines of early Egypt together with the sacred shrine of Serabit, and further south the majestic mountain group of Gebal Serbal (6,734 feet), Gebal Musa (7,357 feet), Gebal Katrin (8,727 feet), and Ras Safsaf (6,540 feet). At the foot of Gebal Musa lies the convent, originally the site of "The Bush," later the shrine of St. Katherine.

There is plenty of evidence that in earlier times—even down to the Middle Ages—the 'Desert of Sinai' was cultivated in many places and supported far more wild vegetable and animal life than at present.

Our earliest knowledge of Sinai is derived from somewhat obscure references in the early Babylonian inscriptions. When however we come to the results of the researches of Professor Flinders Petrie at the temple ruins of Serabit, in the neighbourhood of the disused turquoise and copper mines of ancient Egypt, we are upon solid historical ground. At the mines were a number of rock cut tablets high up on the cliffs of the Wady Maghara; they date from the first Egyptian dynasty onwards. An interesting, illustrated account of these is given in this volume. The temple of Serabit shows the remains of successive additions covering many centuries, commencing with the very primitive, Semitic pre-Egyptian caves, sacred to the worship of the moon-god. It is a fascinating suggestion of the authoress that the Mount of God (Exodus XVIII., 5), at which the Israelites camped was at this same spot; that indeed it was at this venerable shrine that Moses stayed and communed with the Deity. The theory is discussed in a very interesting chapter on "The Israelites in Sinai." The next chapter summarizes all that is known of the Nebataeans in Sinai.

During the Christian era Sinai has an almost continuous history for the 4th Century. Here the hermits lived a strange and weird existence, utterly alien to our modern ideas, delighting in hardships, dying not infrequently of famine or thirst, with an inner life enriched by visions and by strange fables and fancies. It is in the writing of some of these recluses that we first read of 'The Bush,' from which the Lord spoke to Moses at the foot of the high mountain when the Law was given. In the reign of Justinian the Monastery was founded, in the neighbourhood of The Bush, and Roman slaves, with their wives and families, were brought there to form a community for the protection of the monks. The Cult of St. Katherine, destined to be its predominant claim for sanctity did not begin till the 10th Century. The body of this martyred Saint was supposed to have been deposited upon the mountain top—probably Gebel Musa—though later it was transferred to the Monastery—and from it exuded the priceless and potent oil which wrought many miracles in far-off cities in Europe. During the 11th and 12th Centuries St. Katherine was far more famous in Europe than at her local shrine.

The history of the Convent in succeeding centuries has been full of vicissitudes. In more recent years manuscripts of priceless worth have been discovered in the library and scholars have gathered there for study. The age-long succession of monks still continues, in numbers much reduced, to live their isolated lives within the ancient semi-fortified walls.

This volume gives us a vast amount of interesting information on every aspect of Sinai's history, and is a distinct contribution to our knowledge of a land but seldom visited and but little described.

E,W.G.M.

## BOOKS RECEIVED.

"The Sisters of the Spinning Wheel." By Puran Singh. (London: J. M. Dent and Son. Ltd. 6s. net.)

"The Eclipse of the Abbasid Caliphate." Original Chronicles of the Fourth Islamic Century. Edited, Translated and Elucidated by H. F. Amedroz, Barrister-at-Law, and D. S. Margoliouth, D.Litt., F.B.A. In seven volumes. (Oxford: Basil Blackwell, £7 7s. net.).

"Sweet Waters." By Harold Nicolson. (London: Constable and Co., 7s. 6d. net.)

"Music and Life." By W. J. Turner. (London: Methuen and Co. 7s. 6d. net.)

"East is East." By T. D. Pilcher. (London: The Bodley Head. 7s. 6d. net.)

## CUNEIFORM LITERATURE.

The library of the late Rev. C. H. W. Johns, Master of St. Catherine's College, Cambridge, and a distinguished Assyriologist, has, at his special request, been given to his old college—Queens', Cambridge. It contains practically all books of value to students of cuneiform literature, and, what is probably most valuable of all, a collection of Dr. Johns's MS. notes. Access to this library will be readily granted, and it is hoped that it will be used by students interested in Assyriology.

## "BRITISH PRISONERS IN ANATOLIA."

We much regret that, owing to a printer's error, the sub-title of the above article, published last week, appeared as:—"The Release of British War Criminals" instead of "The Release of Turkish War Criminals." The mistake was such a glaring one that it cannot have given rise to any misconception, but we are extremely sorry that it should have occurred.

## OUR LADIES' COMPETITION.

We have received a number of entries for the above competition, but in order to give readers in the most out-of-the-way parts every chance, we are keeping the competition open a fortnight longer. We hope to announce the prizewinners in our issue of December 22, and to publish the winning papers at the earliest possible opportunity.

Maintenant prête.

## PERSONAL AND GENERAL.

**To-day.**
December 1 (New Style).
November 18 (Old Style).
Rabia II, 2, 1340 A.H. of the Moslem Calendar.
Marheshvan 30, 5682 of the Jewish Calendar.

Lady Elizabeth Babington Smith gave birth to a daughter at Saffron Walden on November 17.

Dr. Ariel Benson is leaving shortly for Aden, India and Mesopotamia in the interests of the Palestine Foundation Fund.

Sir Alexander McRobert, who recently underwent a serious operation, left for India by the s.s. China, on November 25.

Mrs. Hamilton Stephenson has arrived in Egypt for the winter. Her address will be 7, Rue Boutros Pacha Ghali, Heliopolis, Cairo, until April.

THE VISCOUNT LASCELLES

Mr. W. A. Fox-Strangways, late British Vice-Consul at Suez, who is now at Tetuan, Morocco, has been relieved by Mr. A. A. Monckmason.

Miss Phyllis Bedells, the famous ballet dancer, has joined her husband, Major Macbean, in Egypt, where she intends to stay for some months.

A satisfactory Anglo-Afghan treaty having been signed, Sir Henry Dobbs, Chief of the British Mission, has left Kabul. He had just been created a K.C.S.I.

M. Gounaris, Greek Prime Minister, and M. Baltazzi, Minister for Foreign Affairs, expect to leave London next week for Paris. After a short stay there they will proceed to Rome.

The Hon. Lady Lloyd Mostyn, the Hon. Mrs. C. R. Hoare, and Vice-Admiral Sir L. E. Power were among the passengers for India in the P. and O. steamship **Plassy**.

The Secretary of State for the Colonies on November 25 entertained at luncheon, at 2, Sussex Square, the president, vice-president, hon. secretary, and members of the Palestine Arab Delegation.

A marriage has been arranged, and will take place shortly, between Major Robert John Wingfield Heale, Indian Political Department, son of the Rev. J. N. and Mrs. Heale, and Ethel, only daughter of Mr. David Scott, of Burnside, Alyth, Perthshire.

The marriage was celebrated on November 23 at the Brompton Oratory between the Duca del Monte and Miss Ballard Smith, daughter of Mrs. Ballard Smith, of Le Vieux Colombier, Dinard. Part of the honeymoon is being spent in Vienna and in Bucharest.

The marriage arranged between Richard F. Pinder, of Sierra Leone, son of Mr. F. Pinder, Blackburn, and Dorothea L. H. Mayne, younger daughter of Mr. R. J. M. Mayne (Indian Police, retired) and Mrs. Mayne, will take place at Richmond Parish Church on December 21.

*Central News*

H.R.H. THE PRINCESS MARY.

A Correspondent writes :—On November 15 (under the auspices of the Dodecanesian Delegation in Great Britain), Mr. A. T. Callinicos gave a lecture on the Islands of the Dodecanese, with lantern slides at St. James' Schools, Manchester. Canon J. Perry, Manchester Cathedral, was in the chair.

A marriage has been arranged, and will take place in Bombay in March, between Richard George Mills, of Karachi, only son of Mr. and Mrs. G. H. Mills, of 37, Greville Road, St. John's Wood, and Esmé Frew, second daughter of Mr. and Mrs. Robert G. Sommerville, of Ruishton House, near Taunton.

Reuter's Athens correspondent writes (November 23): Earl Granville, the British Minister here, who has been transferred to Copenhagen, and Countess Granville, left to-day for London on their way to the Danish capital. Mr. C. H. Bentinck will act as Chargé d'Affaires pending the arrival of Earl Granville's successor.

The King has granted unrestricted permission to the Rev. Reginald Michael French, of the Hostel of St. Sava and St. George, Oxford, to wear the Cross of Officer of the Order of the Crown of Roumania conferred upon him by the King of Roumania, in recognition of his services to the Roumanian sick and wounded in the late war.

The marriage was celebrated on November 22, at Holy Trinity Church, Exmouth, by Rev. Preb. H. L. Maynard, Vicar of Milverton, and Rev. F. Dyson, Vicar of the parish, between Hugh Vivian Collingridge, Captain 6th Gurkha Rifles son of Mr. and Mrs. Guy Collingridge, and Muriel Patricia, younger daughter of Mr. and Mrs. F. G. Basden, of Moorlands, Exmouth.

The marriage took place on November 16, at the Garrison Church, Lucknow, between Major E. S. Harcourt, M.C., 7th Gurkha Rifles, son of the late Colonel G. J. Harcourt, Royal Dublin Fusiliers, and Mrs. Harcourt, and Nancy, eldest daughter of Major-General Sir Edwin Atkinson, K.B.E., C.B., C.M.G., C.I.E., and Lady Atkinson, Hythe, Kent. The Bishop of Lahore officiated assisted by the Chaplain of Lucknow.

The marriage was celebrated on November 16, at St. Stephen's, Bath, by Canon Charles Digges La Touche and the Archdeacon of Bath, between Owen Cecil Kirkpatrick Corrie, M.C., Vice-President of the Palestine Court of Appeal, only son of Mr. J. O. Corrie, F.R.A.S., of Lincoln's Inn, and 95, Church-road, Upper Norwood, and Ivy Isabel, youngest daughter of the late Henry Digges La Touche, M.I.C.E., Chief Engineer, P.W.D., Madras, India, and Mrs. Henry Digges La Touche, of Lansdown, Bath.

Our Smyrna Correspondent writes (November 14) :— Lady Kennard has arrived in Smyrna to visit her mother Mrs. de Candolle, wife of Major-General Raymond de Candolle, C.B., C.E. Lady Kennard hopes to get some good shooting in Anatolia besides visiting places of archaeological interest.

The Crown Prince and Princess of Greece arrived in Smyrna on Sunday last, and have taken up their residence in the Villa Cotzia at Cordelio, which adjoins the Villa Alliotti, recently occupied by King Constantine.

General Haddad has arrived in Baghdad after his tour of the Arab provinces, which included the Hejaz, where he spent some three months conferring with King Hussein, Palestine, where he stayed as Sir H. Samuel's guest, and Transjordania. On his arrival at the Baghdad aerodrome, he was met by Sir Percy Cox, the King's A.D.C., various Ministers, and other high officials. General Haddad is staying at the Palace, and on the evening of his arrival King Faisal gave in his honour a dinner of fifty covers, at which Sir Percy Cox, the Ministers and other high officials were present.

Haddad Pasha is stated to be optimistic about the future of Transjordania now that the administration in that province has been reorganised. His arrival in Baghdad has excited much popular interest, for Haddad Pasha is looked upon as the ablest and most experienced Arab in public life to-day.

The marriage took place on November 25 in Paris at the Church of St. Augustin and the Russian Church, Rue Daru, of M. Milivoye B. Gavrilovitch, Attaché at the Legation of the Kingdom of Serbs, Croats, and Slovenes in London, son of Dr. Bogdan Gavrilovitch, rector of the University of Belgrade, and Mme. Gavrilovitch (*née* Markovitch), with Mlle. Suzanne Chartier, daughter of Mme. Hannonet de La Grange, Director of the French Reparations Commission, and Chevalier of the Legion of Honour. Owing to family mourning the ceremony was strictly private. M. V. Milanovitch, Secretary of the Legation in London, was best man. The witnesses for the bridegroom were Dr. Vova Marinkovitch (ex-Minister) and M. Gavrilovitch, Minister in London (represented by M. M. Mikajlovitch, Chargé d' Affaires in Paris). Those for the bride were M. Hannonet de la Grange and M. A. Tirman, Conseiller d'Etat and Commander of the Legion of Honour.

## APPOINTMENTS AND PROMOTIONS.

With the approval of the King, Mr. Alfred Edward Martineau has been appointed a Judge of the Lahore High Court, in succession to Mr. Justice Samuel Wilberforce, and Mr. Benjamin Lindsay has become a Judge of the High Court of Allahabad, in place of Sir George Edward Knox.

## A NATURAL FORTRESS OF CENTRAL ASIA.

Lecturing before the Central Asian Society at 74 Grosvenor Street, London, on November 10, Major L. W. S. Blacker, of the Corps of Guides, gave an account of a series of extraordinary journeys, amounting to about 9,000 miles through wild country, sometimes unexplored, in Central Asia, performed by himself and a small party in connection with a British mission in the years 1918-19-20. In the course of these journeys he at one time visited a most extraordinary natural fortress. Khorassan, he said, was walled in by a natural line of ramparts; but the most remarkable part of this natural wall was an outwork called Kalat-i-Nadiri. In the circumstances of the time the Persians could not refuse him admission, but usually they kept this place shrouded in the greatest mystery; largely because Nadir Shah had hidden therein £17,000 worth of loot that he had got from the sack of Delhi.

Major Blacker described the fortress as being about fifteen or sixteen miles long, about four or five miles across, and as containing half-a-dozen villages. All round it was vertical scarped cliff impassable to any but trained cragsmen. He said that since the time of Queen Elizabeth the place had been held as a fief from the Shah by a tribe of Turks, who held it in return for defending that part of the frontier against raiding Turcomans. There was a little attempt at cultivation. It had been visited by very few Europeans in the last 150 years.

Colonel A. C. Yate, who followed, said that he was one of the few Europeans who had visited Kalat-i-Nadiri. It was a singular formation of great interest as associated with the great conqueror Nadiri Khan. He had got an introduction from the then British Agent in Meshed, and upon presenting this had been politely invited into the fortress, where he had spent three days. He remembered being taken to the northern slopes and looking down on the plains of Central Asia. Almost immediately after his visit the Persians made up their minds that they did not want any more Europeans there, at any rate for the present; and when so great and distinguished a traveller as Lord Curzon arrived towards the end of 1886 he had to go away again without being admitted.

Hail, the capital of the Central Arabian Emirate of the Jebel Shammar, has passed into the hands of the Emir Abd el Aziz, the ruler of Nejd, by his defeat, after a long struggle, of the son of the late Emir.

Work on the Tata hydro-electric scheme near Poona has again been postponed, owing to the continuance of the passive resistance tactics of the inhabitants.

A railway line between Kazanlik and Tulovo was opened last week by the King of Bulgaria.

Trustworthy information which has reached the Armenian Refugees (Lord Mayor's Fund), of 95, Victoria-street, S.W., shows that the whole population of the Republic of Erivan is threatened with famine. At the present time, 130,000 children and 120,000 adults are in urgent need of help.

## GREECE, TURKEY, AND THE POWERS.

When they conclude their visit to London M. Gounaris, Greek Prime Minister, and M. Baltazzi, Minister for Foreign Affairs, will leave for Paris *en route* for Rome, where a short stay will be made before their return to Greece. A solution of the Near Eastern question was not to be looked for in their negotiations with the British and the French Governments, for in existing circumstances this goal can be reached only in agreement with Nationalist Turkey. But there is reason for supposing that some useful ground has been covered towards a final settlement. In the first place credit must be given to the Greek Ministers for the manner in which they have carried out a difficult mission. The Greek case, which the Allies have been accustomed to hear so eloquently urged in the past when facts were not against it, lost nothing in their hands; and in showing some consideration for the hard logic of events they certainly enhanced their own reputation and served their country well. If the British Government heard once more the Greek point of view well propounded, the Greek representatives had the British case in the light of the last two years' experience submitted to them, and probably for the first time they realized that they were confronted with a far more formidable argument than any that they had encountered in Paris. Twice during the present year Greece has refused to place herself in the hands of the Allies; she now finds, when no alternative is open to her, that she stands to obtain a worse bargain than she might have secured in March or in June. The position is an unfortunate one for any Government; but the wiser course is to accept it with the best grace. There can be no practical settlement, unless the Turks are a party to it, and it is now left to the Allies once more to bring Turks and Greeks into line. The task has been complicated by the action of the French in concluding a separate treaty with the Turkish Nationalists; but any self-complacency engendered at Angora on this account should not remain proof against winter conditions and other arguments that the Allies can bring to bear upon Mustapha Kemal Pasha. In this matter Great Britain, France and Italy must once more act together; and as the only possible basis of a solution coincides with the main aspiration of the moderate Nationalists, no separate understandings between France or Italy and Angora should prove an obstacle to co-operation. To remove all possible misconception, the British Government should also be in direct touch with the Kemalists, before a conference is held. The bogey of Anglophobia in Turkey need worry no one; for the Kemalists will not be slow to realize that the British come seeking no concessions in Anatolia, but actually bringing terms which pave the way for a lasting peace.

Little is known of political conditions in Angora, but it is safe to assume that Mustapha Kemal Pasha feels himself more secure in this respect than the present Greek Government. Public opinion in Greece must be the sole judge as to whether a Ministry has served the country well or ill. Too often, however, there is a tendency to decide the point by the arbitrary test of the attainment or non-attainment of the popular aspirations. In the present instance a good case would seem to be made out for allowing the Government that carried out the advance into Anatolia, that withdrew the Army and then entered into negotiations with the Allies to take charge of the Greek cause at the Conference that will be called to settle the Near Eastern question. In the interval that will elapse before the Conference can meet there will be time for a more careful examination of the Greek position. Greece stands to gain little, if anything, by changing horses in the middle of the stream. The terms to which she will be asked to signify her assent are not the result of any weakness in the advocacy of the Greek cause on the part of her present representatives. They will be imposed on her from without, and the harder they may seem to bear, the more necessary for the nation to close its ranks and to meet misfortune as a united people. Many visions have been dissipated in Asia Minor. It is by no means certain, however, that Greece will be ultimately the loser. The realization of some hopes may prove a more onerous burden than a country which cherishes them is able at the time to support. This promised to be Greece's experience in Asia Minor. The original conception of Smyrna as a valuable asset to the Greek Exchequer was soon abandoned when it was found that the Smyrniots had no intention of allowing themselves to be governed by Athens for the benefit of Greek politicians. A Greek Smyrna without a considerable Greek hinterland was proved to be an unworkable proposition; but to satisfy the economic requirements of the port the extent of territory to be incorporated would entail a permanently hostile Turkey, with a corresponding financial burden imposed on Greece. There is no reason why the Greek public should not be brought to see the situation in this light. It has already had some inkling of the strain put upon the nation's finances by, and of the military demands arising from, an Asia Minor policy. A state of unstable equilibrium between Greece and a hostile Turkey must inevitably weaken the Greek position in South-Eastern Europe, and might oppose an insuperable barrier to Greece's becoming a member of the Little Entente. On the other hand, if the Gounaris Government can obtain a loan at once from the Allies and is promised reasonable compensation in connexion with the occupation of Smyrna and the earlier operations against the Turks, the Greek public will have the satisfaction of knowing that the country has not done badly in extricating itself from a false position for which all parties and all classes were in some measure responsible.

The present intention is to summon in January a further conference on the Turkish question. But, if that gathering is to be on the lines of the London Conference last March, when the Turks and the Greeks were invited to state their cases and the Allies were not disposed to enforce acceptance of the terms that they themselves proposed, no settlement is likely to result. The sole purpose of the Conference should be to ratify decisions previously reached. If the discussions should last until the end of January, and then under one pretext or another a month or more be allowed, as before, for the terms tentatively agreed upon to be endorsed in Angora or Athens, the melting time for the Anatolian snows will be approaching, and once again one belligerent or the other may decide that an advantage is to be gained by a sudden resumption of hostilities. The mistake made by the Allies in the Treaty of Sèvres lay in the supposition that there was room in Asia Minor for both Greek and Turkish jurisdiction. There is not. If the Turks can be convinced that they are to have Asia Minor intact, other outstanding points should not prove difficult of adjustment. But the general items of the settlement should be agreed upon before the Conference meets. An essential condition of any settlement, as has been urged before in these columns, is that it should leave Turkey at peace with herself, as well as with the outside world. The relations between the Sultan, the Constantinople Government and Mustapha Kemal Pasha must be satisfactorily adjusted, particularly if there is any question of the Allied troops being withdrawn from Constantinople. This task will have to be accomplished in Turkey, and much, if not everything, will depend upon a wise choice being made in the appointment of the British representative charged with the task of establishing touch with the Angora Government.

## ALBANIA AS HOLIDAY RESORT.

*By Major J. S. Barnes.*

From the dark barriers of that rugged clime,
Ev'n to the centre of Illyria's vales,
Childe Harold pass'd o'er many a mount sublime.
Through lands scarce noticed in historic tales;
Yet in famed Attica such lovely dales
Are rarely seen; nor can fair Tempe boast
A charm they know not; loved Parnassus fails,
To match some spots that lurk within this lowering coast.
(*Childe Harold*).

Probably no more fascinating holiday could be devised than a journey to Albania. Over a century ago Gibbon spoke of Albania as a country within sight of Italy, but less known than the interior of America. The remark is as true to-day as it was then. Yet Albania is not now very inaccessible, and no one need be under any apprehension of any danger to his person or property in going there. The Albanians are anxious to welcome tourists and to extend to them their wonderful hospitality, for which they have an unrivalled and deserved reputation.

The charms of Albania are very well summed up in the following quotation from a little-known book "Journals of a Landscape Painter," published in 1852, by Edward Lear, famous for his nonsense rhymes, but also a very talented landscape painter and an enthusiastic tourist:—

> The general and most striking character of Albanian landscape is its display of objects, in themselves beautiful and interesting—rarely to be met with in combination. You have the simple and exquisite mountain-forms of Greece, so perfect in outline and proportion—the lake, the river, and the wild plain; and withal you have the charm of architecture, the picturesque mosque, the minaret, the fort, and the sarai,—which you have not in modern Greece, for war and change have deprived her of them; you have that which is found neither in Greece nor in Italy, a profusion everywhere of the most magnificent clustering plane and chestnut, growth abundant of forest oak and beech, and dark tracts of pine. You have majestic cliff-girt shores; castle-crowned heights, and gloomy fortresses; palaces glittering with gilding and paint; mountain passes such as you encounter in the snowy regions of Switzerland; deep bays, and blue seas with bright, calm isles resting on the horizon; meadows and grassy knolls; convents and villages; olive-clothed slopes, and snow-capped mountain peaks;—and with all this a crowded variety of costume and pictorial incident such as bewilders and delights an artist at each step he takes.

To these delights, as yet quite unspoilt, must be added those of the sportsman. Woodcock and wild boar shooting are particularly famous; but many varieties of duck, the snipe, the quail, the partridge, the hare, and the wild goat also abound, and even heavier game, such as the bear and the wolf. Trout fishing, too, in Lake Ochrida, and the upper reaches of the Drin, is reputed to be excellent.

As the country has not yet been opened up for tourist traffic, the traveller must be prepared to do without luxuries in Albania. It is possible to find clean but very simple quarters in most of the towns; and where there are no good hotels (by good is meant clean), the traveller may be pretty certain of securing a tolerable room, by applying to the mayor or the prefect, as the case may be. The native cooks know how to make some very savoury dishes, and some of the dainties peculiar to the country are not by any means to be despised. Personally I am very fond of *kos* (compare the German *dicke Milch*), which is served usually at every meal, though most of the sweetmeats I find rather sickly. Care should be taken to insist on each hot dish ordered being brought up separately; for it is the unaccountable custom of the country to serve all the dishes at once, with disastrous results to those who like to eat their food hot. Fruit and the Turkish coffee are delicious.

Apart from having to rough it, there is the matter of expense to be reckoned with. A trip to Albania is not cheap. You can reach the country by the Dalmatian coast from Trieste and return by Brindisi and Rome, and this programme makes a very pleasant five weeks' trip. Leaving London on a Friday, it is possible to reach Venice by the Orient Express before dinner time on Saturday. Cross from Venice to Trieste on the following Tuesday, and take the Lloyd-Triestino boat which sails from Trieste for the Dalmatian coast every Wednesday morning. Pola, Sebenico, Spalato, Gravosa, Cattaro, and Antivari, are passed in the daytime, with time to land and to visit the sights. Durazzo is reached on the following Saturday. The journey is a magnificent one, the scenery of the Dalmatian coast being unsurpassably beautiful with its deep blue water, its high mountains, its woody gulfs, its countless islands, all studded with towns and villages of historical interest and containing beautiful specimens of Venetian and Roman architecture. If the traveller wishes to see Ragusa, the most interesting of all Dalmatian towns, it is necessary to quit the ship at Gravosa and to continue the trip into Albania by motor car through Cattaro, Cettigne and Virbazar, whence a steamer on Lake Scutari may be taken to Scutari itself. Allowing for three weeks in Albania, the return journey may be made from Durazzo and Valona to Brindisi, where the ship arrives on a Monday morning, enabling the traveller to reach Rome on Monday night. Two nights in Rome and one in Paris will bring the traveller back to London on the following Friday.

The cost of this trip will, of course, vary with the requirements of the tourist. For those who wish to travel by train de luxe, with sleepers and single berth cabins, but who are content to stay at small hotels en route, and in Albania to do a lot of walking with a rucksack and to dispense with the luxury of an interpreter (with French or Italian you can get on famously in Albania), £150 will cover all expenses comfortably, including the hire of a horse in Albania in those parts where riding affords

A STREET in DURAZZO.

MARKET DAY AT SHUJAK, NEAR DURAZZO

AT TIRANA.

Digitized by Google

good sport. Those who are prepared to rough it to a greater degree might manage the journey for a £100 and if anyone is in the happy position of being able to take a three months' holiday in the summer months with the idea of camping in the Albanian mountains, the relative cost of the trip would be much diminished.

The chief town in Albania is Scutari, where the market days afford an extraordinarily picturesque sight and opportunities of picking up some very pretty things (charmingly coloured silks and cottons, embroidery, and fascinating slippers made of coarse knitted wool embroidered with silver and gold). The costumes of the peasants here are the finest in Albania. Scutari moreover is the capital of the highlands *par excellence* and on market days magnificent specimens of humanity from the mountains throng the streets. Many of the women are extremely beautiful, and what is particularly pleasing, they are not ashamed to show their faces, for the majority of them are Christians.

There is a road (bad) from Scutari to Kruja, Tirana and Durazzo. Motor cars may be hired. Kruja is the old capital of Skanderbeg, perched 2,000 feet above the plain among olive groves, exceedingly picturesque and commanding incomparable views. Tirana, the present capital, lies in a narrow plain between high mountains and low wooded hills of rare loveliness. Durazzo is the chief port, but as yet a poor little town, stricken by malaria in summer. But it is finely situated and is dominated by some interesting Venetian ruins.

South and east of these points the journey has to be continued over tracks not passable by motor car. But in many ways it is a joy to get away from the bad roads. The best way of travelling is on horse-back, for the distances are long. From Tirana to Elbasan it is 20 miles of rough going over a high mountain pass without a vestige of habitation. From Elbasan you can proceed either to Lake Ochrida and Koritza—a good three days' journey—or else to Valona *via* either Berat or Lyushna. Valona and Koritza are united by a road which passes through Argyrocastro, and there is a magnificent road built by the Italians running between Valona and Santi-Quaranta through the Acroceraunian mountains, than which no more astonishing scenery is to be seen anywhere. Lear's description of it makes the flesh creep. But a journey through Albania means something different every day. Each town has its special features, each district its special costumes. As for the scenery, it is always changing. That above Argyrocastro, for instance, has a peaceful, lyric beauty which fascinated Byron. Lake Ochrida many say is the most beautiful lake in Europe. It is of crystalline clearness and has all the sweetness and charm of the Italian Lakes. The little hills near Tirana, and in a different way, near Elbasan are divinely pretty; while the great plain of the Musakia has the same grandeur and fascination as the Maremma in Italy, with the same characteristics of swamp, lagoon, and lone, melancholy hills. Up in the North and in the interior, however, the wild scenery predominates, some of the mountains reaching a height of over 7,000 feet, virgin peaks many of them, and not even roughly surveyed.

In going off the beaten track the traveller should go with the guide, and if he is determined to enter the territory of any of the mountain clans he should be furnished with proper letters of introduction. But with this single precaution, no one with decent manner and ordinary commonsense need have any fear that he will bring back from Albania anything but pleasant memories and robust health. The plains should be avoided in July and August on account of the heat and the malaria, while the highlands are practically impassable in midwinter. The rainy month is November, and except in midsummer and midwinter you cannot be certain of continuous fine weather. September-October is perhaps the month when the weather may be best depended on to be both fine and pleasant. March to May, though subject to heavy downpours, are, however, the months to be chiefly recommended.

---

According to a Constantinople report, the Angora Assembly is considering the proposal that Sultan Mohamed VI, should be invited to leave Constantinople and take up his residence in Angora.

About 200 Nationalists have been arrested in Azerbaijan by the Bolshevists for having conspired against the Soviet Government.

News received by Georgian circles in London reports the arrest by the Bolshevist Government of a deputation of Tiflis workmen who went to complain about increased economic burdens.

# PRESS ON THE NEAR EAST

## Lord Curzon and the Near East.

Speaking at the Cannon Street Hotel on November 24, Lord Curzon appeared to urge international co-operation as the only way to secure the peace of the world. In dealing particularly with the Near Eastern situation he complained that it was useless for "one Power to steal a march on the others and conclude independent arrangements on its own account." In commenting upon this speech the *Manchester Guardian* of November 24, says :—

There can be no real settlement of the difficult and dangerous questions of Greece and Turkey and the Straits except by the common action of the Powers, and the most fatal blow to the prospects of a stable settlement in the Near East was struck when France entered on separate negotiations with the Turks and made a settlement with them all to herself. Lord Curzon touched lightly on this aspect of the matter, but the drift of his argument was plain enough. Greece herself is of course deeply to blame for refusing repeated offers of mediation, and seeking to force an issue by arms. She has failed, but the need of common action by the Powers remains,if worse is not to follow. If France is the chief offender, this country is not without blame, for Greece believed, not, we fear, without reason, that her attack had the approval of the Government of this country, and Lord Curzon would have added to the strength of his case if he had admitted that we also have something to regret. It is not too late for both sides to redress their error. The whole matter is one which urgently calls for a new approach and a real settlement. Greece can probably hold her own for some time in her present position, but only at an expense which she can ill afford and with no certainty that at any time she may not be compelled to withdraw. Meanwhile the unhappy villagers, whether Greeks or Turks, are called upon to suffer, and the miserable remnant of the Armenian nation, abandoned by France, which had undertaken to protect them, stands in danger of extermination. Never was there a clearer case, on grounds alike of humanity and of policy, for common action by the Allied and friendly Powers. The vital question of the freedom of the Straits, one of the greatest international questions of the world, can never be settled by any other means.

The *Morning Post* of the same date was, on the other hand, by no means so laudatory, for it begins an article called "An Unfortunate Speech" thus :—

Lord Curzon took it upon himself to rate France in the City of London yesterday afternoon. His indictment was twofold. In the first place, he more than hinted that France had embarked or was about to embark upon an isolated policy at Washington, relying on her own armaments to protect her cause instead of submitting to the bulwarks profferred by the conscience and the combined physical forces of the world. In the second place, he suggested that France was stealing a march on this country by concluding a separate agreement with the Kemalist leaders at Angora. Lord Curzon, in thus venting his spleen on an ally, really lays himself open to some dangerous retorts, for if we compare his foreign policy with that of the Quai d'Orsay we gravely doubt if the comparison redounds to his advantage, despite the fact that, as Lord Curzon will be the first to admit, he has at his service perhaps the most efficient department of the State. For after all, France succeeded in preventing the Bolsheviks from overrunning Poland, and thus starting a movement in Germany which might have again plunged Europe into war. On that occasion Lord Curzon apparently trusted to the conscience of the world, which, as the French, the Belgians, and the Poles know, is well-intentioned, but somewhat slow. The French, in their turn, trusted to General Weygand, who is never slow. Then France had the acumen to see that King Constantine was going to be no match for Kemal, and had been guilty of the crime—always considered odious by the obtuse—of profiting from her superior intelligence. French foreign policy may be isolated, but it is certainly intelligible and, on the whole, successful. But Lord Curzon's foreign policy is neither intelligible nor successful. He is too trusted a servant of the Prime Minister ever to be guilty of the indiscretion of thinking and acting for himself. A good butler serves the wine, and under the new dispensation a good Foreign Secretary reads the despatches, but both are expected to be and are obedient. Lord Curzon, when he surveys the sorry spectacle of Europe at the moment, has at any rate the melancholy satisfaction of knowing that in all things he has faithfully obeyed his master.

It proceeds to develop the argument that "France is acting alone because her friend has deserted her," and concludes :—

As for the Middle East, the simple truth is that Lord Curzon backed the wrong horse, and now that the race is practically over he wishes his more discriminating partner to share his losses. By all means let us have united action in the Middle East, but the Foreign Secretary ought to have thought of that admirable axiom in the days when he allowed M. Veniselos and King Constantine to believe that they had behind them in their hazardous adventures the support of Great Britain. Lord Curzon's speech indeed, is a cry of distress. Our foreign policy, directed by Mr. Lloyd George, driven by the ebb and flow of party politics, and thinking only of to-day and never of to-morrow, is being tried in the balance and found wanting. We have drifted into a mess in the Middle East; to-morrow we may be stranded hopelessly on the reparations shoal. The cause of all this trouble is, as we have repeatedly insisted, our failure to come to a complete understanding with France, on which in time we could have built up a durable alliance. We ought to have given her guarantees against a renewal of the German menace, guarantees which we once offered her and then withdrew, guarantees which would save not only Paris but London. Then we could have framed a common policy in regard to Russia and the Middle East which by this time might have brought peace to those distracted regions.

And *The Times* pleads for more light :—

Lord Curzon made a guarded reference to the troubled situation in the Near East. He recognized the urgent need for peace in Anatolia, and pointed out that it was particularly important for us to have peace, since "we are the greatest Mohammedan Power in the world, and it is our interest, not only in relation to England, but in relation to India, Mesopotamia, Palestine, and Arabia, to have a friendly Turkish power on our flank." That is unexceptionable, and the reminder that France also has important Mohammedan interests is opportune. The warning to the Greeks to restrain their ambitions will no doubt have due weight as coming from the representative of a Government that at one time gave special encouragement to the Greeks to undertake military operations in Asia Minor. On the question of the territorial arrangements that might form the subject of negotiations Lord Curzon was perhaps purposely vague. He suggested that there is room for both Turks and Greeks in the Near East. That is indubitable; but the troublesome question is whether there is room for both Turks and Greeks in Asia Minor. We entirely agree that we shall never get out of the present *cul de sac* in the Near East "unless the Great Powers come together and with perfect loyalty and absolute sincerity bend their shoulders to the common task." And for that reason we wish that Lord Curzon could have spoken yesterday in a more hopeful and confident tone which would have been re-echoed in other Allied countries and would have stimulated closer co-operation. The difficulties are not insuperable, though it is as well that from time to time they should be plainly pointed out.

## The Salvaging of Turkey.

In the *Pall Mall and Globe* of November 22 an appeal to England to save Turkey was made by Ahmed Riza Bey, formerly President of the Turkish Parliament. The article begins with a recognition of Turkey's culpability in entering the war, and then shows how, in a bitter anti-British spirit, religion and politics have been confounded by the Mohammedans—a confusion which, however, must be taken into account by Great Britain. After suggesting that if England were to proclaim the independence of Turkey there would be a great change of feeling among the Mohammedans of Turkey, it continues :—

Last January, in order to bring about an understanding between the Powers—England, France and Italy—and the Angora leaders, I proposed to act as an intermediary. My plan received encouragement from the French Foreign Office. I was in fact, on the point of starting for Rome when I heard from Angora that an invitation from England had been accepted, and that Bekir Sami Bey was being sent to London. The whole question, as far as I was concerned, was adjourned. The Franklin-Bouillon Agreement is open to criticism on the ground that it is loaded with commercial concessions. It should have been limited to the settlement of frontier questions and to the provision of guarantees for the security of minorities. It is three years since the armistice, and yet the world is still seething with troubles resulting from the war. In Turkey the condition of affairs savours of anarchy. There cannot be two governments in one country. I see nothing in Angora except a very good army of National Defence. Angora has no other *raison d' etre*. The Angora leaders have shown a high spirit of patriotism and have done admirably, from a military standpoint only. The Angora troops are much encouraged. The semi-circle of *ententes*, with Persia, Afghanistan, Azerbaijan, and Russia, support and simulate effort. The Army of National Defence will secure the necessary resources to continue the campaign until the Greeks evacuate Smyrna itself. It is actually in the interests of the Greeks that they should evacute Smyrna. The fact that Russia is at present in the hands of the Bolsheviks should not affect the Turkish people. It is hoped that the anti-Turkish policy of England will be modified. It is, after all, no unheard-of condidition of affairs for countries that have been at war on different occasions to forget their past grievances and fight together as brothers-in-arms. England and France form an example.

And the article, after saying that "it is for England to save Turkey now," concludes :—

My country has erred, I admit. I submit to the loss of territory within reasonable limits. But we must have our independence restored. The Greeks must leave Asia Minor. Our frontier should be extended to the Enos-Midia line. Adrianople, which, I contend, is a Mohammedan city, should be restored to us, even if the frontier is less generous than I suggest. The disturbances in India on the Caliphate question would cease, I feel sure, if England now recognised Turkey's right to a free existence.

## PALESTINE: THE ARAB CASE.

We have received a copy of a pamphlet entitled "The Holy Land: The Moslem-Christian Case Against Zionist Aggression," an official statement of the Palestine Arab Delegation's point of view. It refers first to pledges given to the Arabs by the British Government during the war, and to statements made in 1919 and 1921 by Mr. Lloyd George and Mr. Winston Churchill, admitting Great Britain's indebtedness to the Arabs. It then quotes Mr. Balfour's famous Declaration of November 2, 1917, on which it comments:—"This Declaration, when news of it first came during the war through the Turks, was utterly disbelieved; later, when it was found to be true, it fell as a thunderbolt from the blue on the Arab population of Palestine, who saw in it death to their political and economic existence. Besides it was in direct contradiction to previous British declarations."

Next, the pamphlet recalls Lord Allenby's proclamation in October, 1918, when he "solemnly assured the people of Palestine that nothing would be decided about their future status without their wishes being first consulted." Arab confidence was restored, we are told, but this confidence "had another shock when the Military Administration in Palestine was replaced by a civil Administration and a Jew and Zionist in the person of Sir Herbert Samuel was sent out as High Commissioner. The Arabs now lost faith in the sincerity of British promises. Nothing would now restore their faith in the British except a strict carrying out of promises made to them in an open and manly manner." Nor were the Arabs' fears allayed (the pamphlet reports) when "they learnt from Zionist sources that, in its first inception, the Balfour declaration was drawn up by Zionists, and that the High Commissioner, who is supposed to be His Majesty's representative, had in fact been nominated by Zionists, and was working for their ends." In support of this a reference is made to the Zionists' Political Report No. 1, and to Zionist declarations at the Carlsbad Conference. In order to show that the Arabs have good grounds for their fears, quotations are given of statements by Dr. Weizmann and Dr. Eder (acting chairman of the Zionist Commission in Jerusalem). Dr. Weizmann's own words as found in the Political Report No. 1 of the Carlsbad Congress were: "I declare that by a Jewish National Home we meant the creation in Palestine of such conditions as should enable us to establish between 50,000 and 60,000 Jews per annum there, and to settle them on the land. Further that the conditions should be such that we should be allowed to develop our institutions, our schools, and the Hebrew language—that there should ultimately be such conditions that Palestine should be just as Jewish as America is American and England is English. In the opinion of Dr. Eder, as mentioned in the reports of the Commission of Inquiry on the disturbance in May, 1921, there can only be one National Home in Palestine, and that a Jewish one, and no equality in the partnership between Jews and Arabs, but a Jewish predominance as soon as the numbers of that race are sufficiently increased." And Mr. Sidebotham is quoted as saying: "It is desired to encourage Jewish immigration by every means, and at the same time to discourage the immigration of Arabs." The Arab faith in the word of an Englishman was shaken, but hope still lived. The Delegation was "duly elected by the Congress of 96 members, who in their turn had been elected by the Moslem and Christian Leagues all over the country. The League, consisting of men who enjoy the confidence of all classes of the population whom they represent, raised funds to meet the Delegation's expenses. It is thus seen that the Delegation is truly representative of all the Arab inhabitants of the country, who compose 93 per cent. of the total population. The nation's hopes are centred in this Delegation, and in the message of goodwill, which, it was believed, it could send out to its people from the British Government and from the British public. Unfortunately, however, up to the present, this word is not forthcoming..... matters to-day are still where they were months ago." An official interpretation of the Balfour Declaration has been asked for, but it is not forthcoming. Mr. Balfour himself declines to be drawn on the subject; and the Arabs are driven to believe that the Zionist representatives are right. The Arab used to live at peace with his Jewish neighbours before the war; and the existence of the Jewish colonies "is incontrovertible evidence of the toleration of Arabs towards their Jewish guests..... Never were there any riots in Palestine before the war; never was there any hatred shown to the Jew. Things might have gone on in this fashion and all would have been well." But the Balfour Declaration has led the Zionists to aim at the political and economic domination of the Arab, and as he can bear no political domination by the foreigner, trouble began. The pamphlet reminds us that Mr. Churchill, in the House of Commons, stated it as his opinion that "the only cause of unrest in Palestine arose from the Zionist movement, and from our promises and pledges in regard to it." The Arab is not so bad as he is painted by the Zionists; had he been a brute he would have attacked the Jews when they were less numerous in the country. "The Arabs of Palestine are not Anti-Semitic. As a matter of fact they are more tolerant of the Jew than the Christian peoples of the West have been. What the Arab will not tolerate is the political Zionist, the Zionist who has come into his country with the idea of dominating him and becoming his master." The concluding paragraphs of the pamphlet give the Arab demands.—"The Arab people of Palestine ask: First, that a National Government be created that shall be responsible to a Parliament elected by those inhabitants of Palestine who lived there before the war, namely, Moslems, Christians, and Jews. Second, the abolition of the present policy in Palestine; and the regulation of immigration to be controlled by this National Government, which is the best judge of the capacity of the country to support newcomers. Third, the Holy Places for all religions to be left to the entire control of their present guardians, and that neither the National Parliament nor any other authority be allowed to effect any changes therein. Four, that a local Gendarmerie be created for policing purposes, the expenses of this body to be met by the Palestine Government. This would save the British taxpayer the huge amounts he is now spending on the country. "Let Parliament send out a Commission to Palestine to examine into the question and report. The Arab is a friend of England and has ever been loyal to, and trustful of, her. Why should England now lose this friendship and gain the dislike of the whole Arab world, both Moslem and Christian, by this unwise and unjust policy? Why should the British politician allow seeds of trouble and contention to be sown in a country that has always been peaceful and quiet? This should never be allowed. The Arabs call upon every true Englishman to use his influence and power to stop it."

## NAVAL MOVEMENTS.

The light cruiser Cardiff, Captain L. F. Maitland-Kirwan, flagship of Rear-Admiral Sir Reginald Tyrwhitt, which recently conveyed ex-King Charles of Hapsburg and his consort from Galatz to Madeira, has returned to Gibraltar, and is to be taken into dockyard hands there for a refit on December 1 (to-day).

The battleship King George V., Captain B. S. Thesiger, C.B., C.M.G., and the light cruiser Centaur, Captain W. F. French, C.M.G., have arrived at Malta from Constantinople.

The hospital ship Berbice, A. H. Hardy, master, which arrived at Devonport from the Mediterranean on November 14, is ordered to leave again on Monday for her station. She will call at Gibraltar, and arrive at Malta on December 7.

On November 13, a number of political associations in Athens celebrated the first anniversary of the downfall of M. Venizelos and the restoration of King Constantine to the Throne.

Ten policemen and four rioters were injured in a riot which occurred last week in consequence of an attempt to run tramcars in Calcutta, where there is a strike of tramway employees.

The Hanoi newspaper *France-Indo-Chine* announces the death of Mingoon Ming, the former Crown Prince of Burmah, at Saigon, whither he fled on the overthrow of King Thebaw by the British in 1885.

## NOTES AND NEWS.

Devonshire Square.
E.C. 2.

### Sir Adam Block's Report.

The special report of Sir Adam Block on the Ottoman Public Debt, a summary of which will be found in another column, is naturally a far from encouraging document, as for many months past conditions in Turkey have gone from bad to worse. The Treaty of Sèvres has still to be ratified, and Sir Adam warns bondholders that, until that takes place, they should not count on any permanent improvement in the revenues assigned to the loans. He further points out that as long as the Greco-Turkish conflict continues there is little hope of the encashment of any revenues in Anatolia, and, commenting on the effects of its prolongation, says that "the damage done is incalculable."

### Arrears of Bond Interest.

The Council in March last, it will be remembered, made a payment on account out of its funds in Europe of 1s. 3d. per coupon up to March, 1920, a similar percentage in francs being paid on the premiums and redemption value of Lottery Bonds drawn for redemption between December 1, 1914, and February 1, 1920. After deduction of these payments the balance due amounted £T7,524,183.18. At July 31, last the Council held for the service of the Debt £3,456,435, including amounts deposited in German and Austrian Banks, representing at the rate of exchange on September 1, £513,006. The payment of the arrears is dependent on the result of legal proceedings which have been instituted to obtain repayment in gold of the sums deposited in Germany during the war. If they are repaid in gold there will be more than sufficient to pay the arrears, but if not "the bond holders will have to be consulted with regard to some scheme for the funding of the unpaid balance of the coupons, after utilising the remaining funds in hand."

### Turkey's Financial Straits.

A little over a year ago the members of the Council of the Debt were invited to undertake the control of the finances of the Turkish Government. It was a thankless task, and made more difficult as the Provisional Financial Commission has strictly limited powers, and can only suggest and advise. The nature of the problem to be solved may be gathered from the fact that the ratio of receipts to expenditure is as 1 to 2½. Even granted that certain taxes are raised, Sir Adam states there is little prospect of receipts and expenditure balancing, unless a policy of economy in general is adopted so long as Constantinople is cut off from Anatolia. He expresses the hope that as soon as a sound and intelligent control over expenditure is established on the lines of the financial clauses of the Treaty of Sèvres the Allied Powers will recognise the necessity for granting Turkey a greater measure of fiscal independence.

### Bulgarian Reparations.

The postponement of the payment of reparations which is being so strongly urged in Bulgaria is likely to meet with much more sympathetic treatment on the part of the Allies now than would have been the case six months or a year ago when opinion had not yet inclined to the view that the relief from the burdens entailed by the war was an essential to economic recovery. Bulgaria's case is admittedly good, but the question of the length of postponement is one on which views are apparently likely to differ. A period of ten years was first advocated, but this, of course, would be far too long, and it seems probable that, if the Allies decide to meet Bulgaria's wishes, the duration of the postponement will be from three to five years.

### Sudan Plantations.

In his speech at the general meeting of the Sudan Plantations Syndicate Mr. F. Eckstein pointed out that besides the effect of the fall in the price of cotton the company had suffered from considerable mishaps to its crop. At Zeidab there was a bad attack of bollworm; at Tayiba abnormal rains necessitated repeated resowing, while at Barakat there would have been a very fine crop but for a shortage of water due to a breakdown in the pumping station at the critical time. For the present season it is satisfactory to learn that the reports from all three stations are very promising. At the company's new station, Hosh, 6,040 feddans are under cotton, which Mr. Eckstein described as record work, and of this crop too the reports are very good, so that, given a reasonable price for cotton, the outlook for the company would appear to be excellent.

### The P. and O. Report.

Though no bonus is to be paid this year on the Deferred Stock of the Peninsular and Oriental Steam Navigation Company the report shows that there was only a comparatively slight decrease in the net earnings for the twelve months ended September 30. The net profit amounted to £571,466 as compared with £657,377, and with the carry forward the total is £683,405 as against £772,607. Of this total dividends absorb £583,100, and the carry forward is £100,305 as compared with £111,938. It is stated that during the first half year the steamers were able to do something more than cover expenses, but recent voyages have resulted in serious losses, hence the decision of the directors not to recommend a bonus. When operating costs fall to something approaching the normal and there is a revival of trade, "it is hoped that there may again be a fair margin of profit for the company."

REPORTS FROM OUR OWN CORRESPONDENTS.

## GREECE.

*Athens, November 12.*

**Commercial Convention with Austria.**

Despite the interchange of views which has been taking place since October of last year between Greece and Austria with a view to the conclusion of a commercial treaty the question is still in suspense, the work of preparing the clauses of the treaty not having yet been determined. According to information received from the Ministry for Foreign Affairs, the Austrian Government has again approached the Greek Legation at Vienna with a view to expediting the signing of the convention. It is understood that documents have already been exchanged between the two competent Ministries, discussing details of a provisional understanding pending the ratification of the convention. The determination of the clauses of a convention which would remain in force for some years has been considered impossible until the new Greek Customs duties have been definitely fixed.

**Decreased Imports.**

From statistics received at the Ministry of Finance regarding the proceeds of the new additional import duties, as well as from the reports of the various Customs authorities, it appears that imports for the past three months have shown a considerable decline as compared with those of the corresponding period in 1920. In consequence the increased import duties imposed for the quarter in accordance with the new tariff have been without effect.

## BULGARIA.

*Sofia, November 21.*

**External Loans.**

In the course of an interview which M. Tourlakoff, the Minister of Finance, accorded me on November 15, the Minister stated that Bulgaria would not definitely accept any foreign loan offers until the internal 6 per cent. loan was floated. This internal loan was to have been floated last month, but was postponed for three months at the request of the banks, who pointed out that it would be almost impossible to raise a loan under the existing conditions. M. Tourlakoff went on to state that in addition to the loans offered to Bulgaria by the Franco-Belgian group and by Messrs. Balfour, Beatty and Co., there were two offers from America, but he lacked details of their proposals. The 200 million francs loan of the Franco-Belgian group is now divided up into four equal parts, the proposal being that 50 million francs should come from France, Belgium, Italy, and England respectively.

Messrs. Balfour, Beatty have been requested by the Bulgarian Government to increase their loan from two to four million pounds, but no reply has yet been received. Although there is as yet no positive news to this effect, it would appear very probable that the Franco-Belgian group and Messrs. Balfour, Beatty may come to some joint arrangement. As the former's loan is now apparently to be drawn from four countries, the question of rivalry will not enter so much into the matter. The object of both loans is the same, namely to enable the Bulgarian Government to construct new railways. It is understood that negotiations are now taking place in London regarding the matter, and some kind of combination is considered likely to take place.

## YUGOSLAVIA.

*Zagreb, November 16.*

**Loan Rumours.**

People are sceptical of the rumoured success of Dr. Kumanudi's negotiations for a large loan in London, and the reported conditions are regarded as being so onerous, that it is hoped the rumours are unfounded. It is said that much better terms are forthcoming from Belgium, but only extreme optimists believe that.

**The Dinar.**

The depreciation of the dinar continues to cause anxiety. After coming down to half the value that it had stood at for about a year, it has started a series of violent fluctuations, which are, if possible, more disconcerting than the regular fall. The causes, of course, are varied and complex. One report states that the Government sent delegates to Zurich to buy up all the dinars on the market, for the key of the situation is held to be in that city; they succeeded in finding only a million, which they absorbed, but still the slump continued. So speculation at Zurich was obviously not the only cause. Other and deeper causes are at work. The main factors are the Budget deficit, the flooding of the country with uncovered paper money, the small export trade and lack of confidence in the political stability of the country. The estimated Budget deficit for 1922 is put at about two milliards; to reduce this means rigid economy ine xpenditure, a consummation more to be wished than expected. As to the note circulation, there are about four and a half milliards of dinars in circulation, of which about four and a quarter millions are directly on the State account,and uncovered. As a result of the last deficit the treasury was depleted, so the Government called upon the National Bank, which promptly printed off more notes, of course without cover. This explains the appearance in circulation of a large number of brand new specimens of the pretty blue pre-war Serbian 100 dinar notes, which are infinitely superior in appearance to the dinar-kroner paper. As to exports, there can be no question about the natural resources of the country, which produces far more than it can consume, but what with the transport difficulties and the strangling regulations and interference, exporters never know whether they are on their heads or their heels. The trouble is the vicious circle. The authorities cannot afford to be economical; they are compelled to be penny wise and pound foolish by force of circumstances; they cannot improve communications without great expenditure, and this they cannot do without a loan abroad. They cannot raise a loan until confidence in the solidity of the state is increased in western Europe and America. However in the apotheosis of Karl the main cause of political anxiety is removed, allowing demobilisation to take place, so that everybody is pleased. Perhaps this is the reason that the dinar has improved by almost fifty per cent. in a week.

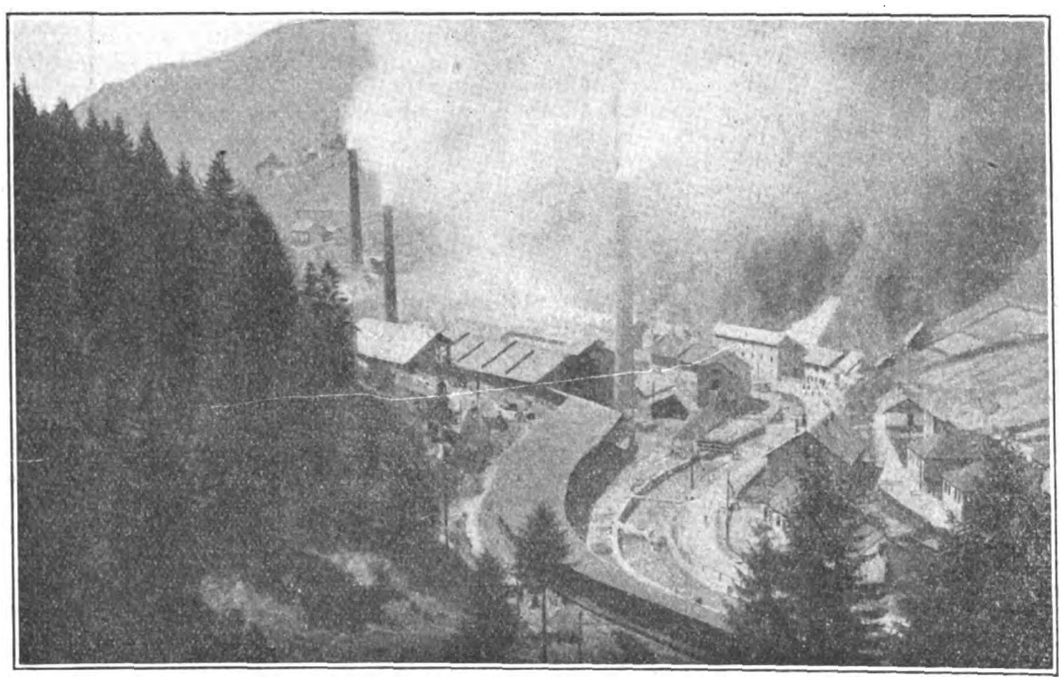
## YUGOSLAVIA'S MINERAL RESOURCES.

### Extensive coal deposits.

Very little has hitherto been published with regard to the mineral deposits of Yugoslavia, but that deficiency has now been good by the comprehensive survey of Mr. D. Alexander Wray, of the Geological Survey of Great Britain, who visited the country as a member of the British Economic Mission, which was despatched in 1919 to investigate the position there with a view to rendering assistance through British industrial and commercial sources, and whose report has recently been issued by the Department of Overseas Trade. The report, which is a model of its kind, and reflects the greatest credit on its author, will surprise those who have until now had only a limited knowledge of the mineral resources of the Near East. It makes it clear that there are great potentialities in Yugoslavia, given favourable conditions for development, the most important of which is undoubtedly the provision of adequate capital.

The report is divided into three sections. The first and introductory part deals with the development of the mining industry in the states now included in Yugoslavia, its organisation, the position during the war, these years, however, being quite exceptional.

It is obvious that the development of Yugoslavia's mining industry must depend very largely on the facilities for trade. On this subject the view is expressed by Mr. Wray that "the difficult external communications of the State must act to the detriment of the future development of the mineral and natural wealth of the country." The industry has been handicapped especially in Serbia, Serbian Macedonia, and Montenegro, he points out, by inadequate means of internal communication. Slovenia, Croatia, and Slavonia, have excellent railways and main roads, to say nothing of river transport, but Bosnia and Herzegovina have only narrow gauge railways. The construction of the projected railways in Serbia and Serbian Macedonia would naturally make an enormous difference to the position. "Of these," says Mr. Wray, "the Valyevo-Zavlaka-Loznitsa branch should lead to the development of an important mining region round Zavlaka and Krupanj, while the projected Nish-Prishtina-Adriatic railway, together with the proposed Kralyevo-Raska branch, should lead to the reopening of the mining districts in the Kapaonik Mountains. In Serbian Macedonia the projected Kumanovo-Stratsin-Kriva Palanka line passes close by the formerly large mining districts round Kratovo, Sultan Teperi and the Osogov Mountains."



Iron works and foundry, Krapuli near Vares, Central Bosnia.

the prospects for development as regards communications, the establishment of power stations, and generally the prospects for enterprise. In the second section geological conditions are dealt with, while the third comprises a detailed survey of the minerals.

It was only in the last century that the mining industry in Yugoslavia, with the exception of Slovenia and Croatia, assumed any great importance, though Mr. Wray points out that there are numerous traces in Serbia and Bosnia of extensive old workings belonging to Roman times and the Middle Ages. Considering the conditions, its development has been fairly rapid, judging by the statistics available for Serbia, Bosnia, and Herzegovina. Thus the output of coal and lignite in Serbia rose from 159,692 metric tons in 1900 to 313,001 in 1912, that of black copper from 250 metric tons in 1900 to 7,355 tons in 1912, and that of cement from 1,625 metric tons in 1900 to 24,948 in 1912. In the latter year the output of iron pyrites amounted to 46,189 metric tons. The rapid progress in the output of copper, it is pointed cut, was due to the growth of the Bor copper mines. In Bosnia and Herzegovina the output of coal and lignite rose from 394,576 metric tons to 841,140 in 1913, and to 973,215 in 1917. In 1900 the output of iron ore was 133,454 metric tons. It rose to 270,131 for 1912, and to 406,437 for 1917, both

The question of power is another problem to be faced. Mr. Wray is of the opinion that central hydro-electric power stations, similar to those established in Slovenia and Dalmatia, might be installed in connection with the mining industry to great advantage, and suggests that the extensive lignite deposits of Slovenia, Bosnia, Croatia, and Northern Serbia, may prove a factor that will assist in the solution of this and other allied problems. "These fuels, though low grade, and containing, when first raised, 50 per cent. of moisture, have a heating power of 2,500 calories; freight rates, however, are excessively high, and, moreover, they do not stand transport well. Central power stations may here be considered with advantage, as the deposits are large, and the seams frequently very thick. They can also be very cheaply worked out, as no deep mining is required, and no pumping."

The third section of the report commences with a survey of the coal resources of Yugoslavia. Mr. Wray points out that true stone coal does not exist in any large quantity, and that practically the whole of the coals mined are either brown coals of Mesozoic or lignites of Tertiary age.

Of the constituent parts of the new State Bosnia and Herzegovina have the greatest coal reserves, it being estimated that the probable reserves amount to

Digitized by Google

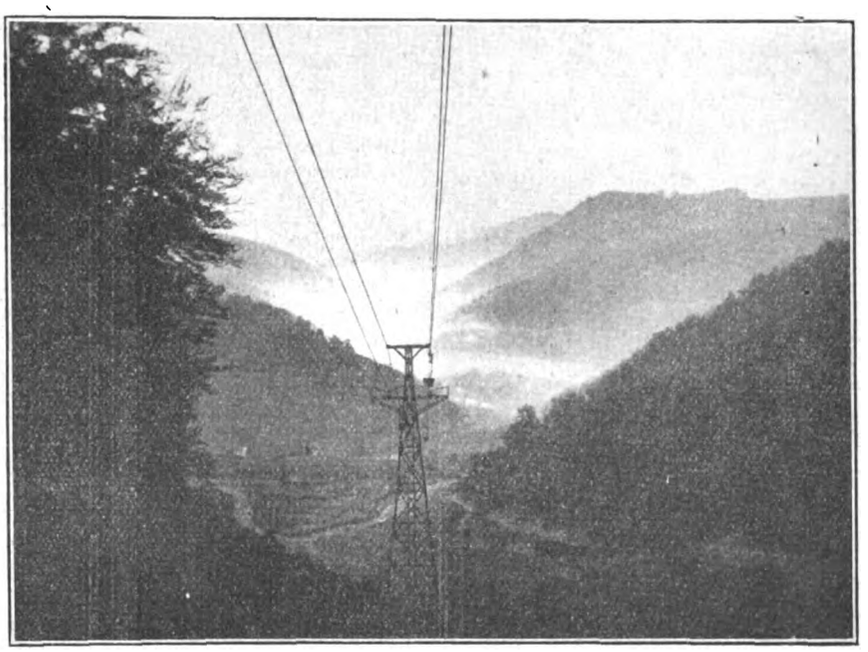
1,700,000,000 metric tons, and the possible reserves in fields not yet completely surveyed to 1,976,300,000 metric tons. Next comes Slovenia with 123,600,000 and 91,300,000 metric tons, while Serbia itself has probable reserves amounting to 59,700,000 metric tons and possible reserves estimated at 192,550,000 metric tons. The total probable coal reserves of the state are put at 1,900,000,000 metric tons, to which has to be added possible reserves of approximately 2,364,000,000 metric tons.

As regards the quality of the coals Mr. Wray says that they "answer sufficiently well for the railways and ordinary industrial purposes." For many factories higher grade coal is essential, and it is recorded that many works were at a standstill for lack of it. The bulk of the imported coal came from Austria and Germany before the war, and in view of conditions in this country it is to be presumed that supplies will probably be drawn from the same direction in the future.

The pre-war output of coal in Yugoslavia amounted to approximately three million metric tons, and as for 1919 the returns show an output of 2,500,000 metric tons it will be realised that despite the war it should not be difficult to place the industry on a much firmer footing than it has previously occupied. Almost the whole of the pre-war output was utilised locally, and this will no doubt continue to be the case in view of the gradual expansion of industries and the consequently increased demand for fuel.

The iron ore deposits of Yugoslavia are centred principally in Bosnia in the districts of Vares and Ljubia. Estimates of the reserves in Bosnia have differed considerably. Dr. F. Katzer, the Government Geologist, basing his estimate on the deposits that have been worked, put the total reserves at twenty-two million metric tons, three and a half being siderites, fifteen limonites, three hematites, and a half magnetites. On the other hand Dr. Nottmeyer in 1910 estimated the potential reserves to amount to almost five times that total in the district of Vares alone. "While this estimate" says Mr. Wray "may be unduly optimistic it is probable that if the total untouched ores of Bosnia are included in Dr. Katzer's estimate, the total reserve tonnage may safely be computed at thirty to forty million metric tons." Outside Bosnia mining has been carried out on a small scale in Slovenia and Croatia. Iron ore occurs in Serbia, Serbian Macedonia, and Montenegro, in many regions, but with the exception of the Majdanpek mines in Serbia are of small importance. In Serbian Macedonia chief hopes would appear to centre round the Babuna mines, between Veles and Prilep, which were largely worked by the enemy, and of which little has been hitherto known.

(To be concluded.)



**Aerial ropeway; and Majdanpek Valley, Northern Serbia.**

The receipts of the Egyptian Delta Light Railways for the week ended October 31, amounted to £E15,248.

*The Photographs on this and the next page are reproduced from "The Geology and Mineral Resources of the Serb-Croat-Slovene State, being the report of the Geologist attached to the British Economic Mission to Serbia," by kind permission of the Controller of H. M. Stationery Office*

## THE SILK INDUSTRY IN CYPRUS.

(*From A Correspondent.*)

There has been some talk of a revival, or expansion, of the silk industry, and native opinion in parts of the island has been stimulated by the praiseworthy efforts of the Agricultural Department in late years to encourage it, and to explain the great opportunities that are being lost. Sericulture might be largely and profitably developed with no very great effort within a few years were it not for the cloud which hangs over every branch of agriculture, and which is often attributed to apathy and ignorance of the peasantry. It is not, however, so much that Cypriots are to be accused of idleness, for they work industriously enough, in spite of the climate and often of a trying lack of water. But it is always along old grooves, and much more might be done if there were more of a driving force backed by a modicum of financial aid from the powers that be. Much might have been done since, about 26 years ago, Mr. P. Gennadius, the first Director of Agriculture, clearly explained what was needed. It was to Mr. Gennadius that was due the revival of the silk industry in Broussa, after the havoc wrought by the disease *pebrine*, which attacked the silk-worm in France in 1845, and then spread through Europe to Asia. It was M. Pasteur who found the remedy. All acquainted with the Near East have known the beautiful silk fabrics of Broussa, that "important centre of the silk trade of the East," which find their way to Cairo, Smyrna, and many other bazaars. Had fortune favoured the island instead of yielding it a prey to succeeding periods of maladministration, sericulture would have speedily progressed and rivalled that of some other countries. It has been long established in the island. When in the 6th Century A.D. the silk-worm was introduced from China into the Byzantine Empire, it soon found its way through Asia Minor to Cyprus, where climatic and other conditions are highly favourable. It is easily acclimatised, and in process of time a Cypriot species was developed. The Cyprus cocoon, which ranges in colour from white to bright golden orange, acquired a reputation of its own. Very pretty silk goods, some of very pleasing dyes, are made and sold in the bazaars of Nicosia, for dresses, blouses, skirts, scarfs, handkerchiefs, and other purposes.

It is true that a good deal has been done to prevent importation of bad eggs from France and elsewhere. But had the directions of Mr. Gennadius been fully followed Cyprus would have produced sufficient eggs of good quality, not only for local use, but also for exportation to other countries. As it is, the quantity produced is negligible, and large quantities of French eggs are imported. A largely increased cultivation of the mulberry tree should of course be one of the benefits which would be derived from increased irrigation, to which the study devoted to this difficult problem this year may, it is hoped in some quarters, lead. All this however presupposes also a more energetic and expert guidance in the development of this valuable and arrested industry. It is capable, as regard winding and ma acture, of very great improvements.

H.M. Representative at Belgrade announces that the surcharge levied in the Serb-Croat-Slovene State, when Customs duties are paid in paper or silver, has been increased from 300 to 400 per cent. as from November 10.

## TURKEY'S ECONOMIC POSITION.

### A Serious Outlook.

A special report by Sir Adam Block, representative of the British and Dutch bondholders on the Ottoman Public Debt, has just been issued.

Sir Adam Block points out that until the Treaty of Sèvres is ratified bondholders should not count on any permanent improvement in the revenues assigned to the loans, and further that as long as the Greco-Turkish war goes on there is small hope of the Council being able to encash any revenues in Anatolia. Of the effects of this war he says :—" The loss and destruction of life and property caused by the prolongation of the war in Anatolia are deplorable, and must have far-reaching effects. The damage done is incalculable. Whole areas have been devastated, the resources of the country are wasted, and the population ruined. The bondholders are, therefore, deeply interested in the pacification of what is left of Turkey. Without peace at home and peace abroad, any policy of reconstruction or of reparation is out of the question. Whilst most of the other belligerent Powers of Europe have, at any rate, had a respite from hostilities, and have more or less profited from their opportunities for repairing the destruction and loss incurred in the war, Turkey has drifted from bad to worse. Three years have now elapsed since the Armistice, and at the moment of writing it is difficult to prophesy the date when a return to normal conditions will become possible."

For 1919-20 the gross receipts amounted to £T11,782,952.68, and the net receipts to £T7,766,838.20, there being an increase in the gross receipts of 72.51 per cent. due for the most part to the revival of trade after the Armistice. For 1920-21 only approximate figures are available, the estimated total being £T11,000,000. For the current year Sir Adam estimates the gross receipts for the first six months at £T3,376,930, a considerable decrease on the figures of the previous year.

As regards the coupons in arrears the funds at the Council's disposal in Europe enabled it to make a payment on account of 1s. 3d. per coupon up to March, 1920, inclusive. A similar percentage in francs was paid on the premiums and redemption value of Lottery Bonds draws for redemption between December 1, 1914, and February 1, 1920. The balance due on March 1, 1921, after deducting the above payments, amounted to £T7,524,183.18. On July 31 the Council had the following sums in hand for the service of the Unified Debt Coupons and the Turkish Lottery Bonds:—1, London, £268,580; Paris, 60,940 francs at 47.57, £1,281, £T (gold), 51,378, £58,862; Rome, 401,719 Lire at 84.75, £4,740; Constantinople, the sum of £T14, 746,308, equal at the rate of exchange of September 1, to £2,609,966, total £2,943,429; 2. The amounts deposited in German and Austrian banks equal at pre-war exchange rates to £8,312,703, and at the rates obtaining on September 1, to £513,006, making the general total £3,456,435. As foreshadowed in Sir Adam's last report measures have been taken with a view to obtaining from Germany repayment in gold of the funds deposited there during the war. " Until the result of these legal proceedings is known," says Sir Adam " it is impossible to state how the balance of the unpaid coupons of 1915-16, 1916-17, 1917-18, 1918-19, 1919-20, and 1920-21 is to be provided for. If Germany repays in gold the sums deposited in gold there will be more than sufficient to pay the coupons; if not the provision will be insufficient, and the bondholders will have to be consulted with regard to some scheme for the funding of the unpaid balance of the coupons, after utilising the remaining funds in hand."

In September of last year the members of the Council of the Debt were requested by the British, French, and Italian High Commissioners in Constantinople to undertake the control of the finances of the Government in Constantinople in order if possible to restore the equilibrium of the Budget and to enable the Government to carry on the administration. By the sale of certain material and with the aid of several windfalls the Government, Sir Adam points out, has been enabled to pay its way to the end of June, 1921, whilst funds are regularly provided for certain services. The question of increasing certain taxes is being considered, but, says Sir Adam, " the question bristles with difficulties, and, unless at the same time the Turkish Government follows the example of every other European state and agrees to reduce the number of its personnel, civil and military, and to adopt a policy of economy in general, there is little prospect of arriving at a balance between receipts and expenditure as long as Constantinople is cut off from Anatolia." The position is roughly that while the receipts amount to £T1,000,000 the expenditure totals £T2,500,000.

" If the Provisional Financial Commission has not succeeded in its somewhat ungrateful and difficult task " says Sir Adam, "it is that its powers are strictly limited. It can only suggest and advise. All hope of permanent improvement in the general financial situation must be deferred until a Financial Commission, on the lines of that provided for in the financial clauses of the Treaty of Sèvres, is set up and loyally accepted by the Turkish Government." He adds that it is to be hoped that as soon as control on these lines is established the Allied Powers will grant Turkey greater fiscal independence, and the right to establish an equal distribution of taxation.

" This," says Sir Adam in conclusion "is not written in the sole interests of the bondholders. The financial and economic rehabilitation of this country is very essential to the general reconstruction of the world. A bankrupt state is incapable of internal economic reconstruction. Turkey cannot, therefore, without reform in its finances take its proper share in the world's production. Turkey is a food-producing country, and unless the finances of the State are on a sound basis, Europe will suffer from the loss, not only of its valuable products, but of a market for the produce of industry and manufacture, wherein Great Britain has held, hitherto, the greatest share."

## PALESTINE'S SOAP INDUSTRY.

Olive-oil soap is the product of the most importance of the few industries which exist in Palestine (says the American Consul at Jerusalem, Mr. A. E. Southard). The centre of the Palestine soap industry is at Nablus, in the Province of Samaria, 40 miles north of Jerusalem. There are about 30 small factories at Nablus and all are engaged in making pure olive-oil soap. There are almost as many factories at Jaffa (the port of Jerusalem), but the production is not as great as that of the Nablus factories, is not exclusively of the pure olive-oil variety, and does not appear to have the reputation of the Nablus soap. Small factories are found in Jerusalem and elsewhere, but Nablus and Jaffa are the important centres. Nablus is also the centre of an important olive-oil district.

Exact figures as to the total quantity of soap produced in Palestine are not available. An estimate of a production of 8,000 tons annually is probably liberal. The Nablus soap makers' estimate is that they produce about 4,000 tons in a year when olive oil is obtainable in sufficient quantities. The value of the soap produced in Palestine varies with business conditions, but the rottle (6,349 lb.) has at present an average wholesale value of 20 Egyptian piastres. The minor share of the total soap production, which contains fats other than olive oil, sells a little cheaper.

Considerably more than half the total soap production of Palestine finds a market in Palestine, Syria, and the trans-Jordan regions, and may be considered local trade. Palestine soap finds its principal export market in Egypt. Syria, Palestine, the trans-Jordan region, and Egypt practically consume the entire soap production of this country, and there are no important quantities exported to other markets. Generally no Palestine soap goes to the United States, but there is a small factory at Haifa which caters to a limited but established American demand for pure olive-oil soap. The quantity of this soap exported is comparatively unimportant.

# Near East Markets.

## LONDON PRODUCE REPORT.

### Prices Unsettled.

Sugar.—Home refined has been in fair request at unchanged rates. West Indian crystallized is the same at 38s. to 41s., while Czecho-Slovakian is 6d. down at 20s. White Java is the same at 47s.

Coffee.—The market has been quiet. Costa Rica is unchanged at 130s. while Indian is 2s. down at 110s. Nairobi at 105s. is unaltered. Futures are.—December, 47s. 9d.; March, 48s. 9d.; May, 49s.; July, 49s.; and September, 49s.

Oilseeds.—A steady tone has prevailed. Indian linseed is the same at 16s. 9d. while La Plata has gained 1s. at 16s. Rapeseed is higher with Toria 1s. 6d. up at 18s. 6d., and brown Cawnpore 3d. up at 17s. 9d. Cottonseed is unsteady. Indian has gained 3d. at 9s. 3d., while Sakellaridis is the same at 11s.; but Egyptian black has shed 1s. 3d. at 11s. 6d.

Seed Oils.—Prices are higher. Linseed has been done at 27s. 6d., November—December, 27s. 6d., and January—April, 27s.; increases of 1s. in each case. Rape oil is unchanged with the crude variety at 48s., and refined at 53s. Cotton oil is lower with refined common edible 7s. down at 43s., and Egyptian crude 2s. down at 36s. Deodorised is unchanged at 50s. Turpentine is 2s. 3d. up at 71s.

Oilcakes.—Business has been brisk, and prices in most cases are higher. Linseed cake is 10s. up at 270s., while cottonseed cake has advanced 30s. to 200s. Arachis cake has shed 10s. at 220s., but palm kernal has gained 40s. at 160s.

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., report as follows for the week ended November 12:—

Sultanas.—The total estimated arrivals to date amount to 148,940 bags as compared with 83,450 bags for the corresponding period of last year. The total estimated sales are 138,940 bags as against 73,450 bags for last year, and the estimated stock unsold amounts to 10,000 bags as against the same amount for 1920.

Figs.—The total estimated arrivals to-date amount to 169,000 loads as compared with 184,000 loads last year. The total estimated sales amount to 169,000 loads as against 168,000 loads for 1920.

Shipments.—The s.s. City of Smyrna and s.s. Luque, the former for London, and the latter for Bristol, Liverpool and Glasgow, are now loading and sailing about November 16.

Markets.—Sultanas are very firm, prices moving upwards, and an advance of about 10s. to 11s. per cwt. is reflected on the past fortnight. Although remaining stocks are sufficient for all requirements into next summer, both farmers and dealers, apprehensive of further depreciation in Turkish currency, are reluctant to part with their holdings, and can only be induced to sell with difficulty and at continually advancing rates. Figs are exhausted and business is practically over for the year. Exchanges have ruled fairly steady during the week at between 735-745.

## CURRENT PRICES.

*General Produce.*—Bacon: (Continental), 133s. cwt.; (Canadian), 105s. cwt.; (American), 92s. 6d. cwt.; butter: (Danish), 251s. cwt.; (Australian), 160s. cwt.; (New Zealand), 192s. cwt.; cheese: (Canadian), 104s. cwt.; (New Zealand), 93s. cwt.; lard 73s. cwt.; eggs: (Danish), 40s. 6d. per 120; (Styrian), 28s. 6d. per 120; chillies, 167s. 6d. cwt.; cloves (Zanzibar), 1s. 7¼d. lb.; cocoa (Ceylon, good to fine), 97s. 6d. cwt.; coffee: (Costa Rica), 152s. 6d. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior), 60s. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2¼d. lb.; raisins (Valencias), 145s. cwt.; sultanas (Smyrna), 125s. cwt.; currants (Vostizza), 80s. cwt.; currants (Amalias), 70s. cwt.; sugar: (Tate's cubes), 55s. 9d. cwt.; (Lyle's granulated), 49s. 10½d. cwt.; (Mauritius crystals), 43s. 3d. cwt.; (West India crystallized), 40s. 6d. cwt.; (centrifugal), 16s. 3d. cwt.; tapioca (fair Singapore), 1½d. lb.; sago (small pearl), 26s. 6d. cwt.; sago flour, 17s. 3d. cwt.; rice: (Rangoon, No. 2); 18s. 9d. cwt.; (bran, Rangoon), £6 17s. 6d. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 2½d. lb.; tea: Indian (common to good common), 1s. lb.; (medium to good), 1s. 6½d. lb.; (fine to finest), 2s. 8½d. lb.; Ceylon (common to good common), 1s. ½d.; (medium to good), 1s. 7d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 48s. 6d. qr.; (La Plata, ex ship), 82s. qr.; (Australian), 57s. 3d. qr.; barley (malting), 65s. qr.; barley (feeding), 41s. qr.; oats (English), 32s. 6d. qr.; oats (La Plata ex-ship), 25s. 4½d. qr.; (mixed American), 33s. qr.; maize (La Plata), 33s. 3d. qr.; flour, 45s. sack.

*Metals.*—Aluminium, £122 10s. ton; antimony (English Regulus), £36 10s. ton; bismuth, 7s. 6d. lb.; copper (standard), £66 11s. 3d. ton; copper (electro), £75 10s. ton; gold bars 103s. oz.; iron (No. 3 Cleveland), 110s. ton; hematite (mixed number), 125s. 9d. ton; galvanized sheets (24 G), £187 10s. ton; lead (soft foreign), £24 ton; manganese Poti, 1s. 1½d. unit; molybdenite, 40s. unit; nickel, £187 10s. ton; platinum, 382s. 6d. oz.; plumbago, £20 ton; quicksilver, £9 17s. 6d. bottle; silver bars, 39s. oz.; spelter (G.O.B.), £26 3s. 9d. ton; tin (standard), £158 17s. 6d ton; wolfram, 12s. 6d. unit; zinc sheets, £35 ton; tin plates (20 by 14), 21s. 6d. box.

*Chemicals.*—Acids: Boric, 66s. cwt.; oxalic, 9d. lb.; citric, 2s. 5d. lb.; tartaric, 1s. 4¾d. lb.; ammonia (sulphate), £14 17s. 6d. ton; arsenic (white powdered), £39 10s. ton; benzole (standard), 2s. 5¼d. gallon; bleaching powder (35 per cent.), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 120s. cwt.; Potassium: Bi-chromate, 8d. lb.; chlorate, 6¼d. lb.; caustic, £32 10s. ton; nitrate, £40 ton; permanganate, 1s. 1d. lb.; prussiate, yellow, 1s. 2¼d. lb.; sulphate (90 per cent.), £15 8s. ton; Sodium: Crystals, 140s. ton; bi-carbonate, £11 10s. ton; bi-chromate, 6¾d. lb.; alkali (58 per cent.), £8 13s. 9d. ton; chlorate, 4d. lb.; caustic (70 per cent.), £24 5s. ton; hyposulphite, £17 10s. ton; prussiate, 8¼d. lb.; nitrate, £14 16s. 3d. ton; glycerine (crude, 80 per cent.) £80 ton; glycerine (industrial, 1,260 per cent.), £110 ton; lemon oil, 3s. 2d. lb.; quinine, 4s. 0½d. oz.; red lead, £38 5s. ton; white dry lead, £41 5s. ton; white ground lead, £50 17s. 6d. ton; sulphate of copper, £29 10s. ton; sulphate of iron, 75s. ton.

*Hides and Skins.*—Ox and Heifer (first), 90 lbs. and up, 8¼d. lb.; 80 to 89 lbs., 8¼d. lb.; 70 to 79 lbs., 8¾d. lb.; 60 to 69 lbs., 7,3-8d. lb.; 59 lbs. and under, 6,3-8d. lb.; (second), 90 lbs. and up, 7,1-8d. lb.; 80 to 89 lbs., 7¼d. lb.; 70 to 79 lbs. 7¼d. lb.; 60 to 69 lbs., 5,1-8d. lb.; 59 lbs. and under, 5,1-8d. lb.; Cows (first), 60 lbs. and up, 6¼d. lb.; 59 lbs. and under, 6¼d. lb.; Bulls (first), 5,1-8d. lb.; (second), 4d. lb; Kips (first), 7¼d. lb.; (second), 6,1-8d. lb.; (third), 4d. lb.; Calcutta Market. Prices in rupees per 20 lb.:—Arsenic hides (cows), Agras, 9 to 12; Durbhangas, 6 to 7; Patnas, 4.8 to 5; Salted cows, 3 to 7. Arsenic hides (buffalo), 3 to 5.8. Skins: Calf, 8 to 10 per 20 lb.; goat, 250 to 280 per 100 pieces; Bombay Market:—Dressed buffs, 10 to 14 annas per lb.; dressed cows, 10 to 14 annas per lb.; goat and sheepskins, 1.4 to 1.12 rupees per lb.

*Miscellaneous.*—Cotton: (American), 10.41d. lb.; (Egyptian Sakel), 18.40d. lb.; Oilseeds: Linseed (La Plata), £14 12s. 6d. ton; rape (Toria), £16 7s. 6d. ton; palm kernals, £17 17s. 6d. ton. Oils: Linseed, £26 ton; olive (Levant), £77 10s. ton; palm, £36 7s. 6d. ton; rape (crude), £48 5s. ton; soya, £33 10s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £42 10s. ton; cotton (crude) £39 10s. ton; ground nut, £47 ton; Rubber: Plantation (No. 1 crepe), 10¼d. lb.; smoked sheet, 10¼d. lb.; fine hard Para, 1s. 2¼d. lb.

## ALEXANDRIA EXCHANGE.

*Supplied by G. L. Mortera, Alexandria and Cairo.*

Prices on November 11 were as follows:—Agricultural Bank of Egypt, £4¼; Alexandria Water Co., Ltd., £6,31-32; Anglo-American Nile Steam, £2½; Associated Cotton Ginners, £21-32; Banque d'Orient, Fr., 56½x; Behera Ord., £E 8,3-8; Brasseries d' Egypte, Fr., 75; Building Lands of Egypt, £23-32; Cassi di Sconto Priv. Fr., 100; Ciments d'Egypte Priv., Fr., 90; Ciments d'Egypte Div., Fr., 24; Comptoir Fin. et. Com. d'Egypte, £1,11-16; Consolidated Land, Pt., 5¼; Credit Foncier Fondateur, Fr. 850; Credit Foncier Act, Fr., 640; Credit Foncier, 1880 Oblig., Fr., 336; Crown Brewery Priv., Fr., 112; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 81½; Eaux du Caire Jouissance, Fr., 104; Egypt and Levant, S.S. Ord., 30s 1½d; Egyptian Delta Light Railways, £3,7-8; Filature National d'Egypte, £11; Immeubles d'Egypte Soc. an des., £5,11-32; Khedivial Mail S.S. Ord., 110s.; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi £4¼,; Kom Ombo Ste An Fondateur, £33 9-16 ex.; Land Bank of Egypt, Parts de Fond, £27; Lots Turc., Fr., 30½; Menzaleh Canal Navigation Pt., 270; Nungovich Hotels, £6,5-16; Ramleh Railways, £2,15-16; Salt and Soda, 32s.; Tram d'Alexandrié Priv., Fr., 45; Tram d'Alexandrié Div., Fr., 57½; Union Fonciere d'Egypte, £2,3-8; Egypt Hotels, £2 3-16; Urbaines et Rurales, £2,15-16.

H.M. Commercial Secretary at Constantinople reports that the exportation of the following articles from Turkey is now permitted without licence:—wood for building purposes; locally made bricks and tiles; starch; pekmez; compounds of quinine, and compressed aspirin.

Mr. P. Garelli, sub-manager of the Zagreb branch of the Banque Franco-Serbe, has been appointed manager of the London office, and Mr. F. E. J. Pow, previously manager of the foreign exchange department of the Société Générale, London, has been appointed assistant manager.

# Engineering Topics.

*By Our Engineering Representative.*

**Wire Rope Lubrication.**

The proper lubrication of wire ropes used in winding, ship, and other work is one of great importance now that the prime cost of wire ropes is so high. Wire ropes for ordinary commercial use are made up of a number of strands of iron or steel wire, twisted together, and laid over a hemp core in much the same way as a hemp or cotton rope is formed. Whenever such a rope is subject to strain, either by tension or by bending or passing over a pulley, these strands of wire have to move over and pass each other and back again, for perhaps an appreciable fraction of an inch ; in fact with ropes of large diameter the movement is far greater than anyone immersed in the subject would imagine.

Wire ropes will deteriorate with use but not with age if properly looked after. The life of a rope depends to a great extent, as has been pointed out, upon the character of the metal used, the construction of the rope, the diameter of the drums or pulleys on which it it is used, and to a very great extent upon how it is lubricated. A haulage rope should be considered as a piece of machinery having many wearing surfaces that should be thoroughly and efficiently lubricated, and the ideal lubricant is one that will penetrate to all the parts, and which will form an elastic coating on the exterior. A wire rope may be made and selected with the utmost care, but unless it is properly lubricated and protected from weather effects its life will be appreciably shortened. The conditions which affect the life of a rope, other than the actual mechanical strains and stresses, are friction which causes the strands to wear thin, contact with acid fumes, with water containing acids or salts in solution or with elements which produce corrosion and consequent brittleness of the strands. The higher the carbon content and the steel, the more susceptible are the wires to this corrosion. The lubricant used should penetrate between the wires, and should not harden on the outside. A lubricant that hardens becomes cracked when the rope is bent, and when it passes over pulleys, or drums, and these cracks, minute as they may be, allow moisture or acid fumes to penetrate to the centre and so cause internal corrosion. Further, the lubricant must be applied frequently in order that the wires may be kept well covered, and also to prevent the hemp core from drying. Each time the lubricant is applied the accumulated dirt must be cleaned away so that the fresh lubricant may penetrate to the parts where it is most required.

An efficient lubricant for use with wire ropes must possess the following practical characteristics. It must be absolutely free from acid, salt, chemical impurities, and water ; it must be of such a body as will remain soft and pliable under all atmospheric conditions, and it must not be subject to evaporation. It must be impervious to water, and must not tend to produce soap when bought into contact even with impure or alkaline water, and it must be unaffected by water heavily charged with chemicals such as exist in certain operating conditions, and must not decompose under the most severe service. Another point, and one which is frequently lost sight of, is that it must be able to penetrate or surround particles of dirt which may collect on the cable, as if it does not these will, through friction, cut into and wear away either the strands of the rope or the surface of the sheaves or drums. Another point to be borne in mind is that the lubricant should be of such a nature that it may be liquified to a consistency that will permit of a very thin film being applied.

One of the leading engineers who have specialised on this subject, Mr. G. R. Rowland, says that a long and careful investigation of the ropes used in all classes of service seems to indicate that no two rope manufacturers use the same grade of lubricant. An analysis of the materials most commonly used and recommended for this class of work shows that pitch, tar, talc, and graphite are used, with other filling materials, in very large proportions, this being no doubt for the purpose of making a heavy adhesive mixture. These substances, however, are of little or no real use as they have the effect of only partially protecting the external parts of the rope, and at low temperatures will crack and peel, permitting an attack to be made on the inner sides of the strands and the core. In some cases ordinary black mineral oil, or " waste oil" as it is called in the trade, is used. Apart from a temporary effect only, oils of this class are really worthless as rope lubricants as they will not cling to the outer surface, penetrate to the core, or resist the action of moisture or fumes. Where such oils are used frequent applications are necessary, and owing to their characteristics they afford no lubrication to the pitch of the sheaves, drums, and pulleys, and are thrown off or evaporate within a few hours after they are applied, thus leaving the rope at the mercy of the elements and of frictional wear. All of which goes to show that expert advice should be taken in this matter of lubrication, and that the old fashioned rough and ready methods of lubricating, which appeared to possess the elements of cheapness and simplicity of application may shorten the life of the rope on which they are used and thus prove exceedingly expensive in the long run.

**Carbonisation.**

Recently a good deal of attention has been devoted to the developments which have taken place in connection with what is known as the low temperature method of carbonisation. I have already dealt with this at length in these columns. and am firmly convinced that most if not all the difficulties in the way of its commercial application have been overcome.

I have just had brought to my notice another method of carbonisation which I have not seen in operation, but which seems to possess some interesting and novel features. It is the invention of Mr. H. Nielson, and differs initially from that already dealt with in that the retorts used are not fixed but slowly revolve during the heating process. The primary object of the invention is to obtain supplies of marketable smokeless fuel from waste coal, and consequently little attention is paid to either the quality of the gas or even to the exhaustive production of tar oil, ammonia liquor or other by-products. Internal carbonisation is effected by means of producer gas, this being a striking departure from most if not all of the other methods in use. Engineers will examine details of this process with interest, especially in view of the fact that carbonisation proceeds far more rapidly and economically with heat when directly applied. I hope in the near future to be able to give a full account of this new and promising method of low temperature carbonisation.

**Tunnel Ventilation.**

The efficient ventilation of long tunnels has been the subject of considerable attention on the part of railway engineers, and the problems presented appear to have been all more or less overcome. A new ventilating plant is being provided for the Severn tunnel, not that the existing plant has proved unsatisfactory, but merely because it is not large enough to cope with the recent increase in the traffic.

Opportunity has been taken to incorporate certain new features, and a fan considerably larger than most engineers would have expected is to be installed. It will be 27 feet in diameter and nine feet wide, and will operate at the comparatively high speed of 100 revolutions per minute. At this speed it will be able to supply about 800,000 cubic feet of air per minute, which should be ample for the purpose. A horizontal tandem compound condensing engine of about 800 indicated horse power will be used to drive the fan, the engine cylinders being 22 and 42 inches in diameter respectively, with a stroke of 30 inches. It is interesting to note that the new installation will be built and erected by the same firm that laid down the present installation nearly 35 years ago.

# Company Meetings.

## SUDAN PLANTATIONS SYNDICATE.

### BOARD'S FORWARD POLICY.

### Proposed further issue of capital.

The fourteenth ordinary general meeting of the Sudan Plantations Syndicate, Ltd., was held on November 23, at Winchester House, Old Broad-street, E.C., Mr. F. Eckstein (the Chairman of the company) presiding.

The Acting Secretary having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—In addressing you last year I ventured to sound a note of warning regarding our prospects for the coming year, and I asked you not to blame your board if our next balance-sheet was not quite so brilliant as that which I then had the good fortune to present to you. The reason why I made this statement was obvious, inasmuch as cotton prices were then unjustifiably high and, unfortunately, events during this year proved my warning to be only too true. Not only did the market for cotton come down with a run owing to stagnation of trade in Lancashire, but we also suffered from considerable mishaps with our crops, to which I will refer late. on.

**Sound Financial Position.**

As usual, I will deal first with our accounts, which are before you. The first four items on the debtor side of the balance-sheet—namely, share capital, reserves and share premium account—are practically unchanged. Creditors are considerably less than last year, and so is our profit. On the credit side you will find under general development a large increase, something like £120,000 for Gezira and the new Hag Abdulla pumping station, all due to new work. Further, buildings and furniture show an increase of £34,000, canalisation Gezira areas of £12,600, and agricultural implements and plant of £17,000; and there is a new item, light railways, £21,000. Cotton and other stocks figure at £335,000, and to this I shall refer more fully later on. Our securities and cash assets are naturally less than last year, the above-mentioned sums having been spent on the Gezira development scheme. Still, our financial position is sound, but we shall in all probability soon require further funds, and it is our intention to issue fairly soon a further 150,000 shares, and, as before, to offer these to you at a moderate premium.

The profit and loss account needs no explanation, but, subject to your approval, we have again set aside a bonus for our staff and £2,500 as an addition to our staff provident fund. Both these items I recommend warmly to your acceptance. From the directors' report you will have noticed that we are proposing to distribute a slightly higher dividend than we had actually earned up to the close of our books. Your board has no hesitation in recommending this proposal to you in view of our very considerable carry-forward.

**Unsold Cotton.**

This is all I think I need say under this heading, but the point I wish to emphasise is cotton unsold at the date of closing our books—namely, June 30, 1921. The amount of cotton we have had to deal with is the largest so far in our history. As not a single bale of our cotton had been sold at the time we had to close our books, we stocked it in our balance-sheet partly at cost prices and partly at the valuation we then had from our brokers. During the last few weeks we have, however, disposed of our entire Zeidab crop, as well as of a fair quantity of both the Tayiba and Barakat crops. In the sale of the Tokar cotton we are only making slow headway. The reason why we had to deal this year with so comparatively large an amount of cotton is that, during my stay in the Sudan in the early part of this year, I arranged to buy a good deal of the Tokar crop on joint account with the Sudan Government. I did this because I wished to help the Government to dispose of this crop, for which at that time there were not many buyers in the Sudan, and so to encourage the natives to continue growing cotton. As far as I can judge to-day, this transaction will give the two parties a fair return on their outlay and for the work done.

**Cotton Production.**

Turning now to our own stations, at Zeidab the crop promised to be excellent when I addressed you last year, and picking started at an unusually early date, but shortly after we suffered from a bad attack of bollworm, to the great detriment of the yield. The Sudan Government sent Captain Bedford, one of their entomologists, to study and to report on this plague, and we hope that the careful research he made may bear fruit in the future. This season we have 3,300 feddans under cotton, and my reports are that up to date we have picked something like 6,000 kantars and that the quality is above the average and satisfactory. Our total yield last year from our own tenants and our water tenants was 6,876 kantars; this year we expect a considerable increase.

At Tayiba we experienced quite abnormal rains, which necessitated repeated re-sowing. This made the cotton late, which always means an unsatisfactory crop. The yield was 5,117 kantars from 1,700 feddans. This year we have planted 1,698 feddans, and we hear that our present crop is looking well, with the exception of a small area which is rather late.

At Barakat we should have had a very fine crop indeed, but during the later stages an unfortunate breakdown in the pumping station—the bursting of a boiler—caused a serious shortage of water just when the plants most needed it. So here, again, we had to be satisfied with middling results—namely, 6,704 kantars from 2,011 feddans. For this year we have planted cotton on 2,100 feddans, and our latest news is very satisfactory.

At our Hag Abdulla pumping station the work has progressed rapidly, and we have given our new cotton station the name of Hosh. The completion of the installation of the pumps and engines on this station in readiness for the present season was from first to last a race against time in circumstances of great difficulty. You will be pleased to hear that we have now 6,040 feddans under cotton, which is really record work, and reflects the greatest credit on our resident staff. The latest reports we have of this new crop are likewise good. To sum up, all the four stations are showing up very well, but it is a little too early to form definite estimates.

**Gezira Plain Developments.**

Having dealt with our present stations, I feel sure you wish me to say something about the progress of the larger scheme, to which we are wedded through our agreement with the Sudan Government, and I think this is all the more necessary as there are, so I am told, all kinds of sinister rumours floating about.

Gentlemen, the truth is that the Blue Nile dam, which is to bring the water to the Gezira Plain, and which is being constructed by the Sudan Government, is costing more—in fact, a good deal more—money than the original estimates provided for, the chief cause being largely increased costs of material and higher wages, all due to the late war. The Sudan Government has to raise more money, and naturally looks to the British Government for help in this respect in some form or another, and negotiations are going on in this sense between the two Governments. Meanwhile, within the limits of the money at present available, the work at the dam is proceeding, and we hope that by next year considerable progress will have been made. Some millions have already been spent upon this dam, and in my humble opinion it is unthinkable that its completion should be interrupted and delayed.

We on our part are steadily pushing on with the work before us, and you will be interested to hear that, quite apart from the areas at Barakat and Tayiba, we have developed on the Gezira Plain a further 60,000 acres, and out of these 12,000 acres are fully canalised. In addition to this we have completed practically all the buildings required for the headquarters staff and a number of houses on the land at a cost of about £56,000. Besides this we have in the Sudan something like £50,000 worth of stores and building materials, which are available for further extension of our operations. All this will show you that our faith in our undertaking is as great as ever, and I am confident that our forward policy will bear corresponding fruit in time and give you entire satisfaction.

**Potentialities of the Sudan.**

My colleague, Brigadier-General Asquith, paid a visit to the Sudan in the latter part of last year and made a thorough inspection of our various interests, and I spent several months there early this year. I came away more impressed than ever with the great potentialities of the Sudan and with the unmistakeable and keen desire on the part of the Sudan Government to develop the country to its fullest extent in the best manner possible.

Digitized by Google

Among the countries where the British flag flies none ranks higher than the Sudan in its potentialities of wealth, in its record for efficient and economical administration, or as a field for the production of a high-class cotton. It appears to me to be the duty of the British Government to help the Sudan—a comparatively new country—to make itself self-supporting, and this can only be done by stimulating the production of cotton. You have there the right soil, a suitable climate, and a population which is purely agricultural and is quite ready and able to do the work under proper supervision. In all our experience there we have had good and middling crops, but we never had an absolute failure. Further, the population is growing at a rapid pace, as I have convinced myself during my journeyings through the Sudan this year.

May I just say, too, that the relationship of your syndicate with the Government in Khartoum and its officials in the Provinces is all that can be desired. Likewise, our relationship with our native tenants could not be better; they know they get absolutely fair, straightforward and sympathetic treatment, and they consequently trust us. I cannot illustrate this better than by telling you that when we wanted tenants for the new Hag Abdulla area we had applications from more than double the number we required.

Our staff, on whose efficiency we naturally depend a good deal, is perfectly loyal and devoted to its duties. It is invidious to mention names when all are efficient and do their work well, but I would like to give a special word of praise to Mr. Horne, our resident engineer at Hag Abdulla, for excellent work done under considerable difficulties. Our managing director, Mr. MacIntyre, is at his post in the Sudan and continues to render us the greatest possible help and assistance.

I now move:—"That the report of the directors and statement of accounts to the 30th June, 1921, now laid before the meeting, be and that the same are hereby received and adopted."

**Brig.General Asquith's Visit.**

Brig.-General Arthur M. Asquith, D.S.O.: Gentlemen, our Chairman has dealt clearly with the various aspects of the reports and accounts which are submitted for your approval. In seconding this resolution I propose to confine myself to certain parts of the ground which he has already covered. I served in the Sudan as a Civil Servant for five years, and am consequently conversant with the language, the natives and the officials. Returning last year after nine years' absence, I visited the company's plantations and the Blue Nile dam with a fresh eye, and I came away confirmed in my belief in the potentialities of the Gezira as a field for the production of high-class cotton and in the efficiency and economy with which your interests there are administered.

With regard to the potentialities of the Gezira Plain and the first 300,000 acres to be irrigated, you must imagine a plain 80 miles long by 20 or so broad—a strip of a plain of much greater extent—as flat and for most of the year as bare of vegetation as this table. The Blue Nile bounds it and the railway runs through it for the whole of its length. It is composed of black and reddish black earth, yards deep.

Going south from Khartoum in the train you come first to Tayiba; next 15 miles or so further south, to Barakat; then, 30 to 40 miles further south again to Hag Abdulla, or Hosh as it is now called. It is a very remarkable sight in this arid plain to come across the fresh green extensions of your plantations—an actual case of the "desert blossoming like the rose." Each of these plantations spaced out over the area to be irrigated from the dam when it is finished, forms a nucleus round which families of natives have grown up or are growing up with a knowledge of cotton and how to grow it. Your English staff who inspect and superintend and help them deservedly enjoy their full confidence and ours. Without these nuclei of trained cultivators and of trained British staff it would be impossible to keep pace with the great strides in the extension of areas under cotton which should follow upon the heels of the completion of the dam, and this was the factor uppermost in your directors' minds when they decided upon the installation of the big new pumping plant at Hosh.

**The Problem of Finance.**

Our Chairman has told you that the Sudan Government are negotiating for the further funds which they require to complete the dam, and with him I consider it quite unthinkable that the British Government should fail to help them. You will remember that the British Government guaranteed the interest upon the previous loan of £6,000,000, the greater part of which was earmarked for this dam. There seems to me to be compelling reasons why the British Government should continue to help in this matter to the utmost of their power. If they do I am convinced they will never have to act up to their previous guarantee. If they do not they very probably will have to act up to that guarantee at the expense of the taxpayer.

But in addition to this financial aspect there are political considerations which should weigh overwhelmingly, even if the dam in itself would not, as we firmly believe that it will, pay its way and show a profit. We hear much in these days of the desirability of developing in other countries such industries as are complementary to, and not competitive with, those of Great Britain. Here we have a perfect instance in a country where our flag flies of a complementary industry—a means of feeding the mills of Lancashire, which, in turn, will sell to the Sudan increasing quantities of their finished products. We hear also of unemployment here and of money spent, largely unproductively, in relief of it. Any interruption with work on this dam means more unemployment and cancellation or postponement of contracts for sluices, ginning machinery, ploughing engines, light railway material and all sorts of engineering stores.

So much for the home political aspects, but to those of us who have spent some of the best years of our lives in the Sudan there is a final and vital reason for unfaltering pursuance of our task. In the East there must be no chopping and changing of policies. The Sudan costs the British taxpayer nothing or next to nothing. It is inhabited by tribes of warlike traditions, and probably never in its history before has it enjoyed over twenty years of continuous peace. This country, more populous and of greater extent than Mesopotamia, the Sudan Government rules with, perhaps 150 British officials and one battalion of British infantry. It is a supreme instance of goodwill and of mutual confidence, which has been built up by twenty years of conscientious and unadvertising administration. The native has learnt that he can always depend upon this sprinkling of British officials to give patient and disinterested consideration to all his grievances, and never to go back upon promises once made. They have been led by the Sudan Government to count upon the completion of the dam. Its completion spells for them prosperity and insurance against starvation, and they have not been free from famines in the past. Any interruption of the work now might be construed by them as a breach of faith due either to the weakness of this country or to the sacrifice of Sudanese interests to ill-informed extremist clamour in Egypt. In short, our position in the Sudan is based primarily upon the natives' confidence in our keeping faith with them, and this confidence, built up for over 20 years, must not be lightly risked.

There is just one further remark I should like to make. We have all read with regret in the papers that the recent negotiations between the delegation of Adly Pasha and the Foreign Office in regard to Egyptian affairs have broken down. People in this country are apt to confuse Egypt with the Sudan, forgetting that from Cairo to Khartoum is a four days' journey, and that the Sudan has in Port Sudan an independent outlet to the sea. We must not forget that the public opinion and politics of the Sudan are entirely distinct from those of Egypt. Let us hope that there may be no serious troubles in Egypt, but let us also remember that in 1919 the grave troubles in Egypt caused no ripple or reflection on the surface of Sudanese peace.

The motion was carried unanimously, and a dividend at the rate of 15 per cent., less income-tax, was declared.

# SHIPPING INTELLIGENCE

## DEVELOPMENT OF PORT OF ORAN.

Certain proposals have been put forward by the local Chamber of Commerce with regard to works to be undertaken for the extension of the Port of Oran (says the British Vice-Consul at Oran). It may perhaps be necessary to point out that the whole of the quays and warehouses of the port of Oran are the property of the local Chamber of Commerce, which has practically constructed the port and quays at its own expense, by loans authorised by the French State, and with certain allowances from the Government-General on behalf of the Colony of Algeria.

**An Ambitious Programme.**

The programme is an elaborate one and will consume considerable time and an enormous amount of money before it is realised. No details are provided by the Chamber of Commerce as to the precise dates the various undertakings are to be commenced—some were started before the war, and on that account were abandoned—but all are mentioned as of urgent necessity It may be generally taken that the present Chamber of Commerce is determined to do its utmost to further the development of the port and commercial output of Oran and its province, and is continually urging both the Government and Municipal Authority to undertake improvements in conjunction with itself.

**Extension of Port.**

The proposals put forward by the Chamber of Commerce include the extension of the port eastwards, so that that portion will consist of five large modern basins. Added to this is the Mers el Kebir harbour, situated immediately to the west of Oran, where improvements under an old scheme will be completed and new plans evolved to make the whole a combined port large enough to meet the needs of the province and town of Oran, and incidentally one of the largest in the Mediterranean. The scheme involves many important subsidiary works, such as the development of inland communications with the port by the construction of new railways, sorting stations, and roads, and the alteration of those means already existing; the provision of adequate lighting, policing, and fire preventive apparatus in the port; of modern machinery for facilitating the loading and discharging of ships, of fresh water supply for ships; of adequate warehouse accommodation and a free-pass Customs House warehouse for goods in transit for Morocco. The proposals mention the establishment of a commercial exchange, a commercial club and library, a commercial educational scheme, and the improvement and extension of the residential part of the town and suburbs, and generally envisage a re-created town in accordance with the most modern ideas.

## NORTH MEDITERRANEAN SERVICE RESUMED.

The regular service of the Messageries Maritimes Company from Marseilles to Naples, Piraeus, Smyrna, Constantinople, Beyrout and Levant ports, which had been temporarily suspended since the war, will be resumed with the departure of the s.s. Lamartine, due to leave Marseilles on December 15 next.

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses:—*

*Anchor Line.*—S.s. Vitellia for Bombay (Liverpool, December, 7).

*Anchor-Brocklebank Line.*—S.s. Holywell for Port Said, Colombo, Madras and Calcutta (leaves London December 3); s.s. Mangalore for Calcutta (Birkenhead, December 3); s.s. Maidan for Calcutta (Birkenhead, December 17); s.s. Masirah for Port Said, Colombo, Madras and Calcutta (leaves London, December 24); s.s. Maimyo for Port Said, Colombo, Madras and Calcutta (leaves London, January 7).

*Bibby Line.*—S.s. Leicestershire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, December 7); s.s. Sittang for Rangoon (Middlesborough, January 7).

*Byron Steamship Line.*—A steamer will sail on December 15 for Patras, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

*Cunard Line.*—S.s. Pavia for Gibraltar, Ceuta, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum (Liverpool, December 3); s.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa (Liverpool, December 20).

*Ellerman Line.*—S.s. Grodna for Genoa, Leghorn, Naples, Palermo, Messina and Catania (Liverpool, December 1); s.s. Falernian for Gibraltar, Malta and Alexandria (Liverpool, December 3); s.s. Asturian for Gibraltar, Malta, Patras, Syra, Smyrna, and Constantinople (Liverpool, December 17).

*Ellerman's "City" Line.*—S.s. City of Florence for Calcutta (Birkenhead, December 8); s.s. City of Baghdad for Calcutta (Birkenhead, December 21); s.s. City of Bristol for Calcutta (Birkenhead, December 21).

*Ellerman's "Hall" Line.*—S.s. City of London for Bombay, Karachi, and the Punjab (Liverpool, December 12).

*Ellerman's Westcott and Laurance Line.*—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

*Glen Line.*—S.s. Glenamoy for Port Said, Port Swettenham, Singapore, etc. (London, December 8); s.s. Glentara for Port Said, Port Swettenham, Singapore, etc. (London, December 22); s.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January 5).

*Henderson Line.*—S.s. Mandala for Port Said and Rangoon (Birkenhead, December 14).

*Holt Line.*—S.s. Ningchow for Port Said, Port Swettenham, Singapore, etc. (Swansea, December 7).

*Johnston Line.*—S.s. Aviemore for Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, December 10).

*Papayanni Line.*—S.s. Andalusian for Tangier, Malta and Alexandria (Liverpool, December 10).

*P. and O. Line.*—S.s. Khyber for Colombo, Madras, and Calcutta (London, December 2); s.s. Kaisar-I-Hind for Bombay (London, December 16); s.s. Soudan for Colombo, Madras, and Calcutta (London, December 30).

*P. and O. British India Line.*—S.s. Nuddea for Colombo, Madras, and Calcutta (London, December 3); s.s. Hatimura for Colombo, Madras and Calcutta (London, December 15); s.s. Mudura for Bombay and Karachi (London, December 10); s.s. Domala for Bombay and Karachi (London, December 30); s.s. Mantola for Colombo, Madras, and Calcutta (London, January 6).

Holders of debenture bonds to bearer of the Madras and Southern Mahratta Railway Co., Ltd., which fell due on November 30 are notified that the directors, with the sanction of the Secretary of State for India in Council, are prepared to renew such debentures for a period of two years at 5¾ per cent. and for four years at 6 per cent. interest.

The Postmaster-General announces that in consequence of an alteration in the time of departure of the aeroplanes from Toulouse it is now possible to post up to 6.30 a.m. (printed papers 6 a.m.) at the General Post Office, London, on Monday, Tuesday, Thursday, and Saturday, to connect with the air mails for Morocco which leave Toulouse on Tuesday, Wednesday, Friday, and Sunday respectively. The mails are due to reach Casablanca on the following day in each case.

# Company Notes and Reports.

**Indo Burma Oilfields.**

The first report of the Indo Burma Oilfields, covering the period from incorporation on February 6, 1920, to March 31, 1921, states that, as the company has not yet reached the producing stage, the whole of the expenditure incurred, less interest received and certain other items of revenue, has been debited to capital account, and no separate profit and loss account is submitted. Work was commenced at Yenanma in July, 1920, and at Padaukpin in January, 1921. The results obtained have exceeded the expectations of everyone connected with the company, and fully justify the change in the original programme. The last well drilled in on the Yenanma area has yielded 45 barrels per day, and the average from the wells so far drilled on that field of nine barrels per well per day, against the original estimate of three barrels, is evidence of the great potential value of the area. The equally satisfactory result of 63 barrels per day from No. 3 well on the Padaukpin area, against an estimate of 10 barrels, goes far to prove the oil-bearing capacity of that area. A satisfactory arrangement has been made with the Yomah Oil Company, Limited, a company already operating in the Yenangyaung field, for the drilling of a number of this company's well sites on a co-operative basis. The Yomah Company are providing the labour for and superintending the drilling of the sites, and this company itself is providing most of the plant. The oil produced will be divided between the two companies on a sliding scale basis. No. 1 Well drilled under this arrangement has to date reached a depth of 1,225 feet. It is hoped to drill exploratory wells on the Okpon and Mindegyi areas during the next dry season, and work on the other areas will depend on the result of detailed examinations and surveys to be made by the company's geological staff.

Arrangements have been made with the Yomah Oil Company, for the erection of a joint refinery, estimated to cost £235,000, to deal with the products of both companies. A separate company has been formed for this refinery, two-thirds of the requisite capital being subscribed by this company, and one-third by the Yomah Company. The refinery is situated on the left bank of the Rangoon River, about fifteen miles below Rangoon, and should be ready to receive oil early in the new year. The lay-out of the plant has been so designed as to permit of very large extensions. Meeting, Winchester House, E.C., to-day, 12 noon.

**P. and O.**

The report of the Peninsular and Oriental Steam Navigation Company for the year ended September 30, states that after providing for depreciation there is a credit balance on the year's accounts, including £111,938 17s. 2d. brought forward from last year, of £683,405 9s. 6d. The directors propose to deal with this balance as follows :—5 per cent. dividend on the preferred stock (of which 2½ per cent. was paid as an interim dividend), £152,000 ; 12 per cent. dividend on the deferred stock free of income tax (of which 6 per cent. was paid as an interim dividend), £431,100 ; to carry forward to next year, £100,305 9s. 6d. Warrants for the dividend now recommended will be posted on December 13. The Insurance Fund has been increased during the past twelve months by £5,000,000 bringing it up to £3,000,000. £840 of the first and £7,480 of the second debenture stock has been redeemed during the past twelve months, but, as noted in previous reports, the company retains the power to re-issue this stock. Of the five ships of the "B" class, building by Messrs. Harland and Wolff for the company's Australian emigrant and cargo business one, the Baradine, has been delivered and is on her maiden voyage. Another, the Ballarat, was launched over a year ago, but her completion has been delayed by the joiners' strike. She will probably be delivered in the course of the next few weeks. The Barrabool was launched last month. The construction of the other two vessels is progressing. Work is proceeding on the four large mail and passenger steamers, Moldavia, Mongolia, Maloja, and Mooltan. The Moldavia and Mongolia are launched and will probably be completed by April or May, and the directors hope to get delivery of Maloja and Mooltan towards the end of next year. The directors are glad to be able to report, thanks to their captains, officers and engineers, that the fleet has been navigated during the year without serious casualty. The mail contract continues to be worked, under arrangement with the Post Office, on the lines mentioned in the last report.

During the first six months of the year the steamers were able to do something more than cover expenses, but for the last six months this has not been the case. Recent voyages have resulted in serious losses, and owing to this the directors regret they cannot recommend a bonus for the past year. When wages, cost of stores and coal and operating generally come down to something like normal figures, and trade revives, it is hoped that there may again be a fair margin of profit for the company. Two directors Mr. A. M. Monteath and Sir Montagu C. Turner, go out of office by rotation, and will offer themselves for re-election at the annual meeting. The directors recently availed of an opportunity to acquire the freehold of a property, 20, Great St. Helen's, at the back of and adjoining the company's office in Leadenhall Street, which will be serviceable in the future. Meeting, Company's Offices, December 7, 11 a.m.

**Eastern Telegraph.**

The report of the Eastern Telegraph Company for 190 states that the revenue amounted to £4,381,856, from which are deducted £1,629,057 for ordinary expenses, and £1,359726 for expenditure relating to maintenance of cables, income and war taxes payable abroad, share of contribution to pension a,d superannuation funds towards depreciation of investments, payments to staff, and other expenses incidental to the war, special grant on formation of staff widows' fund, and sundry differences in exchange, leaving £1,393,073. After providing for income-tax, corporation profits tax, and excess profits duty payable in England, interest on mortgage debenture stock, and dividends on preference stock, in all £474,015, there remains £919,058, and £416,082 was brought in, making £1,335,140. The directors have placed £500,000 to general reserve fund and £100,000 to maintenance ships fund. Three interim dividends of 2½ per cent. each and a final dividend of 2½ per cent. have been paid on the ordinary stock, amounting together to £400,000, making 10 per cent., free of tax, for year ; also a dividend, free of tax, on the new ordinary shares amounting to £18,662. These appropriations absorb £1,018,652, and leave £316,478 to be carried forward. An expenditure of £1,576,088 has been incurred during the year in respect of new cables, and, in accordance with the purpose for which the new ordinary shares were issued, £1,000,000 has been charged to capital expenditure, the balance of £476,088 being charged against general reserve fund. This fund has also been debited with £301,021 for partial renewal of main line cables, &c., £57,650 for loss on sale of investments, and £250,000 as a further provision on account of investment fluctuations. Balance to credit of fund at date of accounts is £2,217,930.

**British Merchants' Morocco Association.**

We give the following extracts from the fourth annual report of the British Merchants' Morocco Association :—

It could not be expected that Morocco would be immune from the trade depression which has been prevalent all over the world during the past year. There are, happily, indications that the low-water mark has been reached. Trade, in certain goods, is again opening out, although the adverse exchange value of the French franc severely handicaps the restoration of the British export trade with the French Protectorate.

As regards the cargo services, although, throughout the year, business which has offered has been small and uncertain, the older lines have maintained regular sailings, and the Royal Mail Steam Packet Co., have recently instituted, in connection with the Power Steamship Co., a definite fortnightly sailing. The question of freights, both inward and outward, has been raised between the Association and the steamship companies, who have in every case where it has been possible, given favourable consideration to recommendations made. There is hope of still further reductions, although it must be borne in mind that the British steamship companies are operating under very adverse conditions of competition from foreign lines, the rates of exchange enabling the latter to quote freight rates with which the British companies necessarily find difficulty in competing.

The situation with regard to phosphates has not made much progress since the last report was issued. The Offices des Phosphates has been set up and it is understood that some quantity has actually been shipped. It is difficult to conceive how the Maghzen authorities can deal with so extensive deposits without enlisting private enterprise, and it is thought that a definite application to share in the exploitation of the phosphates, if made by a responsible British group with the necessary financial backing, might be favourably considered.

---

A national association has been formed in Egypt for the transaction of motor car insurance business.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Stamboul, November 19.

The trade depression which has been brought about by the depreciation of the exchange is tending to disappear as the result of the fall in sterling which is at present between 720 and 730.

Speculative purchases on this market have ceased, and prices are lower. Consignments for Roumania and Anatolia have stopped. The only outlets at present are the ports of South Russia—Batoum, Sebastopol, and Novorossisk.

The new tariff of 11 per cent. *ad valorem* has come into force. Merchants have been hurrying to get their goods through the Customs so as to benefit by the specific tariff hitherto in force.

Prices of manufactures show a tendency to fall in countries of origin and in this market. Cabots which had risen to £T10¼ have receded to £T8½.

*Produce.*—Sugar. After undergoing various fluctuations, prices have ended by weakening on the chief foreign markets. Quotations are :—Java £19 per ton ; American 8 dollars per 100 kilos ; Belgian £20 per ton. Stocks here have increased, and prices tend to fall.

Coffee.—The market remains firm despite the attempts of New York to bring prices lower. All arrivals are immediately absorbed; stocks in warehouses are insignificant.

Salonika, October 31.

Cereals.—Prices have recorded a new rise. Wheat 1.60-1.70 drachmae per oke ; maize 1.20 to 1.35 ; barley 1.15 to 1.20.

Cocoons.—Stocks are nearly exhausted. The quotation is 60 to 70 drachmae per oke.

Wool.—Stocks are exhausted. Some transactions have taken place at the following prices : 9 drachmae for black and 8 drachmae for white.

Olive Oil.—There is an abundant supply. Prices are from 8 to 9½ drachmae per oke.

Opium.—There is no demand. Stocks amount to from 15 to 20,000 okes. Quotations 120 to 130 drachmae per oke.

Tobacco.—Some very important sales have taken place, and producers have profited by the marked rise in prices to dispose of their stocks, the principal purchasers of which have been the American houses. Prices range from 11 to 60 drachmae according to quality. Stocks of tobacco amount to 150,000 okes.

Skins.—Stocks are exhausted. Transactions have been carried out at 10 to 12 drachmae per pair for lamb's skins, and at 28 to 30 drachmae for those of kids.

Cotton.—Stocks are abundant. Smyrna-Adana is 9 to 9½ drachmae per oke, while American is 10 to 10½.

The Bulgarian trade delegates, M. Kassiroff, President of the Balkans Trading Company, Limited, and M. K .N. Moutafoff, former administrator of the Bulgarian National Bank, arrived in London last week for the purpose of meeting British trade delegates.

The Union of Czecho-Slovak Exporters and Importers and the Chamber of Commerce have to come to an agreement to establish an arbitration tribunal which will examine any complaints from abroad regarding exports.

# Stock and Share Markets.

## DULL AND UNEVEN TENDENCY.

*(From Our Own Correspondent.)*

London, Monday Evening.

The markets have on the whole been very quiet this week. The Irish position is still tinged with uncertainty, while the prospects of material results accruing from the Washington Conference are not so bright as they were, and these things have naturally checked activity. Favourable developments in both directions would make an enormous difference to the position.

Judging by the unfavourable result of the South African Loan the market has had enough of Colonial issues for the present, and it is quite probable that those that are said to be in the offing will be postponed until the New Year. Other new issues have not been so plentiful of late, but we are promised several in the next few weeks, including two important oil issues.

**Colonial Securities Weak.**

Gilt-edged securities have been fairly firm with a few exceptions. Consols are the same at 49,1-8, while War Loan Fives are 1-16 up at 88,1-16. Fundings are 1-8 up at 73¼. The India 7 per cent. Loan has shed ¾ at 103, while the Sudan 5½ per cent Loan is 5-8 lower at 74. In Near Eastern securities which rank among British Funds Egyptian Guaranteed 3 per cent. are ¼ down at 68½. Greek Guaranteed 2½ per cent. 1898 are unchanged at 62, but Turkish Guaranteed 4 per cent. 1855 are ½ up at 69.

Exchange fluctuations have again had their effect on the foreign group. French securities have been noticeably weak, the 5 per cent. War Loan being 3 down at 33½. German 3 per cents. were dull on the decline in the mark, and at 2,3-16 are 1-8 down on the week. Chinese securities have been dull, while Brazilians have displayed some weakness. Japanese stocks have been steady, the 4 per cent. 1899 issue and the 4 per cent. 1910 issue being both unchanged at 62.

Greek securities have been unsteady. The 5 per cent. 1884 Loan has shed a point at 33, while the 5 per cent. 1881 Loan is also 1 down at 33. The 4 per cent. 1902 Loan is 1 down at 31, but the 5 per cent. Funding Loan is unchanged at 33. The 5 per cent. 1914 Loan is the same at 34.

**Industrials Dull.**

Industrials have been dull and irregular, though there has been as usual little business passing. Textiles have been fairly steady with Courtaulds 3d. up at 33s. 9d. After their fall of the previous weeks Armament Shares are a little steadier. Evidently the view is taken that the discounting of possibilities has now gone far enough, and that it would be as well to "wait and see" what is going to happen. Armstrongs are 9d. down at 14s., while Vickers are 3d. down at 9s. 3d. Guest Keens are unchanged at 28s., while Cammell Lairds remain at 11s.

There has been little doing in Shipping securities. P. and O. Deferred are 3 down at 280, while Furness Withys are 3d. down at 22s. 3d. Cunards have shed 1s. at 17s. 6d., while Royal Mails are unchanged at 79.

**Anglo-Egyptian B Strong.**

A somewhat dull tone has been in evidence in the Oil market as a result of a certain amount of Continental liquidation. Burmahs are 1-16 down at 5,11-16, but Mexican Eagles are unchanged at 3,5-16. Among Egyptians Anglo-Egyptian B have been in demand, and are 3-16 up at 1,9-16. Oilfields of Egypt have shed 4½d. at 3s. 6d., while Gemsah, Oil Reefs are 3-8. In the Roumanian group Roumanian Consols are 3d. down at 7s. 9d., while Steaua Romana have shed 3d. at 7s. 9d. Phoenix are 3d. down at 6s. 9d., while Dacia Romanos are 11-16, a decline of 1s.

Mines have been irregular, weakness developing in a number of directions as the result of Continental selling. Diamonds have been a specially weak spot with De Beers at 9,1-16.

**Banks Steady.**

Banks have been fairly firm. Agricultural of Egypt 3½ per cent. Bonds are ½ down at 54, but the 3½ per cent. Guaranteed Bonds are unchanged at 55½. Imperial Ottoman Banks are ½ down at 6½, but National Bank of Egypt are 1-16 up at 18,9-16. Bank of Athens shares are unchanged at 2, but Ionian Bank are 9-16 up at 3¼. Chartered of India are unchanged at 15, while National of India are the same at 37½. P. and O. Banks are 3-16 down at 11,1-8. Imperial of Persia remain at 5,1-8, while Bank of British West Africa are the same at 4½.

Land shares have been steady. Béhéras are unchanged at 8¼, while Béhéra Prefs are the same at 3,1-8. Egyptian Delta Lands remain at 6s. 9d., while New Egyptians are unchanged at 22s. Egyptian Consolidated Lands are 1½d. down at 10½d. Sidi Salems are the same at 1, while Union Fonciéres are unchanged at 2,7-16. Sudan Plantations are 3-8 down at 2¾.

**Rubbers Firm.**

The Rubber market has continued to present a firm appearance though for the time being the rise has evidently ceased. There has so far been no buying of any importance by the public, which will not be induced to come in until it is a good deal clearer than it is at present that the price of the raw commodity is definitely on the up grade. My view, as I have pointed out before, is that fluctuations must be looked for, but that the tendency will henceforward be upwards.

Among miscellaneous descriptions Alexandria Waters are unchanged at 6,11-16, Egyptian Markets are 3d. down at 18s. 3d. xd., while Egyptian Salt and Soda are 3d. up at 32s. 3d.

## FOREIGN EXCHANGES.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

(1) The Modern Chaotic Exchange Situation
(2) The French Exchange Position.
(3) German Industry and the Mark.
(4) The Italian Lira.
(5) The United States Dollar.
(6) Miscellaneous Exchanges
(Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

# COTTON & COTTON GOODS.

## MANCHESTER REPORT.

(*From Our Own Correspondent.*)

*Manchester, Saturday.*

The market during the past week has not been altogether featureless, but although the tone has been rather better the increase in the actual turnover has been hardly noticeable. The strength displayed in raw cotton circles has been welcomed, but it has not forced out business. Buyers have distrusted current rates, but if values for the raw material will only steadily advance not with a rush, but slowly and definitely, then there is every probability of increased business following. The political situation abroad has been very disturbing, especially with regard to India, and although there are signs that the Gandhi boycott is weakening, it will be some time before his efforts are a thing of the past. Then again, the financial position in China is stated to be very serious, but everyone anticipates that the Shanghai houses will successfully cope with the situation. In the cloth section only a small demand has been about for Egypt and the Levant, and the majority of the offers have proved impracticable. Quotations for Egyptian yarns have tended to harden, but when actual business has been placed before spinners buyers have been able to obtain concessions. A few miscellaneous cloth transactions have been put through for India, but the turnover for China has been very unsatisfactory. Buyers for the Republics of South America have not been quite idle. Prices for American yarns have been rather firmer, but only a patchy offtake has been registered. Many weak sellers have been about.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date November 23:—The past week has shown but little difference from the many which have preceded it, and business on the spot continues to drag along in a most unsatisfactory manner. The only feature of note has been the issuance of the United States Ginners' Report last Monday. A somewhat "bullish" significance was read into the figures, and this contributed a better tone to the various "futures" markets which, to a certain extent, has been reflected in the "actual," both here and in Manchester. No real improvement is noticeable, but a better tone prevails and prices display a hardening tendency, which is a change from the last two or three weeks. There are rumours that the Indian boycott of British goods is breaking down, but so far no confirmation has been obtained. Manchester to-day reports a bigger enquiry, and "more attention being attracted to yarns," but tangible results still remain very small. Here in Liverpool, we have witnessed a series of steady, advancing markets, and though there is spot cotton to be had at considerably below the quoted official values, yet the sales average a bare 300 bales a day. Spinners are only buying just enough from week to week to enable them to keep their machinery going, and some have either shut down altogether or are running on part time only. It is, unfortunately, only too obvious that large stocks of high (cost) price materials are still hanging over the market, and the unfortunate possessors seem to have the greatest difficulty in disposing of them, even when they are willing to accept a more or less heavy loss. More interest has been shown recently in cotton for forward delivery, and from one quarter, at least, some fair orders have been forthcoming.

The small general enquiry here for spot cotton calls for no special comment, except possibly that sellers have been more pressing, and buyers less keen, than ever. Total sales, 1,700 bales (includes 150 bales Sudan). Quotations all round are advanced 25 points. Fully Good Fair Sakellaridis 21.25*d*.

---

There is a demand in Algeria for British goods such as cloth for men's clothing, boots and shoes, linoleum, and oilcloth.

---

The export of Tunsian alfa is hampered through lack of wagons and many negotiations for sales have consequently been stopped.

---

According to a recent report the German potash syndicate has established a sales organization at Vienna for the purpose of trading with the Balkan countries.

---

The deposit accounts of Czecho-Slovakian banks amounted to 3,443,000,000 kronen on August 31; while the current accounts totalled 6,110,000,000 kronen.

## OIL SHALES.

Only recently, when the demand for petroleum has so enormously increased and there seemed to be a danger of exhaustion of supplies of natural oil, has attention been directed to other sources of supply, especially oil shales. These are shales rich in bituminous substances and yield oil and gas on distillation. Oil shales have been worked for the production of oil for a number of years in Scotland, France, and a few other countries, but lately deposits in the kimmeridge clay in England have been receiving attention whilst those in Norfolk are under development. Much research has also been undertaken on the vast oil shale deposits in the United States, especially those of Utah, Colorado, and Wyoming, those at De Beque, Colorado, being actively developed.

Interesting information on the subject of this source of oil is given in a volume entitled "Oil Shales" by H. B. Cronshaw, B.A., Ph.D., A.R.S.M., just issued in the series of monographs produced under the direction of the Mineral Resources Committee of the Imperial Institute (price 5s. net.) The monograph first describes oil shale and the similar material torbanite; the mining and distillation of oil shale; and the composition and properties of shale-oil. Descriptions follow of deposits of oil shale and torbanite in various parts of the British Empire, including those in the Utrecht district of Natal, Wakkerstroom district of the Transvaal, Albert County in New Brunswick, Pictou County in Nova Scotia. Blue Mountains in New South Wales and Mersey district in Tasmania. Accounts of foreign deposits are given next and include those of the United States, France, Bulgaria, and Brazil. A map showing the oil shale deposits of the world and a bibliography conclude the volume.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 21:—

Season.—November 14 and 17.—light rain in North-West India. November 18—few falls in South Madras. November 19 and 20—monsoon strengthened slightly, causing nearly general rainfall in Malabar. Conditions of Crops.—November 18—Bengal and Punjab unchanged. In Central Provinces cotton and sesamum very good; wheat promising, and harvesting of rice nearly completed. Assam, November 21—transplanted winter rice good; broadcast winter rice, sugarcane, cotton and tea normal.

Markets.—November 18—Bombay cotton market unsettled Settlement due to-day (*i.e.*, November 21) postponed to November 22, certain firms having declined to acknowledge authority of East India Cotton Association as the authority qualified to deal with contracts entered into under the Cotton Contracts Board. Ready cotton steady with improved demand. Fine M.G. Oomras on November 15, were Rs. 365 December-January, and Rs. 359 March. Bombay cotton arrivals from September 1 to November 11, 1921 were 325,000 bales as compared with 130,000 bales in the same period of the last year. Bombay piece-goods market unchanged. Local goods moving steadily. Calcutta jute market, November 18—quiet. Gunny market, November 15—very quiet. At tea sale on November 15 few Darjeelings offered, but good selection of good quality teas from other districts. Teas over Re. 1, 4 per lb. steady, but prices of other grades showed irregular advance of 3 to 9 pies per lb. Good liquoring medium grades sometimes 1 anna dearer. 302,132 packages sold to date at an average price of 9 annas 2 pies per lb. November 18—special Straits quality rice, Rs. 620. November 15—market conditions firm with further advance in prices. T.N., November, Rs. 162; December, Rs. 160. Railway Survey.—Mingaladon-Bauktaw railway survey of 11 miles by Burma Railways Administration and Reconnaissance Survey of Central Indian Coalfields Railway by State Railway sanctioned. Appointment of an officer to determine lines of railways required for coalfields in area bounded on north and west by East Indian Railway and south by Bengal-Nagpur Railway Main Line and Bilaspur Katni Branch also sanctioned. No change in Bank Rates.

---

Czecho-Slovakia's exports to the United States from January to the end of June amounted in value to 4,438,000 dollars, and the imports from the United States amounted to 883,000 dollars.

---

Anglo-Egyptian Oil Output (week ended November 18)—Gemsah, 38 tons, previous week 53 tons. Hurghada, 3,503 tons against 3,629 tons.

---

It is understood that the Fourth International Samples Fair of Prague will be held from March 12 to 19, 1922. Applications for space will be received at the Fair Offices at Prague up to December 15.

---

A Customs Office has been opened at Lalla Rhano for the collection of consumption duties on alcohol, sugar, candles, and "colonial products" entering the French Protectorate from the Spanish Zone.

## NOTES OF THE WEEK.

### *The Offer to Egypt.*

The official papers relating to the negotiations between the British and Egyptian Governments prove that more points were at issue than the military dispositions, although this latter question was made the crux of the discussions. A dispassionate perusal of the documents, however, leaves the impression that the negotiations ought not to have broken down, and in view of the pointed remarks since made by Lord Allenby, to the effect that they were on the eve of a solution of the Egyptian question which would be satisfactory to all and in which all interests would be safeguarded, we venture to hope that the negotiations have not completely broken down, but have been interrupted to enable Adly Yeghen Pasha to take fresh counsel in Egypt. In the High Commissioner's letter to the Sultan the British Government suggests its desire to grant full independence to Egypt as quickly and in such measure as conditions permit. Between the military clauses, on which the British Government sets such store, and the stipulations regarding the status of the British Representative, to which the Egyptian Prime Minister takes exception, there would seem to be ample room for a compromise acceptable to both parties.

### *The Issue in Brief.*

Briefly expressed, the position as revealed by the published papers is that the Egyptians want more than they have the right to expect, and the British Government is not prepared to concede all that it might safely grant. There is only one way of bridging the gulf between the two parties, and that is, for the British Government to be satisfied that it can make further concessions and for the Egyptians to be satisfied with less than they now ask for. It rests entirely with the Egyptians themselves whether the time required for the erection of this bridge shall be short or long. If Adly Pasha and Abdel Kharlek Pasha Sarwat can retain their hold of the situation and can clearly show that the Egyptian people have acquired the capacity—on which the British Note to the Sultan lays such stress—to preserve their country from internal disorder and its inevitable corollary, the intervention of foreign Powers, the transition stage to the full attainment of the national ideal will not be unduly prolonged. If, on the other hand, from lack of courage or from want of confidence in themselves, they abdicate in favour of Zaghloul Pasha or his extremist followers, there can only be a period of trouble and disappointment in store for Egypt.

### *"Safety First."*

There can be no question that the British Government's point of view has been cogently set forth in the letter presented by Lord Allenby to the Sultan. Lord Milner adopted the view that, although the Egyptian people were not yet qualified for self-government, they should be allowed to experiment with it within certain limits, and as his Mission was not called upon to formulate the limits in a hard and fast treaty, there was an inevitable tendency on the part of the Egyptians to anticipate that the utmost latitude was to be afforded them. The British Government has not receded from the letter of the Milner agreement, but it has approached the subject in a different spirit from that adopted by the Mission. As we believe that it would be possible to go farther that the Government has done without endangering the safety of the Empire or the security of life and property in Egypt, we would the more urgently counsel the Egyptians not to lose their opportunity by refusing what is offered them. The rejection of the terms of the draft Treaty will suggest that they shrink from the test of their capacity for self-government entailed in the restrictions imposed on their conception of complete independence; whereas if they are able—as they claim to be—to pass through the period of probation with flying colours, they have the certainty that public opinion in Great Britain will not deny them "the full attainment of the national ideal."

### *The Entente and Asia Minor.*

However obstinately M. Briand may defend the action of his Government in making a separate Treaty with Mustapha Kemal Pasha, it must be plain to all thinking Frenchmen that the alarm created in Cilicia must react upon Greece and make the Greek Government, even if it accepts under protest the principle of evacuation, much more exacting in the matter of safeguards for non-Turkish minorities in Asia Minor. On this point, however, France can be of no assistance to the Entente, as her prestige in Greece is well below zero, and the British Government must take it upon itself to treat independently with Greece. Already it is being suggested in Athens, according to the correspondent of the *Daily Telegraph*, that Great Britain has "abandoned" the Greeks. In the official settlement of the Turkish question the Entente Powers must act together; but there is no reason why Great Britain of her own accord should not offer Greece a separate explanation of the

Digitized by Google

circumstances that have led to the revision of the Treaty of Sèvres. Her responsibility for Greece's disappointment will be in Greek eyes much greater than that of France, and it will take time to convince the Greek people that the change in British policy is more favourable to the permanent interests of Greece than was the shortsighted action that launched her on the hazardous Asia Minor venture.

### *The Position in Greece.*

Nothing is more calculated to give a concrete turn to the traditional British sympathy with Greece than her present disappointment. Little interest may have been taken by the British public in the campaign in Asia Minor, because it was felt instinctively to be the outcome of a wrongheaded policy that perpetuated fighting anywhere over anything after the Allied victory in the Great War; but there was much to command respect in the way Greece insisted upon settling her own domestic concerns according to her own inclinations, and not at the dictation of the disgruntled Supreme Council. It was possible to challenge her wisdom in taking the situation in Asia Minor into her own hands, but her courage could not be denied. As things are, she has an invaluable asset in having achieved unity, and there can be little doubt that the strong position which King Constantine holds in the affections of his people will stand the country in good stead at this trying time. He will need all the statesmanship that he can command to bring Greece unscathed through her fresh ordeal, and those who have wished the country well, and have refused to subordinate the interests of the Greek people as a whole to those of individual political parties, are confident that King Constantine will prove equal to the occasion.

### *Flight from Cilicia.*

The panic caused among the Armenians, Greeks, and other Christians of Cilicia by the conclusion of the Franco-Turkish Agreement has spread rather than diminished. According to some reports, it is shared by the Arabs of the evacuated region, said to number between four and five thousand, and even by the Turks who do not belong to the Nationalist party. As in all such cases, it will doubtless be wise to make somewhat wide allowance for exaggeration in these reports, which usually owe their origin to refugees who are, very naturally, hardly in a state to see things in any but the worst light. But even when such allowance has been made, it is clear that the panic is widespread; and in spite of all official denials and assurances, it is impossible to feel that it is quite groundless. General Gouraud may point out to the frightened people that not only the honour of the Kemalist Government, but its interests also are at stake, and that "it cannot be imagined that the Turks will display rancour on account of the past or resort to massacre;" but those addressed would probably reply that the Kemalists have not always shown themselves alive to their own interests, and that for their own part they put no faith in Turkish honour, while their imagination makes no difficulty at all over envisaging the Turks either showing rancour or resorting to massacre.

### *Some Consequences.*

We do not share the fearful anticipations just referred to, and we believe that Angora will do its best to avoid disgracing itself before the civilized world. Mustapha Kemal and his associates must realise that for them the Franco-Kemalist Agreement constitutes, as General Gouraud puts it, a half-way house towards peace; and if anything untoward should happen, it will surely be against their desires and intention. But reports regarding the attitude assumed by the Turks who first returned to Adana towards the Christians there are certainly not calculated to allay uneasiness on the part of the latter; and it is easy to understand the rush there has been to escape from the area concerned. At least four shiploads of refugees arrived at Alexandria and Port Said last week, and so great was the passengers' fear that in one case when they were refused permission to land they seized the ship in order to prevent its return to Mersina; nor would they allow the captain to proceed to Beyrout without an official guarantee that they would be allowed to land there. Why they were debarred from landing in Egypt is not clear, and the explanation will be looked for with some anxiety. But it is surely astonishing for the Paris *Temps* to "regret to learn that the British authorities do not appear to find it possible to permit the admission into Egypt" of these refugees; and to suggest that "the French authorities will no doubt not fail to offer them that help and protection which they believed they were able to do without." Even the extremely Francophil *Morning Post* finds France's attitude on this point "strange."

### *Anarchy in Persian Azerbaijan.*

A message from Tabriz sent to *The Times* by its special correspondent in the Middle East throws into vivid relief the state of anarchy existing in the extreme north of Persia. The Assyrian refugees who have been the guests of the British Government in Mesopotamia are now returning to their homes in the Urumiah district, and their passage of the Kasvin-Tabriz road appears to have incited the Shahsavend tribes to improve the occasion after their own style. The unfortunate refugees are reported to have had a very bad time, many of them being stripped naked, and the road has been, once more, rendered unsafe. The notorious Kurdish brigand chief, Simko, whose name is not unknown to our readers, and who has been terrorizing the Urumiah district, has now gone so far that an expedition has been organized for the purpose of bringing him to book. Indeed, as we write, it is reported that Persian troops have actually engaged and defeated his followers.

### *An Insult to America.*

Vigorous action of the kind was clearly called for if the Persian Government hoped to keep up any pretence of being master in its own house. For Simko had overstepped all limits, as is shown by the account given of a raid on Suj Bulak carried out by him on October 6. Suj Bulak, it may be remarked, lies about 70 miles south-east of Urumiah; but the brigand made a forced march and appeared before the town quite unexpectedly. The gendarmes offered resistance, but were defeated, and, after surrender, were put up in batches and mowed down by machine-gun fire, to the number of 500. The town, needless to say, was looted. Not content with this, the attackers broke into the American Lutheran Mission, stripped three American ladies, beat a Frenchman attached to the Mission, and appear to have driven his wife out of her mind by their brutalities. The outrage is sure to create great indignationin America and Americans will at least take a very lively interest in the Persian Government's attempt to settle the account with Simko.

### *Liberty in India.*

While the Prince of Wales has been enjoying the splendours and the sports of the Rajput States, the Government of India have been taking steps to restore to ordinary subjects the liberty of which they have for some time been to a great extent deprived. Lord Reading's speech to the Punjab Chamber of Commerce is noteworthy for its frank recognition of the fact that the intimidation and coercion of private citizens had become intolerable; and the proclamation as illegal associations of the various formations of "volunteers," who have been the effective agents of intimidation, may be taken as evidence that business is meant. These bands of youths have been steadily extending their activities during the past year; they have enforced the boycott of foreign merchandise by picketing and intimidating traders; they have molested the vendors and the consumers of exciseable goods; they have compelled the general closure of shops when that nuisance is decreed by some irresponsible persons in the background; they have fomented strikes and industrial disorders; and, speaking generally, they have done much to deprive British India of its old reputation as the freest country in the world. Their disappearance, if it happily results, will be welcomed by the great majority of the people.

### *"Slave Mentality."*

If the question be asked, how these "volunteers" can do what they have been doing, the answer must be sought in the story of the past. Indian governments, whether Hindu or Moslem, interfered in the daily lives of their subjects to an extent which is now difficult to realise, and anyone wearing a uniform, or displaying any sort of a badge of authority, was in practice free to bully as much as he chose. Extremist politicians talk of "slave-mentality" as a product of British rule, but the phenomenon is in fact far older, and these same politicians have exploited it most effectively for their own purposes. The badged volunteer has been trained to bully the people, and the people, bound by the tradition of being bullied, have submitted to the badge. Of late there have been some faint signs of a reaction against this tyranny in a few of the larger cities, and, so far as we can judge, Lord Reading's Government have seized the psychological moment for action designed to bring it to an end. The effect of their action may be expected to appear when the Prince of Wales reaches the cities of northern India, for in many of these a boycott of his visit has already been "ordered" by the local extremist junta, who will now have an opportunity of showing the extent of their influence when deprived of the assistance of their trained bullies.

### *Trouble on the Frontier.*

When we wrote last week that the treaty with Afghanistan could not by itself remove anxiety for the safety of the Indian Frontier, we did not anticipate quite so prompt a demonstration of the fact as was furnished by the Waziri raid in the direction of Quetta. The raiders really belong to the tribal country, but they have been settled for some time in Afghan territory, and it was from Afghan territory that they started on the expedition which must be regarded as successful from their point of view. We do not suppose that this party of Waziris have any particular respect for the Ameer's authority, or that the raid has any connection with the conclusion of the treaty; the simple fact is that an unprovoked attack has been successfully carried out, and, if it is not punished, it is likely to be followed by more. We trust that the significance of the occurrence will be realised by those Indian politicians who still think that frontiers can be guarded by fine phrases: it may well serve as an object-lesson, and object-lessons are more effective than lectures in the primary stages of political education.

### *Lord Sinha's Resignation.*

There will be widespread regret at the news now formally published that Lord Sinha has been compelled to tender his resignation of the office of Governor of Bihar after less than a year's tenure. The cause assigned for this step is nervous exhaustion, or what most of us call overwork, and the fact is a significant reminder of the strain of public life under the conditions which now prevail in India. Lord Sinha has always worked at high pressure. In the old days he enjoyed an enormous practice at the Bar, notoriously an exhausting occupation, and for the last ten years or so he has advanced from one high office to another in a way which can have left little or no opportunity for rest or relaxation. Last week's announcement assures us that his health has not been permanently injured, and we hope that a real holiday may result in such a recovery as may enable him to do many years' work for India.

## THE WEEK AT HOME.

*London, Monday Evening*

### Ulster and Sinn Fein.

Ulster has given its answer to the Sinn Fein proposals for an All-Irish Parliament, and it is of the nature that was anticipated: Ulster will have nothing to do with such suggestions—she intends to stay as she is for the present. Sir James Craig's speech had the authentic touch of the man who has made up his mind, and it was significant that it was at once accepted, even in quarters that are not friendly to Ulster, as final and conclusive.

Thereupon the British Government had to try again; Downing Street is nothing if not persistent. Fresh proposals were formulated for Sinn Fein—or perhaps it would be more correct to say that the alternative proposals which were already in existence were taken out and dusted before they were presented to the Irish delegation, which retired to consider them. Sinn Fein naturally professes to be disappointed that Ulster will not trust it, but I doubt whether the delegates are very

surprised. The note at the moment, however, is moderation, and it is said that Sinn Fein will neither definitely accept nor reject the Government's new proposals. But sooner or later the question of allegiance will have to be faced. Sinn Fein has so far avoided the matter, and spoken of a general profession of allegiance by the Irish Parliament instead of the individual oath by every member. The theory is that this is the best card in the Sinn Fein hand, and they want to keep it till the last. When they have won the other tricks (most of which which we are willing to concede) they will not mind losing the final trick to the King. At any rate, that is what those who are in pretty close touch with the Sinn Feiners assure me.

**Washington and the World.**

The Correspondents at Washington have not been earning their money this last week, but then little of importance has happened. It appears that it was the well-known French journalist "Pertinax," and not M Briand, who said rude things about the Italian army, but the mischief is done. This excitement over, the only flutter in the dovecots of peace has been the rumour that the Anglo-Japanese Alliance was to be denounced immediately, but the report was on the face of it absurd.

The fact seems to be that the Conference has realised that the world cannot be reformed by a gesture or a good resolution, and has settled down to business—the business of considering problems in detail. This is excellent common sense, but it does not make good cables, and the journalists are perceptibly yawning. Even when President Harding threw out a hint that the Washington Conference might become a kind of annual affair, the reporters gave it rather perfunctory treatment.

The one question that really moves the political world at the moment is whether Mr. Lloyd George is to cross the Atlantic or not. The morning paper says he will, the evening paper says he won't. At the moment of writing, the odds seem against his going, but before the printer has this paragraph the position may be reversed. It all depends on Ireland: if Sinn Fein can be persuaded to keep the Irish Conference in cold storage for a month, then the Prime Minister will go. I believe that the Sinn Fein delegates are quite willing for the Conference, or at least for the truce, to go on, but there are ugly signs from the Irish counties that some of the rank and file want to be breaking heads again.

**A Communist Fiasco.**

The legal event of the week has been the action of Mr. J. H. Thomas, M.P., against an obscure paper named the *Communist*, which is edited by a conscientious objector and pro-Bolshevist called Mr. Francis Meynell. Mr. Meynell, who is the son of a well-known poet, seems a little primitive in his methods. He attacked Mr. Thomas for the part he took in the coal strike, accused him of treachery to his class, and called him Judas Iscariot. When Mr. Thomas brought an action, Mr. Meynell cited no evidence on his own behalf to show that he had any reason for making these accusations, and forbore to go into the witness-box to say why he had done it. In fact, he has not had a word to say for himself. He was cast in damages for £2,000, which seem well deserved. If that is the best that communist propaganda can do, I don't think much of it.

**A City Loan.**

Some comment has been caused in the City by the fate of the South African Loan. Six million 6 per cent. stock was offered at 96½, but 83 per cent. was left on the underwriters' hands. There was nothing against the stock, for South African credit is high, but it followed rather closely on another issue last September of £5 million by the Union of South Africa, and in the past two months altogether £33 millions of Colonial loans have been emitted. Seeing that in the same period about £70 millions have been subscribed to our own Treasury Bonds, it is not very surprising that the investor has got a little out of breath; the wonder is that he has kept up so well, for there have also been a good many industrial issues this autumn. The South African stock will sooner or later be absorbed, but it would probably be wise for other Colonial loans to wait a little. A good many industrial prospectuses are also hung up pending better times.

**A London Fog.**

The first genuine London fog of the season visited us last week. It was impossible to see across the road, omnibuses almost ceased, and trains were hours late. It may have been imagination, but after the long spell of fine weather the atmosphere seemed peculiarly gritty and offensive. But even a visitation like this does not convert us from our love of the open hearth, which is responsible for most of the smoke; I doubt whether even a month's continuous fog would change our habits.

Meanwhile, although most people have forgotten about it, the drought in the South of England goes on, and Unless December gives us a succession of downpours, 1921 will go down to history as the driest year in our records.

**Postal Grievances.**

The Postmaster-General is in hot water again. The new telephone exchanges are being hotly criticised, and some of the bills that have been published by small users of that abominable convenience certainly seem extortionate. The picture-postcard makers again say that they are ruined by the three-halfpenny postcard rate, which is probably true; and business men who deal largely in the mail-order trade are pointing out that the abolition of the Sunday collections means that Monday is a lost day. This latter facility evidently ought to be restored with the New Year, and now that falling costs have enabled tram and bus proprietors to reintroduce the penny fare, the three-halfpenny postcard can hardly plead justification any longer.

**The Theatre Slump.**

The theatres are complaining of bad business. They always do just before Christmas, but this year there seems more reason than usual for the groans of the managers. Only two or three houses are playing to capacity, and one play after another collapses with only a short run. The critics, who were recently attacked by the managers for damning their productions, have again retorted that the plays are too bad to draw the public. I find it difficult to accept that verdict, partly because the worst play in London is attracting crowded audiences every night; the real reason is that there is not enough money in our pockets to go regularly to the theatre. After all, there are a large number of theatres in London, and to fill them all nightly means the expenditure of several thousands of pounds, as well as bus, tram, and taxi fares—when one is hard up, the theatre becomes an occasional luxury. Much the same tale comes from the restaurants which deal in theatre suppers.

**Poor Clergy and Rich Churches.**

Appeals are again being made for contribution to the funds to diminish the poverty of the clergy, which is indeed deplorable. But the effect of these appeals has been somewhat discounted by the announcement that Barclay's Bank has offered half-a-million sterling for the site of All Hallows, Lombard Street, one of the redundant City churches, and the offer has been refused. The church has only about twenty parishioners, its upkeep costs something, and the stipend of its incumbent is over a thousand a year. Five hundred thousand pounds would go a good way towards solving some of the more pressing difficulties of church finance.

**The Week's Books.**

It seems that an unusual number of religious books have been and are to be published this season. In "The Evolution of the New Testament" (Murray) Mr. J. E. Symes summarises the results of modern historical and critical research with great clearness. He is usually on the conservative side, but the extreme position taken up by the more destructive critics of thirty years ago has been generally abandoned.

"The Mother of All Living" (Constable) is by the author of the most successful novel of the year, "Simon Called Peter," which has run through several editions and has been discussed at every tea-table.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents).*

## ROUMANIA.

*Bucharest, November 27.*

**Parliament.**

On Monday, November 28, Parliament will be re-opened.

It is anticipated that the King's Message will this year be a fairly short one, and will touch in general terms on the various political and social problems set forth in the Government's programme for the coming legislative Session. The first paragraph of the King's Speech will announce the birth of Prince Mihai, which, apart from giving the country a new Crown Prince, provides for the continuance of the dynasty. The Message will then refer to the new Franchise Bill, which it is hoped will become law in the course of the coming session. Another paragraph of the Speech will lay stress on the fiscal reforms and the economic reconstruction of the country. A further announcement will be made upon the revision of the Constitution in order to comply with the new situation brought about by the union of the new provinces. Further, the Message will touch on the administrative Reform Bill, which tends to the decentralisation necessitated by the country's expansion. The King's Speech will end with a reference to Roumania's foreign policy.

**The Opposition's Attitude.**

Even until the eleventh hour the Opposition still upholds its determination not to attend the sittings of Parliament. There are, however, strong rumours that the Tzaranist Party have been induced by the Government to resume their seats in Parliament by the assurance that the new Franchise Bill will be modified according to their views. Should the rest of the Opposition still continue in its recalcitrant attitude, the Government has decided to declare the seats vacant and to call for by-elections.

In Government circles it is asserted that the Liberals' vigorous campaign of late is due chiefly to the expiration in December of the term of office of the Governor and one of the Directors of the Banca Nationala. As these high functions have always been occupied by Liberal members—the Banca Nationala is, so to speak a Liberal Institution—the Party is doing its utmost to come to power before these nominations fall due.

**Capture of Chief Author of Senate Attempt.**

Max Goldstein, the principal author of the Senate attempt, when a bomb was made to explode during the sitting of the House, was captured in very exciting circumstances. Last Saturday night, after having managed to cross the Danube in a rowing boat at Giurgiu, without being noticed by the frontier guard, Goldstein was walking towards the town when suddenly he was stopped by a gendarme and ordered to show his identity papers. He first tried to bribe the soldier, but as this failed, he fired a shot at him and ran away. The gendarme, although severely wounded in the lung, managed to give the alarm, and a search party was organized. Next morning, at a village half-way to Bucharest, the criminal was recognized—Goldstein has only one arm and was carrying a bag—and after an exchange of shots with a number of peasants of the village, he surrendered after having exhausted all his cartridges. He was then conveyed to Bucharest by motor-car. The police found on him 2,200 dollars and passports with three different names, and his bag contained 25 kgrs. of explosives of the strongest kind.

Max Goldstein, on being cross-examined, very coolly admitted that he was the chief perpetrator of the Senate outrage, and even gave the police full details of the methods by which it was carried out. On being questioned why he returned to Roumania, he calmly answered that his object was to rescue his comrades who were recently arrested, and to pursue the task with which he had been entrusted by the Soviet Communists.

Goldstein is a Communist of the fanatic type, and make no secret of his anarchistic theories. He will be tried by a military court on December 15, together with 400 other Communists now under arrest.

**An Epoch-Making Discovery.**

For the last fortnight the local press has been ringing with praises in honour of the extraordinary discovery of a hitherto unknown provincial Roumanian physician, Dr. Putzureanu, who claims that by his specially prepared serum he can cure consumption even in its last phase. This discovery, although in a more or less experimental stage, has attracted a large number of patients suffering from phthisis, and a regular pilgrimage has started to Olanesti, the small village-spa, where Dr. Putzureanu has his primitive sanatorium. Dr. Putzureanu is keeping the composition of the serum secret until he has completed his experiments. The treatment, however, starts with an examination of the patient's blood in order to establish the strength of the serum required, which is then injected. The serum, it is said, is obtained from domestic animals.

The Government has appointed a special Committee of Physicians to investigate the efficiency of this treatment.

**Commemoration of Roumania's Unknown Hero.**

A festival, organized by the "National Union of Ex-Warriors," took place at the National Theatre last Monday in commemoration of Roumania's Unknown Hero. The programme consisted of patriotic speeches, recitals, *tableaux vivants* and plays performed by members of the Union and the actors of the National Theatre. The hall was beautifully decorated with Roumanian and Allied flags, and was packed to over-crowding The festival was honoured by the presence of Prince Carol and the British, French and American Ministers, as well as of MM. Maniu, Vaida, Jorga, Bratasanu and other prominent Roumanians.

**Order of "Michael the Brave."**

With the usual ceremony, the King gave the traditional annual banquet to the members of the Order of "Michael the Brave," the highest Roumanian Military decoration, at the Royal Palace last Monday. Two hundred members were present and they were seated at the table headed by the King and Prince Carol, not according to rank but in accordance with the length of time ago that the Order was bestowed upon them. On this occasion the members asked from the Sovereign that a plot of ground in town might be presented to each of them, and this the King promised to do.

**Ukrainian Refugees in Roumania.**

The majority of the Ukrainian refugees have settled down in Bessarabia. Their total number is now about 22,000. The Government, considering it unsafe that such a large number of them should be concentrated in one particular province, especially in Bessarabia, has now decided to transfer them to the interior of the country, allotting a certain number to every town. This

transfer began on November 20, and during the winter months only those fit for travelling will be transported, allowing the aged and children to follow in the spring.

**Ex-King Charles' Subsistence Allowance.**

The annual civil list of £20,000 accorded to ex-King Charles and his family in their exile, to be borne by the Succession States of the former Hapsburg Empire, is being greatly criticised especially by Roumanians. In the first place, it is considered rather curious that some of these countries should be burdened with this expenditure without being previously consulted. Roumania's share would be about 1,700,000 lei, which amounts to more than the actual civil list of the King of Roumania. Apart from this, Roumanians do not cherish the idea of having to contribute to the maintenance of a former monarch who has never been a *persona grata* to the Roumanians, who, on the other hand, have been actually oppressed by this dynasty.

## BULGARIA.

*Sofia, November 28.*

**A New Group and a New Paper.**

There are signs that the various bourgeois parties are gradually realising that unity is strength and that it is necessary for them to sink their party differences and form a solid coalition against the Government. With the idea of fostering this idea a number of prominent citizens, composed of bankers, lawyers, business and professional men, have formed themselves into a group. This group is essentially non-party, and although there are many politicians in its ranks, these have for the time being, become, so to speak, "independents." The group is in touch with the leaders of the different bourgeois parties, who have promised them all the assistance in their power. The group represents capitalist interests, and one of its main objects is to call public attention to the fact that Bulgarian capital must at all costs be attracted back to Bulgaria. At the moment a great deal of capital is outside the country, and the owners thereof are afraid to bring it back lest it may be touched by some new legislation on the part of the present Government. Such a state of affairs is, of course, very harmful to the industrial and commercial life of the country, and if the new group can succeed in remedying this evil, it will have accomplished a great work.

Although not forming part of the organisation of the group, the institution of a new commercial newspaper is very closely allied with it. This newspaper is expected to make its appearance at the New Year, and will be published daily. It will be entirely non-political, and will confine itself to matters of economic and commercial interest. It is understood that a considerable sum of money has been secured with which to give this new production a good start, and provided that it can manage to steer fairly clear of the Censor, there is no reason why it should not prove a most successful venture. Sofia is very rich in daily papers, but a good solid commercial paper will fill a much felt want. If it is to come into line with the other newspapers its price will have to be half a lev (about a fifth of a penny at the present rate of exchange); but as it is well known that hardly any of the present newspapers manage to pay their way at this price, perhaps the new paper, whose name has still to be decided on, will give the others a lead by charging a lev a copy.

**Internal Reforms.**

Any Englishmen who was acquainted with Bulgaria before the world war will testify that the average State employee was possessed of a high code of morals. In fact without making any comparisons with other Eastern European countries, it can safely be said that Bulgaria enjoyed a very enviable reputation in this respect. Owing to a variety of reasons this reputation is fast being lost. The war had a bad effect on the morals of every country, but in Bulgaria the enormous rise in the cost of living, (it is 25 times higher than it was before the war) has been the chief cause of the increase in bribery and corruption. Wages have been advanced only a mere trifle in comparison with the rise in prices, and the consequence is that a great number of the 100,000 odd State employees find it impossible to live on their pay. The lucky ones have a private income; but the vast majority have either to do other work in addition to their State duties, or to adopt a dishonest means of livelihood. The alternative is starvation for themselves and their dependents.

In order to try to put a stop to this state of affairs among the Gendarmerie, M. Radouloff, the newly appointed Minister of the Interior, is preparing a series of reforms which he hopes will at least decrease the amount of corruption. Considerable changes amongst the personnel are anticipated, and a stricter supervision of the minor officials will be made. M. Radouloff is well fitted to the task of reform, as he is known as a singularly upright man himself. Corruption has, however, grown to such an extent that it will require very strong measures indeed to abolish it. In fact, the only certain way of abolishing it is to pay all State employees a living wage, and summarily punish and dismiss any official who is afterwards found guilty of dishonesty. The increase of wages would mean a large drain on the Exchequer, but this could be partly counterbalanced by doing away with half the number of the present employees. Besides this, if corruption were reduced to a minimum, the State would itself gain thereby, as a good proportion of the money now being illegally made, must come, indirectly, if not directly, out of the State funds. M. Radouloff's reforms will in any case be awaited with interest, as it is very necessary that something should be done to put an end to the present state of affairs.

**Trial of the Radoslavoff Cabinet.**

Last week General Jekoff, the Bulgarian Commander in Chief during the recent war, was cross-examined regarding his actions whilst Minister of War. He occupied this post for forty days in the summer of 1915, but was transferred to command the Army a few days before Bulgaria declared war. The most interesting piece of evidence given by the General was his statement that ex-King Ferdinand, when asked why he himself did not assume the command of the Bulgarian Army, replied that his influence was not great enough to permit of his taking on this responsibility. General Jekoff always referred to his former Monarch in a tone of the utmost respect, which was in striking contrast to the tone adopted by some of the other accused persons while speaking of their former ruler. General Jekoff did not disclaim responsibility for his attitude regarding the declaration of war, contenting himself with saying that,

as a Minister he had to carry out the orders of his superiors. The manner in which he gave his evidence made a very strong impression on all who were present, but the general opinion is that he will be punished along with the rest in spite of his chivalrous action in voluntarily returning to face his trial. Another matter on which General Jekoff spoke very strongly was the gift by Germany to Bulgaria of 200 million levas. This sum of money was intended as an incitement to Bulgaria to enter the war on the side of Germany. General Jekoff declared at the time that such an offer was an insult to Bulgaria and reduced her soldiers to the level of paid mercenaries. He said that if Germany wanted Bulgaria's aid, the line of action she should have taken was to pay for all the expenses incurred by the war, but he personally was against the question of money entering into the military convention between the two countries.

## GREECE.

*Athens, November 26.*

**Departure of Earl Granville.**

Earl Granville, accompanied by Lady Granville, left Athens last Wednesday morning by the "Orient Express" for England. All the members of the British Legation, the majority of the members of the British Club and English Colony in Athens, as well as several Greek notabilities attended at the Station.

The new British Minister is expected here early in December.

**Church and Politics.**

Politics in Greece apparently play a prominent part even in the election of such minor church officials as the wardens. According to the *Ethnos*, last Sunday's election of the wardens in the various churches in Athens was marked by incidents between the Venizelist and the Anti-Venizelist candidates, the latter even succeeding in bringing about a postponement of the elections in certain churches where a strong Venizelist feeling predominated. In spite of this, however, Venizelist wardens were elected in the Cathedral itself and at several other churches. The *Ethnos* adds that it is possible that these results will not be confirmed by the Metropolitan of Athens.

**Bonuses to the University.**

The Commission charged to examine the question of bonuses to the Professors of the University revoked under the Venizelist Government has decided to grant to each of the twenty-one Professors of this category, an amount equal to seven months salary. The total disbursements to be made in this connection will amount to 500,000 drachmae.

**Athens in Darkness.**

A lightning strike was declared soon after midday on Tuesday last by the employees of the Electricity Works at New Phaleron, and both Athens and Piraeus were left for three days without light and tramcars. The electric train service between the two towns were also suspended. At the same time the Athens tramway employees also went on strike, and left their cars on the road without taking them back to the depôts.

For several days previously negotiations had been in progress between the Committee of the Union of Electricians and the Government, the principal demand of the former being an increase of 200 drachmae per month retrospectively from January 1, 1921. After much deliberation, the Government agreed to a temporary increase of drs. 50 per month, plus a bonus of 25 drachmae a month for every child under 21. These concessions, however, did not satisfy the employees, and at midday on Tuesday the Union of Electricians published a statement to the effect that in view of the indifference with which they considered the Government had treated the matter, and in fact had rejected concessions previously accorded, a general strike was to be declared. But the Government had not been asleep this time. All Power Stations were immediately placed under military control, and orders for the arrest of the promoters of the strike issued. All electricians enjoying temporary exemption from the Army were ordered to rejoin their units within 24 hours, and 300 sailors specially chosen from the naval arsenal were brought up to work the central Electrical Works at New Phaleron. At the same time most of the ringleaders of the strike and several of the strikers themselves were arrested by the Military Authorities and charged with insubordination and leaving their duties without permission. The trials were quickly arranged, and after an all-night sitting the verdict was pronounced by which eight were condemned to eight years' imprisonment, 28 to five years' imprisonment, while twenty others were acquitted. These severe punishments have apparently had the desired effect, as many of the strikers still out have expressed their willingness, on presenting themselves to the Prefect of Police, to resume their duties.

Athens to-day has practically regained its normal aspect. although certain economies in the use of electricity are still enforced. The Authorities are to be congratulated upon the prompt and energetic manner in which they have handled the situation, and the result can only be described as a complete victory for the Government.

## ASIA MINOR.

*Smyrna, November 23.*

**Cilician Refugees.**

The British s.s. Montaza brought to Smyrna over 300 Christian refugees from Cilicia, who were escaping before the territory was handed back to the Kemalists. M. Sterghiades, the Governor of this province, refused a landing to them in Smyrna, and when a Greek deputation sought to induce him to allow the refugees to land he asked for a guarantee that they would be housed and fed—which was not forthcoming. The steamer has taken them on to Constantinople, but it is very improbable that they will be allowed to land there, as there are already over 50,000 refugees in Constantinople.

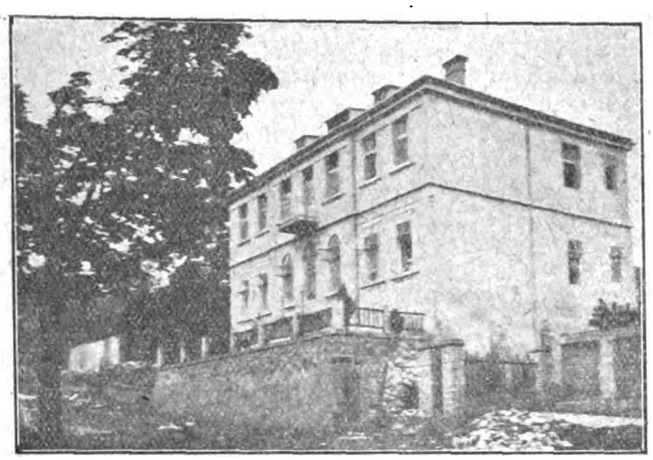
## THE CHILDREN'S HOSPITAL (ANGLO-SERB.) BELGRADE.

Dr. Macphail makes an urgent appeal through our columns for money to help to support the Children's Hospital (Anglo-Serb) in Belgrade, which has been carrying on its work and growing under great difficulties during the last three years. Until recently the Hospital was of a temporary nature, but some months ago the opportunity occurred for Dr. Macphail to put this work on a permanent footing by the acquisition of a new building which was in course of construction in the hospital quarter in Belgrade. This was officially opened in February 1921, and has been working for some months as a Hospital of seventy beds, complete with out-patient department, operating-room, and dispensary. The Camp in the woods of Topchidar for



**The Hospital: Exterior**

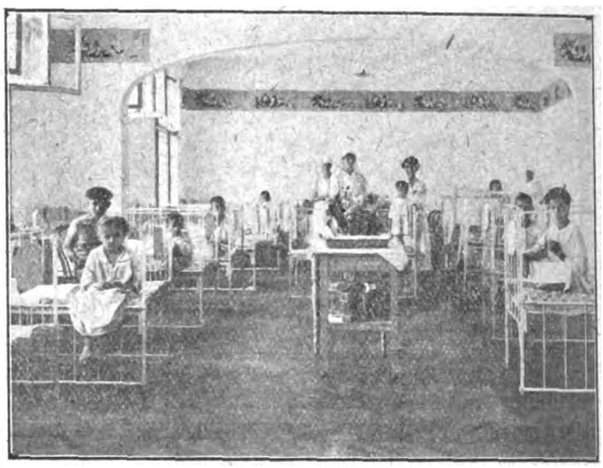
convalescent patients opens for six months during the summer in connection with the Hospital.

Part of the older building in the street of Prince Milosh the Great has been retained as a training school for Serbian nurses and is being run in connection with the Hospital. This training-school is supported financially by the Board of Foreign Missions of the Methodist Episcopal Church. The school is the first of its kind in Serbia. It is regrettable but true that at present the nursing profession, in other countries one of the proudest assets of womanhood, occupies in Serbia a very inferior position. The training-school is doing much to alter this state of things, and its establishment in connection with the Children's Hospital is further evidence of the value of the work of the Hospital, not only in its more obvious aspects, but as a factor contributing to progress and enlightenment in the medical work of the country.

The expense of running the Hospital in its new, and, it is hoped, permanent, form has been materially increased during the last six months owing to necessary outlay incurred in outfitting the Hospital building, and also because many of the Allied Relief Missions which used to render great assistance by grants in money and in kind have ceased their activities in Yugoslavia. This has also had the effect of temporarily reducing the subsidy made by the Serbian Government, as the latter have now to support entirely a number of institutions all over the country which were formerly guaranteed by the aforesaid organizations. The cost of the new building was £5,000, of which all has been paid. Of this latter sum £2,000 was subscribed by the Child Welfare Association, S.H.S., and £1,000 by the Hon. Elsie Cameron Corbett, £1,000 proceeds of collection by Messrs. Ellis, South Africa, and the rest from various sources. The yearly cost of running the Hospital is about £3,000, and Dr. Macphail is appealing for a sufficient sum to guarantee the future of the Hospital for three years.

£50 will secure the upkeep of a bed in the Hospital, which can be designated in accordance with the wishes of the donor. It is felt that many persons and units who have served in this country or with the Serbian Army may wish to perpetuate their connection. There could scarcely be a better method of effecting this than by the endowment of a bed or the granting of a small donation to this Hospital where the children of the soldiers and of the people come to be healed of their ills.

A critical period in the history of the Hospital has now arrived. Unless further support is forthcoming the



**The Hospital: Staff and Patients Surgical Ward**

work will have to cease, for lack of funds. The Serbian Ministry of Health is not yet in a position to take over the Hospital and maintain its present standard. The only source of regular income is 5,000 dollars monthly from the Board of Foreign Missions of the Methodist Episcopal Church and, until the Association closed in June, 10,000 dinars monthly from the Child Welfare Association, S.H.S. All other income is from voluntary subscriptions. It is felt that it would be a crime to abandon at this juncture a work which represents nearly three years of ceaseless and heroic endeavour especially as the full harvest of this is just beginning to be reaped.

The Children's Hospital as it stands to-day is not only an institution unquestionably deserving of support on account of the work it is doing for humanity, but in the eyes of thousands of Yugoslavs it is a monument to the sympathy and help rendered by the English speaking peoples of the world to a young and struggling nation, not only during the great conflict but also in the difficult post-war period. As such it must continue. Dr. Macphail has formed a small committee in Belgrade to further the interests of the Hospital, of which Major Hanan, ex-Chairman of the Child Welfare Association, S.H.S., Mr. Clark, Managing Director of the British Trade Corporation Bank, Colonel Kratz, and several others are members. Subscriptions may be sent to the Honorary Treasurer and Auditor:—J. Clark, Esq., British Trade Corporation, Knez Mihailovo, Belgrade.

# CORRESPONDENCE.

## ARE EGYPTIANS CAPABLE OF GOVERNING THEMSELVES ?

*To the Editor of "The Near East."*

Sir,—The question which has been made the subject of this letter is one that is being constantly asked by people in England, who know little or nothing about Egyptian affairs but have a vague idea that: (a) we went to Egypt to suppress a rebellion; (b) we have during the past forty years evolved order and affluence out of chaos; (c) if we leave the country, it would be a question of a few years, or even months, to undo all that we have accomplished; (d) it is much better, therefore, to continue as we are, ignoring the demands for independence so persistently urged by the Nationalists. (a) and (b) are undoubtedly true, and the problem our statesmen have been endeavouring to solve is to prevent the result anticipated (c) and at the same time to satisfy the legitimate aspirations referred to under (d), which many of our countrymen are urging us to ignore.

Unfortunately the problem, which was comparatively easy of solution at the start, if properly handled, now bristles with difficulties owing to the inconsistent way it has been treated by our rulers from the early eighties to the crowning act of folly when the Foreign Office was too occupied to receive the Egyptian Delegation after the Armistice.

All the statesmen, whether British or Egyptian, who played the leading parts in Egyptian drama are dead and gone, and on this account one hesitates to criticise; but let us recapitulate very briefly the events as they occurred, and study them, if we can, from the point of view of the Egyptian Nationalists. We have:—The military occupation, to suppress rebellion; the appointment of a Financial Adviser, with a seat on the Cabinet of Ministers; the civil occupation by officials from India with limited contracts for a few years; the Drummond-Wolfe convention, which failed to materialise, and the subsequent refusal of England to fix any date for evacuation; the appointment of other advisers in the several Ministries; the re-conquest of the Sudan and the Joint Control recognised by treaty; the Anglo-French convention giving England a freer hand in Egypt; the Mixed Government at one time contemplated by Lord Cromer; the creation of the European Civil Service; the failure of Sir Eldon Gorst's policy to extend home rule; the dictatorship of Lord Kitchener; the Italian seizure of Tripoli, acquiesced in on our part without protest; the Balkan war and further diminution of Mohammedan power caused thereby; the declaration of the Protectorate; the incidents of the Egyptian Labour Corps and conscription of animals, etc. Finally, whilst the Arabian Ameers were being welcomed in Paris the Foreign Office refused to receive an Egyptian delegation even to discuss the status of Egypt.

With this record to guide them, is it any wonder that the Egyptian agitators refuse any longer to believe in the disinterested motives of the British Government, or to place much faith in our repeated declarations of eventual evacuation?

It is not for a moment argued that the situation which has arisen was deliberately engineered to make evacuation impossible. Our statesmen have merely failed to foresee the results that must follow from the inconsistency of their acts with their declared policy. There can be no question, either, that the Egyptians have benefited by our actions more than they would have had we fulfilled our pledges in the spirit. But we cannot expect Egyptians, especially the younger generation, who have no first-hand knowledge of the abuses which existed, to look at it in this light. All that they see is a constantly increasing interference in every branch of the administration and a civil cadre to provide salaries for Europeans, where in their eyes the cheaper Egyptian would serve the purpose equally well.

But the discussion of might-have-beens will not help us much to relieve the existing tension. What we must strive for is to create a better atmosphere for the present and security for the future. There are only three things that our Government need trouble themselves about—Justice, Public Security and Finance. As regards the justice to be meted out to the Egyptians this requires little or no interference on our part. The law courts contain most of the intelligence of the country, and if justice fails occasionally, it will be on account of there being too much law and too little of the rougher methods which alone appeal to certain classes. The only difficulty for which provision should be made will be to ensure that all the Europeans who accept the hospitality of Egypt shall be subject to the same law as the Egyptians, the powers of the Mixed Tribunals being extended for the purpose, and the Capitulations abolished.

As regards public security, if there are *no political grievances* there will be *no political agitators* to stir up the lower classes. With no agitators, the Police, with the assistance of the Egyptian troops, may safely be left to look after any rowdy elements that may exist, and Europeans will be as safe in the Nile Valley as in their own country. The only places where the British Army will be sadly missed will be the sporting clubs which owe so much to the British officers. It may be argued that the British Cabinet should insist on the right of re-occupation if necessary? With the Powers, perhaps, but not with the Egyptians—simply warn them what to expect without even a declaration of war if things go wrong. The right will never require to be exercised except to protect Egypt from invasion.

The financial question is really the only one which calls for interference. Writing in complete ignorance of any terms which may have been proposed by the Foreign Office and refused by Adly Pasha, I nevertheless consider that the Foreign Office has every right to insist on the continued existence of the Financial Committee with the British Controller or Adviser as a final arbiter, the said Committee to have the preparation of the Budget till such time as the reserve may have reached a sum to be agreed upon, when this control might be relaxed. If these proposals were accepted, it by no means follows that all the Europeans would be cast adrift. The only difference would be that those who elected to remain and were accepted by the Egyptian Government would recognise that they could no longer look to the British Agent to further any cause they might have at heart. They would have to rely on their own Minister or other superior Egyptian official. They would, in fact, have to exercise more tact and less brute force.

I am, etc.,

Biarritz, November 26. Coles Pasha.

## THE FRANCO-TURKISH AGREEMENT AND THE CHRISTIANS OF ASIA MINOR.

*To the Editor of "The Near East."*

Sir,—The Franco-Turkish agreement is now an accomplished fact; but a fact as to the final results of which, for both contracting parties, we are very doubtful. However careful both parties may seem to be in putting it into practice, we have every reason to believe that fresh troubles are looming over the darkened horizon of Cilicia.

Evacuation of this unhappy corner of the Near East has begun. French troops under the command of General Dufieux have bidden their last farewell to their fallen comrades. The non-Turkish population is left to its cruel destiny. Some three hundred Christian families, anticipating a reign of terror by the Kemalists, have given up all hopes, abandoned all posts and properties, and escaped to the shores of Cyprus or Syria.

No doubt France at this very critical moment is anxious to regain the favour of the "Sick Man of Europe." But in doing so, we are afraid, she is pursuing her course at the expense of Allied policy in the Near East. It is fully understood, therefore, that if her immediate purpose is to resume her old diplomatic relations with her "prodigal" friened, Turkey, her further aim is to cope with and be a check to British

Digitized by Google

interests, and thus to create a balance of power in the Near East.

In this heart-rending situation, the attention of thousands of people is directed to the public opinion of Great Britain, to know whether it can ever approve of France's action, as to the signing of the death decree of so many thousands of Christians in Cilicia. Those unhappy people are to-day doomed to pass once more under the yoke of Turkish treachery. Will Great Britain, who was the first Power to occupy that land three years ago, to-day fold her arms and turn her back with absolute indifference towards a matter which directly concerns her own interests? Will she participate with France in dooming those homeless people to die on the barren coasts of Syria and Cyprus, or in leaving the remaining non-Turkish population of Cilicia at the mercy of the Kemalists? Will she ever do that? Will her policy this time also, be hesitating, cloudy and unwise; and will she let matters drift?

I am etc.,

O. Basra.

Beyrout, November 13, 1921.

## THE CASE OF THE ARCHBISHOP OF RHODES.

*To the Editor of "The Near East."*

Sir,—The Italians declared that the "lack of courtesy" of the Archbishop of Rhodes was the principal cause of his deportation to Patmos. On the contrary, a "lack of tact" towards the Greek community of Rhodes was shown by the Italian authorities on the occasion of the visit of their Crown Prince. The officials of the Archbishop's court at Rhodes were informed of the forthcoming event *one* day before the arrival, whereas the Turks and the Jews had been officially advised a fortnight before, so that they should be prepared for the ceremony, in the course of which, as it is alleged, they alone ate 500 okes of sweets and drank 250 cases of champagne and 200 cases of beer. . . .

The Rhodian Greeks frequently complain of the persecution which they suffer at the hands of the Italian demobilised soldiers, who, under the auspices of the Governor, Count Bosdari, have formed in Rhodes two Legions, the "Lega dei Combattenti" and the "Lega d'Italia," with a view to terrorising the Greeks. It has been also ascertained that the Italians had premeditated the deportation of the Archbishop a long time before the visit of the Prince, and that they availed themselves of the absence of the British Consul, Mr. F. Taylor, a personal friend of the Prelate, to put this into effect.

The latest news from Rhodes is that the Archbishop is still at Patmos in a very destitute position. This behaviour towards a Prince of the Greek Church surely is a disgraceful scandal. *Quousque tandem Italia?*

I am, etc.,

T. D. Moscona.

# PRESS ON THE NEAR EAST

## Egypt and India.

Under the above title the weekly edition (November 26) of the *Westminster Gazette* gives briefly its views upon these two large questions. After mentioning the breakdown of the Egyptian negotiations, it says it is sufficient at this juncture to say that

the military authorities have had their way, and that a golden opportunity of placing our relations with Egypt on a sound basis, and of improving our position in the Mohammedan world, has been lost. We still believe that a settlement on the lines of the Milner Report is inevitable. The question now to be answered is how severe a crisis we shall have to meet in Egypt before the inevitable is recognised. If the military influences had their way we should be fighting everywhere and all the time, in Ireland, in Egypt, and in India alike, and that fact is in itself the *reductio ad absurdum* of their policy. For we have not sufficient force to go round, and although they might conceivably coerce Ireland, or Egypt, or India, they manifestly cannot coerce Ireland, and Egypt, and India.

It proceeds to examine the "disturbing news" from India, and discusses the possibility of Mr. Gandhi's arrest.

For in India the responsibilities of government still rest upon us. If in the future the vast mass of the Indian people wish to be rid of us altogether we shall have to go, for we cannot coerce such numbers, nor would it be right that we should try. But such a position has certainly not yet arisen. Mr. Gandhi and the extreme Caliphate agitators speak only for a small, though a very vocal, minority. Moreover, we have already set our hand to the development of self-governing institutions in India, and we are pressing forward with our scheme as fast as is practicable or safe. Our course, therefore, is clear. We must persevere in our efforts to make the Montagu reforms a success, and in the meantime the Government of India must govern. That is its first and simple duty to the millions of people who look to it for peace and security. The sufferings of Hindus during the Moplah revolt and of Parsees during the Bombay riots are enough to indicate the kind of persecuting anarchy that is awaiting its chance. When, however, we say that the Government of India must govern, we mean that it must act with judgment and not in a panic. The panic which resulted in the Amritsar massacre is very largely responsible for the present state of unrest, and the deep resentment aroused by that tragedy will, we fear, be increased by the appalling blunder which has caused the death by suffocation of over fifty Moplah prisoners. The Government can withstand agitation, and is in duty bound to suppress it when it results in disorder and loss of life; but depending as it does on the consent of the great majority of the Indian population, it cannot afford to permit horrors like these to happen. Nor can it afford to incur the genuine hostility of the Mohammedan section. The Mohammedans have been seriously perturbed by our policy towards Turkey, and they will not be reassured when they learn of our failure to satisfy the legitimate aspirations of the Egyptians.

## The Future of Turkey.

In the November issue of *Looking Forward* Mr. Constantine Browne writes from Constantinople on "What is going to Happen in Turkey?" His article is dated last September, and was therefore written before the signing of the Franco-Turkish agreement, but his picture of the position nevertheless remains substantially true. He begins:—

Three months' fighting between Greeks and Turks have brought us back exactly to where we were a year ago, and the situation a year ago was not much better than ten years ago, or ever since Turkey became a bone of contention between greedy European Powers. It is really wonderful to watch the doings of the representatives of the Great Powers in Constantinople. Their main idea is not to settle the Eastern question, but to entangle it in such a way that it may do harm to the interests of some "Ally." The Greeks, while hastily withdrawing, clamour victory for the sake of "moral" and "prestige" and other useful words they learned during the European war from the various Allied and German censorships. The Turk acts like a dog that has just missed being licked and barks after the bigger dog; and the Allies shake their heads telling everybody: "We told them not to undertake such a hazardous enterprise without being thoroughly prepared" and look forward with great delight to more secret diplomacy and more intrigues to come.

To the simple-minded onlooker the solution to the Near Eastern question seems easy. Since the Greeks have failed to force the Treaty of Sèvres upon the Turks by force of arms the main clauses of that Treaty ought to be altered. The Smyrna district which, it was admitted in London last February, had unjustly been given to the Greeks, should be returned to the Turks. Thrace, where there are very few Greeks, should be divided between Bulgars and Turks who represent more than 75 per cent. of the population. The Tripartite agreement dividing Turkey into three zones of influence—British, Franch and Italian—should be cancelled. But this is not how the Allies look at the matter.

He then considers the respective attitudes of Italy and of France in conciliating Turkey, and comes to Great Britain's position:—

Great Britain's position is more complicated. Britain looks at the Turkish question more from the political than the economic standpoint. What will the Mussulman world say if the British Government yields to Kemal's demands? Some eight months ago the British Government still had time to make a *beau geste* and come to an understanding with Kemal Pasha, compelling the Greeks to evacuate Smyrna and Eastern Thrace. But at that time the British Government followed the policy of "punishing the Turk" and really believed that 150,000 Greeks, well equipped and supplied, would be able to annihilate the Kemalist army. It still believed that peace ought to be dictated and not discussed with the Turks; it considered as a bluff the various treaties between Kemal and the Mussulmans in Persia and Afghanistan; it believed that the Indians were not interested in the Turkish question. An intelligent Turk, one of their few statesmen, said to me once: "When Turkey was strong, the Mussulmans of other races under her rule were intriguing and bothering her; when Turkey was neither powerful nor weak, they were indifferent as to what happened to her; but now, when Turkey is down and out, they all rush to her succour." And this

Digitized by Google

is true. Remember the revolts of the Egyptians and the Arabs. Remember that during the Great War all the holy wars proclaimed by Turkey had no effect, yet now Egyptians, Arabs, Indians, Azerbaidjanese, Persians and Kurds send money and men to help her out of her troubles. The failure of the Greeks to defeat the army of the Turkish Nationalists has placed Great Britain in an unpleasant position. If the Government agrees to satisfy all the claims of the Turks, this will be interpreted by the Mussulmans as a sign of weakness and will perhaps give excellent propaganda material to various agitators in India and elsewhere. On the other hand, if Kemal's main demands are not satisfied, the British Government has no means to compel him to accept the terms of the Treaty of Sèvres. The Greek army, the main trump in the hands of the Allies, is demoralized and can no longer be counted on.

Kemal is to-day in a position to dictate his peace terms. Neither the Italians nor the French are willing to let the present state of affairs drag on much longer. Their Mussulman subjects are in another Continent and they are not afraid of them, even if a peace with the Nationalists were to be interpreted as a capitulation. On the other hand, they do not mind much if British prestige comes out of this affair much lowered and do not worry about the possible troubles the British Government may have to face in India. Great Britain, in the present situation, cannot but desire to delay the solution of the Turkish question as long as possible.

**Fealty to Faisal.**

Under the heading "The Fealty of the Tribes: A Chapter in the history of 'Iraq," the *Fortnightly* publishes (November) a picturesque description of King Faisal's reception by the Arabs of the Euphrates when he went among them to make himself known to them, and to receive the allegiance of their chiefs. The writer, "'Iraqiyah," gives a vivid account of the enthusiasm not only of the half-settled Arabs, but also of the true Desert wanderers, the 'Anizah and others, for the Emir—for a ruler of their own race. We have a good picture of Fahad Beg, Shaikh of the 'Anizah, "whose writ runs westward halfway to Damascus while his fame as a Ulysses among his people has spread to the extreme confines of Arabia." Mahrut, Fahad's son was the host of the party, but—

It was Fahad Beg himself who held out his hand to us as our boat touched the western bank of the river. Small of stature—his tall son overtops him by a foot—vigorous in mind and body under his 70 odd years, he has been a staunch friend of the Great Government since General Maude first entered Baghdad. Yet earlier friendships unite him with such of us as knew these parts before the war, when we made certain of safety and hospitality by pitching our tents beside his in the wide levels of the Syrian desert. There he holds his nomad court, with the black tents of his tribe clustered round him and the grazing camel herds which are his wealth covering the plains.

Under the bluff which ends the wilderness towards Euphrates floated the standard of 'Anizah, surrounded by the horsemen and camel riders which compose the striking force of the tribe. Mahrut leads them in battle; it is his task to guard our desert frontier against attack, but Fahad, now that he has grown old, keeps to the tents. There, sitting by his coffee hearth, he will draw open his shirt and show you a deeply pitted scar where the spear, driven between his shoulder blades, came out below his breast. "I looked down and saw the spear point, but my mare bore me on till the Shammar behind us desisted from pursuit. I was carried to a tent and the women tended me with herbs according to their knowledge. It was the will of God that I should recover, but afterwards I raided no more."

There follows some account of another important sheikh, 'Ali Suleiman, of the Dulaim, who is acknowledged as their paramount chief along two hundred miles of the river.—

His tribe, obedient to the laws of nature which for the last 6,000 years have driven the population of the Arabian peninsula to find a livelihood by the Mesopotamian streams, appeared some 300 years ago in the Syrian desert and gravitated to the Euphrates. There, no doubt, they absorbed or scattered the older inhabitants, their predecessors from Arabia, who for greater security had built their villages on islands in mid-river. At Alus, at Hadithah, at 'Anah you may see soaring mediaeval minarets, as well as the stone foundation of people yet older than the minaret builders, still earlier comers from the peninsula, as far back as the Assyrians.

Then came the turn of the Dulaim: Shammar, and on their heels 'Anizah, poured out of the southern waste, raided, robbed, and destroyed till they drove the half-settled Dulaim back into the confines of the island villages. But the Dulaim survived; they are a sturdy nation. They made terms with 'Anizah and pastured their flocks with those of the nomads in the Syrian desert; but with the Shammar, driven back into the plains between the two rivers, they maintained an enduring enmity. Gradually, as the Turks established a feeble hold over the Aleppo road, the cultivator gained greater security, but it is only in the last four years that he has come to his own. British troops at Ramadi revived his hopes that where he had sown he might reap the harvest, that even if he planted palm trees he might gather the fruit, and he set to work, 'Ali Sulaiman leading. Already the shaikh has doubled the area of his date gardens; but more than that, confident in our protection, he has invested his capital in permanent undertakings. A wide new bazaar, with ample accommodation for travellers above it, testifies to his activities; he finances the water supply of the town, he promoted the buying of the electric light plant from the British Army when it evacuated Ramadi, and under the guidance of British engineers he is digging a canal from the Euphrates almost to Baghdad, whereon his turbulent tribesmen will find peaceful and profitable employment.

Ir was at Ramadi that the great scene of the tour was enacted. Here—

An immense black tent stood by the river bank. At the upper end was a dais walled in on three sides with screens of green boughs through which a cool air blew from the river. Here sat the Amir with Fahad Beg by his side, while 'Ali ranged the tribesmen in their appointed places. They stretched so far that no voice could have carried more than half their length and before he spoke Faisal summoned them up to him. They sat below the dais, five or six hundred men wrapped in brown mantles, their hands folded in long white sleeves, their heads covered with the red kerchief of the Sunni tribes and crowned with a black rope of camel's hair. There, Faisal, leaning forward in his high seat, lifted his hand and spoke, and he spoke as a chieftain of tribesmen in the sonorous language of the desert, with command and injunction and question to which his audience gave deep-tongued answer. So it has been in such gatherings since the earliest days of Arab civilisation, when the tribes assembled in the Days of Ignorance, before the preaching of Islam, to hear the recital of verse which is yet preserved. And as the poet chanted, his hearers broke into his ode with their applause: "Yes, yes, by God the truth! He speaks the truth!"

Faisal was at home in these surroundings. "For four years," he began, "I have not sat in a tent, nor in such company. I have come to help you to restore your land to its ancient glory and I claim from you your help. If we would work we must have peace—oh, Arabs, are you at peace with one another?"

"We are at peace," they answered.

"From this day——" he continued. "What is the date?"

Some one gave him the Muhammadan month and day.

"And what the hour?"

The Arab hour was given—four o'clock, an hour before noon.

"From this day, the nineteenth of Dhul Qada and the hour 4, any tribesman who lifts his hand against a tribesman is responsible to me. I have my rights over you as your lord."

"And our rights?" cried out a white bearded shaikh.

"And you have your rights as subjects," he answered, "which it is my duty to guard. I guard the peace of the land—can we prosper without peace?"

"True, by God!" they shouted.

"And I will come among you, and with your chiefs in council I will settle your differences."

Then Fahad took up the word.

"Oh, Arabs," he said, "does this content you?"

"We are content," they answered.

With that Shaikh 'Ali and Fahad Beg, standing one on either side of Faisal, took the oath of allegiance to him as king, "because," they added, "you are acceptable to the British Government."

Faisal turned smiling to the one or two British officers who were sitting near.

"There is no doubt," he said, "of my relations with the British Government, but we must settle our own affairs among ourselves."

Thereupon 'Ali stepped to the edge of the dais and called up the shaikhs of the Dulaim. One by one, to the number of thirty or more, they strode up to Faisal, and laid their hand in his hand in token of personal fealty. For this is the religious law of Islam: a man may seal the formula of allegiance, yet he is not bound to personal service unless he has given his hand to his lord.

The great moment of the day was over and we turned out thoughts to feasting.

The article concludes with a silhouette of Faisal standing up to recite the evening prayer. "With his face towards Mecca, the birthplace of his ancestor, the Prophet, he prayed and bowed his forehead to the ground in the prostrations ordained by his faith. We sat silent, but I think that in spirit we prayed with him . . . ."

## DALMATIA TO-DAY.

Last Friday those who desired to hear something on the Italian-Yugoslav controversy from the Italian point of view, had the opportunity, when Captain Goad addressed the British Italian League at 74, Grosvenor Street, describing his recent experiences in Dalmatia. The trade of Trieste, he said, had immensely diminished, due partly to the confusion of the hinterland which consequently, had no exports, and partly to the Yugoslav method of placing tariffs on goods from Trieste going through their country to Hungary or Austria. This had decreased imports. The slump in shipping and the American restriction of immigration had also affected the port adversely. Zara was an Italian enclave and the headquarters of the third zone of occupation. The results upon it of the evacuation of that zone would be disastrous, its trade would come to an end. Sebenico had seemed to him like a dead city. The principal thing that had struck him was its marvellous harbour. The ship had passed into what appeared like an inland sea, through a channel of deep water about two hundred yards wide, with a fort on one side surmounted by the Venetian lion. In the harbour four great steamers lay rusting. They were part of the old maritime fleet of Austria, and had been handed over to the Yugoslavs who could make no use of them. Except the loafers round the pier he had found very few people in the town. Asking how this was he was told that two thousand had emigrated, going mostly to Istria.

Speaking of political conditions he said that in Spalato, although the population was mainly Italian, the street names were written up in Cyrillic characters. The Italians told him they had no schools; these had been closed by the Austrian Government when Italy went into the war and had never been reopened. They were not even allowed to put an Italian inscription on a tombstone. There was no endeavour made to save the Venetian relics of the town, as apart from those of the ancient Romans; the opportunity of pulling down Venetian windows and such things was gladly taken. The Italians had no redress for the insults they continually received.

The Croats had impressed Captain Goad as a singularly smileless, politically intense people. They loathed the present régime; there was a sort of Balkan tyranny, a lack of justice and a militarism above all that they had not experienced under the Austrians.. The great danger was lest Serbia should endeavour to rule Dalmatia by setting Croats and Italians one against the other, and by the illusion of Italian imperialism, which was steadily kept up. The remedy for the existing state of things was the decentralisation of the new power and autonomy for Dalmatia.

## THE NAVY IN THE CASPIAN.

A spirited little affair in which the British flotilla under Commodore D. T. Norris in the Caspian Sea, won considerable renown in May, 1919, is recalled by the Admiralty announcement of the award of prize bounty. The bounty, which is now ready for distribution in the Department of the Accountant-General, is granted to H.M. ships Kruger, Venturi, Asia, Windsor Castle, and Emile Nobel, together with certain airmen from the seaplane carrier Alader Yousanoff, for the destruction of eight Bolshevist armed vessels at Alexandrovsk. At this place the main part of the Bolshevist force, including five armed merchantmen, eight destroyers, 14 small armed motor-boats, and two gunboats, were assembled, and after an aerial reconnaissance and bombing raid Commodore Norris's flotilla made a determined attack, pressing on up the harbour under a heavy fire. In addition to the eight vessels destroyed others were injured or rendered immobile from want of oil. The affair definitely curbed the Bolshevist naval power in the Caspian.

## LORD KITCHENER MEMORIALS.

In view of the wide interest that has been taken in the Lord Kitchener Memorial Chapel in St. Paul's Cathedral, the Executive Committee of the Lord Kitchener National Memorial Fund desire to announce that certain modifications in the original scheme have been made in accordance with the suggestions of Sir Aston Webb, President of the Royal Academy; Sir Thomas Brock, R.A.; and Sir George Frampton, R.A., who placed their advice at the disposal of the Committee. It is hoped that the models for the new design will be ready for submission to Sir Aston Webb and his colleagues early in the New Year.

At a dinner given by Mr. Ralli at the Café Royal on November 28 to the Lord Kitchener Scholars, it was decided to form a Lord Kitchener Scholarship Association, in which will also be enrolled the ex-Service officers and men, numbering 200, who obtained Lord Kitchener Scholarships at the end of the war. The income from the Lord Kitchener Fund will probably permit of 50 to 60 scholarships being annually granted, so that in years to come the Association will be a very large body. A committee of the scholars was constituted, including representatives from the Imperial, King's, and University Colleges, and the London School of Economics.

## THE KING TO THE AMEER.

The King has sent the following telegram to the Ameer of Afghanistan: "To His Majesty Ameer Amnullah Khan of Afghanistan. On the occasion of the conclusion of a treaty of friendship between my Government and the Government of Afghanistan, I desire to convey to your Majesty this expression of my sincere pleasure at the restoration of friendly relations between us, together with my earnest hope that these relations may long continue, and may contribute, as I am sure they will, to the prosperity and peace of my Empire and of Afghanistan. GEORGE R. I."

## THE INDIAN COUNCIL.

Mr. Bhupendranath Basu, who has been a member of the India Council for four years, has left for Calcutta on leave until the middle of April. His health has been somewhat indifferent of late, but he will return for a further spell of service in Whitehall unless his medical advisers strongly urge his resignation. In the ordinary course his membership, begun before the reduction of the statutory period to five years, would extend to November, 1924. His Mohammedan colleague, Sahibzahda Aftab Ahmad Khan, is in India, having gone out in anticipation of being followed within three or four weeks by the other members of the Lytton Student Committee, but, meanwhile the Legislative Assembly refused the grant required for the cost of the Committee's tour. The other Indian member, Mr. Dadiba Merwanjee Dalal, took his seat last week, and has been appointed a member of the Finance Committee.

## RUSSIAN REFUGEES.

The Russian Refugees Relief Association announce that in response to the appeal published in the *Morning Post* they received up to November 25 donations for the refugees in Constantinople to the amount of £156 13s. 7d., and that a considerable amount of clothing was also received. On November 24 £200 was forwarded by the Association to the central committee of the Russian Red Cross, Russian Zemstvos, and Russian Towns in Constantinople, which distributes food to the most destitute among the refugees in that city. Four bales of clothing are being despatched to Constantinople through the British Red Cross.

## NEWS IN BRIEF.

According to the latest statistics the total number of Russian refugees in Bulgaria is 35,000, of whom 7,000 are in the district of Sofia.

An agreement between the British and Greek Governments (Cmd. 1554, 3d.) signed in Athens on September 9, 1921, provides for the recognition of the Imperial War Graves Commission as the sole British authority charged with the care of British military graves in Greece.

About 4,700 more refugees from Cilicia are expected to arrive in Smyrna in ships provided by the Hellenic Government, which has ordered all refugees to be disinfected and vaccinated.

M. Stratos, leader of the Reform Party in the Hellenic Chamber, now possesses an official newspaper in Athens owing to the appearance recently of the *Ephimeris ton Sizitisseon*.

As Bulgaria has been unable to recruit gendarmes for 12 years' service the Conference of Ambassadors has authorized the reduction of the period of service by half.

Brigands stopped a postal motor-car near Gabes, in Tunis, and murdered the driver, a French lady, and a French officer. Two other passengers were wounded.

Marshal Franchet d'Espérey arrived in Tunis on December 2 and proceeded to the headquarters of the French Occupaton troops.

During a violent storm off the island of Trianisia, 56 miles west of Rhodes, last week, the Italian destroyer Centauro was sunk, without loss of life.

Ferid Bey, the diplomatic representative of the Nationalist Government at Angora, arrived in Paris last week.

In recognition of the generous hospitality shown by the Ameer of Afghanistan to the Dobbs Mission, the Government of India has presented the Ameer with sufficient telegraph material to link up the 400 miles separating Kabul from the Indian telegraph extension at Herat *via* Kandahar.

General Gouraud, French High Commissioner of Syria, has issued a proclamation to the inhabitants of Cilicia, in which he expresses confidence in the guarantees given by the Nationalist Turks, and urges the Cilicians to remain under the promised protection of the Ottoman Government, assured that they will always have the full solicitude of France.

According to a Moscow message the Commissar Tchitcherin is to take part in the forthcoming Angora Conference with delegates from Turkey, Persia, India, Afghanistan, and Transcaucasia.

According to a message from Tunis, some difficulty has arisen between the French authorities and the British Consul there with regard to the conferring of French nationality on Maltese in Tunis.

The League of Nations Secretariat has received from the Greek Government a Note protesting against Albanian action in Koritza. This Note, which states that the Albanians occupied Greek schools and expelled the Greek Metropolitan, will be forwarded to the members of the League Council.

The 1st Battalion Loyal Regiment (North Lancashires) left Devonport on December 1 for Southampton to embark for Constantinople. The battalion was brought home from Malta early in the year, and has served until recently in Ireland.

## THE EXPANSION OF ISLAM. II.

**"THE NEW WORLD OF ISLAM." By Lothrop Stoddard, A.M., Ph. D. (Harvard). London: Chapman and Hall, Ltd. 16s. net.)**

The Indian peninsula is a geographical unit by virtue of its mountain and ocean barriers, but its political unity is a modern achievement. Peopled by many races which are kept apart by diversity of blood, language, creed and culture, it has always succumbed to foreign invasion. In the 11th Century of our era an Afghan prince established Islam in the Punjab, and succeeding Moslem leaders extended its sway over Northern India. Their creed attracted the lower grades of the Hindu hierarchy,who found in its conception of human brotherhood a refuge from the contempt of their priestly tyrants. An overwhelming majority of the 70,000,000 Mohammedans who inhabit India descend from Hindus who voluntarily emhraced Islam, or were compelled to adopt its tenets. In the 16th Century a Turko-Mongol dynasty obtained hegemony; but the empire welded together by Akbar's statesmanship was destroyed by the intolerance of his successors. The Hindu princes rose in revolt, provincial satraps assumed sovereign power, and India was plunged in anarchy from which it was rescued by an association of British merchants, compelled by circumstances to found an empire. It is needless to relate the rise of the British "Raj," which has given India 150 years of almost unbroken peace; but Professor Stoddard's opinion of the régime which has been superseded by "Dyarchy," deserves quotation :—

> It was the government of a few hundred highly-skilled administrative experts, backed by a small professional army, ruling a vast agglomeration of subject peoples. It was frankly an absolute paternalism, governing as it saw fit, with no more responsibility to the governed than the native despots whom it had superseded. But it governed well. In efficiency, honesty, and sense of duty the government of India is probably the best example of benevolent despotism that the world has ever seen. It gave India profound peace; played no favourites, holding the scales even between rival races, creeds and castes. Lastly it made India a real political entity—something that India had never been before. Yet the very virtues of British rule sowed the seeds of future trouble. Generations grew up united in unprecedented acquaintanceship, forgetful of past ills, seeing only European shortcomings; and, above all, familiar with Western ideas of self-government, liberty and nationality. In India, as elsewhere, there was bound to arise a growing movement of discontent against Western rule—a discontent varying from moderate demands for increasing autonomy to radical demands for immediate independence.

In diagnosing the symptoms of Indian unrest Professor Stoddard travels far from his thesis. Suffice it to remark that Indian Moslems are divided on the question of Nationalism, with its side issues of non-co-operation and *Swadesh*. The great majority dread the recrudescence of Hindu supremacy which it apparently involves; but some are inclined to join forces with the half-educated proletariat which clamours for complete autonomy. India, in short, has entered on an era of transition fraught with pain and peril.

Professor Stoddard's concluding chapters deal with the economic and social factors which favour the speed of revolutionary leaven. Chief among them is the unquestionable fact that mouths to feed are increasing in a greater ratio than means of subsistence. Thanks to freedom from the warfare, pestilence and famine which kept it down, the population of India has trebled in a century; while the arts and crafts which sustain human life are still incredibly archaic. Hence an unprecedented rise in the price of necessaries, which falls with special stress on the *intelligentsia*. The latter ascribe their sufferings to foreign rule; but an upward trend of prices prevails throughout the civilised world, owing partly to the wastage of war, but chiefly to the reckless multiplication of the human species. The lesson taught by Professor Stoddard's lucid survey of the economic problem is that political reform is not a panacea for social ills. A first step in the upward ladder will be made when education shall have brought home to every family in the land the absolute necessity of prudential self-restraint.

This consummation lies in the womb of the future, and it is threatened by destructive forces which may involve the social-political and economic organization of Hither Asia in irretrievable ruin. Russian Bolshevism—a direct result of the Great War—aims at the overthrow of Western civilisation. There are two stages in its insidious propaganda. The first renders lip-respect to Oriental creeds, and supports all rebellious movements; the succeeding stage bans religion and Nationalism as "bourgeois" devices to keep men under the yoke of Capitalism. It cannot be doubted that the volcanic conditions prevailing in Hither Asia are in great measure due to Bolshevist propaganda. The masses in India and Egypt have none of the bulwarks which protect Western societies from a powerful dissolvent; and their plight wears an ominous resemblance to that of pre-revolutionary Russia. They are emotional, credulous, and densely ignorant; there is no powerful and enlightened middle class; the tradition of age-long despotism breeds acquiescence in the rule of minority. Professor Stoddard sounds a timely note of warning in his peroration :—

> If the triumph of Bolshevism would mean barbarism in the West, in the East it would mean downright savagery. The sudden release of the ignorant,brutal Oriental masses from their traditional restraints of religion and custom, and the submergence of the relatively small upper and middle classes by the flood of social revolution would mean the destruction of all civilisation and culture, and a plunge into an abyss of anarchy from which the East would emerge only after generations, perhaps centuries.

F.H.S.

## "TO THOSE WHO MAY FORGET."

**"WHILE I REMEMBER." By Stephen McKenna (London: Thornton Butterworth. 21s. net.)**

In his preface Mr. McKenna very ably explains why, at the age of thirty-three, he is writing a book of reminiscences. He is urged to do so, as was Mr. Shane Leslie when he wrote "The End of a Chapter," by the feeling that the point of view of someone who is young and therefore not very far from any of his own experiences, and who can still look forward, must be more interesting than that of one who has reached old age. Decidedly, such an arrangement has obvious advantages, but that certain degree of detachment, which is really necessary to a book of reminiscenses, must be lacking. It is noticeable that the best chapter is the second, which is called "A Setting and a Date," and which contains a kind of summary of the manners, politics, literature and dramas of the '90s, given in order to produce the right atmosphere in which to begin an account of the time through which those who were born about thirty years ago have passed. This chapter, which deals of course with impressions gained in childhood and with facts which are becoming definitely historical, achieves, because of the better perspective given by distance, a greater clarity and gives a more definite idea of a period than the rest of the book, which is written in the spirit of partisanship and in the turmoil of strongly held political opinions.

Digitized by Google

No reader can doubt that it was worth while for Mr. McKenna to write, in the words which he knows how to set racing with such a swift stormy current, his impressions of Westminster, Oxford, life in London before the War, a Government Office during the War, and of England since the Treaty of Versailles was signed. The reader might, however, be forgiven for remembering that Mr. McKenna has already given his impressions of all these things more vividly and with greater force in his novels; notably—of all but the last—in "Sonia," from which we feel sure that a future generation will be able to form a clearer picture of the times—and also for that matter of the aspirations of those members of the Liberal party who were very young in 1906—than will be possible from this book of things remembered. It is strange and interesting to find the author, as he passes quickly along, commenting on the Marconi case, the doings of the militant suffragettes, and the Ulster trouble of 1914, and to remember how few years it is since everyone discussed these events long and loudly and to realise to what an incredibly distant age they seem to belong. Through his success in reproducing an atmosphere Mr. KcKenna helps those of his own generation to recall many half forgotten sensations. At the present time, when the Washington Conference is taking place, the diary of the author's visit to Washington as a member of Mr. Balfour's Mission in 1917 is especially interesting. There is one curious chapter in which literary snobbishness in London and the tiresomeness of its effect on an author are vehemently condemned. It seems to be out of place here and to have little connection with the other chapters. Readers of Mr. McKenna's novels will not need to be reminded of his opinion of London Society and its "gilded hooliganism;" he sums it up in his preface where he says that society has "passed in thirty years from the civilization of the Stone Age, to that of the Cities of the Plain."

The result of writing so near to the events described is that the strongest impression left on our minds as we close the book is not that we have just been given some graphic sketches of the life of that generation so many of whom never passed beyond their early youth. It is of the fact that Mr. McKenna combined all his shining ideals and all his generous hopes for the attainment of mankind's greater happiness with his ardent faith in the Liberal party, and that he now stands dismayed at the side of its grave, exclaiming bitterly that his "political idols have been flung on their faces." But it would be impossible for one who has nothing but fierce scorn for those whose consciences can rest until everyone "is secure from disease and premature death; from pain, hunger, thirst and cold; from spiritual and intellectual fear; from terror of his fellow-men; from the educational inequality that sets him at a disadvantage with others; from the grievance that comes of a blow struck to his racial or religious sentiment" to end on a note of pessimism. He is comforted to feel that, just as it had been ten years earlier, "Oxford is still the kingdom of youth and idealism still flourishes in its shelter," and he finishes his record by expressing the belief that if the Liberal party, to which he had given his wholehearted devotion and to which he feels that he must still look for the creation of a better scheme of things, lacks a leader, "it is only for a moment."

## FASHIONABLE DIVERTISEMENTS.

**"THE ROMANTIC LADY." By Michael Arlen (London: Collins, 7s. 6d. net.)**

Last year Mr. Dikran Kouyoumdjian, the Armenian author who writes English under the name of "Michael Arlen," published a book called "The London Venture." It was a series of vivid impressions, brilliantly done, but a little lacking in proportion. In this collection of four stories, which takes its title from the first of them, much the same qualities are evident: a mordant, searching power of criticism, and a certain waste of energy in the undue concentration upon rare aspects of human life. These stories, of which the first, "The Romantic Lady," and the third, "Consuelo," are the best, turn for the most part upon the loves of men and of women, and particularly on the fashionable way of conducting such affairs. Now in Mr. Arlen's stories there is perhaps naturally, and certainly mercifully, no one who even distantly approaches to Mr. Kipling's "If" type; but really the opposite type of man, who knows more about a married woman than her husband knows, whose honour can be bent and straightened in a day, and whose vaunted obsession is sex, is as boring as the other is nauseating. In a word, the characters in this book do not hold us, they mildly stir an interest.

What does interest us, however, is the extraordinarily serviceable technique of Mr. Arlen. It is a technique which enables him to present almost perfectly alike the background or atmosphere of his tales and the conversation of his agents. His skill in our language is really marvellous; and though for ourselves we do not greatly care for his book as a book, we have no doubt that those who like this sort of thing will very well like it.

## THE BOMBAY HANSARD.

**"OFFICIAL REPORT OF THE BOMBAY LEGISLATIVE COUNCIL DEBATES." Vols. i, ii. (Bombay, 1921.)**

We have received the first two volumes of these reports, covering the sessions of March and April last. In point of form they are pleasing, well printed on good paper; an index is badly wanted, but we suppose this will be provided in due course. As regards the matter, even a cursory notice would run to many pages of this journal; the debates appear to have touched every topic of local interest, and possibly a few others, and a rough calculation indicates that not far short of a million words were spoken during these two sessions. To say more would be superfluous.

## BOOKS RECEIVED.

"War Government of the British Dominions." By Arthur Berriedale Keith, D.C.L., D. Litt. (Oxford: The Clarendon Press. Published on behalf of the Carnegie Endowment of International Peace. 10s. 6d. net.)

"Zionism and World Politics." By Horace M. Kallen, Ph. D. (London: William Heinemann. 12s. 6d. net.)

# Cambridge University Press

**Studies in Islamic Mysticism.** By REYNOLD ALLEYNE NICHOLSON, Litt.D., LL.D., Lecturer in Persian in the University of Cambridge, formerly Fellow of Trinity College. Demy 8vo. 24s net.

"Dr. Nicholson, by a long series or editions, translations, and essays has acquired a European reputation as a master of this subject . . . Dr. Nicholson's work leaves nothing to be desired from the point of view of either learning or taste, and, though chiefly interesting to specialists in Islamic matters, should serve to enlighten a far wider public on what William James called the varieties of religious experience."
*The Saturday Review.*

**Studies in Islamic Poetry.** By the same author. Demy 8vo. 26s net.

"Dr. Nicholson's *Studies in Islamic Poetry*, issued in a beautiful volume by the Cambridge University Press, presents a fascinating account of Early Persian and Arabic poetry. Not only is the critical and historical material of the utmost value, but Dr. Nicholson provides a large number of fine renderings in prose and verse of all the quotations."
*The Jewish Guardian.*

**Arabian Medicine.** Being the Fitzpatrick Lectures delivered at the College of Physicians in November 1919 and November 1920. By EDWARD G. BROWNE, M.B., F.R.C.P., Sir Thomas Adams's Professor of Arabic in the University of Cambridge. With a frontispiece. Demy 8vo. 12s net.

"There is always a fascination about the medicine of the East, especially that of bygone days, and the early phases of the healing art as practised by the Muslims of the eighth to the thirteenth centuries A.D. could not have a better exponent than Professor Browne. . . . The book is a scholarly review of a very interesting subject and forms delightful reading. It well repays perusal."—*The Prescriber*

# PERSONAL AND GENERAL.

**To-Day.**

December 8 (New Style).
November 25 (Old Style).
Rabia II, 9, 1340 A.H. of the Moslem Calendar.
Kislev 7, 5682 of the Jewish Calendar.

The Aga Khan has arrived at Nice from Paris.

Viscount Milner, has taken his departure for Spain, and will be absent about a fortnight.

Lord Cawley has left Berrington Hall, Leominster, for Gallipoli, *via* Constantinople.

Sir John Norton-Griffiths, M.P., has returned to England from South America.

The insignia of arch-priest of the Serbian Church has been presented to the rector of St. Magnus the Martyr, London Bridge.

Sir Cecil and Lady Lowther are leaving for Hammam R'Irha, Algeria, and will not return until the meeting of Parliament.

General Sir Bindon and Lady Blood have arrived at their flat, 59, Cadogan Square (telephone, Kensington 416), which is now their permanent address.

The King received in audience at Buckingham Palace last week Mirza Davud Khan, Miftah es Sultaneh, who presented his credentials as Persian Minister.

Marquess Curzon of Kedleston has left London for Kedleston. Marchioness Curzon of Kedleston remains for the present at 1, Carlton House Terrace.

On December 2, the Hon Francis Lindley was received in audience by The King and kissed hands upon his appointment as His Majesty's Representative at Athens.

The Grand Duchess George of Russia was the guest of the Greek Chargé d'Affaires and Madame Rangabe at luncheon on December 2 at the Legation.

The offices of the Roumanian Military Attaché have been transferred from Marble Arch to the Legation in Cromwell Place, Kensington.

The Earl of Altamont, the Hon. G. H. Pelham, and Sir Robert and Lady Hay Drummond-Hay are among the recent arrivals at Cairo.

The Countess of Ronaldshay has sailed to join the Earl of Ronaldshay at Calcutta, and will be away till March.

The engagement is announced between Gervase Gorst Smith, of Colombo, Ceylon, and Gladys Alford, only daughter of Mr. and Mrs. Ronald Alford, of Hankham Place, Sussex.

The engagement is announced between Danby Robins Wheatley, S.I., and Guinivere Isabelle, only daughter of Mr. and Mrs. J. I. Craig, Woolwich House, Sydenham, lately Cairo, Egypt.

After being absent from Bulgaria since October, 1918, the two sisters of King Boris, the Princesses Eudoxia and Nadejda, returned unexpectedly to Sofia on December 3. Their return has been well received in the country, not only on their own account; for they are deservedly popular, but also because the attachment of the King to his two sisters is well known and much sympathy has been felt for him in his loneliness during the last three years.

The marriage arranged between R. V. M. Buchanan, M.C., R.E., and Geraldine, only daughter of G. Keatinge, C.I.E., of Teffont Ewyas, Salisbury, will take place at Teffont Ewyas on December 29.

A marriage has been arranged between Major J. C. Field-Richards, late Hampshire Regiment, and Marion, widow of Lindsay J. A. Daniell, of 25, Ovington Street, S.W., and youngest daughter of Sir Steuart Colvin Bayley, G.C.S.I., K.C.I.E., and Lady Bayley.

The marriage took place on November 26, at Brompton Oratory, between Brevet Major Frederick Corbett Hickie, Supply and Transport Corps, youngest son of late John Hickie (Survey of India), and Margaret Annie Macdonell, eldest daughter of late Cuthbert MacDonell.

M. Mavromichaelis, the Hellenic Minister of Marine, and Admiral Aubrey Smith, head of the British Naval Mission to Greece, arrived in Constantinople on November 28, to discuss the question of reinforcing the Black Sea Squadron.

A marriage has been arranged between Major A. Thompson, 112th Infantry, Indian Army, youngest son of the late Joseph Thompson, of Wandly, Brough, and Josephine Mary, daughter of E. P. Hutchinson, Elloughton, East Yorkshire.

The marriage was celebrated on December 1, at St. John's Church, Paddington, by the Rev. R. H. Hutchinson, assisted by the Rev. A. S. V. Blunt, between Douglas Hamilton Coats, Captain, R.A.M.C., and Eileen Constance, daughter of Lieut-Colonel F. H. G. Hutchinson, I.M.S.

A marriage has been arranged, to take place in Calcutta early next year, between Reginald Bousfield Lagden, M.C., late Rifle Brigade, eldest surviving son of Sir Godfrey Lagden, of Weybridge, and Christine, youngest daughter of the late Lieutenant-Colonel C. H. Haig, Royal Engineers.

The engagement is announced between Patrick Shaw (late 6th Cameron Highlanders), son of the late Sir Andrew Fraser, K.C.S.I., and Lady Fraser, of Auchenleish, Glenisla, Alyth, N.B., and Peggy, daughter of Mr. and Mrs. W. A. McArthur, of 25, Barkstone Gardens, S.W.

The marriage was celebrated on November 18, at the Cathedral, Bombay, between Captain T. Franklyn Pearse, 120th Rajputana Infantry, Indian Army, eldest son of Major R. E. Franklyn Pearse, and of Mrs. Pearse, Brown Heath, Buxted, and Madge, niece and adopted daughter of Mrs. Tucker, The Chantry, Buxted, Sussex.

The marriage took place on September 20, at the Afghan Memorial Church, Colaba, Bombay, India, between Westley Stokes, V.D., M.I.M.E., M.I.S.E., M.Inst.T., eldest son of Westley Stokes, of Goring-on-Thames, Oxon, and Jennie Catherine, elder daughter of Richard and Mrs. Harwood, of Bombay.

The marriage was celebrated on November 19, at the British Consulate, and on November 22, at the Embassy Chapel, Constantinople, by the Rev. Canon Whitehouse, between Captain Charles Edward Gray, I.A., elder son of Mr. and Mrs. E. W. Butler Gray, Chorley Hall, Bridgnorth, and Ruby Kathleen, daughter of Mr. and Mrs. Arthur Baker, Constantinople.

The marriage was celebrated on November 25, at Christ Church, Colombo, by the Rev. W. S. Senior, between Gerard Linton younger son of General Sir Henry Watkis, K.C.B., and Lady Watkis, of Farnborough, Hants, and Marjory Eveline Noel, third daughter of Captain W. W. Gascoyne and Mrs. Gascoyne, of Westwell, Ashford, Kent.

Digitized by Google

The marriage took place on November 24, at St. Thomas' Cathedral, Bombay, between Captain William Forster Charter, M.C., 40th Pathans, only son of the late Mr. and Mrs. W. F. Charter, and Enid Constance Maud Wathen, only daughter of the late Charles Trevelyan Wathen and Mrs. C. T. Wathen, 2, Windsor Terrace, Glasgow, N.W.

Captain F. Entwistle, D.S.O., M.C., who was recently killed in the gallant defence made by a company of the 92nd Punjabis at Barshov (45 miles noth-west of Quetta) when they were outnumbered and overcome by Wazir raiders, joined the Indian Army in 1920. He gained his D.S.O. for heroism in Palestine, where, in December 1917, he took part in the first raid on Amman.

## APPOINTMENTS AND PROMOTIONS.

Mgr. Vicentini, Papal Internuncio at The Hague, has been appointed Apostolic delegate at Constantinople.

Captain John D. Kelly, C.B., A.D.C., has been promoted to the rank of Rear-Admiral, with seniority, November 21, 1921. At the outbreak of war Rear-Admiral Kelly was in command of the light cruiser Dublin on the Mediterranean Station, in which ship he played a prominent part in the chase of the Goeben and the Breslau. He is at present Director of the Operations Division of the Admiralty Naval Staff.

## OBITUARY.

Lieutenant-Colonel Robert Shelton, D.S.O., R.A.S.C., died last week. He first saw active service in the Somaliland Expedition of 1909-10. For his services there he received the African General Service Medal and bar.

The death occurred at Mirzapur last week of Mr. Frederick Samuel Philip Swann, C.I.E., of the Indian Civil Service, aged 50. He reached India at the close of 1894 and his service was wholly in the United Provinces where he reached the grade of Commissioner in 1909. He received the C.I.E. in 1915 for famine work.

The death is announced from Haifa of Sir Abdul Baha Abbas el Bahai, the leader of the Bahai cult. The religious movement called Bahaism had a profound influence in the Middle East, and its powers of attraction extended even to Western Europe and America. It may be remembered that a series of letters contributed to *The Near East* in 1911 by Mr. Francis H. Skrine gave an exhaustive account of Bahaism as a universal religion.

The death has occurred suddenly, at the age of 58, of Brigadier-General George Fraser Phillips, C.B., C.M.G., who gained a European reputation owing to the ability he showed in administering Scutari, in Albania, during a period of international crisis. It was in 1913 that he was appointed to command the International Force at Scutari, where he evolved order out of what was really chaos. During 1915-16 he was Military Attaché with the Serbian Army, and in 1916-17 was head of the British Military Mission in Greece. He went back to Albania from 1918 to 1920 on behalf of the British Government, and his personal prestige greatly helped the Albanians in the re-organization of their country.

The death has taken place of Mr. Robert Watson Frazer, LL.B., the Orientalist, at the age of 67. He had experience as an administrator in the Madras Civil Service, to which he went out in 1877. Upon his return home he was appointed to the staff of the London Institution in Finsbury Circus, and was secretary and principal librarian up to the time of its absorption by the School of Orintal Studies. At the School he was lecturer in Tamil and Telugu. He wrote extensively on India, his best known books being "British India," "Literary History of India," and "Indian Thought, Past and Present."

## LEADERSHIP OR DRIFT.

Although Palestine continues to be administered satisfactorily, no real progress can be said to have been made towards a settled form of government under a definite constitution; nor can this be looked for until Arabs and Jews have composed their differences or at least agreed upon some measure of co-operation. Four months have passed since the Arab Delegation came to London to submit the Arab case to the British Government, and until it returns Palestine remains, politically, more or less in a state of suspended animation. The attempt of the High Commissioner to make the draft constitution a subject for local study and dispassionate consideration broke down in the face of the Arab refusal to serve on the consultative body pending the issue of the Delegation's visit to London. Meanwhile the Delegates find it difficult to make any headway; the British Government was by no means anxious that they should come to England, and now finds itself hampered in discussion by other preoccupations. But perhaps the main reason for the lack of progress in the negotiations is that the two parties have not decided upon a common goal towards which they can try to advance. The Arab demands have been formulated, and as they include "the abolition of the present policy in Palestine," their goal may be said to be an Arab State in which Zionism shall not count. Great Britain, on the other hand, stands committed to a policy in which Zionism most certainly does count. There is only one way of effecting a compromise between these two divergent views; it is for the Mandatory Power to declare, in terms which can be easily understood and admit of no doubt, exactly how much Zionism is to count in the new State. The Arabs will then know where they stand; if they are satisfied with the explanation, well and good, and all parties can co-operate to a definite end; if the Arabs are not satisfied, they will have to decide whether they will suppress their disappointment and make the best of the situation, or whether they will jeopardise the interests of Palestine as a whole, as well as their own, by permanent hostility to the Administration. As far as can be judged, the British Government hesitates to take the natural straightforward course. Since the Armistice cajolery has ousted leadership as the guiding principle of government; it may prove wonderfully successful in Paris or Dublin, but it is woefully out of place in the Near and Middle East. Jews and Arabs, Greeks and Turks, are invited to come to terms with one another, and surprise is expressed when it is realised that they have failed to respond to the spirit of the invitation.

Nothing but an explicit declaration on the part of the British Government as to the manner in which it proposes to provide for the co-operation of Arabs and Jews in the administration of Palestine will clear the air. So far British intentions have been expressed only in vague terms. The Balfour Declaration stated that "His Majesty's Government view with favour the establishment in Palestine of a National Home for the Jewish People, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country." Since then Sir Herbert Samuel, acting as the spokesman of the Government, has expressed in his first report his conviction that the satisfaction of the legitimate aspirations of the Jewish race in relation to Palestine is compatible with a full protection of the rights of the existing population. The measures to foster the well-being of the Arabs, he has pointed out, "should be precisely those which we should adopt in Palestine, if there were no Zionist question and if there had been no Balfour Declaration." At the same time Jewish aspirations are to be satisfied in so far as the Home is to possess "national characteristics—in language and customs, in intellectual interests, in religious and political institutions." Now, in spite of the fact that Sir Herbert Samuel can claim that these have been the principles which have guided the policy of the Palestine Administration during the last year or more, it is not difficult, in view of many exaggerated Zionist statements, to understand the Arabs' desire for a more definite statement which, they think, will enable them to conjure up a vision of Palestine, say, a score of years hence, with this or that post or department or institution carefully labelled Jewish or Arab. Certainly, the British Government cannot itself paint any such futurist picture, but it can more clearly indicate than it has already done how the greater prosperity of the country, through the development of Jewish enterprises, is not to be at the expense, but for the benefit, of the Arabs, how exactly the degree to which Jewish national aspirations can be fulfilled is to be conditioned by the rights of the present inhabitants. It is possible, if not probable, that the Arab Delegation would have received more enlightenment by remaining in Palestine and threshing the matter out with the High Commissioner and his consultative committee. But they have chosen to come to London, and it is to the interests of neither Great Britain nor Palestine that the present indeterminate position in the latter country should be prolonged. If the Delegation in London still holds that a "clear and satisfactory answer" has not been given to the Arab demands, it should be possible to convey authoritatively to it the British Government's resolve that the Jewish minority is to be represented in the Palestine Administration, and that, unless the Arabs agree at once to discuss amicably and on this basis the draft Constitution, the Government will proceed to give the document its final shape without further reference to them. In acting thus, however, the Government must be quite sure of its ground; it will have to be free from all partisanship and must frame a Constitution which will hold the balance even between Arab potentialities and the present superior capacity of the Jewish population.

Apart from Palestine's need for domestic peace, there is the risk of an indeterminate position being used as a motive of unrest throughout the Arab world. Transjordania can hardly fail to react to Arab sentiment within the boundaries of Palestine proper, and through it the various communities of Arabia will become, in greater or less degree, affected. It is a moot point whether the British Government should try to exert its influence on the Arab tribes of the Peninsula in the cause of peace, or should regard a measure of tribal warfare as a safety valve, and turn a blind eye towards it. Recently it was reported that the Sultan of Nejd had attacked Hejaz territory and had captured two towns. If the report were true, it would seem to be straining tolerance too much to allow Sultan Bin Saud, who is in receipt of a subsidy from the British Government, to make war on our Hejaz ally. But it has yet to be learned whether the incident is more than a frontier quarrel over debatable territory. Even so, the occasion offers for impressing upon all the peoples of Arabia that tangible signs of British good will are invariably conditional upon the keeping of the peace. Great Britain has no wish to interfere with their internal affairs, but she cannot remain indifferent to acts of warfare which may ultimately set the whole Arab world ablaze. Unless this attitude is made clear from the outset, the British Government may be storing up trouble for itself. The principle applies to all the peoples of the East. They understand and respect a strong, definite lead. It is unfair to them to adopt at first an easy-going attitude towards their most besetting sins, and then suddenly to draw them up because they appear to have overstepped an imaginary line of our own creation, of which they are entirely ignorant.

## THE MACEDONIAN QUESTION.

### A PLEA FOR AUTONOMY.

*From Our Sofia Correspondent.*

The speech delivered by M. Karandjouloff, the Macedonian delegate to the International Congress for the Rights of Small Nations, which was held at Geneva last September, was a masterly review of the Macedonian question. M. Karandjouloff, formerly a Judge of the Bulgarian High Court of Justice, has consecrated his life to the Macedonian cause, and is a well-known figure in Bulgarian and Macedonian politics. He devoted the beginning of his speech to a brief sketch of Macedonia as it was under the Turks, and went on to mention the names of well known European writers, who were all convinced that the granting of autonomy to Macedonia was the only sure way of assuring peace in the south-west corner of the Balkans.

The desire of the Macedonians to be freed from Turkish rule was very great, said M. Karandjouloff, and the first Balkan War of 1912 was hailed with joy, signifying as it did the union of all the Christian peoples of the Balkans against the hated Ottoman race. This joy was strengthened by the signing of an alliance between Serbia and Bulgaria, which provided for the creation of an autonomous Macedonian State, consisting of the country between Mont Char, the Rhodope Mountains, the Aegean Sea, and Lake Ochrida.

Alas, this alliance was soon annulled by the secret treaty, made on June 1, 1913, between Greece and Serbia, which laid down that Macedonia should be divided up among the Balkan countries, and that the only principle to be observed in the division of the country was that of occupation. This secret treaty was confirmed by the Treaty of Bucharest, and on this occasion no mention of Macedonia was even made by any of the signatory Powers, owing to its partition being regarded as the spoils of war. Macedonia was thus divided up into three sections, and Salonika, its most important town, was cut off from two-thirds of the interior. The next occasion on which the Macedonian question came up for international discussion was at the Peace Conference at Paris in 1919. One Great Power, America, with the support of Italy and Japan, proposed that Macedonia should be made into an autonomous State; but the proposal was overruled on the ground that the greater part of Macedonia already belonged to the Allies, *i.e.* to Greece and Serbia, and the fact of these two countries having signed the Treaty for the Protection of Minorities was considered a sufficient guarantee for the future welfare of the Macedonians.

The Great Powers, continued M. Karandjouloff, no doubt imagined that the protection of minorities would be strictly observed, but in believing this, they showed an ignorance of Balkan affairs; for neither Greece nor Serbia recognises the existence of a Bulgarian element in Macedonia. Statistics relative to the population of disputed territories, and especially Balkan territories, must always be accepted with a certain amount of reserve; but according to M. Karandjouloff, the Bulgarian element in Macedonia totalled a million in 1912. There were in 1910, i.e. before the first Balkan war, 1,100 Bulgarian schools, which were attended by 70,000 pupils. None of these schools now exists. There were also 1,300 churches, chapels, and monasteries, where services were conducted in the Bulgarian language. Greek and Serbian are now the only languages allowed to be used in these churches, whilst of the seven Bulgarian Archbishops whose authority was recognised by the Porte only one is left, the Bishop of Nevrokop, whose diocese is now incorporated in Bulgaria. As regards newspapers, no Bulgarian paper is permitted in Macedonia to-day, whilst no Bulgarian was able to present himself as a candidate for the Parliaments of Athens or Belgrade.

M. Karandjouloff then proceeded to speak of the 200,000 Macedonian refugees who were now in Bulgaria. He drew a touching picture of the life of these unhappy people, who, deprived of their money, their possessions, and often of their nearest relatives, were dragging out a miserable existence. More than 90 per cent. of these refugees, declared M. Karandjouloff, asked nothing better than to regain their homes, provided that they could be sure of enjoying freedom of religion, speech, and thought. These refugees were the children of parents who had for years struggled in a vain attempt for independence, and who would go on struggling, as their spirit was not yet broken and they still had faith in the final triumph of right and justice. In conclusion, M. Karandjouloff made an appeal to the Congress, and by its intermediary to the League of Nations, whereby the voice of the Macedonians might be heard, and, their demand for autonomy be granted.

M. Karandjouloff's speech expresses the views of practically all the Macedonians who are at present refugees in Bulgaria. These refugees are scattered all over Bulgaria, but about a sixth of them live in Sofia, and the quarter near the railway station is almost entirely populated by Macedonians. A few of them are Communists, but all of them are Nationalists in the sense that they desire above everything the autonomy of their country. They do not want Macedonia to be incorporated in Bulgaria, although they would prefer the latter country to Greece or Serbia.

The Macedonians in Bulgaria have come into some prominence lately, owing to the murder of M. Dimitroff, the Bulgarian Minister of War. It was M. Dimitroff who had a meeting with M. Pashitch at Belgrade last June, and it is understood that an arrangement was come to on this occasion whereby common action would be taken by Serbia and Bulgaria against the bands of *Komitajis* who had been active on the Serbo-Bulgarian frontier. During the summer months there have been not a few Macedonians killed in and near Sofia, and it was popularly supposed that M. Dimitroff was indirectly responsible for these deaths. This belief was strengthened by the Minister's having declared that he had received a warning from the Macedonian secret Committee, condemning him to death on account of his persecution of the Macedonians.

This secret committee has its headquarters in the Macedonian mountains, and is presided over by one Todor Alexandroff. M. Dimitroff did not take any special precautions against the threats levelled at him, and as readers of *The Near East* will remember, he, along with three others, was brutally done to death on October 22. This assassination was the signal for the wholesale arrest of many Macedonians, but although the Government state that the assassins were Macedonians, whose names are known, it seems that the actual assassins have not yet been run to earth. The Macedonians in Bulgaria are a very powerful factor, and no Government, however strong it may be, has ever been able to put a stop to their activities. The present Government may once have had the idea that they were capable of succeeding where others have failed, but the assassination of M. Dimitroff, one of the strongest men in the Agrarian Party, will probably discourage them from further meddling with these not too welcome refugees.

# GREAT BRITAIN AND EGYPT.

## The Recent Negotiations.

The text of the various documents issued by the Foreign Office on December 3 relative to the recent negotiations with the Egyptian Delegation is given below. The proposed Convention, which was rejected by the Egyptian Delegation, is as follows :—

Memorandum of Clauses of suggested Convention between Great Britain and Egypt, handed by the Marquess Curzon of Kedleston to Adly Yeghen Pasha on November 10, 1921.

I.—Termination of Protectorate.

1. The Government of his Britannic Majesty agree, in consideration of the conclusion and ratification of the present treaty, to terminate the Protectorate declared over Egypt on December 18, 1914, and thenceforth to recognise Egypt as a Sovereign State under a constitutional monarchy.

There is hereby concluded, and there shall henceforth subsist, between the Government and people of his Britannic Majesty on the one hand and the Government and people of Egypt on the other hand, a perpetual treaty and bond of peace, amity, and alliance.

II.—Foreign Relations.

2. The foreign affairs of Egypt shall be conducted by the Egyptian Ministry of Foreign Affairs under a Ministry so designated.

3. His Britannic Majesty's Government shall be represented in Egypt by a High Commissioner, who, in virtue of his special responsibilities, shall at all times be entitled to an exceptional position, and shall take precedence over the representatives of other countries.

4. The Egyptian Government shall be represented in London, and in any other capital in which, in the opinion of the Egyptian Government, Egyptian interests may require such representation, by diplomatic representatives enjoying the rank and title of Minister.

5. In view of the obligations which Great Britain has undertaken in Egypt, notably in respect of foreign countries, the closest relations shall exist between the Egyptian Ministry of Foreign Affairs and the British High Commissioner, who will render all possible assistance to the Egyptian Government in respect of diplomatic transactions or negotiations.

6. The Egyptian Government will not enter into any political agreement with foreign Powers without consultation with his Britannic Majesty's Government through the British High Commissioner.

7. The Egyptian Government will enjoy the right of appointing such Consular representatives abroad as their interests may require.

8. For the general conduct of diplomatic relations, and the consular protection of Egyptian interests in places where no Egyptian diplomatic or consular representative is stationed, his Britannic Majesty's representatives will place themselves at the disposal of the Egyptian Government, and will render them every assistance in their power.

9. His Britannic Majesty's Government will continue to conduct the negotiations for the abolition of the existing capitulations with the various capitulatory Powers, and accept the responsibility for protecting the legitimate interests of foreigners in Egypt. His Majesty's Government will confer with the Egyptian Government before formally concluding these negotiations.

III.—Military Dispositions.

10. Great Britain undertakes to support Egypt in the defence of her vital interests and of the integrity of her territory.

For the discharge of these obligations and for the due protection of British Imperial communications, British forces shall have free passage through Egypt, and shall be maintained at such places in Egypt and for such periods as shall from time to time be determined. They shall also at all times have facilities as at present for the acquisition and use of barracks, exercise grounds, aerodromes, naval yards, and naval harbours.

IV.—Employment of Foreign Officers.

11. In view of the special responsibilities assumed by Great Britain and of the existing position in the Egyptian army and public services, the Egyptian Government undertake not to appoint any foreign officers or officials to any of those services without the previous concurrence of the British High Commissioner.

V.—Financial Administration.

12. The Egyptian Government will appoint in consultation with his Britannic Majesty's Government, a Financial Commissioner, to whom shall be entrusted in due course the powers at present exercised by the Commissioners of the debt, and who will more especially be responsible for the punctual payment of the following charges :—

(i) The charges for the budget of the mixed courts.

(ii.) All pensions or other annuities payable to retired foreign officials and their heirs.

(iii.) The budgets of the Financial and Judicial Commissioners and their respective staffs.

13. For the proper discharge of his duties the Financial Commissioner shall be kept fully informed on all matters within the purview of the Ministry of Finance, and shall at all times enjoy the right of access to the President of the Council of Ministers and to the Minister of Finance.

14. No external loan shall be raised nor the revenue of any public service be assigned by the Egyptian Government without the concurrence of the Financial Commissioner.

VI.—Judicial Administration.

15. The Egyptian Government will appoint, in agreement with his Britannic Majesty's Government, a Judicial Commissioner, who, in virtue of the obligations assumed by Great Britain, shall be charged with the duty of watching the administration of the law in all matters affecting foreigners.

16. For the proper discharge of his duties, the Judicial Commissioner shall be kept fully informed on all matters affecting foreigners which concern the Ministers of Justice and of the Interior, and shall at all times enjoy the right of access to the Egyptian Ministers of Justice and of the Interior.

VII.—Sudan.

17.—The peaceful development of the Sudan being essential to the security of Egyp and for the maintenance of her water supply, Egypt undertakes to continue to afford the Sudan Government the same military assistance as in the past, or, in lieu thereof, to provide the Sudan Government with financial assistance to an extent to be agreed upon between the two Governments.

All Egyptian forces in the Sudan shall be under the orders of the Governor-General.

Great Britain further undertakes to secure for Egypt her fair share of the waters of the Nile, and to this end it is agreed that no new irrigation works on the Nile or its tributaries south of Wadi Halfa shall be undertaken without the concurrence of a Board of three conservators representing Egypt, the Sudan, and Uganda respectively.

VIII.—Tribute Loans.

18. The sums which the Khedives of Egypt have from time to time undertaken to pay over to the houses by which the Turkish loans secured on the Egyptian tribute were issued will be applied as heretofore by the Egyptian Government to the interest and sinking funds of the loans of 1894 and 1891 until the final extinction of those loans.

The Egyptian Government will also continue to apply the sum hitherto paid towards the interest of the guaranteed loan of 1855.

Upon the extinction of these loans of 1894, 1891, and 1855 all liability on the part of the Egyptian Government arising out of the tribute formerly paid by Egypt to Turkey will cease.

IX.—Retirement and Compensation of Officials.

19. The Egyptian Government shall be entitled to dispense with the services of British officials at any time after the coming into force of this treaty on condition that such officials shall receive monetary compensation as hereafter provided, in addition to any pension or indemnity to which their conditions of service may entitle them. On the like conditions British officials shall be entitled to resign at any time after the coming into force of this treaty. The scheme shall apply to pensionable and non-pensionable officials as well as to employees of municipalities, provincial councils, or other local bodies.

20. An official dismissed or retiring under the terms of the preceding clause shall receive in addition to compensation a repatriation allowance sufficient to cover the cost of transporting himself, his family, and his household goods to London.

21. Compensation and pensions shall be payable in Egyptian pounds at the fixed rate of 97½ piastres to the pound sterling.

22. A table of compensation, (a) for permanent officials, (b) for temporary officials, shall be prepared by the President of the Society of Actuaries.

X.—Protection of Minorities.

23. Egypt undertakes that the stipulations following shall be recognised as fundamental laws, and that no law, regulation, or official action shall conflict or interfere with these stipulations, nor shall any law, regulation, or official action prevail over them.

24. Egypt undertakes to assure full and complete protection of life and liberty to all inhabitants of Egypt, without distinction of birth, nationality, language, race or religion.

All inhabitants of Egypt shall be entitled to the free exercise, whether public or private, of any creed, religion, or belief, whose practices are not inconsistent with public order or public morals.

25. All Egyptian nationals shall be equal before the law, and shall enjoy the same civil and political rights without distinction as to race, language, or religion.

Differences of religion, creed, or confession shall not prejudice any Egyptian national in matters relating to the enjoyment of civil or political rights, as, for instance, admission to public employments, functions, and honours, the exercise of professions and industries.

No restrictions shall be imposed on the free use by any Egyptian national of any language in private intercourse, in commerce, in religion, in the press or in publications of any kind or at public meetings.

26. Egyptian nationals who belong to racial, religious, or linguistic minorities shall enjoy the same treatment and security in law and in fact as the other Egyptian nationals. In particular, they shall have an equal right to establish, manage, and control, at their own expense, charitable, religious, and social institutions, schools, and other educational establishments, with the right to use their own language and to exercise their religion freely therein.

DELEGATION'S REPLY.

The reply of the Egyptian delegation to the proposals of his Majesty's Government, handed by Adly Yeghen Pasha to the Marquess Curzon on November 15, is in the following terms :—

Reply of the Egyptian Delegation to the proposals of his

Digitized by Google

Majesty's Government, handed by Adly Yeghen Pasha to the Marquess Curzon of Kedleston on November 15, 1921.

The Egyptian official delegation have taken cognisance of the draft handed to their president by Lord Curzon on the 10th inst. The delegation note that with regard to the majority of the questions which have formed the subject of our discussions and of notes exchanged between us during a period of four months, the draft reproduces the texts and the formulae which were presented to us at the beginning of the negotiations and which we did not accept.

Thus, with regard to the military question, which is one of capital importance, the draft not only supports, but even extends the scope of the solution which we so resolutely opposed. The protection of Imperial communications, which in the conversations of last year was given as the only reason for the presence of a military force in Egypt, could not justify this solution. While it would have been sufficient to agree upon a zone in the region of the Canal, where the ways and means of Imperial communications and the force for their protection might have been localised, the draft confers on Great Britain the right to maintain military forces at all times, on any part of Egyptian territory, and places at her disposition all the ways and means of communication in the country. This constitutes occupation pure and simple, destroys every idea of independence, and suppresses even internal sovereignty. In the past military occupation, although it had only a temporary character, sufficed to guarantee to Great Britain absolute control over the whole administration without the need of any textual treaty or any definition of the powers whatever.

With regard to the question of foreign relations, the only point on which the original formula of the Foreign Office has been modified by the acceptance of the principle of representation, the right which has been recognised as ours is surrounded by so many restrictions that it becomes to a certain extent illusory. It cannot be thought that the Minister for Foreign Affairs would be able freely to undertake the responsibilities of his office, if he were compelled by a formal stipulation to maintain the closest relations with the High Commissioner, that is to say, in fact to submit to his direct control in the conduct of foreign affairs. Further, the obligation to submit to the consent of Great Britain all political agreements, even those that are not incompatible with the spirit of the alliance, constitutes a serious infringement of the principle of external sovereignty. Finally, the maintenance of the title of High Commissioner, which it is not customary to confer on diplomatic representatives accredited to independent countries, emphasises yet further the character of the political status proposed for Egypt.

Again, the problem of the capitulations having been postponed, we had every reason to believe that there ought to be no further question of it in the agreement, and that it would be dealt with later by Egypt, the party chiefly interested, with the diplomatic co-operation of her ally. But now the problem is regarded as one that principally interests Great Britain, who takes upon herself from henceforth the protection of foreign interests and intends eventually to carry on alone the negotiations relative to the abolition of the capitulations.

With regard to the Financial and Judicial Commissioners and their interference, in the name of the protection of foreign interests, with the whole internal administration of the country, interference going so far in certain cases, as regards the Financial Adviser, as to constitute a check on the Government and Parliament, we do not wish to touch again upon the objections put forward in our various notes. We must, however, say that from the discussions which followed on the postponement of the question of the capitulations we did receive the impression that an agreement would be reached with regard to the protection of foreign interests on other bases more compatible with the sovereignty of Egypt.

With regard to the question of the Sudan, which had not yet been discussed, we feel bound to point out that it has been made the subject of provisions which we cannot accept, and which do not guarantee to Egypt the exercise of her indisputable right of sovereignty over that country and of control of the waters of the Nile.

The foregoing observations render it unnecessary for us to analyse the draft, the spirit and scope of which they have sufficiently brought out. And the insistence with which it refers to the obligations of Great Britain, "the special responsibilities" of the High Commissioner and the new reason given for the presence of the military force, viz., the protection of the vital interests of Egypt, have the effect of investing the draft with the quality of an actual deed of guardianship.

When we accepted the mission with which his Highness the Sultan entrusted us, we hoped to conclude a treaty of alliance which, while truly establishing the independence of Egypt, would have safeguarded British interests, and Egypt as the ally of Great Britain would have held it a point of honour scrupulously to fulfil the obligations which would have been incumbent upon her. But an alliance between the two peoples cannot be realised save with the condition that it does not constitute for one of them a permanent pact of subjection.

The conciliatory spirit in which our discussions were conducted entitled us to look forward to the result of the negotiations with confidence. The draft which we have in our hands does not correspond with that expectation. In its present form it does not allow us to retain the hope of arriving at an agreement which will give satisfaction to the national aspirations of Egypt.

## LORD ALLENBY'S NOTE.

Communication from his Majesty's High Commissioner for Egypt and the Sudan to his Highness the Sultan of Egypt, December 3, 1921.

Your Highness,

I have the honour, in accordance with instructions received from his Majesty's Government, to place before your Highness the following statement of their views in connection with the negotiations that have recently taken place with the delegation despatched by your Highness under the presidency of his Excellency Adly Pasha. His Majesty's Government have presented to Adly Pasha the draft proposals for a treaty between the British Empire and Egypt which they were prepared to recommend to his Majesty the King and to Parliament and have learnt with keen disappointment that these are not acceptable to him. They regret it the more because they regarded their proposals as liberal in character and far-reaching in effect, and because they cannot hold out any prospect of reconsideration of the principle on which they are framed. It is therefore proper that they should acquaint your Highness fully with the main considerations by which they were guided, and with the spirit in which their proposals were made.

One dominant fact has governed the association of Great Britain and Egypt for forty years, and must always govern it, namely, the close coincidence between Great Britain's interests in Egypt and the interests of Egypt herself. The independence and the prosperity of the Egyptian people are both of great importance to the British Empire. Egypt lies upon the main line of communications between Great Britain and the King's dominions to the east. The whole territory of Egypt is indeed essential to those communications, since the fortunes of Egypt, are inseparable from the security of the Suez Canal zone. The immunity of Egypt from the dominant influence of any other Great Power is therefore of primary importance to India, Australia, New Zealand, and all his Majesty's Eastern Colonies and Dependencies; it affects the welfare and safety of nearly 350,000,000 of his Majesty's subjects. The prosperity of Egypt is also important to them, not merely because Egypt and Great Britain are each other's best customers, but because any serious danger to financial or commercial interest in Egypt invites the intervention of other Powers and threatens her independence. These have been the governing motives of British association with Egypt, and they are as powerful now as in the past.

The general success of that association during the generation which preceded the Great War was universally recognised. When Great Britain first began to take an active interest in Egypt the Egyptian people were a prey to financial chaos and administrative anarchy. They were at the mercy of every comer, and could not have resisted those fatal forms of foreign exploitation which undermine a nation's self-respect and destroy its fibre. If the Egyptian people are a vigorous and self-respecting nation to-day they owe that recovery largely to British assistance and advice. They have been secured against foreign intervention; they have been helped to create an efficient system of administration; large numbers of them have been trained in the arts of government; their power has steadily grown; their finances have prospered beyond all expectations; the welfare of all classes has been laid on firm foundations. There has been no shadow of exploitation in this rapid development. Great Britain has sought for herself no financial gain or commercial privilege. The Egyptian nation has garnered all the fruits of her counsel and help.

The outbreak of war between the great European Powers in 1914 made the association between the British Empire and Egypt of necessity more close. When the Ottoman Empire joined the side of Germany, not only Britain's communications, but Egypt's independence were forthwith jeopardised. The declaration of the protectorate was a recognition of the fact that only by common action under a single command could the common menace to the Empire and to Egypt be effectively repelled. In the extension of the war brought about by Turkey many thousands of the King's subjects from India, Australia, and New Zealand, as well as from Great Britain, were maimed or killed. Their graves in Gallipoli, Palestine, and Irak stand as witness of the great effort which Turkish intervention cost the British Commonwealth. Covered by their ranks Egypt passed scatheless through that period of ordeal. Her losses were inconsiderable; her debt was not increased; her wealth is now greater than before the war, whilst economic paralysis lies heavy on most other lands. It is not wise for her people to overlook these facts or forget to whom they are owed. But for the power exerted by the British Empire in the war Egypt must have become a field of action between contending forces, which would have trampled on her rights and destroyed her prosperity. But for the victory of the Allies she would not now be a nation claiming sovereign national status in lieu of the protectorate of a foreign Power. The freedom which she enjoys and the prosperity of higher freedom to which she aspires she owes alike to British statesmanship and British arms.

His Majesty's Government are convinced that the close coincidence of interests between Great Britain and Egypt which has made their association so mutually beneficial in the past is the key to the relationship which they should still maintain. Now, as in the past, the British Empire has to shoulder ultimate responsibility for the defence of your Highness's territories against external menace, as also for such assistance as your Highness's Government may at any time request in the maintenance of your authority at home. It must claim, moreover, the ex-

Digitized by Google

clusive right of tendering such advice as your Highness's Government may require in the administration of the country, the conduct of its finances, the development of its judicial system, and the pursuance of its relations with foreign Governments. These claims are not, however, asserted with any desire to derogate from Egypt's enjoyment of the full rights of national self-government. They are pressed only as against other foreign Powers; and they are based upon the fact that the independence, good order, and prosperity of Egypt are an essential element in the safety of the British Empire. His Majesty's Government regret that throughout the negotiations your Highness's delegation made little practical advance towards recognition of the British Empire's just title to these exclusive rights and responsibilities.

The treaty provisions which his Majesty's Government consider necessary to maintain these rights and cover these responsibilities were formulated in the draft proposals which Adly Pasha will communicate to your Highness. Of these the most essential are those relating to British troops. His Majesty's Government gave most careful consideration to the arguments advanced by the Egyptian delegation on this subject, and were unable to accept them. Neither the present condition of the world nor the course of events in Egypt since the Armistice permits of any modification at this time in the disposition of the British forces. Egypt, it is necessary to repeat, is a part of the Empire's communications. Scarcely a generation has passed since she was rescued from anarchy, and there are signs that the extremer elements in the Nationalist movement are even now capable of plunging her back into the abyss from which she has so recently been raised. The anxiety of his Majesty's Government on this point has been aggravated by the unwillingness of your Highness's delegation to recognise that the British Empire must have firm guarantees against any such menace to its interests. Until such time as Egypt's record gives confidence in her own guarantees, the British Empire must maintain sufficient guarantees itself. Of these the presence of British troops in Egypt is the first and foremost. His Majesty's Government cannot waive or weaken it.

They repeat, however, with emphasis, that their claims in this respect are not intended to involve the continuance of an actual or virtual protectorate. On the contrary, the ideal which they have sincerely at heart is that of an Egypt enjoying the national prerogatives and international position of a sovereign State, but closely wedded to the British Empire by a treaty guarantee of common aims and interests. With this end in view, they proposed to terminate the protectorate forthwith, to recognise Egypt as "a sovereign State under a constitutional monarchy," and to substitute for the present relation between the Empire and Egypt "a perpetual treaty and bond of peace, amity, and alliance." Their hope was that Egypt, with a reconstituted Ministry of Foreign Affairs, would at once have despatched her own representatives to foreign Courts; and they would readily have supported an application on her part for admission to the League of Nations. The Egyptian nation would have thus secured at once the powers and privileges of a sovereign State.

The rejection of these proposals by your Highness's existing Government creates a new situation. It will not affect the principle of British policy, but it necessarily reduces the measures which can now be carried out. His Majesty's Government therefore desire to state clearly where they stand.

With regard to the immediate present, they cannot give effect to their proposals without the consent and co-operation of the Egyptian nation; but they maintain the desire, which they have long entertained, to provide for the ever-advancing development of native talent by an increase in the number of Egyptians employed in every branch, and notably in the higher branches of the Administration, hitherto too extensively filled by Europeans. They are willing to pursue, in consultation with your Highness's Government, the negotiations in foreign Courts necessary for the abolition of the capitulations, so that the international situation may be clear when the Egyptian legislation necessary to take the place of the capitulations is ready to be passed. They would wish that the powers now exercised by the Commander-in-Chief under martial law should be exercised only under the Egyptian civil law by the Egyptian Government, and they will gladly withdraw martial law as soon as the Act of Indemnity, which is indispensable for the protection of that Government as well as of the British authorities in Egypt, has been enacted and become operative in all the civil and criminal courts in Egypt.

With regard to the future, his Majesty's Government desire to state in plain terms the policy which they intend to pursue. They understand that the proposals presented to your Highness's delegation were rejected on the ground that the safeguards for British and foreign interests contained in them would be fatal to the genuine exercise of self-government. They deeply regret that the maintenance of British troops in Egypt and the association of British officials with the Ministries of Justice and Finance should be so gravely misunderstood. The progress of Egypt towards her ideals will not only be retarded, but completely jeopardised, if her people are tempted to indulge their national aspirations, however sound and legitimate in themselves, without sufficient regard to the facts which govern international life. Nothing is gained by minimising national obligations and exaggerating national rights. Extremist leaders who preach in this vein are not a stimulus but a menace to Egyptian development. By their influence on the course of events they have repeatedly challenged the interests and provoked the fears of foreign Powers; and they have sought to affect the outcome of these negotiations during the past few weeks by subversive appeals to popular ignorance and passion. His Majesty's Government do not consider that they would be consulting Egypt's welfare by making concessions to agitation of this kind; and Egypt will make no progress until her responsible leaders show the will and strength to put it down. The world is suffering in many places at the present time from the cult of a fanatical and purely disruptive type of nationalism. His Majesty's Government will set their face against it as firmly in Egypt as elsewhere. Those who yield to it only make more necessary and so prolong the maintenance of those foreign sanctions which they denounce.

In these conditions, for Egypt's interest as much as for their own, his Majesty's Government will continue unshaken in their aims as Egypt's advisers and trustees. It is not sufficient for them to know that they could exercise the right of re-entry into Egypt, if, left to her own unaided counsels, she should revert to the waste and disorder of the last century. They desire to see the work of Lord Cromer's generation completed, not recommenced, They do not aim at keeping Egypt in tutelage. On the contrary, they desire to fortify the constructive elements in Egyptian nationalism, to give them scope, and to bring nearer the full attainment of the national ideal. But they must insist on effective rights and powers to safeguard both Egypt's interests and their own until the Egyptian people have shown the capacity themselves to preserve their country from internal disorder and its inevitable corollary, the intervention of foreign Powers.

The true line of advance for the Egyptian people is by co-operation with the British Empire, and not by antagonism to it. In this spirit of co-operation his Majesty's Government on their side are prepared to consider any methods which may be suggested for carrying out the substance of their proposals, whenever your Highness's Government may so desire. They cannot, however, modify the principle on which their proposals are based or relax the essential safeguards which they contain. The future of Egypt under these proposals would be in the Egyptian people's own hands. The more clearly your people recognise the identity of British interests with their own, the less necessary will safeguards become. It is for the responsible leaders of Egypt, in this second generation of her association with Great Britain, to prove by their acceptance and steady use of the national status now open to them that the vital interests of the Empire in their country may be progressively entrusted to their care.

## NOTES AND NEWS.

Devonshire Square,
E.C. 2.

### The Sudan Loan Negotiations.

After somewhat anxious negotiations which have been spread over nearly six months Sir Edgar Bernard, Financial Secretary to the Sudan Government, has been able to leave London with the satisfaction of knowing that, as far as can humanly before seen, the future of the Sudan is assured. I have called the negotiations "anxious," because in spite of the reticence, perhaps rightly, maintained regarding them, it was realised by those closely interested in Sudan affairs that the mission charged with the task of securing the British Government's consent for a further Sudan loan was encountering serious difficulties. The great irrigation project of the Sudan—the bringing of water to the Gezira Plain by means of a dam across the Blue Nile—which is being carried out by the Sudan Government mainly with the proceeds of a loan the interest of which is guaranteed by the British Government, is going to cost considerably more than was originally estimated. More money is required, and unless the British Government is prepared to continue to back the enterprise, the necessary funds have little chance of being raised.

### Britain's Hand on the Plough.

The delicacy of the position in regard to the Sudan was obvious. On the one hand there was the compelling need for the strictest economy on the part of the British Exchequer; on the other there were the Egyptian negotiations, and the feeling that it would be much more convenient if for the time being attention was not directed towards the Sudan. Whether any whispers had reached the Government ear challenging the practical success claimed for the project cannot be said. If they should have, the speeches made at the annual meeting of the Sudan Plantations Syndicate, reported in these pages last week, will have supplied a useful antidote. As for the Egyptians' anxiety over their water supply, presently, when political passions have subsided, it will be realised that the maximum area of land that can be irrigated by the Nile is only a third more than the area now under irrigation, and that, given the intelligent control predicated by the British occupation of the Sudan, Egypt can have all the water she is ever likely to want, without grudging the Sudan any scheme of irrigation in which it cares to undertake. In regard to the Blue Nile Dam the most pertinent factor is that the work is already well advanced; hopes and enterprises have been founded upon it; the future of the Sudan, it may be said without exaggeration seems to hinge upon it. In such circumstances it was well nigh out of the question that there could be any looking back now; but the times are sadly out of joint, and the Sudan is to be congratulated on having established its case for the completion of the great work.

### Yugoslavia's Budget.

Our Correspondent in Yugoslavia supplies this week the details of the Yugoslav Budget. The measures proposed with a view to balancing the Estimates at 6,257 million dinars are sufficiently drastic, for, in addition to a substantial increase in the income tax, they include a levy on capital. It will be of interest to note what the Croats and Slovenes will say to the War Ministry being responsible for a quarter of the total expenditure. Even if the Belgrade Government can plead that "the young State has a very long frontier and has no friends among its neighbours and some avowed enemies," the obvious retort is that Yugoslav policy must be largely responsible for this state of affairs at this particular moment of the world's history.

### Peace in the Balkans.

The only attempt since the Armistice to disturb the peace of the Balkans—if we exclude the civil fighting in Hungary—has by the judgment of her Allies been laid at the door of Yugoslavia. There is, therefore, no justification for the suggestion that the attitude of her neighbours calls for armed vigilance on her part. She is a party with Czecho-Slovakia and Roumania to an Entente, and her treaty with Greece has not been formally denounced. Even if these arrangements should not prove adequate for her peace of mind, she knows well that in the League of Nations she has all the protection against aggression that she needs. No country in South-Eastern Europe has brighter prospects than Yugoslavia, and she is in a position to set an example of wholehearted devotion to peaceful development. But if her war budget is to be a quarter of her total expenditure each year, it is evident that she will have to deny herself many of the things for which the country is clamouring.

### Indo-Burma Oilfields.

As the Chairman's speech at the first annual general meeting of the Indo-Burma Oilfields (1920) Ltd., is reported elsewhere in this issue, I prefer to touch here

**BANK OF ROUMANIA LIMITED**
(FOUNDED 1866)

*Head Office*: **17, TOKENHOUSE YARD, LOTHBURY, E.C. 2.**

**Branch**: 11, CALEA VICTORIEI, BUCAREST.

*Directors*:
E. W. H. Barry, Esq.
C. De Cerjat, Esq.
The Viscount Goschen.
General The Hon. Sir H. A. Lawrence, K.C.B.
Lieut.-Col. Sir Albert Stern, K.B.E., C.M.G.

*Bankers*—
Bank of England. Messrs. Glyn, Mills, Currie & Co.

A general Banking business with Roumania is conducted, and correspondence from those having interests in that country is invited.

Digitized by Google

upon the remarks subsequently made by the Company's Technical Adviser, Colonel H. H. Johnson. After stating his conviction that the Company had in Yenanma one of the largest, if not the largest potential oilfield in Burma, he referred to the question of the future of Burma. That country, he believed, was only on the eve of its oil production, and he looked for a very large development in the industry. There was, he said, an immense deltaic formation, and oil was found over a very large area, portions of which have never yet been thoroughly explored. It is to be hoped that these confident predictions will be fulfilled. In view of the fact that the big Burma oilfield—the Yenangyaung—is regarded as one of the most prolific in the world, if a considerable extension of oil-bearing ground can be proved, there may well be bright days ahead for the country.

**The Anglo-Egyptian Bank.**

With a dividend of 15 per cent. and a bonus of 2½ per cent., both free of income-tax, the shareholders of the Anglo-Egyptian Bank will have no need to be unduly despondent over the fact that the Bank has had to claim back some of the excess profits duty previously paid to the Government. Egypt has proved no exception to the general rule that banking profits throughout the world have shown diminution. The year has been marked by violent fluctuations in the price of cotton, a circumstance which necessarily tends to restrict trade in the country. The upward movement that set in during the summer has not been maintained, but even the lower prices ruling represented such a marked improvement on those obtaining in the earlier part of the year that the fellaheen has been showing greater readiness to part with his cotton. Trade in Egypt cannot hope to be altogether independent of the political situation, but everyone financially interested in the country will note with satisfaction that the first news of the conclusion, in circumstances suggesting failure, of the negotiations between the Egyptian and British Governments has been received philosophically in Egypt. On all hands there seems to be reluctance to believe that a *modus operandi* cannot even now be reached.

**Roumanian Consolidated Oilfields.**

In the Directors' report issued to the ninth general meeting of the Roumanian Consolidated Oilfields, Ltd., there is much of interest not only to the shareholders of the Company, but also to a wider public interested in the development of Roumania and of South-Eastern Europe as a whole. The Company has acquired for a period of twenty years the exclusive right to supply natural gas for heating and power purposes in Ploeshti, the second town of Roumania and the "capital" of the oilfields. Extensive tracts of gas land have been secured at a distance of some seven miles from Ploeshti, and the presence of large quantities of natural gas has been established. A pipe-line connecting the town with the first of the wells drilled has already been constructed, while another, more than seventeen miles long, is supplying gas fuel to the Company's boilers at Bana Moreni. This source of power opens up great prospects for the British Company as well as for Roumania's oil and other industries.

**Commentator.**

## AGRICULTURE IN CYPRUS.

The annual report of the Director of Agriculture, Mr. W. Bevan, for 1920-21, has been published. The Director acted as Commissioner in two districts, from May, 1920, to January 21 last, but carried on his own work in addition. His entomologist retired, his Moslem Assistant Inspector died while on leave, and two lecturers resigned—their places being still vacant. Clearly therefore the department was very considerably handicapped. The entomologist, Mr. Solomides, is the inventor of an insecticide, which claims to be fatal to locusts at small cost, while harmless to other animal life; and it would be interesting to know what success the inventor is meeting with.

Candour compels the admission that any survey of agricultural work in Cyprus can hardly fail to be disappointing, seeing that under present conditions no substantial advance, commensurate with island needs, is practicable. Here is a land which every book and report assures us is one of great possibilities. But it is a worn-out estate, whose soil, in its once most fertile regions, is played out, whose agricultural methods remain antediluvian, and whose rural population is deeply submerged in debt. It might, and may again, see prosperous days; so at least say all the experts who have looked in and reported. Sir Samuel Baker held that Cyprus red wines should undersell cheap clarets in England, and its chief port become the Liverpool of the East. Many authorities have visited the island on Government invitations, and have submitted valuable essays, which, as Mr. Bevan says of a late report "fully bear out the views put forward from time to time by the Department." But it is generally "a voice and nothing more." Depressing indeed must be the labours of many British officials who work in such an atmosphere. The reports alluded to will remain as valuable documents for future reference, when the island wakes up to better times.

In the present report we read that M. Mazel, of the Fédération Générale des Grainages Francais, visited the island and went very fully into the whole question of silk-production. "He was much impressed by the silk-producing possibilities of Cyprus, and furnished a valuable report." What we wonder will be the result. In the year under review silk cocoons were the best produced for many years. The olive crop surpassed anything within living memory. Oil presses worked day and night from mid-October to February. The "olive plants imported from Spain in 1919 are doing well;" but the whole industry, which might be enormously developed, remains in a lamentably backward state.

As regards wine, it is sad to read that, after a tenure of 43 years, "the fundamental principles of wine-making are, to all intents and purposes, unknown to the average village wine-makers." A new departure has been made in giving practical instructions. But the outlook is still far from promising. Happily prices obtained for such wines as are made have recently been good. Respecting tobacco the hopes raised a few years ago appear to be quite blighted. No mention is made of the crops. Lately the leaf is said to have been sold at 2d. a pound.

A consignment of sugar-beet was sent to Egypt, and the Société Générale des Sucreries reported that it compares favourably with that of the average quality grown elsewhere. Here again is an opening of which advantage might be taken. A new feature is the growing of gooseberry and raspberry plants in some school gardens in the hills. These and other English fruits unknown to Cypriots might be grown luxuriantly in the higher altitudes by any person who could look after gardens all the year round.

As regards the destruction of pests, villagers are again described as apathetic, and blind to their interests, although insecticides and appliances are offered at low cost. Against this may be set the statement that intelligent attention is given to some of the lectures and demonstrations.

The department keeps in touch with the Imperial Institute. Various products were sent for the Cyprus Court during the year, and another show-case has been placed in it for island exhibits. Mr. Bevan and his diminished staff are to be congratulated on having maintained, with such success as is at present possible, a strenuous campaign in the principal fields of Cypriot industry, during a year of depression and of perhaps exceptional difficulty.

## REPORTS FROM OUR OWN CORRESPONDENTS.

### ROUMANIA.

*Bucharest, November 20.*

**The Government and the Banca Nationala.**

A few days ago the State applied to the Banca Nationala for a fresh loan of 500 million lei, intended for the purpose of settling the outstanding accounts due to various local banks and to manufacturers for goods delivered. This would have the effect of somewhat relieving the prevailing monetary stringency, so bitterly felt by trade and finance. The bank has refused to grant the loan on the ground that it would involve a further issue of bank-notes, and in consequence would further depreciate the national currency; but, on the other hand, the Bank has declared its willingness to assist the banks and merchants with direct credits to the extent of the amounts which they have to get from the State.

M. Take Jonescu, Minister of Finance *ad interim*, is not satisfied with the bank's decision, considering it as a slight on the Government, and further negotiations are in progress. The Government Press views the bank's attitude as a political move, because the majority of the directors of the Banca Nationala belong to the Liberal Party. In view of the fact that the Banca Nationala is a privileged State bank, it will be interesting to follow developments.

**Control of foreign deposits in lei.**

The measure recently taken by the Government of appointing a committee to control the deposits in lei owned by foreigners at local banks has been the main topic of the week in financial and political circles. This measure has provoked objections from abroad, and the French Minister at Bucharest has made friendly representations to the Government in this connection. The Government point out that this measure already exists in other countries for the protection of the rate of exchange of the country's currency against speculation, and further assert that it is not meant as a restriction on foreign property but merely as a control in order that the transfers ordered from abroad from one bank to another should be based on purely commercial transactions and not used for speculation, which has been the case hitherto. The disastrous depreciation of the leu, brought about by this speculation, has harmed not only the *bona-fide* foreign owners of lei but also Roumania's external trade, and is felt just as keenly in the manufacturing countries like Great Britain and France. The threat of suppressing the quotation of the leu on the Paris Exchange is hailed here with favour, for thereby it is thought that the leu will cease to be an object of speculation.

**The Banca Natiunei.**

The experts appointed by the Tribunal to check the books of the Banca Natiunei are still continuing their investigations, and only after the termination of this work will it be known whether this bank can be granted a moratorium or will have to be liquidated. A great deal will also depend on the general meeting of shareholders which is to be held shortly.

M. Take Jonescu has proposed at a meeting to which were convened the representatives of the principal local banks that the Banca Natiunei should be liquidated slowly, as it possesses many valuable properties and also considerable assets. A slow liquidation, with the co-operation of the principal local banks backed by the State, will presumably in due course cover all claims from foreign and home creditors. By this process the prestige of the Roumanian banks will be saved, as otherwise the impression might be falsely conveyed abroad that the other banks are also affected by the Banca Natiunei's failure, which in reality is not the case. The representatives of the various banks have agreed in principle to this proposal.

*Bucharest, November 27.*

**Trade with Germany.**

Many local merchants, seeing that they could not trade with countries with inflated currencies, had begun to place their orders in Germany, Some of these orders have been delivered, but to their astonishment the merchants have lately been informed by German manufacturers and merchants that from now on German goods will also be sold against francs or the pound sterling.

**War Losses.**

The Department of War Damages has terminated its work in collecting the data of war damages sustained by private persons and the State in the old Kingdom. The total amount claimed is about 4,800 million lei, taking as a basis the value of the damaged articles in 1916. As, however, only 3 milliard lei have been provided for the old Kingdom, all claims over 3,000 lei will be proportionately reduced.

**New Import Regulation.**

As a result of the demand of the different Chambers of Commerce for the reduction of imports to a minimum, the Government, on studying the matter thoroughly, came to the conclusion that complete prohibition of imports even for a certain period would be out of the question, owing to the fact that almost every branch of trade needs certain articles of general utility which cannot be produced in the country or are produced in inadequate quantities. A special Committee of experts is now studying the subject, and is considering practically every article to be imported. Imports are to be classed in three categories: 1 () Articles which will be entirely prohibited; (2) Articles of general usefulness which will be free of restrictions and without any additional tax; (3) Articles which are not produced in sufficient quantities by home manufacturers will be subject to a somewhat higher tax.

It is hoped that the new import regulation will abolish completely the system of permits and authorisations, which has caused so much unpleasantness and has served to restrict trade in general.

**M. Titulescu's Mission in Paris.**

According to the latest telegraphic information, M. Titulescu's mission seems to be progressing favourably. In the first place, it is reported that the exact number and value of Treasury Bonds in circulation will be ascertained. Holders of these Treasury Bonds will be called upon to make the corresponding declaration to a consortium of Bankers consisting of the Banque de Paris et des Pays Bas, the Banca Commerciala Italiana of Milan, and the Bank of Roumania, each of them being duly represented in Bucharest. It is assumed that this syndicate will actually replace the Treasury Bonds by a new issue, and will also be entrusted with the redemption of the new Bonds in due course. M. Titulescu further hopes to obtain facilities of payment for the Roumanian merchants who are unable to meet their bills in foreign currency at the present rate of exchange. He is reported also to have secured a loan of 150,000,000 francs on the security of the gold production of the Transylvanian State mines.

**Miscellaneous News.**

The Government has decided to reduce the import tax on jute cloth from 300 lei to 20 lei per 100 kilograms.

A beginning has been made in the restoration of horses by Germany under the terms of the Peace Treaty. The first consignment has arrived, and from five to eight trainloads are to be despatched monthly.

### YUGOSLAVIA.

*Zagreb, November 23.*

**The Financial Problem.**

How to make the Budget balance is a serious problem for Yugoslavia. Dr. Kumanudi, Minister of Finance,

Digitized by Google

is determined on drastic measures to restore the Budget equilibrium this year. The estimated expenditure is 6,257,577,804.86 dinars, and the revenue from ordinary sources falls short of this by some milliards. As a first step the estimates of all the Ministers were returned to them to be cut down, and the pruning knife was generously employed. In addition to this Dr. Kumanudi proposes to increase the revenue by 30 per cent. by new taxes.

His proposals include a heavy increase in direct taxation. A number of taxes are to be doubled, among them the income tax. In this country the employer pays the income-tax on his staff's incomes, and thus employers will find themselves faced with an increase of something like 30 per cent in their wages bill, for although the actual salaries are maintained almost at the pre-war level, they are brought up to a satisfactory level by sundry allowances, and the Government taxes the allowances as well. The new tax is meeting with such powerful opposition that some modification of the original proposal is bound to take place.

The next innovation is a property tax. This is acknowledged to be a desperate expedient, and is for one year only. In reality it is a tax on capital, and will involve the organisation of special and expensive machinery for its administration. Finally there is the project for another financial loan. The recent loan of 500 million dinars for expenditure on railways and other means of communications was a tolerable success, but this new loan is to be for a milliard, or just double, for the equally praiseworthy object of the reduction of a mass of the uncovered paper money in circulation.

It will be of interest to give the items of revenue set forth in the estimates. These are as follows (in dinars) :—Customs, 417,810,000 ; octroi duties, 390,000,000 ; profit on money, 810,000,000 ; war invalids tax, 36,065,750 ; State lands, 61,656,369 ; temporary property tax, 597,112,384.61 ; extraordinary surtax, 400,000,000 ; various revenues, 14,655,750 ; direct taxation, 1,806,162,550 ; State farms, &c., 1,295,305,593.50 ; sundry revenues, 29,311,877.75 ; tax on turnover, 400,000,000 ; total, 6,257,577,804.86 dinars.

It is also not without interest to note the appropriations of the various Ministries, which are as follow : Main State administration, 598,487,881.35 ; Justice, 185,677,576.90 ; Education, 459,924,493.30 ; Religion, 81,619,291.20 ; Interior, 138,054,647.15 ; Public Health, 185,603,764.95 ; Foreign Affairs, 34,312,197.50 ; Finance, 829,266,857.40 ; War and Marine, 1,489,356,657.40 ; Public Works, 273,098,216.75 ; Communications, 831,081,742.60 ; Posts and Telegraphs, 238,254,284.65 ; Agriculture, 114,156,187.60 ; Mines and Forests, 206,464,051.00 ; Commerce and Industry, 40,688,995.06 ; Social Policy, 414,111,489.85 ; Agrarian Reform, 55,514,979.10 ; Constituent Assembly, 907,540.60 ; reserve credits (special), 81,000,000.00 ; total, 6,257,577,804.86 dinars.

It is easy to criticise this, but in reviewing Yugoslav finance, as well as Yugoslav politics, the local conditions should be known and borne in mind. That the War Ministry accounts for nearly a quarter of the total expenditure gives a handle to those who raise the cry of "Serbian militarism," but the plea raised here is that the young State has a very long frontier, it has no friends among its neighbours and some avowed enemies, and its existence would not be worth a day's purchase unless it were prepared to defend itself.

**BANQUE FRANCO-SERBE**

## BULGARIA.

*Sofia, November 27.*

### Exchange and Reparations.

There have been some big purchases of levas by foreign and local banks during the last week, and the consequence has been that the rate has gone up and down with startling rapidity. On November 21 the pound sterling was worth 685 levas, on the 23rd. only 590, and the 24th. 660, and at the moment of writing it is hovering between 630 and 650. On the whole the tendency has been for the lev to rise in value, and although the purchase of levas to pay for tobacco has been the main factor in the upward rise, the belief that Bulgaria may be granted a delay in the payment of reparations has also had an encouraging effect. No more is yet known as to the delay, but a decision will probably be come to before the end of the year. The Government anticipate a delay being granted, but whether thay have weighed sufficiently the probable "price" of such a delay, is open to doubt. The Allies are not going to grant a delay of three or five years without being sure that at the end of this period, they will be able to exact some kind of an indemnity. The Government must envisage being called upon to provide for budget equilibrium, higher taxes, reforms in connection with the Customs, and a strict exercise of economy. These four matters may be said to be the principal matters which will come up for discussion, should a delay in the payment of reparations be granted, but naturally enough there are other reforms, such as complete freedom of export, which will also have to be considered. In fact the granting of a delay in the payment of reparations will open up an entirely new vista in the financial life of the country, and may prove the turning point in the financial depression which has at present settled over Bulgaria.

## GREECE.

*Athens, November 26.*

### A New Bank.

An application has been received by the Minister of National Economy for approval of the formation of a Commercial and Agricultural Bank in Thessaly. The new bank will have a capital of 6,000,000 drachmae, and its head office will be at Volo.

The Xanthi (Western Thrace) branch of the Bank of Athens has been re-opened.

## ASIA MINOR.

*Smyrna, November 24.*

Permission was granted by the Greek authorities to a British firm to bring down twenty waggons of barley from Ushak to Smyrna, and after considerable delay on various accounts eight waggons reached Smyrna. The remainder are now held up on the plea that 25 per cent. must be retained for the Greek military requirements. This procedure has entailed a considerable loss to the British firm who had sold the twenty waggons for immediate delivery and are now unable to fulfil their contract.

There is a large demand for photographic apparatus in Algeria.

Algeria has an extensive market for coal, coke, and patent fuel.

## THE ECONOMIC RESOURCES OF PALESTINE.

Lecturing at the London School of Economics on November 28, Mr. Leonard Stein (Political Secretary of the Zionist Organisation) said that as the combined result of war, misgovernment, and a gradual dessication which had been going on for about two thousand years, Palestine had been in 1914 little more than a stagnant backwater. The mass of its population had been apathetic and unprogressive, and such enterprising spirits as they had received no support from the corrupt and sluggish Government. German and Jewish colonies were efforts on a limited scale which showed what would be possible under more favourable conditions. The war had brought a virtual cessation even of such economic activity as there had been, and though under British administration efforts had been made to restore the damage done, Palestine had not yet fully recovered its equilibrium; its economic condition was still in some respects subnormal. It was mainly an agricultural country; according to the official statistics for 1919 sixty-one per cent. of the population of Western Palestine were engaged in farming, while in Trans-Jordania no other occupation existed of any importance. The principal cereal crops were wheat, barley and millet. The comparative outputs for the last two cereal years (in metric tons) had been 1919-20:—Wheat, 45,000; barley, 25,000; millet, 15,000. 1920-21:—Wheat, 75,000; barley, 51,000; millet, 30,000. These figures related only to Western Palestine; for Trans-Jordania no reliable statistics existed. Palestine was not self-supporting in the matter of wheat, but imported from the Hauran while on the other hand, there was an export of the high grade barley grown in the Gaza district, which in 1913 had amounted to nearly 9,000 metric tons. There was also a small exportable surplus of millet. Palestine produced a considerable quantity of fruit and vegetables; these were mainly reserved for local consumption; except that about a million water melons annually were exported to Egypt, Syria, and other Mediterranean markets. The principal fruit crops were oranges, olives, grapes, and almonds, of all of which there was usually an exportable surplus, the olives being exported in the form of oil and soap. Of oranges about 17,000 metric tons had been produced in 1920-21 as against 13,000 metric tons in 1919-20. Before the war there had been an export trade which had amounted to 456,000 boxes in 1905, and had grown to 1,608,000 boxes in 1913. More than half of this had gone to Liverpool. Subsequently the trade had declined but probably this was only a temporary setback. Vinegrowing and wine production were almost entirely in the hands of Jewish growers. Before the war about a million gallons per annum had been produced, eighty per cent. being dry red wine. About 6,600 gallons of Cognac were also distilled.

Speaking of shipping the lecturer said that the coast of Palestine possessed in Haifa a natural harbour of the first magnitude. In 1913 steam shipping entered and cleared amounted to 1,238 vessels totalling 1,961,000 tons. For 1919-20 the corresponding figures were 357 vessels and 466,000 tons. For 1920-21 they had grown to 720 vessels and 809,000 tons. As the result of the transfer of the Austrian Lloyd vessels to Italy, the Italian flag predominated in Palestine ports; the British flag came second.

Looking to the future the lecturer said that the present economic development of the country was far from being the measure of its recources. These still remained largely untapped, and Palestine was to-day entering upon a new stage of development; the dead hand of Ottoman misgovernment having been replaced by an enlightened and progressive administration under British auspices. That definite change was being accompanied by an equally important concentration of Jewish idealism, energy, and capital in the spirit in which nations were made, and in a degree disproportionate to the intrinsic merits of the country from the purely economic point of view. Palestine's resources might now be expected to be developed with more than normal rapidity. Agriculturally there was room for much greater development; petroleum might be found in substantial quantities. The Jordan with its descent from seven feet above sea level to thirteen hundred feet below it was a latent source of water power. Among other industries, it should be possible to develop fruit preserving, tomato canning and the extraction of essential oils.

## TENDERS INVITED.

*Tenders are invited for the following contracts, and must be made by the dates mentioned.*

(*Particulars of tenders marked* (*D.O.T.*) *are to be obtained from the Department of Overseas Trade,* 35, *Old Queen Street, S.W.*1.)

**Egypt.**

Ropes, canvas, etc.—The Director General Ports and Lighthouses Administration, Alexandria, Egypt, invites tenders for the supply of ropes, canvas, bunting, oils, paints, and general miscellaneous stores (including asbestos, chemicals, brushes electric lamps, files, &c., for the first half of the financial year, 1922-23. December 21 (D.O.T.)

**India.**

Gully-cleansing machine.—The Corporation of Calcutta invites tenders for the supply of a motor-driven vacuum gully-cleansing machine for the purpose of carrying out experiments with this method of gully and cesspit-cleansing. The tank should be cylindrical in form, and of a capacity of from 400 to 800 gallons, depending on the principle adopted for cleansing the gullies, &c. Tenders in duplicate, enclosed in sealed covers and superscribed "Tender for Motor-Driven Vaccum Gully and Cesspit Cleanser" are required and tenders must remain open for acceptance for a period of at least two months from the date of opening. Tenderers must deposit Rs.600 in the Corporation Treasury as earnest money before the tenders are opened. January 10.

**Bulgaria.**

Cotton Waste.—The Directorate of Railways and Ports, Sofia, for the supply of:—10,000 kgs. of coloured cotton waste, estimated value at 20 leva per kg., 2,000,000; and 2,000 kgs. white cotton waste, estimated value at 25 leva per kg., 50,000. Tenderers must accompany their offers by samples of the material quoted, weighing about one kilogram, which will be used to check the consignment on arrival. The estimated value is 2,050,000 leva and tenderers must deposit 5 per cent. of the amount of their quotations as a guarantee, to be eventually returned to them. Delivery required as follows:—One half in four months and the balance in six months, c.i.f., Black Sea or Danube port. Payment terms: Half against documents, the suppliers putting up a bank guarantee against this sum which will be freed against arrival and final acceptance of the goods, the balance also being paid on final acceptance of the goods. December 30 (D.O.T.).

**Morocco.**

Hospital.—The Public Works Department of Morocco at Rabat invites tenders for the construction of the first lot of the civil hospital at Casablanca. Applications for the form of tender prepared by the Administration, giving detailed estimate of quantities, should be addressed to the Director-General of Public Works at Rabat, and such applications should be accompanied by technical and financial references. December 15.

*Cable Address:* "Lobo, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** *All Cable Codes used.*

Manufacturers of JUTE SACKS and JUTE CLOTH for all purposes

*By Our Engineering Representative.*

## DIESEL ENGINES.

In the early days of the Diesel engine, although its advantages in simplicity and principles of operation and low fuel consumption were recognised, it was felt that the disadvantages at the time incidental to it, such as the high compression necessary to ensure the production of a temperature sufficient for the ignition of the injected fuel, were such as would outweigh its utility for some time to come. Needless to say, those disadvantages and difficulties have been overcome satisfactorily, and the Diesel engine of to-day is a thoroughly practical and efficient prime mover.

The immediate outcome of the feeling mentioned, however, was the introduction of the semi-Diesel engine, in which a heating device in the shape of a hot-bulb as extension of the cylinder is used. This engine has developed along lines of its own, and is also, like its forbear, a highly efficient piece of machinery.

In a Diesel engine, of the 4-stroke cycle type, the adjuncts usually comprise a two-stage air compressor, an air-injection device, a compressed air container, and a fuel tank. The operation is simple in the extreme. As the engine piston starts on its first downward travel, the air admission valve is open to the atmosphere, and allows air to pass into the cylinder. On the return stroke of the piston all valves are closed, so that the piston compresses the air in the cylinder to a pressure and from 450 to 500 lbs. to the square inch. The result of this is that the air becomes highly heated, the temperature rising to about 1,000 degs. Fahr, when the highest pressure is reached. When the piston is at the top of its stroke, or slightly before, according to the "timing," the fuel-injection valve is opened, and liquid fuel in the shape of fuel oil, tar oil, or some other heavy hydrocarbon is forced in to the cylinders, where, meeting the highly heated air, it automatically ignites and burns. When the correct supply of fuel has been forced into the cylinder the fuel valve is closed. Under the impulse of the ignited gases the piston is forced downwards, the heat energy of the fuel being thus converted into useful work. Arrived at the bottom of the stroke the piston commences to move upwards, and as soon as it does the exhaust valve is opened and the moving piston drives out the spent gases. As soon as the top of the stroke is reached the air valve again opens, as the four stroke cycle has been completed. For the sake of simplicity of description no mention has been made of the air compressor, fuel pump, or injector. Technical readers are well aware of these, but they would be confusing, perhaps, to a layman.

**Semi-Diesel Operation.**

In the four-stroke semi-Diesel engine the first downward stroke of the piston draws air through the air inlet valve into the cylinder. On the return stroke of the piston the valve is closed, and the air in the cylinder is compressed but not to so high a pressure as in the case of the Diesel engine itself. Before the piston is quite at the upper dead centre the fuel charge is driven by the pump into the chamber known as the hot bulb or hot ball, which is kept at a full cherry-red heat. As the piston reaches its upper centre the fuel is turned in the compressed air with explosion-like rapidity; the temperature and the pressure in the cylinder increases, and the piston receives a power impulse, the gaseous mixture expanding during the second downward stroke of the piston. On its return stroke the exhaust valve is opened, and the piston sweeps the gaseous products before it and through the valve, thus completing the working four stroke cycle.

Before the engine is started the chamber of the bulb must be heated with a torch or by some other means to a dull red heat, after which the successive explosions of the fuel oil will keep it sufficiently hot. In some types of engines a thin copper tube is run into the bulb so as to meet the spray of fuel. This small pipe can be readily heated up to facilitate starting, and it keeps constantly at a high temperature whilst the engine is working, as it quickly absorbs heat from the walls and hot gases. It is thus possible to start an engine of this type before the entire bulb is heated, and any tendency towards misfiring whilst the engine is running is eliminated. It generally requires from 10 to 12 minutes preliminary heating to get the bulb itself up to the correct temperature for starting, and when starting use is made of compressed air furnished by a small independent air compressor worked by hand or by an electric motor or petrol engine.

**Auxiliary Machinery.**

The whole subject of the development of the Diesel engine is of extreme interest, and one of the most satisfactory features in connection with it is that British engineers are not only keenly alive to the importance of this prime mover, but are actually leading spirits in its development. A very large number of firms have joined the ranks of the manufacturers of Diesel and semi-Diesel engines, and W. H. Allen, Sons and Co., Ltd., of Bedford, inform me that they have just secured, from that eminent Belfast firm, Messrs. Harland and Wolff, a licence to manufacture Diesel engines under the Burmeister and Wain patents.

These engines will be made in the Queen's Engineering Works, Bedford, and will be turned out to jigs, tools, and fixtures under a system of detailed inspection to secure accuracy, interchangeability, and rapid production. This work, I understand, will be carried out in special fitting and erecting shops which are fully equipped with every form of labour saving device, and have also the latest appliances, so that the engines may be tested as nearly as possible under actual working conditions.

The engines will be made in sizes to conform with present-day requirements, and the firm are specialising more particularly in the supply of Diesel electric generating sets for auxiliary and other purposes on board ship. They hope shortly to be in a position to supply auxiliary air compressors made under the same licence, and they inform me that they are laying themselves out to provide the other auxiliaries which go to form the complete equipment of a ship's Diesel engine room. I hope at some early date to have an opportunity of going over the Bedford works of this firm, and of describing them in these columns. I gather that they are turning out every class of Diesel accessory and auxiliary machinery including Diesel engine driven generators; auxiliary air compressors; motors for driving compressors; motors for sanitary, ballast, bilge and cooling purposes; centrifugal pumps for all purposes and also the various types of motors required in connection with refrigerating machinery, steering gear, hoists, and all descriptions of winches.

# Near East Markets.

## LONDON PRODUCE REPORT.

### Seed Oils Lower.

Sugar.—Home refined has been in moderate request at unchanged prices. West Indian crystallized has remained firm at 38s. to 41s., while Czecho-Slovakian at 20s. is unaltered. White Java is 6d. lower at 46s. 6d.

Coffee.—The market has been steady. Costa Rica has risen 10s. to 140s., while Indian at 110s. is unchanged. Nairobi at 105s. has shown no change. Futures are :—December, 49s. 3d. ; March 50s. ; May 50s. 6d. ; July 51s. 6d. ; and September, 51s. 6d.

Oilseeds.—A steady tone has characterized the market this week. Indian linseed is 3d. up to 17s., while La Plata at 16s. is unchanged. Rapeseed is the same with Toria at 18s. 6d. and brown Cawnpore at 17s. 9d. Cottonseed is firm with Indian at 9s. 3d., Sakellarides at 11s., and Egyptian black at 11s. 6d.

Seed Oils.—Prices are unsteady. Linseed oil has shed eightpence at 26s. Rape oil is lower with the crude variety at 46s., and refined at 52s. decreases of 2s., and 1s., respectively. Cotton oil is down with refined common edible 3s. less at 40s., Deodorized is unchanged at 50s. Turpentine has shed 1s. at 70s.

Oilcakes.—Business has been dull, and all prices are unchanged Linseed cake is 27s., and cottonseed cake is quoted at 200s. Arachis cake is the same at 220s. as also palm kernel at 160s.

## ORANGE GROWING IN PALESTINE.

Jaffa oranges, famous for their sweetness and general excellent quality, are the leading item in the export trade of Palestine, and are of special interest in the commercial status of a country which normally imports from four to five times as much as it is able to export (says a recent American consular report). The average grades go to Egypt and other eastern Mediterranean markets, but England is probably the most important market.

In the last good year before the war the export crop of Jaffa oranges amounted to approximately 1,500,000 cases, which required something over 4,000,000 feet board measure of lumber for crating and boxing. When the export trade was resumed in 1919 and 1920 the season's exports amounted to 647,000 cases, and for the year ending March 31,1921, 830,000 cases. The crop for the season of 1921 and 1922 is expected to exceed 1,000,000 cases in all.

The lumber used for making orange cases is an item of considerable relative importance in the import trade of Jaffa. Before the war lumber for this purpose was imported mainly from Australia and Roumania, and since the war some Swedish and American lumber has been brought in, but the Roumanian source of supply is again available and is favoured because of the comparative cheapness with which the lumber may be obtained.

While the dimensions of the boxes used are not exactly uniform the average is as follows : Length, 68 centimetres (26.77 inches) ; width, 32 centimetres (12.59 inches) ; height, 27 centimetres (10.62 inches). One partition is used. The thickness of the ends and partition is 16 millimetres (0.63 inch), and the thickness of the tops and bottoms, 7 millimetres (0.28 inch).

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., Smyrna, report as follows under date November 1 :—

In the report we issued on August 1, last, we estimated the yield of sultana raisins at about 31,000 tons. Considerable uncertainty existed for a time about the condition of the grapes owing to the insufficiency of the rainfall in the past winter and the unusual heat which set in during the months of July and August and which undoubtedly caused some loss of fruit. The vines had blossomed copiously in the spring, and the earlier forecasts had been reckoned on the expectation of a production of some 40,000 tons, a result which under more normal atmospheric conditions would certainly have been attained.

The statistical position up to October 31 is as follows, our estimates being based on the returns of the Tithe Department and shipments actually effected (the figures representing Turkish kintals) :—Total sales on the Smyrna market 323,800; total sales Carabournou sultanas, 5,000 ; total sales on the Vourla market, 100,000, total 428,800. Estimated stocks remaining at Smyrna, Magnesia, Alascheir, Axar, Nymphio and Vourla, are 172,000 ; the total being 600,800 Turkish kintals, equal to about 33,000 tons.

Shipments since the opening of the season to this date have been the following :—To London, 459,830 boxes against 268,581 boxes in 1920 ; to Liverpool, 317,340 boxes against 184,399 for last year and to Outports 78,627 boxes against 42,063 for 1920 ; total boxes 855,797 against 495,043 for last year, equal to about 11,000 tons and 6,200 tons respectively. About 12,500 tons were exported to the Continent, United States, Canada, and Australia, compared with 5,000 tons in 1920, making a total of 23,500 tons as against 11,200 tons.

Figs.—The forecast we made in our report of August 1, of a probable yield of about 22,000 tons has not been realised. Total arrivals to October 31, amount to about 163,000 bags, equal to 16,000 tons. Stocks on the market, in the interior of the country, and held by shippers against out-standing engagements, can be reckoned at a maximum of 2,000 tons, thus making the result of the production about 18,000 tons, against 22,600 tons in 1920. Some figs of very inferior quality still remain in the Meander Valley but this grade is only suitable for distillery purposes, and cannot be taken into account for export. The deficient yield is entirely due to the mild and dry winter and to the intense heat which prevailed in the summer months, which prevented the orchards bringing to full development and maturity all the fruit which they carried. Rains also, in the course of October, damaged some quantity of fruit, which, through fermentation, underwent a deterioration of quality which does not permit of its being exported with safety. The quality of the crop as a whole has not been satisfactory, and fine sound figs have commanded a premium through the season. The grading of natural figs has been inferior to that of 1920. Shipments for this season have been as follows :—To the United Kingdom. :—To London, 8,957 Sk-ton cases ; 35,527 boxes, 147,634 bags. Liverpool, 5,475 Sk-ton cases ; 11,079 boxes, 68,011 bags. To Outports, 505 Sk-ton cases, 1,293 boxes, 23,782 bags. Total,14,937 Sk-ton cases, 47,899 boxes, 239,427 bags. Equal to about net tons 5,800.

To the United States and Canada :—25,175 Sk-ton cases ; 35,602 boxes ; 187,566 bags ; equal to 7,430 net tons. To the Continent, Australia, &c., estimated shipments are about 3,000 tons. This brings the total shipment to-date to 16,230 net tons ; Estimated stocks Smyrna and Interior, 2,000 tons ; estimated result of yield say 18,230 tons. Of the stock at present visible of about 2,000 tons it can be safely stated that within the next fortnight no figs will be left on the open market. Twelve months ago, stocks available in Smyrna and in the interior of the country amounted to about 5,500-6,000 tons. To all intents and purposes therefore, business can be considered over for the season. A few small lots may be expected to come forward at intervals from the Meander Valley, but the quality will be inferior and only suitable for local distillery.

Black Raisins.—Owing to the state of war prevailing in the Tchal districts where these raisins are mainly grown, no supplies have been sent to market from those parts. The total quantity which will be available for export will not exceed this season some 1,500 tons, representing the produce of Phocea and the Island of Icaria. Existing stocks are at present estimated at about 3-400 tons, but very small supplies are actually available on the

Digitized by Google

market at Smyrna.

General Remarks.—Fruit shippers have been operating during the present season with considerable caution. The volume of business in sultanas taken up in June and July for forward shipment to the U.K. and Continent, aggregating about 5-6,000 tons, was done progressively at continually advancing rates, owing to the apprehensions which existed at the time about the eventual result of the yield. G. A. Q. sultanas which started at 80s.c-.i.f. were progressively dealt in up to 100s-c.i.f. some sales towards middle of August having been concluded at 110s.-c.i.f. for shipment by first steamer. The heavy flow of arrivals, advancing exchanges, and a declining market during September, undoubtedly favoured these forward operations. It is reported, however, that some shippers who failed to secure their exchange in time on their operations with Germany, have, with the subsequent collapse in German marks, found their anticipated profits converted into disastrous losses. The sharp fall in prices which took place early in September has stimulated consumption in the United Kingdom, and although the volume of shipments has been considerably heavier than last season supplies are being steadily absorbed and the market has an improving tendency. So far as the Continent goes, the position is unsatisfactory. Many shipments for Germany are being diverted and offered for sale in Holland and Belgium, where markets are overstocked, and prices have all along been slumping badly.

With regard to figs, business is generally worked on a forward basis, and undoubtedly the sharp advance in sterling and dollar exchange saved the position for packers, who otherwise could not have come out of their deliveries except at a loss in view of the higher range of prices which prevailed throughout September especially for sound conditioned fruit suitable for layer packing.

Reference has been continually made in our weekly reports to exchange fluctuations. With the existing uncertainties on this score, shippers have had a very difficult situation to cope with, and, in most cases, have preferred to secure their exchange from day to day or on each successive deal rather than expose themselves to sudden and sharp reactions which would jeopardise profits. Doubtless some shippers, more speculatively inclined, have profited by the advancing rates of exchange, by taking up business for forward delivery which at the time of sale, was apparently unprofitable. Exchange uncertainties still continue, and so long as no political settlement is arrived at in these parts an improvement in this respect cannot be anticipated.

## ROUMANIAN CROP REPORT.

We are indebted to Messrs. Watson and Youell's Shipping Agency Ltd., of Roumania, for the following report dated November 30 :—

The weather during October continued dry and warm during the daytime but cool and sometimes cold at nights, with occasional hoar frosts on the mountains. Slight rains fell in North Moldavia, Bukovina and Bessarabia during the first fortnight and fairly heavy rains fell in Transylvania towards the end of the month. The prolonged drought broke early this month and general penetrating rains fell almost continuously for about three weeks. The wind veering into the North, the temperature has fallen to below freezing point at nights, with occasional snow or sleet. Detention of steamers at Black Sea ports has occurred through heavy gales recently.

Autumn ploughing and sowing have been possible in Bessarabia and Transylvania, and the early sowings look very well, but in other parts of the country field work had to be discontinued on account of the dryness of the land. The recent rains have done a lot of good and will permit of ploughing and sowing being resumed all over the country. It is to be hoped that the weather may be sufficiently mild for good progress to be made.

The Government have decided to increase the selling price of wheat in order to encourage cultivation on a larger scale. The maize crop has been gathered in excellent condition and is of superior quality, but the crop is reported to be much under average. The fodder crop is also under average and a shortage for home requirements is feared. The veterinary reports are satisfactory on the whole, some cases of foot and mouth disease are reported in Transylvania and in the district of Muscel. There is a considerable export of cattle going on at present to Constantinople, Palestine, Greece, Italy and Marseilles, but chiefly to Constantinople. Prices have risen, especially in Transylvania.

The water in the Upper Danube has risen 4½ feet allowing much belated loaded grain lighters to arrive at overseas shipping centres from up the river. The lowest depth of water in the Danube on the 23rd inst. was 23½ feet which occurred at the 13½ miles post. Over the Bar at Sulina the European Commission of the Danube have been able to maintain the pre-war depth of 24 feet since early in September. The repairs to the Bridge over the Borcea opposite Cernavoda, according to the latest official report, are to be completed early next month, and it is expected that the first train will make the crossing on the 6th proximo.

## CURRENT PRICES.

*General Produce* —Bacon : (Continental), 140s. 6d. cwt. (Canadian), 117s. 6d. cwt. ; (American), 95s 6d cwt ; butter : (Danish), 230s. 6d. cwt. ; (Australian), 160s. cwt. ; (New Zealand), 192s. cwt. ; cheese : (Canadian), 109s. cwt. ; (New Zealand) 101s. cwt. ; lard, 73s. cwt. ; eggs : (Danish), 43s. 6d. per 120 ; (Styrian), 22s. per 120 ; chillies, 167s. 6d. cwt. ; cloves (Zanzibar), 1s. 7½ lb. ; cocoa (Ceylon, good to fine), 97s. 6d. cwt. ; coffee (Costa Rica), 152s. 6d. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt. ; (Jamaica), 67s. 6d. cwt. ; (Mocha longberry), 113s. cwt. ; (Santos, superior), 59s. cwt. ; ginger (washed Cochin), 67s. 6d. cwt. ; nutmegs (110's to 80's), 11½d. lb. ; pepper (Singapore black), 3½d. lb. ; (Muntok, white), 7½d. lb. ; pimento, 2½d. lb. ; raisins (Valencias), 140s. cwt. ; sultanas (Smyrna), 125s. cwt. ; currants (Vostizza), 80s. cwt. ; currants (Amalias), 60s. cwt. ; sugar : (Tate's cubes), 54s. 9d. cwt. ; (Lyle's granulated), 48s. 10½d. cwt. ; (Mauritius crystals), 43s. 3d. cwt. ; (West Indian crystallized), 40s. 3d. cwt. ; (centrifugal), 15s. 6d. cwt. ; tapioca (fair Singapore), 1½d. lb. ; sago (small pearl), 26s. 6d. cwt. ; sago flour, 16s. 9d. cwt. ; rice (Rangoon, No. 2), 18s. 9d. cwt. ; (bran, Rangoon), £6 5s. ton ; cinnamon (firsts), 1s. ½d. lb. ; mace (fair Singapore), 1s. 3½d. lb. ; tea : Indian (common to good common), 16s. 9d. lb. ; (medium to good), 1s. 7d. lb. ; (fine to finest), 2s. 10½d. lb. ; Ceylon (common to good common), 1s. 1d. lb. ; (medium to good), 1s. 7d. lb. ; (fine to finest), 2s. 9d. lb. ; Java (common to good common), 8½d. lb. ; wheat (English white), 49s. 3d. qr. ; (Australian), 52s. 6d. qr. ; barley (malting), 62s. 3d. qr. ; barley (feeding), 42s. qr. ; oats, (English), 32s. 6d. qr. ; oats (La Plata ex-ship), 25s. 6d. qr. ; maize (La Plata), 33s. 4½d. qr. ; flour, 44s. sack.

*Metals.*—Aluminium, £122 10s. ton ; antimony (English Regulus), £36 10s. ton ; bismuth, 7s. 6d. lb. ; copper (standard), £66 16s. 3d. ton; copper (electro), £76 5s. ton; gold bars, 102s. 11d. oz. ; iron (No. 3 Cleveland), 110s. ton ; hematite (mixed number), 116s. 3d. ton ; galvanized sheets (24 G), £18 5s. ton ; lead (soft foreign), £25 2s. 6d. ton; manganese Poti 1s. 1½d. unit; molybdenite, 38s. 9d. unit ; nickel, £192 10s. ton ; platinum, 382s. 6d. oz. ; plumbago, £20 ton ; quicksilver, £10 7s. 6d. bottle ; silver bars, 37,5-8d. oz. ; spelter (G.O.B.), £26 10s. ton ; tin (standard), £161 2s. 6d. ton ; wolfram, 12s. 3d. unit ; zinc sheets, £35 ton ; tin plates (20 by 14), 21s. 6d. box.

*Chemicals.*—Acids : Boric, 66s. cwt. ; oxalic, 9d. lb. ; citric, 2s. 5d. lb. ; tartaric, 1s. 4½d. lb. ; ammonia (sulphate), £14 7s. 6d. ton ; arsenic (white powdered), £40 10s. ton ; benzole (standard), 2s. 5½d. gallon ; bleaching powder (35 per cent), £15 10s. ton ; borax crystals, 31s. 6d. cwt. ; cream of tartar 126s. 3d. cwt. ; Potassium : Bi-chromate, 8d. lb. ; chlorate, 6½d. lb. ; caustic, £32 10s. ton ; nitrate, £40 10s. ton ; permanganate, 1s. 1d. lb. ; prussiate yellow, 1s, 2½d. lb. ; sulphate (90 per cent.), £15 5s. ton ; Sodium : Crystals 140s. ton ; bi-carbonate, £11 5s. ton ; bi-chromate, 6½d. lb. ; alkali (58 per cent.), £9 3s. 9d. ton ; chlorate, 4d lb ; caustic (70 per cent.), £24 5s. ton ; hyposulphite £17 ton ; prussiate, 8½d. lb. ; nitrate, £14 16s. 3d. ton ; glycerine, (crude, 80 per cent.), £80 ton ; glycerine (industrial, 1260 per cent.), £110 ton ; lemon oil, 3s. 2d. lb. ; quinine 4s. oz. ; red lead, 39 5s ton ; white dry lead, £42 5s. ton ; white ground lead, £55, 15s. ton ; sulphate of copper, £29 10s. ton ; sulphate of iron 5s. ton.

*Hides and Skins.*—Ox and Heifer (first), 90 lbs. and up, 8½d. lb. ; 80 to 89 lbs., 8½d lb. ; 70 to 79 lbs., 8½d. lb. ; 60 to 69 lbs., 7 3-8d. lb. ; 59 lbs. and under, 6, 3-8d. lb. ; (second), 90 lbs. and up, 7, 1-8d. lb. ; 80 to 89 lbs., 7½d. lb. ; 70 to 79 lbs., 7½d. lb. ; 60 to 69 lbs., 5, 1-8d. lb. ; 59 lbs. and under, 6½d. lb.; 5,1-8 ; Cows (first), 60 lbs. and up, 6½d. lb. ; 59 lbs. and under, 6½d. lb. ; Bulls, (first), 5, 1-8d. lb. ; (second), 4d. lb., ; Kips (first), 7½d. lb. ; (second), 6, 1-8d. lb.; (third), 4d. lb. ; Calcutta Market, Prices in rupees per 20 lb. :—Arsenic hides (cows), Agras, 7 to 12 ; Durbanghas, 4-8 to 6-8 ; Patnas, 4-8 to 6-8; Salted cows 4 to 7-8. Arsenic hides (buffalo), 3 to 5-8 ; Skins : Calf, 8 to 10 per 20 lb. ; goat 240-270 per 100 pieces ; Bombay Market :— Dressed buffs, 10 to 14 annas per lb. ; dressed cows, 10 to 14 annas per lb. ; goat and sheepskins, 1-4 top 1-12 rupees per lb.

*Miscellaneous* — Cotton : (American), 12,00d. lb ; (Egyptian) Sakel), 20-40d lb ; Oilseeds: Linseed (La Plata), £10 2s. 6d. ton; rape (Toria), £17 7s. 6d. ton ; palm kernels, £17 16s. 3d. ton. Oils : Linseed £27 2s. 6d. ton ; olive (Levant), £78 10s. ton ; palm, £36 2s. 6d. ton ; rape (crude), £48 5s. ton ; soya, £32 15s. ton ; petroleum, 1s. 4d. gallon ; petrol, 2s. 1d. gallon ; fuel oil (ex-tank), £3 15s. ton ; coconut (Ceylon), £42 10s. ton ; cotton (crude), £35 10s. ton ; ground nut, £46 10s. ton ; Rubber : Plantation (No. 1 crepe), 10½d. lb. ; smoked sheet, 10½d. lb ; fine hard Para, 1s. 2½d. lb.

# Company Meetings.

## ANGLO-EGYPTIAN BANK.

The Thirty-Fifth Ordinary General Meeting of the Anglo-Egyptian Bank, Limited, was held on November 29, at the Bank, 27, Clement's Lane, Lombard Street, E.C.4.

Mr. Raoul Hector Foa (Chairman of the company) presided.

The Secretary (Mr. Geo. H. Soul), having read the notice convening the meeting and the report of the auditors,

The Chairman, after referring to the loss sustained by the company through the death, during the year, of Mr. H. A. Richardson, a director, and also to the decease of a former colleague, Mr. J. Howard Gwyther, said :—As regards Egypt, the chief field of our activities, the whole of the situation has been overshadowed by politics. The delegation, headed by Adly Yeghen Pasha, which has been over here for some months to settle the relationship which is to exist in the future between Great Britain and Egypt has, I grieve to say, left our shores without having, apparently, definitely arrived at an arrangement, but I hope and trust that a *modus vivendi* satisfactory to both nations will ultimately be reached. The prosperity of Egypt largely depends upon the amount of money accruing to that country from the sale of its cotton. There have been since this time last year very considerable fluctuations. At the end of November, 1920, f.g.f. Sakellarides was about 40 dollars a kantar ; on March 4, 1921, the price was 22 dollars ; on September 30 last it was from 56 dollars to 57 dollars ; and on the 11th of this month it stood at from 37 dollars to 38 dollars, a kantar being equal to 99 lb. avoirdupois. Under date October 13, our cotton manager in Alexandria wrote :—" The fellah has taken advantage of the unexpected rise in cotton and shows the greatest good will in parting with his cotton, so that, with an average demand from outside, the end of this season should see the interior warehouses bare of the staple." It is to be remembered, however, that since the date of this letter there has been a considerable fall in cotton.

During the period under review the imports of manufactured articles into Egypt have been on a very much smaller scale than in preceding years, and the warehouses in Egypt, overflowing with unsold merchandise then, now certainly contain far less of this than they did a year ago.

Your directors have gradually extended the number of branches. Our bank is now working at Assiut and Suez in Egypt, at Omdurman in the Sudan, and at Nazareth in Palestine. We have, at last, been able to secure a site for premises in London large enough for our needs, and these will, I hope, be ready for our occupation within six months from to-day.

In Palestine we are proud to be able to say that we have been of considerable use to the Government in the country, but commercial development there is a plant of slow growth.

Banking profits have diminished all over the world, and from a variety of causes. We cannot expect to be an exception to the general rule. Our deposits have been somewhat reduced. One third of this is due to the disappearance of one Government account which we knew was only of a temporary nature, and the rest, is, no doubt, owing to the withdrawal of money by clients who had to make good the shrinkage in commodities, or other values. There have been very few important variations in the items in the balance-sheet. The totals of the two sides of the balance-sheet are down from £18,000,000 to £14,000,000, reflecting the shrinkage in business which has followed upon the inflation brought about by the world war.

We have great pleasure in being able to declare a final dividend of 15 per cent., together with a bonus of 2½ per cent., both free of income-tax, but our satisfaction is to a certain extent qualified by the fact that we have had to claim back some of the excess profits duty which we had previously paid to the Government. Your directors continue to do what in their power lies to keep up the reputation which the bank has for so long enjoyed, and Sir Marshall Reid will in a few weeks be visiting most of our branches, thereby exercising a supervision over the general business of the bank, being brought into close personal contact with our many good clients.

The report and accounts were unanimously adopted.

## INDO-BURMA OILFIELDS.

The First Annual General Meeting of the Indo-Burma Oilfields (1920), Ltd., was held on December 1 at Winchester House, Old Broad Street, the Rt. Hon. the Earl of Denbigh, C.V.O. (Chairman of the company) presiding.

The Chairman, after dealing with the figures in the balance sheet, said :—Turning now to the general operations of the company the first and most important item I will deal with is the change made by the directors in the programme of the company from what was outlined in the prospectus issued when the company was formed. You will recollect that the prospectus declared the policy of the company to be the development of its Yenangyaung well sites. The Yenangyaung field was well known as an oil producer and it was from that field that most of the oil in Burmah had been derived. Like all other companies during the year 1920 this company had great difficulty in getting delivery of the machinery and plant ordered by it and in the meantime the local staff were able to give more attention to what I may refer to as the company's outside areas, particularly Yenanma and Padaukpin. As a result of a detailed examination of these areas they strongly urged the Board to drill trial wells on them. After giving the matter the fullest and most anxious consideration and believing it to be in the best interests of shareholders to get oil at the earliest possible date your directors authorised work to be started at Yenanma. The first well drilled came in with a production of 6½ barrels per day at 690 feet against the prospectus estimate of three barrels. Seventeen wells have been drilled in the neighbourhood of No. 1 well, and the results are set out in the technical adviser's report which accompanies the directors' report. Four further wells are being drilled and the results may be received at any time. You will note that oil has been struck in every well, the six best giving results of 12, 14, 18, 25, 30, and 45 barrels per day respectively. Results from three wells have been cabled since the report was issued: No. 20, which produced 11¼ barrels per day, No. 21 producing 18 barrels and No. 22 producing 30 barrels. Including these the average for the producing wells so far drilled is just 11 barrels initial yield per well per day against the prospects estimate of three barrels average production.

Coming now to the Padaukpin Area, work was commenced in No. 1 well in January 1921 and in No. 2 well some little time later. It was subsequently discovered, as the result of a large scale survey that the centre of the dome was situated on an area of 1.8 square miles contiguous to the company's original area. This area was the property of a Burmese Syndicate from whom the company's managing agents obtained an option to purchase at the price of £17,500, and I am glad to say that they have now turned the whole of this area over to the company at the price they paid for it, subject only to the same royalty as is payable in respect of the original area. Five sites were located on that area and No. 3 well struck the oil at a depth of 1414 feet, the yield being 63 barrels per day. No. 1 well was drilled to 1950 feet when on account of bad caving-in it was decided to abandon it. No. 2 well has now reached a depth of 782 feet. No. 4 well a depth of 1,450 feet, and may strike the oil at any time. No 5 has reached 705 feet and No. 6 100 feet. The rig is erected on No. 7 Well.

The next matter to which I would like to refer is the question of the refinery. On making careful search for a suitable site, it was found that the Yomah Oil Company had already acquired the best site for a refinery which could be discovered anywhere in the neighbourhood of Rangoon. That company had already ordered a considerable amount of material, and eventually it was decided to join with them in the erection of a co-operative refinery. The first unit of this refinery is nearing completion. The refinery is laid out on the most modern lines and is capable of extension up to 4,000 barrels capacity per day.

Regarding the question of profits I am assured that taking a moderate view the company can, beginning early in the New Year count on earning profits of £10,000 per month, which sum will be progressively increased as production increases. With regard to the future programme, work will proceed with the present plant at Yenanma and Padaukpin continuously. The company's experts have the fullest confidence in the future of the company and so has every member of the Board.

The report was unanimously adopted.

# SHIPPING INTELLIGENCE.

## NEW SHIPS FOR THE NEAR EAST.

Chief among Eastern trade developments should be the appearance in the late spring, or early summer, of the two new P. and O. liners Moldavia and Mongolia, says *The Times*, while a directors' report shows that the company hopes to obtain delivery of the Maloja and Mooltan towards the end of the year. Each of these four mail ships is named after a vessel destroyed by enemy action during the war. The Ballarat, launched more than a year ago and intended for the P. and O. Company's service to Australia *via* the Cape, is expected to be delivered within the next few weeks. Then, at the beginning of the year, the new liner City of Simla is to make her maiden voyage in the new service of the Ellerman and Bucknall Line between the Continent, the United Kingdom, and the Far East, and is likely to sail, according to present reports, with most, at any rate, of her accommodation filled. The revival, on December 21, of the same company's pre-war passenger service between London and South Africa is another interesting development.

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses :—*

*Anchor Line.*—S.s. Castalia for Bombay (Liverpool, December 27).

*Anchor-Brocklebank Line.*—S.s. Maidan for Calcutta (Birkenhead, December 21) ; s.s. Masirah for Port Said, Colombo, Madras and Calcutta (leaves London, December 24) ; s.s. Maihar for Calcutta (Birkenhead, December 31) ; s.s. Maimyo for Port Said, Colombo, Madras and Calcutta (leaves London, January 7) ; s.s. Media for Calcutta (Birkenhead, January 11) ; s.s. Manaar for Port Said, Colombo, Madras and Calcutta (leaves London, January 21).

*Bibby Line.*—S.s. Herefordshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, December 21) ; s.s. Sittang for Rangoon (Middlesborough, January 7).

*Byron Steamship Line.*—A steamer will sail on December 30, from Liverpool, for Patras, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz and Braila.

*Cunard Line.*—S.s. Antinoe for Gibraltar, Piraeus, Smyrna and Constantinople (London, December 16) ; s.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa (Swansea, December 24).

*Ellerman Line.*—S.s. Asturian for Gibraltar, Malta, Patras, Syra, Smyrna, and Constantinople (Liverpool, December 17).

*Ellerman's "City" Line.*—S.s. City of Florence for Calcutta (Birkenhead, December 16) ; s.s. City of Baghdad for Calcutta (Birkenhead, December 21) ; s.s. City of Bristol for Calcutta (Birkenhead, December 21).

*Ellerman's "Hall" Line.*—S.s. City of London for Bombay, Karachi, and the Punjab (Liverpool, December 12) ; s.s. City of Paris for Bombay, Karachi, and the Punjab, (Liverpool, December 30).

**ANCHOR LINE**

**First-Class Passengers only.**

**LIVERPOOL TO BOMBAY.**

**KARACHI via Bombay calling at Gibraltar & Egypt**

LARGE STEAMSHIPS. UPPER DECK CABINS.
FITTED WITH ELECTRIC FANS.
RECOGNISED BY INDIAN GOVERNMENT.

PASSENGER SAILING DATES—

CASTALIA, JANUARY 6.
MASSILIA, JANUARY 20.
ELYSIA, FEBRUARY 10.
CIRCASSIA, MARCH 10.
OLYMPIA, MARCH 22.

**Anchor Line (Henderson Brothers), Ltd.,**
16, Gracechurch Street, London, E.C.3.

*Ellerman's Westcott and Laurance Line.*—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

*Glen Line.*—S.s. Glentara for Port Said, Port Swettenham, Singapore, etc. (London, December 22) ; s.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January 5) ; s.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 19).

*Henderson Line.*—S.s. Mandalay for Port Said and Rangoon (Birkenhead, December 14) ; s.s. Pegu (new steamer) for Port Said and Rangoon (Birkenhead, December 28).

*Holt Line.*—S.s. Eumeus for Port Said, Port Swettenham, Singapore, etc. (Glasgow, December 15) ; s.s. Ningchow for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, December 15) ; s.s. Demodocus for Port Said, Port Swettenham, Singapore etc. (Glasgow, December 15) ; s.s. Theseus for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, December 15).

*Johnston Line.*—S.s. Aviemore for Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Varna, and Constantza (Liverpool, December 10) ; s.s. Venice for Piraeus, Volo, Salonika, Bourgas, Varna and Constantza (Liverpool, December 17).

*Moss Line.*—S.s. Luque for Casablanca, Gibraltar, Malta, Famagusta, Beyrout, Haiffa and Jaffa (Liverpool, December 12) ; s.s. Sitra for Gibraltar, Malta, Piraeus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, Constantza and Sulina (Liverpool, December 23).

*Papayanni Line.*—S.s. Andalusian for Tangier, Malta and Alexandria (Liverpool, December 10).

*P. and O. Line.*—S.s. Kaisar-I-Hind for Bombay (London, December 16) ; s.s. Soudan for Colombo, Madras, and Calcutta (London, December 30) ; s.s. Delta for Bombay (London, December 30).

*P. and O. British India Line.*—S.s. Hatimura for Colombo, Madras and Calcutta (London, December 15) ; s.s. Mudura for Bombay and Karachi (London, December 16) ; s.s. Domala for Bombay and Karachi (London, December 30) ; s.s. Mantola for Colombo, Madras, and Calcutta (London, January 6) ; s.s. Nirvana for Colombo, Madras and Calcutta (London, January 21)

*Prince Line.*—S.s. Glenelg for Tunis, Malta, Alexandria, Jaffa, Haiffa, and Beyrout (Manchester, December 17).

## ROUMANIAN CONSOLIDATED OILFIELDS.

The report of the Roumanian Consolidated Oilfields Ltd., for the period ended March 31, the date having been altered from June 30 to March 31 so as to coincide with Roumanian official requirements, states that the issued share capital of the company is £1,432,294 in fully-paid ordinary shares of £1 each. The issued debenture capital is £563,200 in 10 per cent. convertible debentures of £100 each. In respect of this amount, £178,120 has yet to be received, the final instalment being payable on April 30, 1922. On March 31, last, prior to the debenture issue, loans and advances by bankers amounted to £200,500 ; they have since been reduced to £79,910, and the further moneys to be received on debenture account provide for the liquidation of this debt and the discharge of the remaining liabilities of the company. The old 6 per cent. debentures have been exchanged for the new issue, which has, therefore, become a first charge upon the company's undertaking. Meeting, Cannon Street Hotel, December 9, 12 noon.

## MADRAS AND SOUTHERN MAHRATTA RAILWAY.

The report of the Madras and Southern Mahratta Railway Company for the year ended March 31 states that the company's share of the surplus profits of the company's and State lines, less Indian income-tax and supertax, amounted to Rs.29,34,756, which has been paid by Government and remitted at 1s. 3,3-16d. per rupee, realizing £185,715. The share of the profits from the Mysore State lines was Rs.53,885, realizing £3,709, thus making a total of £189,424. Interest on investments amounted to £32,533 making a total of £221,958 (as compared with £484,184 for 1919-20). The final dividend for the year is 25s. per cent., and a bonus of £1 per cent. is also proposed, making with the guaranteed interest, a total distribution of 7 per cent. for the year. The reserve fund has been raised to £500,000.

## THE OIL WELLS OF CZECHO-SLOVAKIA.

According to a recent American Commerce Report the Gbely oil wells in Slovakia are the largest in the Czecho-Slovak Republic. The oil output consists of the so-called "heavy" oils, which have a very low freezing point, no paraffin or asphalt, and a very small portion of benzine and kerosene. On account of its nature, the oil is especially adapted for the manufacture of lubricating oils. The monthly output of refined oil was 6,000 quintals* in 1919, 8,000 quintals in 1920, and about 10,000 quintals in 1921. Therefore, it is far too small to meet the requirements of Czecho-Slovakia, for lubricating oils. The supply from Gbely relieved the demand of the country for oils and greases in 1918 and 1919, when there was no possibility of import. At that time the whole output was placed at the disposal of the State railways. It is now manufactured into what is known as "Vulcan" oil, oils and greases for compressors, motors, cylinders, and transformers, as well as into the clear and colourless oils for sewing machines, typewriters, etc. The first boring was made in 1913 at Gbely by the Hungarian Government. The Czecho-Slovak Government has continued the work, but finds itself handicapped at present in further prospecting because of the high cost of making borings.

* *Quintal* = 220.46 *pounds.*

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated November 28, 1921 :—

Condition of Crops.—November 25—Damage to rice owing to drought in Western Bengal. Central Provinces and Punjab prospects unchanged. Bombay prospects fair, except in parts of East Deccan, where rain was badly wanted.

Markets.—November 24—Bombay cotton market steady. Fine M.G. Oomras Rs. 409 December-January; Rs. 408 March. Bombay cotton arrivals from September 1 to November 18, 1921, were 370,000 bales as compared with 163,000 bales in the same period of the last year. Bombay Piece-goods market closed from November 17 to 19, and after that very quiet; local goods moving quietly but steadily. November 25—Calcutta jute market very quiet. November 26—Hessians slightly steadier with slight advance in rates; Heavies very quiet. At tea sale on November 22, good selection from Assam and Dooars. Cachars and Sylhets fair. Prices advanced for all grades except dusts; common and medium grades advanced 9 pies to 1 anna per lb. Fine teas firm to slightly dearer. Full prices for improved qualities and teas with any cold weather flavours. 381,280 packages sold to date at an average price of 9 annas 3 pies per lb. November 22—Shellac market firm in earlier part of the week with advanced values. T.N., Rs. 165. In latter part prices easier at Rs. 160. November 25—Special Straits quality rice, Rs. 495 for December new crop.

Government of India have sanctioned for exports to all destinations 100,000 tons of balance of 1921 rice crop. Survey for Agra-Bah-Batesar line of 46 miles by State Railway's Officer sanctioned. No change in bank rates.

## FIRMER TONE GENERALLY.

*(From Our Own Correspondent.)*

London, Monday Evening.

While business has been very restricted owing to the uncertainty regarding the Irish negotiations, the general tone has been better than might have been expected, on the strength of the belief that a solution of the problem can still be found. The idea of a Moratorium for Germany has been received with a certain amount of favour and has also contributed to a more cheerful tone.

**Conversion and War Loans Strong.**

Gilt-edged securities have been firm. The Conversion Loan has jumped ½ at 64,11-16, and War Loan Fives show an advance of 16 at 88¾. Fundings and Consols are steady at 73½, and 49,7-8 respectively. In Near Eastern securities which rank among British Funds, Egyptian Guaranteed 3 per cent. at 68½ and Greek Guaranteed 2½ per cent. 1898 at 62 are unchanged, while Turkish Guaranteed 4 per cent. 1855 are ½ up at 69½.

The market has shown no definite tendency for foreign securities. French securities have been a little brighter, the 5 per cent War Loan being 1½ up at 35. German 3 per cents. are again dull and have dropped to 2,13-16. Chinese securities are still on the dull side and Brazilians are unsteady. The Japanese 4 per cent. 1899 issue and the 4 per cent 1910 issue have each shed 2 points and now stand at 60.

Greek securities are firmer. The 5 per cent. 1884 Loan has gained a point at 34, as also the 5 per cent. 1881 Loan at 34. The 4 per cent. 1902 Loan at 31, and the 5 per cent. Funding Loan at 33 are unchanged. The 5 per cent. 1914 Loan is the same at 34.

**Industrials Weak.**

Rather more business has been passing but prices generally have been on the decline. Textiles have improved with Courtaulds 9d. up at 35s. 3d. Armament shares are still unsettled in spite of their rally last week. Armstrongs are 1s. down at 13s. and Vickers have shed a like amount at 8s. 6d. Guest Keens have lost 1s. at 27s., while Cammell Lairds are unchanged at 11s. A quiet tone has prevailed in Shipping Securities. P. and O. Deferred are unaltered at 280, while Furness Withys are 3d. up at 22s. 6d. Cunards have dropped 3d. at 17s. 3d., while Royal Mails are the same at 79.

**Burmahs Stronger.**

A brighter tone has been in evidence in the Oil market during the week. Burmahs have gained 1-16 at 5¾, and Mexican Eagles at 3,29-32 are 19-32 up. Among Egyptians, Anglo-Egyptian B have shed 1-16 at 1½ while Oilfields of Egypt have remained at 3s. 6d. In the Roumanian section, Roumanian Consolidateds have lost 3d. at 7s. 6d., and Steaua Romana have shed 6d. at 7s. 3d. Phœnix at 6s. 6d. are 3d. down, while Dacia Romanos at 13-16 are 1-8 up.

Mines have been more cheerful with De Beers 5-16 up at 8,3-8.

**Banks Firm.**

Banks have remained firm. Agricultural of Egypt 3½ per cent. Bonds are unchanged at 54, and the 3½ per cent. Guaranteed Bonds are the same at 55½. Imperial Ottoman Banks are unaltered at 6½, but National Bank of Egypt shares have dropped 5-16 to 18¼. Bank of Athens shares at 2, and Ionian Banks at 3¾ both remain unaltered. Both Chartered of India and National of India remain the same at 15 and 37½ respectively. P. and O. Banks are 1-16 up at 11,3-16. Imperial Bank of Persia remain at 5,1-8, while Bank of British West Africa are ¼ lower at 4¼.

Land shares have been variable. Béhéras are unchanged at 8¾, while Béhéra Prefs are 1-16 up at 3,3-16. Egyptian Delta Lands remain at 6s. 9d., but New Egyptians are 3d. lower at 21s. 9d. Egyptian Consolidated Lands are the same at 10½d., while Sidi Salems have lost 1-16 at 15-16, and Union Foncieres remain unchanged at 2,7-16. There is no improvement in Sudan Plantations, which remain at 2¾.

**Rubbers Steady.**

The Rubber Market has shown a good tone during the week, and all quotations have improved. Business is still very limited, a few special shares only being favoured.

Among miscellaneous descriptions Alexandria Waters have cast 1-16 at 6,5-8; Egyptian Markets at 18s. 3d. are unchanged while Egyptian Salt and Soda at 32s. 6d. has gained 3d.

## BUILDING REVIVAL IN ALEXANDRIA.

Some activity is noticeable at the present time in the building trade in Alexandria, particularly in the erection of private villas in the suburbs, states H.M. Commercial Agent for Egypt. United Kingdom firms desirous of offering supplies of building materials can obtain the names of contractors and importers of such materials in Egypt on application to the Department of Overseas Trade, 35, Old Queen Street, Westminster, S.W.1.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

(1) The Modern Chaotic Exchange Situation
(2) The French Exchange Position.
(3) German Industry and the Mark.
(4) The Italian Lira.
(5) The United States Dollar.
(6) Miscellaneous Exchanges (Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

## MANCHESTER REPORT.

(*From Our Own Correspondent.*)

*Manchester, December 2.*

The tone of the market during the past week has been distinctly dull. No feature of importance has presented itself and business on all sides has been within very narrow limits. Rumours of financial trouble at home and abroad have proved disconcerting and the political situation throughout the world is dead against trade developing. In both the spinning and weaving sections more machinery is gradually being brought to a standstill. With regard to cloth hardly any business has been transacted for Egypt, the Levant and Constantinople. Here and there a few small lots in suitable makes have been sold but prices generally have proved entirely impracticable. Quotations for Egyptian yarns have been somewhat easier and buyers have had matters all their own way. Demand for piece goods for India has not resulted in very much business, and manufacturers on the whole have had a dreary week. A few odd sales in light cloths have taken place. Standard makes have been practically neglected. Trade with China has been nearly at a standstill. Sales of any weight have not been mentioned. South America has continued quiet. A little more business has been about for the home trade. American yarns prices generally have favoured buyers. A few export numbers have been in request for India.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date November 30 :—

Another very dull week has passed, and the heavy clouds of depression overhanging the trade still show no signs of an immediate dispersal. Patience and optimism are still called for to a large degree, and one has to look ahead, and explore all the surrounding circumstances deeply, before one can feel that one's faith in the ultimate revival of the trade is justified. Dealings in actual cotton on our market this week have been on a very limited scale ; sale figures have dwindled to a low ebb, and prices show a decline. There has been quite a marked enquiry for white cotton, but the business resulting has been most disappointing. Sudan, once again, claims a comparatively large share in the total—the result chiefly of " following on " out of old lots, which are now offered at attractive rates as compared with what was being asked for the same cotton only a week ago. The same hand-to-mouth policy is still in evidence on the part of spinners, and oddments, and box-bales, at knock-out prices, seem to be the only kind of cotton which really finds favour. Spinners are still very lugubrious in their outlook, and from Manchester comes a doleful tale of featureless, dragging markets. It is not entirely without significance, however, that whereas organised short time for the Egyptian section was not even proposed, in the American section, where it was actually put to the vote, the necessary majority was not obtained. From this it is not surprising if some people suggest that things in the spinning world are not quite as black as they are sometimes made out to be. Further enquiries are reported from India, and they are nearly all for quick delivery. In fact, it would appear as if that country was not short of stock, but as if very little was required to induce it to replenish. Will the necessary impetus be forthcoming ? If it were, events might move very rapidly in Lancashire, for, although most spinners are carrying large stocks of yarn, there is no doubt that a very large percentage of them have little raw cotton. The American crop bogey, which has been used so often to sway and unsettle the futures markets of the world, should receive its quietus on the 12th proximo, when the Washington Agricultural Bureau will issue its final report C.i.f. business has shown a distinct falling off during the period under review. Total sales 1.150 (includes 260 bales Sudan). Quotations show a reduction of 75 points on the week. Fully Good Fair Sakellaridis 20.50d.

## BRITISH EMPIRE COTTON GROWING.

### Compulsory Levy for Spinners.

(*From Our Own Correspondent.*)

*Manchester.*

Owing to it having been found impossible for the Liverpool Cotton Association to collect the levy of 6d. a bale on cotton imported into this country for the purpose of raising a fund to finance cotton growing in the British Empire, the question of promoting a bill in Parliament to make the levy compulsory was considered at special meetings in Manchester on December 1. At the ordinary monthly meeting of the General Committee of the Federation of Master Cotton Spinners' Associations, it was decided to refer the matter to a sub-committee. The question was also dealt with at a meeting of the spinning members of the Cotton Spinners' and Manufacturers' Association, when it was decided to support the bill in Parliament. If legislation to this effect is carried, the levy of 6d. a bale upon all cotton used in this country will raise about £100,000 a year and if this is done the Government has promised to make a grant of about £1,000,000 towards the work of the British Empire Cotton Growing Corporation.

## LANCASHIRE COTTON TRADE WAGES.

### Further Reduction.

(*From Our Own Correspondent*).

*Manchester.*

The wages of the operatives in the Lancashire cotton industry are about to be revised. Last June there was a three weeks' strike against a reduction but eventually the workpeople had to submit to a fall of 60 per cent. on list rates, which meant a drop of 3s. 10d. in the £ on current wages, and a further reduction of 10 per cent. on list rates in the last week of this year. The agreement was for six months and it was arranged that at the end of that period it would be in order for either side to apply for a further change. Owing to the severe trade depression, and the unprofitable state of the industry, it is taken for granted that the employers will not lose any time in seeking a further reduction. It will be necessary for them to give three months' notice, and it is probable that the trade union secretaries will receive a demand at the end of this year or early next. It may be mentioned that although there is some irregularity in the lists on which the operatives are paid the wages now ruling are about 150 per cent.. above the level existing at the outbreak of war in July 1914. On behalf of the employers it is contended that until wages are considerably reduced it will not be possible to compete against other countries in the leading consuming outlets of the world.

According to a Bucharest correspondent of *The Times*, Roumanian stocks of benzine are exhausted and the production of the next three months is already booked. As regards paraffin, large quantities have already been exported, and imported orders from abroad are pouring in, engaging future production. Prices show the following increases :—Paraffin, export price from 0.90-1 lei per kg. in August to 1.80-2 lei ; heavy benzine, from 1.90-2 lei per kg., to 5-6.50 lei ; light benzine from 3-3.50 to 7-8 per kg.

## NOTES OF THE WEEK.

### *A Near East Conference.*

The Conference of the British, French, and Italian Foreign Ministers, proposed by the Marquess Curzon of Kedleston, for the purpose of discussing the Near Eastern problem would not seem to be likely to take place as soon as had been expected. The Angora Treaty is understood to be the obstacle; but it is not quite clear what useful purpose will be served by a further exchange of views on this subject between Great Britain and France. The chief concern of both Powers should be a settlement of the Turkish question. Their last attempt resulted in the Treaty of Sèvres, which is now a dead letter. It will be time enough, when Great Britain, France and Italy have decided upon the terms of a new and feasible settlement, to inquire whether the Angora Treaty prevents France from supporting her Allies in carrying out the settlement. If it should, and if in the meantime the Franklin-Bouillon enterprise has not been disavowed by the French Chamber, it will then be necessary to decide whether Great Britain and Italy will have to act without French co-operation. France's hands will only be tied, if the Allies are called upon to coerce Turkey. It may be that the new Treaty will be accepted eagerly by all the Turks, Nationalists included, and there will be no question of coercion.

### *The Need for Action.*

At present Great Britain and France are only complicating the *impasse* by exchanging views on the Angora Treaty. That precious document and the blunder that brought it about have been denounced everywhere, even in France; but the French politicians responsible for it are not going to admit their mistake, if there is the least chance of the Chamber's endorsing their policy. M. Briand is taking care that the Foreign Affairs Commission shall postpone its verdict as long as possible, and much valuable time is being lost by the British Government's attempt to put off a Near Eastern settlement until the Angora Treaty is out of the way. Only a speedy peace with Turkey will obviate the worst effects of France's betrayal of the unfortunate people who trusted to her protection; for if there is still war between Greece and Turkey when the Nationalists take complete control of Cilicia, they will deal with their Greek and Armenian enemies in the reoccupied territory according to custom. The only course that may save these people from the fate now awaiting them is for the Allied Powers to satisfy the Nationalists that they need no longer regard themselves as fighting with their backs against a wall. With the withdrawal of the Greek army from Asia Minor and with the prospect of being left in possession of strictly Turkish territory the Turks may be brought to realise that not even in their own preverted view is anything to be gained by getting rid of any further section of their dwindling population. But to bring about this most desirable state of affairs the Allied Governments must act, not merely talk or exchange views.

### *Trouble in Crete.*

There is a familiar ring in the announcement that trouble has broken out in Crete; but this time it would seem to be devoid of international significance. Official statements speak of armed deserters attempting to enter Canea, in order to enforce their demands, and being repulsed by troops and by shells from an armed transport. As the island is the stronghold of Venizelism, timorous folk in Athens would naturally, at the first report of trouble in Crete, conjure up visions of a fresh Venizelist revolution. But according to one explanation the trouble is connected with a feud between a battalion of naval reservists and the population of Canea. The naval reservists would presumably be of Royalist complexion; in Canea will probably be a quite fair sprinkling of M. Venizelos's disbanded special police who earned for themselves a bad reputation on the mainland. It will be remembered *inter alia* that the murderers of M. Dragoumis, done to death by his soldier-police escort in one of the main streets of Athens, escaped to Crete. An attempt to settle old scores might easily be made; but it is certain that they will not be tolerated by the Government.

### *The Position in Egypt.*

The fears that the failure of the Egyptian and British Governments to arrive at an agreement regarding the future of Egypt would give rise to something in the nature of a non-co-operation movement in Egypt show signs of being realized; but we still hope that better counsels will prevail. It will not, of course, be lost sight of in Egypt that Sinn Fein appears to have succeeded where the Egyptians failed, and there will be a tendency to attribute success in Ireland to the greater violence employed. This, however, would be an entirely erroneous reading of the Irish negotiations. Quite apart from the different circumstances in which the Irish drama has been set, it should be realized that the Sinn Fein delegates abandoned some of the claims on which the chief stress had previously been laid. The mistake made by the Egyptian Delegation in London was that it refused to recede from a single item of the extremist

Digitized by Google

programme settled by popular clamour in Egypt, and, worse still, belied all the hopes entertained on the strength of its membership that it would enter into the negotiations in a conciliatory spirit and in a receptive state of mind. The Delegation's letter in reply to the British Government's draft convention proves that they were prepared to do nothing of the sort. It should, therefore, be a matter of honour for Egypt to try to succeed where Adly Pasha failed.

### *An Adriatic Incident.*

An unpleasant incident, which shows that bad feeling between Slav and Italian over the question of the Adriatic is not yet dead, is reported from Spalato. Two Italian officers were there assaulted by a number of Yugoslavs, and one of them was slightly wounded in the head. So far we have had no Yugoslav explanation of the occurrence; so that we do not know what led up to the trouble. But it is very satisfactory to note that the Yugoslav officials acted at once in the most correct manner, the Governor of the province calling on the Italian Consul and offering an official apology and assurance that measures had been taken for the arrest of the offenders. With so much soreness still lingering between the peoples of the two nations, such incidents, it is to be be feared, have to be expected, but if their officials will always act as correctly, as promptly, and as firmly as the Yugoslavs have done in this case, it should be possible to avoid any serious trouble.

### *Prince Said Halim Assassinated.*

Prince Said Halim, who was Grand Vizier of Turkey at the time she entered the War, and retained that position until 1917, when he was removed to make way for Talaat Pasha, was last week assassinated in Rome, where he had been staying since his release from Malta. The crime appears to have been carefully planned, and though the Police have not yet made any arrests in connection with it, they seem to have formed the opinion that the man who actually shot the Prince was an Armenian. Should this theory prove correct, it will be impossible to avoid coming to the conclusion that the leniency shown in the case of the murderer of Talaat Pasha has emboldened those responsible for the present crime. The murdered Prince was a prominent figure in the Committee of Union and Progress, of which he was at one time Secretary-General; but it is probable that he was a tool rather than one of the directing forces of the Committee; and he certainly was a man of liberal ideas for a Turkish statesman. In Egypt, where he was in a kind of exile for some years, he was well liked by Europeans who were brought into contact with him; and though his attitude in the days immediately preceding Turkey's entry into the War was disingenuous, it is probable that he was far less responsible for what took place than the men who had determined to force Turkey into the wrong path, for their own gain.

### *The Cilician Refugees*

The Archbishop of Canterbury, having received appeals on behalf of the Cilician refugees from the Armenian Bishop in Egypt and the Armenian Archbishop of Smyrna, placed them before Lord Curzon, who has sent a reasoned reply which should be studied by all those people who think that this country could effectively intervene in the matter. Briefly, Lord Curzon points out that it is not in the power of this country to transport the refugees to a place of safety and take charge of them there. "It is a practical impossibility to accommodate them in Cyprus, Egypt, Mesopotamia, or Palestine," says the Note, "and there is no money to defray the very heavy expenses of their maintenance, even if the necessary accommodation were to be made available. Our previous experience in Mesopotamia has shown that they cannot, or will not, support themselves." And the Note recalls that the Government were recently criticised for their refusal to raise the unemployment allowance here in respect of children, and points out, only too truly, that "there are thousands of people on the verge of starvation in this country." These are incontrovertible facts, and they afford a sufficient explanation of the Government's refusal to shoulder fresh burdens and responsibilities which could not justly be regarded as theirs. The announcement that a French officer has been appointed Chief of the Gendarmerie Mission in Cilicia, and that he will be assisted by four other Frenchmen will cause satisfaction in this country as well as in Cilicia.

### *Death of Kutchik Khan.*

It is reported that Kutchik Khan, who has for some time been a power in northern Persia, and a source of embarrassment to the Teheran Government, has been captured by Cossacks and beheaded. If the report be true—and we see no reason to doubt it, in view of the desertion of the Jangali leader by his former lieutenants—it will mean a considerable enhancing of the Government's prestige, and will also, in all probability, set free a fresh force to assist in settling the account with Simko, the Kurdish chieftain. Without wishing to depreciate the courage or skill of the Persian forces, it is impossible to avoid expressing a mild surprise at the success that has lately attended their efforts to suppress brigandage and rebellion; for in the past such successes were rare and came only at long intervals. It would be interesting to know whether the Sardar Sipah is the driving force behind the new movement, or whether it is supplied from outside—and if so, from what direction.

### *The Prince's Tour.*

At Bharatpur the Prince of Wales completed the second section of his long journey, during which he has been the guest of a succession of Indian Rulers. He has seen some of the most wonderful sights, and enjoyed some of the very best sport, that the world can offer; he has been welcomed with enthusiasm by populations which have not yet begun to talk politics; and he has now passed on to what is rightly regarded as the very heart of British India, for it is the people of the United Provinces who in the long run decide the fate of the new ideas originating in Bengal, or Madras, or Bombay. The inclusion of Bharatpur in the programme was particularly satisfactory, for the Maharaja is the recognised head of the Jats, perhaps the finest of all the races of Northern India. Three centuries ago the English merchants in Agra described them as "a resolute folk," and resolute folk they have often shown themselves to be—in Flanders and elsewhere. One does not see or hear much of "slave mentality" in a Jat village, and now that they are beginning to take an active part in public life, they may be expected to contribute to the common stock a fund of sturdy good sense by which all India will be the gainer.

### *The Arrests in India.*

Last week we noticed the action taken by the Administration to restore liberty to ordinary Indians by suppressing the organisations of bullies known as "volun-

Digitized by Google

teers." The immediate sequel has been the arrest of some of the most prominent extremists in the United Provinces, who formally challenged the Government by declaring themselves to be "volunteers"; while in the Punjab some arrests of leaders have followed on a breach of a different law. So far these arrests have not led to any untoward results, and at this distance it looks as if the psychological moment for action has for once been taken. Lajpat Rai in the Punjab, and Motilal Nehru in Allahabad may be described as the leading local representatives of Mr. Gandhi's ideas, but their position is not to be compared with his, for while each has a band of more or less devoted adherents, neither can be said to have made any particular impression on India as a whole. If we may rely on the silence of the cables, Mr. Gandhi himself is still carrying out his decision not to set on foot an active policy of disobedience at this juncture, and without his leadership it is not likely that much serious mischief will result.

### *The Influence of Environment.*

Of the agitators who have been arrested, the most interesting is Lajpat Rai, a man of whose mentality no convincing explanation has yet been put forward. This year, as we have said above, he has been an ardent supporter of Mr. Gandhi's characteristic ideas, unworldliness, renunciation, and seclusion from the western taint. Last year he published a rather interesting book in which he demolished these ideas one by one, and preached the gospel of national salvation through the increase of material wealth with an unction worthy of Chicago or Montreal. In 1920 he was urging India above all things not to be self-complacent, but to drink more deeply of the stream of European culture : in 1921 he is allied to the party which will not even allow naked Indians to wear European clothes. His sincerity in all this has not been questioned, and the most probable explanation of the rapid change is that he is unusually susceptible to his environment. The preface to his book is dated " New York, U.S.A." and its doctrine is characteristically Western ; on the Congress platform in India, he has echoed the sentiments of his associates , we have still to learn the effect of a period of unwonted silence and reflection.

## THE WEEK AT HOME.

*London, Monday Evening*

### The Irish Settlement.

It has been an amazing week. On Monday morning we were in the depths of gloom at the anticipated immediate breakdown of the Irish Conference. On Monday afternoon the negotiators sat for over four hours; at eleven on Monday night the Irish delegates returned to Downing Street, and Tuesday's papers went to press with the most pessimistic headlines. But before the public had opened its morning papers on Tuesday, evening editions were out announcing " Irish Peace—Official." What had happened was that after a two hours' conference at midnight on Monday, Mr. Lloyd George assented to the alteration of a phrase, and at half-past two in the morning the Sinn Fein delegates signed the document.

The *Morning Post* of Tuesday announced that the Conference was already dead, but that the Government had not the pluck to publish the news. A few hours afterwards the terms of the agreement were generally known. The sensation of relief was so great that there was no real disposition to criticise details. A few people boggled over the term " Irish Free State ; " one or two constitutional lawyers made the point that by calling the document a treaty the Government had conceded, even though only the moment, the independence of Ireland, since only an independent State can conclude a treaty. The point is of little more than academic importance, for the independence is specifically resigned in the articles of agreement. The oath of allegiance, which had given much trouble, and which was the last point settled, was closely scanned ; it differs so slightly, however, from those taken by the Dominions that little criticism of its wording is likely to be heard. It is pointed out, in this connection,and I think with justice, that if Irishmen meant to repudiate the treaty at the first opportunity, they would not have been so careful, almost too meticulously exigent in fact, over the terms of the oath ; it is precisely because they mean to keep it honestly, and because in that sense an oath binds the soul, that they have disputed its wording.

### After-Effects.

The news was received with profound relief on both sides of the Irish Sea ; it seemed incredible that a problem which has agitated English politics for seven hundred years, and which had become steadily more critical, should at last be settled. Those who have been in touch with the negotiations point out that roughly the terms are those put forward by Sinn Fein last spring, plus the oath of allegiance, on which the British Government rightly insisted ; I need not emphasise the point, because the terms which have now been agreed were set out in this column six months ago.

The after-consequences of the Agreement may now be glanced at. In England it will help trade, which has been held up by the uncertainty attaching to the question of peace or war in Ireland ; and it will enormously enhance the prestige of the Government. The settlement is a supreme personal triumph for Mr. Lloyd George, and presumably marks the culmination of his extraordinary career ; even his opponents admit that his Government is now safe for some years, and several of them are ruefully admitting that the success also justifies the Coalition principle, since no single party could have achieved it.

The Coalition principle in fact is to be emphasised when Parliament meets in state next Wednesday to satisfy the Treaty. The King will open the new session, and Lord Morley, the veteran English Liberal, and Lord Dunraven, the veteran Irish Conservative, will move and second the Address in the Lords. The former is an honoured old man of 83, who has not been seen in public since he resigned office in 1914; the latter is three years younger. It is possible that Lord Londonderry, as representing Ulster, will criticise the part Lord Birkenhead has taken in the settlement, but there is no doubt whatever that, if and when challenged, the Lord Chancellor will give back a Roland for an Oliver.

Politicians are already talking about a General Election early next year. It is too soon to say yet whether their prognostications are correct. The Government will naturally be sorely tempted to go to the country, since they would sweep the polls, but there are two considerations against that course which they will have to weigh. In the first place, the country does not see the need of an election, and business men are naturally averse from a month's interruption of trade at the very time things are improving ; in the second place the Conservatives want the House of Lords reformed, which means in effect the repeal of the Parliament Act, and they want it done next session. The ordinary elector cares not one jot about the House of Lords, and sees no necessity for any change ; but questions of constitutional machinery always excite politicians, and the Conservatives are after all the largest party in the Coalition.

### The Position in Ireland.

It is more difficult to summarise the position in Ireland. The Treaty has to be ratified by the Sinn Fein Parliament (whose Gaelic official title I am incapable of spelling correctly), as well as by the British Legislation and also by the Irish Cabinet. But difficulties have

Digitized by Google

already appeared, and it will apparently be impossible to avoid a split. The Irish negotiators—Mr. Arthur Griffith, Mr. Michael Collins, and Mr. Gavan Duffy—intend to honour their signature: Mr. de Valera, who was a member of the first Conference, but not of the second, will divide against them. He has also always been bitterly opposed to anything short of complete independence, which was recognised by some men on both sides as impossible. It was because he took that attitude that the first negotiations broke down, and when he was omitted from the second Delegation, he did his best to wreck its chances of success by his telegram to the Pope. He now intends to wreck the settlement if he can, his idea of a settlement being an agreement in which one side should concede everything and the other nothing.

It is difficult to say how great a following he will attract. The best authorities in Irish affairs believe that he will muster forty per cent., and Mr. Arthur Griffith sixty per cent., of Irish political opinion; in that event the Agreement will be ratified, but the new Irish Government under Mr. Arthur Griffith will have to reckon with an extremist Opposition under De Valera. It is suggested, however, that its real strength in the country is not so great as in the existing Sinn Fein Parliament, which is an *ad hoc* body elected in 1918 under the pressure of national crisis, when the extremists were at the height of their power.

It was to the possibility of this split, no doubt, that the Lord Chancellor referred when he remarked that the Irish negotiators who returned to Dublin were "taking their lives in their hands." They will not have a very easy time, as they are confronted with the certainty of a Hertzog movement of irreconcilables similar to that which agitated South Africa after the Union; but it is generally assumed that any such movement would be doomed to gradual decay.

Ulster has taken the news of the Agreement sullenly rather than passionately. She had undoubtedly reckoned on the negotiations' breaking down. The Ulster Parliament has been more reticent than the Belfast Press, which has used a good deal of strong language; but Ulster's rights are safeguarded, and it is hoped that in time she will adopt a more generous attitude.

One point further should be mentioned. It is generally expected that the King will open the new Irish Parliament. It is not forgotten that his noble speech at Belfast last July was the origin of the change of policy which led to the Truce and the Conference; and although he has not exceeded his constitutional function, it is common knowledge that he has taken an active interest in the negotiations, and it would be difficult to overestimate the tactful influence which he has brought to bear. The time, however, has not yet come to write the inside history of the last six months; but I may add that it is hoped in many quarters that the Duke of York will be the first Governor-General of Ireland, and that the Royal Family will often pay long visits to the island.

**Washington.**

The Washington Conference has been practically forgotten during the greater events at home. Its proceedings have not been very exciting, and it is still uncertain whether Mr. Lloyd George will go. It is semi-officially announced that he will not, but the little birds that perch on the chimneys of Downing Street are said to have winked their eye when the announcement was published. Of course it may only have been the soot, but it may equally well have been that they did not quite believe the denial.

**The Reform of London Government.**

The Commission which was set up to consider the reform of London Government has now begun its work under the chairmanship of Lord Ullswater, who is more familiar to us as the late Mr. Speaker Lowther. One does not envy him his task. The London County Council wants to extend its boundaries and enlarge its powers by taking in such places as Wimbledon, Sutton, and Watford, and other dormitory suburbs where people are Londoners by day and of a different local allegiance by night. The outer suburbs, on the whole, do not wish to be incorporated—for one thing, it might mean higher rates, and for another thing, they have their local councils, in which the Wimbledon butcher, the Sutton baker, and the Watford candlestick-maker become civic dignitaries. On the other hand, a central authority would be more efficient than these small bodies, which often overlap and continually wrangle. The Commission will have to digest a mass of conflicting evidence from the various opposing interests.

**Hospitals and Debt.**

The hospitals are again in difficulties, and the papers are full of correspondence and appeal. It is possible that an attempt will be made to get the Government to take things up next session, since the voluntary system has resulted in practical bankruptcy and the closing of beds and wards; and I notice that one critic has pointedly remarked that the four millions a year which the Government spends in administration at the Ministry of Health could be expended to much better purpose in rescuing the hospitals. The difficulty, of course, is that Government control means bureaucratic administration, and bureaucrats, as other low organisms of nature, multiply like mites in a cheese wherever they are introduced; and further, Government control would almost certainly reduce the flow of private charity.

**Female Football.**

An amusing controversy has broken out as to the advisability of women playing football. It appears that several teams have been formed, mostly of tea-shop girls, and these young ladies play the "soccer" game regularly, before admiring crowds of young men, and it is suggested that the latter see a good deal more of these Amazons than our grandmothers would have approved of. Apparently the attraction has become so great that it has diminished the spectators at the ordinary games, and the Football Association—which is the official headquarters of the male game—has become alarmed. It has issued a manifesto denouncing the young ladies, and there has been a chorus of statements to the effect that the new fashion is bad for the game, bad for the young ladies, and bad for their future children. To this the female footballers merely answer that they intend to go on playing, that football is better for their complexions than paint and powder, and that the people who denounce them are a lot of old fogeys.

**The Week's Books.**

"The Empire at War" (Oxford University Press), by Sir Charles Lucas, is the first volume of what will prove to be a standard work. Sir Charles, who is a well-known authority on the history of the British Empire, traces in this preliminary volume the steps by which the colonies gradually outgrew the military and naval protection of the mother country, and in time volunteered to take their share in the common burden of defence. The earliest instance quoted of Imperial co-operation is in 1655, when a force of volunteers was raised in Barbados and other West Indian Islands to assist Cromwell's expedition against Hispaniola.

"The Tragic Sense of Life" (Macmillan) by Miquel de Unamuno, a Spanish professor of philosphy at Salamanca, is an attempt to reconcile Catholic faith with scientific reason. It is well written, and is obviously the fruit of long thought, but it is not a successful reconciliation of the opponents. It should be said that what the author calls "the tragic sense of life" is the consciousness of the futility of death, and he therefore endeavours to prove the immortality of the soul. What he actually succeeds in doing is to prove that he ardently desires immortality, which is not quite the same thing.

"Anglicanism" (Macmillan) by the Rev. Hensley Henson, consists of the lectures given by the Bishop of Durham a year ago at Upsala, Sweden. He analyses the history of the Church of England, criticises the Enabling Act which, in his opinion, is practically tantamount to Disestablishment, attacks the Anglo-Catholic movement, and gives reasons for believing that the Church in its present form is not likely to last very long. But he admits that two hundred years ago Bishop Butler thought the same.

*(From Our Own Correspondents).*

## EGYPT.

*Cairo, November 26.*

**News of the Negotiations.**

A few hours after my last letter had been posted there came the news that the Anglo-Egyptian negotiations had been broken off. One of the vernacular papers immediately published a special edition, but it was not until the next day that the news became widely known. Neither on that occasion nor on any subsequent day, however, would the uninformed visitor to Egypt have realised that anything unusual had occurred. I can hardly recall a week since the end of the war when things have been so stagnant in Egypt. Life has meandered along very placidly; there has been little business afoot; and politics have been less discussed. There was a slight recrudescence of interest yesterday, when it was rumoured that the negotiations had been informally resumed with the Delegation through the British Embassy in Paris, but those Egyptians who are in the confidence of the Cabinet unanimously stated there was no foundation for any belief that such negotiations, if they were going on at all, would have any material result.

The position, as this letter is written, is that the negotiations have been concluded, and that Adly Pasha is bringing the British offer back for presentation to the Sultan, but has meanwhile allowed it to be understood that the Egyptian Official Delegation has refused the terms offered. The Foreign Office has posted the text of the British project to Cairo, accompanied by the Egyptian Delegation's reply to that offer, and a British "explanatory note," which it is believed will set out why the British Government was not able to agree *in toto* to the claims of the Egyptians. The Delegation is expected back on December 5, and it is probable that these officials documents will be published soon after its return; and until the explanatory note reveals the attitude of the British Government towards Egypt, it is highly improbable that there will be any developments whatsoever. Even Zaghloul, who is maintaining a wise silence at this juncture, will not move until he sees how he can best exploit the situation to his advantage. He has given us a hint that he might favour a hostile reception for the Delegation, but he has to reckon with authorities who are determined not to let him play with fire.

**Looking Forward.**

Probably the week December 4—11 will see important developments. It is known that the Cabinet will resign soon after the Delegation's return, but if the terms contained in the Explanatory Note referred to above give the Egyptians a hope of ultimate independence, it is probable that there will be little difficulty in securing the formation of another Cabinet. Indeed, there are already signs that certain groups have an eye to the high offices of the future, and it is not unlikely that these ambitions will prove a strong card on the side of the British authorities. But if, contrary to all expectation, the Explanatory Note should make it clear that the Nationalists have no hope of realising their aims within any reasonable period, the sequel will be embarrassing to everyone in Egypt. There is a greater distrust of the British Government than ever; and were it not for the factional issues involved, which bid fair to prevent the Egyptians' uniting on a basis of common hostility to England, it is probable that the British Government would find itself in a very delicate position in Egypt.

Thus it is apparent that the whole situation hinges on the context of the Explanatory Note. Its contents are secret; but there is every reason to believe that it will offer terms which will not be found impossible of acceptance by a section of the Egyptians. In that case, a Cabinet will be formed. We have seen enough during the last seven months to know that a strong Egyptian Ministry can crush disorderly opposition to it, and if the next Cabinet can make out any Nationalist programme at all it may be relied upon to pilot the Ship of State through the intervening period till negotiations can be resumed. In any case, actual physical trouble is not deemed likely. Such opposition as may be revealed will probably take the form of hindrance of the governmental machine. It is not believed that the threatened policy of non-co-operation will be instituted, for several reasons, including the recent collapse of that movement in India. The only dangerous possibility lies in the fact that the local authorities, by hasty action, might precipitate untoward events. The authorities are in a difficult position, as they have to maintain order; but as far as can be seen there is no intention on the part of anyone of creating disorder. Tact is necessary; but if it is exercised, there is every hope that the crisis will be safely weathered.

**The Pleasure-Makers.**

Fortunately, there is one thing that the political situation cannot control: Egypt's weather. For the past few days it has been simply perfect. Bright clear mornings, with just a nice nip in the air, warm noontides, and cool evenings, with nights that make dancing one of the joys of living. Cairo is gradually getting into a social whirl of select dances, Italian opera, two race-meetings weekly, bazaars and increased private entertainment. Cairo tennis enthusiasts momentarily are jubilant over the sound trouncing administered to Alexandria's champion singles' and doubles' players by the Cairo representatives in the Bally Cup, which was fought out at Alexandria last week-end and resulted in a victory for Cairo by nine matches to six. The final round of the Cup is to be played in Cairo next March.

**A Notable Conference.**

Under the Chairmanship of the Right Rev. Bishop Gwynne, Anglican Bishop of Egypt and the Sudan, an unofficial conference of representatives of various Christian demonstrations of the East and the West was held recently at Helouan, near Cairo. The object was to discuss ways and means for promoting unity amongst the Christian Churches, and eventually those present formed themselves into a Brotherhood with the object of working in co-operation for the desired unity. It was decided that any attempt at fusion would be useless, and, after some discussion, it was agreed to endeavour to facilitate co-operation between the Churches rather than to make an effort to incorporate the different denominations in one homogeneous whole. The spirit of the Conference and of the speeches was one of mutual help; consistency of ideas rather than formal amalgamation. As the different speakers pointed out, the goal was the thing to be achieved. The movement as yet is entirely unofficial, but it is highly probable that in the near future some official status will be given to it.

**The Sultan's Movements.**

H.H. the Sultan and the Sultana will return to Cairo on Thursday next. Some sections of the Ministries

Leaders of the World's Office Equipment and Filing Systems.

have remained in Alexandria, and it is improbable that they will return to Cairo prior to the return of the Official Delegation.

## SUDAN.

*Khartoum, November 22.*

**Official Movements.**

H.E. The Sirdar and Governor-General arrived in Khartoum from leave on the 5th inst. The train was in on time at 5 p.m. and His Excellency was welcomed by a representative gathering of officials and notables of the various communities, who were presented by Mr. R. H. Dun, Chief Justice.

It is reported that the appointment of Mr. C. E. Lyall, O.B.E., as Civil Secretary will shortly be gazetted, and that he will be succeeded as Governor of Kassala by Mr. C. P. Browne, the present Governor of Berber.

**Birth of Princess Fawzieh.**

The following telegram was received by the Sirdar on the 5th inst., from His Highness the Sultan.

The blessing of Almighty God has been once more vouchsafed to us in that he has been graciously pleased to grant to us a daughter, born in the ninth minute of the third hour of the blessed fifth day of Rabia el Awal of the year 1340. We have named the child Fawzieh and we send you this message to enable you to publish the good news and to record the name of our child in the same manner as that of our Prince, and to announce it to all officers and men of our Army and to our subjects, the people of the Sudan. We pray God that he may make the birth of our child a source of blessing and happiness to our country and to our people.

to which His Excellency replied as follows :—

On behalf of all ranks of your Highness's Army and of all the people of the Sudan, I have the honour to express to your Highness the joy and delight with which I have received your Highness's gracious message containing the good news of the birth of a daughter to Her Highness The Sultana. I earnestly pray that the protection of the Almighty may rest upon both, and that under His blesssing the life of Her Highness the Princess Fawzieh may be prosperous and happy. I shall announce the auspicious event formally to the Army and the people of the Sudan in a Special Gazette.

The Sultan has telegraphed his thanks.

**Armistice Day.**

On Friday November 11, the third anniversary of the conclusion of the Armistice, a service of prayer and thanksgiving was held in All Saints' Cathedral, Khartoum, which was filled from end to end. The service opened by the singing of the hymn "O God our help in ages past," and included the XXIII. Psalm. At eleven o'clock, the hour from which the Armistice took effect, there was a period for silent prayer, and the Bugles and Drums of the 2nd Royal Munster Fusiliers, posted outside the Cathedral, where they could be heard not only within the building but all over Khartoum, played the "Last Post."

**Municipal Matters.**

The inauguration of the new Khartoum Municipal Council will take place about the second half of next month, and it is stated that the names of the members will shortly be published. It is to be hoped that the new body will take steps to carry out repairs to the Khartoum roads, which are in a deplorable condition, and to reform certain of the municipal services which appear to be inadequate to the needs of the residents.

The Government housing scheme for officials has been progressing well. Of the houses under construction in Khartoum under the "Jackson Housing Scheme" thirty-five are already occupied, and a further six are nearing completion.

Seven prominent Nazirs and Sheikhs of the Red Sea Province arrived on November 12, on a visit to Khartoum. They were received by the Governor General on the 15th inst, and have been taken round the sights of the capital, including the Gordon College, Law Courts, etc., returning to their several homes on the 18th inst.

The Headquarters of the Customs Administration will move from Sinkat to Port Sudan on November 26.

As a result of heavy rain a wash-out occurred on the night of October 28 between Thamian and Erheib stations on the Port Sudan line.

It is notified that the Tonga Talodi road was opened to wheeled traffic on November 1.

Commandant Grossard, with the French Members of the Wadai Durfar Boundary Commission and accompanied by Lieut.-Colonel H. D. Pearson, arrived at El Fasher on November 18.

## YUGOSLAVIA.

*Zagreb, November 30.*

**Political Undercurrents.**

The underground crisis, of which the public heard rumblings for some time past, culminated last week in a report that M. Pashitch had tendered his resignation to the King, and everybody was wondering what would happen next and whether M. Pashitch would be again entrusted with the task of forming a Cabinet, or whether M. Protitch would be given a chance to try his experienced hand in driving such a mixed team as he is generally credited with endeavouring to break in. But the storm blew over, for the Radicals and Democrats realised that if they quarelled, both would probably be out in the cold for a long time. Such opinion as was not jaundiced by bitter party feelings was sick and tired of these rumours of crises, which recalled the days of the summer before last, when the situation was very similar and the two main parties were fighting for the possession of the portfolio of the Interior, which has a much greater importance out here than with us. It is, indeed, a political trump card; for the Minister who holds it exercises tremendous political influence throughout the country; and it is more sought after even than the portfolio of Finance. At the same time, the vigorous personality of its present, and former, holder, M. Pribitchevitch, provoked the hostility of his opponents. Two years ago M. Protitch resigned and broke up a coalition because he could not get on with him, and now the Radicals do not like him at all. As for the Opposition parties they simply cannot bear him.

**Radicals and Democrats.**

But counsels of reason are now prevailing in Belgrade. The Radicals and Democrats have agreed to bury the hatchet for the sake of their joint existence, and report has it that M. Pribitchevitch will accept the portfolio of Education again, as he did in the early part of the year. So Dr. Davidovitch, the Democrat leader, and M. Atsa Stanoyevitch, Chairman of the Radical Club, have been in earnest conversation and have decided to make a long-standing coalition, to sink all petty differences, and to select ministers who can get on with each other without rubbing each other too much the wrong way. At the same time, they will proceed to a programme of legislation on the most pressing matters, such as the Budget, on agriculture, on Government officials' pay, and the administrative division of the country. It is interesting to note that Dr. Davidovitch suggests for the latter law releasing members from an obligation towards their party, allowing each to vote according to his conscience, with responsibility only to his own constituents.

**The Mohammedans.**

Meanwhile, the Mohammedans are considering their action. They are afraid of M. Pashitch's policy of dividing the Turkish Mohammedans of Macedonia from their Slavonic co-religionists in Bosnia and Herzegovina. It is certain that they will formulate new demands as the price of their continued support. There is at the same time a report that Stepan Raditch and his followers are coming to Belgrade. One member, in an interview, stated that they were suspicious of that "old reactionary" M. Stoyan Protitch, but as a republican party, they had leanings towards the Republican Party of Serbia. All the parties are in a state of excitement. The Republicans of Serbia, few in number, have been having a "congress."

**Dr. Kumanudi on S.H.S.**

The Minister of Finance, Dr. Kumanudi, has recently

Digitized by Google

made a reassuring statement, and his figures should be borne in mind by those amateur critics who are constantly sneering at the attempts of the young State to put its affairs in order. The Minister reminded his audience of the vast sums that were of necessity expended in restoring the damage of war. Towards indemnity, the country has so far received 10,000 horses from Germany, and nothing else. But they have been compelled to expend no less than 350 million dinars a year in pensions alone for wounded and crippled soldiers, a fearful burden at once on the manhood and finances of the country. Besides that, all railway bridges and culverts throughout Serbia have had to be restored, an urgent job, for the last act of expiring Austria-Hungary was typical, the destruction of Serbia's railway system. He attributed at least a large share of the cause of the fall of the dinar to the behaviour of a number of banks, who have been exporting sound "valuta" on a large scale. Also, he insisted on the necessity of reducing the number of officials, a welcome sign, and also of the army. He considered that the internal loan had been successful, but that it was necessary to conclude a foreign one, in order to construct the railway to the sea, which is a necessity to the country. Dr. Kumanudi pointed out that several Government institutions and industries which should be revenue-producing are in fact run at a loss, and suggested that they should be leased to foreigners, which would be a satisfactory change from their past xenophobe policy, which has done them the reverse of good abroad.

**"Bozhe Pravde."**

The Viceroy of Slovenia has ordered that the three hymns of the triune people be sung in churches, that is, the Serbian hymn, "Bozhe pravde" ("God of Justice") sanctified on the blood-stained fields of Macedonia, the Croat, "Lijepa nasha domavino" ("our lovely homeland"), which was written by a Serb, and the Slovene, "Naprej zastava slave" ("Forward the Standard Glory"). But Archbishop Yeglitch, of Liubliana, has requested the Government to issue an order that only the Serbian hymn be sung in churches, for that is the only one which is a hymn in the true sense of the word, the others being but national songs. "Bozhe pravde" is a very beautiful and impressive hymn, recalling the splendid anthem of the Tsars of Russia, and it is satisfactory that it is a Roman Catholic archbishop and a Slovene who has made the request, so that M. Raditch and his friends cannot claim it as another instance of "Serbian tyranny."

**The Balkan Committee.**

The recent resolution of the Balkan Committee has attracted less attention here than its parents probably anticipated. The Yugoslavs who have heard of the Balkan Committee do not know who appointed it, and members who are known have not a sympathetic press, at least in Zagreb. The voice is the voice of the Balkan Committee, but the words are the words of Stepan Raditch. As a matter of fact, all Yugoslavs regard the question of their internal organisation as a purely domestic matter, for which they require foreign help solely from purely party purposes, and if any foreigners care to join in party questions out here, so much the better for the parties in question. But they have a habit of resenting outside interference in domestic matters, however well meant.

**"News" of England.**

English public affairs continue to occupy considerable space in the Zagreb press. We find reports of the conference at Washington, the Cilician question, with a portrait of Lord Curzon, not too flattering; and two columns on the libel action of Lord Alfred Douglas, which interests the public on account of the great popularity of Wilde, translations of whose works, in Latin and Cyrillic print, are always exhibited in all booksellers' shops.

**Yugoslavs Abroad.**

It is generally known that there is a large colony of Yugoslavs in the United States, and a substantial one in South America, especially in Chile and the Argentine, but it is not generally realised that there is a quite important colony in New Zealand. According to official figures published in April, there were at that date 867 Yugoslavs there, but this figure cannot be accurate. It is known that in 1919 there were 1,700, but 400 of these returned after the liberation, and no less than 325 naturalised themselves British subjects: the census shows only 24 women, which is remarkable, especially as the Yugoslavs keep very much to themselves and seldom intermarry with the nationals of the country in which they settle. Of this colony, it is a noteworthy fact that there is but one Serb, Mlada Yovanovitch, from Belgrade, who keeps an inn in Auckland; of the others, there are two Slovenes and the rest are Croats and Dalmatians, This great preponderance of former Austrian subjects is eloquent tes timony of the dissatisfaction of Yugoslavs under the old régime, especially among the Dalmatians, who are a vigorous, sea-faring folk, whose country was kept in a state of poverty and backwardness by the Hapsburg policy. Most of these Yugoslavs live in or near Auckland, and there are from thirty to forty in Wellington. The majority are engaged in agriculture, mining, and in various crafts. The richest is reputed to be Mato Ujdur, a rubber merchant, of Auckland.

---

*Zagreb, December 7.*

**The Political Situation.**

The political crisis continues, but the Government has not yet resigned. M. Pashitch is having difficulty in coming to terms with the Democrats, and the stumbling block is mainly the Ministry of the Interior. He has been having "conversations" with all sorts, with the Peasants and with the Mohammedans, and, it is reputed, with the Clericals of Slovenia and even with the Raditch party. The Radicals would certainly be glad to form a Cabinet without the Democrats if they could, but as these two are the main so-called bourgeois parties, their interests are really identical, except on personal matters, which play so important a part in politics out here, and are one of the chief curses of the country.

**"Association" in Croatian.**

The detailed interest that Croats take in British affairs is surprising: a Zagreb paper recently gave a detailed account of the football match between Tottenham and Newcastle, with a free interspersal of English words, some of which are already acclimatised; it is amusing to read that the "arena" was "overcroroded." In a short sentence of only twenty-five words, we find the following anglicisms:—"Newcastle-Spuri u White Hart-lawe," "Tynesideri," "strategiju," "backa," "off-sideom." The Croat terminations to English words give them a fantastic dress, but the whole passage is eloquent of the Croatian interest in British institutions in general and in sport in particular.

**Winter Again.**

After two mild winters, so that snow is almost a novelty to young children, Zagreb is now subject to arctic conditions. After three days of black frost and icy northerly gales, a heavy fall of snow occurred, which the municipal authorities dealt with promptly, clearing the streets, and especially the narrow, crowded, and horribly uncomfortable Ilica, with commendable celerity. Sleighs with tinkling bells appeared and glided picturesquely over the snow, while hundreds of men, women, and children brought out toboggans and slid happily down the hilly streets on the north sid of the town. There is every prospect of a long and severe winter, and at the same time of a fuel shortage; and to add to everything, prices are rising all round and only snow is falling.

**Wolves by Zagreb.**

The arctic weather has had the effect, extremely unusual for Zagreb, of bringing wolves into the neighbourhood of the town, a convincing sign of an unusually hard winter. A couple of peasants from the village of

Digitized by Google

Oborova were attacked, but succeeded in beating the brutes off, so they cannot be desperate yet; for only a properly armed and strong man can hope to defend himself against the onslaught of a hungry wolf, and that too only if he is not caught unawares. In the long drought they came down to the villages near the hill-country near the sea and from the mountains of the Lika, and destroyed a number of sheep. At Belgrade, when the snow lies long, they get bold, and come as close as Topchider, finding cover in the woods of the Koshutniak. But it is very many years since wolves have been recorded from the neighbourhood of Zagreb.

## ROUMANIA.

*Bucharest, December 4.*

### Opening of Parliament.

On November 28, the King, who was accompanied by the Queen and the Crown Prince, read the opening speech of the new session of Parliament. After referring to his great satisfaction at finding himself amidst the nation's representatives, his Majesty went on to say that times are so grave that the country claims the collaboration of the prominent men of all parties, and it is, therefore, desirable that Parliament should have them re-united in patriotic action. He then touched on the expressions of joy and loyalty which reached him from all quarters of the country on the occasion of the birth of his grandson, Prince Mihai; and continued :—

The result of your work during the eight months of the preceding session was but the first step on the road of the reforms necessitated by the present time. The consolidation of our State in its new form is such a gigantic task that for a long time to come it will have to be the chief preoccupation not only of the nations's representatives but of all the live forces of the country. If, however, the difficulties of the problems which have to be faced are stupendous, we can consider ourselves fortunate that our labours can be carried on in peace and propitious conditions, considering present times. Thanks to the measures which have been taken in time by my Government, internal order is completely assured, so that even the last of the exceptional measures which are still in force, owing to circumstances through which we have passed, will also be removed shortly.

Our relations with the Allied countries during the time of war continue, and will continue, to be very intimate and cordial. New alliances have been completed with the neighbouring countries with whom we have political and economic interests in common. The relations between Roumania and the States with whom we have been at war are on a way which will lead very rapidly to normal conditions.

Special care must be devoted to the definite settlement of our financial situation by carefully controlling the State's expenditure as well as by completing the necessary measures for the application of the laws which should ensure the State's revenues, taking into consideration all needs.

The Franchise Reform, the basis of which has been introduced in the Constitution of 1917, and for which my Government submitted to you in the last session the necessary Bill, will have to be completed on the basis of the admitted principle of direct, secret, and obligatory universal suffrage, with proportional representation of minorities..

Your time having been devoted to the Agrarian and Fiscal Reforms you could not take up the Military Reform Bill. My Government will submit to you in this session the Bills which are prepared to put our Army on a solid foundation, so that it shall continue to be the safeguard of ou existence and welfare.

The Speech is considered here rather sober and curt in face of the numerous problems of the day. It touches only a few of them, and even these with great caution, while others seem to be purposely omitted in order to avoid embittered parliamentary discussions.

### The Absentee Opposition.

The striking feature of the opening of the Assembly was the total absence of the members of the Opposition from their alloted seats ; but they were seen in large numbers in the public gallery. At the next day's sitting, however, the members of the Peasants' Party resumed their seats in Parliament, in accordance with the arrangement which has been made with the Government. In explanation of this arrangement M. Lupu, one of the Leaders of the Peasants' Party, declared that in view of the obligations taken by the Government, embodied in the King's Speech, namely that the Franchise Reform Bill will be passed and that Martial Law, censorship and other exceptional measures will be abolished, they considered it their duty to attend the sittings of Parliament, in order to force the Government to carry out these measures. Their presence in Parliament, however, does not signify that they approve of the Government's past acts or its programme. M. Lupu further stated that it is understood that, immediately after the passing of the Franchise Bill, this Parliament will be dissolved, and that a neutral Government will be formed to conduct the new elections for the "Constituante."

The parties that are abstaining from attending the sittings of Parliament are : the Liberals, the Transylvanian National Party, the National Democrats under M. Jorga, the Bukovinian-Democrats under M. Nistor and the Bessarabian Peasants' group under M. Inculetz. In other words, it is just those parties that have been negotiating lately for the purpose of forming a coalition in order to come to power, but whose negotiations have so far not succeeded, for reasons mentioned in my previous letters. They have, however, issued a more or less identical *communiqué* to the effect that after the threatening declarations made by the Premier recently concerning their attitude, they consider it a moral impossibility to take part in the work of such a Parliament.

## BULGARIA.

*Sofia, December 5.*

### The Disbandment of Conscripts.

By December 10, Bulgaria will possess no soldiers, gendarmes, or frontier guards, other than those enlisted on a voluntary basis. The Conference of Ambassadors at Paris have instructed the Inter-Allied Military Commission of Control at Sofia to see that all "conscript" soldiers at present serving with the various branches of the Armed Forces are demobilised at once. Ten thousand men, who were principally employed in the Gendarmerie and Corps of Frontier Guards, are affected by this order. Thus on December 10, Bulgaria will have 6,200 men under arms, who will be distributed between the Army, Gendarmerie, and Frontier Guards. These 6,200 men are all voluntary recruits, and have to serve six continuous years with the colours. The military clauses of the Treaty of Neuilly laid down that the length of service should be twelve years, but permission has been granted for the period to be reduced by half. The Minister of War, M. Thomoff, views the situation with grave apprehension, as he considers that 6,200 men are totally insufficient to police the frontiers and interior of the country, and in addition to perform duties such as Palace, prison, and bank guards, looking after guns and horses, etc. M. Thomoff does not think that any more voluntary recruits will be obtained, but it is right to point out that when the volunteers only numbered 3,500, the same view was expressed by the then Minister of War.

The salient feature about the case is, however, that by the end of next week the Government will not have enough armed force at its disposal to quell any disturbance that may arise. The Communists have tried very hard to enrol themselves in the Army, but the authorities have so far managed to prevent them. It is nevertheless more than probable that the Communists will endeavour during the coming months to take advantage of the impotent situation in which the Government finds itself. The Roumanian Communists have of late shown some activity, and in the future it will not be difficult for their Bulgarian brethren to cross the frontier and assist them in any acts of violence which they contemplate. This is only one aspect of the situation ; the internal one is even more grave, as, although Bulgaria is essentially a non-communistic country, a small handful of desperate men, unhindered by armed force, can make things decidedly unpleasant for the rest of the population. The Inter-Allied Military Commission of Control at Sofia preserves a discreet silence as to its own views, but almost any individual officer will admit that he regards the total disbandment of the Bulgarian Army,

Digitized by Google

and its substitution by a few thousand poorly trained and ill-disciplined volunteers as a step which is quite capable of leading to serious consequences. The Great Powers appointed an Inter-Allied Military Commission of Control to Bulgaria, and it is understood that on several occasions the Commission has pointed out that the military clauses of the Neuilly Treaty are not practical, and recommended that they should be revised. It is not known what reply was given to these recommendations, but it is known that not one high Allied military officer has come to Sofia to investigate personally the situation, and if there is trouble in Bulgaria, the Allies, and not the Bulgarian Government, will be entirely to blame.

**The Return of the Princesses.**

Great was the surprise of Sofiotes when on Saturday, December 3, they learnt that the Princesses Eudoxia and Nadejda were back in Sofia. Their Royal Highnesses who arrived on the previous evening from Munich, travelling by the Simplon Orient Express for the latter half of the journey, were met by their brother, King Boris, at the frontier station of Dragoman. Their return is hailed with general satisfaction, both on account of their own popularity, and also on account of the joy that is felt for His Majesty, who will now be freed from the hermit-like existence that he has led for the last three years.

The Princesses left Sofia for Hungary in the autumn of 1918, and afterwards joined their father at Saxe-Coburg, where they have spent the greater part of their semi-exile. It is not yet known whether their stay at Sofia is to be of a permanent nature or not, and as the Heir Apparent, Prince Cyril, has not accompanied them, it is thought that they will probably pay a long visit to the King, and afterwards return to Munich. Inquiries made at the Palace yesterday elicited the information that the Princesses were in good health and had passed an uneventful journey. Travelling *incognito*, they were escorted from Munich to Sofia by Colonel Courtoclieff, Grand Marshal of the Court, and their arrival at Sofia was devoid of all ceremony, the news of their return only leaking out on Saturday afternoon. The same evening, small knots of people were to be seen gathered about the Palace, in the hope of catching a glimpse of the princesses; but their hopes were not realised, and although it was rumoured that, in company with the King, they would attend a Red Cross ball given that night at the Officers Club, here again the wishes of the populace were doomed to diasppointment.

**Electioneering Activities.**

According to a recent statement of M. Daskaloff, Minister of Commerce and Industry, the Government are going to make great efforts during the coming year in order to acquire increased popularity in the country. M. Daskaloff said that a decision of the Agrarian Union obliges each Minister to make a tour in the provincer three times a year. On these occasions the Ministes will be provided with a special train, which will stop at every important station, so as to permit of a speech being made to the assembled multitude. Other methods will also be adopted to win favour with the peasants, and particular stress will be laid on the fact that former Governments have never taken the people into their confidence, whilst the present Agrarian Administration has no secrets from its followers and has for its war-cry "Government by the People." The Opposition parties are meanwhile not idle, and many of their leading men are "stumping the country." Their view is that the peasants are becoming discontented with the Government owing to the lack of law and order, and also owing to the corruption that is so rife amongst State employees. Brigandage is certainly very much on the increase, but it is hardly fair to blame the Government for this, as the absence of a sufficiently strong Army and Gendarmerie prevents the authorities from pursuing the unruly elements of the population. As to corruption amongst State employees, this matter was dealt with in my last week's letter, and until a great number of the present employees are dismissed, there is no hope for a diminution in the amount of corruption. The peasants come mostly into touch with minor Government officials and it naturally does not please them if they have always to employ a gentle form of persuasion in order to get their business carried out.

**Miscellaneous News.**

The Bulgarian Government has consented to accept the care of 3,000 Russian refugee children. The League of Nations will arrange for their food, and M. Gentizon, the Balkan correspondent of the *Temps* will represent the League in Bulgaria, in regard to the welfare of the children.

A serious fire broke out at the Military Arsenal, at Sofia on Saturday evening, December 3. The extent of damage is not yet known, but it is believed that several million cartridges and a quantity of old war material have been destroyed.

## GREECE.

*Athens, December 3.*

**The Winter Season.**

A cold snap followed by two days' severe rain heralded the approach of winter, and from now until the end of February we must look forward to a less genial climate than that for which Southern Greece is noted.

The winter, which usually opens the season of gaiety and festivities, has this year set in very quietly and without the *éclat* with which last season was announced. One by one the *Thés dansants*, as offered by the various larger hotels, are recommencing. The indoor theatres and cinemas are now in full swing, and the numerous gambling houses offer their distractions to those who prefer the green table to the mild excitement of the dancing floor. A great difference, however, is to be noted between the spontaneous gaiety of last year and the very subdued and quiet demeanour of Athens at the present moment; it is almost as if the Athenian populace wished to deprive the Englishman of his noted record of taking his pleasures sadly! Possibly the approach of Christmas and the ensuing period of jollity, culminating with the Carnival, may produce a brighter atmosphere.

**Contraband of War.**

The Commander of the auxiliary cruiser Yperochi has reported to the Ministry of Marine that as a result of the perquisition made at sea off the island of Cephalonia of an Italian cargo boat, a considerable quantity of war material has been seized. This includes 3,000,000 rounds of ammunition of Mauser rifles, and nine aeroplanes of Italian make. Investigations have proved that this material was consigned to Adalia, where it was to be handed to the Kemalists. A Turkish major on board who, it is said, is a nephew of Mustapha Kemal, was arrested.

The Italian cargo boat was conducted to Piraeus under escort of the t.b.d. Lion.

**The End of the Strike.**

The strike of the electricians and tramway employees definitely ended on Sunday last, and Athens has regained its normal aspect once again. At a general meeting of the tramway employees, the Committee of Administration was deposed and a new Committee elected. This presented itself to the Minister of Communications and requested him to regulate the question of wages on the basis of the proposals formulated by him.

From certain indications it would appear that the ringleaders of the strike, who had received such severe sentences, are not likely to serve the whole, and will in all probability be shortly released.

**The 1922 Class.**

According to statistics compiled at the Ministry of War the return of the mobilisation of the 1922 Class has been entirely satisfactory. It is understood that the number who have answered the call exceeds any previous maximum. The newly incorporated regions have given their full quota, all their men coming under the category having answered the call enthusiastically.

Digitized by Google

**General News.**

A Royal Decree has been signed by which the tramway fares on certain routes in Athens have been increased. The price of electricity is also increased by 30 lepta per kilowat, this being applicable only to hotels and commercial houses of all descriptions, private houses being exempted. A slight increase in the fares has also been effected on the Athens-Piraeus electric railway.

On Thursday a delegation of the French colony in Athens and Piraeus placed a wreath of flowers with the French colours on the monument erected in the Piraeus cemetery in memory of the French sailors who fell in Athens on December 1, 1916. A wreath was likewise placed there by the Franco-Hellenic League.

3,000 Greek and Armenian refugees from Cilicia have arrived at Chios, their landing at Cyprus not having been permitted. 400 of these will remain in Chios, and the remainder will be sent to Smyrna.

## TURKEY.

*Constantinople, November 29.*

**Elusive Hopes.**

Whatever hopes there may have been of a settlement in the near future of the Turco-Greek conflict have now dwindled practically to vanishing point. At one time it appeared as if there was some prospect of the National Pact being stretched at certain points in such a manner as to provide a basis for discussion that would have been acceptable also to the Greeks. That prospect quickly vanished, however, although differences of opinion on the subject caused a serious political crisis in Angora. In spite of official assurance to the contrary on the part of the Angora Government, there can be hardly any doubt that the resignation of Hamdullah Subhi Bey, Minister for Education, and of Omer Lutfi Bey, Minister for Public Works, were due to political differences with the majority, who cling obstinately to a concrete interpretation of the National Pact. Jelal Bey, Minister for Justice, and Hassan Fehmi Bey, 2nd Vice-President of the Great National Assembly, are also reported to have tendered their resignations, but to have withdrawn them in deference to the insistent desire of the Assembly. Whatever the details of the struggle may have been, however, it is now pretty well beyond doubt that the advocates of the Pact, the whole Pact, and nothing but the Pact, have won the day, despite the lamentable economic conditions to which the whole of Anatolia has been reduced by the crushing exactions for the benefit of the Army.

At the same time, according to the most recent reliable information on the subject, the negotiations between the Italians and the Angora Government have reached a deadlock; although it was recently stated that Signor Tuozzi had been so far successful in his task in Angora, that he was about to leave in triumph with an agreement in his pocket. To judge from the present situation, it is quite possible that Signor Tuozzi was about to leave as stated, but because further discussion appeared useless, and not because the matter had been brought to a successful conclusion. It is now stated that the Angora Government is refusing to agree to the Italian demands for concessions, and the Italians have refused to accept the Turkish demand for the abolition of the Capitulations. These details may or may not be accurate; but the fact remains that Signor Tuozzi is meeting with serious obstacles in his attempt to conclude what would be, after all, if official statements are accepted at their face value, a very limited agreement indeed.

**The Franco-Kemalist Agreement.**

The Turkish press this morning published jubilant articles, illustrated with photographs, concerning the entry of the Kemalist army into Adana, and the transfer of the administration to Kemalist officials. Muhieddin Pasha, who is in command of the Kemalist troops, has acquired a reputation for humaneness, and there may, therefore, be some hope that the "guarantees" given by the Angora Government will be fulfilled. The non-Moslem population of Cilicia, however, places no faith whatever in the promises of the Angora Government, and is in a state of complete panic. Thousands have already fled, leaving their homes and shops filled with furniture and merchandise, rather than face any risks. In view of their past experiences, it was unlikely that they would do anything else, especially as, convinced of their security under the "Protector of Christianity in the East," they have been rather indiscreet towards their former tyrants, from whom they thought they had been freed for ever. Now that the "Protector" can offer them nothing more than a promise couched in half a dozen words such as would be insufficient to clinch a bargain in marbles between two small boys, their panic is only equalled by their bitter indignation.

The expectation that the Soviet Government of Moscow would require explanations with regard to the conclusion of a friendly agreement with a "bourgeois capitalist and imperialist Power" has been fulfilled; but Yusuf Kemal has telegraphed an emphatic assurance to M. Tchitcherin of Turkey's fidelity to the Treaty of Friendship concluded in Moscow in March, and to the Treaties concluded at Kars in October. Whether these explanations will be regarded as satisfactory by the Bolshevist allies of the Angora Government remains to be seen, but it is worthy of note that the Bolshevist representative in Angora, the former schoolmaster Nacharanos, has suddenly found it necessary for the betterment of his health to undertake a journey in winter from Angora to Moscow. It is possible that it is for these reasons that the Angora Government is unwilling for the moment to make any further advances to the "capitalist and imperialist" Powers, and has therefore put the brake on the negotiations with Italy. Once the French are safely out of Cilicia, it will be interesting to see how much farther the suddenly renewed "secular friendship" between France and "Turkey" will stretch.

**Monsignor Barry Doyle.**

On November 24, Monsignor Barry Doyle, formerly Roman Catholic Chaplain to the Royal Dublin Fusiliers, was presented with an address and a handsome diamond and amethyst ring by "British and American Friends" in commemoration of his elevation to the dignity of Domestic Chaplain to the Pope. Speeches were made by Mr. Ryan, First Secretary at the British High Commission, who is of the same faith as Monsignor Barry Doyle, and General Sir Charles Harington, and Colonel Hughes, Senior Chaplain to the British Forces in Constantinople, who are both Protestants. The initiative for the presentations came from certain "other ranks" who are not Roman Catholics, and the attendance at the gathering was eloquent testimony to the wide popularity of the British Army Chaplain whom the Pope has been pleased to honour at the original instance of Monsignor Barry Doyle's former Commanding Officer, Colonel Bonham Carter. The speeches made upon this occasion were all deserving of more than passing notice, but space prevents more than a brief reference to certain striking passages in that of Monsignor Barry Doyle himself. Referring to religious tolerance, the speaker paid a very warm tribute to the complete freedom enjoyed by Roman Catholics all over the world under the British flag, and stated that it was the proud boast of British Roman Catholics that they would not change their political status for that of any other nationality in the world. Monsignor Barry Doyle's speech raised the occasion above the level of local interest, and raised hopes amongst all who heard it that a thorny problem, which has vexed

the United Kingdom for centuries, may after all be solved to the satisfaction of all the nations concerned.

## ALBANIA.

*Tirana, December* 5.

**The Commission and the L.O.N.**

The three members who compose the Commission, accompanied by the Secretary, Count de Pourtales, arrived in Albania on November 23, and, after visiting Tirana and Scutari, have left the latter town in order to inspect the Northern and Eastern frontiers of Albania. The presence of this Commission is a source of much satisfaction to the Albanians, who are thereby assured that they will have impartial and just witnesses. Col. Schaeffer, of Luxemburg, is intimately acquainted with the Orient, having been a long time at Constantinople; the two other members are Major Meinich (Norway) and Professor J. Tederholm (Finland).

**Serbian Withdrawal.**

The Serbs have withdrawn, in accordance with the decision of the Council of the League of Nations, on the right bank of the River Drin, in the direction of Luma; but they are still in occupation of a large area within the north-eastern frontier, among other parts in the sub-district of Bunja. Nevertheless it is hoped that before the 10th inst.,—the date fixed for the evacuation of Albanian territory and withdrawal beyond the neutral zone—the Serbs will have conformed with the decision of the Conference of Ambassadors. I learn, however, that the Belgrade Government is reported to have sent a note to the Ambassadors to the effect that it cannot evacuate the neutral zone, giving as its reason that it cannot keep its troops on the frontier of this zone during the winter. The Conference has replied that the zone must be unconditionally evacuated.

**The Metropolitan of Koritza.**

The presence of the Commission of the League of Nations has been turned to advantage in getting rid of the Greek Metropolitan (Bishop) of Kortcha (Koritza) Monseigneur Jacob. This personage, who is titular Bishop of Durazzo, has been in Koritza some five years, as an agent of Hellenism, provided with ample funds. Some time ago the inhabitants of the town and district demanded his expulsion; but the Albanian Government hesitated to take such a step, for fear of giving rise to rumours prejudicial to Albanian interests. The presence of the Commission simplified matters, for the Government placed at its disposal all the documents proving the intriguing of the Bishop against the local government and the Albanian nation.

The Bishop left Koritza last week, and embarked at Valona. No hostile demonstration against him was permitted by the authorities; but the people are delighted to be freed from a nightmare which has lasted too long.

**The Greek Schools.**

Since the beginning of the scholastic year 1921, no Greek school has been re-opened at Koritza, where, on the request of the Orthodox followers all the once Greek schools of the country have been made into Albanian schools. The Greek *lycée* of the town has also been suppressed, and the students attend instead a Franco-Albanian *lycée*, under the direction of a Frenchman, who will shortly be assisted by two others from France. Professor Récoing has also been lecturing for two years. It should be added that the Greek schools in Albania—as everywhere in Turkey—were under the administration of the Patriarchate of Constantinople, Turkey allowing no Albanian scholastic foundation, and are consequently a survival of the Turkish régime; and it is on the strength of these institutions that Greece has made her imperialistic claims.

**The Future of the Orthodox Churches.**

It is well known that the Orthodox Patriarch of Constantinople only acquired his power and jurisdiction over all Christians of the Eastern Rite on the day when the Turks entered Constantinople, and Sultan Mohammed II gave him unlimited sway. Since that time the Sublime Porte has been unwilling to recognise any other ecclesiastical authority for the Orthodox, and the Bulgarians had great trouble in securing their Exarchate which, moreover, was only recognised by Turkey through the insistence of Russia. The Albanians and the Vlachs (Kutsovlachs, Zingari) have not yet an autocephalous church, that is to say, one independent of the Patriarchate. Moreover, according to the organic laws of the Patriarchate, every country which ceases to be part of the Ottoman Empire, ceases at the same time from the religious point of view, to be attached to the Patriarchate. Thus Greece herself has a Synod, likewise Roumania, and Serbia has a Chief Metropolitan. Evidently, therefore, Albania will break the bond that unites her with the Patriarchate of Constantinople, and she will place her Orthodox churches under the jurisdiction of an Orthodox but Albanian Synod.

**Independence Day and an Amnesty.**

The national fête of November 28—Independence Day proclaimed in 1912 at Valona—was celebrated throughout Albania with uncommon enthusiasm. It was really the first time that the country could celebrate its complete independence in the little fatherland, freed at last from foreign dominion.

On this occasion an amnesty was decreed for political delinquents, which allowed the parents of Marko Gjoni to return to Mirdita, where, since the departure of the Serbs, complete quiet has reigned. Marko Gjoni himself is still in Serbia as the guest of the Yugoslav authorities.

## ASIA MINOR.

*Smyrna, November* 28.

Great excitement has been caused here by the publication in the local Greek papers of a report that a British force has been sent from Cyprus to Mersina with the object of protecting the Christian minorities now that the French are handing over the territory to the Kemalists. This news has evidently been brought to Smyrna by the refugees, numbering 1,000, who arrived last night on the Greek steamer Thetis, which had been commandeered by the Greek Government for the transport of Christians fleeing from Cilicia. The Thetic refugees have also been sent to Klazomene, where the Greek authorities are putting up sheds in which to house these refugees. The British authorities have sent a vice-consul from Beyrout to Mersina, to report on conditions there, and have placed a destroyer at his disposal; which has evidently been the cause of the above mentioned Greek newspaper report.

*Smyrna, November* 29.

**Sport.**

On Sunday last the return match between the Bournabat football team and the Panionion team ended as before in a draw of one goal each.

The Boudjah Hockey Club played a match on Saturday last—"ex-Service Officers" against the "Rest," which ended in a win for the "Rest" by 2 goals to 1.

**General News.**

The Greek Hospital steamer Elsie has brought to Smyrna another 1,000 refugees from Mersina.

The Greek High Commissioner, M. Sterghiades, having had his attention drawn by Sir Harry Lamb to the fact that several British firms had failed to collect from the Greek Military Base sums due to them for goods delivered, has made arrangements whereby all these amounts have been paid; likewise several large out-standing accounts due to French firms. As regards the sums due by the Greek Military Base to Greek and Ottoman subjects, 25 per cent. of these amounts has also been paid.

A considerable quantity of heavy artillery of very modern pattern has been landed in Smyrna during the past week for the Greek Army, and a steamer is expected from America bringing 14,000 tons of wheat for the Greek troops.

## CYPRUS.

*Nicosia, November* 14.

**The Greek Attitude.**

The High Commissioners has by proclamation fixed November 28 for the holding of fresh elections of non-Moslem Candidates to the Legislative Council. The

Digitized by Google

Greeks are speculating whether Maronites, or other candidates not of their persuasion, will venture to offer themselves for election. If so, small account will, they say, be taken of any such action by Greek Cypriots; but such candidates shoutld bear in mind that in offering themselves they trespass on ground which is set apart for Greeks only! They belong to a category which can only number a few hundreds as against four-fifths of the population. What right has a handful like this to disregard the feelings and opinions of the Greek majority. and to presume to deal with island affairs? How could such persons be regarded as representing the people? The Queen's Order in Council (1882) which established the Legislative Chamber had in view a body which would, in fact as well as in name, represent the island. The spirit and intention of the Order cannot be carried into effect if Greeks abstain from standing and others are elected. The reasoning is peculiar, but characteristic. They omit to say that it is precisely the spirit and intention of the Order which they have themselves for years failed to carry out, thereby seriously obstructing island progress.

**Impending Reforms?**

There is considerable discussion arising out of a rumour that reforms are to be introduced into the Cyprus Constitution. Report says that wider rights are to be bestowed upon the people. As regards the Legislative Council it is said that three more seats are to be given to Greek members (the number being now 9) without any increase in the number of official members (now six; while the Turks are three). The Greeks would in that case have a majority. Greeks, it is said, are to be eligible as Presidents of the six District Courts, over which only English judges can now preside. In that case, of course, the same privilege would have to be extended to the Turkish Community, as Turks have been called to the Bar in London, and others are studying for examination. It is also believed that the financial position is to be improved by transferring from Cyprus surplusses of revenue now not so applied. The introduction of such reforms, the Greeks say, is now overdue; but in any case neither these nor yet more liberal privileges would for a moment divert their community from insistence on their claims for union with the "mother country." Such gifts are regarded as sops which are given to pacify discontent. The rumour that under the Churchill scheme Cyprus, Malta, and Gibraltar are to be administered under one High Commissioner is regarded with great dissatisfaction.

## FOR THE DESTITUTE IN TURKEY.

Mr. Allan Ramsay appeals for help for the destitute in Turkey. He writes:—"So many appeals have been made that one feels diffident in bringing to your notice the deserving case of the children of the Turkish Refugees.

"I can speak from personal experience of their pitiable plight and will not labour their unfortunate circumstances. All that has ever been said or written regarding the famine and disease-stricken conditions of Bolshevik Russia and Central Europe applies with full force to these unfortunate Turkish people, and while there may be some doubt as to whether the Russian conditions are not greatly exaggerated, there is none in regard to these 70,000 poor derelicts, mainly children, housed in the semi-ruined barracks and stables of Daoud Pasha, near Constantinople, bare-footed and in rags, without food or fuel, and whose case is the most desperate of all the stricken peoples of Europe.

"I, personally, visited this so-called Refugee Camp, in company with the Rev. Dr. Frew (D.D. of Glasgow), Presbyterian Minister, and Hamdi Bey, a Member of the Turkish Peace Delegation, at the request of H.H. Damad Ferid Pasha, brother-in-law of H.M. the Sultan of Turkey, and can vouch for the appalling conditions under which these poor wretches are existing, and to which they are gradually succumbing.

"With a ruined country and a bankrupt Government, there is nothing to be hoped for locally, and while their co-religionists in India may help a little it is to be hoped that something may be done in Britain. Whatever mistakes the leaders of their country have made, the children are innocent victims, and it is on their behalf that my appeal is made. Contributions may be sent to Messrs. Coutts and Co., Bankers, 440, Strand, London, W.C., for the British Red Crescent Society, and the Honorary Treasurer is Mr. A. S. M. Anik, 2, Fenchurch Avenue, E.C."

# CORRESPONDENCE.

## "RIOTS IN JERUSALEM."

*To the Editor of "The Near East."*

Sir,—Your "Notes of the Week" in your issue of November 19 (p 614) allege that the Zionist Organisation organised celebrations in Palestine on November 2. I should be much obliged if you would allow me to state in your influential review that no Jewish celebrations were held on November 2 in Palestine. At the request of the Administration we advised the Jews throughout the country to hold the day as a normal working day, to keep their shops open, etc. After demonstrations had begun by processions of Arabs, the closing of Arab shops etc., the Jewish shops were simply closed as a necessary precaution.

I should be much obliged if you would allow me to place on record our appreciation of the conduct of the police in Jerusalem on this occasion. They rendered such help as was in their power for the suppression of disorder, and behaved, with few exceptions, with the impartiality in the discharge of their difficult task that the Western world expects from a police force.

Your assumption that political aims actuated us in asking for the suspension of Mr. Storrs from his duties is incorrect; the request was made on the ground of his proven incapacity to govern.

I am, etc.,

M. D. EDER,
Palestine Zionist.

Jerusalem, November 27.

## THE SITUATION IN ALBANIA.

*To the Editor of "The Near East."*

Sir,—Some time ago there appeared in the papers of Constantinople an official *communiqué* of the Legation of the Serbs, Croats, and Slovenes concerning the Serbo-Albanian conflict and the present situation in Albania. It is surprising to see that an official *communiqué* could be so erroneous as this one is. It states that the Yugoslav troops have not invaded Albania, but have only established "the demarcation line of 1918 which the Albanians had passed." If that is so, why did the Yugoslav Government—after the Allied Powers had taken the necessary steps—announce that "it would withdraw its troops from Albanian territory"? If the Yugoslav troops had not invaded Albania, what troops would the Yugoslav Government withdraw from there? This, of course, means that there were Yugoslav troops in Albania; otherwise the Yugoslav Government would simply state that it had no troops in Albania, instead of saying that "it would withdraw its troops from there."

There is no reason whatsoever to believe what the *communiqué* says about the internal situation of Albania: its statements are far from truth. The Serbian politicians look, or rather make others look, at the "Mirdite question" through a magnifying glass, so to say, so that people might think it is a very serious question, while in reality it is nothing as compared with the uprising of the Croats and Montenegrins in Yugoslavia. So, we see the Yugoslav newspapers using such terms, as "republic of the Mirdites," "oppression of the Catholics," "anarchy in Albania" and what not! But the plain truth is this. The Yugoslav Government wished to create some troubles in Albania at a time when the Albanian question was being discussed in the League of Nations, and with this in mind it had the ridiculous idea of creating an independent "republic of the region of the Mirdites"; (this region is near the Serbian frontier and is inhabited by Catholic Albanians, who make up only a small part of the Catholic population of Albania. Accordingly a suitable tool was found in the chief of the Mirdite tribe, who was given by the Yugoslavs the name of "President of the Republic of the Mirdites." But the unfortunate "president" was not successful in inciting the people of his "republic" to revolt against the Albanian Government, and was obliged to flee to Prizren, a neighbouring city in Serbian territory.

At present, Marka Gjoni is asking for the independence of the Mirdites, while they themselves have already declared that they have been and will always be loyal to the Tirana Government. If the Yugoslav Government has nothing whatsoever to do with Marka Gjoni and his claims—as the *communiqué* maintains—why did a Yugoslav aeroplane fly over the city of Shkedra (Scutari), and throw papers urging the Albanians "to save their country by joining Marka Gjoni against the Albanian Government"?

Now I ask: "How can there be an oppression of the Catholics in Albania—as the *communiqué* states—when one of the four members of the Regency is a Catholic Bishop, and when several

Digitized by Google

Catholics, three of whom are priests, are members of the Parliament?" "Can a people or a community be oppressed by a Government in which it has a full share?"

I am, etc.,

VASIL ANDONI.

Constantinople, November 25, 1921.

### THE PALESTINE DELEGATION.

*To the Editor of "The Near East."*

Sir,—Palestine has no grievances to ventilate, which are not common to most countries, at this moment; its commerce is admittedly bad, cost of living dear, and the cost of its administration is too high for the *old* inhabitants of the country at this stage of their affairs.

If attention is given to these matters, and some improvement were to be effected, there is no reason why the blessings of the British administration should not bring their full fruit forthwith.

The political question which occupies the time of the Palestinian Delegation can very well be left in the hands of H.M.'s Government, whose sympathy for the Arabs is so well known. This question requires wider knowledge of world politics, finance, and idiosyncracies, than can be found in Palestine.

My sincere advice to these gentlemen, therefore, is to go home, and there do their best to co-operate with the enlightened and capable British administration in charge of the country.—I am, etc.

A. SEFI.

## MUSICAL NOTES.

### SERBIAN FOLK-SONGS.

Since the war already two volumes of Serbian folk-songs have been published in London, under the respective editorship of M. Manjlovitch and of Mr. Chanter; and here, to supplement their work, comes another set of songs: "Mélodies populaires serbes," by Miloïe D. Miloievitch. It is one of that very useful series brought out under the auspices of the Serbo-Croat-Slovene Society at the University of Paris, and it is published by Rouart, Nerolle, and Cie at four francs net. The songs are arranged by M. Miloievitch, and there is a French adaptation of the words by M. Emile D. Dernay.

As far as I know, only one of the songs here collected has been published before, viz., the Skoplye song called "Bilyana," which Mr. Chanter arranged in his volume published last year by Messrs. Cary. It is interesting to note the differences in the two arrangements of this song. Between the two harmonisations there is much resemblance—as was almost inevitable in so simple a melody—but the English version made by Malcolm Burr, who called the song "By Ochrida's Stream," differs considerably from the French one here. I will give the first verse of each:—

A Maiden was washing her linen white,
By Ochrida's clear limpid stream.
Then came Vintners riding by,
Vintners all from far Belgrade.

Bilyana blanchissait son linge
Aux claires sources du Vardar.
Par là passèrent trois marchands,
Les beaux marchands de Béograde.

On the whole the French version is rather more "singable," but as a language it takes more easily, I believe, to translation from the Slavic.

All the eight songs in M. Miloievitch's volume are thoroughly typical Serbian melodies, and the pianoforte settings he has made for them are done with beautiful aptness. First, there is a particularly haunting "chanson triste" from Macedonia, where the long, chromatic wail of grief suggests no possibility of comfort, ending in dark indefiniteness on the dominant. Then comes a wild gypsy air from Kraina, with strongly marked rhythm, syncopation, and repetition: it is a very joyful song, with a fine accompaniment. In the words there is nothing at all; it is simply the natural, unprompted genius of the Hungarian bursting out. "Miryana," a very characteristic love-song from Vranje, has in it most of the favourable devices of the Yugoslav folk-song—the free rhythm, the grace notes, the intervals, the super-tonic ending, and so on—and its inner meanings are extremely well brought out in the pianoforte part. Next is a very coy conversation between "le matelot et la lavandière," almost French in its arch simplicity; it was collected from the town Makarska, in Dalmatia. A tragic little song from Bosnia, called "La mère de Gjafer-bég" wanders artlessly and tenderly in and out of the keys of C major and of its relative minor, and has an intimate appeal. The Old Serbian song about the "tailleur malicieux" who skimped the robe of the girl who wished to appear in her finery before her beloved is founded on a subject common to our own country, but the melody is much more rhythmic and confident than that which the vain, disappointed ones in England used to sing. But possibly the song of deepest and most permanent beauty is the last, a Herzegovinian lullaby. Here you are right in the atmosphere of the East, miles and miles away from lands where any rocking berceuse will soothe the child; here, in the most human of all songs, you find discovered the soul of another people than your own. This melody contains all that wistful, yearning mystery which pervades so many Slav tunes; it has, moreover, the most wonderful continuity of rhythm in addition to its frequent changes of both time and key. In fact it is a song of genius. I do not know how old it is, but one can easily imagine that hundreds of years ago mothers crooned this tune to their babes, and that its healing influences are still potent. And it is especially pleasing that in this superb melody the editor has surpassed himself in the setting of it out.

This small collection of songs by M. Miloievitch is really a notable one, which will be invaluable to all students of folk-song.

ANDANTE.

Official reports have reached Delhi that the situation in the Moplah rebellion area has greatly improved. During the last fortnight 8,679 rebels have surrendered; the remainder are avoiding encounter and are being hunted day and night. The military hope to conclude operations by the end of the year.

A semi-official contradiction is given in Bucharest to the report emanating from Soviet Russian sources that Petlurist bands had been organized on Roumanian territory.

It is semi-officially stated in Athens that the insurrection in Crete is dying down.

Sir Herbert Samuel, the High Commissioner, the Patriarchs of the Eastern Churches, the Grand Rabbi, and Arab notables attended a service in the Anglican Cathedral in Jerusalem on December 9, the anniversary of the deliverance of Jerusalem. There was also a military review.

## THE WAR AND SOME SIDE-SHOWS.

**"SOLDIERS OF THE PROPHET." By Lieutenant-Colonel C C R. Murphy. (London: John Hogg, 10s. 6d. net).**

Colonel Murphy, the author of this deeply interesting book, is the son of an officer (still living, as he writes in his last chapter), who knew Turkey as an ally of England, and fought on her side against her inveterate enemy in the Crimea. His own experience has been quite different: as Chief Intelligence Officer to our Mesopotamian Force, and Head of the first British Mission to Turkey in 1918, he may be said to have seen the other side of the medal; but he has a friendly feeling for the Turks, it seems, and writes of them with justice. Besides his war service, he has to his credit service in the Persian Gulf, before the war, as Intelligence Officer, and his acquaintance with Turkey is one of long standing. He writes, therefore, with a far wider knowledge of the Turks and their country than is to be found in most 'war' books; and, as a result, what he writes gains greatly in interest and importance..

His chapters on the Mesopotamia campaign are probably the most valuable in the book, for his position gave him exceptional opportunities to gather information and make observations; and he has been able to supplement the knowledge acquired on the field, from the British point of view, by the study of many Turkish reports, war diaries, despatches, and other documents. The value of such material to the serious student of the war need not be pointed out; but Colonel Murphy may be congratulated on presenting his narrative of events clearly, and with a minimum of technicalities, so that it is easily understood by the reader without any military training. The story of the siege of Kut is told very simply, but surely very effectively, in chapter 11, and the brief survey of the situation in Mesopotamia at the time of General Townshend's occupation of the devoted town is of particular interest. We should like to quote from it at length, but must confine ourselves to the concluding paragraph:—

> From the foregoing facts it will be seen that if General Townshend had resumed his advance immediately after the battle of Kut, he could have marched straight into Baghdad without further serious fighting, and could have established himself there before Von der Goltz had time to reach that city. After the latter had arrived, however, it is doubtful whether General Townshend could have remained there for a single day, and the tragedy of surrender would have been enacted in Baghdad instead of Kut. With the necessary reinforcements and means of transport General Townshend would no doubt have gone on at once; without them the only course was not to advance at all.

Colonel Murphy does not, of course, tell us who was actually responsible for the failure to provide "the necessary reinforcements and means of transport." The world suspects that Townshend and his force were sacrificed to the politicians' gamble; and it is safe to say that in connection with this deplorable episode the only way in which the Govermnent showed itself active and efficient was in keeping the truth from reaching the public. However—

To our mind, the least satisfactory chapter in the book is that on "The Temple of Baal," which gives a rather undistinguished description of Baalbek; but this may be because we find it as impossible to wax enthusiastic over the beauty of those great ruins as on the artistic merits of Palmyra. But when we turn to the author's description of the Turkish expedition into the Hauran in 1910, of the consequent operations at Kerak, or of those in Tangistan in 1913, we find them full of interest. No less interesting are later chapters, "The Rebellion in Oman," "A Persian City During the Great War," "The Persian Gulf in 1913-14," or "Constantinople in 1918." Some of these essays, especially the earlier ones, throw a very vivid light on the Turkish method of dealing with the Arabs, and enable us to understand, at least dimly, why the latter hate the former with so great hatred. Thus, the expedition against the Druses in 1910 may have been successful, but it surely cost the Turk dear at a later date: and when we read (p. 30) of the Turkish General, victorious at Kerak, ordering his men to dig up the graves of the former sheikhs and fling their bones to the wind, and to bury the murdered Turkish soldiers in the graves, we are not surprised to learn that: "This act of vengeance greatly enraged the Arabs, and tended to widen the abyss which has always yawned between them and the Turks." The subject of gun-running crops up here and there (but we suspect that the author could tell us a great deal more about it, if he chose to do so), and the "Tangistan" chapter gives a lively account of operations undertaken as a result of piracy and massacre in quite the old style. In his last chapter the author gives us his impressions of some people he met in Constantinople just after the Armistice, among them the Sultan, the ex-Khedive of Egypt ("who admitted quite frankly that he had backed the wrong horse") and 'Ali Haider, "the rightful Grand Sherif of Mecca." And here and there in the book are some truly Oriental tales. One of these, told to Colonel Murphy by an Arab in Damascus, "made a good allegory on the state of the Turkish Empire at that time" (1910). It runs thus:—

> There was once a merchant who lived in Damascus. His house was newly built, but it was very rickety and creaked when the wind blew. So one day he went to the landlord and complained about it.
>
> "Do not distress yourself," said the landlord. "When the house creaks it means that it is praising God."
>
> "Undoubtedly," said the tenant with mock reverence; "but I am dreading the moment when it will worship and fall down
>
> "So it was," adds the author, "with the jerry-built fabric of the Constitution. It was new and yet it was creaking. The Young Turks said it was praising God, but the Arabs knew that it was about to prostrate itself."

## THE LEVANT WATERS.

**"SWEET WATERS." By Harold Nicolson (London: Constable & Co. 7s 6d net.)**

It is round a text of Aristotle's "Poetics" which postulates "activity" as the ultimate aim of life that Mr. Harold Nicolson has woven what we believe to be his first novel, and though to this general maxim he has indeed held faithful, it is rather on a text from one of Flecker's choicest prose-sketches that the particular demonstration of the maxim is built: "the splendour and desolation of the Levant waters is something that derives into the soul." For the value of this book lies not so much in its essential theme as in its practical setting; its background of events is more important than its continuity of thought. The author has, of course, founded his story upon personal experience, and has so chosen the pictorial, incidental method to arrive at what we may presume he considers the deserved climax in the career of his hero, an English diplomatist in Constantinople. There is little subtlety in his work: the tale is a straight, purposeful one, in which the various reactions of event upon character, and of character upon event, are kept in admirable perspective.

Briefly, the story is this. At the time of the first Balkan War a young girl, Eirene Davenant, who is born of an English father, dead when the story begins, and of a fatuous, mercenary Greek mother, is cherishing the loneliness of her life in Therapia and Pera, when upon her gloomy but eager horizon appear two Englishmen. The first, Angus Field (Tonbridge and Wadham) is a weak and precious clerk at the Embassy of Constantinople. After finding that he and the girl are mildly stirred by each other's existence, he, with gullible impudence, proposes to her, and is of course refused. (He had deserved the rebuff had he done nothing more than throw "The Golden Journey to Samarkand" about his room in disgust). But the second, Hugh Tenterden, (possibly Eton, and certainly Christ Church), is all otherwise: as Counsellor of the Embassy he shows the enormously cool efficiency which commonly pervades the work of

Digitized by Google

British diplomatists, and, having seen the worth of Eirene in nursing Turkish wounded on the battlefield, is proposed to by her, and, though his age is forty-two, succumbs. On this note, the joyful result of Aristotle's "activity," or perhaps the inevitable result of the novelist's accidents, the book ends.

It is a curious work, this story of Constantinople, in some ways a remarkable work. We have no great respect for the main motive of the author's tale; we almost long for a mistake to be made by the infallible Hugh Tenterden, despite the beauty of his name (and the consequent fact that Kent was his country, how awful to have to share it with Angus Field!); but even so we think that Eirene, who with all her passionate cleverness might surely have been a little more easily deceived, was lucky to catch him. But against these things much is to be matched. The setting of the novel is beautifully done, with a wealth of imagination and a keenness of perception that of themselves alone make the work notable; the prominence allotted to the different events is given with justness, the opening chapters and the description of an attack of sea sickness overwhelming Eirene's aunt being the only examples of a temporary loss of balance; the minor characters of the book,—Aunt Emily, a delightfully futile old creature, touched in with rare skill and malice; Bela Lukacs, a disgusting cosmopolitan Jew whose confident intrigues are ended by a table knife in his back,—Edhem Bey, a very fashionable Turk who talked Stravinsky in 1913 and yet found cause to desert in the sight of cholera in his army—and many others just as good—are drawn with precision and vivid faithfulness; and above all the onward movement of the book is continuous. The choice of this chronological method, in which a strict sense of perspective and of order had to be preserved, Mr. Nicolson has proved to be wise; but a writer less skilled technically than he would surely have come to grief.

No review of "Sweet Waters" could end without a remark on Mr. Nicolson's style. He has in this book adopted a short, sometimes a staccato, and occasionally even a pizzicato, mode of description, a mode which has enabled him to give some penetratingly fine pictures of natural scenes, to supply convincingly a condensation of remembered thought, and to shift the staging quickly. But there is a monotony in these things. One remembers that it was (wasn't it?) Mr. H. G. Wells who set the fashion of short chapters which switch from one line of the story to the other, and though we do not have his ineffable dots, we do have in panting profusion the verbless sentences and the orgy of full-stops. However, Mr. Nicolson has travelled his peripatetic journey with certainty and dispatch, and we congratulate him on his achievement. If we for our part should have preferred less visualisation and more vision, it is probably our fault; and we only carp in this unfair way because we think we could have had what we wanted, so fastidious a sense of style and so nice an insight into affairs has the author when he chooses to exercise them.

## BARBARY.

**"BARBARY: THE ROMANCE OF THE NEAREST EAST." By A. MacCullum Scott, M.P. (London: Thornton Butterworth 12s 6d net.)**

In these days of quick travel, contrasts are becoming less noticeable and sudden changes a portion of everyday life, but the three days in which Mr. MacCallum Scott takes us from London to the beginning of his travels in Barbary are as good a series of contrasts as one might hope to find. Then he shows us that, in the Roman Empire, Britain and Africa occupied similar positions, that the same great men won fame in both Provinces, that they found in each the same monuments of a race that was before the Phoenicians. There the resemblance ends, and we are treated to a record of journeyings and peoples as unlike England as one could desire. There is, compressed between the covers of this volume, all the Romance promised in the sub-title, and whether the description be of the past or of the present, of the native population or of Europeans met during the author's wanderings, the attention is never allowed to flag.

Of particular interest at the present time is the chapter on the French rule in Northern Africa and the comparison between this and our own rule in Egypt. At the outset, it appears strange to the British mind that Algiers is an integral part of France and that Arabs are recording votes which send Representatives to the French Chamber of Deputies.

Economically, the author considers the British in Egypt have been more successful, but, employing the "methods of Rome," France has constructed roads and railways, built irrigation and drainage works. Schools have been introduced and, with them, *boulevards* and *cafés*, cinemas and newspapers. Last, but by no means least important, comes the development of agriculture. As an example, before the French occupation, the Franco-African Company acquired over 300,000 acres of land between Hammamet and Sousse, on the Byzacenian Plain from which Rome drew so much wealth. Under the native administration, much opposition was encountered, but, under the new régime, vines, olives and figs have been planted, and corn has been sown, and the French town of Enfidaville has sprung up, with a church decorated with mosaics from the ancient Christian Church at Uppenna. Politically, however, the French would appear to have been more successful. Apart from the difference in races, several reasons are put forward to account for this. The military régime in Egypt had a far from good effect; but the chief causes of the French success would seem to be the bestowal on chiefs and leading men of all the privileges of Europeans, the absence of an educated proletarait, and possibly the remoteness of Turkey.

## THE MESOPOTAMIAN MANDATE.

At King's College, London, on November 23, the Principal (Dr. Ernest Barker) read an interesting lecture dealing with the question of the political aspects of mandated territories. Among other things he said there were three classes of mandates: (a) where the Mandatory Power gave only administrative assistance and advice, (b) where it administered, and (c) where it treated the mandated area as an integral part of its own territory. Mandated territory in classes (a) and (b) might become in time an entirely independent state.

Mr. W. G. Ormsby-Gore, M.P., said the system of mandates was now beginning to work in full. With regard to Mesopotamia, last week Mr. Fisher had made a statement to the Council of the League of Nations sitting in Paris that the British Government were going ahead of the mandate, and had set up a King of Irak, who had been received by the population and crowned There was in that the germ of a new independent nation. The provisional independence of the state had been acknowledged, and a statement to that effect would go to the world and to the Council of the League. We were limited in Mesopotamia to administrative advice and assistance, and the time would come—personally he hoped it would soon some—when the mandate could be wound up, and Irak be recognised as a nation, and admitted along with Persia, Siam, and other states as a member of the League.

## PERSONAL AND GENERAL.

**To-Day.**
December 15 (New Style).
December 2 (Old Style).
Rabia II, 16, 1340 A.H. of the Moslem Calendar
Kislev 14, 5682 of the Jewish Calendar.

Sir Basil Zaharoff has arrived at Monaco.

Lady Somerleyton has arrived at the Hotel St. George, Algiers.

Lady Mabelle Egerton is leaving for Madras on a visit to her sister, Lady Willingdon.

Earl Granville, hitherto British Minister in Athens, is now in London, preparatory to taking up his new post as British Minister in Copenhagen.

Lieutenant-General Sir A. S. Cobbe, V.C., Military Secretary at the India Office, who is suffering from pneumonia, is improving.

The Right Hon. E. S. Montagu, Secretary of State for India, has recovered from his indisposition, and has resumed his duties at the India Office.

Marquess Curzon, of Kedleston, left London on December 10 for Hackwood Park, Basingstoke, to join Marchioness Curzon of Kedleston.

The Duc and Duchesse de Montpensier are visiting the Duchess of Aosta of Naples, before leaving for Egypt, where they will spend the winter.

Prince and Princess Christopher of Greece will arrive at the end of the week at the Villa Kasbeck, Cannes, which they have leased from the Grand Duke Michael.

M. Stefanovitch, who has been appointed Third Secretary to the Legation of the Kingdom of Serbs, Croats and Slovenes, arrived in London last week from Belgrade.

The United States has accredited a Minister to Bulgaria, Mr. Charles Wilson, formerly American Chargé d' Affaires at Sofia. He presented his letters of credence to the King of Bulgaria on December 5.

At noon on Saturday next, the anniversary of the birth of King Alexander, King of the Serbs, Croats, and Slovenes a special service will be held at the Russian Church in Welbeck Street, Marylebone.

The Cairo correspondent of *The Times* states that the Sultan of Egypt has conferred the Grand Cordon of the Order of Mehemet Ali on Prince William of Sweden, and other decorations on Swedish officials.

The marriage took place on December 1, at Kensington between Ernest L. Norton, Indian Civil Service, and Phyllis Marguerite Hannah, youngest daughter of P. F. S. Spence, of 4, Edwardes Square Studios.

The marriage was celebrated on December 5, at All Saints' Church, Malabar Hill, Bombay, between Captain Gilbert Leonard Stratton, M.C., R.F.A., and Ruthie, second daughter of Mr. and Mrs. Ernest Mardon, of Eastwood Manor, East Harptree.

A marriage has been arranged and will take place shortly, between Major C. J. S. Le Cornu, M.C., 56th Punjabi Rifles, Frontier Force, elder son of C. F. and Mrs. Le Cornu, of Bagot, Jersey, and Violet Grace Robinson, daughter of Mrs. E. B. Atty of Southbourne.

A marriage has been arranged and will take place in Constantinople on December 14, between Captain Stephen Ayshford Sanford, younger son of Major and Mrs. Sanford, Triley Court, Abergavenny, and Princess Olga, daughter of Prince and Princess Mickeladze.

The marriage took place on November 5, at the Cathedral, Bombay, between Captain Steuart L. Symonds, M.C., only son of the Rev. B. L. Symonds, Rector of Haversham, Bucks, and Norah, younger daughter of the late Mr. E. I. Worley, Solicitor, Stoney Stratford.

An engagement is announced between Captain G. Murray, M.C., the Seaforth Highlanders, son of Mr. and Mrs. Keith Murray, Thurso, Caithness, and Phyllis daughter of Mr. and Mrs, G. Campbell Devon, Kotah, Rajputana, India.

The marriage arranged between Stephen H. Longrigg of the Mesopotamian Civil Administration, younger son of Mr. and Mrs. G. Hemsley Longrigg, and Florence Amy, elder daughter of Mr. H. A. Anderson, C.S.I., will take place in Baghdad about the end of January.

Sir James MacKechnie, managing director of Vickers, Limited, Barrow-in-Furness, left Liverpool on December 10 for New York in the Cunard liner Scythia. Before returning to England towards the end of next month he will visit important industrial centres in Canada.

The marriage took place on December 2 at Mozuffarpur-Bihar, India, between Ralph Brathwayt Beevor, I.C.S., eldest son of Ralph J. Beevor, of St. Albans, and grandson of the late Sir Thomas Beevor, Bt., and Phyllis Margaret Ashburner, eldest daughter of Henry Oliver Minty, of St. Albans.

The marriage was celebrated on November 9, at St. Stephen's Church, Ootacamund, by the Rev. W. R. Crichton, betweeen Charles Oliver Robins Mosse, M.C., Captain, 120th Rajputana Infantry, I.A., son of Col. W. O. M. Mosse and Marion Beatrice Barber, daughter of Sir Edward Fairless Barber.

The Roumanian Minister in London has handed the insignia of various orders conferred by the King of Roumania for services during the war to the following: Viscount Burnham, Mr. H. A. Gwynne, Mr. G. H. Mair (of the League of Nations), Mr. Frederick W. Emett (of Reuter's Agency), and Professor Gerothwohl.

In response to a request transmitted through Sir Percy Cox, our High Commissioner in Mesopotamia, the Archbishop of Canterbury has nominated a chaplain to minister to the civil population in and near Baghdad. The Chaplain nominated is the Rev. Frank Ford, B.A., Cambridge, at present curate of Ross, Herefordshire.

He served in Egypt, France, and Mesopotamia during the war.

There was an informal reception at the Bulgarian Legation last week in honour of the Bulgarian Trade Delegates, Monsieur Kassiroff and Monsieur Mutapboff. Among the guests were : The Dowager Lady Boyle, Lady Grogan, Sir Edward and Lady Boyle, Messrs. Noel Buxton, Leland Buxton, Goad, Montague Bell, Conwill-Evans, Major Neate, Major Cumberbatch, Mr. Thompson, Mr. Mandeville, Monsieur Liudskanoff, the Staff of the Bulgarian Legation, Mr. Ledward, Mrs. Archibald Little, and Mrs. Philip Howell.

## APPOINTMENTS AND PROMOTIONS.

The Constantinople Correspondent of *The Times* states that Mgr. Meletios Metaxakes, the former Archbishop of Athens, has been elected Œcumenical Patriarch of Constantinople by a big majority. He was the Venizelist candidate.

Rear-Admiral John Luce, C.B. Rear-Admiral in Charge, Malta, Colonel Arthur Frank Umfreville Green, C.M.G.,D.S.O., Colonel on the Staff in Charge of Administration, and Group-Captain Charles Rumney Samson, C.M.G., D.S.O., A.F.C., Air Officer Commanding Royal Air Force, Malta, have been appointed members of the Nominated Council for Malta.

## OBITUARY.

The death has occurred of Mr. Richard Bagot, the novelist. Mr. Bagot spent a great deal of his time in Italy, in whose service he wrote much. It will be remembered that he occasionally contributed to *The Near East.*

The death is announced of Mr. B. A. Malandrinos, who had been Greek Consul-General at Liverpool since 1893. Throughout the whole of his consular connection with the city he took an active part in the various movements for the relief of distress amongst Greeks, and he was also practically sympathetic in his support of charities of a national and local character.

The death has occurred of Lieutenant-Colonel Sir George Roos-Keppel, G.C.I.E., K.C.S.I., He was born in 1866, obtained his commission in 1886, and joined the Royal Scots Fusiliers in India. He took part in the operations in Burmah between 1887 and 1889, and in 1895 was transferred to the Indian Staff Corps. After seeing a good deal of active service he was in 1907 transferred to the Indian Supernumerary List, and was afterwards appointed Chief Commissioner and Agent of the Governor-General on the North-West Frontier. On the manifestation of Afghan hostility early in 1919, he was in the position of chief political officer to Sir A. Barrett. Shortly afterwards he was appointed a member of the Council at the Indian Office.

The death has occurred of Mr. Ernest Myers, the distinguished scholar and poet. Born in 1844, he went up to Balliol in 1863, and there won the Gaisford Prize for Greek verse. His first publication was his prose translation of the "Odes of Pindar," issued in 1874. This was followed three years later by a volume of poems which included "Reveries de Voyage" and "Philhellene." In 1880 he published "Rome and Other Poems," and in 1882 he collaborated with Mr. Andrew Lang and Mr. Walter Leaf in a prose version of the "Iliad," intended as a companion volume to the translation of the "Odyssey" into prose by Messrs. Lang and Butcher. His third book of poems, "The Judgment of Prometheus and Other Poems," was published in 1886, and in 1904 he issued a collection of some of his earlier works under the title, "Gathered Poems." Mr. Myers was a member of the Hellenic Society from its foundation.

# WHERE TO STAY IN THE EAST.

## CAIRO.

THE
**CONTINENTAL-SAVOY**
THE MOST UP-TO-DATE AND BEST SITUATED HOTEL IN CAIRO

Entirely Renewed. Overlooking Ezbekieh Gardens. Opera Square. Famous Terraces. 300 Rooms, 150 Bathrooms. Cairo's Fashionable Grill-Room Restaurant. Daily Concerts. Weekly Dances. Open all the Year round

**MENA HOUSE HOTEL,**
At the Foot of the Pyramids. The Ideal Hotel out of Town.

**HELOUAN.** HEALTH RESORT near CAIRO. Sulphur Baths & Thermal Establishment
GRAND HOTEL, HELOUAN. Strictly First Class.

## PORT SAID
## SIMONINI'S HOTELS

S. SIMONINI, Prop.

**CASINO PALACE HOTEL**
Surrounded by Gardens, replete with modern comfort, delightful residence

**MARINA PALACE HOTEL**
*(formerly Savoy Hotel)*
Commands the most beautiful view of Suez Canal, Harbour and Entrance. Separate apartments with private bath.

**- CONTINENTAL HOTEL -**
Very convenient for commercial travellers because of its central position

**SUMMER PALACE HOTEL**
RAMLEH—ALEXANDRIA.
Under entirely New Management.
Every Modern Comfort, American Bar, Restaurant, Billiards.
WINTER SEASON.
Best Orchestra, Daily Concerts, Weekly Dances:
Special Terms for Families.

**NAJEM HOURY'S CYPRUS HOTELS COMPANY.**
OPEN ALL THE YEAR ROUND—
NIKOSIA—Cyprus Palace Hotel.
LIMASSOL—Olympus Hotel.
FAMAGUSTA—Savoy Hotel.
LARNACA—Majestic Hotel.
FOR SUMMER SEASON.
TROODOS—Olympus Hotel.
6,000 feet above sea level. Open from May till October.
Perfect situation. French and English Cuisine. Moderate Terms.
Excursions to Mount Troodos.
For Tickets and further Particulars, apply

## THE EGYPTIAN NEGOTIATIONS.

Although Adly Pasha has resigned his post of Prime Minister of Egypt, it would be a great misfortune if the Egyptian people were to adopt the view that negotiations for a treaty of "peace, amity and alliance" with Great Britain must on that account be at an end. A dispassionate examination of the Papers issued in connection with the discussions in London suggests that the negotiations broke down from lack of sympathetic understanding on the part of the negotiators, rather than from any insuperable difficulty in the problem to be solved. It should still be possible for Great Britain and Egypt to come to an agreement on the basis of the draft Convention submitted by the British Government; but in the light of the Delegation's reply to the proposal and of the wording of the communication addressed by the High Commissioner to the Sultan, it is not difficult to understand why the negotiations failed. Adly Pasha evidently did not regard himself as Egypt's plenipotentiary representative with a free hand to frame the best treaty with Great Britain that he could arrange; he was merely counsel, speaking to his brief, the terms of which had been previously restricted within hard and fast lines by popular clamour at home. The British Government, on the other hand, while anxious to respect the Milner Agreement, had not had the personal touch with the Egypt of to-day, that Lord Milner's Mission obtained as a result of their visit, and if the negotiations were carried on in what we may call the tone of the letter to the Sultan, there can be little wonder that the Egyptian Delegation assumed a still more unbending attitude as the days passed. The letter, let it be said at once, is a masterly *exposé* of the facts of the case, not a statement of which can be challenged; but whether the laying of emphasis on certain features of the situation was expedient or conducive to the success of the negotiations may be open to doubt. In fairness to the British Government it may be supposed that the Egyptian Delegation at the outset proved itself so oblivious to the underlying conditions of any relationship, past, present, or future, with Great Britain, that the tendency to emphasize these conditions was intensified. Negotiations undertaken in such circumstances were doomed to failure from the beginning. But the outspokenness of the British Government's letter may help to clear the air. There can be no question that a number of elementary points had been overlooked in Egypt; but with a new Ministry an opportunity offers to review the whole position, and the first thing to be done is to examine the terms of the suggested convention without reference to any tone alleged to have been adopted in the London negotiations or to any passages in the covering letter.

The Convention offered by the British Government accords recognition to Egypt as a Sovereign State in alliance with Great Britain. That is the status so eagerly desired by the Egyptians, and as they cannot hope to secure it except with the consent of Great Britain, it would be thought that they would not lightly reject the offer, when by accepting it they stand a much better chance than they have at present of modifying other arrangements which in their opinion clash with the main purpose of the Treaty. It must be obvious to every thinking Egyptian that the British Government is within its rights in claiming for the British Empire "exclusive rights and responsibilities" in regard to Egypt. If these rights and responsibilities did not exist, there would be no question at this time of a treaty between the two countries. No Egyptian, however, can charge Great Britain with having abused her position by exploiting the country for her own benefit. Mistakes may have been made; the higher branches of the Administration may have been too extensively filled by Britons, and too exacting a standard of efficiency may have been required. But the aim has invariably been the moral and material uplifting of Egypt, and Great Britain has sought for herself no financial gain nor commercial privilege. This state of affairs affords *a priori* evidence that, when the British Government stipulates for "an exceptional position" for its High Commissioner, and for British Financial and Judicial Commissioners, it is still seeking Egypt's good and not its own. If it be urged, as it was by the Delegation in London, that for an Egyptian Minister for Foreign Affairs to maintain the closest relations with the High Commissioner is to submit to the latter's direct control in the conduct of Foreign Affairs, it must be pointed out that no difficulty can arise, unless the Foreign Minister wishes to act in opposition to the spirit of the Treaty. Similarly British Financial and Judicial Commissioners will have no cause to "interfere" with the internal administration of the country, unless Egypt's own interests are threatened. As far as the Egyptians are concerned, these officials can be for the most part figure-heads, if the Government lives up to the standard that it claims to be able to maintain; but their presence at the beginning alone makes the new era possible and protects the young State from foreign interference of a really derogatory character.

We should have preferred to see Egypt treated with greater confidence or at least with greater generosity; but it has to be admitted that the British Government has not received much encouragement to this end from the Egyptians themselves. Some estimate can now be formed of the prejudice caused to Egyptian interests by Zaghloulist excesses; the extremist movement has not only compelled Great Britain to take her own responsibilities more seriously, but it has also stirred up a number of foreign Powers to insist upon safeguards which only British troops can supply. Moreover, it is impossible not to feel disappointment at the way in which the Egyptian Delegation played its part in London. The reply to the proposals of the British Government is an indifferent effort, whether regarded as a piece of dialectics or as an essay in constructive statesmanship. The effect must have been to exasperate the Foreign Office and to impart more sting to the letter addressed to the Sultan. The arguments advanced might satisfy platform oratory; they could carry no weight in a council chamber. They would seem to have been written for perusal in Egypt, rather than as a considered answer to a serious proposal. An Egyptian Government can do better than this, and we had hoped that Adly Pasha, having taken counsel of his countrymen, would find it possible to accept the draft Convention as a basis for a Treaty of Alliance. Now that he has resigned it devolves upon his successor to resume the negotiations. The terms offered by the British Government are just what the Egyptians care to make of them. They can be in their hands either merely the latent "guarantees" that the actual situation requires, or the "deed of guardianship" and the "permanent pact of subjection" that they were dubbed by the Delegation. As the former they will give no trouble to Egyptians anxious to serve their country well, and in the course of a few years will carry their own repeal. If the negotiations are not resumed, the British Government will direct the Administration on the new lines now laid down in the letter to the Sultan; but it is unlikely that on those lines Egypt will tread the path of peace or make the material progress of which she is capable.

## ADVENTURES IN CENTRAL ASIA.

### From Tashkend to Orenburg and Back.

*By Sirdar Ikbal Ali Shah, F.R.G.S., M.R.A.S.*

I was marched along what seemed an almost interminable road, until at last my captor and I came in sight of a dreary expanse of coal-fields, the appearance of which gave me much misgiving. On the road thither my brain had been working rapidly and I had tried to think out various schemes for extricating myself from the clutches of the Bolshevists. At first it had occurred to me that my escort might be bribed, but when I recalled that his sergeant was aware of the circumstances of my arrest, I at once saw the hopelessness of such a plan. If I were to hold him up with my revolver I might manage to escape, but it would certainly not be for long, and the consequences upon recapture were too dreadful to contemplate. There was nothing for it, indeed, but to accept for the moment the situation which had been created by my own rash action.

We soon arrived at a large wooden erection which was labelled in Russian and Turki "Department of Mines," and after knocking at the door, my *ispolkom* hustled me into a stuffy, low-roofed room, in which several very unkempt Russians were drinking tea and smoking. "Is this one of your men?' asked the policeman brusquely, of a fat, untidy, little man who was wearing a pair of top-boots at least three sizes too large for him.

"Do you think I know all these dogs by headmark?" he replied, drawling out his words in the most offensive manner possible, while he looked me up and down contemptuously. "Speak up, fellow, what mine are you attached to?"

"I am attached to no mine," I said. "I am an Afghan subject, and demand to be set at liberty without a moment's delay."

"What proof have you of what you say?" said the official.

"Here's my proof," said I, producing my passport, which had been made out during my visit to Afghan territory.

He scrutinized it carefully, and his manner changed somewhat. I was, of course, well aware that all Bolshevist officials had the strictest orders to treat Afghan subjects with the greatest possible courtesy.

"There seems to have been some mistake," said the official, politely enough, "but haven't you yourself to blame? What are you doing in that rig-out?"

"I arrived in Samarkand only yesterday," I replied. "I hoped to get work on the coal-fields as an overseer, and bought these old clothes for the purpose."

"So you want to be an overseer?" laughed the man. "Can you speak Turki fluently?"

"Yes," I replied, "and half-a-dozen other languages as well."

"There isn t much money in it," he said deprecatingly, "but the work isn't hard. It consists in going down the mines and seeing that the men are kept steadily at it. As a matter of fact we could do with a dozen men like yourself, and if you care you can start right away."

Now this was precisely what I had hoped would turn out, although I had intended to reach my object from a different road from that I had to traverse.

Accompanied by one of the group who decorated the office of the superintendent, I was taken across the road to another building, where I was enrolled as an overseer. Here my duties were carefully outlined, and I was given a notebook in which to jot down my reports. I found that I had to keep a careful account of the daily output of each of the hundred and forty labourers under my charge, and to see that they did not fail to reach a daily minimum of output—a minimum, I may say, at which many British miners would gasp. I was then taken down the mine shaft on a crazy lift which was not even covered in. When I reached the workings I was shown that part of them over which I was to exercise supervision. Up till now this had been done by a Russian, who was glad to be rid of the job, and who welcomed me heartily, going round with me and pointing out those workers who were recalcitrant. Faithfully to describe the appearance of these poor wretches would be impossible. I do not think I remember ever having seen such a dejected lot of men as these unfortunate serfs, the victims of Bolshevist ambition. Not only did they put in from fourteen to sixteen hours' work every day, but the rations they received were limited to a totally inadequate portion of black bread, a quantity of milk curd and water. For the most part they were silent. The guards and overseers did not understand their language, and mistaking what they said for complaints, answered them by blows with the knout. This instrument was, of course, unknown above ground in Soviet Bokhara, but the Bolshevist below ground is a demon in a very real hell.

I had presided over a portion of this inferno for about ten days when a slight accident, caused by a fall of coal, necessitated my quitting work for a day or two. Lying in the rude quarters provided for me, I confessed to myself that I had seen enough of subterranean Bolshevism. When I had recovered I said not a word to anyone, but going into the town purchased an outfit of decent clothing, and took the first train I could get to Tashkend. There is a large Russian element in this town and its streets present an extraordinary variety. At one moment the visitor is in a popular thoroughfare, at the next, almost in the country, while another step will bring him into a veritable wilderness, with vast ravines through which brawling streams take their way. It is, indeed, a most romantic place, with its time-worn mosques and *medressés* or theological colleges. Beyond its gardens we find the open steppe stretching right away to the mountains.

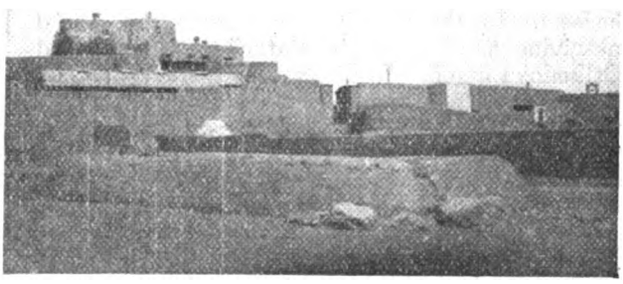

*Photo by I A Shah.*

**JAMRUD FORT, at the Mouth of the Khyber Pass.**

It was while in Tashkend that I conceived the idea of going right through Russian Turkestan to Orenburg, the great centre of Muscovite activity. I knew very well that if I went by the Tashkend-Orenburg line I should sooner or later be pulled up, and at first I actually thought of proceeding by caravan. Then it occurred to me that I might revive my old role of merchant. The Russians there, I argued with myself, must be badly off for many things, and if I could take them exactly what they wanted they would probably not investigate too deeply into my credentials. Of course I knew full well that I should lose on the deal, as the rouble is at present worth so little, but on the other hand I was most anxious to see the fountain-head of Bolshevism in Central Asia after having heard so much about it. But what to take with me—that was the question. There was one thing I knew that the Russian always required, that he could not in fact exist without, and that was—tea. I had heard that they were very short of this commodity at Orenburg, whereas plenty of the block tea, which is commonly used in Asia as a means of exchange, was constantly coming from China into Bokhara.

Digitized by Google

I was aware that I could best make my purchase at the Bish-Agatch, or the southern part of the city, next to the Russian town, so I betook myself to the bazaar of that quarter. Bolshevism did not seem to have in any way hampered the activity of the place, and I noticed that Tashkend was by far the most orderly of any of the towns of Central Asia, with the possible exception of Kabul. I went around pricing block tea, and bought a very considerable quantity, at the same time purchasing one or two chests of the finest China tea procurable, which I thought might come in handy as a present to officials. I then went to the Passports Office and describing myself as a Persian merchant, had very little difficulty in obtaining the necessary *visa*.

Next day I took the train for Orenburg. It was by far the most dreary journey by railway I have ever made, for the train seemed to stop at least three times an hour. Not only were we held up to permit of the passage of endless coal-trucks, but numerous troop-trains passed us both going to and coming from Orenburg. The men they contained seemed to me to belong to almost every Asiatic race, Persians, Tartars, Uzbeks, and even Chinese, and I can assure you this passage of large bodies of men opened my eyes regarding the operations of the Bolshevists from a military point of view. It took us the best part of five days to reach Orenburg, and when at last I got there, I was so stiff with prolonged sitting that I could hardly move at all. I found Orenburg quite a good-sized, modern, Russian town. The approach to it is through a beautiful and well-wooded country, and the city itself is built on a broad plateau, from the level of which its spires and roofs rise in quite an imposing manner. I found quite a comfortable room in a good hotel, and enjoyed the luxury of a bath and bed.

*(To be continued.)*

## TWO FETE DAYS IN YUGOSLAVIA.

*Liubliana, December 7.*

**The Anniversary of the State.**

The birthday of the State, December 1, was observed in Liubliana with becoming ceremony and sincere enthusiasm. In the morning there were the official Thanksgiving services at the Catholic Cathedral and the Orthodox Church. In the evening there was a Gala performance at the Theatre, where the patriotic one act play *Jugana, vila najmlaisa* (Jugana, youngest of the vile) was followed by Shakespeare's "*Comedy of Errors*" in Oton Zupanshitch's amazingly clever translation, and with the quaintly mediaeval Levantine setting which has been devised for it here. At the same time the Liubliana branch of the Yugoslav Journalists' Union had arranged a festival concert at the Union Hall, the chief feature being the participation of no less than six local choral unions, their programmes consisting entirely of beautiful arrangements of national songs from all over the Kingdom. The famous Glasbena Matica, the Conservatoire Choir, was, of course, incontestably the best; but one or two others ran it pretty close. The Opera had wisely given its Gala performance (Mousorgsky's "Boris Godunov") the night before.

**St. Nicholas' Day.**

Since then we have been busy celebrating St. Nicholas' Day, observed here with all ancient pomp and circumstance. I was lucky enough to be invited to two receptions by the Saint,—to the Sokols' party at the National Club, and on St. Nicholas' Eve to the entertainment organised by the colony of natives of the Littoral (the Primorci) here in Liubliana. On that occasion the Saint (in private life formerly a well-known citizen of Trieste) made an excellent speech,—finely patriotic, humorous, and with an undertone purely tragic. The Primorci are a hospitable folk. As I glanced round the crowded hall, I was forcibly reminded that I had spent pleasant festive evenings with them already in the old days of exile during the war in London,—little dreaming then, that I should one day be their guest in Yugoslavia,—and they still in exile!

## SHAKESPEARE IN SERBO-CROATIAN.

*(By Our Belgrade Correspondent.)*

Shakespeare is as appreciated in Yugoslavia as he is everywhere. Dukat, in his "Pictures from the History of English Literature" (in Croatian) calls him the greatest dramatic genius the world has ever seen, and Miletitch refers to "Romeo and Juliet" as the greatest love-song of all ages. One of Croatia's greatest literary men, Shenoa, has translated "Romeo and Juliet," and "Much Ado about Nothing," Spiro Dimitrovitch has translated "Julius Caesar," Harambastitch has translated "Hamlet" and "The Merchant of Venice," Laza Kostitch has translated "King Lear," Badalitch has translated "Antony and Cleopatra," and the "Sonnets" have been done by Beshitch, Trnski, and Svetislav Stefanovitch. The plays are often produced in Belgrade and in Zagreb.

The translations look a little odd to us. For the benefit of those readers, not an inconsiderable number nowadays, who know some Serbo-Croat, we give the renderings of the old familiar titles. "Love's Labour Lost" is "Zalundni Trud liubavi," "The Comedy of Errors" is "Komediya Zabluda," "The Taming of the Shrew" appears as "Ukroshena Goropad," "A Midsummer Night's Dream," which is quite a favourite, becomes "San letne noshi," "Much Ado about Nothing" is "Mnogo vike ni zashto," "As you like it" is "Kako vam drago," "The Merchant of Venice" is "Mletishki Trgovac," *Mleci* being the old Slavonic name for Venice. "All's well that ends well" is somewhat disguised as "Konac delo krasi," literally, "The end adorns the thing." "A Winter's Tale" is simply "Zimnya Prisha," "Measure for Measure" appears as "Milo za drago," an idiomatic translation. Very little knowledge of Serbian is requi e l to recognise "Vessele Zhene Vindzorske," "The Merry Wives of Windsor," which was not long ago advertised all over Belgrade, but an accurate knowledge of the Continental calendar is required to recognise "Vesper Sv. Triyu Kralya," literally, "The Evening of the Three Holy Kings," which is nothing more or less than "Twelfth Night."

The proper names are usually simply transliterated and spelt in the Serbo-Croat phonetic way, but some are actually translated. For instance, Sir Toby Belch becomes *Tobiya Podrig*, a literal translation of his euphonious surname, but Sir Andrew Aguecheek is more freely rendered as *Andriya Bledonos*, literally, Pale-nose. Bottom the Weaver appears as *Tkalac Prelac*, where the first word means a weaver, but *prelac* is a rare word meaning an effeminate man, and diagnosed in Ivekovitch and Broz' Croatian lexicon as a "man who spins, and mixes more with women folk than with men: often in their speech they resemble women more than men." It is a localism in Syrmia, and is derived from the verb *presti*, to spin.

The following extract from a translation of "Hamlet" by Harambashitch is worth reproducing:—

Bit, ili ne bit—pitanye je sada:
Je l' shasnije po liudski duh sve str'yele
B'yesneshe sudbe smireno podnosit,
Il' proti c'yelom moru svih nam yada,
Oruzhat se i smyelo sve dokonshat.

## ENGLISH HIGH SCHOOL, CONSTANTINOPLE.

We are pleased to learn that in the recent examination held by the College of Preceptors the English High School for Girls, Pera, Constantinople, did extremely well. Anahide Bahri, a pupil of the school, was placed 1st in the Honours Division of the Preliminary Grade, an two other pupils, Nevart Reizian and Nellie Menahem, were placed 6th and 7th in the same Division and Grade. These successes were secured in competition with girls from schools and colleges all over Great Britain, and they reflect great credit on the Pera school.

### CAUCASIAN DINNER.

Madame Zarchi presided at the Caucasian Dinner, held at the Lyceum Club last week. Among the guests were Prince Michel Soumbatoff (Georgia), Mr. Mehtiev (Azerbaïjan), Lord Clifford, Mme. Bagratoumi (Armenia), Mr. Gugushvili (Secretary, Georgian Legation), Mr. and Mrs. Lo Chong, Dr. Serge Zarchi, Commander and Mrs. Thimm, Mr. and Mrs. Djakelly, Mr. Tcheidze (President of the Georgian Parliament), Mr. and Mrs. Philip Snowden, Mr. Brayley Hodgetts, and Mr. Nikita Balieff, who, with other Caucasian members of the Chauve-Souris company, gave Georgian, Armenian, and Azerbaïjanian folk-dances and folk-songs in national costume. Armenian songs were rendered by Miss Manna Karina, and Georgian ones by Countess de Tomasevitch. The Chairman said that, although the three countries now forming these republics had not always been the best of friends, they were now firmly united, and could set an example of friendship to older nations.

## PRESS ON THE NEAR EAST

### The Entente and Turkey.

The view is expressed in some quarters that Great Britain must eventually follow France in making a similar agreement with the Kemalists. Mr. Crawford Price, however, in the *Sunday Times* of December 4, will have none of this, though he admits that "it will require the exercise of considerable diplomatic skill to undo the nefarious consequences of the Franco-Kemalist pact." He continues :—

France has sold her moral birthright for a mess of political and commercial pottage, and if the Entente is to endure in fact as well as in name she must find some way out of the impasse to which her self-centred and economically tainted adventure at Angora has led. Fortunately, there are evidences that the agreement reached by M. Franklin Bouillon is largely disapproved in France, where there is genuine concern at the implied departure from an historic French tradition. There is a slight possibility that the opposition in the Senate may in fact, lead to such modification of the Treaty as would again qualify France to take her seat on the international jury. Let us hope that this desirable consummation will be reached. But, in any case, something must be done to conclude peace with Turkey, with whom we are actually still at war, and to secure a settlement of the Eastern Question endowed with some, at least, of the elements of permanency.

We cannot request Mustapha Kemal to dictate the terms of peace, because in that case we should lose all we have fought for. The straightforward course would be to frame a treaty on the basis of the Armistice, give the Greeks moral backing, and permit them to raise the necessary funds and impose our will upon the Turks. This would be a logical development, but it seems that we are afraid of Moslem sentiment, afraid of inter-Allied discords and afraid that the Hellenic army would fail in the task—although while bereft of all assistance, it continues to hold the key position in Anatolia.

Thus we are again driven to seek salvation in compromise. Actually there are only two conditions upon which we are absolutely bound to insist—the security of the Ottaman Christians and the freedom of the Straits. To hand back the Christians of Asia Minor to Kemalist rule would be unthinkable. No paper promises have ever prevented the Osmanli from torturing and massacring their victims, and flushed with victory over the greatest powers of Europe— for they would regard it as nothing less—they would be more than usually incorrigable. As for the Straits, with Western Asia Minor in Turkish hands, freedom of transit would be a mockery.

Our minimum requirements entail at least the creation of an autonomous State under Turkish sovereignty which will englobe the majority of the Christian population. Such a State must have the force necessary to maintain itself against revolution within and invasion from without; otherwise security for Christians and Straits alike goes by the board. This is beyond the powers of a gendarmerie; it necessitates the existence of an army, and for the present the Greek army is the only machine in sight. Now, it is certain that Kemal, after his recent diplomatic success, would refuse voluntarily to sign any peace based on these lines, and it would be somewhat futile to expect the Supreme Council with one of its members hopelessly compromised to insist upon its execution.

To sum up, we cannot accept Kemal's terms; he will not accept ours, and we are disinclined to assist the Greeks to force them upon him. There would seem to be only one chance of escape from the predicament, and I venture to suggest that, this being essentially an international question, we should call in the League of Nations. The prestige of that body has increased of late, and its decisions would undoubtedly carry more weight both in Turkey and abroad, than those of the now discredited Supreme Council, which can apparently be defied at will. In this case the League would have also the power to impose its decisions, for the Hellenic army is at its disposal, and with international co-operation of the most inexpensive kind, would be assured of success. Moreover, if Christian minorities were perforce left under Ottoman rule, their fate would be an international concern and it would be the duty of Geneva to provide real guarantees for the security of their lives and properties.

### Great Britain and the Bolshevists.

In the *Yorkshire Post* of December 1 Mr. Raymond A. Coulson, writing from Constantinople, had an article upon "Bolshevik Propaganda and Great Britain." He begins by noting the growing dissension between the Left and Right wings of the Communist party since the signing of the Anglo-Russian Trade Agreement, the dispute being over the advisability of continuing Bolshevist propaganda in the East in spite of the Agreement. He proceeds :—

The main lines of the arguments are as follows: Both sides agree that the ultimate communisation of the countries surrounding Russia is essential for their continued existence. There is no Communist idealism in this. All that was abandoned long ago. It is simply that the Soviet leaders recognised that, unless they can overthrow the "Capitalist Powers" of Europe, Sovietism in Russia must fall. The motive is one of sheer self-protection. The issue is as to the best means of achieving this end. Trotsky Buckharin, Dzerjinsky, Stalin, Surits, and Radek, backed by the Komintern, argue that propaganda in Western Europe has failed, and that there is no prospect of overthrowing the Powers by direct approach. The alternative is to raise Asia against Europe. They are convinced that this can be done, and that the result will be successful. The continuance of Eastern propaganda is therefore essential to the further existence of Communism. "The trade agreement with Great Britain," they argued, "has been given a trial, and has not been any use to us. If we have a breach with England we do not lose anything. If, on the other hand, we give up Communist propaganda in the East we shall fail to achieve the necessary revolution." This party regards Britain as the key to the whole situation. They are convinced that they can overthrow Great Britain by producing chaos and revolution in India. This idea is indeed held with an almost fanatical fervour by all Communists. In brief, the Trotsky party admit the possibility of their being thrown out of Russia, and would then propose to retire into Asia. That is to say, they wish to prepare against necessity a line of strategic retreat from which they could the more effectively attack.

Lenin and his party of the Right reply that they are in no way opposed to the communising of the East and the West. But all that has been done so far has been a series of experiments, the results of which have not been happy. The situation has beome dangerous. It is necessary now to go slow, stabilise the position, and conserve the resources of Russia. Should Communism fail in Russia, it will be discredited in the eyes of the whole world, and will have no chance anywhere else. The cause stand or falls in Russia. Trotsky's military plans, and the enormous sums spent on propaganda, are weakening the country. The policy, though to be resumed later on, must be abandoned for the present. It is always easy to start a fire in Asia, but difficult to control it. There is danger that an Asiatic revolutionary movement might become a nationalist movement instead of a Communist. By going slow it would be possible to exercise control and guidance into the right channels.

Trotsky replies that England is the main factor, and can be overthrown only by pressure in the East, and that must be brought to bear as soon as possible. No, says Lenin, go very slow, even disarm suspicion by giving some proofs of loyalty to the Trade Agreement. We need Agreements with other nations. If we have a breach with Britain they will be out of the question.

The result of all this was a decision to modify the propaganda policy, and half-hearted orders to this effect were given to the Council of Action and Propaganda. The Council refused to agree, and I have the best reason for knowing that propaganda was continued actively right up to the receipt of Lord Curzon's Note. This Note appears to have shaken the Komintern, who did not realise that we knew as much as we did. They have been

at pains to assure us that the charge was not based on fact, but the latest inside information from Moscow establishes the fact beyond doubt. The Note produced a great stir at headquarters, and renewed instructions were sent to Baku demanding the cessation of propaganda. Baku protested, but was apparently forced to comply. Whether or not the Council of Action and Propaganda will continue to refrain remains to be seen, but it may be taken as highly improbable that they will do so. There is every likelihood that they will try to continue by secret means.

## A Near Eastern Settlement?

Hope is not yet dead of a settlement in the Near East, as witness the *New Statesman* of December 3 :—

The "plain speaking" which is now in full blast between Paris and London, coupled with the equally plain exhaustion both of Greece and of Turkey, encourages us to hope at last for a settlement in the Near East. The main conditions of that settlement, if it is to be a real one, are clear. They are, as they have been from the beginning, first, an agreed policy between ourselves and France and Italy, and secondly the disgorging by Greece of the Empire that she cannot swallow. We may have a just ground of complaint against France in her conduct over the Angora Treaty, and Greece, may have a just ground of complaint against us in our blowing hot and cold on her Anatolian adventures. But complaints will not alter the facts. The Franco-Turkish agreement cannot be wiped off the slate; the Greek collapse cannot be undone. M. Gounaris, the Greek Prime Minister, in an interview in the *Daily Chronicle* the other day, appeared to suggest that it could. "Our cause," he said, "is the cause of the Allies," which means presumably that we are to perpetuate Mr. Lloyd George's original blunder of using the Greek armies to crush the Turkish Nationalists, and if necessary (it evidently would be necessary), to give them large material assistance. There is not one person in a thousand in France or Italy, who will agree to that. What we can agree is that the non-Turkish populations ought to be protected from massacre or persecution by the Turks. The new-found enthusiasm of some of our statesmen for defending Armenians is an interesting spectacle; it is welcome, and we hope it will last. But it obviously cannot be made an excuse for not handing back to Turkey what is indisputably Turkish—the whole of Anatolia. For the town and port of Smyrna, where the Greeks are in a majority, we shall probably be forced back on the solution of an international régime. With the Greeks in control, peace and prosperity are impossible, after all that has happened, either in Smyrna itself or further afield.

But *The Times* of December 8 harps rather on the difficulties in the way of a settlement. After outlining the essential preliminaries to peace-making, it says :—

A great difficulty lies in the uncertainty and elusiveness of the Turkish factor. The Greek advance has given the Turks an appearance of unity, and it is with Mustapha Kemal, as representing the strongest element of Turkish resistance, that the Allies will have first of all to deal. Mustapha Kemal will no doubt retain a considerable prestige whatever happens; but the opening of peace negotiations will reveal certain inconsistencies and irregularities in his position. He is not the Caliph in whose name agitators have cried aloud for support for the Kemalist cause throughout the Mahomedan East. It is the Sultan of Turkey who is looked up to as Caliph by the maiority of Mahomedans, and the Sultan, his entourage, and a great many Turks who acknowledge his authority are antagonistic to the Kemalists. The Sultan is in Constantinople, and the theory put forward by the agitators is that he is a prisoner of the Allies, which is untrue. At any rate, the relations between the Sultan and Mustapha Kemal will have to be re-adjusted before the Ottoman State can be regularly re-established as the result of peace.

A further difficulty lies in the very complicated relations that subsist between Mustapha Kemal and the Russian Bolshevists. There is not the slightest reason to suppose that the Kemalists are in any sense Communists, though a peculiar brand of Turkish Bolshevism has been evolved, under the name of "The Green Apple," by some enthusiastic young Pan-Turanians. Mustapha Kemal, however, cut off from the West, has been compelled to make terms with the Bolshevists who have supported him as an Ally in their attack on the West. They support him in his extreme nationalist demands. They may easily withdraw their support if he modifies his claims and so alienates his more violent followers, or if he actually comes to terms with the Allies. One result of the conclusion of the agreement with France has apparently already been to create trouble in the Kemalist rear.

## The Future of India.

In the series of letters which Mr. H. G. Wells is writing from Washington in the *Manchester Guardian* and the *Daily Express*, he is touching on many world problems. On December 9 he considered the problem of India. After stating as his opinion that all the mischief-makers in the world cannot prevent the English-speaking States (including Ireland and America) from becoming "a great predominant association," and that "no other communities have so much to give mankind," he comes to India :—

But when we turn to India we turn to something absolutely outside the English-speaking world-girdle. One of the many manifest faults of that most premature project, the League of Nations, was the fiction that it brought in India as a self-governing nation, as if she were the same sort of thing as these self-governing Western States. It was, indeed, a most amazing assumption. India is not a nation or anything like a nation. India is a confusal variety of States, languages, and races, and, so far from being self-governing, her peoples are under an amount of political repression which is now perhaps greater there than anywhere else in the world. Politically she is a profound mystery. We do not know what the political thoughts of the peoples are, nor, indeed, whether they have in the past any political concept at all parallel to those of Western civilisations.

He then points out that Western democratic methods are not necessarily adaptable to all the world, and then contrasts the Washington Conference, with its idea of concerted abstinence and withdrawal from other peoples' affairs and territory, with the Versailles Conference, of which he says :—

Versailles and the League of Nations were ridden by the idea of mandates all over the world. Where disorder or weakness reigned a single mandatory Power was to go in, making vague promises of good behaviour, to rule and exploit the country. It was the thinnest, cheapest camouflage for annexation. It was a hopeless attempt to continue the worst territory-seizing traditions of the nineteenth century, while seeming to abandon them. It was Pecksniff Imperialism. So we had the snatching of Syria, Mesopotamia, and so forth, but any soundly-constituted league or association of nations should render that sort of thing unnecessary and inexcusable.

The reason lying at the base of the British occupation of India, of the Japanese occupation of Korea, of the French occupation of Indo-China, and so forth, is a perfectly sound reason so long as there is not an association of nations. And it is an entirely worthless one when there is such an association: it is that some other Power may otherwise come into the occupied and dominated country and use it for purpose of offence. The case of the British in India—that they kept the Imperial peace for all the peoples of the land, that they warded off Afghan raiders who devastated India in the early eighteenth century, and afterwards the long arm of Russia—is a very good one indeed. The British have little cause to be ashamed of their past in India, and many things to be proud of, but they have very good cause indeed for being ashamed of their disregard of any Indian future. They sat tight and turned peace into paralysis. They did not educate enough or release enough. Always the excuse for suppression has been the fear of a rival. Well, the whole purpose of an association of nations is to eliminate the fear of a rival and all that the fear entails in war possibilities.

THE
EUPHRATES & TIGRIS
STEAM NAVIGATION CO., LTD.

Regular Service of Passenger and Cargo Steamers running at frequent intervals between BUSREH (Persian Gulf) and BAGHDAD on the River Tigris, and between MOHAMMERAH (Persian Gulf) and AHWAZ on the river Karun.

Cargo booked on a Through Bill of Lading to BAGHDAD and/or AHWAZ by the chief liners sailing from the U.K. Continent and India.

## NOTES AND NEWS.

Devonshire Square.
E.C. 2.

**The Rupee to go Lower ?**

The position with regard to rupee exchange is again attracting attention. The rupee is weak now at a time of the year when it should normally be firm because, as I have pointed out, India's markets are to all intents and purposes closed to her at the moment. But another factor, it seems, must now be taken into account, and one also conducing to weakness, namely India's financial position. That there will be a very considerable deficit on the Budget is evident, and the effect of that on the rupee will probably be pronounced. Forecasts are apt to be hazardous, but I may say that in some quarters a considerably lower rate would not cause surprise. Viewing conditions as a who leit would appear that we shall have to wait a long time before seeing that 2s. rupee!

**The Coming B.I.F.**

Promising accounts reach me regarding the prospects for the approaching British Industries Fair. Manufacturers are showing a greater interest in it as an instrument of trade development than ever before, and already it is evident that when the curtain rises at the White City on February 27 it will disclose an extremely comprehensive range of the products of British industry. Invitations to the Fair have been sent out to buyers in every country, and in other ways every endeavour has been made to draw attention to the value of the exhibition as a medium for commerce ; and it is gratifying to be able to state that, judging by the present indications, a very large number of buyers may be expected to visit the fair. As it will evidently be held at a time of reviving trade, with a "boom " in all likelihood ahead, that means that good business will be done.

**British Overseas Bank.**

In view of the prevailing conditions the results obtained by the British Overseas Bank for the year ended October 31 can only be regarded as very satisfactory. The profits amounted to £102,326 as compared with £199,744, but the difference is very much less than that, as the latter figure represents the profits before the deduction of taxation. The dividend is maintained at 6 per cent, absorbing £60,000; £10,000 is allocated to the reserve against interests in foreign banks, and a similar amount is placed to premises account, while £57,526 is carried forward as against £35,200.

**The Shipping Outlook.**

Dealing with the shipping position at the annual meeting of the P. and O. last week, Lord Inchcape pointed out that they were passing through a period of unprecedented depression, and the P. and O. had had a poor year. Instancing some of the difficulties encountered, he cited the high price of coal in the spring as the result of Government control, the strikes of the miners and joiners, and enormous increases of wages. In this connection he referred to the way in which production costs have been kept up by the trade unions and the Wages Boards so that "the world had been unable to purchase from us." In the shipping industry wages have been slightly reduced, but are still far above what can be paid, and, added Lord Inchcape, " wages afloat will have to come down, if British shipping is to hold its own."

**Roumanian Consolidated.**

The favourable prospects for the Roumanian Consolidated Oilfields were emphasised at the general meeting. The company, the chairman pointed out, possessed some of the best lands in Roumania, it had over 170 kilometres of pipelines, and " it had succeeded in getting what the directors regarded as the most valuable thing that had ever been developed in Roumania, namely the gas business " and " they were in a position when the world trade was stabilised to 'make good' to an extent equal to, if not better than, any of their competitors in Roumania." He was unable, however, to give any indications as to when the company would again be in a position to pay dividends. This depends, of course, on the exchange, in which connection there will be general agreement with his statement that Roumania will probably be one of the first countries to right itself in view of its great resources.

**Balkan Loan Negotiations.**

The satisfactory news is forthcoming from our Sofia Correspondent this week that the negotiations in connection with the proposed loan by Messrs. Balfour, Beatty and Co., are progressing favourably, and the fact that a member of that firm has gone to Bulgaria to conduct the further discussions seems a very hopeful sign. From several points of view it is to be hoped that an early settlement will be reached. It would for one thing afford definite proof to the other Balkan countries that they can safely look to this country for support ; for another it would be bound, as I have pointed out before, to have an important repercussion on British trade endeavour.

REPORTS FROM OUR OWN CORRESPONDENTS.

## EGYPT.

**Outlook Uncertain** *Cairo, November 26.*

The week has seen business go from bad to worse. It is not necessary to point out again how closely interwoven at the present time are the political and commercial situations. An improvement of the former means a corresponding improvement of the latter, and conversely. The political situation having been absolutely stagnant, business has remained stagnant also. But whereas it is sometimes a good thing for a political situation to remain quiet, a similar quietness is not an asset to business. If the commercial community could see the outcome of the resignation of the Cabinet and the publication of the official documents it could utilise the current slackness by making plans for the new situation likely to be created by that outcome. But no one knows the issue. All that is likely is that if the political situation clears business will improve; if the political problem becomes more acute business will grow weaker. It is significant that the smaller merchants who usually visit the villages to buy small amounts of raw cotton have temporarily abandoned trade, primarily because there is no real strength in the cotton Bourse at Alexandria and, secondly, because the future is so dark.

## THE SUDAN.

*Khartoum, November 22.*

**Provincial News.**

Reports from Dongola Province state that as a result of the general fall in the price of dhurra the labour situation is temporarily easier as far as wages are concerned. Daily wages now run from PT 3½ to PT 5. The drop in the price of dhurra is responsible for the cessation of work on the part of privately owned pumps. The river has kept a high level during the month of October thus simplifying the work of irrigating, and in certain places the deposits of silt have been so large as to increase the cultivable areas of the islands to a considerable extent.

The Halfa Province date market is much depressed. Very few merchants are buying, and the prices offered are very low. The date crop promises well, but the market prospects are gloomy as a considerable quantity of last year's crop is still in store unsold. Dhurra cultivation throughout the Province is good, and crops are expected to be satisfactory both in quantity and quality.

News from Kassala is to the effect that cultivation in the southern districts is promising but that the land in the vicinity of Gedaref is suffering from lack of rain. An early harvest is looked for. The Gash flood was very low in October, and irrigation was dependent on periodical flushes. On three different occasions the river entirely ceased to flow. The opportunity was seized by the Agricultural Department to dam the river and divert the succeeding flushes into the canal and secure sufficient reserves for a second watering of practically all the area under cultivation. With the exception of a few high patches the cultivation of the irrigated area is good. The Gash cultivation is well forward, and both dhurra and cotton crops are healthy and promise a fair yield. The appearance of smut is notified from Kassala, but it is early to estimate the extent of damage from this pest. A slight earthquake shock was experienced at Kassala on September 21 at 1.3 p.m. Later news from the Province states that crops are fair but damage has been sustained from birds and crickets. The latter are especially plentiful, and have almost entirely destroyed the crops in some areas.

Rains are reported to have been abundant in the Nuba Mountains, and crop prospects throughout the province are excellent.

Crop results in the White Nile Province are likely to be disappointing owing to the poor rains in September and October.

Blue Nile crop prospects are equally gloomy, the heavy rains having arrived too late to do much good.

## ROUMANIA.

*Bucharest, December 4.*

**Export of Wine.**

In view of Roumania's abundant wine crop, which is reported to be also of superior quality, the Government has consented to allow the export of wine free of duty. The barrels, in which the wine is transported, will also be free of duty, and the guarantee deposit for the return of the barrels will not be required. Exporters, however, will have to pay a statistical tax of 10 bani per litre.

**British Locomotives.**

The local Press announces that the British Export Credits Scheme Department is sending representatives to Roumania in connection with the supply of 600 locomotives for the Roumanian State Railways, and that these locomotives will be paid for with Roumanian grain.

**New Metal Coins.**

The Ministry of Finance has put into circulation metal coins of 50 bani. The 25 bani metal coins are expected to arrive shortly from Switzerland. This metal is an alloy of 94.30 per cent. aluminium, 3.41 per cent. zinc, 0.63 per cent. copper, 0.64 per cent. silicium, 0.72 per cent iron, and 0.30 per cent. of other metals. The average weight of five 50 bani coins is 1,194 grammes density 2.88, diameter 21 m-m, and thickness 1.6 m-m.

**Good Beet Crop.**

It is reported that the beet root crop this year is very abundant. It is thought that local refineries should be in a position to sell their sugar production at a price varying from 8 to 10 lei per kilogramme.

## GREECE.

*Athens, December 3.*

**Trade Decreasing.**

According to the statistics of the Ministry of National Economy, imports for the first quarter of 1921 amounted in value to 411,846,580 drachmae, as against 549,602,908 drachmae for the coresponding period of 1920. Exports during the same quarter amounted to 134,557,507 drachmae, as against 140,360,614 drachmae last year.

**Agrinion Tobacco.**

A telegram from Agrinion states that marked activity hasprevailed in the tobacco market there during the last few days. The price on account of the demand has doubled within a week. The price of aromatic tobacco is now 9-10 drachmae per oke. The largest quantities of Agrinion tobacco are exported to the United States and Belgium.

**Storage of Currants.**

The Ministry of National Economy has drawn up regulations for the working of centres for the storage of currants. This step was taken as a result of a protest of the Chamber of Commerce of the United States at Patras against the very faulty handling of this commodity, of which America consumes considerable quantities.

## BULGARIA.

*Sofia, December 5.*

**The Proposed Loan.**

The negotiations between the Bulgarian Government and Messrs. Balfour Beatty, and Co., are going on very satisfactorily. An important member of the firm is expected to arrive in Sofia very shortly in order to discuss more fully with the Government the conditions under which the loan will be offered.

Digitized by Google

**Contract for British Firm.**

It is gratifying to be able to state that notwithstanding the adverse exchange United Kingdom firms are still able to compete in the supply of tin. A contract to supply the Bulgarian State Railways with a considerable quantity of this commodity was obtained by a British firm which is established at Sofia.

## YUGOSLAVIA.

*Zagreb, December 6.*

**The Zagreb Bourse.**

The report of the Zagreb Bourse for the past year, which has only recently appeared, contains some interesting particulars. The growth of business since 1919 is remarkable. The totals (in millions of krone) are as follows (the figures in brackets representing the totals for 1919):—Banks and finance house shares, 381 (124); industrial shares, 197 (13); foreign exchanges, 1,071 (44); foreign currency, 782 (127). It is perhaps even more interesting to compare the business of the Zagreb Bourse with that of Belgrade for 1920. The totals are as follows (in millions of dinars), the first figures in each case being those for Belgrade:—Bank shares, 4, 95; industrial shares 3,49; foreign exchanges, 322,267; foreign currency, 311, 195. The difference here, too, is remarkable, for Zagreb has a great preponderance in banking and industrial securities, while Belgrade does a very much larger business in foreign exchange. The reason is that Croatia and Slovenia are much more developed industrially than the eastern and western portions of the kingdom, also, the tradition of the "saraf" probably lingers in Belgrade, where, it should be remembered, the Jewish element is the Levantine Spanish-speaking branch of that indomitable race, and Spanish may be often heard in the streets of Belgrade while their co-religionists in Zagreb look to Vienna and Budapest as their spiritual home. The Jewish element contributes very largely to the money-changing business in Belgrade and still retains much of the oriental in its character.

## ASIA MINOR.

*Smyrna, November 24.*

**The Import Duty.**

The Smyrna Representatives of the High Commissioners are collaborating with a view to find a practical *modus operandi* regarding the application of the 11 per cent. *ad valorem* customs duty

The respective High Commissioners in Constantinople have agreed upon the following proceedure:—(1) Adoption of the system of valuation which was in force before the war. (2) All cases of disagreement between the Customs House and the importer to be referred to a commission composed of a delegate each from:—(a) The Customs Administration; (b) The Provisional Commission of Control sitting at the Ottoman Public Debt; (c) The Consulate; (d) The Chamber of Commerce of the nationality of the importer. This is considered to be too unwieldy a method for Smyrna, and it is proposed to simplify it by having disagreements settled by an official of the Customs House and a delegate from the Chamber of Commerce of the nationality of the importer; and in cases where these two cannot agree, the question to be decided by a referee appointed by both.

**The Question of Mortgages.**

The joint committee representing the five chambers of Commerce in Smyrna have addressed a petition to the Representatives of the High Commissioners praying that they will induce the Greek authorities to apply the Turkish Law regarding mortgages on property and goods. At the present time mortgagees are unable to foreclose mortgages, with the result that most mortgagers refuse to pay interest on their mortgages, and as they received the money when the Turkish gold pound and the £ sterling were worth about Ps.400— instead of as at now worth about Ps.800—the mortgagees already stand to lose 50 per cent. of the money advanced. On the other hand the mortgagers are allowed by Hellenic Law to increase the rent of their property from 5 to ten times the pre-war amount, so that their income is assured. There are, however, many instances where the owners of property are not able to collect any rent at all, or a very small rent quite insufficient to cover cost of upkeep of the property, hence they use this excuse for not paying the interest on their mortgages.

## BULGARIAN PRE-WAR DEBTS.

As already announced in these pages, two representatives of Bulgarian business houses have recently paid a visit to England with a view to coming to an understanding with British creditors on behalf of firms in Bulgaria who owe money in connection with goods supplied before the war. A meeting was held at Cornwall House, London, at the offices of the Clearing Office for Enemy Debts, under the chairmanship of Mr. Egerton Grey, the Controller, and as a result of the discussion which then took place between the two Bulgarian delegates, M.M.Chr. Kassiroff and Kroum Moutafoff, and representatives of the London, Manchester and Bradford Chambers of Commerce, and the Federation of British Industries a scheme was agreed upon and is to be submitted to the Bulgarian debtors for their confirmation. On behalf of the Bulgarians it was urged that there was no desire to evade payment of their debts; but liquidation at the present rate of exchange was beyond the means of the firms concerned, and must inevitably force some of them into bankruptcy. The proposal that they put forward was that where payment was insisted upon at once by a British firm, it should be effected at the exchange rate of 200 leva to the pound; but that otherwise the debts should be allowed to run on for ten years, bearing interest at six per cent. as from the date of the raising of the Bulgarian moratorium in May of this year, no interest being due for the war period. The representatives of the British creditors were not prepared to accept these terms, but finally agreed to the following scheme:—That payment should be made at 200 leva to the pound or that the debts should be allowed to run on for six years, bearing interest at five per cent. for the whole period of the debt, inclusive of the war years. It was also stipulated that Bulgarian debtors should provide some guarantee for payment. The British creditors wished to have the guarantee either of the Bulgarian Government or of the National Bank; but as no such guarantee could be given, it was left to the Bulgarian firms to make other arrangements to this end.

Both parties to the negotiations are to be congratulated on having arrived at a friendly adjustment. Much of the credit due belongs to the Controller, Mr. Egerton Grey, who paid a visit to Bulgaria to satisfy himself as regard to the actual conditions in that country. It was obvious that debts incurred when the lev stood at 26 to the pound could not be liquidated with any justice with the lev at 600-700 to the pound. A number of British firms had appreciated the position and had compounded with their debtors, realizing that it was better to make some sacrifice in regard to old debts, which had for the most part been written off, than to lose the Bulgarian market for all time. The remainder had not been ready to take a long-sighted view of the situation but their representatives at the meeting, impressed by the testimony of the Controller, who was supported by the Federation of British Industries, were induced to make the concessions indicated. For the moment, with the rate of exchange so adverse, the Balkan market may be largely closed, but there can be no doubt that it has great potentialities, and it is all important that every effort should be made to keep this market for British goods. It should, therefore, be a matter of policy with British merchants and manufacturers to make things as easy as possible at the present moment for their Bulgarian debtors. Although the payment of interest for the period of the war has been officially stipulated, the matter should be left open for discussion in individual cases. The goal to be aimed at is that all the countries of the Balkans should be set upon their feet again at the earliest moment, and no hard and fast policy should be enforced to prevent Balkan merchants from resuming their trade relations with Great Britain.

Palestine's imports for the first eight months of this year totalled £E.3,614,592, as compared with £E.3,192,355 for 1920, an increase of £E.422,237. The exports for the same period amounted to £E.502,021, as against £E631,061, for 1920, a decrease of £E.69,040.

## YUGOSLAVIA'S MINERAL RESOURCES

### Important Copper Mines.

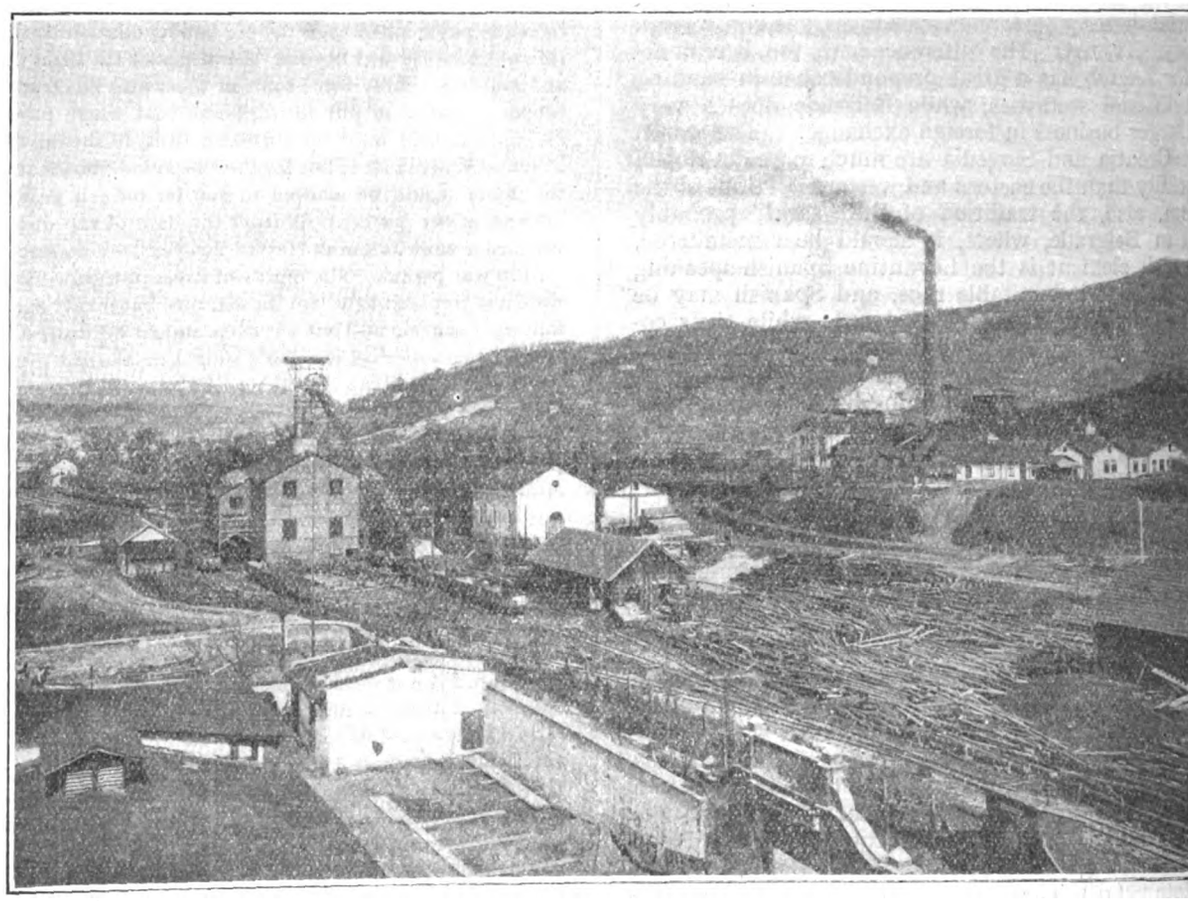
(*Conclusion.*)

While manganese ores are to be found in many parts of Yugoslavia the only centre at which there have been extensive workings is at Cevljanovitz, in Bosnia which also contains other deposits of less importance. The output of manganese ore in Bosnia in the last forty years, Mr. Wray points out, has amounted to about two hundred thousand metric tons. The economic value of the deposits in Serbia is uncertain. From 1900 to 1914 the output of the Cevljanovitz mines ranged between 7,939 metric tons in 1900, and 1,114 metric tons in 1904, the total for 1914 being 4,120 metric tons. No statistics are available for 1915, but the output for 1916 and 1917 amounted to 22,674 and 48,851 metric tons respectively, totals which show very plainly the efforts made to utilize these deposits. The report states that the reserves of these mines are believed to be considerable.

Serbia itself is the most important centre for the ores of antimony, of which there are abundant occurrences in the neighbourhood of Loznitsa, Krupanj, and Zavlaka. Mr. Wray states that antimonite occurs at Cemernitza, near Fojnitza, in Central Bosnia, possibly in sufficient quantity to warrant further exploitation. "This very old mining district," he adds "has apparently been largely worked out by successive generations of miners from Roman times onwards. In the fourteenth and sixteenth centuries they were being worked by Saxon miners. The ancient miners, however, seem to have largely worked these veins for the gold and silver they contained, and it is believed they may be profitably exploited for stilnite and possibly mercury in some places. Such a view is supported by the fact that during the purely exploratory work carried out in this district some twenty years ago unworked portions of lodes rich both in stilnite and cinnabar were met with. It is possible that deep level workings may yet lead to successful results."

Old workings in various parts of Yugoslavia show the extensive scale on which gold mining was carried on in the Roman period and the Middle Ages. Before the Balkan and European wars 300 kilograms of fine gold were obtained annually in North-East Serbia, while exploratory work has been carried out in Bosnia, "The tests made within recent years" says Mr. Wray "have revealed the presence of gold in the gravels and alluvia of the Vrbas, Bistritza, Lasva, Narenta, Rama, and Neretvitza rivers. In the Vrbas valley it averaged .648 grams per metric ton; in the Bistritza it varied from .032 to two grams; and in the Lasva valley, in the proximity of Lasva, it averages 0.26 grams per metric ton."

Since Yugoslavia possesses the famour Bor copper mines it is superfluous to add that the State's resources of this mineral are very considerable. Besides Bor there are important mines in the district of Majdanpek, which, Mr. Wray points out, has always been one of the most important mining centres of Eastern Europe. The pre-war output of the States comprising Yugoslavia of about seven thousand metric tons came almost entirely from Bor and Majdanpek. In the years preceeding the war there was a rapid increase in the production of the Bor mines. For 1907 the production was 1,220 metric tons, while the total for 1911-12 was 7,575 metric tons. It is uncertain to what extent the mines were utilised during the occupation of Serbia, but it may be taken for granted, in view of the use that was made of other mineral deposits, that very large amounts of ore were raised.



Kreka Collieries; Donja Tuzla, with important salt springs.

Deposits of lead ores exist in many districts of Yugoslavia. The principal districts are round Pliberg and to the south and east of Celovatz in Slovenia. The Misitza mines in this region are stated to have produced 45,000 metric tons during the war. There are numerous lead and zinc ore mines in Serbia, but the production has not been important.

Bauxite and kaolin are the chief aluminium minerals worked in Yugoslavia. There are important deposits of bauxite in Western Croatia, while there are rich deposits

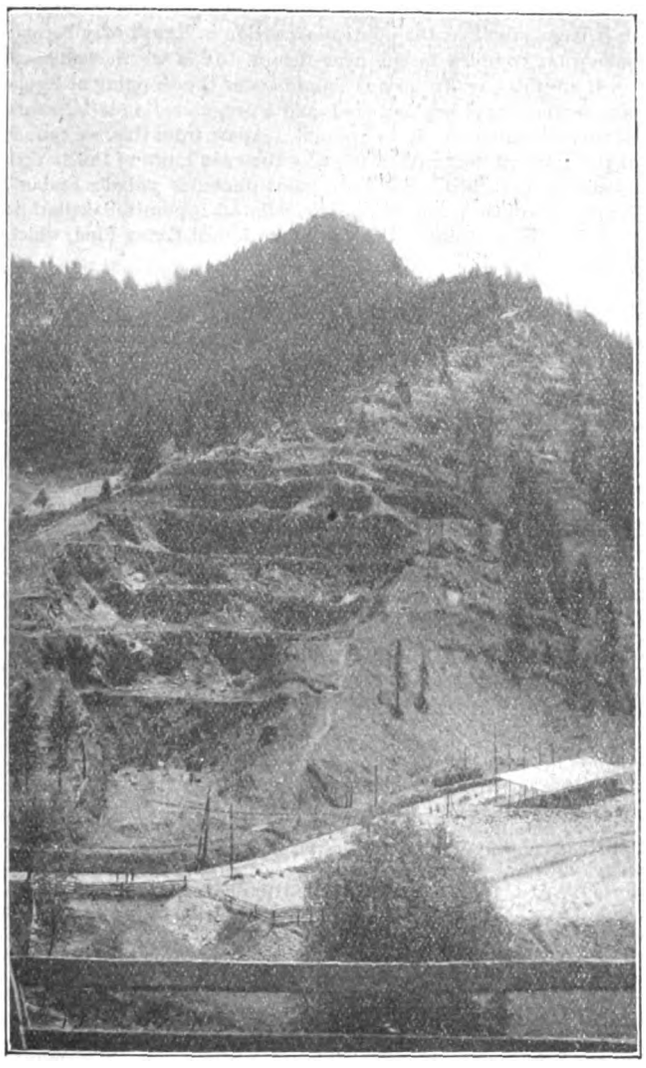
*The Photographs on this and the next page are reproduced from "The Geology and Mineral Resources of the Serb-Croat-Slovene State, being the report of the Geologist attached to the British Economic Mission to Serbia," by kind permission of the Controller of H. M. Stationery Office.*

Digitized by Google

in Central Dalmatia, in the neighbourhood of Sibenik. Kaolin has been worked in a few centres in Serbia, but "many of the deposits of kaolin in Yugoslavia have as yet not been completely investigated."

Rock salt occurs in a number of localities, mainly in Bosnia and Herzegovina. Most of the production is obtained from the salt works at Donja Tuzla, in North-East Bosnia, a district from which salt has been obtained from early times. "The resources of the salt-borings at Donja Tuzla," says Mr. Wray "must be very large, judging by the fact that there is very little sinking in the ground level of the brine over so extended a period. At the present rate of increase it is estimated that the salt borings at Donja Tuzla will yield sufficient brine for at least another hundred years' working."

Considerable exploration work is now being carried out in Yugoslavia in order to determine whether oil



Hematite—ore workings, Smreka.

exists in a sufficient amount to make its utilisation worth while. "Several parts of the Serb-Croat-Slovene State" says Mr. Wray "present apparently favourable conditions for the occurrence of oil, but as yet the only area it has been proved in any quantity is in Croatia. Here the Upper Tertiary beds are extensively developed and but little disturbed. Borings made in two localities have indicated the presence of heavy tarry oil, together with large quantities of natural gas." It is obvious that should oil exist in paying quantities it would add enormously to the potentialities of Yugoslavia.

The minerals referred to in this and the previous article on Mr. Wray's report by no means exhaust the list of those to be found in Yugoslavia; but they include the most important, and for the rest we would refer readers to the report itself, which they will find a veritable mine of information. From our brief survey it will be seen that Yugoslavia is exceptionally fortunate in having at its disposal mineral resources of considerable importance, which should prove a valuable factor in the future economic progress of the State. But for that to be the case it is necessary, as we have pointed out, that conditions should be favourable for the work of development.

## BUILDING IN CONSTANTINOPLE.

The Commercial Secretary to the British High Commission in Constantinople in a recent report points out that to obtain some idea of the magnitude of the housing problem which awaits solution in Constantinople it is necessary to recall the conditions which existed before the war. It was then very difficult to accommodate the cosmopolitan population of the city. Many quarters consisted, and still consist of old wooden houses in close proximity to each other, and were an easy prey for fire which, in the absence of an effective fire fighting organisation, has claimed whole districts in the course of a day. The recent fire in Scutari, for instance, destroyed over 1,000 houses in twelve hours, and rendered over 10,000 people homeless. The effect of the war was on the one hand to put a stop to any attempts which were being made to ameliorate conditions, and on the other hand to accentuate the lack of houses through a great influx of refugees from South Russia and Asia Minor.

It is only during the past few months that any systematic attempt has been made to rebuild the city. At the present time various building societies and private enterprises are displaying great activity and large houses are being erected in every quarter. A recent Law passed by the Constantinople Prefecture forbids the erection of houses made wholly of wood or with a wooden exterior, and this has caused a great demand for building stone and bricks, etc.

Apart from the increased costs of production in the United Kingdom, and heavy freight rates necessary in transporting building material to Turkey, there are other contributory causes to the lack of British trade in this direction, viz.:— (1) the increasing activity of local manufacturers; (2) the absence of British architects in the city; (3) the low standard of building carried out by local architects and builders.

Houses are built of materials that would be unhesitatingly condemned in the United Kingdom, and their actual construction is faulty and in many cases dangerous. A British merchant in the building trade in the city has assured the Commercial Secretary that the majority of the newly erected houses would not pass inspection by a United Kingdom authority, but that at the same time it is hopeless to endeavour to introduce a higher standard into the trade locally. A few rich Europeans occasionally require a house built in accordance with modern requirements as regards architecture, and materials, but their number is rare, and, in general, cheapness is the first consideration.

## AGRA AND OUDH DEVELOPMENT LOAN.

The India Office has issued the following communique:—The Provincial Government of the United Provinces of Agra and Oudh issued in September their first loan under the new constitutional arrangements, which permit local Governments to raise money on the security of the revenues allocated to them under the Reforms Scheme. The loan was described as a development loan. The objects for which the funds were required included the construction of canals, the improvement of communications, and forest and agricultural expansion. The issue took the form of limited-option (5-20 years) bonds at 93 carrying interest at 6 per cent, free of Indian Income Tax. The Government, while retaining the option of repaying the loan at par after 1931, undertook to redeem the whole amount outstanding at par in 1941. At the same time provision was made for the repayment, at the *option* of holders, of a limited amount of the loan at par each year after 1926. The terms of the issue were novel so far as Government loans in India are concerned, and evidently proved attractive. The Government of the United Provinces appealed for a minimum of two crores, but though the lists were closed before the expiry of the full period originally contemplated, over four crores are understood to have been subscribed.

The traffic receipts of the Smyrna-Aidin Railway for the week ended November 26, amounted to £6,416.

# Cotton & Cotton Goods.

## PIECE GOODS TRADE WITH INDIA.

*(By Our Manchester Correspondent).*

Although recent mail advices being received from India regarding the piece goods industry are reading a little more cheerfully the position out there is still far from satisfactory, and a prominent Manchester shipper who has just returned from an extensive business trip in the Dependency, while admitting that there was some improvement in Bombay and Calcutta, stated that the position in the up country districts was still very bad. He attributed the lack, or smallness, of local demand from the consuming centres to the shortage of money among the masses owing to the poorness of the last year's monsoon, and to the fact that the benefits of the excellent monsoon just passed have not yet been felt.

With regard to the Gandhi boycott of foreign piece goods my informant said that the movement had weakened in some places, but it was still a force acting against our trade. "There does not seem much hope of new business at the moment" he said "as the ruling values in India of Lancashire goods are so far below to-day's replacing prices. Fancy and dyed goods are in the worst position, and these can be bought in the bazaars up country at something like 40 per cent below what they could be sold at in Manchester to-day, and even at these figures there is not much local business doing. The stocks of Lancashire goods in the bazaars and in dealers' hands are comparatively very small, but both the importers and the banks hold fair quantities waiting a revival of local buying." Questioned as to the future course of events he gave the opinion that a steady demand would soon create a shortage of Lancashire goods as there was very little in transit and practically no business on the books of the merchants in this country.

## MANCHESTER REPORT.

*(From Our Own Correspondent).*

*Manchester, Saturday.*

Although the position of the market is still far from satisfactory the tone during the past week has been rather better. Business has not developed to any particular extent, but there are indications of prices grounding in some sections. It is apparent that producers have made up their minds that it is better to curtail production on a larger scale than accept some of the ridiculous bids which have been about. The provisional settlement of the Irish settlement has had a good effect upon traders, and if only the political situation in the Eastern countries would brighten the general outlook for Lancashire would undoubtedly be better. With regard to the cloth inquiry for the outlets of the Near East not many offers have materialised, and only limited purchases have taken place. Producers of Egyptian yarns have not met with very much encouragement. Buying has been very patchy, and special sorts have attracted more attention than common marks. Rather more cloth demand has been about for India, and some encouraging transactions have taken place in jaconets for Madras, grey shirtings and mulls for Calcutta, and fancies and specialities for Bombay. Discouraging advices have been received from China, and sales have been few and far between. South America has continued dull. In American yarns for home consumption there has been slightly more inquiry, and although wretched prices have had to be taken the sales have been rather better. A substantial turnover has taken place in bundles for India. Other outlets have not been active.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date December 7:—Extreme quiet still rules in this market; sales show a further falling off, and prices a further decline. A small general enquiry has been experienced, and the depressing hand-to-mouth purchasing, which has lately become a feature of our market, has again been in evidence. All spinners have the same thing to relate: the impossibility of selling yarn except at a considerable sacrifice, and even then they meet with competition. Yesterday a slightly better tone became apparent on the news of an Irish settlement having been reached, and rumours of a moratorium having been granted to Germany. The effect of this was merely ephemeral however, and little fresh business resulted. To-day, the market has sunk back into its previous state of lethargy, and another small decline has been registered. Manchester reports have been far from exciting. More enquiry has been forthcoming from India, but actual offers still remain too low. The exchange difficulty seems to have effectually bolted the China outlet. for the time being at any rate. Yarns for India showed some improvement at the beginning of the week, but the home trade appears quite lifeless. Further curtailments of outputs are reported, both for cloth and yarn. A letter from Egypt, which comes from a source usually very reliable, and which errs, if anything, on the careful side, gives us a figure of 4,500,000 cantars as the total receipts expected in Alexandria this season, that is, from 1-8-21 to 31-7-22. They regard these figures as ultimately "bullish," and inform us with regard to Upper Egyptian cotton that this quality is already practically exhausted.

It is possible that the political situation in Egypt may become somewhat complex in the near future. It is worth watching, for if anything really serious should occur the shipping of Egyptian cotton would be hampered, and a very live "bull" feature at this side might easily be created. Apart from this, we cannot at the moment see any reason why the even tenor of the market should be disturbed. Sales 900 bales (includes 70 bales Sudan). Quotations of Brown and Upper are reduced 25 points, Sakellaridis is reduced 75 points, with the exception of Extra Fine, which is only 25 points lower.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 5:—

Season.—November 26 to 28—a few showers in south-east Madras, Assam and north Bengal. November 29 and 30—weather dry. December 1 to 4, local rain in north-west India, south-east Madras, and Assam. Condition of Crops.—December 2—in Bengal, outlook of spring crops satisfactory, but rain required in places. Punjab and Central Provinces unchanged. December 5—in Assam, outturn of cotton poor, transplanted winter rice good, broadcast rice, tea, sugarcane, and prospects of rape and mustard normal. Markets.—December 1—Bombay cotton market firm. Fine M.G. Oomras Rs. 416 December-January; Rs. 408 March. Cotton Contracts Board reinstated as controlling body for cotton trade for unspecified period and first two tender days in December cancelled, first tender day now being seventh. Bombay cotton arrivals from September 1 to to November 25 were 443,000 bales as compared with 203,000 in the same period of the last year. In Bombay piece-goods market, demand and ruling rates discouraging. Stocks on October 31 were 62,389 packages. Local goods moving slowly. December 2—Calcutta jute and gunny markets quiet but steady. Indefinite extension of short time agreement, which allows withdrawal on two months' notice, now reported definitely settled. At tea sale on November 29 quality offered was good an Dooars excellent. Prices stationary for all teas up to 1 rupee. Higher priced teas irregular. Common grades 3 pies lower. 400,751 packages sold to date, at an average price of 9 annas 5 pies per lb. Shellac—December 2, T.N., Rs. 155. December 2 Special Straits quality rice, Rs. 500 for December new crop. Freight Rates.—Conference Lines' freight rates for United Kingdom reduced to 40s. less 10 per cent. on jute basis. This has come down from 50s. which was in operation on November 20. Railway Survey.—Cawnpore-Ajmere Railway survey by State Railway officer sanctioned. No change in bank rates.

The Bulgarian Government has authorized the importation free of duty of carbonic acid, potassium carbonate, adhesive substances, nails, spirits of wine, and animal fat used in the manufacture of soap.

The production of the Jáchymov radium mines, Czecho-Slovakia, during the present year amounted to two grammes.

## THE ALEXANDRIA WATER COMPANY, LIMITED.

### INTERIM DIVIDEND.

Notice is hereby given that an Interim Dividend of Four Shillings per £5 share on coupon No. 66 is payable on and after the 15th. December, 1921, at Messrs. Barclay's Bank, Ltd., 1, Pall Mall East, London, S.W. and 54, Lombard Street, London, E.C. or at the Anglo-Egyptian Bank, Ltd., in Alexandria, upon the making of a declaration as to ownership in the form required by the above Banks, form of which will be supplied upon application.

Dated Alexandria, 23rd. November 1921.

By order of the Board,

K. B. Woodd Smith, Manager.

# Engineering Topics.

*By Our Engineering Representative.*

**A Wolseley Record.**

Further to my recent note regarding the wonderful performance of the 10-h.p. Wolseley car at Brooklands, where it succeeded in setting up 10 records in rather over six hours, I am now informed that extended investigation into the record book shows that it also set up five more, viz., the 400, 500, 600, 700, and 800 kilometre records, the speeds being in the neighbourhood of 132.5 kilometres per hour. This feat of achieving 15 records all in one run is in itself something of a record, I should say. Certainly it is a wonderful car, and, as I said before, the car which did the run was a standard model in all essential respects.

**A New Carburettor.**

I am informed that a new type of carburettor has just been invented, by means of which much heavier oils than heretofore can be used as fuel for motor vehicles or for any other application of the internal combustion engine fitted with electric ignition. The claim is made that this carburettor will reduce the cost of the oil used by two-thirds, by which is no doubt meant that the quantity of oil used will be reduced by that amount. If so, it would seem probable that the inventor is claiming far too much; a carburettor which would show a 10 per cent. saving over other patterns would be almost too great an advance to be believed; to claim a saving of 66 per cent. would seem to go beyond the bounds of reason. It is said that the inventor is so sure of his facts that he has applied for patents in 27 countries, and that he has also convinced a Danish aeroplane company to the extent that they are using it on their machines. Details and drawings of this carburettor are awaited with interest.

**A Recent Conversion.**

For some time past a steam driven auction dredger has been in use on the Sumas River in Washington, and recently it was converted to the electrical drive, the work being carried out in a remarkably short time. The steam plant was removed bodily and the necessary electric motors and controlling gear fixed in place. The dredger has several motors, mostly for subsidiary purposes, but the load is dealt with by a 1,000 h.p. machine of the latest type. This drives the main pump at 300 r.p.m., and the next largest motor is one of 150 h.p., which works the cutter, through a set of reduction gears. Altogether the dredger consumes 1,325 h.p., at a pressure of 440 volts on the brushes. The supply voltage of 2,300 volts is transformed down from the overhead service mains of the power co., which carry energy at 34,000 volts, by means of three 500 KVA transformers mounted on a barge which is moored to the bank of the river, but which can pay out sufficient flexible cable to allow of the dredger, which also is fitted with ample flexible connectors, being moved to practically any position. Should it be necessary to take the dredger beyond the range of the scow and its connections, the transmission line can be tapped at any required position and a supply obtained in that manner.

It appears that after the crew and workmen had become used to the new method of working, the dredger was able to handle about 600 cubic yards of average silt per hour at a total cost of a trifle over one halfpenny per cubic yard, a cost which compares more than favourably with that which obtained previously.

**Electric Locomotives.**

The advantages of electric locomotives of the battery type have frequently been dealt with in these columns, and it has been pointed out that for shunting purposes, for working trucks in dockyard, wharf and colliery systems and for handling comparatively heavy traffic for short distances they possess a number of advantages. I hear that the Blackburn Corporation has had experience with one of these locomotives, the makers of which were the English Electric Co., the engine being run on the railway siding that lies adjacent to the new electricity work at Whitekirk. A locomotive of average size, it has a haulage capacity of 80 tons, but is, of course, capable of an appreciable overload. Indeed on occasion it has handled a train of eight 10-ton loaded wagons making a total load of about 100 tons. It was found invaluable during the building of the electricity works mentioned, and hauled practically the whole of the brick, cement, timber and other materials used in the building work.

So far no accurate account of operating costs and value of work done seems to have been kept. All that is known is that it has given satisfaction, has never needed repair, can be manned by two men, and is fitted with the extremely efficient batteries made by the chloride people, with whose batteries I had experience over 25 years ago. Speaking from knowledge of these productions I am not surprised to hear that the locomotive has given no trouble; I have never known a chloride battery yet which did not stand up to its work perfectly.

**Natural Gas.**

It has been known for some years past that large quantities of natural gas were to be met with in more than one part of France, and, had it not been for the war, engineers would have been able to pay much more attention to investigating the sources of supply and to seeing how far, if to any extent, these flows were indicative of the presence of oil.

Recently, particularly in parts of Alsace, traces of oil-bearing strata have been located, and although it is not generally known, even in France, petroleum is actually being worked at Pechelbronn. Large quantities of extremely thick natural gas are being tapped for industrial and domestic lighting purposes, and well over 100,000 cubic metres of gas are delivered into storage system every 24 hours. The discovery was fortuitous, a bore having been started to find out if any underground salt bed could be tapped. This was fifteen years ago, and the work was abandoned because such salt as was found was contaminated (?) with petroleum. Later, certain engineers re-opened the old salt borings and extended them with the result that gas was found at a comparatively shallow level, and was met with in immense quantities at a little over 200 metres down. Geologists who have visited the site, and have tested samples of the soil sent up by the borers, express the belief that continued boring will result in the discovery of oil in considerable quantities which will do much industrially, to counterbalance the deficiency of coal.

**C.A.V. Dynamo.**

At the recent motor cycle show at Olympia the long awaited C.A.V. dynamo lighting sets for motor cycles were shown both on "solo" and "combination" machines. The dynamo for these installations is only 3-1-8in. diameter, but it is built on identical lines with the standard C.A.V. car-lighting models. The output is five amps. at about 1,000 r.p.m., an ample charging rate to cover all ordinary lighting requirements which may include a dashlamp, spotlight, etc. The battery, a special "C.A.V. Willard." has an actual capacity of three amps for 10 hours.

**Electricity and the Car.**

It is curious to reflect that a few years ago those engineers who held that electricity would play an important part in connection with the development of motor cars were regarded as visionaries by the majority of those in the industry. At the time there was no suggestion of putting a fairly powerful electric generating plant on the car; the utmost that could be done in connection with lighting was to fit up a more or less makeshift sort of lamp supplied with current from a more or less unreliable generator. It was not until Mr. C. A. Vandervell got to work and began to put lamps and batteries of good quality and fairly high efficiency on the market that the electric lighting of motor cars became a commercial possibility.

# Near East Markets.

## LONDON PRODUCE REPORT.

### Oilseeds Higher.

Sugar.—Home refined has been in fair request at unchanged rates. West Indian crystallized has remained steady at 39s. to 41s., while Czecho-Slovakian is 1½d. down at 19s. 10½d. White Java is 6d. down at 46s.

Coffee.—Prices have remained unchanged. Costa Rica has come to business at 140s., while Indian at 110s. is the same. Nairobi is firm at 105s. Futures are:—December, 50s.; March, 50s. 6d.; May, 51s. 6d.; July, 52s. 9d.; and September, 53s. 3d.

Oilseeds.—Prices have shown a higher tendency in most cases. Indian linseed is 9d. up at 19s. 9d. and La Plata has gained 10s. to 16s. 10d. Rapeseed is unsteady with Toria 3d. lower at 18s. 3d., and brown Cawnpore unaltered at 17s. 9d. Cottonseed is steadier with Indian unchanged at 9s. 3d.; while Sakellarides and Egyptian black have both gained 1s. 3d. at 12s. 3d., and 12s. 9d. respectively.

Seed Oils.—Unsteadiness has prevailed during the week. Linseed oil has gained 1s. 9d. at 27s. 9d. Rape oil is lower with the crude variety at 45s., and refined at 51s.; 1s. down in both cases. Cotton oil is inactive. Refined at 43s. is 3d. up; Egyptian crude is unchanged at 37s.; and deodorized is 2s. down at 48s. Turpentine is firm at 70s.

Oilcakes.—Business has been weak and prices are variable. Linseed cake has advanced 20s. to 290s., and cottonseed cake has remained at 200s. Arachis cake has jumped from 220s. to 280s. during the week while palm kernal is firm at 160s.

## DRIED FRUIT REPORT.

Messrs. J. C. Houghton and Co. of Liverpool, report as follows under date December 1:—

Currants.—There has been a welcome change in sentiment, business being on a larger scale with advancing prices. We commenced the month with the cargoes of the s.s. Gerano, Trentino, and Inneroy, about 2,200 tons, and a decidedly improved demand set in, which continued during the period under review. Practically the whole stock was marketed, a large business also being transacted in old fruit. At one time the brokers' counters were bare of samples, an unprecedented experience for this time of the year. The exceptional strength of the Greek market was undoubtedly the dominant factor in the advance here, although we must not lose sight of the fact that available supplies were meagre in the extreme, as we had had no arrivals for three weeks. The trade on the whole had delayed their Christmas purchasing until the last possible moment, and this certainly helped to force up values, for buyers being caught unprepared had to pay rates demanded by holders. We close the month in very quiet fashion with business restricted. The rapid advance has certainly checked the demand, and a reaction from the highest quotations is the natural sequence, and the market may be all the stronger for the set back. Very little progress has been possible out of the last two steamers, Andalusian and Pavia, and sales reported show a reduction from high water mark. Latest quotations are:— new fruit, Pyrgos, 57s.; Amalias, 58s. to 62s.; Patras, 64s. to 68s.; Zante, 57s. to 63s.; Gulf, 64s. to 68s.; Panariti, 70s. to 78s.; Vostizza, 70s. to 85s.; Smalls Vostizza, 66s. to 80s.; and old fruit mostly 40s. to 50s.

Valencia Raisins.—All parcels of sound condition continue to be absorbed as quickly as they arrive, at full prices, ½ boxes selling at 130s. to 135s.; ¼ boxes selling at 140s. to 150s.; and seedless selling at 120s. to 125s. Poor and out of condition lots difficult to move at 90s. to 110s.

Sultanas.—Sultanas have been in active demand, and at advancing prices during the whole month, the cargoes ex Trentino, Cypria, and Belgravian selling as quickly as samples were available. Good average quality opened at 108s., quickly rising to 118s., natural qualities selling 120s. to 140s., sulphured varieties 130s. to 150s., Greeks 120s. to 130s. Further supplies ex Gulf of Suez and Luque are due, but as considerable portions of these steamers are sold "to arrive" it is not expected there will be any quantity available for the market. Red Afghans spot selling 90s., new crop, quoted 65s. c.i.f., and yellow 75s. c.i.f. Dec. to Jan. shipment.

Figs.—For the fresh consignments per s.s. Trentino lower prices had to be accepted, owing to the fresh condition, and at the reduction more interest was taken in layers and small boxes, and with additional supplies ex s.s. Cypria and Belgravian practically all were sold, the only stock remaining being Locoums, which are in over supply. Sales were, large boxes (Layers), 110s. to 125s.; small boxes and packets 120s. to 140s.; and Locoums 120s. to 140s., fine 160s. to 175s. Bags naturals in more request, and recovered in value. Prima advanced from 54s. to 57s.; genuine advanced from 58s. to 63s.

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co. of Smyrna, report as follows for the week ended November 19:—

Sultanas.—The total estimated arrivals to date amount to 151,680 bags as compared with 85,445 bags for the corresponding period of last year. The total estimated sales are 143,680 bags as against 75,445 bags for 1920, and the estimated stock unsold amounts to 8,000 bags as against 10,000 bags for last year.

Markets.—The demand for sultanas has been more restricted during the week, and although prices are normally unchanged there are signs of weakness which may before long influence an all round decline in values. Dealings in figs are practically over for the season, no supplies remaining up country. Exchanges have fluctuated within very narrow limits at a slightly lower level than last week.

Sultanas.—A further report dated November 26 states that the total estimated arrivals to-date amount to 155,775 bags as compared with 86,670 bags for the corresponding period of last year. The total estimated sales are 145,775 bags as against 76,670 bags for last year, and the estimated stock unsold amounts to 10,000 loads compared with the same amount for 1920.

Shipments.—The s.s. Gourko and s.s. Cressado for London and Liverpool respectively have a load of sultanas and are due in England early in December.

Markets.—Sultana sales during the week have been limited, about 250 tons having been bought for shipment to the U.K. Demand from other markets is very restricted. Although stocks show a slight increase, dealers appear under no pressure to sell for the present and prices show no material change. A few small lots of figs are on the market but quality being very inferior and prices quoted extremely high, shippers refuse to operate. Exchanges, are firmer, sterling having advanced to 760-765.

## AGRICULTURAL CONDITIONS IN MESOPOTAMIA.

The following extracts are taken from the Agricultural Bulletin of Irak for the month ended October 16:—

The abnormally high temperatures which have prevailed during the summer have affected the date crop by hastening maturity. Vegetables have become more plentiful with the recent fall in temperatures. The cotton crop in a similar manner is developing large number of flowers, which, in the absence of hot winds, are being retained by the plants, but it is feared that any flowers forming after the end of September will not be sufficiently advanced to mature before the frosty weather sets in.

The Director of Irrigation reports that the level of the Tigris at Baghdad at the end of September was the lowest on record since 1906. The level of the Euphrates at Ramadi was about one foot higher than on the same date in 1920. Evacuation work on the extension of the Yusufiyah Canal is in progress. About 50 square miles have been contour surveyed. Material is being collected with a view to constructing the Buters Regulator in the current season. Repairs to that portion of the Hindia Barrage damaged by the Arabs owing to lack of proper control over the water during the disturbances of 1920 are in hand. A hand regulator for the Saklawiyah (sub-division) is under construction. About 21 kilometers of branch canals have been completed. Clearance of canals bed in the Abu Gharaib is in progress. On the Amara canals a fairly adequate supply of water for the rice crop has been available. The supply available for navigation has not been seriously diminished below that of the previous month. Navigation in the Narrows, however, has become increasingly difficult on account of recently formed shoals. Now that the rice crop is nearing maturity an increased supply of water will be available to scour out these shoals. On the Diala water supply is reported to be sufficient except on the Khorassan.

Digitized by Google

The harvest of red rice is practically completed. This crop is almost invariably broad casted, and sown on the higher lying lands where the supply of water is frequently precarious. The condition of the red rice crop this year is believed to be, on the whole rather, below the average. The harvest of transplanted rice has just commenced. This crop is reported to be well above the average on practically all canals. Early grain and sesame, which are average crops, are being harvested. Date picking in lower Irak is now well advanced. The date crop in general is slightly above the average. The picking of sweet and sour limes and small quantities of oranges has commenced. Winter vegetables are being sown, and land is being prepared ready for the winter crops of wheat and barley.

Fodder is now particularly scarce except in irrigated areas where there is still a fair supply. The condition of live stock in general is slightly improved with the advent of cooler weather.

**Experimental Farm.**

At Baquba satisfactory progress was made during the month. The cotton experiments at this station will probably give valuable results. Maize imported from America has done well except at Baquba where about 50 per cent. of the plants have been destroyed by the Stem-borer. The lucerne crop on all farms has done well. Cotton experimental work at Kut has suffered owing to a breakdown of the pumping plant.

**District Work.**

The cotton crop started maturing during August. Part of it has already been delivered to the ginnery of the British Cotton Growing Association. Now that the price of cotton has again materially increased, and the cultivator has seen and appreciated the very considerable difference between his native cotton and that grown by him this year for the first time from seed issued by this Department, he is evincing a desire to cultivate the crop on a much larger scale during the coming season.

## CURRENT PRICES.

*General Produce.*—Bacon: (Continental), 140s. 6d. cwt. (Canadian), 120s. cwt.; (American), 101s. cwt.; butter: (Danish), 212s. cwt.; (Australian), 162s. 6d. cwt.; (New Zealand), 193s. cwt.; cheese; (Canadian), 106s. cwt.; (New Zealand) 98s. cwt.; lard, 76s. cwt.; eggs (Danish), 43s. per 120; (Styrian), 22s. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 7½d. lb.; cocoa (Ceylon, good to fine), 97s. 6d. cwt.; coffee (Costa Rica), 152s. 6d. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior), 61s. 6d. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 140s. cwt.; sultanas (Smyrna), 127s. 6d. cwt.; currants (Vostizza), 83s. 6d. cwt.; currants (Amalias), 60s. cwt.; sugar: (Tate's cubes), 54s. 9d. cwt.; (Lyle's granulated), 48s. 10½d. cwt.; (Mauritius crystals), 43s. 3d. cwt.; (West Indian crystallized), 40s. 3d. cwt.; (centrifugal), 15s. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 18s. 3d. cwt.; (bran, Rangoon), £6 2s. 6d. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 4d. lb.; tea: Indian (common to good common), 1s. 0½d. lb.; (medium to good), 1s. 7d. lb.; (fine to finest), 2s. 10½d. lb.; Ceylon (common to good common), 1s. 0½d. lb.; (medium to good), 1s. 7d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 49s. 6d. qr.; (Australian), 53s. qr.; barley (malting); 62s. 3d. qr.; barley (feeding), 42s. 6d. qr.; oats (English), 32s. 9d. qr.; oats (La Plata ex-ship), 25s. 10½d. qr.; maize (La Plata), 34s. qr.; flour, 43s. sack.

*Metals.*—Aluminium, £122 10s. ton; antimony (English Regulus), £36 10s. ton; bismuth, 7s. 6d. lb.; copper (standard), £66 1s. 3d. ton; copper (electro), £76 ton; gold bars, 101s. 3d. oz.; iron (No. 3 Cleveland), 100s. ton; hematite (mixed number), 106s. 3d. ton; galvanized sheets (24 G), £18 5s. ton; lead (soft foreign), £24 18s. 9d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 38s. 9d. unit; nickel, £190 ton; platinum, 382s. 6d. oz.; plumbago, £20 ton; quicksilver, £10 7s. 6d. bottle; silver bars, 37½d. oz.; spelter (G.O.B.), £26 10s. ton; tin (standard), £164 15s. ton; wolfram, 11s. 10½d. unit; zinc sheets, £35 ton; tin plates (20 by 14), 20s. 10½d. box.

*Chemicals.*—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 3½d. lb.; tartaric, 1s. 4¾d.; ammonia (sulphate), £15 1s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard), 2s. 5½d. gallon; bleaching powder (35 per cent), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 124s. 6d. cwt.; cwt.; Potassium: Bi-chromate, 8d. lb.; chlorate, 6d. lb.; caustic, £31 10s. ton; nitrate, £45 ton; permanganate, 11½d. lb.; prussiate yellow, 1s. 1¾d. lb.; sulphate (90 per cent), £15 5s. ton; Sodium; Crystals 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d. lb.; alkali, (58 per cent.). £9 9s. 9d. ton; chlorate, 4d. lb.; caustic (70 per cent.), £24 5s. ton; hyposulphite £17 ton; prussiate, 8½d. lb.; nitrate, £14 18s. 9d. ton; glycerine, (crude, 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent), £110 ton; lemon oil, 3s. 2d. lb.; quinine, 4s. oz.; red lead, £39 5s. ton; white dry lead, £42 5s. ton; white ground lead, £51 15s. ton; sulphate of copper, £29 10s. ton; sulphate of iron 75s. ton.

*Hides and Skins.*—Ox and Heifer (first), 90lbs. and up, 5,5-8d. lb.; 80 to 89 lbs. 8,5-8 d. lb.; 70 to 79 lbs. 8,5-8d. lb.; 60 to 69 lbs., 7¾d. lb.; 59 lb. and under, 6,3-8d. lb.; (second), 60 lbs. and up, 7,3-8d. lb.; 80 to 89 lbs., 7,3-8d. lb.; 70 to 79 lbs., 7½d. lb.; 60 to 69 lbs., 6½d. lb.; 59 lbs. and under, 5½d. lb.; Cows (first), 60 lbs. and up, 6½d. lb.; 59 lbs. and under, 6½d. lb.; (second), 60 lbs. and up, 5,5-8d. lb.; 59 lbs. and under, 5½d. lb.; Bulls (first) 5,5-8d. lb.; (second), 4½d. lb.; Kips (first), 7¾d. lb.; (second), 6¾d. lb.; (third), 4½d. lb. Calcutta Market. Prices in rupees per 20 lb.:—Arsenic hides (cows): Agras, 7s to 12.8; Durbhangas, 6 to 7; Patnas, 5 to 6. Salted cows, not quoted. Arsenic hides (buffalo), 3 to 5. Skins: Calf, 8 to 10 per 20 lb.; goat, 230 to 270 per 100 pieces.

*Miscellaneous.*—Cotton: (American), 11.06d. lb.; (Egyptian Sakel), 18s. 50d. lb.; Oilseeds: Linseed (La Plata), £17 ton; rape (Toria), £18 2s. 6d. ton; palm kernals, £18 17s. 6d. ton; Oils: Linseed, £29 7s. 6d. ton; olive (Levant), £77 10s. ton; palm, £36 10s. ton; rape (crude), £47 ton; soya, £34 10s. ton; petroleum, 1s. 4d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £43 3s. ton; cotton (crude), £35 10s. ton; ground nut, £46 10s. ton; Rubber: Plantation (No. 1 crepe), 11½d. lb.; smoked sheet, 11,5-8d. lb.; fine hard Para, 1s. 2½d. lb.

FOREIGN EXCHANGES

AND

HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

(1) The Modern Chaotic Exchange Situation
(2) The French Exchange Position.
(3) German Industry and the Mark.
(4) The Italian Lira.
(5) The United States Dollar.
(6) Miscellaneous Exchanges
(Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

# Company Meetings.

## P. AND O. STEAM NAVIGATION.

### Lord Inchcape on the Industrial Outlook.

### The need of National Economy.

Lord Inchcape, presiding at the Annual General Meeting of the P and O. Steam Navigation Company on December 7, said they met under happy auspices and on a really historical occasion. That morning the terms of settlement with Ireland had been published and he thought it was their first duty to congratulate His Majesty the King and Mr. Lloyd George on having at last, so far as could be seen, secured peace in Ireland after 700 years.

Since August last he had been engaged on the Economy Committee appointed by His Majesty's Government, under the Chairmanship of Sir Eric Geddes, to enquire into public expenditure, expenditure which had reached figures that the country could no longer stand. Even, he said, if he had had time to prepare a lengthy address he could have added but little to what he had preached from many platforms during the past few years.

**National Solvency our First Line.**

The nation had been greatly impoverished by the war, and if we were to regain our first line of defence, which was solvency, we must curtail our expenditure in every direction. We had launched out into all sorts of wild-cat schemes, and had made commitments which, if not modified, would lead us into bankruptcy. We realised now that we had no funds with which to build up the new heaven and the new earth on which we started three years ago. The multiplication of ministries was landing the nation in enormous expenditure, and the country was getting filled up with functionaries who were living on the people.

**A Ruinous Housing Scheme.**

Well-meaning pundits and idealists got hold of departments and launched out regardless of cost. According to a recent statement in the House of Commons, five hundred thousand houses were to have been built at a cost of 500 millions, houses which would not give a return on the capital outlay at a lower rent than £75 a year and which could not be let for more than £16. Fortunately the Prime Minister had stepped in and succeeded in limiting their number to the 176,000 which had been started; but even this reduced number would cost the country one hundred and seventy six millions and the taxpayer would be saddled with ten millions a year to make up the deficiency of rent for the next sixty years.

Education was now costing the country over 100 millions a year against one fourth of that sum before the war; teachers' salaries, based on the standard of two years ago, has been more than doubled; and the resulting pensions, if maintained, would shortly involve us in another ten millions a year.

**Only Way to Renewed Prosperity.**

It was necessary to realise that the Government and the local authorities had no fund to draw upon except what they extracted from the people. If industrial undertakings were depleted by excessive taxation less money was available for the expansion of industry, there was less employment in the country and a reduced standard of living all round. Unable to increase our revenue, our only hope lay in reduction of expenditure and to this end he did not doubt but that the common sense of the country would come to our aid. He was glad the shipping industry was now free from Government control, and, he continued, he had hopes that before long the trade of the country would have settled down to normal conditions, free to work out its own salvation, and to make profits out of which to contribute to the revenue. Government trading and government interference in trade disputes had proved disastrous, and he hoped the country had learned its lesson.

**440 Ex-German Ships Sold.**

Recalling his undertaking, a year ago, of the sale of ex-enemy ships for the Government, he stated that he had so far disposed of 440 vessels for upwards of 20 million pounds. He had very few left to sell, and would be glad when this rather troublesome and thankless task was finished.

**A Year of Depression.**

Turning to the directors' report, he greatly regretted that they had felt compelled to withhold a bonus for the past year. The dividend and bonus for the year ending September 30, 1914, totalled 15 per cent.; for the year ended September 30, last it was 12 per cent. or 3 per cent. to the bad; but, in the present condition of shipping, the directors, if they had not reduced the dividend, would have been guilty of imprudence. They had to look to the future and to husband their resources; they were passing through a period of unprecedented depression; and, in lowering their distribution, they were not alone. In common with most shipping companies they had had a wretched year; government control of coal had caused enormous prices during the spring; then came the coal strike which drove their ships to the Continent for coal, while the joiners' strike and the delays which it involved had driven steamers to the Continent for overhaul. They had had, besides, to bear enormous increases in wages, both afloat and ashore, and, to crown all, Trade Unions and Wages Boards had kept production costs in this country so high that the world had been unable to purchase from us, and steamers had been leaving this country with nothing more than ballast cargoes and often not with these and the consequent greatly lessened demand for imported raw material had made it increasingly difficult to find homeward cargoes. Some of their cargo steamers, he continued, they had laid up; but their obligation to maintain their services had prevented the laying up of their mail and passenger steamers, which had been kept running, although at a heavy loss. As exemplifying the scarcity of cargo the P. and O. Branch Line, which runs a regular service from London to Adelaide, Melbourne, and Sydney, had, he said, in the last financial year, despatched 11 steamers capable of carrying 101,000 tons of measurement cargo, and these had sailed with 69,000 tons of unfilled space. The Board had foreseen that after the war, the company would be faced with difficulties. They refrained from recommending any large increase in their dividend and, instead of distributing cash resources, they suggested a small bonus in stock. That policy he thought would eventually prove to have been right. In order to pay for new ships they had had to realise their war loan investments at a serious loss and to write down to present market values those which they still held.

**High Wages and Unemployment.**

Under the National Maritime Wages Board set up in November 1917 wages had enormously increased. Those increases were at that time borne by the Government, for the ships were under Government requisition and the Government distributed the tax-payers' money with a lavish hand; but, once the vessels had been discharged from Government service and economic conditions had to be faced it was found that these high wages could not be paid out of commercial earnings. Wages had been slightly reduced, but were still much beyond what shipowners could afford to pay, and, in consequence, 650 British ships of 1,117,092 tons were at the moment laid up in the United Kingdom and probably as much tonnage again, if not more, in ports outside the Kingdom, with the result that thousands of captains, officers, engineers and men were unemployed; while those remaining in employment were drawing pay much above the economic rate. There was no use mincing matters—wages afloat would have to come down if British shipping was to hold its own. In the case of their own unemployed officers and engineers they had done what they could in granting half pay for a certain period; and, although this meant a considerable charge on the company's resources, he felt sure the meeting would approve of the course adopted. Dockers wages, fixed by a government tribunal in May 1920 at 16s. for a day of eight hours, had lately been reduced to 14s. a day, but the tonnage handled here per man per hour was much less than in former days and, while it cost 2s. a ton to work cargo in Antwerp, the cost in Middlesbro was 6s.

**Quality Of Passenger Services.**

Seldom, he continued, did a day pass in which he did not receive a personal appreciative letter—some consolation in these hard times. Recently he had such a letter from Lord Northcliffe, now on his way home from a tour round the world. In that letter Lord Northcliffe said the ship on which he was travelling was run with the punctuality of a clock, and that, so far, he had found nothing but efficiency in the handling of the company's ships and those of its associated lines. Such letters he invariably passed on to the captains and others concerned. He confessed to the occasional receipt of grumbling communications and these too were passed on with a view, if possible, of remedying defects.

**Some Graphic Statistics.**

During the past year the steamers in commission of the P. & O. and its associates had numbered 444, they had traversed 15,345,081 nautical miles, had made port entries 25,315 times, had carried 13,236,981 tons of cargo, 188,575 animals, 2,111,564 passengers and had employed crews numbering 45,912. They had run without serious accident and without the loss of a single life by marine casualty. With regret, he had to record the loss by death during the year of two of their colleagues, Lord Burghclere and Lord Balfour of Burleigh.

He could not, he said, conclude without expressing the appreciation of the Board of the loyal and whole-hearted devotion to the Company of their staff, afloat and ashore, at home and abroad. No institution, he felt safe in saying, was better served than the P. and O. and its associated lines.

He was sorry to say that Sir Thomas Sutherland, who had occupied that Chair with such marked ability for thirty-seven years, was not at all well. He had seen him the other day and, though vigorous as ever in mind, he was suffering a good deal physically. He was sure they would join with him in an expression of sympathy for Sir Thomas Sutherland in his illness and in the hope that he would make a good recovery.

He concluded by moving the adoption of the report and accounts.

Mr. H. N. Gladstone seconded the motion.

Mr. Grinnel Milne, in the course of some appreciative remarks, commented on the form of the report and accounts and expressed a hope that the example of some other companies might be followed in future.

Lord Inchcape, in replying, pointed out that some years ago the form of the accounts was agreed to by the shareholders in general meeting as it was considered best not to disclose to the world and their competitors the methods and details of their business.

The motion was passed unanimously, the dividend recommended was declared, and the retiring directors having been re-elected a vote of thanks was given to the Chairman, directors and staff.

## LAND BANK OF EGYPT.

The directors of the Land Bank of Egypt announce a dividend of 7s., making 10s. per share, and of £4 3s. per Founders' share for the year ended September 30, 1921. Coupons will be paid at the Comptoir National d'Escompte in London.

## KHEDIVIAL MAIL STEAMSHIP.

The accounts of the Khedivial Mail Steamship and Graving Dock Company for the year ended June 30, shows a credit balance, including £13,699 brought forward and transfer from reserve, of £34,243. The directors propose 10 per cent. dividend on Ordinary shares for the year, carrying forward £13,247. The directors state that trading profits show a considerable falling off. The s.s. Ismailia has been sold. Two new ships of about 5,000 tons each are being built for the service of the company. Meeting, 122, Leadenhall-street, E.C., December 20, 12.30 p.m.

## BRITISH OVERSEAS BANK.

The profit of the British Overseas Bank for the year to October 31, after allowing for rebate of interest and providing for all bad and doubtful debts, income-tax and other taxation, was £102,326, plus £36,200 brought in, making £137,526. Interim dividend on "A" Ordinary shares at £30,000 rate of 6 per cent. per annum absorbed £30,000, leaving £107,526. Final dividend on "A" Ordinary shares at rate of 6 per cent. per annum, less tax, recommended, placing to reserve against shareholding interests in foreign banks £10,000, to reduction of premises account £10,000, leaving to be carried forward £57,526. Notwithstanding political and commercial difficulties, the Anglo-Polish Bank had a satisfactory initial year. The Bank is issuing 50,000 additional shares amounting to P.M.25,000,000, and Bank Zjednoczonych Ziem Polskich (Bank of United Lands of Poland), with which close relations have been established, is taking a large participation in the issue. Close relations were established with the Dorpater Bank at Dorpat, in which a small shareholding participation has been taken, and an important increase of its activities in Esthonia is anticipated, Meeting, Cannon-street Hotel, E.C., December 16, noon.

## BRITISH CONSULAR REPORTS.

### IX—ALGERIA.

The Acting British Consul-General at Algiers, Mr. J. K. V. Dible, in his report on the economic and commercial situation in Algeria in 1920, which has just been issued, says:—

"At the commencement of the year 1920 Algeria presented a most prosperous appearance. Although the 1919 harvest had been somewhat unfavourable, everything pointed to excellent crops in the current year, and there was a keen demand for land, which was being purchased at exceedingly high prices. Produce realising profits hitherto undreamed of, commercial exchanges in general were being effected on an extensive scale, and both farmers and merchants were doing a lucrative business.

This picture was entirely changed as the result of the economic crisis, the full effects of which were felt in Algeria by September. "Wine for instance, which had been realising 9, 10 and even 11.50 francs the degree, could scarcely be sold at two francs or even less; and alcohol, which had been dealt in up to 1,300 francs the 100 degrees, fell to 300; wool, in which sales had been effected at as much as 13,000 francs the ton, was offered at 2,500 francs; leather, skins and hides depreciated to prices 60 per cent. or 70 per cent. below those of May. The wine merchants refused to accept the prices asked for by the farmers, and consumers refused to pay the exorbitant charges demanded for all classes of goods.

"Stress must be laid on the fact that Algeria is mainly an agricultural country; the natives, who form by far the largest part of the population, are engaged almost entirely in agricultural pursuits. As already indicated, the return of cereals had not been very satisfactory in 1919, 1,1-3 million tons only having been gathered instead of the three million tons of the previous year. This deficiency would have been redressed had the corn crops of 1920 been even on an average scale; but an almost complete lack of rain, followed by sirocco, caused the 1920 harvest to be the worst that has been experienced for very many years, producing wide-spread misery, poverty and famine. To state the case vividly, during the months of September, October and November, 1919, 6,766 tons of grain and 3,153 tons of flour were exported, whilst during the corresponding months of 1920 there was no exportation; expressed from the point of view of imports, during the first-named period 154 tons of grain and 72 tons of flour were imported, whilst during the same period in 1920, 37,857 tons of corn and 5,502 tons of flour were imported. As regards the above-mentioned slump in wines and alcohol, local producers blame the Government for having permitted the import into France of 88 million gallons of wine from Spain, France being the principal purchaser of Algerian wines; they also maintain that the high rate of duty is one of the chief causes of the stagnation. However, partly as the result of the bad prospects of the present wine harvest, prices have risen during the last month."

**Improved Transport Positions.**

"A marked improvement in the transport of goods traffic was noticeable towards the end of 1920, and it is anticipated that the present corn crops will be transported without undue delays. During 1920 three Baldwin locomotives of 1-metre gauge were purchased for the Bona-Guelma line, one of which commenced to run during the month of December, 1920, whilst 50 1-metre gauge waggons were bought from the Etablissements Decauville for the same line and were put in circulation in October, 1920. The Ouest Algérien Company put in service on its Oran line the two locomotives and 36 waggons that formed the balance of an order which it had placed in 1919 with the Compagnie des Chemins de Fer de Paris a Orléans. Finally, the Paris-Lyon-Mediterranée have loaned from their service in France three locomotives of series 2,500, for express trains, and six locomotives of series, 4,000, for goods traffic, and two of the former and one of the latter were working before the end of 1920. The service of a certain number of passenger trains which had ceased to run during the war was recommenced on January 16, 1921.

"The electrification of the proposed lines between Sétif and Bougie, Medjez-Sta and Oued-Damous, Nemours and Marnia, of the line under construction between Bizot and Djijdelli, and of the existing lines between Duvivier and Oued-Keberit, Philippeville and Constantine, Bougie and Beni-Mansour and Sétif is under consideration."

The transfer books of the Burma Corporation are closed until December 31.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

*Aleppo, November* 16.

The position in this market remains unchanged except for a considerable improvement in the prices of cotton and woollen goods. The crop of cereals is good. An early recovery of business is hoped for when communications are re-established with the interior. The exports of the products of this region are restricted.

Prices ruling here are as follows (in Syrian piastres per kilogram) :—wool (washed), stocks about 3-4,000 bales, 38, (raw) 23 ; cotton 17 ; gall nuts 16 ; grain 4½ ; pistachio nuts—white 35, red 27 ; apricot stones 10.

## EGYPTIAN SALT AND SODA.

The report of the Egyptian Salt and Soda Company for the year ended August 3, 1921, states that the soda works at Wady Natron had to be stopped for several months, owing to an accumulation of heavy stocks. These stocks have subsequently been disposed of, but, owing to outside competition, at prices leaving no profit. An amount of £E80,000 has already been reserved against expenditure on the works at Moharrem Bey in previous years, and it is proposed to set aside a further sum of £E60,000, making £E140,000. It is estimated that the total cost of this new installation with all the latest improvements, will finally be about £E250,000. The factory will ultimately appear in the books at about £E100,000 only. The gross profit was £E 132,332, less general administration expenses £E5,545, interest on Debentures £E2,904, leaving £E123,883. The directors have set aside for depreciation for factories £E11,175, provision for eventualities, £E5,000, leaving £E107,708, plus £E115,520 brought in, making £E223,229. The directors propose a dividend of 4s. 6d. per share ; transferring to reserve to meet expenditure towards completion of Moharrem Bey works, £E60,000 ; carrying forward £E54,025. Meeting, Alexandria, December 23.

## AGRICULTURAL BANK OF EGYPT.

The following was the position of the Bank's encashments on October 31 ( the figures in brackets representing the corresponding totals for 1920 ):—Existing Loans : Short Term Loans, £E28,968 (£E10,585), Special Loans with Government guarantee £E18,517, Category " B " £E3,391,080 (£E3,317,917,), Total £E3,438,565, (£E3,328,502) ; Matured Loan Instalments : Due £E302,550 (£E360,232). Special Loans with Government guarantee. £E24,029, falling due £E238,136 (£E212,493) total £E654,715 (£E572,725) Perceptions : Outstanding on January 31, £E172,760 (£E83,724), Balance £E107,631 (£E44,019), Encashed, £E65,129 (£E39,505) ; Matured Loan Instalments : Encashed, £E236,198 (£E234,073) ; Total encashments of instalments due, £E301,327 (£E273,778).

## BRITISH INDIA STEAM NAVIGATION.

The accounts of the British India Steam Navigation Company for the year ended September 30, 1921, show balance available, after providing for depreciation and interest on Debenture stock of £137,071. The directors recommend a dividend of 8 per cent. for the year, free of tax, on shares, carrying forward £25,495, against £25,462 brought in. The directors think it advisable to conserve funds against the possibility of less prosperous years, and they therefore do not recommend a bonus for the past year.

The sixteenth ordinary general meeting of the Associated Cotton Ginners of Egypt, will be held at the offices of the company, Alexandria, on Thursday, December 22.

## GILT EDGED IN DEMAND.

*(From Our Own Correspondent.)*

London, Monday Evening.

In view of the Irish settlement and the agreement at Washington in regard to the Pacific, it would seem superfluous to state that the past week has been a good one for the markets. But the full effects of these favourable developments have yet to be felt. There has been a considerable increase in the volume of investments, but interest has been mainly confined to the gilt-edged group, and the turn of the others has yet to come.

It had been expected that in consequence of the South African loan result we should have no more Colonial issues for some weeks, but this proved not to be the case, for a large loan for the Straits Settlements has since been floated, and has been a remarkable success. Why the one should have been taken and the other left is somewhat of a mystery, in view of the brilliant prospects that South Africa would appear to hold out. A possible explanation is that the public took a jaundiced view because of the apparently unfavourable outlook in general at the time of the South African issue.

**Gilt-edged Buoyant.**

Gilt-edged stocks have displayed a buoyant tendency. The Conversion Loan at 65 5-8 is 15-16 up, while War Loan Fives have gained 11-16 at 90 7-16. Fundings are 3-4 up at 74, but Consols at 48 7-8 are a point lower. In Near Eastern securities which rank with British funds Egyptian guaranteed 3 per cent. are 1-4 up at 68 3-4. Greek guaranteed 2 1-2 per cent 1898 are 1-2 up at 62 1-2, while Turkish guaranteed 4 per cent. 1855 have gained 1 1-2 at 71.

Foreign securities have also been somewhat better, French stocks being a special feature on the improvement of the franc, with War Loan Fives 3½ up at 38½. German 3 per cent. have improved on the possibility that time will be allowed in regard to reparations, gaining 5-16 at 3 1-8. Chinese securities have been very firm, while Brazilians have generally advanced. The Japanese 4 per cent. 1899 is 1¾ up at 61¾, while the 4 per cent. 1910 has recovered ¾ at 60¾.

Greek securities have been steady. The 5 per cent. 1884 Loan is the same at 34 while the 5 per cent. 1881 Loan is the same at 34. The 4 per cent. 1902 Loan has gained a point at 32, while the 5 per cent. Funding Loan is unchanged at 33. The 5 per cent. 1914 Loan has risen sharply to 37, a gain of 3 on the week.

**Industrials Irregular.**

The improvement in the general situation has not yet had much influence on this group, and a rather irregular tendency has been in evidence during the week. One cause is, of course, to be found in the passing of so many dividends, which, however bright the outlook—and the indications certainly seem to point to a substantial widening of business in the New Year—invariably has a pronounced effect, not only on the shares concerned, but on the particular group. Textiles have continued to present a fairly firm front with Courtaulds 1s. 1½d. up at 36s. 4½d. Armament shares have shown some irregularity. Armstrong's have gained 1s. at 14s., but Vickers are unchanged at 8s. 6d. Guest Keens have recovered 1s. at 28s., while Cammell Lairds are 6d. up at 11s. 6d.

Shipping securities have been harder with P. and O. Deferred a specially good spot at 294, a rise of 14. Furness Withys are 1s. up at 23s. 6d., and Cunards have gained 6d. at 17s. 6d.

**Oils Steady.**

A steady tone has prevailed in the oil market. Mexican Eagles have again been a firm spot, and are 9-32 up at 4 3-16 Burmahs have shed 1-16 at 5 11-16. Among Egyptians, Anglo-Egyptian B are 1-16 up at 1 17-32, while Gemsah Oil Reefs are 7-16, and Oilfields of Egypt are 3s. 6d. In the Roumanian group Roumanian Consolidateds are 6d. up at 8s., while Steaua Romana have gained 2s. at 9s. 3d. Phoenix have risen 3d. to 6s. 9d., but Dacia Romanos are 1-16 down at ¾.

In mining descriptions a harder tendency is to be noted in various directions. De Beers have been very firm, and are 1¼ up at 9 5-8. Some interest has been taken in Chartereds, which stand at 11s. 7½d. There has been a recovery in Tin shares, and Nigerians generally have been a bright feature.

**Banks Firm.**

Banking descriptions have been firmer. Agricultural Bank of Egypt 3½ per cent. Bonds are unchanged at 54, while the 3½ per cent. Guaranteed Bonds are the same at 55½. Imperial Ottoman Banks have improved to 7½, a rise of ¾, but National Bank of Egypt have shed 1-16 at 18 3-16. Bank of Athens are unchanged at 2, while Ionian Banks are unaltered at 3¾. Chartered of India are 3-8 up at 15 3-8, while National of India have gained ½ at 38. Imperial of Persia are unchanged at 5 1-8, but Bank of British West Africa are 1-8 up at 4 3-8 xd.

In Land Shares Beheras are the same at 8¾, while Béhéra Prefs are unchanged at 3 3-16. Egyptian Delta Lands are 6d. up at 7s. 3d., while New Egyptians have risen 3d. to 22s. Egyptian Consolidated Lands remain at 10½d. Sidi Salems are unchanged at 15-16, while Union Foncieres are 1-16 up at 2½. Sudan Plantations are 2 9-16xd.

Among Miscellaneous descriptions Alexandria Waters are 1-8 up at 6¾; Egyptian Markets are unchanged at 18s. 3d.xd; while Egyptian Salt and Sodas are 9d. up at 33s. 3d.

## ALEXANDRIA EXCHANGE.

*Supplied by G. L. Mortera, Alexandria and Cairo.*

Prices on November 25 were as follows:—Agricultural B nk of Egypt, £4½; Alexandria Water Co., Ltd., £6,7-8; Anglo-American Nile Steam, £2½; Associated Cotton Ginners, £11-16; Banque d'Orient, Fr., 56½x; Behera Ord., £E 8¼; Brasseries d' Egypte, Fr., 60; Building Lands of Egypt, £1¼; Cassi di Sconto Priv. Fr., 100; Ciments d'Egypte Priv., Fr., 50; Ciments d'Egypte Div., Fr., 24; Comptoir Fin. et. Com. d'Egypte, £31-32; Consolidated Land, Pt., 5; Credit Foncier Fondateur, Fr. 850; Credit Foncier Act, Fr., 643; Credit Foncier, 1886 Oblig., Fr., 327; Crown Brewery Priv., Fr., 112; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 80; Eaux du Caire Jouissance, Fr., 102; Egypt and Levant, S S. Ord., 27s 3d; Egyptian Delta Light Railways, £3,7-8; Filature National d'Egypte, £11,7-16; Immeubles d'Egypte Soc. an des., £5,5-16; Khedivial Mail S.S. Ord., 110s.; Khedivial Mail S.S. Co., Pref. £2½; Kom Ombo Ste An de Wadi £4¼; Kom Ombo Ste An Fondateur, £34 ex.; Land Bank of Egypt, Parts de Fond, £37; Lots Turc., Fr., 28; Menzaleh Canal Navigation Pt., 250; Nungovich Hotels, £6,5-16; Ramleh Railways, £2¾; Salt and Soda, 32s. 7½d.; Tram d'Alexandrié Priv., Fr., 39½; Tram d'Alexandrié Div., Fr., 52; Union Fonciere d'Egypte, £2,1-6; Egypt Hotels, £2; Urbaines et Rurales, £2¾.

## THE GREEK DEBT SERVICE.

The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt from January 1 to September 30, 1921 (new style January 14 to October 13, 1921).

| — | Monopolies, tobacco stamps, stamped paper, Naxos emery. | Piraeus Customs. |
|---|---|---|
| | Drachmae. | Drachmae. |
| Gross receipts. Sept. 1921 .... | 7,006,991 | 9,343,287 |
| Do. do. do. 1920 .... | 6,063,644 | 4,716,000 |
| Estimated receipts for 9 months (Law of Control) ..... | 21,675,000 | 8,025,000 |
| Actual receipts for 9 months, 1921 ..... | 52,558,224 | 48,285,354 |
| Actual receipts for 9 months, 1920 ..... | 48,802,856 | 43,153,049 |
| Difference between estimated and actual receipts for 9 months 1921 | 30,883,224 | 40,260,254 |
| 1920 | 27,127,850 | 35,128,094 |

Note.—Of the surplus over the estimated receipts from monopolies, tobacco, stamps, stamped paper, and Naxos emery, 49 1-5 per cent. is applied towards increasing the minimum rates of interest and sinking fund on the External Gold Loans of 1881 to 1893,

The products of the sales of Naxos emery have been paid in paper drachmae since August, 1920. In the case of the Piraeus Customs, the receipts in gold are included in the above statement at par.

# SHIPPING INTELLIGENCE

## THE DARDANELLES AND BOSPHORUS.

### PASSAGE OF EX-ENEMY VESSELS.

The Allied Governments have now decided that ex-enemy vessels may be allowed to pass through the Dardanelles and Bosphorus for purposes of trade with non-Turkish ports, says the *Board of Trade Journal*, provided that they are in possession of a permit issued by the Allied High Commissioners at Constantinople. Applications for such permits should be made to the Allied High Commissioners direct, and until definite regulations are drawn up, each case will be treated on its merits.

## CZECHO-SLOVAK SHIPPING.

### COST OF THE ELBE AND DANUBE FLEETS.

The special Czecho-Slovak public works budget for 1921 comprises the amount due as indemnities for the vessels assigned to Czecho-Slovakia in accordance with the terms of the Peace Treaties. This indemnity amounts to 7,145,254 Swiss francs, or 117,696,691 Czecho-Slovak crowns, at the rate of 10.5 crowns per franc. The expenses incurred in handing over these vessels amount to three million crowns, thus bringing the total up to 120,896,691 crowns. The vessels ceded by Germany to Czecho-Slovakia for the Elbe fleet are 48 in number, with an aggregate horse-power of 19,410, together with 194 barges with an aggregate tonnage of 123,220. In addition, Czecho-Slovakia receives warehouses, cranes and similar appurtenances. Germany also supplies the Danube fleet with seven barges, whose aggregate tonnage is 5,083, in return for a payment of 338,490 gold marks which will be credited to Germany's reparation accounts. Austria is ceding three passenger vessels, 30 barges, five tug-boats, whose aggregatch orse-power is 2,800, and 42 barges, whose aggregate tonnage is 29,760. The total value of this material is 5,375,584 Swiss francs, or 88,608,780 Czecho-Slovak crowns. Hungary is to cede two steam-tugs 25 tug-boats and three barges, to a total value of 1,709,570 Swiss francs, or 20,197,905 Czecho-Slovak crowns. The dredging installations, valued at 500,000 Swiss francs, will be credited as part payment of Hungary's reparations to Czecho-Slovakia.

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses :—*

*Anchor Line.*—S.s. Castalia for Bombay (Liverpool, December 27).

*Anchor-Brocklebank Line.*—S.s. Maidan for Calcutta (Birkenhead, December 21); s.s. Masirah for Port Said, Colombo, Madras and Calcutta (leaves London, December 24); s.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (leaves London, January 7); s.s. Media for Calcutta (Birkenhead, January 11); s.s. Manaar for Port Said, Colombo, Madras and Calcutta (leaves London, January 21).

*Bibby Line.*—S.s. Herefordshire for Marseilles, Port Said, Colombo, and Rangoon (Birkenhead, December 21) s.s. Gloucestershire for Marseilles, Port Said, Colombo and Rangoon, (Birkenhead, January 4); s.s. Sittang for Rangoon (Middlesborough, January 7).

*Byron Steamship Line.*—s.s. Maid of Spetsai for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, and Braila, also calling at Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, December 23); s.s. General Napier for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, and Braila, also calling at Volo, Salonika, Smyrna, Bourgas and Varna (Liverpool, January 10).

*Cunard Line.*—S.s. Antinoe for Gibraltar, Pireaus, Smyrna and Constantinople (London, December 16); s.s. Tyria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa (Swansea, December 24).

*Ellerman Line.*—S.s. Assyrian for Gibraltar, Melilla, Malta, Patras, Smyrna, and Constantinople (Liverpool, December 17); s.s. Asturian for Gibraltar, Malta, and Alexandria (Liverpool, December 24).

*Ellerman's "City" Line.*—S.s. City of Florence for Calcutta (Birkenhead, December 16); s.s. City of Baghdad for Calcutta (Birkenhead, December 21); s.s. City of Bristol for Calcutta (Birkenhead, December 21); s.s. City of York for Calcutta (Birkenhead, January 6).

*Ellerman's "Hall" Line.*—S.s. City of London for Bombay, Karachi, and the Punjab (Liverpool, December 12); s.s. City of Paris for Bombay, Karachi, and the Punjab (Liverpool, December 30).

*Ellerman's Wyscott and Laurance Line.*—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

*Glen Line.*—S.s. Glentara for Port Said, Port Swettenham, Singapore, etc. (London, December 22); s.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January); s.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 19).

*Harrison Line.*—S.s. Tactician for Calcutta, (Liverpool, January 3).

*Henderson Line.*—S.s. Mandalay for Port Said and Rangoon (Birkenhead, December 14); s.s. Pegu (new steamer) for Port Said and Rangoon (Birkenhead, December 28).

*Holt Line.*—S.s. Telemachus for Port Said, Port Swettenham, Singapore, etc. (Glasgow, December 29); s.s. Agapenor for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, December 29).

*Johnston Line.*—S.s. Venice for Piraeus, Volo, Salonika, Bourgas, Varna, and Constantza (Liverpool, December 17).

*Moss Line.*—S.s. Karnak for Gibraltar, Malta, Piraeus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, Constantza and Sulina (Liverpool, December 23).

*Papayanni Line.*—S.s. Bosnian for Algiers, Malta, Piraeus, Smyna, Volo, Salonika, Smyrna, and Constantinople (Liverpool, December 31).

*P. and O. Line.*—S.s. Kaisar-I-Hind for Bombay (London, December 16), s.s. Soudan for Colombo, Madras, and Calcutta (London, December 30); s.s. Delta for Bombay (London, December 30); s.s. Nore for Colombo, Madras, and Calcutta (London, January 13); s.s. Macedonia for Bombay (London, January 13).

*P. and O. British India Line.*—S.s. Hatimura for Colombo, Madras and Calcutta (London December 15); s.s. Mudura for Bombay and Karachi (London, December 16); s.s. Domala for Bombay and Karachi (London, December 30); s.s. Mantola for Colombo, Madras, and Calcutta (London, January 6); s.s. Nirvana for Colombo, Madras and Calcutta (London, January 21).

*Prince Line.*—S.s. Glenelg for Tunis, Malta, Alexandria, Jaffa, Haiffa, and Beyrout (Manchester, December 17).

**ANCHOR LINE**

**First-Class Passengers only.**

## NOTES OF THE WEEK.

### *Asia Minor,*

The conference on the Near Eastern question between the Foreign Ministers of Great Britain, France and Italy is due to take place in Paris in the first week of January. In the meantime the British and French Prime Ministers are meeting in England this week, and we may hope that any obstacle to a practical settlement of the Asia Minor problem presented by the Angora Treaty will have been removed before the Paris Conference opens. If the absence of definite news from Asia Minor implies that neither the Greeks nor the Turks are making any move, it is for the best. As the former can no longer be in doubt as to the main points of the final settlement, they will naturally be tempted to reduce their responsibilities in Asia Minor as quickly as possible; but it may be better for all the parties concerned if the Greeks and Turks continue to face one another in the neighbourhood of Eskishehir. The Angora Government, according to the latest reports, is being obliged to devote some attention to the position in Transcaucasia, where Enver Pasha is finding the authority vested in him by the Bolshevists very much to his liking. The Allied Powers will have no desire to stiffen the terms of the settlement because Mustapha Kemal Pasha is in difficulties on another front; but they can hardly fail to welcome complications that promise to make the Angora Government more amenable to a reasonable and practical peace.

### *The Ministerial Crisis in Roumania.*

With the exception of M. Venizelos, no Balkan politician is better known in England than M. Take Jonescu, and the news of his appointment as Prime Minister of Roumania will be received here with lively interest. It is too soon, however, to know whether the ministerial crisis arising from the resignation of General Averescu's Cabinet will be settled so easily. Roumania is passing through a period of considerable anxiety, and a section at least of public opinion would be glad to be rid of party quarrels for a time, in order that a real Coalition Government should try its hand at the difficult task of reconstruction. There is some reason for supposing that this view appeals to M. Take Jonescu, and it remains to be seen whether he will be successful in giving effect to it. His first purpose may be to form a transitional Government which will undertake fresh elections, and to leave the question of a Coalition Ministry until the results of the polls are known. His own following in Parliament is not large enough to enable him to carry on without the support of other parties. Accordingly his chances of inaugurating a new domestic policy would depend on his ability to associate rival leaders with himself. M. Take Jonescu has certainly "fixed" Roumania's foreign policy, and whatever ministerial changes there may be it is unlikely that there will be any new orientation in the matter of foreign affairs.

### *The Egyptian Position.*

It is satisfactory to find that Sarwat Pasha did not refuse the invitation to form a new Egyptian Ministry until he had made an attempt to come to an understanding with the British Government regarding the interrupted negotiations. What form his efforts took has not yet been divulged, but his action suggests that the more enlightened section of Egyptian opinion does not subscribe to the view that Lord Allenby's letter to the Sultan has closed the door to further discussion. In his report to the Sultan on the London negotiations Adly Pasha certainly makes out a better case than he did in the unfortunate reply to the British Government. At least there is an acknowledgment that Great Britain has her side of the question; but he would seem to be trying to justify his summary rejection of the draft convention by references to Lord Allenby's letter to the Sultan, which was not drafted until later and must indeed have been inspired in no small measure by the disappointment caused by the Delegation's attitude to the British proposals. "We may not have counted at once on a satisfactory project," he writes, "but at least we hoped to have a project which would have left the door open to discussion and which might have become the basis of a possible agreement. . . One cannot reconcile in the same project the theory of alliance and the theory that Great Britain is responsible for Egypt." But that is precisely what has to be reconciled, until Egypt can show that she is equal to all the demands made upon an independent State. If on the day when the alliance comes into force she gives practical evidence of her capacity, the "theory" of British responsibility remains a "theory" or, in other words, becomes a dead letter, and the alliance changes from a theory to a reality. Unfortunately Adly Pasha had not the courage to test his convictions of Egypt's capacity for looking after her own and foreign interests. He is right in supposing that British public opinion favours the change in Egypt's

Digitized by Google

status to that of a sovereign State, but there will be little sympathy with any attempt on Egypt's part to dispense with all guarantees or safeguards.

### *The Alexandria May Riots.*

The Minutes of Proceedings and Report of the Military Court of Enquiry into the Alexandria Riots, May 1921, has been published as a Blue Book (Cmd. 1527). It runs to nearly 270 pages, and gives a clear picture of the unfortunate events with which it is concerned. Since those events were directly connected with the agitation for "complete independence," it is at once natural and fair to consider the Report in connection with the latest phases of the agitation. And it may be said at once that a perusal of the evidence will almost certainly lead to the conclusion that it would be a very bad thing for Egypt, and a much worse thing for the Europeans in Egypt, if the "complete independence" should be gained at once. It is necessary to bear in mind that the agitation was, nominally at any rate, directed not against the British, but against the Egyptian Government; and the Report seems to indicate that while the extremists showed a certain ability in organization, the forces of law and order were to some extent crippled by the extraordinarily timid attitude of the Government in the face of provocation. The police in most cases behaved remarkably well in the earlier stages of the trouble; though later many of them, with the Egyptian troops, made common cause with the rioters. For all that, the mob had things pretty well its own way for a time, and the picture of lawlessness presented by the report is not pleasant to contemplate. Then our troops were called in, and, as one of the native witnesses said, "Since the British soldiers took over, nothing further had happened."

### *Their Effect in Europe.*

The Court finds that "there is no evidence that the Greeks started the trouble by firing," and that "the mobs had a very definite organization," but unfortunately it "found no evidence as to what extent this organization was." It states its opinion that the Zaghloulists were determined to repeat the Tanta incident; and it indicates that weakness of the Government emboldened the mobs to think that they could act with impunity. But perhaps the most remarkable thing in the Report is the way in which it "draws attention to a very important fact"—the hatred of Europeans which, it declares, has always existed in Egypt. To this hatred it attributes the events of 1882 and those of 1919; and these Alexandria Riots of 1921 were, it considers, only the latest manifestation of the same spirit. In this view the Court was strongly supported by the evidence of M. de Witasse, the French Consul, who, after sketching the events of June, 1882, remarked: "Exactly the same thing that happened on the 11th June, 1882, has happened on the 22nd May, 1921." The Italian and Greek Consuls, it is to be noted, joined their French colleague in stating that they could never consent to their nationals being protected by a force composed exclusively of Egyptians. That is a strong expression of opinion; but the Extremists in Egypt —and their friends in this country—would be wise to ponder its full significance at the present time.

### *In Northern Arabia.*

News received in London last week from Hail puts the occupation of that place by the Sultan of Nejd in a different light from that of earlier reports. It will be remembered that the first news of the business came from Bahrein, and referred to the capture of Hail after a long struggle. The version just received, from Hail itself, announces that the occupation was the result of negotiation, and that there was no bloodshed. The message adds that the family of "the local Sultan" (presumably Ibn Rashid is referred to) was arrested and deported; and that Sultan Abdul Aziz Bin Saud's influence is now paramount throughout the Shammar country. While we may feel a certain sentimental sympathy with Ibn Rashid and the Shammar, who showed themselves capable of unusual loyalty—unfortunately to the wrong side—in the War, we may hope that the recent changes will eventually make for stability in the Arabian peninsula. Bin Saud is reported to have despatched a force to occupy Jauf, or Jof, an important oasis and town, about 250 miles north-west of Hail.

### *On the Hejaz Frontier.*

These operations must not be confused with those others, far to the South, in the neighbourhood of Tayef, where a semi-independent sheikh, Khalid, of Wahabite sympathies, has been causing some trouble. The Colonial Office recently issued a statement to the effect that it was convinced that the Sultan of Nejd is not responsible for the latter disturbance. This statement may be accepted without reserve; but the facts that Sheikh Khalid is a Wahabite and that Bin Saud has had to disclaim control over him are in themselves somewhat disquieting. Moreover, unless we are mistaken, it was in this region that the fighting took place soon after the Armistice between the forces of Bin Saud and those of King Hussein, when the latter, led by the Emir Abdullah, were heavily defeated. The Sultan of Nejd may yet have some stiff work with the Shammar from the north; but it is to be hoped that he will be able to exert his moral influence to restrain Khalid's ardour. Otherwise all Arabia may ere long be more or less in a blaze.

### *Persia and Great Britain.*

The question of oil concessions in Northern Persia has been well to the fore during the past fortnight, owing to the Persian Government's attempt to cancel the Anglo-Persian Company's concession. The facts of the case are dealt with on another page, and we refer to the matter here only because the Teheran Government's attitude appears to be dictated very largely by the desire to show unfriendliness to this country. Indeed, taking this case in conjunction with the cancelling of the Roads Concession, to which we referred not long ago, it is difficult to avoid the conclusion that Teheran is deliberately going out of its way in order to make itself unpleasant to Great Britain. The reasons for such conduct would not be far to seek: the Persians have for some time been greatly annoyed with what they regarded—or affected to regard—as attempts on our part to interfere with their affairs; and their Bolshevist friends in the North have taken very good care to keep the feeling of soreness from fading away. The Soviet Government has, indeed, made claims with regard to some at least of the oil concessions in Northern Persia; and though they may be put forward merely as a blind, they suffice to show that Russian influence is—once more—at work to make mischief in that region, which Russia formerly regarded, and doubtless will again ere long regard, as earmarked for her own future occupation.

# THE WEEK AT HOME.

*London, Monday Evening.*

**Ireland at Westminster.**

The interest of the week has lain politically between Westminster and Dublin, with Westminster to the fore, because the proceedings at Dublin, although more dramatic, have been mainly behind closed doors. The King opened Parliament in state, and three days were given to the debate on the Address. On the whole the speaking was not equal to the occasion—approval of the treaty was a foregone conclusion—and the fact naturally took some of the fire out of the proceedings.

But there were some moving scenes. It was very affecting to hear Lord Morley, the last veteran of the Home Rule movement, give his blessing—if I may use such a term in speaking of an agnostic—to the Agreement. He spoke with much effort, and the old fire is gone; he seems frail and very feeble, but here and there was a touch of the old beautiful style which delights us in his books.

Lord Carson's violent attack on the Agreement was not effective; he sounded petulant, and somehow he struck me as a less dignified figure than in his old House of Commons days. The two backwoodsmen, Lord Salisbury and the Duke of Northumberland, prophesied red ruin and the breaking up of laws and the downfall of the British Empire, and Lord Sydenham said the same. These Cassandras were answered by the Archbishop of Canterbury, who showed much physical pluck in attending after his recent illness, and were fairly trounced and bastinadoed by the Lord Chancellor, who told them that they spoke like ignorant and hysterical schoolgirls. I doubt whether any previous occupant of the Woolsack has ever enjoyed himself more in telling his fellow peers what he thought of them.

So much for the Lords. In the Commons Mr. Lloyd George was not up to his usual level; he never is when he feels that the House regards the thing as a *fait accompli*. He demonstrated at length that the settlement could not have been made before; this was subtle but unconvincing. And he wound up with a long and overdone peroration, which Mr. Asquith quite properly poked fun at. Mr. Asquith himself was excellent; he discounted all the prophecies that every difficulty was at an end, and brought the House back to a sense of reality by his reminder that a good beginning had been made, but only a beginning. The best Die-hard speech was by Mr. Rupert Gwynne, who should be heard more often; but the dissentients did not number sixty.

**Deliberations in Dublin.**

The rival Parliament in Dublin appears to have been more lively. Mr. de Valera, as was anticipated, has come out definitely against ratification, and one of the London Delegation—Mr. Erskine Childers, the author of "The Riddle of the Sands"—has gone over to his full republican point of view. It is clear that this extremist party has much weight; perhaps more than was anticipated a week ago; because the Irish Catholic Bishops, who individually expressed themselves strongly in favour of ratification, called a meeting of their body to pass a resolution to that effect—and behold, the resolution, when published, bore every evidence of having been watered down to the extreme limit of dilution. In point of fact it was utterly meaningless, and speaking more for their discretion than their courage.

But the Irish gunmen are said to favour peace, and certainly Messrs. Michael Collins and Arthur Griffith are fighting strongly for ratification. The decision has been postponed till this week; it is still generally believed that the Treaty will pass, although by a smaller majority than at first seemed probable.

The future position of the De Valerites is an interesting subject. If a Government is formed under Mr. Griffith, who is the brains of the Sinn Fein movement, the extremists may either oppose it by constitutional means or attempt another republican rebellion; in either case it seems probable that the Southern Unionists will give at least passive support to what must be in effect a rather conservative administration. It was at one time said that Mr. de Valera would go back to his books and lectures, but I suppose, after being a President, he does not wish to decline into a Professor again.

**The 1922 Session.**

Arrangements are already being made for the next session at Westminster, which opens on January 31. The main business, of course, will be to give legislative effect to the Irish Treaty, but the Conservatives are making a hard push to have the House of Lords reform included in the programme. It is now common property that, accidents apart, there will be no general election.

**France and Washington.**

M. Briand, back from America, is on a visit to Mr. Lloyd George, and German reparations are the theme. It cannot be said that anybody here really believes the German Government's threatened bankruptcy to be sincere; it is accepted as one more trick to avoid payment of the reparations. But opinion here is growing steadily in favour of a general reduction of war debts and indemnities all round. It must be, however, frankly admitted that this does not suit France at all, and the financial difficulties of France are far graver than ours. Nor does the idea in the least appeal to America, whose attitude is quite simply "Pay me that thou owest."

As for Washington, the Conference ended very suddenly, and there would be nothing left for Mr. Lloyd George to do if he went there. On the whole, we are more than satisfied with the results achieved; they are not miraculous, but at least they count for something.

The Anglo-Japanese Treaty, which had outgrown its usefulness—it was concluded against the Russian menace in Asia—is merged or enlarged into a four-Power pact between Britain, Japan, America, and France as to the Pacific. Its best friends admit that this instrument is colourless; the unregenerate go so far as to say that it is meaningless. But the fact that America and Japan have agreed to sign it is, however, of real importance in alleviating what was fast becoming an increasingly dangerous position in the Pacific.

As to the limitation of armaments, it suits us and it suits America; it remains to be seen whether the rest of the world will follow suit. Even the professional pacifists do not pretend that it has ended war on this planet; they confine themselves to the lower but very relevant consideration that at least it saves our pockets. I am sorry to say that the cynical point out that it only applies to capital ships, which more than one great naval authority declares to be practically useless, and that it

does not apply to war on land, or in the air, or under the water, and that pugnacious mankind will now turn its attention to the most effective means of destruction in those elements with redoubled zest.

The real truth, however, is that the Agreement is an honourable agreement for ten years, which is as far as ahead as one can look. It will be faithfully kept as between the principals, who have sufficient territory to "fling away ambition" and only desire to hold it in peace; its ultimate success or failure, however, depends not on the principals, but on the leaner and more hungry Powers which may be less convinced of the wisdom of *Beati possidentes*.

There was some talk during the proceedings of an Association of Nations, as a sort of copy of the League of Nations. I gather that this idea has been rather dropped at Washington, the American Senate having no use for it. There is, however, some prospect that another Washington Conference on a less elaborate scale will meet next year.

**Lord Halsbury.**

The death of Lord Halsbury at the age of ninety-eight was a shock; one had almost come to think him immortal. It is not many months ago that he was dining out, and report even had it that he attended a ball afterwards. He was a grand old Tory, not one of the very greatest lawyers, but still one who has left a permanent mark on our judicature. As a politician, he will probably be best remembered for his opposition to the Parliament Act—an opposition which time has in some ways justified. He was a great Unionist, and had he been spared, he would no doubt have denounced the Irish Agreement in unmeasured terms.

**Christmas Trade.**

The usual Christmas crowds have been besieging the usual Christmas shops this last week, and dignified middle-aged gentlemen have been seen carrying home golliwogs and dolls and toy-engines for the younger generation. Prices are certainly cheaper than a year ago, and the shopkeepers report that, even apart from seasonal activities, there is evidence of more money about. But I imagine that most retail traders will be glad to see the back of 1921.

**The Prospects for 1922.**

Everybody, however, is hopeful about next year. There seems general agreement that the worst of the depression is over, and I even discovered a cheerful stock-broker last week. It is true that he is in the gilt-edged market, which is the only department that is earning its keep. But at least there is ample evidence that the voice of the investor is heard in our land, and quotations, even of industrials, are beginning to mount.

A great deal of fresh money has recently been subscribed to Colonial loans, and several more are now pending. Some of the recent issues, which were very poorly supported at first, have since gone to a premium, and this has encouraged those who want money for public works in all parts of the Empire to take the air in Lombard Street again, where their feet are still beautiful upon the flagstones. The export of capital is always an indication of an approaching trade revival, and it looks as though in 1922 our merchants will do more business with the British Empire, and less with Europe, where the conditions, unfortunately, are still very unfavourable. That is the real storm-cloud on the horizon, and it does not get less dark.

**A Scottish Revival.**

Accounts have come from the north-east of Scotland of a religious revival of the old Wesleyan or Moody and Sankey type. It appears to be confined to the fisher-folks, and extraordinary scenes are said to have been witnessed. Visions and voices have abounded, crowds have suddenly gone down on their knees in the street, and the usual emotional fervour of religious conversion has been much in evidence. Those who are in sympathy with this type of evangelical movement hope that it will extend all over Scotland and even England, but outside the Highlands and Wales its chances are rather small. I gather that some of the clergy have no great belief in the permanence of these conversions.

**The Week's Book.**

Many besides Balliol men will want to read "The Life and Philosophy of Edward Caird" (Maclehose, Jackson) by Henry Jones and Professor Muirhead. The successor of Jowett has, perhaps, not left so great a name in metaphysics as T. H. Green, but in some respects his influence, especially in Scotland, was not less deep. His life was extremely uneventful, even for a don, and unluckily he was not a great letter-writer like Jowett. But the present volume tells all there is to tell, and it gives some of Caird's extremely acute criticisms of the current metaphysics of his day; the account of his own system, which followed and expanded Hegel and Kant, is extremely well done.

## OUR LADIES' COMPETITION.

The entries for the above competition have been more numerous than anticipated, but hard work on the part of the editorial staff has made it possible to announce the result this week. Entries have been received from four continents, from Ontario to Ootacamund; and though the winning attempts deal with Near Eastern subjects they were run closely by others dealing with Western European, and even with American topics. The Editor's chief regret is that he had not more prizes at his disposal, and he assures all the competitors that the task of selecting the winners has been anything but an easy one.

As a rule the competitors had obviously taken much pains with their attempts; but it may be noted that there were exceptions to this rule, some articles being so carelessly written as to have no chance at all of a prize. One competitor, who would otherwise have stood a good chance, omitted to enclose a coupon; one or two so far exceeded the maximum number of words allowed as to spoil any chances they might have had; and one attempt, which was excellent in all other respects, fell so far short of the minimum that it had to be disqualified.

**The FIRST PRIZE is awarded to "Dan," whose "Beersheba: Sketches" will be published next week.**

**The SECOND PRIZE goes to:**

**MRS. HAROLD L. SCOTT,**
**Robert College,**
**Constantinople.**

**for an article, "When the Russians Came to Constantinople (November, 1920)."**

**The THIRD PRIZE is won by**

**MRS. R. TOYNBEE,**
**16, Carlyle Mansions,**
**Cheyne Walk, London,**

**for a description of experiences on relief work in Asia Minor.**

**The five CONSOLATION PRIZES are awarded to:**

**Miss M. Rowntree, Rowancroft, Scarborough; Mrs. G. C. Bone, Antioch. Syria; Miss Alice L. Andrews, 11, Edison Ave., Medford 57, Massachusetts, U.S.A.; Mrs. G. R. Colborn, Shebin el Kom, Egypt; Miss Eileen M. Ross, 43, Kehayia Street, New Phaleron, Greece.**

The papers which have won the second and third prizes will be published shortly in *The Near East*. Cheques have been forwarded to the prize-winners.

# THE NEAR AND MIDDLE EAST.

*(From Our Own Correspondents).*

## EGYPT.

*Cairo, December 10.*

**A Snub for Zaghloul.**

As I write the political situation is at its worst, from any point of view. The slightly restive reception of the official documents published last week-end by the British Government had not faded when, last Tuesday, the Egyptian Official Delegation, headed by Adly Yeghen Pasha, returned to Egypt. The Delegation was accorded a sincere welcome by representative gatherings at Alexandria and Cairo, though the decorousness of the reception in Cairo was tempered by some small ruffianly displays by the riff-raff—who seemed to be "again the Government" by reason of payment in cash! The opposition displayed, however, was so obviously artificial and so piecemeal that it did not subtract from the splendid welcome accorded to the returning delegates by the *intelligentsia*. The representative character of the reception and its sincerity constituted not merely a compliment to Adly Pasha and his colleagues, but also—

—deliberately—an expression of lack of confidence in Zaghloul.

**The Personal Equation.**

It is this aversion to Zaghloul that is the main obstacle in the way of Egyptian unity. Fervid appeals are being made, in the vernacular Press and by sections of prominent Egyptians, to all classes to sink their partisan differences and to remember only that they are Egyptians, bound together in the common cause of hostility to Great Britain. That is—from an Egyptian point of view—a very natural and a very laudable spirit. But as there are no fundamental differences of principle, it can easily be understood that the personal equation feature is the bar to unison. Zaghloul desires a fusion of his party with that of Adly, but only on the condition that his leadership is not thereby endangered. The responsible elements in Adly's group, however, not only distrust Zaghloul but detest his politics, and, according to their own statements, prefer to remain in an opposite camp if the price of unity is to be the acceptance of Zaghloul with an authoritative voice in the councils of the leaders. There is no necessity to draw the obvious moral from such an amazing position.

**A Warning?**

The Egyptians having declared, through the Press and in several speeches at public gatherings, that the Treaty proposed by Great Britain was unacceptable, the Cabinet had no alternative but to resign. It resigned on Thursday afternoon, handing to the Sultan a formal letter stating that as the Government had been unable to fulfil the mandate given to it by His Highness and the Egyptian people, it had no reason to continue in office. At the same time Adly Pasha handed in the Delegation's explanatory note on the negotiations. These two documents are to be published at the convenience of the Sultan—probably to-morrow. Coincidental with the submission of the resignation, two strong appeals were issued by the dissentient members of Zaghloul's delegation—who have been supporting Adly Pasha—and the Egyptian Democratic Party respectively. Both documents reviewed the recent relations of Great Britain and Egypt, accused the British Government of having deceived Egypt, suggested that as Great Britain desired to maintain her rule over Egypt she should be left to shoulder alone the functions of Government, and warned any and every Egyptian that acceptance of Ministerial office under present conditions would be regarded "as a stab in Egypt's back."

**"Non-co-operation."**

These documents amounted to an effort to intimidate any Egyptians who are inclined to accept a Ministerial portfolio. They reflect the opinion held by the majority of the Egyptians, who, in effect, agree that as Great Britain has imposed terms and made it clear that there is no appeal from these terms, she should be left to carry that policy into practice without any assistance from the Egyptians, as the Egyptians do not approve of the policy. In the face of superior force, they say, they are unable to prevent the application of that policy, but they can at least refuse to be parties to it. It will be difficult to obtain a Ministry to carry on, as the Egyptians are of the opinion that the failure of the British to secure a Ministry will result in radical amendments of the policy declared in the official documents published last week-end. The general deprecation of methods of violence continues. The term "non-co-operation" is not actually used, but manifestly that is what the policy of dis-association from administrative functions amounts to.

That is the position to which I was referring when I stated that "the political situation is at its worst." Britain having declared a definite policy, that policy has now become a serious bone of contention. The position is complicated by the explicit statement that Great Britain is determined to carry that policy into effect. She must either keep her word, or bow to the opposition. It is not the time, at this juncture, to analyse the offer made to Egypt. The most important thing to be considered is that if the Egyptians, measuring their strength against Britain, find that they can succeed, it will set an intolerable precedent. The position is exceedingly delicate, calling for firmness and tact. The deluge which has put the Delta practically under water during the last two days has prevented any expression of opinion by demonstrations; but the rain has now cleared away, and in the next few days we shall probably have an indication of the manner in which the resignation and the documents published by the Egyptians will react upon the natives as a whole.

**British Community's Views.**

The following is the text of a Memorandum addressed by the British Union in Egypt to the High Commissioner, and signed by the President of the Union, Mr. W. E. Kingsford.

"Excellency,—Your Excellency's Note to H.H. the Sultan, together with the draft Treaty, have been carefully read and considered by the Council of the British Union in Egypt.

"This Council, composed of members of the British community with many years' residence in and experience of Egypt, is of opinion that it is the most important pronouncement concerning British policy with regard to Egypt since Lord Granville's Despatch in January, 1884. As a declaration of policy, without reticence or ambiguity, it places Great Britain with regard to Egypt in a far more unequivocal position than has hitherto been the case; at the same time re-asserting the desire of Great Britain that Egypt should become a self-governing country in close and friendly alliance with the British Empire.

"The Note of Your Excellency meets with the whole-

hearted approval and support of this Council, as it covers the points, which it has, from time to time, urged and brought to Your Excellency's notice.

"This Council notes with satisfaction the intention expressed to give Egyptians wider opportunities of showing their administrative capacities. It is hoped also that Sir C. Hurst's scheme for criminal jurisdiction, against which this Union has strongly protested, will be suitably revised to maintain the rights of British subjects now existing under Consular jurisdiction, should the Capitulations be abolished.

"This Council would respectfully draw Your Excellency's attention to the fact that the admirable impression produced by the definite statement of policy is being jeopardised by the ill-informed articles of..... and certain.....English newspapers, contents of which are cabled and circulated throughout Egypt, thus making it very difficult for the large body of moderate Egyptian opinion to rally.

"In conclusion it trusts that the clearly defined policy now enunciated may result in the cordial co-operation between the British and Egyptian Governments and peoples, based on mutual esteem, community of views, and interests."

**The Season.**

Meanwhile the social season is becoming more gay. Visitors are continuing to arrive, and are not expressing any fears, though naturally they are watching developments. Life at the hotels has become an unceasing whirl of joyous activity, commencing in the early afternoon and finishing well after midnight. The Italian and French operas are well attended nightly; the river excursions are attracting increasing numbers of passengers; the guides are being kept busy taking visitors to the innumerable local objects of interest; and the races—postponed this week-end owing to the sodden nature of the courses at Gezira and Heliopolis—are more largely patronized each week. The cost of living continues to recede, and business is becoming more brisk as the Christmas holidays draw near. The only cloud is at the Court, which is in mourning until the 19th instant for the late Prince Said Halim.

## ROUMANIA.

*Bucharest, December 12.*

**Political Situation.**

The political atmosphere is becoming so loaded that the general impression is that it is now only a question of days before the storm is bound to burst. The present Government has been gradually weakened by various successive blows dealt it by its adversaries, in order to provoke a ministerial crisis. The first attempt was the parliamentary strike of the Opposition, which, however, has not had its full effect, owing to the Tzaranists having, at the last moment, come to an understanding with the Government, upon which they returned to Parliament. The Tzaranists, however, let it be plainly understood that their change of attitude does not signify a support of the present Cabinet indefinitely, but is intended solely to keep the present Parliament alive until the Franchise Bill has been passed on the democratic lines that suit their views. They will then insist on the dissolution of the present Parliament and call for fresh elections under a neutral Cabinet, to consist preferably of magistrates. The new elections, which will naturally be carried out on the basis of the new Franchise Bill, will enable them to hold their ground against the old parties, which they consider reactionary. Their anxiety is explained by the fact that should a change of Government take place before the passing of the Franchise Bill, the King will call to power the Liberals, who, it is known, are, in present circumstances, the only organized party ready to take over the reins of Government.

The second attempt to embarrass the Cabinet was made by the Liberal Press, which alleged that the Premier, while addressing the members of the majority at their last party meeting, contested the Crown's prerogative of nominating or dissolving a Cabinet, despite the parliamentary majority of the Government. This obliged the Prime Minister to justify himself, by submitting to the King the stenographic notes of the meeting, in order to prove that his statements were entirely misconstrued. He further undertook to make a corresponding declaration in Parliament, affirming the above-mentioned constitutional privilege of the King; and also added that he would be the last person to contest this prerogative, considering that his own Cabinet was nominated in this way.

In this connexion, several members of the Tzaranist Party declared recently in Parliament that when the new Constitution comes up for discussion, this question should be settled once and for all, in order to avoid dragging the Crown into party squabbles.

No sooner did the above incident blow over than a third attempt was made, and this time from a quite unexpected quarter. M. Také Jonescu, seeing that the present Government will not be able to overcome its difficulties, and taking advantage of the general cry for a neutral Government, has been preparing the ground to form such a Cabinet from the present parliamentary material. As his advances were not entirely discouraged by some of the Leaders of the various political groups, he submitted his proposals also to the King. Consequent on his changed attitude towards his collaborators, his resignation from the Cabinet was expected daily, and according to the latest reports, it is announced that he has actually resigned. This move of his is bound to be followed by his two partisians in the present Cabinet, M. Antonescu, Minister of Justice, and M. Titulescu, Minister of Finance, and it remains to be seen whether General Averescu will be able to reconstruct his Cabinet, or whether he will have to withdraw altogether.

In some quarters doubts are entertained whether M. Také Jonescu's plan will succeed, for it is questionable whether the Parliamentary majority—who are devoted to General Averescu—will give him the necessary support. On the other hand, it is rumoured that General Averescu, who is fighting hard to remain in power, is now negotiating with M. Marghiloman, the Leader of the Progressist Party, with a view to replacing the resigning Ministers.

**Roumania and the Anglo-Irish Question.**

On the official announcement of the British Legation that the conflict between England and Ireland has been definitely settled, Dr. Lupu, one of the Leaders of the Tzaranist Party, proposed in the Chamber that a telegram of congratulation should be sent to the British Government. This was unanimously accepted and the telegram was worded as follows: "The Roumanian Parliament, taking cognizance of the definite agreement concluded between the British Government and the Sinn Feiners' Delegation, wishes to express its great admiration for the manner in which these negotiations were conducted, as well as for the manner in which this century-long conflict between two civilized nations has been brought to an end. The Roumanian people feel happy that its great Ally has known how to terminate in so just a way this difficult problem of the British Empire. They further wish it prosperity and welfare in the interests of civilization and of the world's democracy."

**Zionist Congress at Cluj (Transylvania).**

Last Monday the Zionist Congress of the new provinces of Roumania was opened at Cluj in the presence of the civil and military authorities, the British Consul, Mr. Goodwin, and the Delegate of the London Zionist Section, Mr. Kurt Blumenfeld. Dr. Fischer, who greeted the representatives of the authorities, declared that the Jews of Roumania desire to remain loyal citizens of this country and do not intend to form a State within a State. The Congress will last five days.

**M. Titulescu's Financial Mission in Paris.**

The financial situation still being the burning question of the day, public opinion was very anxious to learn what M. Titulescu had achieved in Paris in connection with the various financial arrangements for which he specially undertook his journey. In an interview given to the local Press soon after his return to Bucharest, he made the following statements:—"All the financial

Digitized by Google

questions which have been entrusted to me by the Government have been settled in a satisfactory manner. The basis for future negotiations has been established, and in due course those negotiations will be crowned with full success. Following on the established arrangements, the consolidation of our Treasury Bonds will shortly be an accomplished fact, and we shall thus free ourselves from this stumbling block, which from the outset has been at the root of our financial embarrassments. In short, a consortium of Bankers has undertaken the task of liquidating, within 10 or 15 years, the entire stock of our Treasury Bonds, treating direct with holders of same. On the other hand, the Roumanian State binds itself to pay this consortium a reasonable interest and to redeem annually a portion of these Bonds until their complete liquidation."

Referring to foreign deposits of lei at Roumanian banks M. Titulescu said: "The Government's measure whereby the transfer of foreigners' deposits at Roumanian banks was put under control, caused me, I must admit, considerable unpleasantness at first. I have had to give repeated explanations to those who falsely interpreted the intention which prompted the Government to take this step. I also explained to the French Government that the sales of lei on the Paris 'Change, sometimes amounting to 40 million lei a day, could hardly be the outcome of sales of goods, but were simply a speculation on the leu, with disastrous effects for this country as well as for the foreign holders of Roumanian currency. As they had to admit the justness of our measure, I then succeeded in obtaining the reintroduction of the quotation of the leu on the Paris Bourse and also in stabilizing for the moment the rate of exchange, which has a tendency to rise gradually."

**Roumanian Oil Question.**

M. Titulescu further stated that there was no question of negotiating for a foreign loan, either on the basis of the output of gold from the State Mines or on the concession of the "metan gaz" (marsh gaz) of Transylvania. He admitted, however, having discussed the oil question, and that he would gladly encourage the participation of foreign capital provided that the Roumanian element was preponderant in the undertaking.

**Roumanian Students in France.**

In connection with the subsidy for Roumanian students in France, M. Titulescu pointed out that it was true that the French Government offered to contribute towards the difference of exchange from its propaganda funds, with the manifest object of retaining the entire number of Roumanian students in France. These students have proved to be the best propagators of French culture in their own country. M. Titulescu, however, in a friendly way declined this offer, as Roumania, despite its momentary embarrassment, would consider it beneath its dignity to accept such an offer without compensation; the more so as it is not restricting this subsidy merely on account of lack of funds, but especially to enforce the principle of economy.

**Decorations.**

The following have been authorized to wear the Order of the Bath, 3rd Class: Brigadier-General I. Rashcanu, Minister of War, Major-General D. Stratilescu, Commander of the 3rd Army Corps, Major-General A. Razo, Commander of the 1st Army Corps, and Brigadier-General Gr. Bunescu, Commander of the 17th Division. The Order of St. Michael and St. George, 3rd Class:—Colonel C. Constantinescu, Commander of the 25th Infantry Brigade; Colonel Amza Stefanescu, Chief of the General Staff of the 1st Army Corps; Colonel D. Radulescu, Commander of the 2nd Frontier Guards Regiment, and Colonel V. Miron, Commander of the 99th Infantry Regiment.

**General News.**

Last Tuesday, Sir Herbert and Lady Dering gave a brilliant *soirée dansante* at the British Legation. Princess Marie, the entire Diplomatic Corps, and a large part of Bucharest Society were present.

M. Nishi, the newly appointed Japanese Minister to Roumania, is expected to arrive in Bucharest towards the end of February.

Last week an exchange of political prisoners between Hungary and Roumania took place at the frontier station near Oradea Mare.

Five of the Socialist Leaders, who signed the order for a general strike a year ago, have now been released from prison. They were originally sentenced to five years' penal servitude, but the King has reduced their imprisonment to one year.

During the past week heavy snowfalls have taken place throughout the country, and several railway lines were snow-bound. The telegraphic and telephonic services have also been interrupted for some time.

## GREECE.

*Athens, December* 10.

**Troubles in Crete.**

Last Sunday morning about 400 deserters and "*insoumis*," concentrated at a small village called Galata, and started to advance towards the town of Canea for the purpose of driving off the small naval detachment there and deposing the authorities. Many influential Cretan politicians, on being informed of what was going on, went out to meet the rebels and to request them to disperse. Their mission, however, met with no success, and the deserters continued their march on Canea. The regular troops in the town were then obliged to open fire, while the armed transport Myjali, in port at the time, fired several shots on the advancing parties, which were thus forced to retire. On the following morning the rebels again appeared before Canea, and there was a continuous exchange of rifle fire between these and the regular forces throughout the day. All the shops in the town remained closed, and telephonic and telegraphic communications in the eastern provinces of Crete have been interrupted. At a Council of Ministers which was hurriedly summoned in Athens, it was decided that everything possible should be done to restore order in the island. Considerable forces have already been dispatched as well as artillery, and reinforcements are held in readiness to proceed at once to Crete should their presence there be considered necessary.

In responsible quarters the Government is blamed for being too lenient with deserters and "*insoumis*," but it is thought that as a result of these disturbances sterner measures will now be taken to enforce respect for the law. The anti-Venizelist papers attribute the troubles to Venizelist propaganda; this, however, appears to be entirely incorrect as the Liberal deputies in the island have done all in their power to bring about a peaceful dispersal of the insurgents. On the other hand, M. Iliakis, ex-Governor of Epirus, writing in the *Eleftheros Typos* says that the main cause of the disorders was the dispatch to Canea, a year ago, of a marine detachment which since its arrival there continually irritated the inhabitants and treated them, in a most vulgar manner. The Cretans, however, obeying their leaders' advice exercised extreme patience. Last July this detachment went to Halepa, near Canea, and insulted the villagers. The latter organised a protest meeting, and although the complaints were proved to be justified and it was decided to punish the guilty, nothing was done. M. Iliakis points out that another cause of the trouble was the Governor-General's action in enforcing the law against "*insoumis*" (*i.e.* deporting their families), which was now been abolished in Greece.

According to the latest reports from Crete, the situation has somewhat improved, the rebels having withdrawn to the mountain tops outside Canea. The Prefect of the County of Candia has telegraphed to the Minister of Interior that although order reigns throughout his jurisdiction, it would be as well to send reinforcements to prevent, if necessary, the entry into Candia of the insurgents. He adds that troubles are also reported in Rethymno, but order is maintained in all other departments.

**The Future of Thrace.**

Commenting upon the speech of Lord Reading to the

Digitized by Google

leaders of the Mussulmans in India, the *Eleftheros Typos* (Venizelist) states that this has caused a very uneasy feeling throughout Greece. Until this speech England had been prepared to discuss only the question of Asia Minor, completely omitting Thrace; but the Viceroy of India now states that "the points of view of the Mussulmans of India regarding Thrace have already borne fruit, and this will be proved when the conditions which have been accepted by Great Britain are made known." The *Eleftheros Typos* goes on to ask whether decisions have actually been taken with regard to Thrace, and, if so, what are they, and when were they taken, and further asks what the Greek Premier has done in the matter.

**The Liberal Party.**

General Danglis, President of the Administrative Committee of the Liberal Party has sent to all the members letters of convocation for a General Assembly which will take place on the 21st of this month (O.S.) for the election of the complementary members of the governing body.

About 360 letters have been issued, including all ex-deputies, the candidates for the 1920 elections, notable members of the Party, and the Editors of the four Venizelist newspapers in Athens.

**The British Naval Mission.**

The Chief of the British Naval Mission to Greece, Vice-Admiral Aubrey Smith, and the Minister of Marine, M. Mavromihalis, have returned from their tour to Constantinople and Smyrna. The remaining members of the British Mission have now arrived in Athens, including the following: Rear-Admiral Wardle, Engineer Captain Bartlett, Surgeon Captain Atkinson, Engineer Commander Sebastien, Lieutenant Commander W. P. Stocker, Lieutenant-Commander A.D. Lacy, Lieutenant-Commander G. R. Cousins, Lieutenant Berry, Sub-Lieutenant Pollard, and Sub-Lieutenant Whittaker.

Piræus

FURNESS (Hellas) LTD

*General Ship & Freight Brokers, Coal Importers, Stevedores & Clearing Agents.*

Goods forwarded to all Greek Coast-wise Ports, dutied and delivered to any address in Piraeus or Athens, or stored in Private Warehouse.

APPOINTED AGENTS FOR:—

Furness Line
Johnston Line from U.K. and Cont.
Prince Line from U.S.A.
Ocean Salvage Co., Limited.

APPLY TO:—

FURNESS (HELLAS) LIMITED,
Spyraki Building,
Piraeus.

*Cables*: "Furness." *Tele*: 43 Piræus.

**The New Patriarch.**

The news of the election of Monseigneur Meletios Metaxakis, formerly Metropolitan of Athens and now in the United States of America, as Patriarch of Constantinople, was received here with much surprise. The Government which, up to the very last moment, was hoping that the Patriarchate would postpone the election, is now extremely annoyed to see that not only did the latter disregard its wishes, but proceeded to elect the very last person on earth of whom the Cabinet would approve. It goes without saying that the Government will not recognise the election of Monseigneur Meletios; and this would, without the slightest doubt, result in a complete and definite breaking off of relations between official Greece and the Head of the Greek Orthdox Church.

**General News.**

The Direction of Foreigners and Exhibitions of the Ministry of National Economy, has been requested to formulate a Bill proposing a tax of 10 drachmae on every foreigner visiting Greece for the first time.

Three teachers of the Turkish school at Adrianople have been arrested by the Greek authorities on a charge of spreading disquieting rumours to the effect that Thrace will shortly be restored to Turkey.

The resignation of M. Matsas having been accepted, M. Doumas has been appointed General Manager of the State Railways.

## CYPRUS.

*Nicosia, November 15.*

**A Munificent Gift.**

The Greek Community has been agreeably surprised by the news that the entire cost of rebuilding the Gymnasium, which was destroyed last year by fire, is to be defrayed by the generosity of a Greek citizen, M. J. Vergopoulos. The donor desired that his name should not be divulged, but it became impossible to keep it secret. The Greek Council of Education to whom the announcement was made (by M. K. Pavlides, a friend of the benefactor, and Editor of the *Phone tes Kyprou*) at a meeting presided over by the Archbishop, at once passed resolutions warmly thanking M. Vergopoulos. His name is to be inscribed in letters of gold on the pediment or other conspicuous part of the new building. The inscription will record that the Gymnasium was founded by the martyred Archbishop Kyprianos, that it was destroyed by fire in 1920, and rebuilt by M. Vergopoulos in 1921. This generous gift will enable the Committee to devote money collected for the Gymnasium to other school buildings, which are much needed, outside Nicosia.

*Nicosia, November 29.*

**The Greek Attitude.**

It is now generally taken for granted that wider powers are to be offered to the island, and the Greek leaders have practically decided what line they will take, while continuing to agitate for "union." The situation, they say, is analogous to that of the Ionian islands when Mr. Gladstone's Government proposed to bestow the privilege of conditional autonomy. There was in the islands a party which was in favour of unconditional acceptance of the offer. Had its views prevailed the Ionian islands would have remained until now as they were then, but the "liberal" element thought otherwise; and their leader and spokesman, M. Lombardos, proceeded to London and had personal interviews with Mr. Gladstone. He persuaded that statesman that the islanders, while gratefully accepting, as was their duty, the reforms offered, could only regard them as a step towards complete incorporation with Hellas, which was the object of their aspirations. Mr. Gladstone was greatly impressed by the views, and union was afterwards in due course bestowed by H.M. Government. The right policy, it is urged, is therefore to accept the reforms which are to be offered in the same spirit, as only an instalment of a yet larger gift. The

Digitized by Google

cases are precisely similar, and here is an example which should be followed in Cyprus. "If the British Government desire to introduce reforms, it is their business; it is ours to devote our whole energies to one object only, that of incorporation with the Mother Country."

**The Law Courts.**

Complaints are being made regarding congestion of work in the Courts at Nicosia. The highest tribute of praise is given, and always has been given, to the administration of justice in Cyprus by all classes of the people. But from time to time the Nicosia courts have not been able to cope with the work thrown upon them, and complaints have been presented on several occasions respecting the constant adjournments and consequent accumulation of arrears; and the appointment of an additional judge has been asked for. A remedy has generally been sought by calling in the aid of the British judge of the District of Kyrenia, where judicial work is comparatively light. So great is the pressure of work again at present that, to avoid expense and much loss of time, suitors are obliged in many cases to settle matters out of court; and strong representations are being made to the Chief Justice and the Government that an addition to the Bench may now be made.

**General News.**

The High Commissioner, Mr. M. Stevenson, will, it is said, proceed to England for a short visit.

The Greek Archbishop has called a general meeting for December 4, to ratify the programme drawn up for the new union campaign and the organization scheme.

Cilician refugees, both Greek and Armenian, continue to arrive by every opportunity. They bring tales of the terror and despair caused by the Franco-Kemalist Agreement. Several Greek steamers filled with refugees are expected.

## ASIA MINOR.

*Smyrna, December 6.*

**Turkish Brigands.**

News has reached Smyrna that a farmer and his family riding to Alaman Boghazi, north of Ephesus were overtaken by Turkish brigands and slaughtered. The brigands, however, were caught, accidentally, by a party of Greek hunters who were out for wild boar. A fight took place and three of the brigands were killed and one escaped.

Major-General Raymond de Candolle, C.B., C.E., General Manager of the Ottaman (Aidin) Railway Company, accompanied by Mrs. de Candolle and her daughter, Lady Kinnaird, and a party of friends visited the ruins of Pergamus last week-end, and fortunately escaped the Turkish bands that "work" the Soma-Panderma road. The party, whilst at Soma, were advised that the road was dangerous, and that several travellers had been "held up" the day before and three killed.

**Cicilian Refugees.**

The greater part of the refugees from Cilicia, after spending a fortnight at a quarantine station at Klazomene, have been shipped off to various ports in Greece proper. M. Sterghiades, the Greek High Commissioner, has maintained his decision not to allow any of these refugees to settle in Smyrna.

**The British Seamen's Hospital.**

The Smyrna British Colony have evinced great satisfaction at the news that the British Seamen's Hospital, at the Point, will be shortly re-opened, after being closed for 11 years, under the management of Miss Williamson, of the Williamson Nursing Home. The British Foreign Office has at last sanctioned this step, and only the details of the scheme remain to be worked out by Sir Harry Lamb, Dr. Chesseaud, the hospital doctor, and the local committee. The hospital is entitled to £6,000 from the British Government, and if this money is not at once available a philanthropist has offered to advance the amount pending payment by the Government.

## SYRIA.

*Beyrout, November 23.*

**General Gouraud's Proclamation.**

On November 9 General Gouraud addressed to the inhabitants of Cilicia and of Aintab and Killis a message regarding France's decision, "in her generous desire to restore peace to Turkey . . . . to hand over to the Ottoman Government one of the old provinces and two of the old Turkish towns of the empire, which she occupied in virtue of the additional clauses of the Armistice of Mudros." This message has only just been communicated to the local press for publication, but the essential portions of it are sure to have been cabled to London. It urges the Christian populations of the district to be transferred to remain calm, and to have confidence in the Turkish administration. In one passage the General calls upon all good citizens, to whatever religion they may belong, to heed his words; to "keep calm, and not to obey a wild impulse that may throw them on the road of exile and misfortune, where they could rely on no adequate help." In another he says: "To leave is to court a disastrous adventure, to which no happy issue is visible. To remain is to keep the fruits of the labour of ancestors, and revive thereby in peace the prosperity of Cilicia, Killis, and Aintab."

Unfortunately this eloquent appeal has been made in vain, and the earnest assurances it contains have not been heeded. Panic has seized the Christian population. The captain of a Greek steamer that transported about 850 of these unhappy fugitives from Mersina to Cyprus, Jaffa, Haifa, and Beyrout declared to the writer that not less than 170,000 Greeks and Armenians have swarmed into Mersina from the interior. This estimate may be exaggerated, but in Beyrout itself there are said to be not less than 1,700 Armenians who have been given such shelter as was possible in the convents and churches or in the houses of compassionate co-religionists. Some have had to camp outside the town. Every available steamer in Syrian and Egyptian waters has been rushed to Mersina, and thousands have already been transported to various destinations, such as Rhodes, Piraeus, Salonika and Constantinople, or to Syrian, Palestinian Cyprian and Egyptian ports. As the 25th of the month is said to have been fixed as the limit of the evacuation period, the fugitives are taking every available means of transport. Wealthy merchants have been travelling almost as beggars, with only trifling sums on them in such cash or jewelry as they were able hurriedly to collect and take away with them. The authorities here, in view of their inability to cope with such a large and sudden influx of refugees (the shortage of houses being already keenly felt by the native population), have tried to prevent the landing of refugees who arrived this morning on Italian and Khedivial Mail steamers, and to redirect them to another destination; but I now learn that, thanks to the representations of the British Consul-General, the refugees on board the Khedivial steamer have been allowed to land.

The ruin and loss in the retroceded territory must be appalling, and fortunes that had survived the war must have been lost in a few days. When it is remembered that the economic life of Cilicia was constituted mainly by the Christian element, viz., Greek and Armenian, the magnitude of the loss to the country will be realized. This loss is bound to react not only on Turkey, but on France as well. Hence the passionate appeal of the High Commissioner.

That the Greeks should hurry away is easy to understand, for it would be expecting too much from the Turks that they should tolerate in their midst the men of a race with which they are in bitter conflict. Different, however, is the case of the Armenians, unless they should have been indulging in provocative acts against their Turkish neighbours while under the temporary protection of the French Flag. It must be admitted, however, that the memory of the Aintab massacres is still quite fresh in their minds.

# A TURKISH NIGHT.

BY

WILLIAM RANSTED BERRY.

(*Dramatic Rights Reserved by the Author.*)

## DRAMATIS PERSONAE.

**HALIL :** *A mountaineer of Anatolia.*
**FATMA :** *The wife of Halil.*
**MUSTAPHAH :** *A private soldier of the Turkish Gendarmerie.*
**AN OFFICER :** *Of the Turkish Gendarmerie.*

**Scene :**

*Interior of a Turkish peasant's mud-brick house, or hut. At R., flush with the wall and quite unadorned, a very small fireplace from which the steady glow of charcoal embers casts a ruddy though faint light into the room. At back, centre, a doorway giving entrance to a second room, which is dark. At L., a wooden house-door of primitive design ; beyond it, rather low in the wall, a small window closed with a wooden lattice of open scroll work and having a wooden shutter opening inwards, which is thrown back. On either side the fireplace, and in the wall-angle between the fireplace and the door at the back, are low broad couches or divans formed by spreading several thicknesses of rugs over thin mattresses laid directly upon the floor. Between the two doorways, and below the window, several large wooden chests stand close against the wall. Here and there, deep niches and long lateral recesses cut into the soft mud walls at irregular intervals are filled with native pots and pans, brass coffee-grinders and tiny china coffee cups. A pair of black native slippers stands beside the door. The wall-surfaces are smooth mud plaster ; the floor, covered in the main with worn rugs and matting, is hard packed earth. The ceiling is extremely low and quite flat, its thin round rafters of unfinished sapling trunks being visible. There are no chairs nor other furniture.*

**Discovered :**

*Halil sitting cross-legged upon one of the couches beside the fire-place, smoking a narghileh which stands at his side. He wears the costume of an Anatolian mountaineer—a fez with a coloured cloth wound around it turban fashion with the fringe hanging over one ear ; a tight-fitting striped shirt of bright aspect ; a short black-embroidered jacket of light blue ; baggy breeches of coarse white linen reaching only to the bare knees, and blue cloth leggings shaped like ancient metal greaves. A broad plaid sash is wound many times about his waist, and over it is strapped an enormous leather girdle fully a foot wide of which the front part is furnished with numerous pouches and pockets as well as with the butt of a modern revolver and the dagger-hilt of a knife. He is in his stocking feet, for the slippers near the door are his. He stares steadily into the fire, and puffs regularly at the mouthpiece of his narghileh in such fashion that the live coals lying upon the tobacco in the bowl glow and fade with equal regularity.*

*After an interval, there is a fumbling at the latch of the house-door. Halil turns his head to watch. The door is slowly opened to its fullest extent and Fatma enters, bowed almost double under a great load of faggots and brushwood which she carries upon her shoulders. With difficulty she loosens the ropes which bind her burden and allows it to fall from her shoulders into the corner behind the door. She straightens herself wearily and wipes her face with a loose end of her head cloth which ordinarily serves the purpose of a veil. She wears a garment of gaily striped material, like calico, tight on the arms and upper body but expanding below into loose trousers gathered at the ankle. Her feet are bare. Upon her wrists and forearms are a number of heavy bracelets, and about her neck a necklace of silver coins.*

**Halil** (*having turned again to his contemplation of the fire upon recognizing his wife as the entrant*) : It was sunset an hour ago, Fatma. You stay too late in the valley where such a night would breed fever in the Sultan himself. And why do you bring that rubbish here to litter up the house ?

**Fatma** (*arranging the firewood in the corner as neatly as may be, and sweeping up stray twigs with a besom*) : Allah forgive me, O my Lord, but rain is coming down the mountains, and there is no dry wood laid by. The donkey too——

**Halil** (*turning sharply to look at Fatma*) : Now, by the beard of the Prophet, has that accursed beast again broken his hobbles ?

**Fatma :** Yes, my lord, he has. But, praise be to Allah, he has not strayed far this time, for I saw him in the wheat field of Mehmet Agha as I came by, and would have stopped to catch him—only, when one is alone it is not easy to replace a bundle of wood such as—

**Halil** (*throwing the mouthpiece of his narghileh from him in exasperation* : Was there ever such an animal in all Islam ? He breaks ropes as though they were threads—and usually eats them into the bargain ! May his religion be destroyed, and his ears drop from his head to shame him before all donkeys !—Yet it was a wise thought in him to choose the field of Mehmet Agha to browse in, and not his master's! May Allah have mercy on his belly ! You say there is rain on the mountains ?

**Fatma** : Yes, a thunderstorm. But it is moving slowly. There is yet time to catch the donkey before it reaches us.

**Halil :** There *must* be time, unless it be the will of Allah that I endure a wet skin for the sake of a mis-begotten, four-legged, beast of Satan, for I would not stir from this spot to fetch the king of donkeys until I have had at least one cup of coffee, O Fatma, dispenser of fragrant delights !

(*Fatma selects from the wall-niches a cylindrical brass coffee grinder and other necessary utensils which She brings to the hearth where She squats upon the floor and busies herself during the ensuing conversation in the preparation of coffee after the native fashion—grinding the coffee beans to a powder which She mixes with sugar and water in a long handled pipkin. She places the pipkin among the embers of the fire and sets herself to watch the brewing of its contents*).

What news is there ? Did you see anyone from the village ?

**Fatma :** I saw no one—except the donkey. And he is no new sight ! But yet———one thing I did see—at sunset—

**Halil** (*suddenly puffing like a grampus at the mouthpiece of his narghileh without visible result, each puff being accompanied by the gurgling sound which has given the water pipe its other name* : "*hubble-bubble.*") More fire for my pipe ! (*puff, gurgle*). Tobacco is not what it used to be—(*puff, gurgle*)—when I was younger ! (*puff-puff, gurgle-gurgle*). Then it would smoulder all day long—(*puff, gurgle*)—like good tinder ;

(*Fatma has hastened to extract a glowing ember from the fire with a pair of long iron pincers, and has laid it upon the ashes in the bowl of the narghileh. Halil's succeeding puffs are rewarded by whiffs of smoke, which increase in volume until the end of his speech finds him an active volcano*)

—but now (*puff, gurgle*)—I can suck and suck like a dying carp—(*puff-puff, gurgle-gurgle*)—and not draw enough smoke to satisfy a flea !—Am I a camel (*puff-puff, gurgle-gurgle*)—that I should grunt and gurgle for no reason ?

Digitized by Google

*(the pipe is now well alight, and Halil settles himself to smoke comfortably).*

You saw no one but the donkey until sunset?—Who did you see at sunset?

**Fatma:** I saw a number of men moving over the shoulder of our mountain.

*(motions up-stage)*

They seemed to carry guns in their hands—but they were very far away.

**Halil:** Guns? They were probably driving partridges. It would have been a good time for it on a day like this when the birds settle down early.

**Fatma:** Do soldiers drive partridges?

**Halil:** *(taken aback)*: Soldiers?—You saw soldiers on the mountains?

**Fatma:** It looked to me like the uniform of the gendarmes—but they were very far away. There must have been at least a dozen of them.

*Rising to her feet, Fatma crosses to the wall-niches and brings to the hearth two small coffee cups without handles, about the size of egg cups).*

**Halil** *(uneasily)*: Gendarmes? Twelve or more of them? Some devil has a spite against you, Fatma! Some afrit has put gendarmes in your eyes, where there were only grazing goats, or bushes moving in the wind!—Why, there are no Gendarmes quartered in our district nearer than Urganli, and that is more than a day's journey.

*(Fatma takes the pipkin from the fire and pours coffee into the two cups, handing one of them to Halil who receives it mechanically the while He gazes at the fire).* What would bring them all this distance—so many of them together—to climb over barren mountains?—unless they have heard something—unless they search for someone!—

*(He slowly turns his head until his eyes encounter Fatma's).*

**Fatma** *(dropping her coffee cup and clutching Halil's knee with one hand while the other fumbles at her breast)*: Not that! Oh, not that!—It could not be——!

**Halil** *(throwing off his agitation with an effort, and patting Fatma's hand which lies on his knee reassuringly)*: No!—No! It could not be that—It must have been a vision that you saw—or goats—not soldiers. We would have heard—there would have been a warning—

*(He drinks his coffee with a loud sipping sound as is the native custom, and rises to his feet. There is a roll of distant thunder).*

**Halil**: But come. Let us go and look for that seventy times abandoned donkey! May his tail wither to nothing, and his grave be unknown! If a devil bewitched you, Fatma, he may bewitch the donkey too; if they were really gendarmes that you saw, they will surely *steal* the donkey!

*(looks quizzically at Fatma as the point of his own sentence dawns upon his peasant mind).*

Now by the beard of the Prophet, we stand to lose our donkey either way unless we hurry to spite the devil or the gendarmes!

*(He crosses to the house-door where He steps into his slippers which stand at the threshold while Fatma hands him a stout stick, like a quarter staff. Exeunt, closing the door behind them).*

*(There is an interval. A MAN'S FACE appears behind the lattice of the window, gazing stealthily in. It disappears. Presently the door-latch is softly lifted and the door is cautiously opened far enough to permit the appearance of a swarthy head. The eyes scrutinize the room quickly and furtively. Its emptiness is evidently satisfactory, for the body of MUSTAPHAH follows his head through the door with cat-like agility and noiselessness. He is dressed in the uniform of a private in the Turkish gendarmerie—a fez of imitation astrakan with a blue cloth top; a dark blue tunic with a single row of brass buttons, and trousers of the same colour with narrow red piping down the seams stuffed into the tops of white woollen socks. A yellow leather cartridge belt, heavy with ammunition for the rifle which He carries, is strapped about his waist. He closes the door gently, slips off his slippers, and glides likes a shadow to the doorway at back, centre, where He peeps into the darkness of the second room until He is satisfied that it, too, is empty, whereupon he crosses to the fireplace, stares for a moment at the condition of its embers, and then turns to the narghileh and stirs the ashes in its bowl with his fingers. He uncovers a live coal and is so startled to find this evidence of a recent smoker that He throws a last nervous look about him and runs on tiptoe to the house-door which He opens to look out and listen for a moment. He draws back into the room long enough to step into his slippers and to lean his rifle against the wall near the door-jamb; then He steals out into the night, closing the door behind him. There is again an interval—until the house-door is suddenly flung open in a fumbling mannner and MUSTAPHAH re-enters staggering under the weight of the body of a wounded Turkish officer which He carries across his shoulders. He struggles to the nearest divan upon which He places his burden as gently as may be. The Officer is dressed much as is Mustaphah, save that He wears military boots and a revolver in a holster, while gold braid and insignia of rank appear upon his fez and tunic. He lies huddled on the divan in an unconscious condition, breathing heavily. There is a good deal of blood on his tunic which is torn at the throat, and his face is almost hidden under a rude and blood-stained bandage which binds his head. Mustaphah springs back to the house-door which He closes after a long look into the night He kicks off his slippers and re-crosses to the officer lying on the divan whom he regards thoughtfully. Stooping down, He unbuckles the revolver belt with its revolver, and fastens it about his own waist. As He straightens up his eyes light on the doorway at back, centre. Running to it, He disappears only to reappear in an instant and return to the body on the divan which He throws across his shoulders as before and carries out of sight through the doorway at back, centre. He returns once more, empty-handed, to recover his slippers and rifle with which He again retreats through the doorway. There is a third interval, broken by the re-entry of Halil and Fatma in the order named).*

**Halil** *(tossing his stick upon the pile of brushwood in the corner and striding across the room to the fireplace where He squats to rearrange the fire while Fatma closes the door, recovers his stick, places the slippers which He has kicked off neatly side by side against the wall, and adjusts her dress)*: A fine black night for a donkey to choose to go roaming over a mountain chain! He has been in our family as many years as there are hairs in the beard of the Prophet, yet it delights him to run from me as though I carried pestilence! Also it is unbecoming a beast of his age to run! May his ancestors perish and his body shrivel—as mine does now for lack of food.—Let us have food, Fatma! Food! Or by the Koran——

*(Fatma obediently moves to the doorway at back, centre, but is suddenly confronted by The Soldier, Mustaphah. She recoils with a stifled scream, covering her face with her veil. Mustaphah, completely ignoring her, moves a few paces into the room and in the graceful Mohamedan fashion salutes Halil who has sprung to his feet and whipped out his revolver).*

**Halil**: Allah protect us!—Who are you? And by what right are you in my house?

**Mustaphah:** Allah pardon me! And his blessing be upon this household! I do the service of the Sultan—

**Halil** *(contemptuously)*: The Sultan! Since when has robbery become the service of the Sultan?

**Mustaphah**: Robbery, Effendim? Now, by my head, you do me a great wrong! You see? I wear the Sultan's uniform, and in his name I have sought shelter here—for a friend—who is hurt. *(Motioning to the doorway behind him).* He lies in that room.

**Halil** *(moving a pace or two toward Mustaphah)*: In that room? Another one of you? How was he hurt?

**Mustaphah** *(slowly)*: He was wounded, Effendim.

**Halil** *(in dismay)*: Wounded? And by whom?

**Mustaphah** *(looking intently at Halil and hesitating*

Digitized by Google

*before replying*) : Kara Yousouf did it, Effendim.

**Halil** (*starting backward in consternation, while Fatma, who has stood huddled against the wall at back, listening, stifles a cry in her veil at mention of Kara Yousouf*).

**Halil :** Kara Yousouf ?—The brigand ? (*Mustaphah nods his head in affirmation*) Here in our mountains ? —Impossible !

**Mustaphah** : Nevertheless, it is true, Effendim. Nothing is impossible that concerns brigands—least of all, mountains. If you like, I will tell you the way of it so that you need no longer be afraid when you hear the name of Kara Yousouf !

**Halil** (*much agitated, but striving to control himself. He returns his revolver to his belt*) : So——that——we shall——no longer——be afraid ?——You mean——? You mean——?

**Mustaphah :** That Kara Yousouf——is dead !

(*Halil's tense nerves appear suddenly to relax as though He had sustained a blow, and He half turns away from Mustaphah with head bent down so that the latter may not see his face wherein suffering and horror, which gradually give place to suppressed fury as the action of the scene continues, are equally mingled. Fatma, who had hung on Mustaphah's answer with breathless intensity, sways as though about to swoon, but recovers herself enough to stagger behind Mustaphah and, unnoticed by him, throws herself prostrate upon the divan against the wall at R. where She lies motionless, her head smothered under her veil*).

**Halil** (*in a low voice, and like a boy repeating a lesson*) : Kara——Yousouf——is——dead ! (*louder*) : Tell me how it was.

**Mustaphah** (*first stepping back and glancing into the dark room behind him*) : Information—I do not know how—came to us as we lay in barracks that Kara Yousouf had left his hunting ground in the North and had come to these mountains of yours—I do not know why. Perhaps he was uneasy—up there—in the North. Perhaps they had changed the caravan routes. In such matters he was as the Prophet in wisdom, they say. We came—a whole company of us—and we scoured these hills night and day for three days, for our men were eager since the price upon Kara Yousouf's head has been doubled. (*Takes from his pocket a small black wooden box containing native tobacco and cigarette papers, and begins to roll a cigarette*) This afternoon, Effendim, our officer and myself became separated from the others—up there—(*points up-stage*) where the great ravines are. We started down one of them to reach the valley—and in a little while, as we came suddenly around the corner of a cliff, we met him face to face—Kara Yousouf. Yes, him and one other. There was a fight. By Allah ! He fought like seventy times seven devils !—But with us was the right, and the sword of Allah—so we bore them down—him and the other—and we killed them—and my officer, who lies in your room behind me, though he was weak from loss of blood, cut off Kara Yousouf's head so that we, and no others, should have the reward. (*Goes to fireplace and kneels down to light his cigarette from an ember which he picks up with the pincers previously employed by Fatma. Halil recoils as He passes so that his face continues to be partly turned away from Mustaphah. The latter rises again to his feet*) Now tell me, was it not well done ? For a loyal subject of the Sultan you do not rejoice overmuch at the death of one of his enemies—this brigand—this dog-born Kara Yousouf.

**Halil** (*in a low and thick voice*) : Oh ! it was well done ! —What more ?

**Mustaphah** (*during this speech, goes to doorway at back, centre, and reaches in for his slippers, which He puts on, and his rifle, then crosses to house-door at L.*) : More ? There is no more. This was the first house we saw as we came down the mountain. My officer could go no farther because of his wounds. I carried him in here. —And now I leave him in your care for a little while. For I must go—back up the mountain—to bring the head of Kara Yousouf which I hid when I could no longer carry my officer and it too. I heard hyenas last night—they shall not rob us of our reward. (*He opens the door, letting in a gust of wind and the sight of distant lightning*). Let your wife look to him. He needs it. (*Nods towards the doorway at back, centre*). I will return very soon. Peace be on your house, O my brother ! (*Salutes as before and Exits, closing the door. The click of the closing latch rouses Halil from the kind of impotent stupor in which He has stood. His face works uncontrollably as He glares at the closed door*).

**Halil** (*raising his clenched hands above his head in a frenzy*) : Pig !—Dog !—Son of a line of murderers !—May Allah cut short thy life ! (*Glances at the doorway at back and controls himself. His eyes rest upon the prostrate form of Fatma. He is on the point of going to her when He hesitates, runs noiselessly to the house-door, opens it, looks out, closes it softly, re-crosses to the doorway at back where He stands looking and listening a moment, and then drops to his knees beside Fatma whom He shakes roughly by the shoulder* : Fatma ! —Fatma !—You heard !—You heard all that he said ? (*Fatma allows Halil to raise her to her knees, when her veil drops from her face showing it swollen with tears*).

**Fatma** (*uttering a long drawn wail*) : All—a—a—a—h ! (*Halil claps his hand over her mouth in a fury, and half drags, half carries, her down-stage to R. as far away from the doorway at back as He can*).

**Halil** (*hoarsely, and shaking her*) : Be silent ! thou mother of a thousand screams !—May Allah pluck out thy tongue ! (*Fatma regains partial control of herself, but low moans escape her*). Now answer me ! Did you not hear what he said ? That they have murdered Kara Yousouf ?—*Our* Yousouf.

**Fatma** (*wailing, and wringing her hands*) : Yousouf !—My son !—My son !

**Halil** : Yes, and my son too !—Our son. But do I weep like a waterfall and wail great nothings while one of his murderers lies under my roof—May Allah destroy his sight !—And the other is gone to fetch his head ? —his poor severed head ? No ! I am a man and a father—the father of Kara Yousouf whom the Sultan made a brigand ! Yes, the Sultan !—What was left to our son when they seized his land—his money—and threw him into prison on a false charge ? His wife ! Yes, our more than daughter, Hasneh. But what was left to him when he was finally set free at the end of two years ? His wife's grave, and a tale whispered at night behind locked doors among the mountains of her body violated and disfigured before they killed her ! And all—all—in the name of the Sultan !—Have you forgotten, Fatma ?

**Fatma** (*in a low tense voice*) : Forgotten !—Allah bear witness to the truth of it !

**Halil :** Had he then no right to set himself against the Government ?— He became a brigand. Yes. But not as a robber of travellers and poor villagers, but as an enemy of the Government, taking from its caravans the gold which the Sultan took from him, and taking from its soldiers the lives which should pay for the one dear life the Sultan took from him.—Yousouf lived—and died—for his revenge !—and now I—his father—also have work to do ! (*Ferocity and determination distort his face as He motions to the doorway at back*). If these two live to see another day, may my name become a mockery throughout all Islam—may Allah strike me dead ! (*During this speech Fatma has quite recovered herself. A hard gleam shines from her eyes, and her face reflects her husband's purpose*).

**Fatma :** Revenge for Yousouf !—Allah give me strength to help you !—But how—how can it be done so that none shall know ?

**Halil :** It must be done to-night. You heard the soldier say that he and—(*points to doorway at back*)—this officer had become separated from the others when they met our son. No one has seen them since but you and I. No one shall ever see them again, for Allah is merciful ! Remember too that these troops come

Digitized by Google

from a distance, and that no one of our village will dare to tell them that Kara Yousouf was our son. These two will be remembered only as men lost in the mountains—and our mountains keep their secrets well. (*Searching each other's eyes, they turn toward the doorway at back*).

**Fatma :** Then there is no time to lose, Halil. The soldier may come back at any minute. (*She runs to the house-door and lays her ear against it. There is nothing to be heard but the rising wind, and a distant roll of thunder. She passes to the window where She closes and bars its shutters. Re-crossing to Halil, she pulls at his arm and points to the door-way at back*).

**Fatma :** One sheep lies ready for your shearing. (*Halil had sunk into a reactionary daze when Fatma left him, but her touch recalls him, and his eyes follow her finger and remain riveted upon the doorway at back. Fatma plucks his knife from his belt and puts it in his right hand*).

**Halil :** (*Moving on tiptoe towards the doorway at back*) Allah be my witness ! (*Fatma turns to the hearth and crouches down before the fire. Halil has just reached the doorway at back when the latch of the house-door rattles, followed by a knocking. Halil faces about in consternation. Fatma springs to his side. They stand motionless staring at the house-door. The knocking is repeated. With a swift movement Fatma wrenches the knife from Halil's hand. She motions to the house-door*).

**Fatma** : Go ! (*Halil hesitates ; She pushes him. As He slowly crosses to the house-door, Fatma disappears through the doorway at back, the knife in her hand. With his hands on the door-bar, Halil looks over his shoulder The empty room tells him of Fatma's intention*).

**Halil** (*calling through the door*) : Who is there ?

**A Voice** : The soldier—Mustaphah. (*Halil unbars the door which is then torn open and Mustaphah impetuously Enters. Halil retreats before him to the centre of the room where Mustaphah, having slipped out of his slippers, follows him*).

**Mustaphah** (*excitedly and joyfully*) : Are you not Halil—Halil the son of Nouri ?

**Halil** : Yes.

**Mustaphah :** Then, by Allah, they were right !—If only I had known when we first came here !—If only he had told me before he became too weak !

**Halil** (*visibly agitated*) : Who ?—Had told you what ? (*Mustaphah is about to answer when a muffled and longdrawn cry, such as a man might make when struck a mortal blow, is heard from beyond the doorway at back. The Two Men are startled. Mustaphah turns sharply as though to go to the doorway at back, but Halil grasps his arm*).

**Mustaphah** : What was that ?

**Halil** : It was nothing—My wife is tending your officer's wounds. I suppose they hurt him when he moans like that.

**Mustaphah :** Moan ? Was that a moan ? Why, I have seen him almost cut to pieces, but I never heard him moan before. (*Looks uneasily over his shoulder at the doorway*).

**Halil :** It is because he lies unconscious.—Allah is greatest ! But what news has so excited you ?

**Mustaphah:** (*vaguely, his thoughts in the next room*): News? —(*his excitement returning with recollection*). News ? If you are indeed Halil, the son of Nouri, as I feel certain you are, I have great news for you ! (*During this speech, Fatma appears in the doorway, and is seen to creep stealthily into the room towards Mustaphah, who stands facing Halil with his back to the doorway. The knife is still in Fatma's hand, and it is evident that She intends to drive it between Mustaphah's shoulder-blades*).

**Mustaphah :** When I left this house a little while ago, I went to find no head ! I went to find the others of Kara Yousouf's band ! For I am no soldier, though you see me in this uniform ! I am Mustaphah—Mustaphah, the companion and lieutenant of Kara Yousouf himself ! (*Halil is thunderstruck, and Fatma, who now stands directly at Mustaphah's back with upraised knife, is motionless as She awaits the conclusion of Mustaphah's recital*). I told you there was a fight in the ravine. There *was* a fight and a bloody one, by Allah !—But the two who were killed were *not* Kara Yousouf and his companion, but an officer of gendarmes and a private !—May their ancestors be destroyed !—Kara Yousouf was wounded and could not escape, so he and I—for I, Mustaphah, was with him—stripped the uniforms from the bodies and put them on so that we might be received into the first house we came to.—And this house, O Halil, father of Yousouf ! was the first !

**Halil** (*in a dry whisper*) : Allah have mercy !

**Mustaphah** (*pointing over his shoulder with his thumb to the doorway behind him*). Do you not see ?—or has Allah scattered your wits ? The man you have sheltered under your roof, and whose wounds your wife has dressed, is Kara Yousouf—your son ! (*Halil staggers back in horror and Fatma, with a shriek, falls to the floor behind Mustaphah, the knife dropping from her hand. Mustaphah whirls about at the sound of Fatma's voice close behind him. He looks from her prostrate body to Halil in astonishment. Presently his eyes fall on the knife on the floor beside Fatma. He moves slowly toward it with his eyes glued upon it. Stooping over, He picks it up gingerly and touches the blade with the fingers of his other hand. They come away covered with blood. With a shudder, He flings the knife from him, recoiling from the body of Fatma as He does so. Halil has sunk upon the divan nearest the fireplace with his head in his hands in an attitude of collapse. Mustaphah stares stupidly at Fatma, at Halil, and then at the blood on his fingers. A look of comprehension and horror creeps into his face. With his eyes on Fatma, He tiptoes to the doorway at back through which He disappears. A moment later He reappears and glares wildly at the motionless figures of Halil and Fatma. Suddenly, avoiding the latter's body as He would an unclean thing, he runs to the house-door where, without shifting his glance from Halil and Fatma, he steps into his slippers, seizes his rifle and opens the door*).

**Mustaphah** (*in a whisper*) : Merciful Allah !—They have killed their own son ! (*Exit running*).

(*Slow Curtain*).

## NEWS IN BRIEF.

The first steamer of the new German Morocco line will leave Hamburg for the Moroccan coast at the end of the month. This new line has been formed by the Flensburger Dampfer Company, the Hamburg Rederei Wilhelm Hamsoth, and the Flensburg Ocean Line.

A Reuter Cairo message, dated Decembes 10 states, —Acting under martial law, the authorities have deemed it advisable to invite Colonel Kennedy to quit Egypt, and he is leaving forthwith.

It is officially announced, reports Reuter, that since the outbreak of the Malabar rebellion 1,826 Moplahs have been killed, 1,500 wounded, 5,474 have been captured, and 14,241 have surrendered voluntarily.

Heavy snowfalls are reported in the interior of Asia Minor, especially in Angora.

# NEAR EAST BOOKSHELF.

## NORTHERN AFRICA.

**"STUDIES IN NORTH AFRICA." By Cyril Fletcher Grant. (London: Simpkin, Marshall, Hamilton, Kent and Co. 8s 6d net.)**

The first impression that one gathers from this book is of the intense vividness and life with which civilization after civilization, from Carthaginian to Turkish, is presented. From the coming of that Queen who entertained Aeneas to the earlier portion of the Nineteenth Century, the author, in guiding us from the ruins of one Empire to those of another built up from the debris of the last, tells us the history of Northern Africa. It is no bare recital of events and stones, but the story during some twenty-seven centuries of the peoples who lived in these lands. It describes their governments and their religions, their wars and their martyrdoms, their work and their pleasures, with an ease and skill that leave in the mind a series of unforgettable pictures; and not only are we told those things which concern names famous in history, we are also shown the everyday life and interests of the people in town and country.

In the description of the mosaic work in a large private house at Oued Atmenia, there is something which makes its owner a man of habits as familiar as those of dozens of acquaintances. We can see this Roman in the hot chamber of his baths, reflecting over the pictures of his horses and remembering rides and races of his earlier days. And no better praise could man, living or dead, desire, than those under the mosaic of a favourite racehorse: "Whether you win, or not, we love you, Polydoxe."

Time after time one is tempted to quote, for this is an eminently quotable book. The message of the Emperor Aurelian, the curses of racing enthusiasts, the cemetery near the cisterns at Malga, we must leave, with so much more that is good, to the discovery of the reader.

To all those interested in the history of Northern Africa, and equally to those travelling for pleasure, this is a book to recommend. We look forward to the second volume promised in the preface.

## A DESERT FILM.

**"THE HEART OF THE DESERT." By Honore Willsie. (London: Thornton Butterworth. 8s.)**

This popular American author again gives us a story of the Arizona Desert. This time her hero is a Red Indian, partly Apache. His name is Cartwell, and he is well educated and by profession an engineer. Also he has "panther strength" which produces "panther grace," "large, long lashed Mohave eyes," "a straight, thin nostrilled nose" and "a stern, cleanly modelled mouth and square chin." The heroine, Rhoda, who has made up her mind that she is slowly dying, is a vision of "delicate loveliness," with whom every man that she meets falls in love at first sight, and who causes one of her victims to exclaim: "I ain't got any rights except the rights that any living man has got to take care of any white thing like her. They get me hard when they're dainty like that. And she's the daintiest I ever saw." Cartwell kidnaps Rhoda and carries her off across the desert for her own good. In spite of his determination to prevent her escape and the fact that he makes her ride all night in a fainting condition, his respectful chivalry is held up for our admiration, and when he looks at her his eyes are "very, very tender." After some months of this treatment she becomes perfectly—in fact remarkably— well and strong. We are shown alternately Cartwell and his Indian attendants flying through the desert with Rhoda and Rhoda's fiancé and two other men dashing in pursuit. Every now and then she is nearly rescued, but Cartwell's Indian cunning always triumphs. When at last, with a splendid gesture of self-sacrifice, he sends her back to her white friends, they throw away all their chances by deliberately preparing to shoot him undefended, in Rhoda's presence. We feel that they only get what they deserve when she finally conquers her prejudice against his race and goes off with Cartwell. In this scene, and as "for a long moment the two clung to each other as if they knew that life could hold no moment for them so sweet as this. Then they mounted, and, side by side, rode off into the desert sunset," the reader gives up the unequal struggle to visualise these people as walking the common earth and only sees them moving rapidly across a lighted screen.

## ON A SUBDUED NOTE.

**"MARGARET'S MEAD." By Jane Harding. (London: Wm. Heinemann. 7s. 6d. net.)**

The principal characters in this book find little but sorrow for themselves, and the secondary characters have quite as bad fortune in their own, smaller, way. The book, therefore, will not be enjoyed by readers who like to associate themselves with the fortunes of the people of whom they read; they will inevitably find the story depressing; and its subdued setting and the restraint with which it is told will add to their depression. Nevertheless it is a good book, and regarded only as a work of art, it will probably afford keen enjoyment to many readers. The characterisation is unusually well done, although we are sometimes tempted to wonder whether both Marion and Lottie would have retained quite so much originality and—we must add—refinement after the experiences through which they passed before the opening of this part of their story. We feel doubtful also about Walter. But the mistake, if mistake there be, is not in the delineation of these characters, which is excellent, but in the account given of their early days; we feel that the author sketched the characters skilfully from life, but that in fitting early histories to them, so to say, she has drawn on her imagination, with less successful results. There are minor blemishes in plenty, but they cannot obscure the merits of an uncommon book, and the author shows real skill in noting the small things that go to the making of character, and a remorseless honesty in setting them down, which will probably take her far if she continues to write. We may direct the attention of those who read the book to the impression created in Marion's mind by her lover's lighting a cigar as he leaves her after her refusal to go off to Africa with him, and the ruthless way in which her attempt to revoke her decision is baulked—by the smallness of a letter box! Renunciation comes, it is true. But how?—"Undesired, a thought jeered at her: a mocking, self-derisive thought that she would fain have slaughtered, and could not. It told her that not morals, nor ethics, nor principles had availed her in her strait; she had abandoned all. Accident had decided the course she should pursue." How often are our decisions, even on most vital points, altered by accident!

# MUSICAL NOTES.

## THE NATURE OF MUSIC.

**"MUSIC AND LIFE." By W. J. Turner. Methuen. 7s. 6d. net.**

I want to begin this column by recommending everyone who has the slightest artistic bent in him to buy and to read this volume of essays. For despite its charmingly irrelevant title, it is easily the most stimulating piece of criticism that I have come across of recent years, and it glows with sincerity and imagination. It is true that the author has not solved the connection between Music and Life, that, indeed, he only fitfully approaches it; but he does touch on all sorts of kindred topics, and one need be neither a musician, nor a musical critic, nor a philosopher, to understand his position. Given a certain degree of imaginative sensitiveness, anyone may find delight and enlivenment in the collection of vitalising essays.

As I say, this book stimulates thought, both in agreement and in disagreement, but as there is no entertainment in redoubling the many points on which the author is correct, I propose to attack one or two others on which I am not so convinced. Mr. Turner is first a poet, and his remarks on Music are, therefore, at once more suspect and more valuable. To begin, he sets out his belief that Music as much as Literature is a part of Life, as necessary, as inevitable, and as eternal: that, in fact, a mastery in, say, the arrangement of words (Literature) could not well exist without a similar and simultaneous mastery in the arrangement of sounds (Music). This intuitive conviction of course gives the lie to the ordinary historical methods, which date the beginning of Music from about the Middle Ages, just as will any belief, firmly enough held; and it leads him to the reasonably intriguing statement that the dead civilizations, like the Babylonian, the Sumerian, the Egyptian, or the Greek, produced music to equal the work of Beethoven or of Schubert. There is nothing to say about this *a priori* method, except to remark its charm: for it is a very grand supposition, this idea of the essential interconnection or inevitable co-existence of all the arts. I myself have for long been puzzled how to establish a theory that a work of art is an expression of life, and the corollary that its maker must be able to move naturally in other worlds of art than his own, but it has proved impossible with serious consistency to entertain the idea, and the reluctant (because less beautiful) conclusion has been drawn that a work of art is a work *per se*, that it exists independently of all other different kinds of art, and that there is now common ground on which all artists can stand. Of course there are artists working for the higher synthesis of all the arts, but they are very minor apostles.

After his sketch, admirably preferred, of the development of Music, the author proceeds to his capital discovery—that the nature of all music, that is, of all great music, is non-emotional. He says:—"I believe that . . . . music as an art has no business with the conveying of the emotions, and that it is the hall-mark of bad music, as of bad art generally, that it is emotional." This conviction he repeats many times in his book, but I think that perhaps it is less important than it sounds. At first anyone whose feet are not clogged with nineteenth-century mire is in agreement with his dictum, but when plumbed it seems to have meaning only as applied to the executive side of musical art. For when Mr. Turner speaks of the particular value of musical works themselves, he is nearly always right; and if he chooses to deny emotion to the best works of, say, Bach, Mozart, or Beethoven, one can merely quibble with him on the definition of "emotion." However, he does dwell on the executive side of music, and here one can bump up heartily against him. I grant at once that if the superficial emotions (such as grief or joy or hope or despair or fear or triumph) and nothing else are stirred one knows instinctively that something is wrong, though personally to have such emotions stirred by art I find extremely difficult. But it is not quite so easy in practice as he makes out to distinguish between refined and purged emotion and the sensuous imagination (as he himself would seem to confess when he admits that "folk-music sprang from 'emotion recollected in tranquillity' plus a certain direct joy in expression.")

Imagination is, of course, the first thing of all, the divine thing without which all art is useless and of no account; but surely it has to be subsidized or supported by the more significant matters of human experience, including the emotions, which both direct and are directed by the imagination? Mr. Turner brings forward as the perfect, non-emotional artist, Heifetz, the young violinist over whose merits opinions are divided, and he cunningly and daringly suggests that Heifetz's playing may, if this "great" fiddler prove in later life to be an inferior person, deteriorate. Now here I am enabled to differ, in calmest possible respect, from Mr. Turner. If creative art is to be kept separate from emotion, as he says it is, why cannot Heifetz's imagination, which informs his executive art, also be unsullied by his experience? Of course it is true that certain artists have died young having achieved their all, that they would certainly have deteriorated had they lived longer; but that is a sign of their limitations, not of the nuisance of continued experience. I am not for a moment convinced that it is through the mere amassing of emotions that the genius of a composer or of any kind of artist so often degenerates with years into talent; but I am convinced that there are degrees of perfection, and that a matured perfection is preferable to a youthful perfection, though each be equally an accidental product. There is something in Mr. Turner's certitude that the perfect musician cannot improve that I don't understand: it almost seems at times that he prefers the perfect to the great. But it may be that his "non-emotional" theory works better for his perfect people (i.g. Mozart and Heifetz) than for the great people (e.g. Beethoven and Busoni), and I think he sometimes forgets that the calm of tranquillity, that sort of divine serenity which he so much admires, is of itself a kind of emotion.

It is interesting, after reading this book, to realize how Mr. Turner's confidences have provoked rival confidences, how his doubts have discovered echoing doubts, how, in short, his provocative personality is stamped on his book. His is certainly an extraordinarily exhilarating work, and whether he is writing on Opera, or on Song-writing, on Programme or on Jazz Music, on César Franck, or on Scriabin, his direct and sincere views are impressively stated. There are two things in the book, however, for which I am sorry. First there is his belief that music-hall songs and rag-time have a certain value, a heresy that is almost orthodox by this time, but nevertheless is bosh; and secondly, an apparent belief that Busoni (of whom he entertains the Jewish tenet that he is an intellectual crank) is accustomed to use a Chappell pianoforte, when everyone ought to know that he outdistances other pianists most easily on an Erard.

**Andante.**

## THE STEAD MEMORIAL FUND.

The late W. T. Stead was so widely known and had so many friends throughout the world that many readers of *The Near East* will doubtless be interested in the report of the Stead Memorial Fund for 1920-1, recently published. The Fund has lost by the death of Lord Ranksborough an energetic and able Chairman; and it has not succeeded in obtaining exemption from assessment to Income Tax. But it has secured Lord Strachie as its new Chairman, and it has hopes of moving the Inland Revenue authorities to grant it the relief to which it feels itself entitled. Meanwhile it is carrying on excellent work, of a kind which would surely have appealed to W. T. Stead himself. Its hostels for women in London, Bath and Leeds, and its work for girls in Hoxton are all admirable, and the hostels are run on self-supporting lines in a way that proves their worth. The Council and the officials are to be congratulated on the success of the undertaking, and if any of our readers can spare a subscription or donation they may feel assured that it will be turned to good account in extending the work. The hon-Secretary is Mr. F. H. Skrine; the offices are at 131, St. George's Road, S.W.1.; and the Hon. Treasurer is Mrs. Hylton Dale, 28, Elm Park Gardens, London, S.W.

## PERSONAL AND GENERAL.

**To-day.**
December 22 (New Style).
December 9 (Old Style).
Rabia II, 23, 1340 A.H. of the Moslem Calendar.
Kislev 21, 5682, of the Jewish Calendar.

Lady Cunliffe has arrived at Algiers.

Lady Nesta Fitzgerald has arrived at Algiers.

The Georgian Minister, M. A. Tchenkeli, returned to London last week from Paris.

The Persian Minister left London last week for Paris, accompanied by Vossough Douleh, ex-Persian Premier.

Lord Doune, the Hon. R. Coke, Air Vice-Marshal Sir Geoffrey Salmond and Lady Salmond, and Sir Alfred Booth are among the recent arrivals at Cairo.

The engagement is announced between Major J. H. H. Dodds, H.B.M's Consul at Adis Ababa, and Lady Annabel O'Neill.

Mrs. Brighouse Snow and Mr. Donald Snow have left London for India. They expect to be away about six months.

M. Constantin Constantinesco, Secretary to the Roumanian Legation, has returned to London from Bucharest.

M. Alexandre Cretziano, Secretary to the Roumanian Legation, has been transferred to the Legation at Washington. He left London last week for Bucharest, on leave.

A marriage will take place in January between Major G. R. Ashton, Indian Army, and Kathleen, daughter of Mr. and Mrs. F. A. Govett, Sunningdale.

The engagement is announced between Captain Frank O. Burne, M.C., Indian Army, and Nancy Eileen, youngest daughter of Mr. and Mrs. George B. Tydd, of Burleigh Lodge, Ascot, Berks.

An engagement is announced between Eliot Wallis, youngest son of Mr. H. M. Wallis, J.P., of Reading, and Isobel Janet, youngest daughter of Angus E. Kennedy, M.R.C.S., L.R.C.P., of Plaistow, Essex.

An engagement is announced between Captain H. L. Barstow, 4th Gurkha Rifles, and Thelma, daughter of the late Frank Marshall, Newcastle, and Mrs. Drake Brockman, Grays, Haslemere.

The engagement is announced of George Monteath, I.C.S., eldest son of Sir James Monteith, K.C.S.I., Bickerell Lodge, Honiton, to Marian, younger daughter of James Ogilvy Dalgleish, Glebelands, Wokingham.

Sir W. M. Ramsay has been obliged by ill-health to abandon the remainder of his lecture tour among the universities of America, and sailed for England last week.

**SCHOOL OF ORIENTAL STUDIES.**
London Institution Finsbury Circus, E.C. 2

**ORIENTAL LANGUAGES AND RELIGIONS.**
Instruction is given in the principal languages of the East and of Africa and on Oriental and African Religions and Customs.
For particulars, apply to Sir E. DENISON ROSS, Director.

The marriage was celebrated on December 5, at St. Paul's, Nicosia, between Clive Watts, Cyprus Civil Service, and Violet Constance, widow of Frank Kyd, East Surrey Regt., and daughter of the late J. R. Wilson and Mrs. Wilson, Carnoustie, Scotland.

The marriage was celebrated on November 12, at St. Paul's Church, Sheerness, between Albert Herbert, C.O.16th Pack Battery, R.G.A., Aden, and Honora Violet Lanphier, daughter of Major and Mrs. T. Clifford Lawes.

The marriage arranged between Lieutenant-Colonel R. S. Stafford, D.S.O., M.C., Ministry of the Interior, Cairo, and Miss May Dixon will take place at All Saints' Church, Cairo, on February 1.

The marriage was celebrated on December 10, between Stafford, elder son of the Rev. E. S. Hilliard, Vicar of Christ Church, Mayfair, and Marjorie Doris, daughter of Colonel H. de B. Codrington, I.A.

The marriage was celebrated on December 7 at St. Mary's, Cairo, by the Lord Bishop of Egypt and the Sudan, between Alexander W. Keown-Boyd, C.B.E., and Joan Mary, youngest daughter of the late Mr. J. C. Partridge, and of Mrs. Partridge, of 38, First Avenue, Hove.

Sir James John Digges La Touche, K.C.S.I., formerly Lieutenant-Governor of the United Provinces of Agras and Oudh, and afterwards a member of the Council of India, of Raglan Road, Dublin, who died on October 5, aged 77, left personal property of the value of £14,205.

A marriage has been arranged between Captain Rudolph C. Mayne, eldest son of Captain and Mrs. Jasper Graham Mayne, and the Hon. Seymour Methuen, younger daughter of Field-Marshal Lord Methuen and Lady Methuen.

The engagement is announced between Lieutenant-Colonel Edmund Tillotson Rich, C.I.E., R.E., Survey of India, and Rosalind, only child of the late Edward C. Seaton, R.F.C.P., and Mrs. Seaton, 29, Oakley Street, Chelsea.

M. Boerescu, Minister Plenipotentiary and Chargé d'Affaires in London, presented to Mr. H. T. Montague Bell last week at the Roumanian Legation, the insignia of Commander of the Order of the Crown of Roumania conferred upon him by King Ferdinand.

With the object of affording relief during the famine in Russia the British Red Cross Society have secured the services of Sir Benjamin Robertson, the eminent Indian famine expert, who is proceeding to Russia forthwith as British Commissioner on their behalf.

A marriage will take place in February, at Bombay Cathedral, between Major Aubrey Ellis Williams, D.S.O., M.C., South Wales Borderers, elder son of Colonel and Mrs. Ellis Williams, of Ivy Lodge, Griffithstown, Monmouthshire, and Sybil, only daughter of Dr. and Mrs. Essex, Woodlands, Pontypool.

The engagement is announced between Major W. E. Beazley, M.C., 54th Sikhs, Frontier Force, youngest son of Mr. and Mrs. J. H. Beazley, Oak Dene, Noctorum, Birkenhead, and Ida May, younger daughter of Mr and Mrs. Arthur Bazett, Bidston, Worplesdon Hill, Surrey.

Lieut-Colonel Alfred Rawlinson, with Lance-Corporal H. D. Ankers, Private H. R. Carter, and Private R. Leadbeater (upon their return from Turkey) had the honour of being received by the King on December 16. His Majesty invested Lieut-Colonel Alfred Rawlinson with the Insignia of a Commander of the Most Excellent Order of the British Empire (Military Division).

Digitized by Google

The engagement is announced between Captain A. W. W. Holworthy, M.C., 3rd Q.A.O. Gurkha Rifles only son of Charles E. Holworthy, Commissioner China Maritime Customs, of 2, Cannon Place, Hampstead Heath, and Winifred, younger daughter of Mr. and Mrs. L. G. Duff Grant, late of Abbotsford Pinner, now residing at 68, Cromwell Road, London, S.W.

The engagement is announced between Captain (Brevet-Major) William G. Hewett, M.C., the Welch Regiment, only son of Captain C. W. Hewett, R.I.M. (retired), and Mrs. Hewett, The Abbey House, Tewkesbury, and Louise S. Wolfe, daughter of the late Francis R. Wolfe and Mrs. French, 15, Pembroke Park, Dublin, and granddaughter of the late Rev. R. Wolfe, some time Prebendary of Exeter Cathedral.

The Geographical Section of the Forum Club was to hear yesterday an illustrated lecture on the Mount Everest Expedition by Sir Francis Younghusband, President of the Royal Geographical Society. This association of women interested in geographical research has been actively at work since the autumn of 1912. In the spring of the following year the Royal Geographical Society opened its doors to women.

## APPOINTMENTS AND PROMOTIONS.

El Bimbashi A. H. A. Alban, D.F.C., has been transferred to the Sudan Government and appointed 2nd Inspector, Mongalla Province.

It is stated from Bucharest that M. Titulescu, former Minister of Finance, has been appointed Roumanian Minister in London.

Mr. C. P. Browne, O.B.E., Governor of Berber Province, has been transferred to Kassala Province and Mr. T. A. Leach has been appointed Governor of Berber Province.

The Secretary of State for India has appointed Mr. Sidney Turner, F.I.A., Principal in the Accountant-General's Department of the India Office, to the vacancy in the post of Accountant-General, caused by the retirement of R. G. Jaquet, C.I.E.

## OBITUARY.

The death occurred at Algiers on December 16, of the accomplished composer, Saint-Saëns.

The death is announced of Mr. Alexander Francis George Moscardi, He arrived in India in 1897, and served in Madras as assistant collector and magistrate. In 1916 he was promoted to be collector and district magistrate.

The death took place last week of Lieutenant-Colonel Lord Napier of Magdala. Lord Napier entered the Bengal Army in 1862, and retired in 1883. He served in the Umbeyla Campaign 1864, and in Abyssinia in 1867. He was A.D.C. to the Commander-in-Chief in India 1870-76, and to the Governor of Gibraltar, 1876-81.

The death has occurred at Marseilles, at the age of 64, of General Sir John Eccles Nixon, General in Command of the forces in Mesopotamia in 1915 and 1916. He was the son of an Indian officer who had been British Resident at Baghdad and Consul-General in Turkish Arabia. He was gazetted to the 25th Foot (King's Own Borderers) in 1875 and transferred, three years later to the Bengal Staff Corps, being attached to the 18th Bengal Lancers. His long career of active service included the Afghan War of 1879-80, the Mahsud Waziri Expedition in 1881, the Chitral Relief Force, in 1895, and the Tochi Field Force (to which he was Chief Staff Officer) in 1897-8. He was promoted to major-general in 1904, lieutenant-general in 1909, and general in May, 1914, when he was in command of the Southern Army in India. He was created K.C.B. in 1911, and G.C.M.G. in 1919.

## THE SITUATION IN INDIA.

Developments in India have been rapid since last we reviewed the political situation in these columns. A month ago we insisted on the gravity of the danger arising from the decision of the extremist section to challenge the authority of the Government in ways which led directly to anarchy, and we urged that the time had come when definite action must be taken, and a lead given which should leave the country in no doubt regarding the intentions of the Administration. On the day our article appeared in print events occurred in India which brought matters rapidly to a climax, and a straight fight is now in progress between the forces of order and the forces of anarchy. The occasion, but not the cause, of this development was the arrival of the Prince of Wales, an event which stood outside ordinary politics, and which was undoubtedly anticipated with eager joy by an overwhelming majority of the population. The extremists, for their own purposes, decided that this visit should be discredited, and with this object they brought into full play the force of the machinery which, wisely or unwisely, they had been allowed to organise; their bands of so-called volunteers were set to work to intimidate a population only too ready to be intimidated, and while in Bombay itself they aimed at marring the public welcome offered to the Prince, in other large cities, and notably in Calcutta, they determined to display their power by enforcing a temporary suspension of industrial, commercial, and social activities. In Bombay their failure was practically complete. The Prince was welcomed by crowds enormous and enthusiastic; the efforts of the volunteers resulted only in disturbances in some portions of the city, and their outrageous conduct was such as to disgust Mr. Ghandi, the man who more than any other is responsible for its occurrence. In Calcutta on the other hand, the volunteers achieved almost complete success. The life of the city was brought temporarily to a standstill; shops and markets were closed; conveyances ceased to ply; and the police were hopeless in face of the organised intimidation which prevailed. The challenge was promptly taken up, and, while the citizens, under the leadership of prominent Indians, set to work to organise a Civil Guard for their own protection, Lord Ronaldshay's Government struck at the root of the evil by proclaiming the volunteers as illegal associations, and taking active measures to break up their organisation. Similar measures were taken in the great cities of Northern India, in Allahabad and Lucknow, in Delhi and Lahore; in each instance the local leaders attempted to defy the Government, and, along with large numbers of their followers, are now in prison or awaiting trial; and official declarations have made it plain that organised intimidation will be tolerated no longer.

These administrative activities undoubtedly indicate a new phase; but it would be a mistake to regard them as marking a reversal of the policy which has prevailed during the last two years; we should rather describe them as a long-foreseen development. The policy deliberately adopted by the Government of Lord Chelmsford, and maintained by that of his successor, was to wait on public opinion. In the old bureaucratic days, the prompt suppression of movements dangerous to public security was a matter of course; but when Parliament had decided that the opinion of India should eventually determine the destinies of the country, the first task of the Administration was, in Lord Chelmsford's eyes, to train that opinion to perform its new functions. Two irreconcilable ideals were before the country, the ideal of Parliament and the ideal of Mr. Gandhi; to suppress the expression of the latter would have been contrary to the new theory, while from the practical standpoint it might have resulted in adding greatly to the number of its supporters. The wisdom of this attitude has been widely criticised, and the time has not yet come for a final verdict, but there is this to be said in its favour, that informed political opinion, being in fact left free to choose, has decided definitely in favour of the ideal accepted by Parliament; the legislatures accept the new Constitution, though they may desire to accelerate its development, while the opposition remains outside. The legislatures represent, however, only a small fraction of the population, and the opposition has during the present year concentrated its efforts more and more on stirring up the masses to conduct which would inevitably bring the Constitution to the ground. To secure this object it had employed both cajolery and intimidation, but as time went on its reliance on intimidation has increased, and its "volunteers," many of whom were in fact hired bullies, have proved to be instruments admirably suited to the end in view. It has long been obvious that these activities, if persisted in, must sooner or later bring about a position such as now exists, and the practical question has been whether the Government should force the pace or wait on its opponents. Here again the decisive consideration has been the attitude of Indian political opinion. It is at least doubtful whether the legislatures would have supported drastic action undertaken in the course of last summer, but the occurrences of the autumn, and in particular the tragedies attendant on the rebellion in Malabar, have made a deep impression, and probably at the moment the predominant feeling in these circles is one of relief, though it is not be expected that the action of the Administration should be received with demonstrative approval. It is still possible for critics to argue that the Government held its hand too long, but at the present juncture such discussions are irrelevant; the important question is the probable outcome of the action which has now been initiated.

On this question it would be dangerous to generalise. The old days of unanimity have passed away, and there are already signs that political opinion is beginning to respond to the new inspiration of responsible Government within the various provinces. Judging from recent news, we are inclined to think that the action of Government will command almost unreserved approval in Madras, where the impression created by the Moplah outrages has naturally been most intense, and where large numbers of citizens have learned by recent experience what insecurity actually means. In the Punjab on the other hand, which knows little of Malabar, the state of public feeling is still unfortunately such that almost anything the Administration does appears as a grievance, and for some time to come the Government will have to bear its burden almost alone. It would be futile to speculate regarding the position in Calcutta, for the Prince of Wales arrives there almost immediately, and his reception will furnish a definite index to the feeling of the public. On the other side of India information of not less importance may be provided by the impending meeting of the "National" Congress at Ahmadabad. It is at least possible that the occasion may be used for a spectacular demonstration of the strength of the Extremists, with Mr. Gandhi playing Frankenstein to the ugly monster he has brought into existence, but here also the event must be awaited. Behind the obvious facts of the situation stand the masses of people, and, if we are not greatly mistaken, their judgment is at present in suspense. Their memory tells them of frequent struggles for the sovereignty of their country, struggles from which prudent men have always held aloof; they have not yet realised that in the new conditions they can themselves do much to decide the issue; and they will acquiesce in the result, whatever it may be. It is for the Government to ensure that that result shall be in accordance with the policy laid down by Parliament for their guidance.

## NAZARETH.

*(From a Correspondent.)*

Nazareth, to which so many pilgrims have bent their steps, has given its name, in Arabic, to all Christians. The earliest gibe which little Egyptians learnt and shouted at the European unbeliever began with the rhyme: *Ya Nusrani Kelb Owani*..... ("O Christian, barking dog".. ..), as the writer heard daily in the more fanatical quarters of Cairo 50 years ago.

Perhaps this has died out. Nazareth seems never, except for brief periods, to have been more than a fair-sized village.

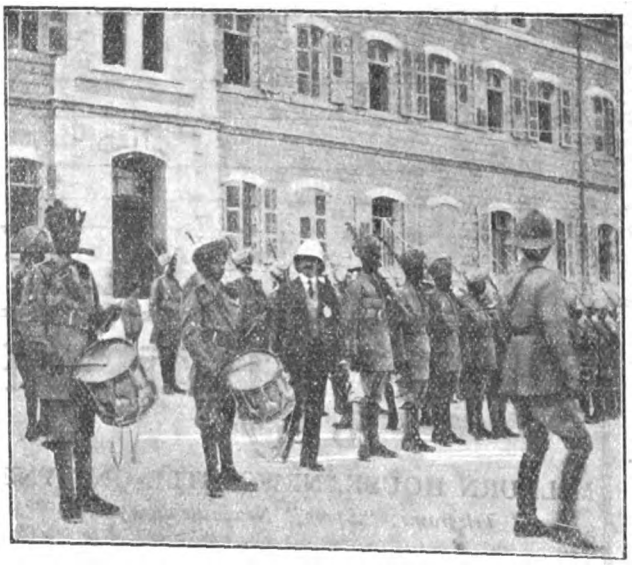
Referring to early travellers, we find St. Antoninus, in the 7th century, praising the beauty of its women. The land around was prodigiously fertile and produced excellent wine, oil, and honey, while millet grew to a remarkable height. In the same century it fell under the Moslem yoke. It possessed at the time a large church. Soon after, the French Bishop Arculf mentions its houses of stone and its great church. Pilgrims encountered many difficulties and were sadly fleeced. Thanks to the strange friendship of Haroun-er-Rashîd and Charlemagne, they had for a while a better time, which, however, was but short. For centuries they preferred to travel to Nazereth from Acre, even if it involved an additional

Mary's Well, Nazareth.

sea passage, rather than from Jerusalem via Nablus (Neapolis) through regions exposed to perpetual risks from bandits on both sides of the Jordan. Nazareth itself, however, suffered from time immemorial from the raids of the Bedouin and other marauders. It has never been a walled town. It was taken by Saleh-ed-din (Saladin) in 1158. In 1202 Saewulf finds Nazareth "entirely laid waste and overthrown by the Saracens." In the 14th century Sir John Maundeville found that what "had been formerly a great and fair city" was but a small scattered village. The Saracens, he says, were "very wicked and cruel Saracens, and more spiteful than in any other place." The place was rebuilt by the Emperor Frederick II in 1250. The most interesting spot is "Mary's Well," to the north-east of the village, which is supplied from Nazareth's one and excellent spring.

In 1799 the French encamped near Nazareth, and subsequently the threats of our Admiral Sir Sidney Smith saved the Christians of this and many another place from a massacre contemplated by "the butcher" Jezzar Pasha. At present Nazareth is the headquarters of the Samaria district. A photograph shows Sir Herbert Samuel and a guard of honour (30th Punjabi's) outside the Government Offices during a late visit. The residence of the District Governor which has hitherto been in a lower part of the village, where summer heat is very oppressive, has now been transferred to a large building on a height above it. The building was formerly occupied by a British mission and doctor. It was taken over by the Turks during the war, and used by them as a barracks for their troops. Before the devastation wrought by the Turks there was an excellent, spacious, and well planted garden in the 50 or 60 feddans of land belonging to the premises. This was a charming and favourite resort for those privileged to visit it. It was entirely destroyed by the Turks. The water supply is from large cisterns provided with pumps, in which rain water is collected, as in many parts of the East. From the height on which the Residency stands, admirable views can be obtained of the sea and Haifa, of snow-clad Mt. Hermon (*Jebel-esh-Shcikh*), of Mt. Tabor, and other spots of interest.

The improvement of roads has shortened distances very considerably, especially for those who can travel by motor car. Tiberias, on the Sea of Galilee, can be reached in about an hour



Outside Government Offices, Nazareth. Sir Herbert Samuel and guard of honour, 30th Punjabi Regiment.

and Jerusalem via Nablus in about four hours. Nothing of course will do more to develop Palestine, in the matter of agriculture, trade, and social progress, than improvement in communications, for which so good a beginning has already been made.

## LORD ALLENBY'S PORTRAIT.

The mother of Field-Marshal Viscount Allenby, now in her ninety-first year, was visited at Felixstowe on December 16, by Lieutenant-General Sir Philip Chetwode, Lieutenant-General Sir Edward Bulfin, and Major-General Sir S. W. Hare, who had served with Lord Allenby in Palestine, and who now presented to her a portrait of her son in oils, by Mr. Tennyson Cole, subscribed for by officers who served with the Field-Marshal. General Chetwode said that they felt that Lord Allenby's well-known and expressed devotion to his mother made it particularly suitable and agreeable to them to express through her their admiration for him as a man and a soldier, and their devotion to him as their commander. Mrs. Allenby feelingly replied.

The Second Congress of the Inter-Allied Federation of Former Combatants opened in Paris on December 17, Great Britain, France, Italy, Belgium, the United States, Roumania, Serbia, and Czecho-Slovakia being represented.

## PRESS ON THE NEAR EAST

**Egypt.**

The *New Statesman* of December 10 has two articles which afford an illuminating contrast. They are called "Peace in Ireland" "—And War in Egypt?" After stating its opinion that the present Irish agreement is "certainly a stable and a final agreement," it gets straight into the Egyptian question :—

> No sane man can read without the gravest anxiety the three documents which have just been made public on the breakdown of the Egyptian negotiations. The first contains the terms of the proposed Convention—terms which blow to the winds the dream of Egyptian independence. The second is Adly Pasha's uncompromising refusal of those terms. The third, in the form of a letter from Lord Allenby to the Sultan, setting out the reasons for the attitude of the British Government, is the most ominous of all. It is a piece of special pleading compounded of veiled threats, appeals, reproaches and cant, the like of which it would be hard to find among the shabbiest records of diplomacy. It used to be said of the Bourbons that they learned nothing and forgot nothing. Our Government in this affair puts them into the shade ; it learns nothing and forgets everything—history, promises, the state of opinion in the East, the state of opinion at home ; it forgets even what is staring it in the face—its own past follies and present wisdom—in Ireland. It presents to Egypt an undergraduate essay on the principles of a new imperialism, which, if firmly applied, will go far to wreck the British Empire. The long tale of Egyptian grievances, the main heads of the demand for freedom, and the ferment and growth of national consciousness in the last two and a-half years—all these things are well known, and we need not dwell on them here. Many of the grievances, political and economic, have long been recognised as substantial, and the British Government, of course, is not refusing reforms. Where it is blundering is in its blindness to the strength and solidarity of Egyptian feeling and in its misreading of the claims to independence. Those claims, coupled as they always have been with concessions to safeguard legitimate British interests, are perfectly reasonable—with the single important exception of the Sudan. The Sudan does not belong indisputably, as Adly Pasha asserts, to Egypt, and Egyptian Arabs have no better title to rule Sudanese negroes against their will than Englishmen have to rule Egyptians against theirs. But this question, important as it may be in one sense, is not important in what really matters ; it is a minor point which would not have produced a breakdown of negotiations. The major questions, on which the split has taken place, are those of the military occupation, of Egypt's foreign relations and of our right to control Egyptian internal affairs through British financial and judicial commissioners. The conditions laid down on these heads in the proposed Convention make a foolish lie of the statement that we "agree to recognise Egypt as a Sovereign State under a constitutional monarchy." The military proposals in particular, as we have argued again and again in these columns, are outrageous, and we agree entirely with Adly Pasha's objection.

It proceeds to remark the "flood of light" which is shed on our attitude by the covering letter to the Sultan. Dismissing as hypocritical (seeing that "the British Government, having by its gross mishandling of Egypt, created a Sinn Fein movement")the claim that we must preserve order, it attacks the problem of Imperial communications :—

> As for the threats to the "communications of the Empire," which are so serious as not "to permit of any modification at this time in the disposition of the British forces," we should be interested to know whence they come. What hostile Power is baring its teeth at us in the Mediterranean or the Red Sea ? Is it Japan, or America, or France, or Bolshevik Russia ? Or is it the Senussi tribesmen whom we have found that we can dispose of with a couple of aeroplanes ? The fact is, that once you turn the pompous abstractions of this letter into concrete questions, the whole notion of a threatened attack appears in its childish absurdity. And it becomes still more absurd when it is remembered that the Egyptians are willing that we should have all the troops we want in the Canal zone, where their strategic position would be perfectly assured. In short, it is impossible for any intelligent person to accept these preposterous arguments. We do not believe that the British Government or anybody else is anxious about our "Imperial communications ;" we do not believe that they are afraid of extreme Nationalists "plunging Egypt back into the abyss." The explanation of the whole matter lies simply in an insane misconception of the Empire, a delusion that the greatness of this country and of the British Commonwealth of Nations consists in a display of military power and can only be maintained by the use of force. It is the old militarist conception which, however it may have served in past generations, will prove futile and even calamitous in this.

It waxes personal on the subject of Mr. Churchill,"our pinchbeck Napoleon," and of Lord Curzon, and then concludes with a word on future developments :—

> We shall not attempt to predict exactly what the Egyptians are going to do. But it is clear that they will resist our will, and they will be right in resisting. We say nothing of the past pledges of responsible British statesmen, pledges made again and again since we first occupied Egypt, that we intended to restore her freedom ; we say nothing of the hopes held out by the Milner Commission last year ; we say nothing of the zeal we have shown in giving liberty to peoples in other parts of the world. All these things may be regarded as irrelevant by a Government to whom principles are but counters in a game. But what is not irrelevant, and what cannot be hidden by the sesquipedalian sophistries of Lord Curzon, is that our attempt to hold Egypt down is a piece of wanton tyranny. The conditions do not demand it ; the merest political prudence cries out against it. The Egyptians will resist, and they will resist solidly. There will not be an Adly party and a Zaghlul party to cut each other's throats. There may be a section of the

Egyptian people counselling moderation and not violence ; we hope there will. Resistance will very likely take the " passive " forms of economic boycotts and strikes. That alone will be awkward and expensive for us. But the suppression of strikes by the police and the military may easily lead to violence and bloodshed, and when that begins it will go on. It is almost incredible that our politicians can apparently so misinterpret the signs of the past, the present and the future. It is, indeed, only intelligible on the assumption that they are infatuated to such a degree by their false imperial idea that they are unwilling to count the cost of it.

It remains, then, for the British people to count the cost—and that very quickly. We do not believe that more than a small minority in this country still cling to the notion of basing an Empire on force—either on naked force, or force camouflaged behind fraudulent phrases. Public opinion here does not want to give a free hand to militarism, whether military or civilian militarism. It wants peace and trade, and it is not so stupid as to imagine that peace and trade are going to be ensured by repeating in Egypt the criminal blundering that we have just repented of elsewhere. We have learned only too well what an experiment of this kind will cost us in lives and money ; we know, in short, that, to put it on the lowest ground, we cannot afford it. There is one man, at least, in the Cabinet who is capable of realising all this, and of undoing the mischief that has been done. Mr. Lloyd George is, of course, technically as responsible as his colleagues for the Egyptian breakdown, but we do not believe that he has, in fact, seriously given his mind to the matter. Let him now, at the risk of offending Lord Curzon's dignity and Mr. Churchill's ambitions, tear up this disastrous Convention and be acclaimed, in Cairo to-morrow as he is acclaimed in Dublin to-day.

## Y.W.C.A. WORK IN THE BALKANS.

*(From Our Port Said Correspondent).*

Miss Grace Saunders, the general secretary of the Y.W.C.A. for Egypt and Palestine, gave a most interesting address at the Y.W.C.A. Hostel in Port Said on November 18 on the subject of World's Y.W.C.A. work and the activities of the Student Christian movement. What interested her audience most, perhaps, was her account of her work in the Balkans. She went in 1911 to Bulgaria, at the invitation of the Bulgarian Student Christian Association. At the University of Sofia there were then two thousand women students, and social clubs, sports' clubs, and Bible study discussions were instituted, the latter at the express wish of the students themselves, who found the Bible a most interesting discovery. Miss Saunders nursed the wounded through the two Balkan wars of 1912 and 1913,so that her knowledge of life and needs in that part of the world is full and varied. Post-war work found her in Roumania at the Student Christian Conference, and she mentioned it as a remarkable thing, and a good augury for future relations in the Balkans, that there were two delegates from Bulgaria meeting happily with the Roumanians and the other nationalities represented there. Miss Saunders also mentioned the interest taken in the movement by the Queen of Roumania, who gave the initial party in the Palace to introduce the English and American workers to the Roumanian ladies, and has also allowed the Palace grounds to be used for games on Saturday afternoons by school girls, amongst whom there is a movement somewhat similar to our Girl Guides. There are now in Bucharest for women clerks, students, and workers, social clubs, restaurants, classes, etc.,under British and American guidance though there are already three Roumanian secretaries, and Miss Saunders emphasised the fact they only came in as pioneers, till the Roumanians themselves felt they could carry on the work without outside aid.

The speaker also had some very encouraging things to say about the work in Greece, where she found interest and co-operation from the Queen downwards. Unhappily the change of régime and the consequent political animosities have somewhat hampered work in Athens, but the leading ladies realize that something must be done to meet the new conditions, and as the English and American workers will be able to come in from outside, unconnected with any political party, they can fill a gap which perhaps no others could, and can be trusted by all. The speaker incidentally mentioned the good work done by some Greek ladies, one of whom had had similar work in America, in meeting and caring for the number of women and children, sent back from America, often penniless and homeless owing to the immigration restrictions. Miss Saunders also said that the ecclesiastical authorities in the Balkans, who at first were inclined to be suspicious,realized that they were not attempting to proselytize, but simply to uplift men and women spiritually in whatever communion they were in, and that some of their best and most ardent helpers were priests in the Orthodox Church.

## THE ARAB HORSE SOCIETY.

A Council Meeting of the Arab Horse Society was held on Tuesday, November 29, 1921, at 2.30, at the Grosvenor Hotel, London, Mr. S. G. Hough, President, being in the chair. There were also present : Messrs. T. C. Armitage, E. R. Calthrop, H. V. M. Clark, A. Stanley Cochrane, Edward Hurtley, Captain Edward Munck, Major G. B. Ollivant, Mr. W. F. Saunt, Lieut.-Colonel P. D. Stewart, D.S.O., Mr. R. S. Summerhays, Brigadier-General C. Templer, C.M.G., C.I.E., and Rev. D. B. Montefiore (Secretary). Letters of regret were received from Lieut.-Colonel W. A. MacDougall, D.S.O., Captain the Hon. George Savile, and Messrs. R. B. Colton Fox, and G. H. Ruxton.

Entries were accepted for the Stud Book, Vol. II., and the arrangements for the election of Members of Council by Members of the Society were settled. The Council carried out the necessary details in connection with the nine Arab and Arab-bred Classes to be held at the London Show, and appointed the Judges, and also recommended a Judge for the Royal Show at Cambridge in 1922.

A letter of thanks was received from His Majesty the King of Irak (Patron of the Society) for congratulations of the Council.

The following new Members were elected :—H. A. Baxter, Bonwycks Place Farm, Ifield, Crawley ; A. J. H. Carlill, Thatched House Club, St. James' London, S.W. ; Mrs. E. M. Carroll, Rocklow, Fetherd, C., Tipperary, Ireland ; General G. Haddad, Pasha, Cavalry Club, London, W. ; The Marquis of Hartington, Chatsworth, Bakewell ; H. W. Jessop, Hill Crest, Elsworth, Cambridge ; C. McK. Lewis, care of Messrs. Blair and Co., 24, Broad Street, New York, U.S.A. ; Mrs. Angela P. H. Mond, Greyfriars, Storrington, Pulborough ; Captain Norman Pryor, Plaw Hatch, Bishop's Stortford ; A. H. H. Sinclair, M.D., 3, Charlotte Square, Edinburgh ; P. W. Stout, The Gables, Meadi, Egypt; Mrs. B. M. Taylor, Ross, Rosscahill, Co. Galway, Ireland.

The Council then adjourned until their next Meeting, January 17th, 1922.

Over 2,000 Armenian refugees from Cilicia are unable to obtain permission to land in Constantinople. A few have been admitted into Cyprus.

Jews throughout the world have been invited to pay a voluntary tax towards the settling of Jews in Palestine by the Zionist Organisation.

## NOTES AND NEWS.

Devonshire Square
E.C. 2.

### The Anglo-Persian Oil Report.

Each succeeding annual report of the Anglo-Persian Oil Company serves to emphasise more clearly the valuable nature of the interest held in this concern by the British Government. Posterity, I imagine, will regard the investment as a stroke of genius. For 1919-20 the net profits amounted to £2,611,615, but for the past year they are no less than £4,028,022, an increase which is, however, not in the least surprising in view of the rapid development of the company's operations. The various allocations to reserves are much the same as before, and it is proposed to maintain the Ordinary dividend at 20 per cent., leaving £1,648,792 to be carried forward, subject to excess profits tax and corporation tax.

### Satisfactory Prospects.

A very promising survey of the company's position is given in the report. The wells are continuing to give a high rate of yield, while test wells which have been sunk have added considerably to the proved reserves. The extensions to the refinery in Persia will be completed early next year, while the full refinery at Llandarcy will be in operation in the spring. It is stated that anticipations have been so fully justified in regard to this refinery that arrangements are being made to erect others to serve other consuming markets. Finally it is of interest to note the statement that conditions in some of the localities where the D'Arcy Exploration Company, Ltd., has been conducting investigations "are favourable for early success in striking oil."

### Danube Navigation Company.

In his speech at the first general meeting of the Danube Navigation Company, Sir Frederick Lewis dealt with the arbitration award in the light of its effect on the Company's interests. The undertaking, which was formed with the object *inter alia* of uniting mercantile interests of the great artery of Eastern Europe, is interested in the three principal Danubian companies. These companies will commence the 1922 season with 51 passenger steamers, 19 ferry steamers, 89 tugs, and 606 barges, apart from the craft under construction, and the only difference made by the arbitrator's award is that they will have six tugs more and one passenger steamer less than they had at the time the Danube Navigation Company made its investments. The prospects of the company would appear to be most promising as the various companies concerned are stated to be doing a profitable trade, and are on a dividend paying basis. But the question of dividends for the shareholders in the Danube Navigation Company is dependent on the exchanges, and that means that there may be a long time to wait.

### North Persia Oil Concessions.

The action taken by the Persian Government with regard to the oil concessions in North Persia which are held by the North Persian Oils Company will have surprised no one who has followed recent manifestations of Persian policy. It is by no means an isolated instance of a policy which bears on the face of it the interpretation that it is inspired not by concern for the lasting good of Persia, but merely by opposition to British interests. In this connection the case of the roads concession, which was also cancelled and the Teheran-Ispahan road forcibly occupied by Persian troops, will be fresh in the minds of our readers. The attitude in regard to the oil concessions affords, if anything, an even more remarkable example of cynical disregard of private rights.

### Attempt to Create Discord.

The facts of the case are worth a little examination. The concessions in question, three in number, were acquired two years ago by the North Persian Oils Company from a Georgian named Khostaria, one of them being a private concession and the others State concessions granted in 1916 and 1917. The Persian Government now takes the line that the concessions are invalid, supporting its contention by a variety of flimsy pretexts which will not stand a moment's examination. Besides declaring them invalid, or to use the actual expression "improperly constituted and illegal," the Persian Government has approved the grant of a concession for the territory in question to the American Standard Oil Company, with a proviso prohibiting the company from transferring or associating with any other company, a clause which obviously suggests the desire to create misunderstanding between Great Britain and America, a task, however, quite beyond the capacity of Persia to accomplish!

### Persia and Foreign Capital.

In expecting their destined concessionaire to welcome the concession the Persian Government have evidently misinterpreted the value of their high sounding phrase that the existing concessions are "improperly constituted and illegal," and they have probably been con-

Digitized by Google

siderably surprised at the attitude of the American company in not accepting the concession pending full enquiry. The knowledge that the situation is the subject of friendly discussions between the Standard Oil Company and the Anglo-Persian Oil Company should plainly indicate to them that a policy such as that pursued will carry them nowhere, and can only prove injurious to Persia's real interests. Obviously Persia must have foreign capital, and the Government is committing a fatal blunder in following a course which must alienate a country on whose support Persia has always been able to count, in the past, as we believe the Persians themselves will again recognise in the near future.

## SUDAN GOVERNMENT RAILWAYS IN 1920.

### A Prosperous Year.

The report of the Sudan Government Railways for 1920 which has just been issued, shows the profits of the undertaking to have been more than double those obtained in the previous year. The traffic revenue rose from £E944,311 in 1919 to £E1,432,809, an increase of £E488,498, while the gross revenue rose from £E1,292,831 to £E1,962,860, an increase of £E670,029. This substantial increase in the revenue was largely due to the increase of the surtax on the railways and Shellal-Halfa Reach from 50 per cent. on passengers, and 40 per cent. on goods to 100 per cent., and to a new surtax of 50 per cent. on river services South of Khartoum, and on Dongola Reach which entered into operation on January 15. The gross expenditure, which amounted to £E1,005,956 in 1919, rose to £E1,281,995, an increase of £E276,039, of which increased pay and war bonus account for £E113,688. It is noteworthy that while 13,894 tons of coal were used above the total of the previous year, the cost only increased by £E38,061. This was due to a favourable contract made in 1919, under which coal was obtained at £4 15s., and £4 17s. per ton c.i.f. Port-Sudan, whereas the market price was at times as high as £7 10s. per ton. Owing to shipping difficulties the full benefit of the contract was not felt during the year. For 1919 the total profit was £286,875, and it rose for the year under review to £E680,865, which is an extremely satisfactory result.

The question of the maintenance of the permanent way is again raised in the report, and it is emphasised that quite inadequate amounts are being devoted to this object. "It was recognised before the war" says the report "that at least £E60,000 annually ought to be spent on relaying and renewals; actually the sums allotted never exceeded £E45,000. To-day, we ought to be spending at the rate of at least £150,000 per annum, whereas the allotment for 1920 was £E60,000." It is justly maintained that the only sound method is to make regular annual allocations for this work, and the increased profit of the railway should now enable this to be done.

Some interesting statistics are given in the report. The receipts from passenger traffic rose from £E138,564 to £E216,143. There was an increase of 19 per cent. in the number of first-class passengers, and of 41 per cent. in the case of third-class passengers the latter being mainly in connection with the Gezireh canalisation work. Goods traffic apart from Government stores increased by 167,446 tons, materials, stores, etc. transported for the above work accounting for 100,000 tons.

In 1920 the Steamers Branch showed substantially increased profits. There was a loss on the Dongola Reach of £5,523 as compared with a loss of £E5,090 in 1919, but this was far more than offset by the profit on the Shellal-Halfa Reach, which rose from £E50,458 to £E83,529. There was again a loss on the Port Sudan Dockyard and Harbours, though substantially less than the previous year, the total being £E4,009 as against £E7,639.

Dealing with the outlook the report states that the post-war condition is not so satisfactory as was hoped, and in this connection reference is made to the maintenance of high prices, and dear coal as factors operating against cheaper mileage. Since the report was written the position has, of course, been greatly altered in this respect. "Increased traffic" it is added "is expected in the coming year and increased expenditure must therefore be expected. The department is to a certain extent in a position now to meet heavier traffic demands, and the locomotive power can cope with a much larger volume of increase than the wagon stock which is still inadequate."

## GRAIN WAREHOUSES IN BULGARIA.

Recently the Department of Overseas Trade circulated information concerning a call for tenders made by the Agricultural Bank of Bulgaria for the construction at the port of Varna of a concrete grain elevator and drying shed. This work is a commencement of a system proposed by the bank for dealing with the export of Bulgarian cereals. The bank's report on the subject contains proposals for the erection of 45 interior warehouses to collect cereals from the producers and to serve as connecting links with 14 port warehouses. The port warehouses must have all appliances for cleaning, sorting, preservation and manipulation of grain whilst interior warehouses must have devices for loading, unloading, manipulation and preliminary cleaning, and, if necessary sorting. The programme of port warehouses is as follows:—

At Varna and Bourgas warehouses of 30,000 and 25,000 tons respectively. Having regard to the recent great development in the flour milling industry and the export of cereals in sacks, separate sheds of 10,000 tons capacity provided with mechanical loading and unloading appliances must be erected at these ports. The warehouses are to be of the silo type and special dryers will be constructed for damp grain.

On the Danube at Vidin, 4,000 tons; Lom, 6,000 tons; Orechov 2,500 tons; Svitchtov, 4,000 tons; Somovit, 4,000 tons; Rustchuk, 5,000 tons; Koslodoi, 2,000 tons; Novo Selo, 1,000 tons; Tsibir, 1,000 tons; Ostrov, 1,000 tons; Beshli, 500 tons; Akchar, 500 tons.

All Danube warehouses are to have silos or floors according to local conditions. Dryers are not necessary. The interior warehouses are divided into four categories:—1st category of 2,500 tons—at Radnevo and Tcherven Breg; 2nd category of 2,000 tons at Provadia, Rasgrad, Novo Zagora, Karnobat, Yambol; 3rd category of 1,000 tons—at Popovo, Pleven, Eski-Djoumaia, Ishiklar, Kaspitchan, Dolni-Debnik, Povdim, Trembish, Shoumen, Telish, Tchirpan, Sledek-Kladenets, Borisovgrad, Straldja, Michailovo, Kermenli, Plovdiv Rakovska and Aitos; 4th category of 500 tons—at Pavlikeni, Levski, Dralfa, Bela, Beltchi-Dol, Karmenetz, Sindel, Vetobo, Morava, Strajitza, Preslav, Shaitanovo, Dve-Mogili, Papasli, Skovelevo, Stara Zagora, Asparuch, Tatar Pasardjik, and Belosem.

Either the silo or floor system is acceptable for interior warehouses, according to local conditions. The first three categories of interior warehouses to be provided with all appliances for loading, unloading manipulation and rough cleaning of the grain and those in the fourth are to have the same appliances for loading, unloading and manipulation of the grain, but will only have cleaning machines if it is possible to instal them.

## ALEXANDRIA EXCHANGE.

*Supplied by G. L. Mortera, Alexandria and Cairo.*

Prices on December 2 were as follows:—Agricultural Bank of Egypt, £4,7-12; Alexandria Water Co., Ltd., £6,13-16; Anglo-American Nile Steam, £2½; Associated Cotton Ginners, £11-16; Banque d'Orient, Fr., 50½x; Behera Ord., £E 8,3-8; Brasseries d' Egypte, Fr., 51; Building Lands of Egypt, £11-16; Cassi di Sconto Priv. Fr., 100; Ciments d'Egypte Priv., Fr., 50; Ciments d'Egypte Div., Fr., 24; Comptoir Fin. et. Com. d'Egypte, £31-32; Consolidated Land, Pt., 5; Credit Foncier Fondateur, Fr., 880; Credit Foncier Act., Fr., 642; Credit Foncier, 1886 Oblig., Fr., 326; Crown Brewery Priv., Fr., 112; Crown Brewery Div., Fr., 130; Eaux du Caire, Capital, Fr., 80; Eaux du Caire Jouissance, Fr., 102; Egypt and Levant, S.S. Ord., 27s. 3d.x; Egyptian Delta Light Railways, £3,7-8x; Filature National d'Egypte, £11,9-16; Immeubles d'Egypte Soc., an des., £5,11-32; Khedivial Mail S.S. Ord., 110s.; Khedivial Mail S.S. Co., Pref., £2½; Kom Ombo Ste An de Wadi, £4,3-16; Kom Ombo Ste An Fondateur, £34; Land Bank of Egypt, Parts de Fond, £38; Lots Turc., Fr., 29; Menzaleh Canal Navigation Pt., 250; Nungovich Hotels, £6,5-16; Ramleh Railways, £2,5-8; Salt and Soda, 32s. 9d.; Tram d'Alexandrié Priv., Fr. 39½; Tram d'Alexandrié Div., Fr. 52; Union Fonciere d'Egypte, £2,13-32; Egypt Hotels, £2; Urbaines et Rurales, £2,15-16.

Anglo-Egyptian Oil Output—(Week ended December 9)—Gemsah, 1,008 tons (previous week 27 tons). Hurghada, 3,420 tons (against 3,564 tons).

# Commerce and Industry.

REPORTS FROM OUR OWN CORRESPONDENTS.

## ROUMANIA.

*Bucharest, December 4.*

**The Banca Nationala.**

The negotiations between the Ministry of Finance and the Banca Nationala with regard to a loan of 500 million lei, have resulted in the following arrangement:—The Banca Nationala will discount the orders of payment issued by the Ministry of Finance only to the industrial concerns that have supplied the State with goods and material. The interest of 6 per cent. charged by the bank will be borne by the Ministry of Finance.

**Passive Resistance to Taxes.**

In view of the attitude of passive resistance to the new taxes on capital and income displayed by the public which has taken the form of failure to make the necessary returns the Government has granted a further extension of the time limit for these declarations, the date now fixed being December 31. It is generally believed that by that time the taxes will have undergone considerable modifications.

It is interesting to note that the yield of one of the indirect taxes, that on luxury goods and turnover, has far exceeded expectations. The revenue for October for Bucharest alone amounted to 12½ million lei, the total for the rest of the country being about 23 millions. Taking these figures as the monthly average the annual revenue should amount to about 420 million lei.

**The Borcea Bridge.**

But for the recent bad weather the bridge over the Borcea—an arm of the Danube— would have been completed by now and available for railway traffic—an event eagerly awaited especially by the population of the Dobruja. As a matter of fact the date of the official inauguration was actually announced. Owing to the cause stated, however, the finishing touches to the structure were delayed. It is hoped that the bridge will be completed before the end of the year.

The great interest with which the construction of this bridge, in replacement of the one destroyed by the retreating Roumanian Army during the war, has been followed is easily understood when it is borne in mind that this bridge is on the only railway line that runs to Roumania's most important port, Constantza. This port is open the whole year round, and is equipped with the latest type of docks, wharfs, etc. There is no doubt that as soon as this railway is working normally the effect on the economic development of the country will be considerable.

**BANQUE FRANCO-SERBE**

Capital - Frs. 20,000,000.

**London Office:—**
**30, COLEMAN STREET, LONDON, E.C.2.**
Telephone: LONDON WALL 8934, 8935. Telegrams: "FRANCOSERB AVE LONDON."
**HEAD OFFICE: PARIS, 16, Rue le Celetier.**

**Belgrade.**

**ZAGREB (Agram), BITOLJ (Monastir), SKOPLYE (Uskub), FIUME, and SALONIQUE.**
*Agents throughout JUGO-SLAVIA, the BALKANS, AUSTRIA, HUNGARY, CZECHO-SLOVAKIA Etc., Etc.*

The London Office collects Drafts and Documents; issues Cheques and effects Mail and Telegraphic Transfers; accepts Bills; opens Documentary Credits; issues Letters of Credit and conducts all operations of Foreign Banking.
Current Accounts opened in Sterling, Francs, Dinars, etc.
Insurances effected through the Bank's Brokers

*Applications for Terms invited.*

In view of its importance the construction of the bridge ought to have been commenced immediately after the Armistice, but unfortunately the Roumanian Government wasted two precious years in negotiating with foreign contractors. American firms were first approached, and they asked 100 million lei for the work. British firms offered to do it for 80 million lei, while the Germans were prepared to undertake it for 30 million lei. Meanwhile the authorities thought of the large steel works of Reshitza in the newly-acquired province, the Banat. The Reshitza Works—now a Roumanian concern under State control—with up-to-date plant, undertook the work, and carried it out in the comparatively short period of 15 months at the very low cost of 13½ million lei, which is about an eighth of the price asked by the Americans.

The new bridge is constructed for a double line, and its resistance is 50 per cent. greater than that of the old bridge.

**The Government and the Farmers.**

In view of the fact that farmers have not offered wheat and rye in adequate quantities for the requirements of the Army and population, the Government has decided to "immobilise" the stocks of these two cereals existing in the country, which will be bought by the State at fixed maximum prices for home consumption.

**Miscellaneous.**

The town of Bucharest is negotiating with a British group for the construction of 1,000 dwellings next spring on sites belonging to the town.

A committee of experts is now considering at the Ministry of Industry a new regulation regarding imports, the principle of which is to allow only such goods to be imported as are neither produced nor manufactured in the country.

*Bucharest, December 12.*

**Miscellaneous.**

Owing to the great scarcity of eggs, fats, and pork, felt throughout the country, these articles have now been prohibited from export until January 15.

Since the chaos prevailing in Russia, Roumania is now the only country that produces black caviare. In view of the large number of enquiries for this article from Switzerland, France, England, Holland, and Denmark, the Ministry of Agriculture has fixed the export price at 100 Swiss francs per kilogramme, to which will be added a further 300 to 400 lei duty tax. Roumania's annual yield of black caviare is 35,000 kilogrammes.

**Roumania's Finances.**

The official figures, showing the State revenues and expenditure for the first six months of the current fiscal year (April 1 to September 30) are now to hand. The total collections made during this period amount to 2,071,093,691 lei, of which total 1,851,769,003 lei are for the fiscal year of 1921-22 and 219,324,688 lei for the previous year. The expenditure amounts to 3,092,134,661 lei, of which amount 1,680,077,155 lei are for 1921-22 and 1,412,057,506 lei for 1920-21.

By comparing the collections with the expenditure for the fiscal year of 1921-22 we find a surplus of 171,691,848 lei, but as the State has had to spend 1,412,057,506 lei for the fiscal year of 1920-21, against which it only collected 219,324,688 lei the actual deficit for the first six months of the current year is 1,021,040,970 lei. As, however, the expenditure for the last fiscal year has not yet finished, and the collections for the second half of the current year will not be any greater than for the first half, we can deduce that the total deficit for the whole year of 1921-22 will amount to about two milliard and 50 million lei. The only consolation for this unsatisfactory situation is that last year the deficit was over three milliard lei, showing that the State's deficit has decreased by one milliard lei.

## YUGOSLAVIA.

*Zagreb, December 6.*

**Commercial "Precision."**

British firms who are not specially accustomed to foreign business are notoriously ignorant of foreign conditions and geography, so perhaps it is pardonable for them to address letters to "Belgrade, Czecho-Slovakia" and the "Republic of Yugoslavia," but the limit has been reached in a letter recently received at Zagreb, the delivery of which reflects considerable credit upon the postal authorities, for it was addressed to "Spugoslavia, Russia!"

**Growth of Trade.**

Statistics published by the *Trgovinski Glasnik* of Belgrade of the exports for the first nine months of 1921 and the corresponding period of the previous year show a very gratifying increase. The commodities exported consist of various cereals, dried fruit, hemp, cattle, poultry, meat, cheese, eggs, timber, minerals and some other products. The figures for the current year are 1,121,893 tons as compared with 263,051 tons of the value respectively of 1,668,780,729 and 710,454,731 silver dinars. Considering the general trade depression and the difficulty of communications these figures are far from unsatisfactory.

## ASIA MINOR.

*Smyrna, December 8.*

During the month of October the Smyrna-Aidin Railway Company's traffic to Smyrna amounted to 12,000 tons, made up principally of dried fruit, valonea, liquorice root, tobacco, minerals, cereals, and provisions.

## CYPRUS.

*Nicosia, November 15.*

**Bread Supply.**

Nicosia is again troubled over bread difficulties. The bakers, Christian and Moslem, have united in raising the price of bread of good quality from 3½ to 4½ piastres (9d.) the loaf, which will cause much hardship to the poorer classes. For some years after the British occupation the Turkish rule was kept up, under which municipalities fixed weekly the price, not only of bread, but of all articles of domestic consumption. But trade has long been freed from these shackles. The Nicosia press now urges that the Government should either establish bakeries, in which Government tithe grain would be used at cheap rates, for the poor, or allow municipal bodies to do so. There seems no reason why the Nicosia Municipality should not proceed on its own authority in the matter, as the Government would probably assist as regards grain.

## THE EXCHANGES.

In pre-war days movements in the exchanges were for the most part restricted to the narrowest limits; and interest in their operations was confined to the few. To-day as the result of the economic upheaval caused by war conditions only a few approach normal, while some stand at figures which, had they been reached before August, 4, 1914, would have led even those with strong nerves to anticipate the worst, while fluctuations violent in character often take place in the space of a few hours. The public generally in all countries has come to regard the exchanges as the test of the economic position, and the increased attention paid to them in consequence has in its turn led to a realisation of the remunerative possibilities attached to purchases of depreciated exchanges or of securities of the countries concerned. Those who are anxious to determine the relative prospects of recovery of the various countries would do well to consult a recently issued little book, entitled "The Foreign Exchanges and how to profit by them," by Victor Louis Gerard, published by the Pall Mall Industrial Investments Ltd., at 1s. It only contains 35 pages, but they are packed with useful information, and the book should be of the greatest value to those who wish to follow the exchange movements. In the first chapter the writer deals generally with the modern chaotic exchange situation, discussing the influence of the gold standard, and the effects of the departure from it, and expressing the view that "prices must continue to fluctuate more or less widely until Europe returns to its old Gold Exchange." Subsequent chapters are devoted to a careful survey of the position in France, Germany, Italy, and the United States, some of the other countries being dealt with in a concluding chapter, and the value of the book is enhanced by charts showing the exchange movements.

American engineers have visited Croatia with a view to the erection of hydro-electric power plants in that country.

It is reported that there is an improvement in the Czecho-Slovak textile, glass, and machinery trades.

The seaborne trade of the Madras Presidency for August, 1921, showed a decrease of Rs.43,19 lakhs under imports and an increase of Rs. 33,67 lakhs under exports as compared with the figures for August, 1920.

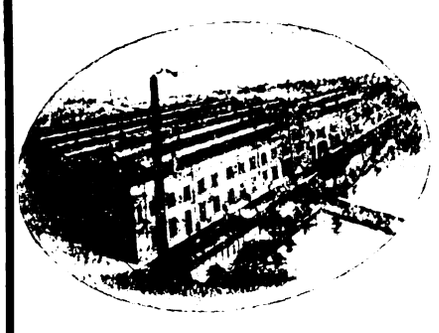
The Economic Agreement between Germany and Yugoslavia has been signed by both Governments, and will come into force as soon as it has been ratified by the two Parliaments.

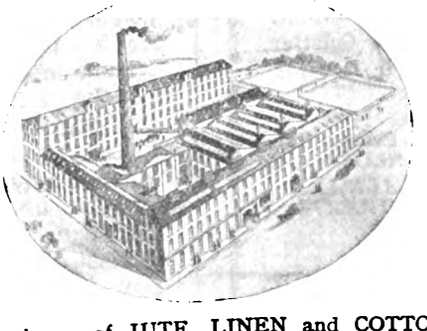
The Indian Government have decided to remove the remaining restrictions on the export of rice from Burma in view of the good crop prospects.

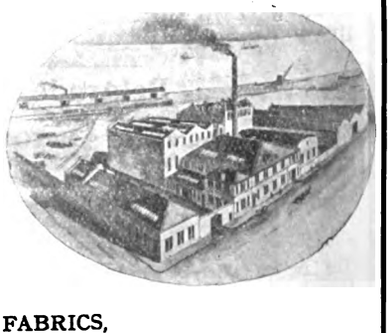
Algeria has a good market for paints and varnishes says a recent American Consular Report. Paints and varnishes are imported principally from France, Belgium, England, and the United States in about the order named. In 1919 and 1920 these imports were as follows:—In 1919, 69 metric tons of varnishes and 782 tons of paints; in 1920, 253 tons of varnishes and 1,800 tons of paint.

Cable Address: "Lobo, Dundee." **LOW & BONAR, Ltd., Dundee, Scotland.** All Cable Codes used.

Manufacturers of JUTE SACKS and JUTE CLOTH for all purposes
Also of WATERPROOF CANVAS and TARPAULINS, YARNS, TWINES, ROPES, etc.







Shippers of all clasess of JUTE, LINEN and COTTON FABRICS, also of CALCUTTA SACKS.

# Engineering Topics.

*By Our Engineering Representative.*

**Lubrication.**

The question of engine lubrication has just been discussed by Mr. S. F. Edge. He says and rightly that in regard to this there is a great diversity of practice. Theory suggests that oil supplied under positive pressure to all, or to at least the main bearings, is the best practice in engine lubrication, and after subscribing to this doctrine he adds :—"I think we shall find that the majority of manufacturers to-day use other ways and means, all of which, on first-grade cars, give some satisfaction to the user. It would be nice to know which is the ideal method of lubrication, and why it is such. We all know what we want in the matter of lubrication —namely, a film of oil interposed between all moving surfaces, sufficient to prevent bare metal rubbing against bare metal, and yet not sufficient to burn away wastefully, so that the products of its combustion will be deposited upon the piston-tops and cylinder-heads in the shape of coke."

We all know the means of getting at this desirable state of affairs, and even the most casual, superficial student of motor engineering can see pitfalls and means of avoiding them. But something I cannot divine is why each manufacturer adheres to his particular practice in the matter of engine oiling. I wonder how many could, or would if they could, tell us. So very much depends upon efficient, simple and easy provision for perfect lubrication that one would think that everybody in the motor trade could say "I lubricate in this way because —" and there would come his reasons. On such an important point one would think that every designer had a definite belief, founded on knowledge of and experiment with all possible systems and lubrications. One would think that every manufacturer would have a downright belief in his system, and would be able to justify that belief..

**Cargo Boat Engines.**

The advantages of the internal combustion engine for marine purposes have been advocated consistently in these columns. Already the principal British engine building firms have given their attention to the subject, and it is probable that the introduction of a type or rather a design of engine which presents one or two noteworthy features will have a further stimulus on development. In this design, which is independent of the compressor, the oil is injected and a lower compression is required whilst the fuel is ignited without possibility of mis-fire. As *Modern Transport* pointed out recently, oils have been used in this type of engine, the specific gravities of which have varied between .81 and .95 and flash points from 100 to 250 degs. Fahr. Apart from the engineering aspect of the matter the economic advantages are of special interest to shipowners, more especially in view of the unsatisfactory position of the fuel problem at the present time. It has been asserted that a motor ship can be operated on about one half the quantity of oil that is required in running an ordinary oil fuel steamer in which the oil is burned under the boilers and used for steam raising in the ordinary way.

Comparing oil with coal it has been estimated that a ton of oil when used in a Diesel-driven ship, will do as much work as from four to five tons of coal. The advantages of such a means of propulsion are obvious, while at the same time there is the further benefit of not being dependent upon coal. Expressing this fact in a simple manner, the consumption of oil per indicated horsepower per hour amounts to 1.02 lb., as compared with from 1.50 to 1.60 lb. of coal. This means a saving of approximately half a pound of fuel per indicated horsepower per hour which, if calculated out for a long voyage, will show an enormous saving in the fuel bill alone, while at the same time a very great reduction of time occupied in transit is effected by reason of the higher speed at which the vessel will travel and the entire elimination of that lengthy and troublesome business known as coaling.

**A Special Turbine.**

The high speed turbo-generator which has been installed at the Liverpool Corporation electricity works is remarkable in many respects, one of which is that it is the largest high speed turbine in the world, or rather the largest turbine in the world running at so high a speed as 3,000 revolutions per minute. It has an output of 12,500 kilowatts, which is equivalent to about 16,600 horsepower, so it will be seen that this is a veritable giant amongst high speed machines. As a matter of fact, it is twice the size of any German or American machine running at anything like that speed, and is capable of an extraordinary overload for brief periods. It is actually capable of developing 20,830 horse power or 15,625 kilowatts.

Amongst the novel features must be mentioned the multiple exhaust construction and feed heating. It has a surface condensor plant with motor driven auxiliaries, and the alternator is ventilated by the closed air thod in connection with which a separate air cooler is used. I understand that a second machine of the same size and power is now being erected side by side with the existing machine and these two giants will be capable of turning out 33,000 horse power, although they occupy the space of four previous machines which between them could only put out 10,700 horse power. It is also worthy of note that the makers have received orders for nine similar sets, including the second mentioned for Liverpool, and has now in hand orders for 12 sets in all, running at 3,000 revolutions per minute and turning out a total of about 144,000 kilowatts or well over 200,000 horse power.

From an engineering point of view the most interesting feature is the multiple exhaust system by which it has been possible to obtain treble the output for the speed of 3,000 r.p.m., and at the same time reduce the mean diameters of the rotating element of the turbine to three-quarters of the previous diameters employed for the smaller output. This reduction in diameter accounts for the greater reliability of the high speed sets as compared with that of smaller sets which have been in commercial service for some time.

**A Novel Range.**

Further to the notes on electric cooking which have appeared in these columns from time to time, a description has just reached me of a new range which has been designed for using both coal and electrical energy. The details show that the complete range as designed is 5 feet in height, which is about the usual height of the British kitchener. It is, however, 46 inches long and 35 inches deep, which is rather deeper than standard practice. The electrical portion of the oven is mounted on top of the range, and is of ample dimensions for cooking the average sized meal, being 19 inches wide, 13 inches high and 15 inches deep. It is lined with rustless steel and has light aluminium racks. The electrical heating elements, which are two in number, are mounted in the ordinary way, and in addition to the oven there are also two electric boiling rings on the top of the coal fired stove. Both the oven and these rings are each controlled by three-heat switches so that a very wide range of temperature is procurable. These switches are fitted with the usual cast iron cases and insulated handles, and are each arranged in the front of the range. Temperature indicators are fitted in both the electric and the coal fired ovens, and the idea is that whilst coal may be used as a general thing, should the coal fire be low at a time when cooking is required, the viands can be dealt with without delay in the electric oven or on the rings, and should the coal-fired oven be taxed at any time to its full capacity, the electric cooker can be used as an auxiliary.

## MANCHESTER REPORT.

(*From Our Own Correspondent.*)

*Manchester, Friday.*

Although the tone of the market during the past week has ruled comparatively steady business has in no way developed. The chief topic of discussion has been the American Bureau report on the cotton crop, and it is now absolutely assured that a total crop of 9,000,000 bales, including linters, will result. When the figures were made public last Monday the effect naturally caused a bearish sentiment, and raw cotton prices dropped, but since then, however, a certain amount of steadiness has been in evidence. Owing to the large difference between the estimate given in October and the one recently published it will be some time before Lancashire traders will have any faith in the Bureau figures. With regard to cloth only a small demand has been about for Egypt, the Levant, and Constantinople. When sales have taken place prices have been very low. The political situation in Egypt is very disturbing, and is naturally having its effect upon business here. Buyers are content to hold aloof and await developments. Quotations for Egyptian spinnings have been rather steadier, and here and there more sales have taken place. Export business has been done in finer qualities for Germany. With regard to the cloth demand for India very few of the bids have materialised. The bulk of the inquiry has been for Calcutta. The political outlook in India shows no improvement. Shippers to China are slow in raising rates, and only a few miscellaneous transactions have been put through. Latest advices from that outlet state that a financial crisis is imminent. Buyers for South America have not been altogether idle. A firmer tone has prevailed with regard to American yarns, but purchases for home use have not been of any weight. Quite a fair export business has been done for Egypt.

## LIVERPOOL REPORT.

Messrs. Reynolds and Gibson report as follows under date December 14 :—Business during the past week has been on somewhat broader lines. From the start a better feeling was apparent, both here and in Manchester, and whilst purchases can hardly be said to have been on an exciting scale, the weekly balance shows a substantial increase in the price of the raw material, and a much better turnover in actual cotton than that to which we have lately become accustomed. The settlement of the Irish crisis and the progress of events at the Washington Conference have had a most beneficial effect on commercial sentiment, and with an increased enquiry from India, which, in quite a number of cases, resulted in transactions taking place, the prospects for the first day or two appeared more rosy than has been the case for a considerable time past.

On Monday last, however, the United States Agricultural Bureau issued its final report, estimating the American crop for the current season at 8,340,000 bales, and this, coming as a climax to a series of estimates which have steadily increased as time went on, acted as a serious damper on the spirits of would-be "bulls." The result, in fact, was rather disastrous for the time being, and our futures markets suffered a sharp set-back, which was reflected next day in the enquiry for actual cotton. The worst feature resulting, however, was that the confidence amongst spinners, which latterly had been making some headway, was once again rudely shaken. However, the decline caused by the Bureau figures has now been almost recovered, and, granting an increasing business for India, which by all accounts appears a reasonable supposition, it is not improbable that the general improvement noted above may continue to broaden out. Yarns have been finding slightly more favour, and in one or two authentic cases a substantial improvement in the basis has been obtained. Enquiry in Liverpool has been chiefly for Sakellaridis round about Fully Good Fair, but prices are very irregular. Good Fair Upper cotton is frequently in request, but is very scarce. Shippers in Egypt are asking high prices for this class of cotton as compared with the better grades. As we pointed out in a previous report, this cotton is likely to be scarce this season, and those who require this quality should lose no opportunity of picking it up whenever a chance occurs. Low cotton of all descriptions which has staple, is still in request, but poor prices are paid for it. Sudan and Tokar continue to hold their own, but here again prices are very irregular. Total sales, 2,400 bales (including 550 Sudan) Quotations are raised 100 points, with Good to Extra Fine Sakellaridis exceptionally 125 points dearer on the week. Fully Good Fair Sakellaridis 20.75d.

## COTTON INDEX FALLING.

Prices in the Lancashire cotton industry have continued to display an easier tendency during the past month, the general average of current quotations, according to Mr. Frederick W. Tattersall, of Manchester, now being 193 compared with 202 at the beginning of November, and 256 early in October. At the corresponding date last year the figure was 268.

The basis of the calculation is 100 which represents the ruling price of each commodity on July 31, 1914. American raw cotton values show exceptionally a slight advance on the month, the figure now being 170 compared with 169, but a fall of 12 points has occurred in Egyptian cotton at 235 against 247. With reference to yarns, American descriptions at 187 register a loss of eight points, and Egyptian sorts have been reduced 18 points—from 209 to 191. Cloth prices also have moved in favour of buyers, the number of 183 being 8 points less.

Throughout September values steadily appreciated, and merchants and manufacturers obtained some measure of relief as a result of the returning confidence of consumers. Unfortunately the improvement in the market was not maintained, and many salesmen on the Manchester Royal Exchange are again seeking orders. There are grounds for believing, however, that the Indian boycott will shortly be at an end, and a revival of buying by Lancashire's largest customer will soon move the trade from its present unparallelled position.

## A PALESTINE MORTGAGE BANK.

The Zionist Organisation Central Office announces that the High Commissioner of Palestine has approved the registration of a mortgage bank, under the name of General Mortgage Bank of Palestine, Ltd., with a nominal capital of £200,000. One fourth of the capital has been issued in shares which have been taken by the Zionist bank, the Jewish Colonial Trust. Before the registration of the new bank long term credits to the extent of £34,000 had already been granted in the form of mortgages on small buildings in Jaffa by the Palestine Foundation Fund. This sum will be refunded by the Mortgage bank by debentures to the Palestine Foundation Fund, which will shortly increase its holding of debentures to £50,000.

The traffic receipts of the Smyrna-Aidin Railway for the week ended December 3 amounted to £6.980.

The crude oil production of the British Burmah Petroleum Co., Ltd., and the Rangoon Oil Co., Ltd., for November amounted to 71,049 barrels.

Numbers are announced of 496 Four per Cent. Egyptian Government Irrigation Trust Certificates, drawn for redemption on January 2.

The traffic receipts of the Egyptian Delta Light Railways for the week ended November 20 amounted to £E13,120; total for year £E245,020. For the corresponding period of last year receipts amounted to £E16.678 ; total for year £E323,137.

# Near East Markets.

## LONDON PRODUCE REPORT.

### Seed Oils Advancing.

Sugar.—Home refined has been in moderate request at unchanged rates. West Indian crystallized has been firm at 39s. to 40s. 6d., while Czecho-Slovakian is 1½d. lower at 19s. 9d. White Java at 45s. has shed 1s.

Coffee.—Prices have remained firm in all cases. Costa Rica has been done at 140s., Indian has come to business at 110s; Nairobi is firm at 105s., and Jamaica is quoted at 150s. Futures are:—December, 50s.; March, 50s. 6d.; May, 51s. 6d.; July, 52s. 9d., and September, 53s. 3d.

Oilseeds.—There has been some irregularity in prices. Indian linseed has shed 2s. 3d. at 17s. 6d., and La Plata at 16s. 3d. has dropped 7d. Rapeseed is firm with Toria at 18s. 3d., and brown Cawnpore at 17s. 9d. Cottonseed has shown a firm tendency, with Indian unchanged at 9s. 3d., and Sakellaridis the same at 12s. 3d., while Egyptian black has gained 6d. at 13s. 3d.

Seed Oils.—A harder tendency has prevailed. Linseed oil has shed 3d. to 27s. 6d. Rape oil is higher with the crude variety 11s. up at 56s., and refined 6d. up at 51s. 6d. Cotton oil has risen. Refined has gained 2s. at 45s., but Egyptian crude has remained unchanged at 37s., while deodorized is 2s. up at 50s. Turpentine is 1s. 9d. lower at 68s. 3d.

Oilcakes. Business has been brisk, but prices have remained unaltered. Linseed cake remains at 290s., cottonseed cake at 200s., and Arachis cake at 280s. Palm Kernal is firm at 160s.

## CHEMICAL FERTILISERS IN GREECE.

*(By Our Athens Correspondent).*

Whereas formerly the use of chemical fertilisers was very little known in this country, a fairly large demand has been noticed during the past ten years, more especially by the smaller farms. This is due, in the first instance, to the extraordinary efforts of the State Departments of Agriculture to popularise the new methods of agriculture, and secondly to the establishment at the Piraeus of a large factory for the production of chemical fertilisers, by the "Société Héllenique des Products Chimiques et Engrais." Thus while up to 1910 the annual consumption did not exceed ten tons in 1915 it reached nearly 6,000 tons. Unfortunately this expansion was arrested during the years of war, on account of the difficulties arising in the purchase and import from abroad of the primary necessities for the manufacture of the fertilisers.

The demand for these goods was so general especially when the prices of agricultural products increased, that one might say, without fear of contradiction that, the difficulties overcome, these fertilisers would be used all over the country, and the amount consumed would exceed many tens of thousands of tons annually. In spite of the rise in the foreign exchanges, the consumption for this year is estimated at 15,000 tons. In 1920 about 14,000 tons were imported from abroad. Great hopes are entertained that with the increasing use of chemical fertilisers, combined with the selection of cereals and the increased sowings, as a result of the hydraulic works, drying up of swamps, and irrigation to be undertaken in Thessaly, Macedonia, and Epirus, Greece will not only be able to produce sufficient crops for her own needs, but will also have a surplus for export.

## THE ALEXANDRIA WATER COMPANY, LIMITED.

### INTERIM DIVIDEND.

Notice is hereby given that an Interim Dividend of Four Shillings per £5 share on coupon No. 66 is payable on and after the 15th December, 1921, at Messrs. Barclay's Bank Ltd., 1, Pall Mall East, London, S.W. and 54, Lombard Street, London, E.C. or at the Anglo-Egyptian Bank, Ltd., in Alexandria, upon the making of a declaration as to ownership in the form required by the above Banks, form of which will be supplied upon application.

Dated Alexandria, 23rd November 1921.

By order of the Board,

K. B. Woodd Smith, Manager.

## EGYPTIAN CROPS.

The bulletin of the Egyptian Ministry of Agriculture for November gives the following particulars:—

Maize (Nili).—The hot weather that prevailed during the month has favoured the growth of the crop. Harvesting is general. The crop this year is later than last year. The yield is expected to be below the average.

Millet (Nili).—The condition of the crop is satisfactory. Harvesting will start next month.

Rice (Sefi).—Harvesting is coming to an end. The yield is not a satisfactory one.

Rice (Nili).—Area sown under this crop in Beheira is very small. Harvesting has started in Fayum. The crop is below the average.

Sugar-cane.—Weather has been favourable and water supply sufficient. Cutting for factories will probably start in two months time. Attacks of Mealy Bug have been reported from several provinces. The crop is slightly below the average.

Bersim.—The crop is growing satisfactorily. The first cutting is general since the 15th of the month.

Wheat, Barley and Beans.—Weather has been favourable and water supply sufficient. Sowing, watering and manuring are in progress. Germination is satisfactory.

## LEVANT MARKET REVIEW.

The following extracts are taken from the review of the National Bank of Turkey for October:—

Since last month, events have been moving rapidly in Asia Minor, the most important being the Treaty concluded by the French Government with the Kemalist Government at Angora.

*Exchange Fluctuations.*—During October, the Turkish pound underwent very serious depreciation. This was brought about by gambling on the Bourse. As a result of this speculation, the Bourse was closed near the end of the month by the Government and has not been reopened up to the time of writing. Public meetings have also been held, where it has been pointed out that the serious depreciation of Turkish currency was brought about by gambling alone, and not trade conditions.

*Foreign Exchanges.*—The economic position in Constantinople continued to become worse, and the demand for foreign exchange was greater than usual owing to the desire of the public to insure part of their funds in strong currency. This was taken advantage of by speculators who assisted to force sterling exchange up from 688 piastres on October 14 to 890, on October 22. On profit taking, the rate fell back to 770 by the end of the month with tendency uncertain as against 636 piastres on October 1.

Various proposals have been mado by bankers with a view to steadying the lira exchange, but it is recognised that depreciation must continue until a sufficient supply of foreign exchange is freely available for the needs of commerce. It is probable that the banks will again take action against speculators in exchange, by refusing to make advances to them in Turkish currency, and if this course of action be finally agreed upon, it may limit considerably the daily fluctuations which are so detrimental to trade.

*Flour.*—During October about 270,000 sacks arrived chiefly from the United States and 40-45,000 sacks were sent to Batoum.

The high rate of sterling exchange is preventing dealers from buying for forward delivery, but heavy arrivals from America are awaited during the first fortnight in November and stocks will be sufficient to last six weeks. However if dealers continue to refrain from buying for forward delivery, it is possible that there may be a shortage at the beginning of December. Prices in America and Canada have slumped considerably, but the high dollar and sterling exchange and the 11 per cent. duty have raised the price in Turkish currency to a higher level than hitherto. Present stocks are estimated between 100,000 to 110,000 sacks.

*Barley.*—A parcel of Roumanian barley was offered on the market at about 7½ piastres per oke c.i.f. Quotations from the United Kingdom for Roumanian barley have fallen from 40s. to 30s. per 400 lbs. during October. Practically all the business done in barley is for local requirements. Prices have fluctuated between 8 and 9¼ piastres per oke and were about 8½-8¾ piastres at the end of the month.

Digitized by Google

*Sugar.*—7,500 tons arrived during the month from the following countries: Java, 5,500 tons; American, 1,000 tons; Holland, 1,000 tons. Between 1,500 and 2,000 tons were sent to Batoum and ports on the Black Sea. Owing to heavy arrivals and the weak position of the article, prices have dropped below those ruling on the Continent. Stocks are about 8,500 tons, mostly Java granulated.

*Rice.*—1,000 tons arrived during October from Rangoon, Siam and Saigon via Port Said or Marseilles and 500 tons went to Batoum and the Black Sea ports. The price of rice in local currency fluctuates heavily in sympathy with exchange fluctuations. The situation on the market is calm but stocks are very low.

*Coffee.*—4,000 sacks were sent from Rio and Santos at c.i.f. prices varying between 56s. and 62s. per cwt. for Rio according to quality. Between 1,500 and 2,000 sacks were exported to the Black Sea ports. Stocks on hand are 2,500 sacks.

*Leather.*—The market is always very calm. A good deal of activity was shown at the beginning of the month owing to the advanced season, and prices were on the upward tendency, but the very serious rise in the exchange towards the middle of the month paralysed all business and caused the same uncertainty and nervousness as before. The situation could not be worse than it is. Prices in Europe are much higher than sale prices here, and it will be long until consumers get accustomed to paying what the importer is justified in demanding. The rise in raw hides on the European markets has had its effect on local raw hides here. These have advanced by 46 per cent., and a further rise is expected. Local leather has risen by 35 per cent., and will very probably go higher. There is no market for vachettes although this is, as a rule, the favourable season. Buffalo hides are very scarce and if Black Sea ports were not closed, there would be a very big demand at high prices. If the present situation continues, all present stocks will soon disappear, as was the case last winter. European leather being so heavily handicapped owing to the exchange, the demand for local leather has increased considerably and the latter is gradually supplanting the former

## CURRENT PRICES.

*General Produce.*—Bacon: (Continental), 136s. 6d. cwt.; (Canadian), 120s. cwt.; American), 106s. cwt.; butter: (Danish), 211s. cwt.; (Australian), 142s. 6d. cwt.; (New Zealand), 173s cwt.; cheese: (Canadian), 107s. cwt.; (New Zealand), 101s. cwt.; lard, 78s. cwt.; eggs (Danish), 44s. per 120; (Styrian), 21s. 6d. per 120; chillies, 162s. 6d. cwt.; cloves (Zanzibar), 1s. 6¼d. lb.; cocoa (Ceylon, good to fine), 97s. 6d. cwt.; coffee (Costa Rica), 155s. cwt.; (East Indian), 130s. cwt.; (Central American), 117s. 6d. cwt.; (Jamaica), 67s. 6d. cwt.; (Mocha longberry), 113s. cwt.; (Santos, superior), 61s. 6d. cwt.; ginger (washed Cochin), 67s. 6d. cwt.; nutmegs (110's to 80's), 11½d. lb.; pepper (Singapore black), 3½d. lb.; (Muntok, white), 7½d. lb.; pimento, 2½d. lb.; raisins (Valencias), 135s. 6d. cwt.; sultanas (Smyrna), 126s. 6d. cwt.; currants (Vostizza), 83s. 6d. cwt.; currants (Amalias), 60s. cwt.; sugar: (Tate's cubes), 54s. 9d. cwt.; (Lyle's granulated), 48s. 10½d. cwt.; (Mauritius crystals), 43s. 3d. cwt.; (West Indian crystallized), 40s. cwt.; (centrifugal), 14s. cwt.; tapioca (fair Singapore), 1½d. lb.; rice (Rangoon, No. 2), 18s. 3d. cwt.; (bran, Rangoon), £6 2s. 6d. ton; cinnamon (firsts), 1s. ½d. lb.; mace (fair Singapore), 1s. 3½d. lb.; tea: Indian (common to good common) 1s. lb.; (medium to good) 1s. 7d. lb.; (fine to finest), 2s. 8½d. lb.; Ceylon (common to good common), 1s. 1½d. lb.; (medium to good), 1s. 7½d. lb.; (fine to finest), 2s. 9d. lb.; Java (common to good common), 8½d. lb.; wheat (English white), 47s. qr.; (Australian), 53s. 4½d. qr.; barley (malting); 57s. 6d. qr.; barley (feeding), 42s. qr.; oats (English), 33s. 3d. qr.; oats (La Plata ex-ship), 25s. 10½d. qr.; maize (La Plata), 34s. 9d. qr.; flour, 42s. sack.

*Metals.*—Aluminium, £122 10s. ton; antimony (English Regulus), £36 10s. ton; bismuth, 7s. 6d. lb.; copper (standard), £66 16s. 3d. ton; copper (electro), £75 15s. ton; gold bars, 100s. 3d. oz.; iron (No. 3 Cleveland), 100s. ton; hematite (mixed number), 107s. 6d. ton; galvanized sheets (24 G), £17 5s. ton; lead (soft foreign), £25 2s. 6d. ton; manganese Poti, 1s. 1½d. unit; molybdenite, 33s. 9d. unit; nickel, £190 ton; platinum, 316s. 3d. oz.; plumbago, £20 ton; quicksilver, £10 7s. 6d. bottle; silver bars, 34¼d. oz.; spelter (G.O.B.), £26 13s. 9d. ton; tin (standard), £168 3s. 9d. ton; wolfram, 11s. 10½d. unit; zinc sheets, £34 10s. ton; tin plates (20 by 14), 20s. 9d. box.

*Chemicals.*—Acids: Boric, 66s. cwt.; oxalic, 8½d. lb.; citric, 2s. 2½d. lb.; tartaric, 1s. 4½d.; ammonia (sulphate), £15 1s. 6d. ton; arsenic (white powdered), £40 10s. ton; benzole (standard) 2s. 5½d. gallon; bleaching powder (35 per cent.), £15 10s. ton; borax crystals, 31s. 6d. cwt.; cream of tartar, 121s. 3d. cwt.; Potassium: Bichromate, 8d. lb.; chlorate, 6d. lb.; caustic £32 10s. ton; nitrate £45 ton; permanganate, 11d. lb.; prussiate yellow, 1s. 1½d. lb.; sulphate (90 per cent.), £15 5s. ton; Sodium: Crystals 140s. ton; bi-carbonate, £11 5s. ton; bi-chromate, 6½d. lb.; alkali, (58 per cent.), £9 4s. ton; chlorate, 4s. lb.; caustic (70 per cent.), £24 10s. ton; hyposulphite, £17 ton; prussiate, 8½d. lb.; nitrate, £14 18s. 9d. ton; glycerine (crude, 80 per cent.), £80 ton; glycerine (industrial, 1260 per cent.), £110 ton; lemon oil, 2s. 11d. lb.; quinine, 4s. oz.; red lead, £39 5s. ton; white lead, £42 5s. ton; white ground lead, £51 15s. ton; sulphate of copper, £29 10s. ton; sulphate of iron 75s. ton.

*Miscellaneous.*—Cotton: (American), 11.33d. lb.; (Egyptian Sakel), 19.15d. lb.; Oilseeds: Linseed (La Plata), £17 7s. 6d. ton; rape (Toria), £18 5s. ton; palm kernals, £18 11s. 3d. ton; Oils: Linseed, £28 17s. 6d. ton; olive (Levant), £77 10s. ton; palm, £36 12s. 6d. ton; rape (crude), £45 10s. ton; soya, £34 10s. ton; petroleum, 1s. 4½d. gallon; petrol, 2s. 1d. gallon; fuel oil (ex-tank), £3 15s. ton; coconut (Ceylon), £43 3s. ton; cotton (crude) £37 10s. ton; ground nut, £46 10s. ton; Rubber: Plantation (No. 1 crepe), 11⅞d. lb.; smoked sheet, 11⅜d. lb.; fine hard Para, 1s. 2½d. lb.

FOREIGN EXCHANGES
AND
HOW TO PROFIT BY THEM.

"The Mysteries of Foreign Exchanges" are not only puzzling the Banking World, but also Exporters and Importers. Furthermore Investors in Foreign or English Securities are feeling the effect of Foreign Exchange movements. We are, therefore, happy to have been able to publish a Treatise of some 38 pages, profusely illustrated with Maps and Charts, which explains in the following chapters, the whole Foreign Exchange position.

(1) The Modern Chaotic Exchange Situation
(2) The French Exchange Position.
(3) German Industry and the Mark.
(4) The Italian Lira.
(5) The United States Dollar.
(6) Miscellaneous Exchanges
(Belgium, Austria, Poland, Roumania, etc.)

Every Merchant (Exporter and Importer), and every Investor in English or Foreign Securities, should possess this interesting publication.

# SHIPPING INTELLIGENCE

## NEW BURMAH OIL TANKER.

On December 14, the new single screw tank steamer Badarpur, built for the Burmah Oil Company, was launched from the Hebburn shipbuilding yard of Messrs. R. and W. Hawthorn, Leslie and Co., Ltd., The vessel which has been specially built for the company's Eastern trade, is 454ft. long, 57ft. wide, and 39ft. 3in. in depth, and its deadweight capacity is 10,000 tons. It is of the two-deck type, and has a pump room with a double line of suction pipes enabling the vessel to be pumped from either side.

The vessel is equipped with one set of triple-expansion engines, which can reach a speed of 11 knots, and three main boilers which work at a pressure of 180 lb. The dimensions of the boilers are 16ft. 6in. in diameter and 11ft. 6in. in length, and an auxiliary boiler is also fitted in case of emergencies, 12ft. 6in. in diameter, and 11ft. 6in. in length. The furnaces are adapted to burn oil fuel on the low-pressure system, and have one duplex unit comprising pumps, heaters, strainers, etc. The Badarpur is the largest vessel of the Burmah Oil Company's fleet.

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses* :—

*Anchor Line.*—S.s. Castalia for Bombay (Liverpool, December 27).

*Anchor-Brocklebank Line.*—S.s. Masirah for Port Said, Colombo Madras and Calcutta (leaves London, December 24) ; s.s. Maimyo for Port Said, Colombo, Madras, and Calcutta (leaves London, January 7) ; s.s. Media for Calcutta (Birkenhead, January 11) ; s.s. Maihar for Calcutta (Birkenhead, January 11) ; s.s. Manaar for Port Said, Colombo, Madras and Calcutta (leaves London, January 21) ; s.s. Malancha for Calcutta (Birkenhead, January 25) ; s.s. Malakuta for Port Said, Colombo, Madras and Calcutta (London, February 4) ; s.s. Mahratta for Calcutta, (Birkenhead, February 8).

*Bibby Line.*—S.s. Gloucestershire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, January 4) ; s.s. Sittang for Rangoon (Middlesborough, January 7).

*Byron Steamship Line.*—S.s. Maid of Spetsai for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, and Braila, also calling at Volo, Salonika, Smyrna, Bourgas, and Varna (Liverpool, December 23) ; s.s. General Napier for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, and Braila, also calling at Volo, Salonika, Smyrna, Bourgas and Varna (Liverpool, January 10).

*Cunard Line.*—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Brindisi, Bari, Ancona, Venice, Trieste, Fiume, and Gravosa, (Swansea, December 24) ; s.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina and Batoum (Swansea, January 5).

*Ellerman Line.*—S.s. Asturian for Gibraltar, Malta, and Alexandria (Liverpool, December 24) ; s.s. Estrellano for Genoa, Leghorn, Naples, Palermo, Messina, and Catania, (Liverpool, January 12).

**ANCHOR LINE**

**First-Class Passengers only.**

**LIVERPOOL TO BOMBAY.**

**KARACHI via Bombay calling at Gibraltar & Egypt**

**LARGE STEAMSHIPS. UPPER DECK CABINS.**
**FITTED WITH ELECTRIC FANS.**
**RECOGNISED BY INDIAN GOVERNMENT.**

**PASSENGER SAILING DATES—**

**CASTALIA, JANUARY 6.**
**MASSILIA, JANUARY 20.**
**ELYSIA, FEBRUARY 10.**
**CIRCASSIA, MARCH 10.**
**OLYMPIA, MARCH 22.**

**Anchor Line (Henderson Brothers), Ltd.,**
**16, Gracechurch Street, London, E.C.3.**

*Ellerman's "City" Line.*—S.s. City of Baghdad for Calcutta (Birkenhead, December 30) ; s.s. City of York for Calcutta (Birkenhead, January 7).

*Ellerman's "Hall" Line.*—S.s. City of Paris for Bombay, Karachi, and the Punjab (Liverpool, December 30) ; s.s. City of Auckland for Bombay, Karachi, and the Punjab (Liverpool, January 30).

*Ellerman's Westcott and Laurance Line.*—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

*Glen Line.*—S.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January 5) ; s.s. Glenogle for Port Said, Port Swettenham, Singapore, etc. (London, January 19) ; s.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. (London, February 2).

*Harrison Line.*—S.s. Tactician for Calcutta (Liverpool, January 3) ; s.s. Intombi for Port Said, Port Sudan, Aden, Mombasa etc. (Birkenhead, January 19).

*Henderson Line.*—S.s. Pegu (new steamer) for Port Said and Rangoon (Birkenhead, December 28) ; s.s. Martaban for Port Said and Rangoon (Birkenhead, January 11).

*Holt Line.*—S.s. Telemachus for Port Said, Port Swettenham, Singapore, etc. (Glasgow, December 29) ; s.s. Agapenor for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, December 29 ) ; s.s. Pyrrhus for Port Said, Port Swettenham, Singapore, etc. (Birkenhead, December 29) ; s.s. Titan for Port Said, Port Swettenham, Singapore, etc. (Swansea, January 5).

*Moss Line.*—S.s. Karnak for Gibraltar, Malta, Piraeus, Syra, Smyrna, Salonika, Constantinople, Bourgas, Varna, Constantza and Sulina (Liverpool, December 24).

*Papayanni Line.*—S.s. Bosnian for Algiers, Malta, Piraeus, Smyrna, Volo, Salonika, Smyrna, and Constantinople (Liverpool, December 31).

*P. and O. Line.*—S.s. Soudan for Colombo, Madras, and Calcutta (London, December 30) ; s.s. Delta for Bombay (London, December 30) ; s.s. Nore for Colombo, Madras, and Calcutta (London, January 13) ; s.s. Macedonia for Bombay (London, January 13) ; s.s. Perim for Bombay (London, January 14).

*P. and O. British India Line.*—S.s. Domala for Bombay and Karachi (London, December 30) ; s.s. Mantola for Colombo, Madras, and Calcutta (London, January 6) ; s.s. Nirvana for Colombo, Madras and Calcutta (London, January 14) ; s.s. Hatarana for Colombo, Madras and Calcutta (London, January 21) ; s.s. Morvada for Colombo, Madras and Calcutta (London, February 3).

## AGENTS WANTED ABROAD.

***ADVERTISERS requiring agents abroad may insert a paragraph in the following column free of charge. Letters in reply should be addressed to "The Enquiry Bureau," The Near East," 1, Devonshire Square, London, E.C.2." when they will be re-directed to the firms concerned. It must be understood that 'The Near East" accepts no responsibility in connection with such replies.***

**111. Agents wanted in the Near East, with good connections is the Typewriter and Stationery Trade, to represent a first-class English firm of manufacturers, on commission basis or own account.**

**118. Well known Sports Goods House with factory in India, wish to appoint Agents in Near and Middle East where not at present represented.**

**113. Import and Export Merchant in Smyrna invites inquiries from British firms wishing to trade with this territory. Will act as agent or on commission basis.**

**114. Importer in Karachi (India) travelling throughout India, wishes to get in touch with merchants and manufacturers in England and elsewhere. General merchandise.**

**115. An import and export firm in Spalato, Yugoslavia, wishes to enter into business relations with British manufacturers, importers and exporters. Specialities :—Exports : Medicinal herbs dried fruits, hides, timber. Imports: Oils, food products, tarpaulins, mackintoshes, sacks.**

**116. Import Merchants in Adana, Cilicia, Asia Minor, wish to represent British firms for any kind of British-made goods. Own account and commission basis. Good references provided. Send catalogues and samples with prices and terms.**

**117. Importer in Roumania, interested in Jute trade, wishes to get in touch with firms dealing in sacks, new and old Dundee, and Calcutta makes.**

**121. Exporter of Greek Ores in Athens, especially of purest quality Magnesite and Chromite wishes to be connected with interested British Firms.**

## THE INDUSTRIES OF PALESTINE.

Conditions before the war precluded the possibility of any great economic development in Palestine, but the country is nevertheless able to boast of a number of small industries, some of them of considerable importance. Primarily an agricultural country Palestine is unlikely to develop industries on Western lines, unless there should be discoveries of unsuspected mineral resources. But there should be ample scope for advance in the smaller industries suited to local conditions. The present position is reviewed in an interesting memorandum issued by the Department of Commerce and Industry of the Government of Palestine in which the existing industries and the prospects are briefly surveyed. We give the following extracts :—

**Olive Oil.**

There are about 400 olive presses for the most part of primitive construction with an annual output of 3,600 tons of oil. Approximately half the oil is fit for consumption, the remainder being used for soap making. A small quantity of olive oil only is exported and that mainly to Egypt. For the year ending March 31, 1920, 84 tons were exported valued at £E.10,280. In addition, Syria and Transjordania take part of the Palestine production, but no figures are available. Since a full crop is only obtained from a tree in every alternate year, the production year by year varies considerably. The following production figures are based upon the tithes estimates :—1919-20, 350 metric tons. 1920-21, 6,700 metric tons. An addition of at least 15 per cent. must be made to arrive at the total production figure, owing to probable under-estimation, and the omission of non-tithable lands. The berries are collected from the trees when they are turning from green to black, when they are considered to contain the maximum amount of oil. The method of collection by beating the trees with sticks damages the trees considerably and bruises the fruit.

**Soap Making.**

There are about 50 factories for soap making, of which 25 are in Samaria (Nablus) District and 15 in Jaffa District. About 2,500 tons of soap are produced annually, for which caustic soda, lime, carbonate of soda, and olive oil (to supplement the local produce) are imported. Over 1,500 tons of soap were exported during the year ending March 31, 1920 valued at £E142,400, and in the year ending March 31, 1921, 1,450 tons valued at £E.132,150 with the exception of a very small quantity to Egypt. Carbonate of soda is in some cases obtained from the ash of a plant called *kulli* found east of the Jordan. The wholesale price of Nab'us soap varies from P.T.3.8. to P.T.4.2. per lb. The method of manufacture is primitive. The industry has suffered considerably by the war. In 1908, 4,500 tons of soap were exported to Egypt from Jaffa alone and the output in the Samaria district reached 7,500 tons.

**Wine.**

Wine is manufactured in commercial quantities, chiefly in the Jaffa district, where at Richon le Zion a well equipped factory was established by Baron Edmond de Rothschild in 1891 at the cost of about £E.120,000. This factory is run in conjunction with others on a co-operative basis. The cellars are capable of holding about 75,800 hectolitres. The annual production prior to the war was 35,000 to 45,000 hectolitres of different wines and spirits including Medoc, Port, Sauterne, Allicantes, Malaga, Muskat, Tokay, etc., and various liqueurs. Smaller cellars and wine presses are to be found at Ziehren Jacob near Haifa, and there is a distillery at Chedera. In addition to the local consumption 1,374,839 litres valued at £E.65,017 were exported during the year ended March 31, 1920, and 1,265,577 litres valued at £E.50,409 during the year ended March 31, 1921, the chief export being to Egypt. Spirits such as arak and brandy are distilled, production being approximately 820 hectolitres in 1919, and 280 in 1920. The production of alcohol rose from 380 hectolitres in 1919 to 890 in 1920.

**Tobacco.**

The abolition of the Regie Monopoly in January, 1921, has opened this industry to all comers. At present the local market is supplied largely by the Regie Co-Interessee des Tabac de l'Empire Ottoman, which has a factory at Jerusalem employing some 230 hands, and handling about 350 tons of tobacco per annum. Messrs. Maspero Freres from Egypt and Messrs. Baddour Bros., Jerusalem, have already opened factories in Jaffa and Jerusalem respectively, and undoubtedly other firms will follow. The duties on home grown tobacco are very much lower than on imported tobacco, and it is hoped thereby to encourage the growth of tobacco locally, but it is not intended that this preference should continue when the growth of tobacco has become stabilised.

**Fisheries.**

The Government is endeavouring to foster the fishing industry. The supplies of fish, salt, and olive oil are considerable, and would appear to provide a good opening for the development of a curing and canning industry, and the use of fish manure would absorb the fish refuse ; so far, however, little progress has been made in this direction.

The principal fishing centres are at Gaza, Jaffa and Haifa. The methods used are those of centuries past, owing to the lack of harbours and the difficulties of working off the open shore. The nets used include Seine nets for shore and sea, trammel nets, and throw nets. Long lines with about 70 hooks, and vertical lines with three hooks are also used. The lines and hooks are usually imported but the fishermen make their own nets. No trawling is done anywhere on the coast. There are no motor boats or steam driven vessels in the fishing fleets, only small sailing boats of not more than three tons being used. The number of fishing boats registered is 120 and of fishermen about 600.

**Building Trade.**

The high cost of building materials and labour has militated against the development of the building industry, but there are signs of a revival in the trade. The chief activity will almost certainly take place at Haifa, Jaffa, Tel-Aviv, and Jerusalem. Stone suitable for building is plentiful. Red roofing tiles were made in Jerusalem prior to the war, but even then most of those used were imported from France. Masons and bricklayers are efficient, but plasterers, carpenters, and plumbers, and subsidiary workers are generally inferior workmen. Lime burning is carried on in most of the large towns. Woodwork and iron girders are imported.

There are a considerable number of small joinery workshops throughout the country, most of the work turned out being of poor quality. The chief centre for this trade is Jaffa, where several factories have been established. The Carmel Carpenters Co-operative Shop, Haifa, and the American Danish Company, Jerusalem, have recently commenced operations with modern machinery. This trade will undoubtedly increase with the building trade.

**Tanning.**

This industry has decayed during the war. The hides of the local cattle are still of poor quality. The number of good cattle hides tanned does not exceed 5,000 per annum. Small tanneries are working at Jaffa producing by hand labour a medium quality leather suitable for tops and thin sole leather. Most of the leather used in the country is imported from Belgium, France, and America, small quantities coming from Egypt. Sheep and goat skins are plentiful. Sheep skins are hand dressed at Jonin, Hebron, and Gaza, and made up into winter coats for the peasants. Hebron is the chief centre for water skins which are prepared from the best quality goat skins, which with other skins in the past were exported to Egypt. Finished water skins sell from PT.80-120. This trade has, however, decreased very considerably. Local shoemaking is carried on by hand to a considerable extent in all the larger towns.

Coarse material and carpets are woven by hand at Jerusalem, Hebron, Gaza, Beersheba, and Mejdel. The inhabitants of Ramallah, a village outside Jerusalem, work a characteristic embroidery. The materials utilized are local wool, imported cotton—yarn and silk. So far as can be ascertained, the total number of hand looms in Palestine does not exceed 800 and there are no power looms. Endeavours are being made to utilize fast vegetable dyes in connection with this industry.

Mother of Pearl and *Objets de piete* are worked entirely by hand by the inhabitants of Bethlehem and the adjoining villages from the imported material obtained for the most part from Australia, the Red Sea, and France. Lake Huleh is also considered a possible source of supply of raw material, and endeavours are being made to test the shells found in this district. Owing to the high cost, shortage of labour, and falling off in the demand, a considerable decrease in production has taken place since pre-war days. The output before the war valued at £E.50,000 is now worth £E.20,000, the majority being exported to France, America, Germany, Austria, Italy, and England.

Glass-making before the war was carried on at Hebron and Tanturah. At Hebron some 500 hands were employed, whereas at present only six or seven persons eke out a precarious existence. The raw material used is broken glass melted down. It is understood that suitable sand is obtainable near the villages

Digitized by Google

of Belt Naim and Yetta, but all attempts to establish the industry on a commercial footing have so far failed. The works at Tantura have ceased to function.

Boat building of a very primitive kind is carried on at Jaffa and Haifa, but this industry is not yet of any importance, owing to the lack of capital and the difficulty in obtaining suitable material locally.

Suitable oils for making scents could be extracted from the many plants found in Palestine. Experiments, hitherto not very successful, have been made with roses, geranium, mimosa, and orange flowers. Some twenty years ago a rose oil factory was established with the help of Baron Edmond de Rothschild at the Jewish Colony near the Sea of Meron, but it proved unremunerative owing to the high cost of the rose plantations. Laurel oil is made from the fruit of the laurel bush at Rosh Pina, Galilee. The colonies are again attempting the manufacture of perfumes from essential oils.

**Minerals.**

The mineral wealth of Palestine is practically unexplored, but building stone is plentiful, and open air quarries are being worked throughout the country. The Palestine Stone Quarry Syndicate has commenced operations near Athlit, and attempts are being made to cut stone with machinery at Bethlehem. Lime is burnt in kilns in several parts of the country. Common salt, potassium and bromine salts, and asphalt exist in large quantities in and around the Dead Sea and phosphate deposits are reported near Bethlehem.

Provided sufficient capital and modern machinery is utilized there appears to be an opening for a paper factory. At present all paper has to be imported. There is a fair demand for newspaper and printing paper, cigarette, packing, and writing paper which will no doubt increase.

Mechanical transport though in its infancy is a growing industry. Various companies run services betwen Tiberias, Dead Sea, Ramallah, Jaffa, Hebron and Jerusalem, Haifa, and Beyrout. Motor boats ply on the Lake of Tiberias and the Dead Sea.

Agricultural implements used by the felaheen are made locally, and at present there is a small demand for anything other than hand ploughs, mechanical devices being as yet unpopular. Demonstrations with agricultural machinery are occasionally held and the popularity of such shows is increasing.

## News from Everywhere.

It is announced that the period during which grain, pulse, and flour may be imported into India free of Customs duty has been extended until June 30, 1922.

The sixteenth ordinary general meeting of the Associated Cotton Ginners of Egypt, Ltd., will be held at the offices of the company Alexandria, to-day.

At a meeting of Indo-Burma Oilfields (1920) held on December 16, the resolutions for altering the articles of association passed at the general meeting held on December 1 were duly confirmed:

The authorized capital of new companies registered in India during September was Rs.208 lakhs, as compared with the high figure of Rs.1,600 lakhs for the same month last year.

The stock of sugar at the Bombay Port Warehouses on October 25 amounted to 17,200 tons, of which, 8,200 were from Mauritius and the balance from Java as against 20,000 tons on the same date last year.

The Colonial Office has notified the Department of Overseas Trade that zone time two hours fast on Greenwich has been adopted in Cyprus, which took effect on November 14. The Colony has hitherto kept local time of two hours twelve minutes fast on Greenwich mean time.

According to a recent report the abolition of the "pay on delivery" postal service between India and Mesopotamia, which ended on August 1, has seriously affected the British population of Baghdad. The Baghdad Chamber of Commerce is approaching the Indian Chambers with a view to concerted action to secure renewal of the postal facilities.

The Roumanian oil production in October (says Reuter), amounted to about 110,500 tons against about 99,200 tons in September. Of this amount the Steaua Romana produced 19,331 tons, the Astra Romana 32,131, the Romano-Americana 23,131, the Creditul Minier 5,375, the Concordia 5,583, ths Internationala, 4,999, the Orion 4,339, and the Colombia 3,732.

## TENDERS INVITED.

***Tenders are invited for the following contracts, and must be made by the dates mentioned.***

***(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street, S.W.1.)***

**Egypt.**

Uniforms and Boots, etc.—The Director-General Ports and, Lighthouses Administration, Ministry of Communications Alexandria, invites tenders for the supply of naval clothing for the first half year of 1922-23. The specification includes 100 pairs ankle boots, 350 pairs sailors' shoes, 170 blue serge jumpers, 400 pairs blue serge trousers, 200 blankets, 500 woollen socks, 450 tarbrushes, 250 flannel undershirts, various naval badges, lanyards, etc. The articles supplied must be exactly similar to the standard sealed pattern, kept at the Central Magazine, Arsenal, Alexandria, and in number, weight, and measurements, in accordance with the written order or size roll given to the contractor by the Director-General of this Administration. The standard pattern will be sealed by the Administration and by the contractor. Local representation is essential. January 16 (D.O.T.).

Wood.—The Director of Stores, F.D.A., Arsenal, Alexandria, invites tenders for the supply of wood. January 18.

Printing Ink, etc.—The Government Press, Cairo, Egypt, invites tenders for the supply of 15,000 metres of black binding cloth; 675 kilos of black printing ink; 3,000 kilos of glue; 1,100 metres of packing cloth; 1,000 kilos of starch; 1,500 kilos of string for heavy packing. Tenders on the proper form will be received by the Controller of Printing and Stationery, Ministry of Finance, Dawawine P.O., Cairo. Representation by an agent resident in Egypt is essential. January 24 (D.O.T.).

Oils, Paints, etc.—The Director of Stores, Frontier Districts Administration, Alexandria, invites tenders for the supply of oils, paints and varnishes to patterns kept at the Arsenal, Alexandria. The specification includes 2,115 kilos of marine engine oil, 3,500 kilos motor oil, 600 kilos turbine oil, besides colza, linseed, rifle oils, turpentine, etc.; 2,000 kilos grey paint in oil, 1,220 kilos white lead in oil, and items of ships composition, Brunswick black, black paint, red lead powder, etc.; 145 kilos copal varnish, etc. January 14 (D.O.T.)

**Yugoslavia.**

Blankets.—Notification was given by the Department of Overseas Trade in October last that the Army Clothing Department of the Ministry of War and Marine, Donji Grad, Belgrade, invited tenders for the supply of 120,000 Army Blankets. The closing date for these tenders was given as November 10, but from recent information received it appears that no tenders submitted on that date were accepted and that the offer is still open. New tenders will probably be called for to be presented on January 18. United Kingdom firms interested are reminded that representation by an agent in the Serb-Croat-Slovene State is essential.—(D.O.T.).

## BAKU CONSOLIDATED OILFIELDS.

The report of the Baku Consolidated Oilfields to September 30 last states that during the period under review the properties of the company at Baku have remained under the control of the Soviet Government. The directors have continued to urge by every means in their power, the claims of the company to the restoration of its properties, compensation of its staff, and payment in full for all oil removed from its reservoirs or baled from its wells. Signs have not been wanting of late that the Soviet Government is beginning to realise that the seizure of property of foreigners without compensation is an insuperable barrier to any reconstruction of Russian industry.

The drilling operations in Texas, referred to at the last annual meeting, resulted last March in the bringing in, at a depth of 3,600 ft. of a flowing well, which produced 10,213 barrels (1,459 tons) of oil before production was stopped by the influx of water from a carelessly drilled well on an adjacent property. The heavy fall in price of petroleum having made drilling in this field temporarily unremunerative, operations have been suspended for the present.

A Bucharest Correspondent of *The Times* states that during the construction of the railway line Craiova-Petrosheni across the Carpathians coal was discovered at three different points. Three thousand men are already at work on the spot, and it is hoped that in about three months production will be in full swing.

The second annual Orient Fair will be held at Bratislava from July 9—16, 1922.

## SUPPLIES AND PRICES IN THE NEAR EAST.

The following extracts are taken from recent reports received by the Imperial Ottoman Bank :—

Stamboul, December 10.

With the exception of some consignments to Russia, notably to Batoum—consignments of a more or less hazardous character—and some sales for Anatolia, the Constantinople market has not presented any movement worthy of note during the week. The financial stringency continues to make itself felt here as a result of the depression and the restriction of bank credits.

As regards manufactures the market is inactive, and prices tend to fall. Merchants have greatly decreased their orders. The market is not in a prosperous condition at present, but it no longer inspires disquiet.

*Produce.*—Sugar. The fall continues. Czecho-Slovakian is continually offered. Here stocks are gradually decreasing, thanks to consignments made to Batoum and other ports of the Black Sea. Quotations are :—Java, December shipment, £18-10 per ton ; American 7-8 dollars per 100 kilos ; here : in transit £23½-24 per ton, in customs £T28½-29 per 100 kilos.

Coffee. The prices of coffee are subject to frequent fluctuations. The commodity is hard, and as the chief markets are in general with small stocks a rise in prices is to be anticipated. In view of the lack of stocks here the arrivals of the week have been placed at advantageous rate. Quotations Rio No. 2, 593, in transit Ps52-60 per oke.

Rice. Prices are maintained. Quotations : Saigon, No. 1 90 francs, shipments from Marseilles ; Rangoon No. 2 £20-21 per ton, shipment from Port Said.

## THE CZECHO-SLOVAK SUGAR INDUSTRY.

According to *Narodni Listy* the Czecho-Slovak sugar output for the period 1921-1922 is estimated at 6½ million metric quintals, while the stocks at November 1 are about half million quintals. The market will, therefore, have at its disposal seven million quintals of raw sugar, or 5¾ million quintals of white sugar. If the recently concluded contract for the delivery of 400,000 quintals to France is taken into account, about 1¼ million quintals, or more than one half of the Czecho-Slovak sugar surplus has been disposed of in addition to 800,000 quintals sold to local buyers. Nearly half of this year's output has thus already been sold. Large quantities have been purchased by the English buyers for delivery from the Czecho-Slovak warehouses in Hamburg

Of the exports in 1920-21 (4,143,760 quintals), the largest quantities were purchased by the following:—France 955,280 quintals, Hamburg, 844,880 quintals ; Austria, 632,730 quintals, Switzerland, 484,290 quintals, England, 340,800 quintals (as compared with 22,110 quintals in 1919-20), Germany, 235,050 quintals, Roumania 212,670 quintals, Yugoslavia, 170,280 quintals and Italy, 121,680 quintals.

The tendency towards concentration of interests which for some time has been making itself felt, was recently manifested by the purchase of the raw sugar factory at Zidovice and the sugar refinery at Steti by the sugar refinery at Usti.

# Stock and Share Markets.

## STRENGTH OF INVESTMENT DEMAND.

(*From Our Own Correspondent.*)

London, Monday Evening.

With the holiday season close at hand it would be unreasonable to expect any considerable broadening of business, however favourable the general conditions, and there has not been much doing in most groups during the past week except in the gilt edged department where once again buying has been on a conspicuously large scale. The Irish position has, of course, been the chief factor of importance, and the vicissitudes of the last few days have had no effect, the general opinion being that peace has come. Germany's announcement that she will be unable to make the January reparations payment in full caused weakness in the foreign market, but otherwise had little influence.

The new Indian issue of £10,000,000 5½ per cent at 93½ was a remarkable success. We have had proof time and again of late that there is ample money available for high class investments, but it seemed just possible that with India under a cloud at the moment the loan might share the fate of the South African issue. Evidently the faith of investors in the future of the Dependency is untouched by the prevailing sickness of non-co-operation.

There are a number of other loans that will come along once the holidays are out of the way. It will probably not be long before investors have a further opportunity of assisting in development work in the Sudan, while I shall be surprised if some Balkan loans are not floated here in the New Year.

**Consols Over 50.**

Gilt-edged have continued their upward progress. Consols have been a specially prominent feature, closing 1,3-8 up at 50¼, while War Loan Fives are 13-16 up at 91¼. Funding have gained 7-8 at 74,7-8, and the Conversion Loan is ¼ up at 65,7-8. In Near Eastern securities which rank with British funds, Egyptian Guaranteed 3 per cents. have gained ¾ at 69½, but Greek Guaranteed 2½ per cents. 1898 and Turkish Guaranteed 4 per cents. are unchanged at 62½ and 71 respectively.

In the early part of the week the foreign market showed distinct firmness, French stocks being a prominent feature, but a reaction followed the weakness of the exchanges resulting from the news of Germany's approaching default, and prices are closing well below the best. French War Loan Fives show a rise of 1½ at 41, while German 3 per cent. are unchanged at 3,1-8, after being much lower. Japanese issues are firm, the 1899 Loan being 1¼ up at 63, while the 4 per cent. 1910 has gained 1¼ at 62. There has been little activity in Greek securities, and prices remain at the previous levels.

**Industrials Harder.**

While business is still very restricted in this group a better tone has been in evidence than for some time past, and in a number of directions prices have hardened. Textiles have been a firm spot with Courtaulds 4½d. up at 36s. 9d. Iron and steel shares have been strong on the prospect that substantial orders will be forthcoming for railway material for India, while the Armament section have, of course, been favourably influenced by the readjustment of naval tonnage at Washington under which two battleships will after all be constructed. Vickers are 9d. up at 9s. 3d., while Armstrong's have gained 6d. at 14s. Guest Keens have improved 1s. to 29s., while Cammell Lairds at 11s. 9d. show a gain of 3d.

Shipping securities have been exceptionally firm, P. and O. Deferred being 20s xd. Cunards are 1s. 6d. up at 19s., while Furness Withys have gained 1s. at 24s. 6d. Royal Mails are 8d.

**Burmahs and the A.P. Report.**

The excellent Anglo-Persian report imparted strength to the Oil group, and Burmahs were naturally favourably affected. At one time, indeed, they reached 6,5-16, but close ¼ down at 6,-1-16, a gain of 1-8 on the week. Mexican Eagles are 1-16 down at 4,1-8. A good showing is made by the report which is just available, and it should serve to restore these shares to public favour. When buying really commences it will not be surprising to see a sharp rise in this and other oil features. In the Egyptian group Anglo-Egyptians have been a firm spot,and are 1-32 up at 1,1-16. Gemsah Oil Reefs are unchanged at 8s. 9d., but Oilfields of Egypt are 10½d. up at 4s. 4½d. Among Roumanians Roumanian Consolidated have gained 3d. at 8s. 3d., while Steaua Romana are 1s. up at 10s. 3d. Phoenix are unchanged at 6s. 9d., and Dacia Romanos are the same at ¾.

Mining descriptions have displayed considerable irregularity. Kaffirs have been a dull spot on the fall in the price of gold, while silver shares have been adversely affected by the dull tone of the metal market. On the other hand tin shares have continued to present a firm appearance, Nigerians in particular being a strong feature despite a certain amount of profit taking.

**Banks Strong.**

Banking descriptions have been firm as a result of the development of the investment tendency. Agricultural Bank of Egypt 3½ per Cent. Bonds are 1⅞ up at 55¾. Imperial Ottoman Banks have also been a firm spot, and are ½ up at 7⅞, while National of Egypt are 3-16 up at 18,3-8. Ionian Banks have gained ¼ at 4. Chartered of India are ½ up at 15,7-8, while National of India have gained ½ at 38½.

Land shares have been steady. Egyptian Delta Lands are 3d. up at 7s. 6d., while New Egyptians have gained 6d. at 22s. 6d. Sudan Plantations have shed 1-16 at 2½.

**The Rubber Position.**

There is literally no business in the Rubber Market at the present time. The price of the raw commodity seems to have become fixed for the time being round about 11d., and that rate naturally is not calculated to give any support to the share market At the meeting of rubber company directors held during the week it was emphasised that the industry is by no means out of the wood yet. The fact that the product now stands much lower than before restriction of output was decided upon speaks for itself.

In miscellaneous descriptions Alexandria Waters are 9½xd., a decline of ¼; Egyptian Markets are 6d. lower at 17s. 9d. ; but Egyptian Salt and Sodas are 6d. up at 33s. 9d.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 12 :—December 5 to 10—light rain in south-east Madras. December 11—weather dry. December 8—in Bengal, reaping of winter paddy progressing satisfactorily and spring crops thriving well. In Central Provinces, sesamum very good, wheat, grain and linseed, good. Punjab and Assam prospects unchanged. December 8—Bombay cotton market steady. Fine M.G. Oomras Rs. 408 December-January ; Rs. 402 March. Bombay cotton arrivals from September 1 to December 2, 1921, were 503,000 bales as compared with 251,000 in the same period of the last year. In Bombay piece-goods market, wholesale demand disappointing, but some retail enquiry showing. Small demand for local goods. December 9—Calcutta jute market firm, and fair business done. Overseas enquiry improving. Firsts, Rs. 52. 8 ; Lightings, Rs. 41 to Rs. 42. December 10—Hessians steadier, but not much business done. Rates tending upwards. Heavy goods quiet but steady. Business reported in Liverpool twills at Rs. 45 for January-March and Rs. 38 in B twills. At tea sale on December 6, quality good ; Dooars very good prices 3 to 9 pies dearer for all grades up to Re. 1. Gap between lower grade and better class teas still decreasing. 419,819 packages sold to date, at an average price of 9 annas 6 pies per lb. December 9—Special Straits Quality Rice, Rs. 495 for December new crop. A press communiqué issued on December 13 states that in view of the favourable reports regarding the character of the rice harvest Government of India have decided to remove immediately all restrictions on the export of rice from Burma. December 6—shellac quiet but steady. T.N., Rs. 157 December ; Rs. 154 January with no sellers. Bombay-Sind connection railway survey (probably *via* Ahmedabad and Cutch) sanctioned, and also Sainghyin-Yeu-Taze Railway survey of 34 miles by Burma Railways Company. No change in bank rates.

Permission has been given to a survey of the proposed Bombay Sind railway connection.

The Imperial Bank of Persia announces a dividend for the half-year ended September 20, 1921, of 5s. per share, free of tax payable December 29.

# Company Notes and Reports.

## ANGLO-PERSIAN OIL.

The report of the Anglo-Persian Oil Company for the year ended March 31, 1921, states that the profit for the year, after allowing for depreciation, Debenture interest, home charges, and royalty, amounts to £4 028,022, to which has to be added the balance brought forward from 1920, £910,978, making a total of £4,939,000, from which falls to be deducted: excess profits duty and corporation tax for 1919-20, £854,665; stamp duty, registration fees, etc., on increased capital and expenses of issue, £135,542, £990,208—£3,948,792, and the following appropriations have been made:—Debenture stock redemption reserve, £80,000, preference share reserve, £50,000, general reserve, £455,000, amortisation reserve, £100,000, £685,000, £3,263,792. From this the following dividends, less income tax have already been paid on the Preference shares:—For the half-year ended September 30, 1920, at 6 per cent. per annum, £150,000. For the half-year ended March 31, 1921, at 6 per cent. per annum, plus 2 per cent. additional for the year, £250,000, and the directors now recommend the payment of a dividend on the Ordinary shares of 20 per cent. per annum, less income tax, absorbing, £1,215,000—£1,615,000; leaving a balance of £1,648,792, to be carried forward, subject to excess profits duty and corporation profits tax for the year ended March 31. In March last, an issue was made of 3,500,000 9 per cent. Cumulative Second Preference shares of £1 each at par. The 5,000,000 Participating Preference shares were at the same time converted into 8 per cent. Cumulative First Preference shares.

The refinery in Persia has continued to give every satisfaction, and the throughput has shown a steady increase. The greater part of the extensions which have been in progress are now in operation, and the remainder are expected to be completed early next year. The refinery at Llandarcy (Wales) is now nearly completed. Partial operations were started there in July last, but the full refinery will not be in operation until the spring. The results obtained there have so fully justified anticipations that arrangements are being made for the erection of further refineries to serve other consuming markets. The wells in Persia from which production is being obtained still continue to maintain a high rate of yield. Test wells which have been sunk to prove additional oil-bearing territory have added considerably to the area of the proved reserves. The fields have been completely electrified to reduce drilling costs and to permit of the most economic working. The throughput of the pipe-lines shows a considerable increase, and when the remaining extensions now in hand are completed, a further large increase will be obtained. The fleet of tankers owned by the company through its subsidiary companies has been successfully worked during the past year with no serious accidents. A number of the tankers for which orders had been placed are already in commission, while the greater part of the remainder are expected to be delivered during the next twelve months.

The D'Arcy Exploration Company, Limited, which conducts the exploratory work of the company outside of Persia, is actively engaged in examining and testing concessions in Europe, Asia, Africa, and South America, and conditions in some of the localities are favourable for early success in striking oil. The distributing organisations of the company have made considerable progress during the past year. The British Petroleum Company has largely augmented its installations in the United Kingdom. The Société Générale des Huiles de Pétrole, the French organisation in which the company has acquired a large interest, has recently purchased three established distributing businesses, and is now marketing oil in France. In Belgium the company has established a distributing organisation under the title of the Société l'Alliance, which is about to begin trading operations. The company has also purchased an interest in distributing organisations in Denmark and Norway, which are expected to be ready to commence business in the early part of next year. Scottish Oils, Limited, has passed through a difficult time owing to the high wages and costs ruling during the early part of this year, coupled with a heavy fall in the prices of products. Wages and costs, however, are now on a materially lower level, and the prospects for this industry are consequently more favourable.

Meeting, Winchester House, December 21, noon.

## MAIKOP MIDLAND OILFIELDS.

The report of the Maikop Midland Oilfields states that, although as a result of prolonged unsettled conditions in Russia it is not yet possible to submit accounts, the directors have been able recently to secure direct information as to the general trend of affairs in Russia, and in particular as to the state of the company's properties, and they report that as from the beginning of March, 1920, the company's properties passed into the control of the Soviet Government, and have since, in common with all other concerns of a similar nature in Kuban Province, been administered by a local oil committee in Ekaterinodar under the general direction of the Supreme Oil Committee in Moscow.

From the time of the announcement by the Soviet Government at the beginning of the present year that they were prepared to agree to the reintroduction of foreign enterprise into Russia, the company has associated itself with the negotiations which the Anglo-Maikop Corporation, Ltd., and its allied concerns have had in hand with the Soviet Government's representatives in England for the purpose of ascertaining whether a scheme could be arrived at for this group to resume control of its properties in the Caucasus on the basis of a concession from the present Government. Permission was received in August last for Mr. J. C. Montgomerie, formerly field manager of this company, to make a visit of inspection to Kuban district. The engineer has recently returned to London after inspecting the company's oilfields, and reports that no harm has befallen the company's properties. The field installations are in good order, and production is being continued in wells brought in by the company previous to the occupation. The oil pipeline from the oilfield to the railway is also in good order.

Having regard to the position thus disclosed, and also that the economic conditions appear to be slowly but perceptibly changing in Russia, the board feel there is nothing to be lost, and possibly much to be gained, by continuing negotiations with the Soviet Government. They are therefore making every possible effort to arrive at a satisfactory arrangement for the future working commensurate with such safeguards as may be necessary in the interests of shareholders, and reserving full rights to compensation for any losses.

## MADRAS AND SOUTHERN MAHRATTA RAILWAY.

The gross earnings of the Madras and Southern-Mahratta Railway Company for the year ended March 31, were Rs639.93 lakhs, compared with Rs630.81 lakhs, and working expenses Rs420.48 lakhs, against Rs342.58 lakhs, showing a decrease in the net earnings of Rs68.78 lakhs. The surplus profits realised £189,424. Interest on investments amounted to £32,533, so that the total receipts were £221,958, compared with £484,184. This large difference is due to a decrease of 13 lakhs of rupees in the company's share of surplus profits and to the amount being remitted home at 1s. 3.3-16d, against 2s. 1¼d. obtained last year. The directors recommend payment on January 2 of final dividend of 25s. per cent. and a bonus of £1 per cent., in addition to guaranteed interest, making for the half-year £4 per cent., all subject to English income-tax, and for the year £7 per cent. An adjustment having been effected with the Inland Revenue on account of Dominion income-tax relief, the Board is able to return to stockholders £31,060, equal to 12s. 9.45d. per cent., overcharged for income-tax. This amount, which is not subject to English income-tax, will be refunded with the dividend in January next. A further £31,682 has been transferred to reserve, making it £500,000.

## ASSAM RAILWAYS.

The Assam Railways and Trading Company has declared dividends on "A" stock at the rate of 8 per cent. per annum for the half-year ended June 30, 1921, on Pre-Preference shares at the rate of 8 per cent. per annum for the half-year ending December 31, 1921, and on New Six per Cent. Preference shares at the rate of 6 per cent., per annum for the half-year ending December 31, 1921.

## NOTES OF THE WEEK.

### *The Entente and the Near East.*

Although the subject of the Near East must have been mentioned between Mr. Lloyd George and M. Briand during the latter's visit to London last week, we may infer that no ground of any importance was covered and no definite decision reached. When the French Prime Minister saw Lord Curzon on the day before his departure the discussion would seem to have been restricted to the plans for the conference of the three Foreign Ministers on Near Eastern affairs. This conference, which is now fixed for the second week in January, is to be preceded by a meeting of the Supreme Council at Cannes. As the exchange of Notes between the British and French Governments on the Angora Treaty has ceased, the way may now be regarded as clear for the re-drafting of a Turkish settlement. This, it is to be hoped, will be done at the Paris Conference; but as the final decision rests with the Supreme Council, the postponement of the Cannes meeting until the Foreign Ministers had come to an understanding would appear to have been the quicker way of setting about the business.

### *Czecho-Slovakia and Austria.*

Dr. Benes, Prime Minister of Czecho-Slovakia, has added another treaty to his list, this time with Austria. The main terms of the understanding between the two countries are that each undertakes to support the other politically and diplomatically for the purpose of maintaining peace and the integrity of their respective territories, and that both States will settle all future disputes between them by arbitration. The importance of this treaty, which is connected with economic arrangements entered into at the same time, lies in the fact that it shields Austria from temptation in the direction of Germany. With the Austrians now drawn within the orbit of the Little Entente, the apparent isolation of Hungary becomes intensified. This feature, however, need not cause anyone uneasiness. It is true that the agreements between Czecho-Slovakia and Roumania and Yugoslavia are primarily directed against the Magyars, but so long as the latter maintain the correct attitude which has become the policy of the present régime, threats of what may happen in eventualities which may never materialise will trouble no one. On the other hand, Hungary will not want to feel herself outside the pale of international friendships, and she will begin to consider still more carefully whether her destiny yet lies with Austria, or whether it might not be linked up with that of Roumania. It would be a mistake, however, to attempt to force the pace. All the arrangements so far made in Central or South-Eastern Europe are provisional, intended to meet the situation of the moment. In so far as they all make for the maintenance of peace they are on sound lines; but they should be regarded as the nucleus of an all-inclusive confederation rather than as the starting point for the grouping of the States into two rival groups.

### *The Yugoslav Government.*

As our letters from Belgrade and Zagreb have indicated, Yugoslavia has been passing through another of those political crises which puzzle outsiders, exasperate the Yugoslavs themselves, and, apparently, do no good to anybody except, perhaps, a few politicians. Happily a telegram received by the *Morning Post* from its Belgrade correspondent announces that this particular crisis has been passed in safety, thanks in the first place to King Alexander's good offices. On His Majesty's invitation, the President of the Chamber acted as mediator between the Radicals and the Democrats, and an agreement was very soon reached. As our Correspondent's letters have made clear, the Ministry of the Interior has been the chief bone of contention; and the problem has been solved in exactly the way he anticipated it would be in his letter of November 30,—by M. Pribitchevitch's exchanging the much desired portfolio for that of Education. The Radicals are to be placated by the creation of a new Under-Secretaryship for the Interior, which is to go to them; while the Democrats are to be awarded a similar post in the Ministry of Agrarian Reform. M. Pashitch remains Premier; and to outside observers the changes and adjustments will probably appear so slight that it will be difficult to understand what all the pother has been about. But it is to be hoped that the Triune Kingdom will be free from political crises for a while.

### *Disturbances in Egypt.*

Until the middle of last week Egypt remained calm on the surface, such manifestations of dissatisfaction as were reported being of a mild character. Even the anniversary of the proclamation of the Protectorate called forth no more formidable demonstrations than schoolboy strikes and the well-known telegrams from sundry Egyptians. But the calm was soon broken by Zaghloul Pasha, who protested, in characteristic fashion, against the findings of the Court of Enquiry into the

Digitized by Google

Alexandria riots, and issued invitations to a mass meeting to be held on December 23, to discuss the political situation. In his protest against the Alexandria findings he ignored the evidence of witnesses who were neither British nor Egyptian, and talked at large of "the Egyptian nation demanding an international inquiry." But his call to a mass meeting was, very naturally, regarded by the authorities as a more serious affair, and the meeting was prohibited. Whereupon he published yet another protest, against the new policy of firmness in Egypt, which he invited Egyptians to "repudiate in an unmistakable manner."

### *Firm Action.*

This was a challenge which could not be ignored if Egypt was to be spared a repetition of troubles brought about by Zaghloul Pasha's activities on an earlier occasion, and it was promptly taken up. Zaghloul was, under martial law, forbidden to make public speeches, attend public meetings, take part in public affairs, or write to the Press, and he was ordered to leave Cairo and go to his country residence. Eight of his most troublesome supporters were similarly debarred from further mischief making. They refused to depart from Cairo voluntarily; and at the time of writing the latest news is that Zaghloul has been removed to Suez, and several of his followers placed under arrest. As a result, crowds gathered round Zaghloul's house, where they came into conflict with the police, and serious rioting, accompanied by loss of life, followed.

### *Parliament and the Refugees.*

Although Parliament was summoned in extraordinary session solely to deal with the Irish question, it proved impossible for the Government to avoid Near Eastern problems altogether. On December 16 the Under-Secretary for Foreign Affairs was subjected to a brisk fire of questions on the subject of Asia Minor by Mr. T. P. O'Connor, Mr. Aneurin Williams and one or two other members who wanted information regarding the fate of the Cilician refugees; while Mr. Aubrey Herbert wished to know whether, "in the interests of minorities and for the sake of our own great interests in the East" the Government would "consider the advisability of adopting an entirely new policy towards Turkey." The latter question remained, unfortunately, unanswered; but with regard to the refugees, Mr. Harmsworth was not disposed to let his questioners have it all their own way. He declared that he was not at all sure that the Armenians had been well advised to fly from Armenia to Cilicia; was definite in stating that H. M. Government had never promised autonomy for Cilicia; and would not accept Mr. Williams' statement that that Government had caused the refugees to return there after the Armistice.

### *"Christians in Asia Minor."*

These unorganised attacks were followed three days later by a much more serious assault, when Lord Robert Cecil proposed a motion expressing the sympathy of the House with the sufferings of the Christian population in Asia Minor, and urging the Government to take every means possible to assist them. Lord Robert Cecil supported his motion in an admirable speech, and Mr. Williams seconded it. Then Sir J. D. Rees took up another side of the case, reminding the House that it was the "assumption that there are not two sides" to the Turk *versus* Armenian question which is "so exasperating to our Mohammedan fellow-subjects in India," and declaring that "the men who inhabit Asia Minor and the Balkans are all built in very much the same mould....and are good men or bad men according to their dispositions and their opportunities." He thought that in the war the Armenians had helped themselves at least as much as they had helped us; and he wished to know if there was to be "no end to the insanity of our benefactions." The discussion was chiefly noticeable, however, for a statement by the Leader of the House, who deprecated the tendency to interpret as a 'pledge' every statement of intention or of policy offered by a British Minister in either of the Houses of Parliament, or in speaking to a British audience. The protest was surely not uncalled for, and we wish we could believe that it would be taken to heart by all the 'phils and 'phobes of the Near Eastern peoples.

### *The Situation in India.*

At the moment of writing the position in India shows signs of rapid development, but the dislocation of business inevitable at this season prevents us from discussing events which will be common knowledge before these words appear in print, but which, so far as we are concerned, are still on the loom of the future. One comment, however, is called for on measures which have been taken to suppress the "volunteer" organisations. The suppression itself is welcomed by middle opinion in this country, but much surprise is expressed at the large number of arrests which have been made in the process. As a keen observer has put it, the volunteer system was like a wall of a kind familiar in most parts of India, built of mud and protected at the top by more durable material. If you want to demolish a wall of this kind, you remove the protection at the top, and the rest crumbles of itself; and in the same way it should have sufficed to arrest the few effective leaders, leaving the units to disintegrate in the ordinary course. Arrests effected by the hundred have a bad effect, and the subsequent releases usually increase the evil.

## OUR LADIES' COMPETITION.

**We publish on page 843 "Beersheba Sketches," by "Dan," which, as we announced last week, won the First Prize (Ten Pounds) in our Lady Readers' Competition.**

## THE WEEK AT HOME.

*London, December 23rd.*

**Exit 1921.**

Parliament is up, the Lord Chancellor and Mr. Churchill are off to Switzerland; Mr. Lloyd George is going to desert Criccieth for Cannes, and minor celebrities are being scattered by the winds of heaven and the railway companies for the holidays. Everybody seems glad that 1921 is practically over; a year that has included the worst drought, the worst coal strike, and the worst trade depression on record has not been much to boast about.

It is true that things improved in December; the Irish settlement was more than sufficient compensation for many other disappointments. Unluckily, as the days pass it is clear that Mr. Asquith's sombre warning that the settlement was only beginning, and that many difficulties had yet to be overcome, was fully justified. The long and stormy debate in the Sinn Fein Parliament; the bitter hatred of those opposed to ratification; the certainty that the extremists are making preparations to carry on the fight, if not against

Digitized by Google

the British Government, then against the Irish Government; the evidence that outrages still continue and that some people want them to continue—all this is depressing. Peace is nearer than it was, but it is not here yet.

**Economy and Education.**

The Geddes Economy Committee have presented their report, and during the holidays Ministers will be digesting their proposals for saving the taxpayer's pockets next year. It is understood that the sum which the Committee propose to lop off is about two hundred millions, which will put the Budget straight and, according to the more optimistic, even permit a little reduction of the income-tax.

There have been various speculations, many of them obviously ill-informed, as to the departments to be retrenched. Most of the economies will be approved by the public, but one is certain to raise verbal opposition. It is known that a large cut is to be recommended in education, and although this will be popular in reactionary circles, it will be hotly disputed everywhere else. What the country wants is more, and not less, education, and no amount of argument about "cutting one's coat according to one's cloth" will conceal the fact that the real idea behind the supporters of drastic retrenchment in this department is the old and delusive belief that education is a danger. There promises to be a pretty controversy over this matter next year; and indeed Mr. Garvin has already opened the attack by remarking that a nation which can afford to spend four hundred millions annually on drink can afford to educate its children properly.

**Religion and Prices.**

The Scottish revival movement, to which I referred last week, has at least produced one good effect. Several tradesmen have been converted, and have since lowered their prices, on the ground that their consciences will not allow them to make extortionate profits any longer. If we could rely on this happening universally, I should be all for as much revivalism as possible in London. A Moody and Sankey mission that concentrated on hotel and restaurant proprietors and made them reduce their bills to something more approaching the standard of honesty, would make it a brighter and better world. It is a pity that Dante omitted hotel-keepers from the *Inferno*; I suppose the very devils were frightened of them,

**A Hospital Boycott.**

The trade unions are doing a very foolish thing. They are threatening to boycott any hospital which does not give trade union conditions to its carpenters, porters, electricians or other employees. The hospitals are not ordinary employers, and they make no profits, except for the community. Trade union conditions imply regular hours, but sickness is not confined to an eight-hour day. There seems to be room for a little more ethics in trade union economics.

**A Dying Paper.**

It looks as though the *Daily Herald* considered itself to be dying. One of its troubles is that apparently it cannot be run at a penny, although the *Mail*, *Express*, *News*, and *Chronicle* cost only that sum; whereas the twopence which the *Herald* charges severely limits its customers. But that is a contributory cause, rather than the real reason for the failure. The *Herald* has often amused and sometimes aggravated the public; but it has not done what it set out to do, which was to convert it. I suppose we are Bolshevist-proof in this country. The workman used Bolshevism as a useful clout to throw against Capital, but the moment it was made clear that Bolshevism in practice meant the conscription of Labour (which Capitalism has never aspired to) Bolshevism was not only dead but damned. It is all very well to say you are a wage-slave, but when you find that the other fellow really means to make you into one, the time has come to "cease this foolery." Presumably the *Herald* has discovered by this time that the Englishman's attachment to liberty is real.

**Famines and Synthetic Gold.**

The prophets have again been making our flesh creep. Sir William Beveridge has published some calculations, derived from meteorology and history, to show that we are entering a cyclical series of lean years, and that 1923 in particular may produce a famine such as has not been known since the fourteenth century. The shortage will, I suppose, be complicated by the fact that the populations of the world are now increasingly demanding wheat instead of maize or rye, or rice; and also by the consideration that, in spite of admonitions from Mr. Harold Cox, people still continue to produce children without the slightest guarantee that these will ever be able to earn their living. But after all, we came so near to famine during the war that one cannot take these predictions of disaster too seriously.

Another professor has been telling us that Germany is making "synthetic" gold, which would make the Reparations bill look silly. It was a good newspaper story, for, as Professor Soddy told us long ago, the transmutation of metals is an accomplished fact. But what can be done theoretically in the chemical laboratory is not practicable on a wholesale commercial scale, and I am afraid that one of the difficulties about synthetic gold is that it costs more to make than the real article to mine.

It must be remembered that the transmuted metal is always of a lower atomic weight than the element from which it derives; e.g., uranium, 238.5, produces radium 226.4. These are, of course, very expensive products, and probably too dear to use for producing gold, whose atomic weight is 197.2—also high in the scale. The intermediate elements are bismuth (208), lead (207.1), mercury (200); these could, at least theoretically, be employed. So if there is a sudden shortage of these elements, some newspaper is sure to announce that they are being made into gold. For myself, with the profoundest respect for the chemists, I think it is as likely that a British cigar will turn into a Havana by being looked at; if only somebody could discover that process, what a different world it would be!

**The Week's Books.**

The publishing trade rather goes to sleep at Christmas after its autumn exertions, but two or three books may be noted.

"Thirteen Years at the Russian Court" (Hutchinson) by Pierre Gilliard is the account by the Tsarevitch's late tutor of the period preceding the revolution. It is a most informative book: it makes clear that the Tsarevitch suffered from bleeding, that mysterious malady which attacks only males, but descends through the female; hence the Tsaritsa's anxiety, and her deception by Rasputin, who assured her he could cure the child. M. Gilliard makes it clear that the Tsar was a weak character; his instincts were generally right, but he could not trust himself to act, and the advice which was given him was too often wrong.

I am afraid the noble Bossuet, and his eloquence, are little more than a name nowadays. Because it was that and no more to me I took up his "Life," by E. K. Sanders, which has just been published by the S.P.C.K. in its well-known series of Ecclesiastical Biographies, and I am bound to admit that it throws a good deal of light on France of the *ancien régime*. Those who are interested in that period might do worse than get the book.

## YUGOSLAVIA.

*Belgrade, December 13.*

### A Sensational Election.

In the political world there is plenty to talk about. The sensation of the moment is provided by the municipal elections in Zagreb, where the Croatian *bloc*, an alliance between the Narodny Club and the Raditch party, has swept the polls clean. The elections are instructive; for they were conducted on party lines. In the first place, not a single Radical was elected, for they only secured a total of 154 votes out of a poll of 21,401. This is a striking figure, for there are only 28,872 voters on the register. The next noteworthy point is the defeat of the Communists, who secured only two seats, with a total of 1974 votes, showing that their victory at the last elections was unnatural, and that the people did not know what they were voting for. They have been educated in the meantime, and Raditch has been busy, for the working classes seem to have transferred their votes *en bloc* from the Communists to Raditch, who cleared no less than 36 seats—the rest nowhere, for, except the Democrats, who gained six seats, the other oddments could muster only half a dozen between them.

These figures have caused considerable sensation in Belgrade, especially as Raditch at once claimed the Irish settlement as a precedent, and is now asking for a Croatian "free state" within the frontiers of Yugoslavia. This is, of course, looked upon in Belgrade as the rankest heresy; for if the Croats got such a degree of independence, all the other centrifugal elements would want it: the foreign minorities in the Voivodina, the Mohammedans of Bosnia, and Macedonia. This would reduce the State to a confederation; and, moreover, the demarcation would be extremely difficult, for the population is inextricably mixed in all those districts; and even in Croatia it would be impossible to draw the line between Croats and Serbs. The old boundaries are no good, for Slavonia goes with Croatia, and contains large numbers of Serbs, and in Croatia in the strict sense there is a very large Serb element, even in Zagreb itself. Bosnia and Herzgovina might with more reason claim a separate status, for their independent history is very old, but even there the Mussulman and Orthodox elements are inextricably mixed, and though the vast majority consider themselves Serbs, a large proportion consider themselves Croats. The same thing applies to Dalmatia, which many Croats claim as purely Croatian, though they have had no political connection for centuries.

### Unity?

There can be no question that complete unity is the most desirable consummation for the country. The only question can be, when? The extreme Unionists wish to make the union complete and absolute straightaway, while the extreme Separationists ask for a kind of confederation on the American or the Swiss model. Moderate opinion is for a compromise, that is, for the postponement of the complete union until the people are more educated. In such a union, everybody must sacrifice something. The Serbs claim that they have sacrificed their identity in the common cause, and their sacrifice has been won at the cost of infinite streams of blood: now let the Croats sacrifice theirs, which has cost them nothing. The Croats, on the other hand, maintain that they have never been conquered, but accepted a personal union with Hungary many centuries ago, and that, even under the worst days of Magyar political oppression, they had a degree of autonomy which the Serbs would deny them. The Serbs retort that they have no need for such autonomy now, and that if they are the strong and cultured people they profess to be, they can assert their individuality by constitutional methods, at the polls, and by providing the statesmen and officials for the State. And to the Croat cry of a greater store of the blessed word "culture" the Serbs answer that their peasants have had political freedom for three generations, while the Croat yokel has never heard of a vote before.

The truth of the matter is that the older generation is dominating politics on both sides, and is naturally conservative and averse from any sweeping change. It is the younger generation, and especially the students, who are the desperate supporters of an out-and-out complete union, a suppression of all old entities in the common State, and that is why the younger generation hate the very name of "S.H.S.", and cry for "Yugoslavia", pleading that the united kingdoms of Great Britain, of Italy, and of Germany have long since sunk their provincial names in the common designation; that the very title of "S.H.S." accentuates that separatism which they wish to see disappear, and which Raditch and Pashitch, for very different motives, are trying to perpetuate. The time must soon come when this fiery young generation will hold the reins, and then they will reverse the work of Pashitch, with his "S.H.S." and of Raditch, with his Croatian Peasant Republic, and sweep all into one Yugoslavia, for which, it will be remembered, the Yugoslavs of Austria-Hungary gave 40,000 men to fight for Serbia on the Macedonian front.

### Serbs and the Irish Settlement.

The Irish settlement has a good press in Yugoslavia and the papers, of both Belgrade and Zagreb, write sympathetically of the English point of view, which is a novelty. As a matter of fact, it is not pleasing to the Serbs, partly because it affords a dangerous precedent for Raditch, and partly because it deprives them of the argument "What about Ireland?" which has been a valuable weapon in the hands of the Serb when discussing politics with an Englishman. Still, the papers have a dig at us when they can. The *Politika* of Belgrade, for instance, produces a telegram from Budapest, to the effect that King George has decorated the Archduke Joseph, Serbia's bitterest and most cruel enemy during the war.

### The Cabinet Crisis.

The Cabinet crisis drags on, and the neutral papers lament the ignoble struggle about a portfolio when grave State interests are at stake. The Democrats are even beginning to hope that they may succeed in forming a Cabinet without the Radicals, who have been holding a congress for three days, which has held up negotiations. Now M. Pashitch is expressing pious hopes that the coalition will be reformed, for the two main parties, much as they hate each other, cannot stand alone. The whole crisis has undoubtedly been a purely technical move on the part of M. Pashitch, for he would never have allowed the Democrats to have a mandate for a day had he thought that they had a ghost of a chance of forming a Cabinet without him. There are the usual rumours of his forthcoming resignation from

public life; but the old war-horse likes the smell of powder too much, and clings to it from habit, for there is nothing left for him to get. He has been Premier of his country through the most momentous years of its history, and is reputed to have acquired great wealth, and to be over eighty years of age. What more can he want?

**A Potiorek Story.**

The sixth anniversary of the defeat of the Austrians by the Serbs on the Tser brings up an amusing story about Potiorek. The Lieutenant-Field-Marshal of the Royal and Imperial Austro-Hungarian Army, late Viceroy of Bosnia and Hertzgovina, after suffering a very severe defeat at the hands of the Serbs, was pensioned, and it will be remembered, afterwards whitewashed by being declared of unsound mind. Smarting under the undignified drubbing he had suffered at the hands of a despised enemy, he took the train for Vienna and travelled alone and privately, taking a seat in a non-smoker. Presently a Magyar walked in smoking a huge pipe, from which he puffed clouds of smoke into the Field-Marshal's face. Potiorek protested, politely at first and then vigorously, as the Magyar sat in silence, puffing more fiercely than ever. Then Potiorek, thinking to impress the fellow, for his name was not yet disgraced, handed him his card, but the imperturbable Magyar quietly took it, put it in his pocket without even looking at it, and went on puffing. This was more than the soldier could stand, so he angrily called the conductor, who requested the Magyar to withdraw to a smoking compartment, while Potiorek fumed and fretted in the corridor. But the Magyar without a word quietly took from his pocket the card which he had received a moment before, and handed it to the conductor, who promptly kowtowed with customary Austrian servility, and turned to the Field-Marshal, and said to him: "It is no good, I cannot turn out a man of his rank: do you know who it is?" "No," answered Potiorek. "Why," said the conductor, "it is that old ass Potiorek!"

**How to be Happy.**

Longevity is well known to be a characteristic of the Balkan poples and apparently the Croats beat all records in this respect, at least in retaining their youthful vigour in old age. Recently there was an instance of a man of nearly 60 who, in marrying for a fourth time, had the satisfaction of seeing his three divorced wives return to the fold at the same time. Now there is a case of a veteran born in 1828, who was jealous of the philandering of his wife, who was 48 years old herself, with whom he had lived in peace for 20 years, and in a wave of passion he knocked in her head with a hatchet. Then he travelled from Subotica to Zagreb to surrender to the police, having heard that the courts there tender the wind to the shorn lamb.

## BULGARIA.

*Sofia, December 12.*

**Bulgaria and the Coming Conference.**

The news that the Allies are to hold a Conference on the Near Eastern question has raised hopes that Bulgaria may be allowed to participate in the Conference. Article 48 of the Treaty of Neuilly specified that "The Principal Allied and Associated Powers undertake to ensure the economic outlets of Bulgaria to the Aegean Sea. The conditions of this guarantee will be fixed at a later date."

It is now almost two years since the Treaty of Neuilly was ratified, and there are no signs of Bulgaria being granted economic outlets on the Aegean Sea. It is understood that the Second Treaty of Sèvres contains a clause in which provision is made for Bulgaria having an outlet at Dedeagatch; but this Treaty has not been ratified, and in view of the probability of the First Sèvres Treaty being revised, it is not likely that the Second Treaty will be put into force.

When Bulgaria signed the Treaty of Neuilly, she undertook loyally to carry out the terms thereof. This she has done, as is witnessed by the evacuation of Thrace, Macedonia, and the Dobruja, the reduction of her Army, the handing over of cattle, etc., to her neighbours, and numerous minor details. She thus has a perfect right to ask when the Allies intend to carry out their part of the Treaty. The Allies, for their part, are at liberty to argue that the Anatolian war has prevented the ratification of the Second Treaty of Sèvres, but they cannot maintain this standpoint for ever. Bulgaria has not shown any signs of bellicosity in her desire to acquire an economic outlet, and it is precisely because of her peaceful attitude that the Allies should at once satisfy her perfectly legitimate demands.

**Her Attitude since the Armistice.**

It is slowly but surely being borne in on Western Europe that Bulgaria is not such a "fire eater" as certain newspapers would have had us to believe, and that on the contrary she is the one beaten Power that is honestly trying to fulfil its obligations. She may not as yet have regained the full confidence of the Governments of the Great Powers, but the general public is beginning to regard her as a country that has not caused them any anxiety or inconvenience. Is it, then, to be her reward that her claims to an economic outlet to the Aegean Sea, and to increased protection for her minorities, are to be disregarded? One hesitates to say that the Great Powers are apathetic regarding Bulgaria's claims; and one can, therefore, only believe that weightier problems have prevented them from giving due attention to this matter.

It need not be feared that Bulgaria will herself take steps to gain an outlet to the Aegean, as her policy, in the words of the Prime Minister, "continues to be a policy of peace, coupled with a desire to remain on friendly relations with all countries." At the same time, it should be realised that Bulgaria still places faith in the justice of the Great Powers, and is awaiting, calmly and hopefully, the result of the forthcoming deliberations. Should the Powers not give their attention to her claims, their action will produce a feeling of dull resentment, which will not easily die down, and which in after years may show itself in a form likely to harm the peace of South-Eastern Europe. Let us hope that the Allies realise the position, and will not hesitate to do justice where justice is due.

**The First American Minister.**

Mr. C. S. Wilson presented his credentials as Minister Plentipotentiary and Envoy Extraordinary of the United States of America, to King Boris on Monday, the 5th inst. This event is significant inasmuch as before

the war, the U.S. were represented in Roumania by a Minister who was also accredited to Serbia and Bulgaria. Now there are Ministers at Bucharest, Belgrade, and Sofia respectively. Mr. Wilson was Chargé d'Affaires at Sofia for three years before being promoted to Minister and is therefore well known in Bulgaria. The presentation of his Letters of Credence was the signal for an outburst of enthusiasm in favour of America by the whole Sofia Press. This is not remarkable, as American influence, largely owing to the efforts of American teachers and missionaries, is very strong in Bulgaria. Besides this, there is a large colony of Bulgarians in the United States. Most important of all is the personal influence wielded by Mr. Wilson. In 1919 when Bulgaria had real need of friends, he showed himself one, and there is reason to believe that if the advice tendered by Mr. Wilson, and the then Allied military authorities at Sofia, had been accepted by the Peace Conference, the Near Eastern question would not be the complex problem that it now is. The Americans were well informed as to the actual situation in Thrace, and at Paris did not hide their disapproval of the attitude pursued by England and France. Unfortunately, they found themselves in the minority, and had to acquiesce in a policy that was in total divergence from the views of the men on the spot, who at least might be presumed to know as much about the situation if not more than those who were sitting in Paris.

**The Fire at the Arsenal.**

The fire, which broke out at the Sofia Arsenal ten days ago, has proved to be a good deal more serious than was at first thought. The burnt material chiefly consisted of rifle cartridges and artillery equipment, whilst the destruction of the two buildings is a serious enough loss in itself. With the exception of a portion of the cartridges that were due to be handed over to the Allies, the whole of the material destroyed belonged to the Government. The Commandant of the Arsenal estimated the cost of the damage to be at least 100 million levas, which is equal to (approximately) £170,000 at the present rate of exchange.

Although it has not been definitely established that the fire was a deliberate act of sabotage, it is understood that some burnt petrol tins were found at the spot where the fire originated, and it is believed that by throwing tins full of petrol on to some woodwork the fire was started. When the Bulgarian Army was at pre-war strength, five sentry posts, each of three soldiers, used to guard this part of the Arsenal. Nowadays, owing to the shortage of soldiers, there is only one post, of three soldiers, and it has naturally been impossible to maintain a proper surveillance over the Arsenal. The Government fear other acts of sabotage on the part of the unruly elements of the population, as the Communists are fully alive to the chances presented them by the small armed force that the authorities have at their disposal.

**Change of Rectors at the University.**

The University year came to an end last week, and on the 15th inst, the customary ceremony of installing the new Rector took place at the National Theatre. King Boris was present and the attendance included practically the whole of the intellectual world of Sofia. The only notable absentee was M. Omartchevsky, the Minister of Public Instruction, who was on tour in the provinces. M. Popoff, the retiring Rector, in the course of his speech deplored the falling off in the number of students at the University, and made reference to the difficulties with which the intellectual classes were now faced. M. Miletitch, the Rector for the coming year, also spoke; but the most interesting thing about the whole assembly was the great reception that was accorded to the King. His Majesty seemed greatly pleased at the warmth of the greeting extended to him, and was looking in excellent health.

## TURKEY.

*Constantinople, December 12.*

**Confusion.**

It is said that the late Sultan Abdul Hamid, after his dethronement, would sit brooding for hours over the political developments which had brought about his downfall, and would suddenly strike the table with his fist, at the same time exclaiming, "Confusion! Futility!" It has long since been realised that the little finger of the Committee of Union and Progress was thicker than the Red Sultan's loins, but even that shrewd old diplomatist could never have foreseen the confusion at present existing as a result of futile policy, not only on the part of the Young Turks, but also of the Allies themselves. Never was there a period when rumours were more plentiful or more contradictory, and never was there a time when the future appeared more obscure. The French deny that their agreement with Angora amounts to anything more than a strictly limited arrangement for the purpose of putting an end to useless bloodshed in Cilicia, but they are making energetic, although discreet, efforts to obtain the Imperial ratification of that agreement. The Italians deny that they have any intention of emulating the example of the French, but there is still an Italian delegate in Angora. The British emphatically deny that any negotiations with the Kemalists are even being contemplated, but two former officers of the British army who were instrumental in making the preliminary arrangements for the negotiations concerning the exchange of prisoners have recently met Rafet Pasha at Ineboli. The local press is filled with speeches by various members of the Angora Administration, but the hopes and activities of the Central Government are shrouded in mystery and silence. Into this confused mixture it was reserved for Bekir Sami Bey to introduce a drop of the tincture of certainty. Opinions may vary as to the precise object of Bekir Sami's journey to Angora via Constantinople, and Bekir Sami himself observed the utmost discretion on the subject; but with regard to possible peace negotiations, he was frankness itself. Although he disclaimed official authority to speak in the name of the Angora Government, there is no doubt that Bekir Sami Bey accurately expressed the intention of the Nationalists when he stated that Smyrna, being Turkish, could not possibly be made the subject of any bargain whatsoever. That is to say, the only condition upon which the Nationalists will consent to negotiate for peace, is the unconditional return of all the occupied areas in Anatolia to the dominion of the Angora Government. This would bring the inter-Allied guards at the Dardanelles cheek by jowl with the Kemalist army, which a Greek army of a quarter of a million, well-trained and thoroughly equipped, has utterly failed to subdue.

That is the problem with which the Council of Allied Foreign Ministers will have to wrestle, and the real terms of that problem are : " Whether it were better to yield advantages gained by Allied blood (mostly British) and to sacrifice all Allied prestige (again mostly British) or to meet force with force and stringently impose a solution safeguarding both Allied advantages and prestige ? "

**Kemalocracy.**

In the course of an inordinately long speech, Mustapha Kemal recently stated that the Angora Administration could not be compared with any other administration in the world, and that the Nationalist conception of politics differed fundamentally from both democracy and socialism. The speech was made in connection with a Bill submitted by the deputy for Mersina, which provided for the reorganisation of the Nationalist Administration on parliamentary lines common to the great democracies of the Occident. In the present circumstances, for instance, any member of the Angora " Cabinet " may have to resign owing to a vote of " no confidence," without affecting the position either of the President or of the rest of the " Commissioners." Mustapha Kemal himself has no right of veto, but is completely independent of the " Cabinet," and yet takes part in debates just as if he were an ordinary " Commissioner." The following is the latest information on the subject, and after reading it, no one will dispute Mustapha Kemal's statements regarding the peculiarity of the Nationalist system.

1. The system of a Cabinet responsible to a parliament is rejected.
2. It has been decided that an independent President shall be created, at the head of the Commissioners, who will apply the decisions of the Assembly.
3. As in the past, Executive Commissioners will be elected by the Assembly, but the method of election is to be changed.
4. The Assembly will have to choose between two candidates, one put forward by the President of the Assembly (i.e. Mustapha Kemal) and one by the Independent President of the Council of Commissioners.
5. The two Presidents will after mutual consultation designate two candidates for each commissariat, one of whom will be definitely elected by the Assembly.

As a result of Mustapha Kemal's opposition, the attempt to create a responsible government in Anatolia has failed, and the Bill submitted by the Deputy for Mersina was condemned by Mustapha Kemal on the grounds that it interfered with the absolute sovereignty for the people. Perhaps it was out of a feeling of modesty that Mustapha Kemal did not specify whose absolute sovereignty of the people the bills would limit.

**Enver.**

The Press, both Turkish and non-Turkish, has recently been replete with strange stories concerning the activities of the ubiquitous Enver. Reference has already been made in a previous letter to the famous " Union and Progress Soviets Party," and the dispute between the former and present Turkish dictators. Enver is now supposed to have thrown down the gauntlet (borrowed from his Bolshevist friends) and Mustapha Kemal is supposed to have picked it up, by ordering Kiazim Kara Bekir Pasha to occupy Batoum. It is impossible at present to ascertain the exact truth ; but if appearances are to be trusted (which is doubtful at least) there has actually been some sort of fighting on the Caucasian frontier between Enverist bands and Kiazim Kara Bekir's troops. Precisely what it all means is not clear ; for it would even now be rash to jump to the conclusion that a definite rupture between Moscow and Angora has occurred. Enver's action may possibly have been in the nature of a threat, intended to manifest Bolshevist displeasure regarding the Franco-Kemalist Agreement, but it is also possible that the whole affair is a specially staged comedy. It is, however, curious that the Kemalist attitude has once again become radically uncompromising, so that even the Italians are unable to settle quite simple matters of an exclusively economic nature.

*Later.*—The Turkish evening paper *Aksham* announces that Signor Tuozzi left Angora for Rome on December 11.

## CYPRUS.

*Nicosia, December* 6.

**Journalistic Activities.**

Socially the season is very dull. Mails under the present needlessly retrograde arrangement come but three times a month. The local Greek press perseveres in its fervid insistence on the duty of increased activity by " union " committees, the views expressed being always hopelessly insular, and quite regardless of the realities of Allied Near East policies. Both newspapers and speakers are now telling the people that any grant of reforms must only be regarded as a temporary " compromise," implying a postponement of the final solution which is to reward Greek efforts. Their acceptance will be no hindrance to the patriotic struggle. Much reference is made to the movements in Egypt and India, as if there were an analogy between the cases of those countries and of Cyprus, where the aim is not complete freedom or autonomy, but incorporation with another country. Cypriot journalists and orators can certainly vie with those of any part of Greece in fluency both of tongue and pen ; and the " exuberance of verbosity " with which the " one and only aspiration " of the Greeks is dealt with here week after week is really remarkable. A new, illustrated satirical paper, the *Peirasmos* (*Tempter* or *Devil*) is about to appear. It is to be printed in Egypt when facilities for producing such a periodical—not to be found in Cyprus—exist. Egypt indeed is rich in satirical papers, several of which contain coloured cartoons.

**A Missing Professor.**

No news has been received of a professor of English for the Pan-Cypriot Gymnasium at Nicosia, who left Marseilles more than a month ago, having booked as far as Jaffa. The School Committee, who have expended about £100 for his expenses, are now anxious as to his whereabouts, thinking he may be staying in Palestine, and they contemplate appointing someone else to carry on the teaching of English pending the receipt of information.

**General News.**

On the second date fixed for electors of non-Moslem members of the Legislative Council, November 28, the two Maronite priests whose candidature was rejected (owing to disqualification of a seconder) were duly elected at Nicosia. In accordance with the decision passed at the pan-Greek meeting, no Greeks were proposed. It is uncertain whether yet another day will be fixed.

The calendar year is to replace the financial in Cyprus : the change is to take place after the close of 1922.

Large numbers of refugees from Cilicia have been unable to land. There are cases of small-pox in that country to add to their troubles. Only Cypriots are allowed to land and that in quarantine stations, in which accommodation is limited. The plight of the refugees is in too many cases most lamentable.

## ASIA MINOR.

*Smyrna, December* 9.

Three thousand refugees from Mersina, arriving in Smyrna by steamers King Constantine and Thraki, have been allowed to land after having been disinfected at the Quarantine Station at Klazomene. The greater number have sufficient means to keep themselves without help from the authorities.

H.M.S. Shark (Commander Russel) has arrived in Smyrna.

## THE MYSTERY OF THE ORIENT.

*By Edouard Driault.*

A course of lectures on Greek Independence is being given at the Sorbonne, Paris, by M. Edouard Driault, in connection with the centenary of the Greek insurrection of 1821. For his introductory lecture, of which we now give a summary in English, M. Driault chose the title "The Mystery of the Orient."

After pointing out that more was known of the ancient history of the peoples of the Orient than of their modern and contemporary history, as a result of a tendency not to prosecute studies beyond the death of Alexander, and having paid a tribute to Pierre Loti, M. Driault continued :—

### 1.—The Past.

For a clear view amid the diverse facts of everyday life and the tangle of events in the Orient one needs to get right away, to climb a hill and study the horizon, that is to say, find again the general lines of political and economic evolution.

The Orient, the Near East, is to-day only a kind of colony over which the Great Powers of the West are quarreling, for it is rich in mines and agricultural resources ; it is one of the earth's beautiful gardens. And it is just for that reason also that it knew some of the greatest empires of the past, and was for centuries the greatest commercial highway between the peoples.

History is a Resurrection.

For the Orient, the Near East, is the Egypt of the Pharaohs and of the Sphinx ; it is Memphis and Thebes of the hundred gates, by each of which Rameses II sent forth a thousand warriors when he made war on the Khetas. It is the Pyramids of Ghizeh and the Temples of Karnak. It is the whole mystery of the Nile which has stirred the imagination throughout all antiquity. One knows to-day where the Nile has its source ; one does not yet know of what new grandeur Egypt is capable.

The Orient, it is Nineveh and Babylon—Babylon which recalls the most extravagant phantasies of a Nebuchadnezzar, a blaze of barbaric luxury six hundred years before Jesus Christ. It is Sidon and Tyre, whose vessels possessed the commercial monopoly of the Mediterranean, whose merchants followed assiduously the highways of Hither Asia towards the legendary countries of India and China.

The Orient, it is Ionia, it is Miletus, not far from the spot which is Smyrna to-day. It is Homer, whose apotheosis the whole universe has not yet finished celebrating ; it is the Iliad or the Trojan War, the victory of Europe over Asia ; it is the Odyssey, the conquest of the Mediterranean by the Greek Colonies, heirs of Tyre and Sidon ; it is Phocea, Mother of Marseilles.

The Orient, it is Salamis, the victory of a subtle intelligence over the colossal forces of barbarism. "That is the moment of our uplifting," cries Michelet, "the era from which dates the European spirit, let us say the human spirit, in its sovereign liberty, in its strength and invention and criticism ; the saving spirit of the world ; its victory over Asia secured the light by which Asia itself was illumined." The Greek Orient, it is Pallas, the goddess of Reason ; it is Aeschylus, Sophocles, Euripides, Aristophanes. It is Socrates, Plato, Aristotle, it is the Pantheon of classical philosophy, in which it seems that already human reason had found complete expression, the most modern philosophy often rediscovering in it its bolder doctrines.

The Orient, it is the Parthenon, the masterpiece of all beauty, the law of beauty being in measure and proportion.

The Orient, it is ancient Greece, mother of democracies, which can always turn to it for instruction.

The Orient, it is Alexander the Great, who gave to Hellenism all the intellectual and commercial expansion with which it was swollen, who Hellenised Egypt and Syria, Persia and Bactriana up to the frontiers of India, who reigned in Babylon, who laid hold of the treasures accumulated by the Kings of Persia in their palaces at Susa and Persepolis and threw them into world-wide circulation, for which they sufficed until the time of the discovery of the American Eldorados.

Alexander the Great died at the age of thirty-three, one of the demi-gods of history ; the path of his conquests was that of the merchants who, on the tracks of the Phoenicians, pushed their caravans from the Mediterranean to India, the habitual route of great commerce, the classic route which has been cut by the Turks and which has not yet been restored by the modern peoples.

One must learn again the lesson of Alexander the Great, one of the greatest problems of the present time. While the merchants were travelling along the greatest highway of the ancient world the Orient was searching with the same passion the moral and religious problem over which philosophy and the universal conscience have not yet ceased to meditate and to pray.

Who will explain why the great monotheistic religions have been born in this Orient, in this Near East, on this small corner of the world which is called Palestine? For the Orient, it is Moses, and the Decalogue, and the Bible, the Book, and the Prophets of the Old Testament. It is Nazareth and Bethlehem, it is Calvary and the Holy Sepulchre, it is the Unknown God of Socrates and of St. Paul.

The Orient, it is the flight of Hagar, Abraham's servant, and the destinies announced to the race of the desert. It is Allah and Mohammed, it is the Holy War, the passions of which have not been extinguished in thirteen centuries. It is the great battle of the Cross and the Crescent, the issue of which remains one of the most mysterious problems of to-day, so that the policy of the greatest Powers hesitates and delays in contradictions.

History, without doubt, can bring to them its lights. But it is also in the Orient that the keenest uneasiness of the human consciousness has been stirred. And it is in the Orient, without doubt, that the pilgrims of thought will always find themselves in the greatest trouble and anguish, for the Orient has not exhausted its mystic virtues.

Christian or Mohammedan, the Orient has never ceased, up to the time of the Turks, to kindle the most magnificent hearths of civilisation. While our Middle Ages of the West were struggling for centuries amid the atrocities of barbaric invasions, their monuments razed by Huns and by Goths, the Orient set up over against one another Constantinople and Baghdad.

Byzantium-Constantinople : the most marvellous geographical position at the heart of the ancient world, at the same distance from Paris and from St. Petersburg, half-way between London and India, at the crossing of the greatest highways on land and sea. Napoleon coveted equally Rome and Constantinople, the two imperial capitals, of which he saw neither the one nor the other, and in comparison with which Berlin, Vienna and Moscow seemed to him as mere provincial towns. "Constantinople!" he cried in his impotent dream, "He who shall hold Constantinople will be the master of the world." The Orient, indeed, from that time is above all Constantinople, and is always Constantinople. Constantine the Great founded it to close the road to barbaric invasions from the North and the East, and it was faithful to this function for more than ten centuries. Constantinople, however, was Justinian and Theodora ; it was Byzantine civilisation. It was Roman law set up in code to assure the organisation of modern states when they tried to reform themselves on the ruins of feudal anarchy. Constantinople, it was St. Sophia, the second marvel of Hellenic art after the Parthenon—in many respects worthy of the Parthenon ; and like the Parthenon St. Sophia was a model imitated throughout the civilised world, as far as Venice and Périgueux to the borders of the ocean, as far as Kieff and Novgorod and Moscow right up to the Russian forest. And St. Sophia was to that world the symbol of the introduction of Oriental barbarism into civilised society. A Christian Church which above all has remained, even in the slavery in which it is sunk to-day, a sanctuary of Orthodoxy,

Digitized by Google

and the apostles St. Cyril and St. Methodius have made the whole Orient the empire of the Orthodox Church, and, however diverse may be its provinces (no more diverse than those of the Catholic Church), there is always an orthodox unity which remains one of the essential features of the physiognomy of the Orient. As in the case of the Roman unity, the Othodox unity has favoured the birth and growth of the young nationalities of the Orient, which always find in the centuries of the Middle Ages their popular legends and their historical titles. Thus came into existence Bohemia, which was to be absorbed for such a long time by the Hapsburg monarchy, and Serbia, which was powerful under Stephen Dushan, and proved itself to be one of the most valorous soldiers of Christianity; but the time of their unity and of their grandeur had not yet come.

And facing Constantinople, the Orient, it was also Baghdad, the heir of Babylon. For Islam, after the extraordinary peregrinations which carried it from Arabia to Spain and to Persia in an immense crescent, which always represents its essential domain, made at that time some wonderful contributions to human civilisation. Baghdad was one of the great lights of history. It was not merely a question of dazzling enchantments in which Haroun the Just and his successors took delight and went to sleep. But the Koran was the book in which the populations of North Africa and Hither Asia were instructed throughout long centuries, and through it have preserved a unity and a solidarity which have to be reckoned with. The law of Mohammed has permitted, even in the dismemberment of the Empire of the Abbassids, the formation of new nations which have remained vigorous—from Morocco to Egypt, and to Persia.

Arab philosophy resumed the teachings of Greek philosophy, and its most illustrious masters posed as the pupils of Aristotle. Arab art has left its marvels, from Cordova and Grenada to Fez and Kairouan, to Cairo and to Jerusalem, to Baghdad and to Teheran. These are also the luminous marts of the great commercial highways where Arab merchants have maintained even in the later centuries the most remarkable activity. In truth the Arab Empire in this way appeared for some time as the heir of the Empire of Alexander the Great. Under the Khalifs of Baghdad the roads opened by Hellenism towards Iran were kept in repair and frequented by Arab merchants, and assured throughout the centuries the prosperity of that Moslem Orient whose political and commercial future to-day is still sunk in mystery. Constantinople and Baghdad did not quarrel in those days. On the contrary they cultivated the best relations and commercial ties—at peace with one another. If this budding friendship could have continued and developed, if it had not been rudely sundered by the Turkish invasion, both would have profited from it to a large extent. The influence of Arab culture, which had rejuvenated and renewed the teachings of Greek philosophy would have awakened earlier and more brilliantly the renaissance of the West, and the vigour of the West would have assured inestimable developments to the civilisation of the Orient. It is just these memories and these promises which we now have to convert into higher realities.

History is a resurrection.

(*To be continued.*)

## PRESS ON THE NEAR EAST

### A Political Philosophy.

The *Morning Post*, examples of whose stern views we have often given in these columns, explains, in the issue of December 13, the philosophy from which those views spring. Its attitude towards what are called "lost causes" is well-enough known, and upon the subjects of Egypt and India it adverts specifically:—

> There be many lost causes which were held strong enough but a few years ago. Some call Egypt a lost cause, Egypt which England made to blossom as the rose; in India our predictions are fulfilled and the Viceroy and Mr. Montagu are now walking through blood and filling the prisons to support a cause tottering if not lost, where before they came a country as great as Europe was governed as within a silken thread. Some call the British Empire a lost cause, because it sways and totters visibly under the concerted blows of secret and powerful enemies. Some call law and order a lost cause because the enemies of both are encouraged by the licence they are given and grow bolder and more insolent day by day. Some call the Christian religion a lost cause, when so many of its ministers support Anti-Christ in their foolish simplicity. England herself might be thought a lost cause when we see her fairest fields and the seats of her government inherited by aliens and strangers, by the unworthy, without breeding, without tradition, without wisdom, without courage. A cause may be called lost, when cunning and cowardice displace wisdom and courage. And so it has happened in the management of our affairs, and yet we shall not call that cause lost which is yet so passionately loved by multitudes of good Englishmen, who are bewildered and betrayed, yet continue in their faith, and never blench in their allegiance. The cause is not yet lost, but if it is to be saved, all who do not fear to espouse a cause because it is held to be lost must unite to turn the appearance and shadow of defeat into victory. It is going to be a long and weary fight against desperate odds; but Englishmen if they are true to the English tradition fight best when things look blackest.

The above extract may be be taken as representative of a school of thought which is diametrically opposed to the Radical school, as represented by the *New Statesman*, a long extract from which we gave last week.

### Great Britain, Armenia, and Turkey.

The *New Witness* of December 16 contains an article by Mr. Ernest H. Griffin, called "Armenia and the World Peace," which tries to stem the strongly-flowing current against the Turks and their ways. He begins:—

> Between Turkey and England there has always been a sympathetic feeling, at all events up to the beginning of the Great War, when our blundering diplomacy almost forced the Turks into the conflict. Yet, once we had smitten the sword from her hand and she lay bleeding at our feet, we sought to impose upon her an unjust and impossible peace. It is not difficult to understand the reason for this when we consider the prejudice created in this country against the Turkish people by the insistent and often unscrupulous propaganda of the Armenians. Before considering the alleged wrongs of the Armenians, it is well to remember that not only has our policy in the Near East shut that market to us, but the repercussion is felt throughout the Islamic population of the whole world.

He then describes how intensely loyal to this country Indian Mohammedans were to us during the war, and how since, in view of the treatment of Turkey, they have been forced to change their attitude. He continues:—

> British opinion with regard to its attitude to Turkey has been poisoned by reiterated stories of massacre, rapine and devilry; and amongst her traducers none have been so successful in their propaganda as the Armenians. It would be a difficult task, in so short an article, to deal with the alleged wrongs of this people prior to the Great War; suffice it to say that they were in continual rebellion against their suzerain, aided in this by the Russians, who kept them in a state of agitation for their own well-understood ends. Nor were Protestant missionaries free from blame, for they fostered revolutionary ideas and used their best endeavours to sap the authority of the Sultan,

Digitized by Google

The Catholics seem to have acted more wisely: while guarding the interests of their flock, they maintained friendly relations with the government. Then he instances some cases in which, he says, Armenians, through their own treachery, have brought misfortunes upon themselves; and he concludes:—

> The ferocious and bestial crimes alleged to have been committed by the Turks are paralleled again and again by the outrages that the latter assert have been carried out by the Greeks and Armenians. Surely British fair play should demand that we refuse to accept stories of atrocities circulated by partisans of either side unless they are authenticated by some such judicial and impartial enquiry as the Carnegie Commission on the conduct of the Balkan War, or the recent International Commissions on events at Smyrna and Yalova. The Indian Delegation invited to this country to advise His Majesty's Government on the subject of the Turkish settlement made an earnest and insistent demand for an enquiry into the question of massacres, and they openly declared that the Indian Moslems would consider that the Turkish nation had forfeited all title to their friendship and goodwill should the alleged unprovoked crimes against the Armenians be substantiated. The time has now come when all thinking people demand that all purely atrocity propaganda should be stopped and, by so doing, the ways made clear for a peaceful and permanent settlement in the Near East.

**ARTICLES TO NOTE.**

"Greek in Extremis," by A. D. Godley, and "The First Conquest of Palestine," by Major F. R. Radin in the *Nineteenth Century* (December).

"An Outlaw of Old Ceylon," by Jasper Martin, and "The Forbidden Fortress of Khurasan," by L. V. S. Blacker in *Blackwood* (December).

## MUSICAL NOTES.

### Miss Ursula Greville.

It was a bold scheme on which Miss Ursula Greville embarked at her orchestral concert, given at the Queen's Hall on December 16. For she chose, as chief test of her claims as a soprano, Mozart's "Non paventar," and Stravinsky's Air from "Rossignol," two extremely difficult things, which require not only superlative technical skill, but supreme confidence as well. There is no question of Miss Greville's ability to sing these airs, but on this occasion an incomplete confidence seriously interfered with her breath-control (normally one of her least-noticed virtues), and she did not do herself justice. When experience is superimposed upon her skill and her pluck, she will, I think, be a great artist.

M. Ansermet, who has specially selected an orchestra, was her conductor. He began with a rather shocking reading of Beethoven's "Coriolanus," in which he concentrated, at the expense of every other consideration, on its dynamic aspect. It is true that he made ample amends for this with a gloriously riotous version of Debussy's "Fêtes," which glittered and sparkled with consistent merriment. The same composer's "Nuages" was not so well done; it is the strong, angular type of rhythm in which M. Ansermet is so fine a master, not the sensuous, wafting or pliant kind. What thought there was behind Honnegger's "Horace victorieux, symphonie mimée," I missed; but it appeared to me a monstrously good game, refereed with most gallant skill. It was the sort of thing you want with a couple of potent cocktails, or as a preludial factor of excitement to a "Rugger" match. Certainly it is wasted with concert walls enclosing its horrid sounds.

It may have been my position in the hall, it may have been M. Ansermet's not sufficiently keeping the orchestra down, and it may have been Miss Greville's nervousness that prevented my hearing all of her usually exquisite interpretation of Monteverde's "Lasciatemi morire." But what I did hear convinced me that the sheer and even beauty of her voice has improved, and in the next item, the "Son gelosa" air from Scarlatti's "Tigrane," that lovely feeling for line which perhaps is her most notable distinction was very evident. Why she sang Cyril Jenkins' "Sea Love" I don't know; it is an obvious commentary on the verse, recreating nothing, and the best that can be said for it is that it recalls an emotion. And I am similarly ignorant about Eric Fogg's "Three Chinese Songs:" they are clever but unreal essays in a wearying, dot-bespangled psychology. After them Mozart's "Ah lo so" was as fresh, as spontaneous, and as fragrant as a real flower beside an artificial one; it was sung, moreover, with a conquering charm. Great things were expected at this concert, and though they were not all realized, it is certain they are only delayed.

### The Prince of Waits.

If there is any singer in this country whose art is so human as that of John Coates, I have not yet heard him. By anyone else, the execution of a recital consisting wholly of carols and of festive songs would have become artificial; but such is Coates' genius and geniality that the intimacy which he at once established with his audience at Chelsea Town Hall last week soon broadened down into sympathy, and finally mellowed into hilarity—in which happy consummation eminently respectable females and dignified clergymen could be heard joining in such unwonted choruses as that of "Oh for Old England's Roast Beef" or of "The Twelve Days of Christmas"! The barriers of art had been broken down: after a quarter of an hour the singer could appeal from any point of the wide plain of humanity, and always be sure of response.

Nothing but great art could have achieved this; but it was the man almost as much as the artist that one came in the end to admire, so virile, so tender, and, in short, so English, did the greatest of our tenors prove himself to be. He started right on the mark with a glorious rendering of "Welcome Yule," a fine old Fifteenth-century carol, written when the faith of Europe was one, and stirringly reminding us of that complete and beautiful reconciliation between Paganism and Christianity in which Englishmen lived before the plagues of the Reformation and of the consequent Puritanism beset the land. But for post-Reformation carols Mr. Coates put up a strong defence, with Attey's "Sweet was the Song the Virgin Sang," and the "Carol for the New Year," which was sung to the Elizabethan tune of "Greensleeves" (though its rhythm was rather interfered with). With the advent of Cromwell Mr. Coates had to leave English carols, and fly to those of France, in the corresponding period of which country much better things were written. It was intoxicating to hear him in the song of the "dead marine," "Qu'ils sont doux, bouteille jolie"; and Mr. Pussyfoot would probably have been moved even to a Falstaff's joyous tears could he have heard "Entendez vous le carillon du verre." Passing discreetly over any eighteenth or nineteenth-century examples of carols, the singer went easily on to modern ones, of which Malcolm Davidson's setting of Masefield's "A Christmas Carol" had most effect. Without question this is a very fine work; after the first faintly limned sketch of the background in the first two verses, it proceeds, keeping a most stately poise, to a magnificent climax. The other song which had most musical worth was Arnold Bax's "There is no rose of such virtue," in which the envelopment of a twentieth-century personality in a fifteenth-century atmosphere is perfectly done. Perhaps naturally there were in Mr. Coates' programme, trifles (such as Reinecke's "Christmas at the Door," or D. C. Thomson's "The Knight of Bethlehem") of superficial or purely seasonal appeal, songs that could not but for the company in which they found themselves have justified their existence; and even this singer's art could not transmute their tinsel into gold. But, on the whole, it was a memorable evening. And I do not mind admitting, while not swerving an inch in admiration of Mr. Coates as an artist, the thought did occur to me as I looked round wonderingly on the mixed nature of the audience which had come to hear both carols and festive songs: "Ye Gods! What a man for a smoker!"

# NEAR EAST BOOKSHELF.

## PANTHEISTIC POETRY.

**"THE FUGITIVE." By Rabindranath Tanore. (London: Macmillan. 7s 6d net.)**

This new volume of work by the eminent Bengali poet contains reflections, impressions and descriptions given in short paragraphs in prose poetry of the type familiar to his many admirers. There are also some episodes in dramatic form and some translations of Indian poetry. The number of this author's ardent admirers is, of course, very great. At present, we learn, his writings are tremendously popular in Germany, where the bookshops are full of volumes of his works.

After reading "The Fugitive" we find ourselves thinking that the author's questions—"I was speaking to you, my love, with mind barely conscious of my voice—tell me, had it any meaning? Did it bring you any message from beyond life's borders?"—could be aptly addressed to the reader, and that in that case the answer would be "not always." There are passages which do convey an image and an idea, but a great deal of it passes by in rhythmic monotony, leaving no impression and in the end produces an uneasy feeling that the poet might, out of force of habit, go on tunefully uttering the most trivial common-places and platitudes, and that it would all sound just the same. In fact we have sometimes the sensation of reading a parody. We cannot doubt, however, that although he appears too often to lose himself in a haze of words when he has nothing much to say, Tagore is a poet, and is haunted and obsessed by the beauty and the mystery of life, and is reaching out to find words to convey his intense realisation of "Beauty that must die and joy whose hand is ever at his lips bidding adieu.". He himself describes this straining pursuit after the glimpsed, fugitive forms of love and beauty when he says: "words, in the agony of their vagueness, haunt my mind, like vagrant clouds hovering over hills, waiting for some chance wind to relieve them of their rain."

## "MADE TO MEASURE."

**"MADE TO MEASURE." By Mrs. Henry Dudeney. (London: W. Collins, Sons and Co., Ltd. 7s 6d net.)**

James Pumphrey was oppressed by the fact that the inhabitants of the suburb where he lived were commonplace and conventional and that their everyday life was so much "made to measure." His heart turned therefore to ugly, individual Mary Blow—but when flaxen-haired Dinah appeared she cast a "black magic" round him, and, although he knew her to be absolutely untruthful and insincere, he married her. Timothy, James' elder brother—wanted to marry Mary, but she would not consent, because of her bravely hidden passion for James. After some years came the war and the gradual breaking up of that "Made to Measure" Society. When James came home on leave he found Dinah unfaithful to him, and Mary, with her energy turned into channels more useful than the perpetual gardening of the old days, a steadfast help to him in his desperate trouble. Towards the end of the war he comes home again, a wreck from shell shock, and again sane, downright Mary helps him back to health, but Dinah comes back and James finds her spell as strong as ever. Mary is left to marry and care for Timothy, who has returned crippled, after being for long reported as missing.

Mrs. Dudeney draws the suburban society and all its pettiness clearly and cleverly, and then shows us how tragic a thing was its upheaval in war time. The book is most notable for the way in which we are made to feel the desolation and emptiness that are left when the comfort, the homeliness, the security of that humdrum life have gone. About the second half of the book there is a grimness, almost a brutality, which has the same quality of the author's insistence on Mary's queer ugly features. It is a dreamy, disillusioned world in which the characters of the story are left to face the problem of renewing their shattered lives. Mrs. Dudeney is wonderfully successful in her picture of James' mother, with her pathetic devotion to James and her consistent refusal to see the facts of life except through the eyes of convention.

## EGYPTIAN ARABIC.

**"EGYPTIAN SELF-TAUGHT (ARABIC)." By Major R. A. Marriott, D.S.O. with supplementary Vocabulary by Negib Hindie. (London: E. Marlborough and Co. Cloth 4s.)**

We congratulate both authors and the publishers on the call for a fifth edition of this taking little Arabic manual, which, if we remember rightly, had a very considerable sale throughout the Near and Middle East during the war. The three special excellences of the handbook are the simplification and conception of the grammar, the careful phonetics in English of the words and phrases, and the supplementary vocabularies. We should like to see in another edition a great extension of the commercial and agricultural phrases, idioms, and substantives. "Egyptian Self-Taught" will be found useful to all beginners of Arabic, and a pleasant assistant and corrector to those who already talk the "kitchen" variety and despair of getting further.

## ITALIAN TECHNICAL WORDS AND PHRASES

**"ITALIAN TECHNICAL WORDS AND PHRASES: AN ENGLISH--ITALIAN AND ITALIAN-ENGLISH DICTIONARY." By E. F. Paventa. (London: E. Marlborough & Co., 6s. net.)**

We also welcome an addition to the Marlborough's Series of Technical Manuals, a little pocket Italian Technical dictionary. The secular vogue of the Italian language and of the Italian engineer, merchant and artizan throughout the Levant renders sure the utility of this little volume to official and non-official Englishmen at work in the wide area between the Black Sea and the Upper Nile. Additional useful features are tables of weights and measures, and a few blank pages for notes and memoranda.

### BOOKS RECEIVED.

"The Legacy of Greece." Edited by R. W. Livingstone. (Oxford: Clarendon Press. 7s. 6d. net.)

"Report of the Commission appointed by the Government of Palestine to Inquire into the Affairs of the Orthodox Patriarchate of Jerusalem." By the Commissioners Sir Anton Bertram, M.A., K.C., and Harry Charles Luke, B.Litt., M.A. (London: Humphrey Milford: Oxford University Press. 12s. 6d. net.)

"Miscellaneous Studies in the History of Music." By O. G. Sonneck. (New York: The Macmilian Company. 3 dollars).

"The Turks and Europe." By Gaston Gaillard. With three maps. (London: Thomas Murby and Co. 12s. 6d. net.)

"La Grèce" par Michel Lhéritier. (Paris, F. Rieder et Cie. Price 5 francs.)

---

The Punjab Government has prohibited the public performance of a play entitled "Zakhmi Punjab," purporting to be a dramatic representation of the Punjab disturbances of 1919. Further, all copies of the play have been proscribed under the Press Act.

The Regimental Pay Office, Basrah, has been moved to Baghdad, and correspondence intended for that Office should in future be addressed to the Regimental Paymaster, Army Pay Office, Baghdad, Irak.

The Annual Report of the Sanitary Commissioner with the Government of India for 1919 has been issued from the Government Printing Office, India.

NOW READY. FIFTH EDITION.

**EGYPTIAN (ARABIC) SELF-TAUGHT**

Revised.

**Major R. A. MARRIOTT, D.S.O.**

With Supplementary Vocabulary:

**By NEGIB HINDIE**

It contains Travel Talk, Conversation and Classified Vocabularies; **NAVAL, MILITARY, AND COMMERCIAL TERMS with PHONETIC PRONOUNCIATION** arranged for use at a glance; Elementary Grammar, Illustrations of Egyptian Coinage, Tables of Money, Weights and Measures, etc., etc.

**Red Cloth, 4s. net.; Blue Wrapper, 3s. net. Postage, 3d. extra.**

**Sold by all ENGLISH AND FOREIGN BOOKSELLERS.**

The Greek Queen-Mother has returned to Athens.

M. Mamartcheff, Secretary ot the Bulgarian Legation, has returned from the Continent.

Lady Mabelle Egerton left England last week to visit her sister, Lady Willingdon, at Madras.

M. Tcheidze, President of the Georgian Constitutent Assembly, has returned to Paris from London.

The Diadoch George and the Duchess of Sparta left Smyrna on December 16, for Athens.

The Raja of Pudukota left London on December 20, with the Ranee, for Cannes.

Viscount Milner, who recently returned to London from Spain, left with Viscountess Milner last week for Sturry Court.

On December 18, at Buckingham Palace, Lieutenant-Colonel C. K. Howard-Bury, Chief of the Mount Everest Expedition, had the honour of being received by his Majesty.

The marriage took place on December 5, at Gorakhpur, India, between Arthur Kerrison, eldest son of Arthur W. Preston, Norwich, and Jessie Laurie, daughter of James Walker, Birchfield, Dollar, N.B.

Sir Samuel Hoare, Deputy High Commissioner for the Russian Refugees under the League of Nations, and Lady Maud Hoare have left England for Constantinople and the Balkans.

The Crown Prince of Sweden will take an active part in the Swedish expedition that proposes to excavate the early Grecian Castle, Aisne, near Nauplia. Work is expected to begin next March.

The marriage was celebrated on December 15, at Brompton Parish Church, by the Rev. Prebendary Gough, between Richard Marsh Crofton, I.C.S., and Olive Amy Stewart, younger daughter of Mr. and Mrs. C. Stewart Cox, 23, Redcliffe Gardens, S.W.

The marriage was celebrated on November 24, at Karachi, India, between Captain Ronald Playfair St. Vincent Bernard, D.S.O., M.C., 6th Gurkha Rifles, and Kathleen Mary Cleland, elder daughter of John H. Cleland, Eversfield House, Richmond, Surrey.

The marriage was celebrated on December 1, at the R. C. Cathedral, Calcutta, by the Rev. Father Meunier, S.J., between Arnold Bellamy Beddow, son of Mr. Frederick Beddow, and Marie, daughter of Mrs. John Meagher, and the late John Meagher, of Montreal, Canada.

Prince Nicolas of Roumania has left for Norway and Sweden for the winter sports, attended by Mr. H. P. Hansell and Major Stefanescu-Draganesti. His Royal Highness will resume his studies at Eton at the end of the holidays.

The marriage was celebrated on December 20, at St. Barnabas Church, Addison Road, W., by the Rev. T. W. Heale, C.F., brother of the bridegroom, between Major R. J. W. Heale, Indian Political Dept., and Ethel, daughter of David Scott, of Burnside, Alyth, Perthshire.

The engagement is announced between Alexander George Gray, of the Bank of India, Bombay, second son of the late A. G. Gray, of Macclesfield, Cheshire, and of Mrs. Gray, and Dulce Muriel Fanny, the elder daughter of Mr. and Mrs. Harry R. Wild, of Berkhamstead Herts.

The marriage arranged between Major W. A. Nicholls, D.S.O., R.F.A., only son of General Sir William Nicholls, K.C.B., and Lady Nicholls, of 79, Warwick Road, S.W. and Hilda Evelyn, youngest daughter of Brigadier-General Garssen, C.M.G., C.I.E., D.S.O., and Mrs. Garssen, will take place at Brompton Parish Church, on January 18.

The marriage was celebrated on December 16, at Saltwood Church, by the Rev. Gerard Bourdillon, cousin of the bride, assisted by the Rev. Canon Galpin (Rector) between Philip George Bree, lieut., 66th Punjabis, and Olivia Mercy, younger daughter of the late Major-General Wauchope, of Flowerhill, Crieff, and of Mrs. Wauchope, Hill House, Saltwood, Kent.

The marriage was celebrated on December 11, at All Saints' Church, Malabar Hill, Bombay, by the Right Revd. the Lord Bishop of Bombay, between Robert Eliot Fryer, eldest son of Lt.-Colonel and Mrs. C. R. Fryer, and Alice Napier, daughter of Lieut.-Colonel and Mrs. Jervois, of North Leasowes, Malvern.

The marriage took place on December 12, at the Cathedral, Bombay, between Samuel Gordon Taylor, eldest son of William Taylor, of Accrington, and Frances Hilda Woodland Hunt, second daughter of the Reverend Alfred Hunt and Alice Hunt, of Welton Vicarage, Lincoln.

The marriage was celebrated on November 23, at the Parish Church, Kolar Gold Fields, South India, between Captain Ernest Wallace Benson, M.C., son of the late George Benson and of Mrs. Benson, of Pinner, Middlesex, and Evelyn M. Ainslie, second daughter of the late R. St. John Ainslie and of Mrs. Ainslie, of Sherborne, Dorset.

The engagement is announced between John Mitchell Douglas Mackenzie, Imperial Forest Service, Burma, eldest son of Alick Mackenzie and Mrs. Mackenzie, 6, The Circus, Bath, and Marjorie Alison Hutchison Douglas youngest daughter of Brigadier-General W. C. Douglas, C.B., D.S.O., and the late Mrs. Douglas, of Brigton, by Forfar, Scotland.

The marriage was celebrated on November 12, at St. Paul's Cathedral Church, Valetta, Malta, by the Revd. F. H. Burkitt, Chaplain of the 7th Destroyer Flotilla,

assisted by Canon Fargus, between Lieutenant Philip Sturley Cooper, Royal Navy, only son of Mr. and Mrs. W. C. P. Cooper, of Becclesgate House, East Dereham, and Frances, younger daughter of the late Mr. C. L. Erlin Clarke, and Mrs. Clarke, of Lark Hill, Worcester.

The marriage was celebrated on December 20, at St. Mary Abbott's, Kensington, by the Bishop of Burnley, assisted by the Rev. Marling Roberts, between Cecil Alexander Henry Harrison, eldest surviving son of the late Major William Harrison, XI. Hussars, of West Hill, Cheshire, and Norah Ethel, eldest daughter of the late Captain Frederick Bentley, India, and Mrs. A. Seaton Bentley, of 7, Mortlake Road, Kew.

## APPOINTMENTS AND PROMOTIONS.

Mr. H. L. Stephenson has been appointed a member of the Executive Council of the Governor of Bengal, in succession to Sir Henry Wheeler.

The King has approved of the appointment of Colonel S. F. Muspratt, C.I.E., D.S.O., Indian Army, to be Aide-de-Camp to the King, Indian Establishment, vice Colonel H. O. Parr, C.M.G., Indian Army, promoted major-general, with effect from June 1, 1921.

It was announced at the Admiralty on December 20, that the King has approved of the following appointments:—

Vice-Admiral Sir Osmond de Beauvoir Brock, K.C.B., K.C.M.G., K.C.V.O., to be Commander-in-Chief, H.M. Ships and Vessels, Mediterranean Station, in succession to Admiral Sir John Michael de Robeck, Bart, G.C.B., G.C.M.G., to date May 15, 1922.

Admiral Sir John Michael de Robeck, Bart., G.C.B., G.C.M.G., to be Commander-in-Chief of the Atlantic Fleet in succession to Admiral Sir Charles Edward Madden, Bart. G.C.B., G.C.V.O., K.C.M.G., LL.D., to date August 15, 1922.

## OBITUARY.

Miss Margaret Gramphorn, missionary in charge of the girls' school connected with the S.P.G. at Trichinopoly, Southern India, has died at Brentwood. She only recently arrived home on furlough.

The death has occurred of Major-General Henry Riversdale Elliot. He joined the Madras 42nd Infantry in 1855. In the Abyssinian campaign he served with the Madras Sappers and Miners, and was present at the assault and capture of Magdala. Later on he was A.Q.M.G. Madras Presidency and Burma, and commanded the 11th Madras Native Infantry.

The death has occurred of Major-General Richard Lloyd-Payne, C.B., D.S.O. He served in many campaigns, including the Burmese expedition of 1885-6, when he was awarded the D.S.O., the operations on the North-West Frontier of India in 1897, and the South African War, obtaining the two medals with five clasps and a brevet colonelcy. He received the C.B. in 1905. In 1912-13 he commanded the 3rd Division Northern Army, in India, and he retired in 1917.

## NEWS IN BRIEF.

Tanta shops were closed on December 18, the anniversary of the proclamation of the British Protectorate over Egypt in 1914, by way of protest against it.

After the Moplah raid of December 14, when the village of Pandalur was destroyed and three policemen were killed, the rebels withdrew across the Nilgiris border to Nirpuzha Moku in Malabar. A detachment of Suffolks has gone to Gudalur to support the police.

The Batoum *Izvestia* announces that last month a conference was held in Baku at which it was decided that there should be a political and economic union of the three Caucasian Republics with Soviet Russia. The political centre of the federation would be Baku and the economic centre Tiflis.

At a meeting of the Synod of the Greek Church, at Athens, a resolution was submitted proposing that proceedings be taken against Bishop Meletios Metaxakis for "having illegally occupied the metropolitan see of Athens and for having endeavoured to bring about a schism with the Greeks in America."

THURSDAY, DECEMBER 29, 1921.

## THE YEAR IN RETROSPECT.

Few countries have reason to regard the year 1921 with satisfaction; those of the Near East least of all. There have been wars as well as rumours of wars, and nowhere has the task of settling down to a normal existence after the world upheaval proved more difficult. Blame attaches as much to the Great Powers as to the Near Eastern States themselves. In the settlement that was to mark the Allied victory: principles had been forgotten, and a policy of get-all-you-can was encouraged. Consequently when one country found that another had been treated more generously than itself, it felt obliged to look around for compensation. The attitude of the Entente Governments was revealed by the British Prime Minister in a speech delivered a few days before Christmas, 1920. It was already felt that the Treaty of Sèvres was not a success, but the three Powers could not bring themselves to face uncomfortable facts. They proposed to wait and see; they would wait upon events in Turkey, where negotiations were pending between Constantinople and Angora; they would wait to see what line of action Greece would take under King Constantine, with whom the Allies could not bring themselves to be on speaking terms. In May, according to Mr. Lloyd George, Asia Minor, and consequently the whole of the Near East, was still "a small incident" in the scheme of affairs with which the British Government had to deal. Strong hopes had been built on the Allied Conference in London in February to discuss the Near Eastern question—the more so as representatives both of Greece and of Nationalist Turkey were to be present; but, although the Allies eventually put forward a new draft of a Turkish settlement, they were at no pains to secure its adoption, and remained indifferent when hostilities were renewed between Greeks and Turks. Cynicism has, indeed, been carried so far that, in spite of assurances given to Indian Moslems by Mr. E. S. Montagu in May, and repeated by Lord Reading last month, that the new settlement for Turkey would be acceptable to Moslem opinion, the Turkish Nationalists do not seem to have been acquainted with the proposed terms, and the Greeks, originally invading Turkish territory as mandatory of the Allies, have been allowed to carry on a war ostensibly to enforce Turkish acceptance of the Treaty of Sèvres, which by common consent has long since been a dead letter. Moreover Allied inaction has been maintained in the face of separate negotiations between France and Mustapha Kemal Pasha, resulting in the Angora Treaty, which has dealt a sharp blow to the smooth working, if not to the solidarity of the Entente. A new Near Eastern conference is promised at the beginning of January, when the Foreign Ministers of Great Britain, France, and Italy will meet in Paris; but unless a radical change of policy is adopted, there would seem little likelihood of this gathering being attended with better results than a similar meeting last June. Only when the Near Eastern question has ceased to be "a small incident" in British affairs will there be any chance of a practical settlement being reached.

The failure to settle the Greco-Turkish question has had less effect on the other States of South-Eastern Europe than might have been expected. Considerable credit for this condition of things is due to Bulgaria for the maintenance of an exemplary attitude, in marked contrast to other ex-enemy States. Not the least satisfactory feature of the year has been the distinct improvement in the relations between the different countries. A concrete achievement has been the formation of the Little Entente as a result of the agreements made by Czecho-Slovakia with Yugoslavia and Roumania, and of the understanding between the two latter States; to this has now to be added an agreement between Czecho-Slovakia and Austria. Hungary, owing to the foolishness of the ex-Emperor Charles and of some extremists within has been a disturbing element; but her official policy has been correct and is beginning to win recognition from even the most suspicious of her neighbours. Bulgaria has lived down a variety of allegations which bore witness to the nervousness of those who made them rather than to the accuracy of their intelligence, and has had the satisfaction of seeing a tendency on the part of Yugoslavia, under a new Constitution, with King Alexander on the throne, to impart an entirely new orientation to her foreign policy, that is southwards instead of to the north. One effect of this change has been to cause a false move on the part of the Belgrade Cabinet in connexion with Albania; but a sharp reprimand from the League of Nations has, it is hoped, saved Yugoslavia as a whole from the mistakes and domination of a militarist section. Albania has rendered a distinct service to the League of Nations, to which it was admitted a member last December, by affording the League an opportunity of enforcing its authority. The Albanians suffered from Serbian aggression while the League was summoning up its courage to act, but its final gesture was very much to the point. In Roumania, General Averescu, with M. Take Jonescu as his Foreign Minister and the driving force in the country, has remained in power until within the last few days. His period of office, however, has not brought political peace to the country or placed on a satisfactory basis the relations between the Outer Roumanians and those of the Old Kingdom, in spite of the pressure which it would be thought the economic situation was bringing to bear on all political parties to patch up their differences in order that the country, united, might devote itself wholeheartedly to the work of reconstruction. For Greece the year has seen the war against the Turkish Nationalists, with all the hopes based upon it not as an end in itself, but as a means to making good in the eyes of the Allied Powers, and then to being able to attend to pressing economic matters, which all the while have been nearer the nation's heart. Fate has not been kind to the Greeks, and has chosen the Allies rather than the Turks as the agents of its spite.

Throughout the last twelve months, as indeed ever since the Armistice, the Near and the Middle East have had to be sidetracked by the Allies for business regarded as more urgent. With the Washington Conference over, the Irish negotiations concluded and Germany brought to a more amenable frame of mind, there may be some chance of Allied statesmen paying the attention necessary to the problem which directly or indirectly is responsible for most of the active unrest in the world. There is an admitted connexion between the Turkish problem and one aspect of the agitation in India. The breadth of view that led to a solution of the Irish question was absent from the Egyptian negotiations after the publication of the report of the Milner Mission. Persia is being left to stew in its own juice—a policy which may serve the Persians right, but is not flattering to the resourcefulness of British diplomacy. After promising our Arab Allies that Palestine should run in single harness, the British Government is attempting to drive it tandem, and the "leader" subsequently introduced is by no means to the liking to the high-spirited Arab between the shafts. Mesopotamia alone seems to have fallen upon good days, thanks to Mr. Churchill's speech on June 14, which restored to the British public its self-respect in connexion with this country as well as its respect for the country itself, and thanks too to the selection of the Emir Faisal as King. With this one exception, however, all the countries of the Near and Middle East are calling for the thoughtful and undivided attention of the Entente in the light of principles enunciated during the war and of post-war experience.

## BEERSHEBA: SKETCHES.

*The hot sun blazing down with a fierce white radiance on the baking village whose white walls reflect back the blinding glare; the buzzing of flies; the loud wrangling of the purchasers in the market place; the hot panting throb of a mill; the sudden raucous bray of a donkey; the gurgling, throaty snarl of a camel;—a hot gusty wind filling the air with sand;—"Allah Akbar" from the minaret, tall and dazzling in the blazing sun. Noon.*

### WHO WOULD BE A TITHE INSPECTOR?

(*The tithe, 12½ per cent of the total yield, is the Government's share of the crop. It is estimated by a Commission either on the standing crop or on the threshing floor. The Inspector of Tithes afterwards goes round to check the work of the Commission. If the owner of the crop disagrees with the assessment, a "shishna," or test, is taken to prove whether the estimate is a fair one*).

"Wallahi, I swear to God my crops are over-estimated. I am a poor man, your Excellency, I have not much land. How shall I live if you take one half in tithes? By the Prophet I swear it is over-estimated and I am very poor."

He certainly did not look particularly wealthy. From the top of his grimy head-gear to the soles of his bare and dirty feet he was ragged and begrimed with the dust of ages. His one garment hung in tatters from a skinny brown shoulder to just above his dusty knees, caught at the waist with an old leather strap, leaving his chest and one shoulder bare as were his stick-like legs and arms. His face was crumpled in a myriad tiny wrinkles, his few remaining teeth were yellow and his claw-like hands gesticulated wildly, now clutching the Inspector's arm, now flung to heaven calling upon Allah to witness his poverty and his honesty.

The Tithe Inspector, fat, calm and stolid, moved across to one of the flat-topped mounds of barley under dispute, appraising its circumference and height. He climbed on to it feeling its solidity with his feet and poked his stick down into it.

"You see?" he said to the "Mudir" who accompanied him. "It has been very cleverly done. The sheaves are laid carefully head to tail and packed firmly, not just thrown down as is usually the case. There must be at least twenty-five 'shabaka' (camel loads) here."

The day's work had ceased temporarily. The Inspector's visit made a not unpleasant interruption in the dull routine of harvesting. And the harvesters, men and boys, women, children, and babies, all stood round commenting audibly on the Inspector's actions, the aged owner protesting at intervals that he was poor but honest.

"Well," said the "Mudir," "the only thing to do if he won't agree to the estimate is to take a "shishna" (test). It's a lengthy job, but it can't be helped. Take an eighth of the stack, make them thresh it and winnow it and then weigh it out. (One-eighth of every stack being the tithe). Before they have half finished threshing in this heat they will give in! Where's a rope?"

The old grey-beard shouted to someone, who shouted to someone else, who yelled at a third, who screamed at a small boy and finally a little girl ran to fetch it from the tumble-down hut they called a house.

Time is no object to Arabs. Their motto seems to be "There's another day to-morrow not touched yet, why hurry?" And their love of argument lengthens everything still more. They cannot work without talking hard and while they talk they forget to work—and there you are!

The rope was stretched across the middle of the stack and as the stack was irregular in shape there was much discussion as to the exact middle. However the "Mudir" used his own judgment as to the division and then put a stop to further argument by letting the old man choose which half should be divided again and so on, until an eighth was marked off and removed to a little distance.

Six men with sticks then set to work in the blazing noon-day sun to thresh out the pile of barley. Old Grey-beard hopped about on the outskirts egging them on and criticising their method of work.

"Beat! beat! Wallahi! are you a dead man? Give me the stick, I'll show you. Oh, Muhammed the Prophet! Beat, oh lazy one! I am poor, I am poor. Oh my paternal uncle! Beat! Beat!"

Suddenly the Government Checker swooped down upon one of the men and snatched his stick.

"Look, oh shameless one! Is that how you would cheat the Government? Look at that nail!" he cried, shaking his outstretched hand furiously at a three-inch nail sticking out at the end of the stick; most useful for tossing the ears of corn over his head out of the way.

"Wallahi!" cried old Grey-beard as if he had not known all the time that it was there. "Would you bring shame upon me? Oh Muhammed the Prophet of God. Allah akbar!"

"It's not a bit of good you calling on Allah" said the Tithe Inspector rather brutally, "I am Allah here! Get on and beat!"

Another stick was produced and the work went on. When the threshing was finished the winnowing was done, by hand, in just as primitive a manner, ending with sifting through a wire sieve. Every tiny scrap of dust was removed and if several grains were tossed out as the sieve was jerked up and down surely the Government would never miss it?

At last it was finished and the little mound of barley gleaming clean and yellow in the sun, was ready to be weighed. The scales gave a last truly "Heath Robinson" touch to the scene. Two flat round discs of rope tied to the wooden cross-piece with bits of tape and rag. The balance was anything but true and had to be carefully adjusted with little stones. Then the weighing began. Old Greybeard slipping an extra handful of barley on to the scales when he thought no one was looking and the Checker, who held the balance, as great a rogue as any of them, giving the scales a tap with his foot to knock some off.

The last few kilos were weighed in dead silence, even old Grey-beard forgetting to call upon Allah and the Prophet.

"Thirty-two measures—thirty-three—thirty-four—and a half!"

Grey-beard squatting on the ground, gazed up at the Tithe Inspector, tense with anxiety.

"El-haq alai" (The right is on me), said the Tithe Inspector after a minute. Which rather involved expression means 'I am wrong.' "The tithe is six, not eight 'kelas.'"

The old man jumped up fairly skipping with excitement, dashed at the Inspector, patted his cheek and kissed his hands again and again, crying:—

"You said it was eight and it's only six! Allah akbar, Allah kareem! You said it was eight and it's only six!"

And when the Inspector finally shook him off and he and the 'Mudir' mounted their camels and rode away they left him running round telling all the people, who had been there the whole time, exactly what had happened from beginning to end.

### WHO PAID FOR THE RABBIT?

We had a Coursing Match in Beersheba the other day. Lieutenant Jones has a very good Salugi—which, for the information of the uniniated, is a distant relation of the English greyhound; Sergeant Smith also has a Salugi which he considers is quite as good as Lieutenant Jones', if not better; Private Brown has several rabbits: and there you have the ingredients for an excellent coursing match.

Private Brown loved his rabbits. A British Tommy must have a pet of some kind and Private Brown's

Digitized by Google

young fancy turned to rabbits and he didn't much want to part with any of them. However the sporting instinct, or cupidity, at last outweighed his affections and most reluctantly he agreed to hand over one of his cherished rabbits for the sum of five shillings, the loser to pay.

Great preparations were made, the course decided upon, the mode of procedure agreed to, and the day and hour for the great event fixed.

The two Salugis were dieted and groomed and exercised with the utmost care. Their respective masters eyeing each hound's points and general condition day by day as the event drew nearer. The rabbit stayed in its hutch wrinkling its nose, eating out of its master's hand and waxing fat all unconscious of the horrible fate in store for it.

At last the great day came. Admiring and loudly critical Tommies crowded to the course, and the betting ran high. Private Brown strove to choke back a manly tear by betting on both sides. The rabbit was produced and amid a profound silence the hounds were taken up to the hutch, wriggling with excitement and snuffing rapturously. The rabbit by this time was losing a little of its placidity and wrinkling its nose more agitatedly every minute.

The crucial moment arrived. The hounds were removed to a little distance and held firmly, the hutch door was opened and the rabbit hopped slowly out. It stopped, sniffing the air, its poor little frightened eyes rolling wildly—gave two or three more terrified hops—rolled over—and died of fright!

Who paid?

---

*A golden glory in the west, a delicate violet edged with pink in the east, the tender light greying the distant foothills and robbing the mud-walled houses in a false glamour the twittering of innumerable finches and sparrows; the faint tinkle of a bell, growing louder as a string of laden camels goes trotting by; the monotonous drone of a native "oude" repeating endlessly the same short refrain; the call of a frog from a fountain near at hand; the hot wind dying; the cooling breeze just stirring the pale pepper trees; "Allah Akbar" from the minaret, tall and graceful in the dying glow. Sunset.*

## THE CARAVANSERAI.

*Think, in this batter'd Caravanserai*
*Whose Doorways are alternate Night and Day*
*How Sultan after Sultan with his Pomp*
*Abode his Hour or two and went his way.*

OMAR KHAYYAM—

---

I am indebted to a correspondent in America for a story that has found its way thither from Egypt. As you may remember, the Labour Delegation to Egypt was accorded a noisy welcome on its arrival in Alexandria, leather lunged 'Gyppies having been assembled by the Zaghloulist agents in great numbers, and no pains or expense having been spared to impress the visitors. These good natives naturally wished to know who was the head of the Delegation; and were told that his name was Swan.—Whether the reply was correct or not I do not know; for as far as I could make out from an incomplete study of the Labour men's proceedings on their little jaunt, there seemed to be as many 'leaders' as there were members of the Delegation. But that is, by the way.—The Egyptian claqueurs at once proceeded to translate the name into Arabic—after their own fashion—and to shout "Ya ya wizz! Ya ya wizz!" thus reversing the "ugly duckling story," so to say, and converting the "Swan" into an ordinary mud-paddling "goose." And my correspondent adds: "How very appropriate!" I do not dissent.

---

Apropos of my recent note about the meeting between Dr. Zervos with the Archbishop of Rhodes, I have received a very friendly letter from Mr. T. D. Moscona. He tells me that he sent a copy of the paragraph to Dr. Zervos, who, he is kind enough to add, is sure to enjoy it. Then he goes on to say:—

> "As a matter of fact, I think I ought to give a better definition of the Doctor's disguise. Dr. Zervos appeared and spoke to the Archbishop in a decent fisherman's garb, and not in his Altogether.
>
> "You may be interested to know that after the interview, and on boarding the steamer which had brought him from the Piraeus to the island of Patmos, Dr. Zervos in his desire to mystify and tease the Italian authorities of the island, took the ship's megaphone and shouted to the exiled Archbishop words of good cheer and hope. . . . . The Doctor does not inform me whether the Italians of the island (who number in all *five* soldiers and a lieutenant) gave chase to him."

So, even if the interview was not quite so Garden-of-Eden-y as I had thought it might be, it must have had its humorous side—at least in its last stages. And Dr. Zervos showed himself possessed of true Hellenic resourcefulness and wit in his Parthian shot at the half-dozen Italians!

---

Some readers may remember that a little while ago I was perplexed by an advertisement in a Zagreb daily. It ran: "Amerik Mixer Mr. Yo Club Bar Please trey Mixer Jos Special Mixed Drings." Now a belated letter reaches me from Zagreb, explaining the mystery. The writer expresses surprise at my inability to understand an advertisement in my own language, and proceeds:—"The "puzzle" on p. 458 of your issue of October 13 is an advertisement in *English* and your heartless comments will surely hurt the feelings of the proprietor of the Club Bar, Zagreb, or at least of the 'English-speaking' Croat (presumably) who drafted the notice. Same being interpreted means 'The American Mixer, Mr. Joe, of the Club Bar, please try Mixer Joe's Special Mixed Drinks.' But after all, probably it is the printer that is to blame."

## NOTES AND NEWS.

Devonshire Square,
E.C. 2.

**Anglo-Persian Developments.**

In the course of a comprehensive survey of the position of the Anglo-Persian Oil Company at the general meeting Sir Charles Greenway pointed out that the profits could have been shown at a very much larger sum, if advantage had not been taken of an extremely good year to make very ample provision for depreciation. It is anticipated that the earnings for the current year will show some falling off, but as the company will not be liable for excess profits duty the amount available for dividend will be in excess of that for the year now ended. In the following year, however, the recent large capital outlay will have commenced to bear full fruits, and in the course of the same year the company will be free from its contracts for benzine and kerosene, and a further larger increase in profits is anticipated:

**More Capital Required.**

For some weeks it has been rumoured that the company was contemplating a further issue of capital, and for once rumour has proved to be true, for Sir Charles stated that the extensions and developments necessary to enable the company to dispose of its largely increasing production to the best advantage will entail a new issue in the near future. The form that it is to take has not yet been definitely decided, and this point will no doubt form the subject of interesting speculations over the Christmas holidays. An issue of Ordinary shares, were such a measure in view, would, of course, be made only at a substantial premium, say at the price of 2, or perhaps even 2½ in view of the exceptional prospects of the company. And what an attractive proposition it would be! But for many reasons anything of the kind cannot be regarded as being very likely, and I imagine that in all probability a new issue of Preference shares will be made.

**The North Persian Oil Concessions.**

The question of the oil concessions in Northern Persia to which I referred at length last week was touched on by Sir Charles, who expressed his astonishment at the confiscatory action of the Persian Government. He laid stress on the point that Persia's future is dependent on financial assistance from other countries, and pointed out that if the country established a reputation for the repudiation of contracts, its credit abroad would be destroyed for ever. "I cannot believe," he added, "that the Persian Government will deliberately commit their country to so suicidal a policy, and I am confident that they will before long see that they have no alternative, if they desire to maintain the credit of Persia in this or any other country, but to honour the signatures and commitments of their predecessors."

**The Borcea Bridge.**

The reopening to traffic of the Borcea Bridge, over which the first train passed on December 15, is an event which should prove of considerable importance in the economic reconstruction of Roumania. Since the Armistice one of the chief drawbacks to the country's progress has been the lack of transport facilities. With the completion of the bridge, over which a single set of rails is laid, but which will have a double set in the course of next year, Roumania is able to make fuller use of the line serving Constantza, the country's principal outlet. The effect of that on trade during the winter should be pronounced, and it should mean that congestion at Constantza, which was so serious during the last two winters, should now be a thing of the past.

**British Traders in Turkey.**

The plea which we publish in another column on behalf of British traders in Turkey having claims arising out of the war is one which deserves every consideration. As a result of the conflict they suffered the severest losses, and the fact that now, over four years after the Armistice, it is still necessary for them to seek redress is clearly a matter which needs explanation. It is worth emphasising that in pre-war days they were mainly responsible for the success of British trade endeavour in the Levant. As their claims have not been met, they have not been in a position to resume their activities.

**After War—Famine?**

About a year ago, it will be remembered, Sir William Beveridge advanced the theory that there is a meteorological cycle affecting harvests, and expressed the view that we might be close to the next recurrence. In the current issue of a contemporary he reverts to the subject, and says that if he had to prophesy at the present time he would give 1923 as the date of the bad harvest, followed by high prices and scarcity in 1924. It is calculated that not only is the 15.3 cycle due in 1923, but that three other cycles should return to their maximum phase between February and September of that year. Happily, as he points out, it is extremely improbable that the four cycles should coincide, but should they do so he anticipates that 1923 will be something like 1315 which saw the worst famine known in Europe.

# STEAM LAUNDRIES IN THE NEAR EAST.

## The Plant Required.

Within the last few years the possibilities of the steam laundry both as a commercial enterprise and in connexion with improvements in public institutions such as hospitals, infirmaries, asylums, etc., have claimed the attention of merchants and engineers in Eastern countries. In Egypt there are two or three steam laundries run on commercial lines and doing well. In the larger towns and cities in India they are also gaining a footing, and within the next few years the steam laundry industry will be one of considerable importance. In the Balkan Peninsula, the Sudan, Morocco, Asia Minor, Mesopotamia, etc., the industry has certainly not got beyond the enquiry stage, and it is quite evident that the field laundries used by the British Army during the war have much to do with the great interest in laundry engineering, now evinced in these countries. In point of fact a steam laundry run on the right lines can be made a paying proposition in any country, where there are a fair percentage of Europeans in residence; the more so in any big European town.

The basis of success in the establishment of a steam laundry is that the work should be well done. It is a common mistake to think that anyone can run a steam laundry successfully; in fact it is a trade that many try after they have failed at everything else in the belief that machinery does everything, and that the minimum of knowledge and individual effort is required. That is not so. In the first place an experienced laundryman will be able to start earning a profit right away, whereas the amateur will in all likelihood throw away the whole of his first year's profits in learning his job, and possibly earn such a reputation for his establishment during the process as to prejudice his chance of future success. It is, however, not the object of this article to throw cold water on the prospects of laundry proprietors abroad, but rather to put on record a warning that the enterprise must be regarded more seriously than has hitherto been the case. Any intelligent man with sufficient capital can make his laundry a paying concern, provided that he instals the right types of machinery and acquires some indispensable knowledge regarding the conduct of his business before he starts. If he is buying his machinery in Great Britain, the makers will be able to give him a great deal of help; better still, if he can get into touch with some of the big steam laundries at home, or some of the laundry experts. He may be charged a fee, but it may save him his business and many anxious days.

When the idea of starting a steam laundry is entertained, the first thing to be done is to ascertain roughly how many family washings can be depended on per week to start with, and how many are likely to be secured when the laundry has become successfully established. With this information obtained, steps may be taken to invite estimates from makers of the machinery.

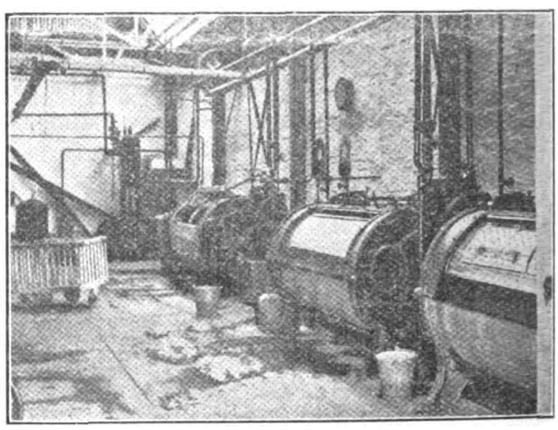
The ultimate prospects of the laundry are rather important in scheming out the plant, because the power installation, *i.e.* the steam boiler, steam engine, or motors are fixed and installed on the basis of the maximum output of the laundry. The actual machinery for washing, drying, ironing, and finishing need not be installed for more than the anticipated output during the first six months, but the boiler and prime mover should have the maximum power. For a concrete example, we may take a steam laundry to deal with the work from 500 families to start with, with a possible extension to 1,500 families, and consider the machinery necessary for this trade, keeping in mind the types of machines most suitable for Eastern conditions.

The steam boiler is the first item to be considered, and care should be taken to ensure that it has sufficient steaming power to deal with the requirements of the laundry when running at full pressure. For all foreign countries where coal is scarce or dear, a horizontal multitubular type is recommended, with the furnace so arranged that wood can be burned. The vertical cross tube boiler can also be built with a wood burning furnace, but the horizontal multitubular type occupies less space, and its transport cost is less.

The prime mover may be a steam engine, electric motors, or a series of motors depending on local conditions; there are good sound arguments for all three proposals. The steam engine is economical on account of the employment of its exhaust for heating water or a drying chamber, and its freedom from breakdown. On the other hand a motor occupies less space, is cheaper to instal, and provides equally as good a drive to an overhead shaft as an engine. The series of motors—say, one in the wash-house, one in the drying room for the ventilating fan, and one in the ironing room—means that any of those sections can be run independent of the others, thus economising in power. In regard to the majority of proposals from the East the steam engine would seem to be the accepted method of driving.

There are many firms in this country making reliable engines up to 20 h.p., and, as they are nearly all represented in the East, both the boiler and engine could be bought locally. The horizontal or vertical types are both suitable, and the working pressure in both cases should be 80 lb. per square inch. The boiler should have a suitable feed water injector and a complete set of stoking tools.

Great care should be exercised in the selection of the laundry machinery proper, because, to speak frankly, there is a good deal of cheap plant on the market which may be termed rubbish. The low prices at which these machines are offered often prove attractive to the prospective laundry proprietor, and he falls into the trap.



**Wash House, with Hydro-Extractor.**

Right away it may be said that a steam laundry equipped with poor quality machinery will not only prove a heartbreak to the owner owing to breakdowns and repairs, but will not turn out the work satisfactorily.

The best plan is to place the order in the hands of a reputable British firm whose manufactures can be relied upon, and follow out clearly the instructions they supply. The most important item in the wash-house is the washing machine, which should be of metal and not wood, as the latter falls to pieces quickly, and is very insanitary in hot countries. The inner case should be of brass 14 B.W.G., the outer casing galvanised steel plate 3-16ths of an inch thick and the gearing with machine-cut teeth. A handy size to commence with is one with a brass inside shell about 34 inches diameter by 54 inches long. The hydro-extractor to have a capacity equal to two washing machines should not be less than 26 inches diameter with perforated steel basket and outer casing of boiler plate. In semi-tropical countries no elaborate drying arrangements are necessary for the reason that so much can be done by natural heat outside. Where a drying chamber is necessary it should be built of brick inside the laundry, measuring about 10 feet square, fitted with hanging rails, and heated with gill-pipe coils. A ventilating fan is required to keep the air in constant motion for quick drying.

In the ironing room the most important machine is the ironing, drying and finishing machine. The choice lies between a single roller machine and one with multi-

Digitized by Google

ple rollers, and the decision can only be determined by the class of work on which the laundry is engaged. Hotels usually prefer a Decoudun, because the bulk of their goods is starched linen, but in an ordinary domestic laundry, with the requirements of which this article deals, a four-roller machine with steam-heated beds and working at 60lb. pressure is the most effective and satisfactory. Additional plant in this department is a collar, cuff, and shirt ironing machine, a goffering machine for frills, and a range of hand irons heated by electricity or pressure gas.

A plant on the lines described provides a good nucleus for a start, and will easily cater for 500 families to begin with. The power plant and ironing and finishing machine are large enough to cope with an extension of the trade to 1,000 families, and all that would be necessary in the shape of extra plant to deal with this latter turnover is a second washing machine of similar size to the original. The plant described is summarized for reference as follows :—

(1) One horizontal multitubular steam roller of 200 square feet heating surface, with furnace arranged for burning wood fuel. Boiler complete with fittings, mountings, and hot water feed injector —working pressure 80 lb. per square inch.
(2) One horizontal slide valve steam engine of not less than 15 b.h.p. for 80 lb. working pressure, or one electric motor with compound winding of similar power.
(3) One all metal washing machine with brass inside shell about 34in. diameter by 54in. long.
(4) One 20-gallon soap and soda dissolver.
(5) One 26in. self-balancing under-driven hydro-extractor with countershaft and friction pulley.
(6) Fittings for single compartment drying chamber, about 10ft. by 10ft. consisting of steel hanging rails, heating coils of cast iron gilled pipes, and 15in. electric ventilating fan.
*Above is optional, depending on the natural conditions for drying.*
(7) One Four-Roller Steam-Heated Calender, with rollers 108in. long by 9in. diameter, with felt and cotton coverings for rollers.
(8) One 24in. collar, cuff, and shirt ironing machine with roller heated by electricity, petrol, gas, or pressure gas.
(9) One goffering machine with roller heated by electricity or gas.
(10) A range of six or eight hand irons heated by electricity or gas.
(11) The hourly consumption of steam for a plant as described would be approximately 450 lb., and the b.h.p. required to drive same, 10. A steam pressure of 15 lb. per square inch is required in the wash-house, and 60 lb. for the Four-Roller Ironing and Finishing Machine.

## GREEK LOAN NEGOTIATIONS.

Sir N. Moore asked the Chancellor of the Exchequer on December 16, whether he was aware that the Greek Government was desirous of negotiating a private loan in this country ; if so, whether it was understood that a substantial portion of that loan was to be expended in goods and material of a peaceful character purchased in Great Britain, and most of the remainder in the British Empire ; and whether, under such circumstances, His Majesty's Treasury would view such a loan with favour, provided that the security offered was satisfactory to the parties negotiating it ?

Mr. Young : I am aware that the Greek Government has given indications of its desire to raise a loan in this country. I am not clear as to the amount so raised which it is proposed should be spent in this country, and have asked for information on this head. As to the last part of the question, it is not the practice of His Majesty's Government to indicate favour or disfavour to loans on the London market.

## ROUMANIAN COMMISSION OF CONTROL CRITICISED.

### Resolutions of British Chamber of Commerce.

We give below two important resolutions that have been passed by the British Chamber of Commerce of Bucharest. The first is a strongly worded protest against the initiation of the Commission of Control for the purpose of preventing speculation in the leu. It states that the Chamber :—

" Having in view the announced intention of the Government by means of the control instituted to prevent speculation in lei. considering that only those deposits in lei lying in banks in Roumania belonging to foreign firms are affected, whilst the deposits of Roumanian firms are not included in the operation of the decision, having in view the fact that in the case of deposits withdrawable at sight the decision of the Council of Ministers appears to be in contradiction to the Commercial Law of Roumania, also that in order to secure the necessary permission to transfer funds, foreign merchants are compelled in fact to attend day after day at the offices of the Banca Nationala, desires to register its protest against the institution of the Commission of Control for the purpose of investigating reasons for the foreign depositors wishing to withdraw their money.

" The Chamber expresses the view that, having knowledge of a large number of deposits held by British firms in Roumanian banks, it is satisfied that the whole of this money is the result of sales of British merchandise made in Roumania. This being the case, the Chamber see no necessity whatsoever for any control having as its object the prevention of speculation in lei. These deposits are not made for the purpose of stock exchange manipulation, and as in every case they are the result of sales of goods made in Roumania at a very much higher value of the lei than at present exists, it is extremely unlikely that the British firms interested will transfer their deposits to the United Kingdom at the present rate of exchange.

" The Chamber further gives as its considered opinion that whatever reasons may previously have existed for the presumption that British firms would wish to withdraw their deposits the institution of control upon the free disposal of the money received for sales made in this country, and freely deposited in Roumanian institutions, is one which will undoubtedly create a feeling of insecurity in the minds of the depositors and thus tend, if prolonged, to promote the withdrawal of these deposits from Roumania, a procedure which will probably result in a further depreciation in the international value of the leu.

" The Chamber is informed that various British merchants who, in spite of the present great difficulties of transport, are struggling to carry on an export trade from this country have been hampered very considerably in their business by the necessity to secure the permission of the Commission of Control for the purpose of withdrawing their own money from the banks in which it was deposited.

" Further the Chamber desires to express its view that the institution of a commission of control of foreign deposits is in direct contradiction to the stipulations of the Treaty of Commerce and Navigation between Great Britain and Roumania signed at Bucharest on the 31st October, 1905, and ratified on the 17th March, 1906, which treaty besides granting national treatment to British subjects and firms in Roumania specifically states that on compliance with the laws of the country the subjects of each of the contracting parties shall be permitted *freely* to export the proceeds of the sale of their property and goods in general. It seems to the Chamber that the effect of the institution of the Commission of Control will only be to hamper foreign exchange transactions of a legitimate nature whilst irresponsible and unscrupulous persons will merely evade the regulations.

" In termination the Chamber would point out that not being able freely to dispose of their own money British firms will be unable to transfer from one bank to another, and this in the present financial situation of this country means, it seems to the Chamber, the loss of an essential safeguard for their deposits inasmuch as, should the safety of any bank be called in question, it would not be possible for foreign depositors, to rescue their holdings without the delay necessary to secure the permission of the commission of control."

**Payments to Foreign Creditors.**

The second resolution deals with the present situation in Roumania as regards debts owing by Roumania importers to foreign countries. It states :—

" After considering proposals made and recently discussed at a meeting of the Bucharest Camera de Comert, as well as at a general meeting of delegates from eleven of the chambers of commerce of this country ; having before it a copy of the memorandum drawn up by the Bucarest Camera de Comert regarding the question of payment to foreign creditors, more especially that part thereof which suggests that, should foreign creditors press for payment of debts due to them under contracts freely entered into on both sides, the Roumanian debtor should be enabled to avoid payment until such later date as may be fixed by the deposit of 150 lei for each pound sterling, 3.50 lei for each French franc found due (a like low rate of exchange being mentioned for other foreign valuta), desires to register its most serious protest against any attempt being made on the part of Roumanian debtors to bring pressure to bear upon the Roumanian Government with the aim of depriving foreign creditors of their just and legal rights of redress.

" Whilst fully acquainted with the facts of the present financial situation in Roumania, and also with the facts regarding the fall in the international value of the Roumanian leu, the Chamber desires to place on record its considered judgment that this attempt to prejudice the rights of foreign creditors can have but one effect, and that is to undermine confidence not only in the ability of the Roumanian debtor to pay his debts, but also in his good faith. The inevitable consequence of such loss of confidence can only be a further tendency to decline in the international value of the leu, and if only for this reason the Chamber condemns most severely the action of those importers, very few in number, who, in their unwise desire to force upon foreign creditors a provisional settlement of the kind mentioned, are prejudicing the credit and the good renown of the whole of the Roumanian mercantile world.

" The Chamber is assured that in stating this it will have the support of the great majority of the honest and respectable traders throughout the whole of Roumania, as well as of the majority of importers, who so far have not associated themselves with the small group above-mentioned, and upon whose shoulders will necessarily fall the greater part of the losses consequent upon the action of the said small group.

" The Chamber considers that in the case of accounts owing to the United Kingdom it is most desirable that the settlement of such questions be left to the individual firms concerned. The relationship between British and Roumanian firms, existing in many cases for a long period of years, have brought into being friendly feelings which will undoubtedly play their part in the settlement of the question. In other cases where difficulties arise in arriving at a settlement this Chamber expresses its readiness to take the part of friendly mediator between the individual firms concerned and to endeavour by every means in its power to promote a settlement.

" In general the Chamber would express its opinion that notwithstanding the acuteness of the financial situation in the United Kingdom the great majority of British creditors would probably consent to a renewal of outstanding bills as they fall due, should the Roumanian debtor make reasonable proposals regarding the payment of interest and a small proportion of the amount due. Holding this view the Chamber feels that the movement to secure obligatory settlements upon the lines indicated in the memorandum of the Bucarest Camera de Comert is without adequate justification as it is extremely unlikely that Roumanian importers as a whole will be summarily prosecuted for payment upon their bills falling due.

" The Chamber is of opinion that a relatively small number of importers may be obliged to meet payments beyond their resources, and does not consider it either advisable or necessary to compromise the good name of Roumanian importers in general for their sake. The question has been given an importance which it does not merit, and an atmosphere of distrust has been unnecessarily imported into the good relationships previously existing between Roumanian merchants and their foreign creditors."

## INDIA'S OPIUM PRODUCTION.

Mr. Gilbert asked the Secretary of State for India on December 16, what was the acreage in India now under cultivation with the opium poppy; how many chests of Indian opium were now exported annually ; what were the destinations of this exported opium ; and whether any and, if any, how much was converted into prepared opium for smoking ?

Colonel Gibbs (Treasurer of the Household) : The total area under poppy cultivation in British India amounted to 156,435 acres in the year 1919-20. 9,823 chests of opium were exported in that year. The countries which imported this opium were the Straits Settlements, Dutch East Indies, Siam, French Indo-China, Japan, United Kingdom, Hong Kong, British North Borneo, Ceylon, Mauritius and the Fiji Islands. My right hon. friend is not in a position to state how much of the raw opium exported from India to other countries is there converted into prepared opium for smoking.

Mr. Barnes : Can the hon. and gallant gentleman say if the Government are working in full harmony with the organisation under the League of Nations for the reduction or suppression of this trade ?

Colonel Gibbs : I am not in a position to state that myself, but I will tell my right hon. friend what the right hon. gentleman says.

Mr. Barnes : Will the hon. and gallant gentleman make enquiries on the matter ?

Colonel Gibbs : Yes, sir.

## INDIAN INTELLIGENCE.

The Indian Trade Commissioner has issued the following cabled news received from the Director-General of Commercial Intelligence, Calcutta, dated December 19 :—Season.—December 12 to 14—weather dry. December 15 to 18—light rain in North-West India. Condition of Crops.—December 16—Bengal and Punjab prospects unchanged. Bombay prospects good except in Deccan and Dharwar, where more rain required. In Central Province, sesamum very good, wheat, gram and linseed good. December 19—Assam crop prospects unchanged. Markets.—Cotton.—December 16—Bombay cotton market firm with upward tendency. Fine M.G. Oomras Rs. 411 December-January ; Rs. 404 March. Bombay cotton arrivals from September 1 to December 15, 1921, were 691,000 bales as compared with 364,000 bales during the same period of last year. Piece-goods—Bombay piece-goods market very quiet. Jute—December16—Calcutta jute market very firm, Firsts Rs. 58 to Rs. 59, Lightings Rs. 47. December 17—Hessians steady and rates tending upwards. Heavy goods steady. Tea.—At tea sale on December 13, Assams and Dooars excellent : others good. Common and low medium grades three to six pies dearer. Good mediums firm. Fine Liquorings one to two annas dearer. Dusts steady ; 437,902 packages sold to date at an average price of nine annas eight pies per lb. Shellac—December 13—market firm. T.N. Rs. 160 December. Spot Rs. 155 closing price. Rice—Special Straits Quality rice Rs. 480 for Decem' er new crop. Imperial Bank of India rate 6 per cent. Freight rates to Continent reduced by 5s. for December-January.

## OVERSEAS OIL SYNDICATE.

The Overseas Oil Syndicate, Ltd., has been registered as a private company with a nominal capital of £25,500 in 25,000 ordinary shares of £1 each and 10,000 management shares of 1s. each, to acquire and deal with lands and interests and rights therein containing, or supposed to contain, oils or similar products, metals, or other minerals, &c. The holders of the ordinary shares are entitled to a non-cumulative preference dividend of 8 per cent., and, subject thereto, the remaining profits may be distributed as to 50 per cent. among the ordinary holders and as to the remaining 50 per cent. among the holders of the management shares. The signatories are to appoint the first directors. The registered office is at 10-12, Copthall-avenue, E.C.

A large cloth-weaving mill has been started at Bucharest, the buildings and plant occupying an area of 3,000 sq. metres. Its machinery and 60 looms are of the latest type.

# Engineering Topics.

*By Our Engineering Representative.*

**Marine-Engines.**

With reference to my recent note regarding Diesel and semi-Diesel engines for marine work it is interesting to note that a number of builders of Diesels operating on the 4-stroke principle are now turning their attention to building 2-stroke types. In this they are certainly wise, as the 2-stroke is not only lighter in weight for power output, but smaller in size, and consequently costs less to build. A glance at the patent records reveals the fact that Messrs. Vickers, the North British Diesel Engine Works, and Harland and Wolff have taken out protection for various ideas connected with 2-stroke Diesels.

Recently quite a number of licences to manufacture under various patents have been taken out by British marine engineering firms, in addition to those mentioned being Messrs. Richardsons Westgarth & Co., and Smith's Dock Co. The former is to manufacture the Tosi type and the latter the Camellaird-Fullagar design. The two twin screw motor ships which have just been ordered by Messrs. Furness Withy and Co., are to be engined by Richardsons, Westgarth and Co. This means the building of four sets of 1,250 h.p. engines.

With regard to 2-strokes I hear that Messrs, Doxford, who have had a good deal of experience with 3,000 indicated horse power standard opposed piston sets, have just prepared designs for 6-cylinder engines of similar type, which will develop 6,000 indicated horse power. On the other hand arrangements have been made by another firm to manufacture 8-cylinder engines of the 4-stroke type, developing 4,000 horse-power. All of which puts the high powered motor ship within the range of practical politics, and the question apparently may now be asked as to what steam engineers have in preparation by way of answer.

**Electric Conduit.**

For many years electrical engineers have been experimenting with a view to devising some safe, cheap, and certain method of bonding steel or other metallic conduits used for carrying light and power wires and cables. Quite a number of what appeared to be highly satisfactory devices, on paper, proved failures when brought into practical use; some had the disadvantage of being clumsy, and others would act with certainty 99 times out of a 100 and fail at some critical moment. In the Terra-grip system just brought out by Simplex Conduits, Ltd., each outlet of the fittings, as couplings, bends, elbows and tees used in the system, has a drilled and tapped boss which carries a steel grub-screw, the end of which is formed with a cup-shaped projection. When the conduit is inserted in the fitting and the screw driven home, this projection is flattened out, and expands when it comes into contact with the steel tube. In this way it forces off a portion of the enamel and makes a perfect metallic contact with the cleaned metal. It also locks the screw automatically so that it will not work loose under even excessive vibration. On occasion it may be necessary to take down a length or so of conduit or to dismantle an installation, and in that case all that has to be done is to turn the screw in the opposite direction. This will cause the projection to re-form itself sufficiently to free the conduit. Should the coned part have been driven home with more than usual force, or have corroded, it will shear off under the strain, and so let the conduit come free. So far as I can judge from a description the device seems likely to prove quite satisfactory in action, and I hear that tests made on assembled systems show that currents up to 40 amperes have been passed through them, and that the average resistance per junction was practically negligible.

**The Claude Ammonia Process.**

The possibilities of the Claude ammonia process were the subject of an extremely interesting and instructive paper given recently before a joint meeting of the Institution of Mechanical Engineers, and the Chemical Engineering Group of the Society of Chemical Industry. According to Mr. J. H. West, the dominant feature of the process is the employment of a high temperature. Claude's experimental data show that for a given temperature the proportion of hydrogen and nitrogen remaining combined under conditions of equilibrium rises rapidly with increase of pressure, although the yield is greater when the temperature is lower. What is actually wanted, therefore, seems to be a combination of high pressure and low temperature, a combination which is given ideally in the Claude process. The Haber process is a low pressure system, comparatively speaking, employing a pressure of about 200 atmospheres as against the Claude pressure of approximately 900 atmospheres. At 900 atmospheres, it is said, the reaction becomes auto-thermic; quite small catalyst vessels can be used, and the initial heating can be effected by external electric circuits.

**Handling Cargo.**

The introduction of mechanical appliances for the handling of cargo at one of the chief Liverpool docks, Mr. G. H. Rae pointed out recently, has been completely successful. After outlining the difficulties met with, he stated that after considering many proposals it appeared that the introduction of a light portable type of electrical crane would best meet the peculiar conditions attending the unloading of certain vessels.

In the first instance six 5-cwt. cranes were ordered of a light but rigid steel construction. These were each mounted on a carriage with four ball-bearing road wheels, and had a lifting speed of 60 feet per minute, slewing 190 feet per minute a height of 14ft. 8ins. to the underside of the hook. Each was operated by a 2-h.p. electric motor. After these had been in operation for some time a further six cranes were added. In these the radius was increased and the lifting speed was 90 instead of 60 feet per minute, a 3-h.p. motor being used with each. The success met with was such that in a few months 18 more of these cranes, making 30 in all, were at work, handling cargo at this dock, in addition to two 7-ton electric cranes each of which has a longitudinal traverse of 1,000 feet and a span of 60 feet.

In the first place the small electric cranes were not fitted with travelling motors but were moved by hand from place to place, or hauled by an electric tractor. They further had non-steering wheels, which arrangement was found inconvenient, and in the later types a steering device was provided, and the electric motors could be geared on to the road wheels. For transferring cargoes from point to point at this dock electric tractors with trailers and electric platform trucks are being largely used, and it has been found that the consumption of electrical energy per ton moved is surprisingly low.

## BRITISH OVERSEAS BANKS.

At a general meeting of the members of the British Overseas Banks Association, held on December 16, the following were elected to form the committee for the ensuing year:—Mr. Percy Arnold, O.B.E., Bank of Adelaide; Mr. Charles Cambie, Canadian Bank of Commerce; Mr. Leslie Couper, C.M.G., Bank of British West Africa; Mr. T. J. Finnie, London and Brazilian Bank; Mr. W. E. Preston, Chartered Bank of India, Australia and China; Mr. Sydney F. Rogers, Imperial Bank of Persia; Mr. Francis Shipton, Standard Bank of South Africa; Mr. Geo. H. Soul, Anglo-Egyptian Bank; Mr. T. R. Whitley, Royal Bank of Canada; Mr. Arthur Willis, National Bank of New Zealand. Mr. W. E. Preston, of the Chartered Bank of India, Australia and China, was elected Chairman, and Mr. Francis Shipton, of the Standard Bank of South Africa, was re-elected hon. secretary and treasurer.

Anglo-Egyptian oil output:—Gemsah (week ended December 16) nil tons (last week 1,068 tons.) Hurghada (week ended December 16), 3,488 tons (last week 3,420 tons).

## LONDON PRODUCE REPORT.

### Dull Tone Prevails.

Sugar.—Home refined has continued in fair request at unchanged rates. West Indian crystallised has been done round about 39s. 9d. Czecho-Slovakian is quoted at 19s. 9d., while White Java is 1s. down at 44s. The futures market has been quiet.

Coffee.—A steady tone has been maintained, and transactions have taken place at recent prices. Futures have been rather irregular. The quotations are :—December 51s. 3d., March 51s. 9d., May 52s. 6d., July 53s. 9d., September 53s. 9d.

Oilseeds.—A rather dull tendency has prevailed. Indian linseed at 17s. 3d. is 3d. lower, but La Plata is 3d. up at 16s. 6d. Rapeseed has been irregular. Toria is 3d. up at 18s. 3d., while brown Cawnpore has shed 6d. at 17s. 3d. Cottonseed has been dull, Indian being 1½d. down at 9s. 1½d., while Egyptian black is 9d. down at 12s. 6d., and Sakellaridis is 3d. down at 12s.

Seed Oils.—Prices have been somewhat irregular. Linseed oil at 28s. 6d. shows a rise of 1s. Rape oil has been weak with the crude variety 10s. down at 46s., refined being unchanged at 51s. 6d. Cotton oil has been quiet. Refined is unchanged at 45s., Egyptian crude is the same at 37s., while deodorised remains at 50s. Turpentine has been dull, and closes 9d lower at 67s. 6d.

Oilcakes.—Business has been restricted, and changes of prices are insignificant.

## ASIA MINOR FRUIT REPORT.

Messrs. C. J. Giraud and Co., of Smyrna report as follows for the week ended December 3 :—

Sultanas.—The total estimated arrivals to date amount to 160,835 bags as compared with 88,035 bags for the corresponding period of last year. The total estimated sales are 150,835 bags as against 80,035 bags for 1920 and the estimated stock unsold amounts to 10,000 bags as against 8,000 bags for last year.

Shipments.—Sultanas are being loaded on the s.s. Gourko, Cressado, and Sea Serpent for London, Liverpool, and London respectively and are sailing at the end of the week.

Markets.—Sultana sales during the week amounted to about 600 tons, mainly for consignment to the U.K. market. The Gourko, Cressado and Sea Serpent will load about 8,900 tons for London and Liverpool. The market, stimulated by above purchases, has been very firm, prices reflecting a slight advance on last week. Very little doing in figs owing to absence of arrivals. Any occasional lot of decent quality coming to market is promptly snapped up after keen competition. Exchanges have ruled easier between 740-750.

There is a steady growth in the use of the Cairo-Baghdad air mail service by the public. On October 13 last the mail contained only 57 letters. On November 17 the number was 172. On December 1 there were 354 letters. The average time of transmission by ordinary mail from London is 27 days. The air mails dispatched from London during the past two months have reached Baghdad on the average in 12 days, and, on three occasions out of five, in 10 days, or less.

## CYPRUS NOTES.

*(From Our Own Correspondent.)*

*Cyprus, December 6.*

Returns for the quarter ended September 30 last show that goods imported were valued at £334,782, as against £509,375 for the same period in the preceding year. Exports were valued at £253,708 as against £314,420.

The rainfall in October was very small, but November has been more favourable. Much rain has fallen in the past week. The sowing of barley is almost finished, and that of wheat is proceeding in the plains. The yield of carobs was excellent in quantity and quality. It is estimated that the total amount collected considerably exceeds 80,000 tons. More than half of the yield has been already exported.

## BULGARIA'S LACK OF CREDIT.

The Bulgarska Banka, in a report dated December 1, states:—

The situation has never been more unfavourable for the importer. As a result of the lack of liquid funds which has become more and more acute, the banks have suspended the grant of credit, and have been compelled to demand covering for credits previously granted. The National Bank of Bulgaria has endeavoured to give some relief by discounting a part of the bills of private banks, but this has up to the present had no effect: the need for funds is too disproportionate to the means of payment in circulation. Important purchases of tobacco have immobilised the last disposable credits, and the present situation has all the characteristics of a severe and lasting crisis.

Stocks of imported merchandise not increasing by reason of the almost total lack of new orders, prices, especially of manufactured goods, have a tendency to rise, this being favoured by the increase in the customs tariff on the one side and by the exchange, which is always falling, on the other. It can be said that importers as a whole are generally abstaining from selling probably counting on a still greater rise, and fearing that they will be unable to replace the merchandise sold.

## TATA INDUSTRIAL BANK.

The Tata Industrial Bank announce a profit for six months to September 30 last after making provision for all liabilities and writing down investments and securities to or under current quotations, was Rs.10,96,355, plus Rs.2,20,004 brought in, making Rs.13,16,359. Dividend of 10 annas per share, free of tax ; to reserve Rs.3,50,000 ; for income tax and super tax, Rs.1,00,000 ; forward, Rs.2,34,080.

# Company Meetings.

## ANGLO-PERSIAN OIL.

### Another Satisfactory Year's Working.

### New Issue Foreshadowed.

The twelfth ordinary general meeting of the Anglo-Persian Oil Company Ltd., was held on December 21 at Winchester House, Old Broad Street, London. E.C., Sir Charles Greenway, Bart. (the Chairman of the Company), presiding.

The Secretary (Mr. F. Macindoe) having read the notice convening the meeting and the report of the auditors,

The Chairman said: Gentlemen,—I have very great pleasure in appearing before you to record another very satisfactory year's working, and one which demonstrates very clearly the progress the company is making and the wisdom of our policy of expansion. In the prospectus we issued early this year we estimated that the profits for the year for which accounts are now presented would, after allowance for the payment of income-tax and royalties, not be less than £4,000,000. As a matter of fact, they slightly exceed that amount, and could quite properly have been shown at a much larger sum had we not deemed it prudent to take advantage of an extremely good year by making very ample provision for depreciation in every direction, both in this company and in our subsidiaries. When it is borne in mind that a very large amount of the capital which has been put into the business during the past two or three years had not begun to fructify, these results may, I think, be regarded as eminently satisfactory.

For the current year there will be some falling off in profits because the heavy fall in the prices of products has not been fully compensated for by the increased throughput owing to the long time necessarily occupied in bringing our various extensions into operation, but as we shall no longer be liable for excess profits duty the amount available for dividends will be in excess of that available in the year under review. In the succeeding year, however, when our recent large additional capital outlay will begin to bear full fruit, and when also, for a part of the year, we shall be free from our present onerous contracts for benzine and kerosene, there is every reason for anticipating a further large increase in our profits.

**Balance Sheet.**

I will now go through the balance sheet, and deal with the items requiring comment. Taking the debit side of the account you will see that the amount of capital issued shows an increase of £1,629,483 16s. 10d. on the previous year, this being the amount then paid up in respect of our issue early in the year of £3,500,000 Nine per cent. Preference shares. The amount of Debenture stock outstanding shows a reduction of £125,000 this representing the amount of Debentures redeemed during the year.

The amount of deposits by associated companies shows the very large increase of over £3,000,000. This chiefly represents increased profits, part of which was subsequently paid to us in the form of dividends, which are included in the contra item of £4,792,295 16s. 8d. Employees provident pension and insurance fund shows the very satisfactory increase for the year of £176,894 19s. 7d. In passing, I may say that this fund has been a great source of satisfaction to the staff and that now it has a membership of nearly 4,000. The share premium and reserve accounts, you will see, have been brought up from £2,000,000 in the previous year to a total of £2,685,000. Apart from these reserves I may mention that considerable reserves have also been set aside in the accounts of our subsidiary companies.

Coming to the credit side of the account, you will see that the amount invested in concessions and shares in other companies has increased by over £4,200,000. This is due to our increased investments in subsidiary companies. All doubtful items have been written off, and the total amount shown under this heading is far below the actual value. The next four items all show considerable increases, due, of course, to the expansion of our business.

**Profit and Loss Account.**

Dealing with the profit and loss account, you will see that the gross profit, after making the very liberal allowances for depreciation to which I have already referred, amounted to £4,948,627 4s. 9d., as compared with £3,458,418 14s. 6d. in the previous year, and the net profit, after deducting income-tax, estimated royalty and other usual items, to £4,028,022 4s. as compared with £2,611,615 4s. 5d. in the previous year, or an increase of over £1,400,000. In our appropriation account we have written off all expenses connected with the issue of Second Preference shares, carried £685,000 to various reserve accounts, and after paying excess profits duty and corporation tax for 1919-20 have carried to the balance sheet the sum of £3,263,792 2s., as compared with £1,848,841 2s. 10d. in the previous year. Out of this sum £400,000 has been paid for dividends on Preference shares and it is now proposed to declare a dividend of 20 per cent. per annum on the Ordinary shares, less income-tax, leaving a balance of £1,648,792 2s to be carried forward.

**Capital Expenditure.**

As will be gathered from my previous remarks and from the report now before you, the extensions and developments necessary to enable us to dispose of our largely increasing production to the best advantage are extensive. They will, of course, involve additional capital expenditure, and to meet this a further issue of capital will shortly be made, but what form this will take has not yet been definitely decided upon.

I will now refer briefly to the more important of our operations in connection with which additional capital expenditure is being incurred.

**Refineries.**

The extensions of Scottish Oils, to which I referred last year, are now in progress, and should be completed by the end of next year. As I then forecasted, the working results of the company during the current year have been much less favourable than in the previous year owing to the heavy fall in prices of all products; in fact, for a considerable period of the year the company was working at a heavy loss, but I am pleased to say that the corner has now been turned, and that with the assistance of the Persian oil which we are now putting through the refineries in order to avail ourselves of the full capacity of the original plant it should henceforth be showing a moderate profit. It is interesting to note, as an indication of the general industrial situation in this country, that while the revenue of Scottish Oils, Ltd., since 12 to 18 months ago has fallen to the extent of about £3,000,000 per annum owing to the lower prices we are realising for our products, the reduction in our working expenses, due to cheaper coal and materials, lower wages and more economical management, amounts to somewhere about £2,500,000. For a portion of this period of readjustment of values we were unfortunately compelled to shut down two-thirds of our works, but with the change which has now taken place in the situation we are arranging to resume full work.

**The Oil Industry.**

If the extraordinary change which has taken place in the economic situation of the oil industry in this country could be regarded as characteristic of other industries it would seem to indicate that the industrial revival for which we have all been looking so anxiously had now nearly matured. But I am afraid that the position of this industry is somewhat unique, since, it does not, as is the case with most others, suffer to any material extent from the competition of countries where the rate of exchange and lower taxation are of immense assistance to the producer. Therefore, we cannot, I think, look for any general industrial revival in this country until the exchanges of the world become adjusted to a more normal level, and until British producers obtain some measure of relief from the present overwhelming burden of taxation.

These are questions which I commend to the study of our legislators—not merely by comparisons with Germany, with which this country is not analagous, but also by comparisons with France—a country which, financially, has been affected by war even more than ourselves, and where it will be found that the burdens on industry are far lighter than in this country.

As mentioned in the report, the refinery of the National Oil Refineries, Ltd., at Llandarcy is now nearly completed. It has been in partial operation since July last, and I am pleased to say that the results we are obtaining are even more favourable than our anticipations. I may take this opportunity of saying that there is no foundation whatever for the fantastic figures which have from time to time appeared in the Press as to the amount of capital we have expended on this refinery. While

Digitized by Google

the refinery represents the last word in the scientific and economic treatment of petroleum—comprising, as it does, not only the best of the known processes and methods of refining, but also some entirely new and valuable ones which have been evolved by our own research chemists—the capital expenditure involved in it is only a mere fraction of some of the wild sums which have been named, and it is more than justified by the returns we are now getting. I should like to add that the plant is running at 30 per cent. in excess of its estimated capacity, that its capacity can be largely added to at small cost and that the petrol and lamp oil produced from it are the best qualities now on the market. I may take this opportunity of mentioning also that we have for some years past had a research laboratory of our own under the charge of a staff of research chemists possessing high qualifications, and that this staff are constantly engaged, in conjunction with our engineering staff in solving the numerous problems involved in the refining of petroleum and in obtaining from the crude oil products of the very best quality. The results of their research work have, I am pleased to say, been most valuable, and have led to the adoption of many improvements in our refineries.

**The Refineries at Abadan.**

In the period under review the throughput of our extensive refineries at Abadan show a very satisfactory increase over that for the previous year. To give you some idea of the magnitude of Abadan, I may mention that the refinery and township cover an area of over two square miles, and that a further large area, about three miles lower down the river, is being rapidly developed for the storage and shipment of the more dangerous oils. When the extensions in hand and contemplated are completed it will rank as one of the largest, if not the largest, single refinery in the world.

Mr. Nichols, one of our managing directors, visited Persia during the year and has returned with gratifying accounts as to the progress of the developments and as to the great potentialities of the present producing fields.

**Distributing Organisations.**

Our two organisations in the United Kingdom—the British Petroleum Company and the Scottish Oil Agency—have been largely extended during the year, and the petrol and lamp oil now being marketed by them are largely of our own production, and before long we hope to be in a position to supply them with their entire requirements of these two products. Further augmentations are still being carried out, and when these are all completed we shall have as complete and well-equipped an organisation as any in the country, and be in a position to meet all demands.

Our French organisation—the Société Générale des Huiles de Pétrole—which now has a capital of 220,000,000 frs, is proceeding rapidly with the erection of installations, and has, as mentioned in the report, recently acquired three established businesses of considerable importance, through which it has now entered the French market.

In Belgium, Denmark, and Norway we have also acquired interests which will enable us before long to commence trading operations in these countries, and negotiations are proceeding for acquiring similar interests in other countries.

**Australian Interests.**

As regards Australia, a suitable site for a refinery has been acquired by the Commonwealth Oil Refineries, Ltd., and the building of the refinery has now been commenced.

In the Argentine we have acquired important interests in two companies which hold large areas in the Commodoro Rivadavia, Neuquen and other fields. Six test wells are being put down in the first of these fields, and we have just received advice that one of them has already struck oil, but the capacity of the well has not yet been ascertained owing to a temporary plugging. In the other fields two test wells are about to be commenced.

**Egypt.**

In Egypt we have acquired the concession of a considerable area on the Sinai Peninsula, on which we are now putting down a test well. Although we are still a long way from the depth at which our geologists anticipated oil would be struck, we have had favourable indications in the form of gas. If this should prove a successful field, it would be a very valuable addition to our Eastern sources of supply.

**Persian Fields and Production.**

I have great pleasure in reporting that our Persian fields are still maintaining their high rate of production, and that further areas of oil-bearing territory have been proved. I have often referred to our well F7, from which we have been getting our main production for a number of years. You will be interested to learn that the total production from this well during the past ten years has been 4,000,000 tons, or 26,000,000 barrels, and that it is now giving a yield of 2,000 tons, or 13,000 barrels, per day, which is considerably more than the average during the period I have referred to. This increase in the daily yield is not, of course, due to an increase in the volume of oil available, but to the fact that we are not now shutting the well in as much as we did formerly. So far as my knowledge goes, no other well of equal producing capacity and continuity has ever been known in any field producing light gravity crude, and, as I have said before, we believe we have many other as good, or better, wells.

It is perhaps needless to point out that this high rate of production, and the fact that our oil is all obtained from flowing wells or "spouters"—means a very low producing cost—probably not a tithe of the average cost obtaining in other fields yielding light gravity oil of equal quality. This low producing cost and the unusually large proportion of the more valuable products contained in our crude—in this respect our crude is probably superior to that of any other field in the world from which large productions are obtained excepting Burmah—give us, of course, a great advantage over other producers.

With the coming into operation of portions of our extensions to pipe lines, pumping stations and refineries we were able to increase the production from our wells to some extent during the year under review. A further increase is being effected in the current year, but the full effect of our extensions will not be shown until the completion of our new 12-inch line and the necessary additions to the pumping stations, when our production will probably amount to no less than 2½ times as much as in the year for which you now have the accounts before you.

Among our many developments is a large electric power station which has been recently completed at Tembi, the electrical energy from which is now being utilised at Maidan-i-Naftun and Maidan-i-Naftek for drilling and other purposes, whereby a considerable economy in our working costs has been effected. Large new workshops, stores, etc., are also in course of erection, and mechanical transport for material and men has been greatly augmented. Transport to and from the fields has been one of our greatest difficulties, and to overcome this the construction of a railway from the riverhead to the fields, estimated to cost £500,000, has been sanctioned, and the work is now in progress.

**The Fleet.**

As regards our fleet, in view of the considerable decline in the cost of shipbuilding and of the much larger supply of tanker tonnage now available in the open market, we and our associated companies have deemed it wise to cancel such of our outstanding orders as can be so dealt with on satisfactory terms, so that we may be free to take advantage of the lower costs and-or time charter rates likely to be ruling in the near future. The present fleet and the boats coming into commission and to be delivered during the next twelve months will amply suffice for our requirements in the immediate future, and such further additions as may be necessary will be made from time to time as required. It will interest you to know that the total fleet owned or managed by our subsidiary and associated concerns—including river and coastal craft—now numbers 150 vessels.

**Differences over Concessions.**

As regards the political situation, for the first time on record I regret to have to report that a difference of opinion has arisen between the Persian Government and ourselves in connection with some concessions in Northern Persia which were acquired by us from the original concessionaire about a couple of years ago. As you will no doubt have noticed from the references to this matter which have appeared in the Press, the Persian Government have, on quite untenable grounds, declared that these concessions, which were quite legitimately granted and acquired, and which have on many occasions since they were originally granted been recognised and acted upon by them, are now invalid, and that they have been in negotiation with another company for the grant to it of a new concession covering the same areas and also two additional provinces. While fully sympathising with the present financial and other difficulties which have doubtless led to this step, I must—as a well-known and staunch friend of Persia and one who has done much to help it both financially and politically—express my most profound astonishment that the present Government should have been so ill-

Digitized by Google

advised as to attempt confiscatory action of this nature ; because Persia's future is dependent entirely upon financial assistance from other countries—either in the form of loans or of capital for its industrial development—and if it once establishes a reputation for repudiating contractual obligations its credit abroad will be destroyed for ever. I cannot believe that the Persian Government will deliberately commit their country to so suicidal a policy, and I am confident that they will before long see that they have no alternative, if they desire to maintain the credit of Persia in this or any other country, but to honour the signatures and commitments of their predecessors.

I may add that one of the signatures which is being repudiated is that of a former Prime Minister, who happens also to be a brother of the present Prime Minister. This gentleman, for whom I have the highest respect, was cognisant of the negotiation for the sale of the concessions to us, and was, in fact, the principal guest at a dinner, at which I also was present, given by Mr. Khostaria in London, to celebrate the conclusion of the negotiations. I would like to know the views of this gentleman, who is, I believe, still in London, on the action of his Government, and what steps he proposes taking to secure recognition by them of his acts and deeds and to deny the statement put forward by them that the concessions were obtained by coercion.

In the south—that is, in the area of the D'Arcy Concession—we are experiencing no trouble whatever, and our friendly relations with the various tribal chiefs remain undisturbed.

**Oil Rights in Mesopotamia.**

Last year I referred to the misconceptions which existed, and to which some measure of publicity had been given in the Press of this country and in America, in regard to the oil rights in Mesopotamia, and also in regard to the attempts of this country to secure a more adequate share of the world's stores of oil. As regards the question of Mesopotamia, this has, as you know, since formed the subject of diplomatic correspondence between the two countries, and it would be out of my province to deal with it here, but I would like to say that in this matter, and in regard to oil questions generally, our relations with the Standard Oil Company are of a perfectly friendly nature and that there is not the slightest ground for suggesting, as has been done in some quarters, that these or any other questions are likely to lead to any serious dispute between the two concerns.

**Appreciation of the Staff.**

Gentlemen, I would like you to again join me in expressing our great appreciation of the services of our staff. When I speak of " our staff " I mean, of course, not only the staff of the Anglo Persian Company, but the staffs of all our associated companies—in this country, Persia and all other parts of the world. As I mentioned last year, we have around us the finest and most enthusiastic body of workers possessed by any oil company in the world, and their enthusiasm and readiness to sacrifice themselves for the welfare of the company grow each year with the company's success. It will be a matter of interest to you to know that the company and its subsidiaries is now giving employment to something like 50,000 people, and that out of this number no fewer than 20,000 are employed in the United Kingdom alone. The latter figure is one that cannot even be approached by any other oil company trading in this country, and it is a matter of great satisfaction to us that the policy which we have been following of creating a British oil industry should not only have been beneficial to the company, but should also have provided employment for such a large body of British workers, the majority of whom would otherwise doubtless have to-day been ranked among the unemployed.

In London our staff has grown to such large proportions that it has been necessary to accommodate them in a number of different buildings in various parts of the City. This obviously has many disadvantages, and to meet the situation we have acquired a large site with frontages on Finsbury-circus and Moorgate-street on which a suitable building capable of housing our entire staff is now in course of erection.

That finishes my remarks, gentlemen, and I now beg to move : " that the report, balance-sheet and profit and loss account for the year ended March 31 be received, approved and adopted."

I regret that Lord Inchcape, owing to his duties on the Super-Axe Committee, has been unable to attend here to-day, as usual, to second this motion, but I have no doubt that Sir Edward Packe, the other Government representative, will be good enough to do so in his place.

Sir Edward H. Packe, K.B.E. ; I have much pleasure in seconding the resolution.

The Chairman : Before I put the motion I shall be pleased to endeavour to answer any questions any shareholders may like to ask. (After a pause) : Well, gentlemen, there appears to be no one who desires to ask any questions, and I will therefore put the motion to the meeting.

The resolution was carried unanimously.

**Dividend on Ordinary Shares.**

The Chairman : I now beg to propose : " That a dividend at the rate of 20 per cent. per annum, less income-tax, on the Ordinary shares in respect of the year ended March 31, 1921, be declared and that such dividend be paid on a date to be determined by the Board." I will ask Sir John Cargill kindly to second the motion.

Sir John T. Cargill, Bart. : I have much pleasure in seconding the motion.

The resolution was unanimously agreed to.

The Chairman : The next motion deals with the Board of Directors. No changes in the Board have, I am pleased to say, taken place since we last met. The directors falling due to retire by rotation are Mr. F. W. Lund, Mr. Frank C. Tiarks, and Sir Trevredyn Wynne, and in view of their good services to the company I am sure it is your wish that they should be re-elected. I therefore now beg to move : " That Mr. F. W. Lund, Mr. Frank C. Tiarks, and Sir Trevredyn R. Wynne, K.C.S.I., who retire by rotation and are eligible for re-election be and are hereby re-elected to the Board." I will ask Sir Hugh Barnes kindly to second the motion.

Sir Hugh S. Barnes, K.C.S.I., K.C.V.O. : I have much pleasure in seconding that resolution.

The Chairman : Before I put the resolution to the meeting I would like to explain the reasons for the absence of one or two of our colleagues to-day. I have already mentioned the cause of Lord Inchcape's absence. The other absentees are Admiral Sir Edmond Slade, who has just left England on a visit to India and the Persian Gulf, and Sir Trevredyn Wynne, who has taken short leave of absence for the purpose of visiting India and Burma.

The resolution was then unanimously carried.

The Chairman : Will some shareholder kindly propose the usual resolution for the appointment of auditors ?

Mr. William Hayes : I have much pleasure in proposing, " That Messrs. Brown Fleming and Murray be and are hereby reappointed auditors for the financial year 1921-1922 at such fee as may be determined by the Board."

The Hon. Bernard Howard : I have pleasure in seconding that.

The motion was unanimously agreed to.

The Chairman : That concludes our business, gentlemen. I beg to thank you for your attendance.

Mr. Creighton : I should like to propose a vote of thanks to the Chairman for presiding to-day and for the very satisfactory report he has given us.

The Hon. Bernard Howard : I second that with much pleasure.

The vote was unanimously accorded.

The Chairman : I have to thank you very warmly, gentlemen, for the kind manner in which the vote has been proposed and passed and I should like to express the great satisfaction it gives my colleagues and myself at meeting you here to-day with such an extremely satisfactory report and one that gives very great hopes for the future.

The proceedings then terminated.

Digitized by Google

## INCREASE OF ALGERIAN IMPORT DUTIES.

The French *Journal Officiel* for December 6 contains a Law, dated December 5, which provides that the following goods shall, on importation into Algeria, pay the same duties as those prescribed in the French Customs Tariff, instead of the lower duties formerly applicable :—Tariff No. 99. pepper (in the grain or ground); 100, pimento (in the grain or ground); 102, cinnamon; 103, cassia lingea; 104, nutmegs, shelled or unshelled; 105, mace; 106, cloves; 107 vanilla. Coffee in the bean or husk (tariff no. 96) imported into Algeria is now subject under the minimum tariff to a duty equal to that of the French minimum tariff less the amount of the Algerian sea octroi duty; under the maximum tariff this product remains subject to duty, on importation into Algeria, at the rate prescribed in the French maximum tariff. Roasted or ground coffee is subject to the rates of the French tariff, which are the same as those formerly in force in Algeria.

## BRITISH TEXTILE MACHINERY TRADE.

The Government returns relating to the export trade of the United Kingdom show that out of a total of £69,373,372 which represents the value of the overseas shipments of machinery for the eleven months ended November 1921, textile machinery accounted for no less a sum than £22,908,180. In 1920 the corresponding figures were £56,284,958 and £6,952,871, and in 1913 £30,917,698 and £7,597,565.

During the past few years, values of course have fluctuated widely and a clearer idea of the importance of the textile machinery industry can be obtained from a comparison of the figures in connection with the weight of machinery exported. During the eleven months ended November last the total of all kinds of machinery was 469,277 tons, 142,699 tons of which consisted of textile machinery. For the same period of 1920 the figures were 412,755 tons and 49,480 tons, against 636,518 tons and 163,784 tons in 1913. Since August last the quantities exported have risen steadily, the figure of 17,406 tons for November being higher than in any previous month this year. The total for the eleven months ended November is less than in the corresponding period of 1913, but the disparity is not large. The principal markets for the eleven months, January to November 1921 with the percentage of the total which their purchases represent are India (38), France (15), Japan (14), and China (10).

Most commodities have slumped in price during the past twelve months but this easier movement has not affected textile machinery values. On the contrary present prices are higher than those ruling a year ago. The average price per ton for the eleven months ended November, 1920, was £141, but for the same period of 1921 the figure was £161. In 1913 the average worked out at £46.

The Delhi, Umballa, Kalka Railway, announces interim dividend for half-year to Sept. 30 last of 6 per cent, plus a bonus of 1 per cent, or 7 per cent. in all, on ordinary stock, less tax at rate of 3s. 6d. in the £, payable Jan. 30.

## BRITISH CLAIMS AGAINST TURKEY.

Mr. Alfred Silley, of Constantinople, whose hard work in the interests of British subjects having claims against Turkey arising out of the war is well-known, writes as follows :—

The case of British traders residing in Turkey is a specially hard one, and above all others calls for the protection by H.M.'s Government of their interests. They were obliged to leave the country at a moment's notice, their businesses were ruined, their goods were seized or requisitioned, and their houses were forcibly occupied and ransacked, their furniture and personal effects being taken or damaged. During four years of war, deprived of the income from their businesses, they lived on their remaining capital, and returned to Turkey after the Armistice, in most cases so crippled financially that they were unable in whole or in part to resume their pre-war trade.

The disastrous effect of this on our trade with Turkey is made clearer in the Constantinople Customs returns, which show that whereas before the war our share of the import trade into Turkey was nearer 38 to 40 per cent., the percentage for 1919-20 came down to 29 per cent., and during 1921 has steadily declined, for the port of Constantinople at all events, to under 20 per cent., until in August last the total American imports into Turkey cleared at the Constantinople Custom House, exceeded ours, and we took second place.

Much of this decline is due to the crippled financial condition of British traders resident in Turkey who can no longer push their country's trade as in the past. If we desire to retain our share of the trade with Turkey it is urgently necessary that steps should be taken to remedy their position and to protect them from unjust discrimination in regard to sums owed them by Turkish debtors and to support their request for payment of their claims generally.

## LIVERPOOL COTTON REPORT.

Messrs. Reynolds and Gibson, of Liverpool, reports as follows under date December 21 :—

The improvement noted in our last report was again apparent at the commencement of the week, but with the approach of the holidays interest has slackened off again, and to-day, after a period of remarkable steadiness, a somewhat weaker tendency has developed. This, as usual, was first manifested in the futures market, and is very probably of a temporary nature only. At all events, no very marked impression has been made as yet on spot prices, which on balance remain unchanged from last week. The enquiry on the whole has been of fair dimensions and of a general character. Tokar cotton has again been in request, but only a few sales have been recorded. Uppers are well held, and the lower qualities particularly are scarce. The demand for Fully Good Fair Sakellaridis has not been quite so marked as heretofore ; the prices asked for this quality show considerable variation.

Manchester is the key to the Liverpool market, and good advices from that quarter are eagerly awaited. On the other hand, India appears to hold the key to Manchester, and the eyes of the whole trade are turned towards that country, where the political situation is still very vague, and where unexpected developments might occur at any time. The latest news, which is to the effect that a conference is likely to be held between representatives of the Indian Provinces and the Government, has been favourably received. It is further hoped that the strong measures recently taken by the Government will tend to restore confidence amongst traders generally in that country. Altogether, although reports differ somewhat, it would appear that there has been rather more business doing with India, even though the prices obtained have not been all that might be desired. Spinners' takings of Egyptian cotton in this country continue at a good figure, but the stock in Great Britain up to last Saturday, 17th inst., was estimated at the large figure of 100,950 bales. C.i.f. business is on only moderate lines. Total sales, 1,900 (includes 350 bales Soudan). Quotations are unchanged from last week. Fully Good Fair Sakellaridis 20.75d.

The traffic receipts of the Smyrna-Aidin Railway for the week ended December 10 amounted to £6,059.

## TENDERS INVITED.

*Tenders are invited for the following contracts, and must be made by the dates mentioned.*

*(Particulars of tenders marked (D.O.T.) are to be obtained from the Department of Overseas Trade, 35, Old Queen Street S.W.1.)*

**Egypt.**

Oils, Paints, etc.—The Director of Stores, Frontier District Administration, Alexandria, invites tenders for the supply of oils, paints and varnishes to patterns kept at the Arsenal Alexandria. The specification includes 2,115 kilos of marine engine oil, 3,500 kilos motor oil, 600 kilos turbine oil, besides colza, linseed, rifle oils, turpentine, etc. ; 2,000 kilos grey paint in oil, 1,220 kilos white lead in oil, and items of ships composition, Brunswick black, black paint, red lead powder, etc. ; 145 kilos, copal varnish, etc. January 14 (D.O.T.)

Photographic Materials.—The Director, Personnel and Equipment Department, Ministry of the Interior, Cairo, invites tenders for the supply of photographic materials. January 31.

Clothing and Equipment.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of clothing and equipment required for the period April 1,—September 30, 1922. The specification includes made-up goods (aprons, caps, jackets, sheets, gallabiyas), material (striped and white linen, calico, canvas packing, house flannel), hardware, (cutlery, implements, padlocks, hollow-ware, enamelled ware) glassware, earthenware, wooden articles, ward slippers, brooms and brushes, mats and matting, oils and paint, soap and soda. Samples of certain articles required as indicated in the specification can be seen at the offices of the Inspecting Engineer to the Egyptian and Sudanese Governments, Queen Anne's Chambers, Westminster, S.W.1., provided firms apply direct to that office and give at least three days' notice. January 28 (D.O.T.).

**India.**

Electric Cables.—The Commissioner, Corporation of Madras invites tenders for the supply of electric cables as follows :—Low-tension cables : Forty-two miles of twin 7-.044 S.W.G., thirteen miles of twin 7-.064 S.W.G., paper insulated, lead covered and steel tape armoured cables for 225 volts A.C. circuits. High-tension cables : Two miles of three-core 7-.044 S.W.G., five miles of three-core 7-.064 S.W.G., paper insulated, lead covered, and steel tape armoured cables for 5,000 volts A.C. circuits with neutral point not earthed. Printed forms of tender, agreement, and specification can be had from the Revenue Officer, Corporation of Madras, on payment of Rs.3 per set, which will not be returned. February 20.

Miscellaneous Stores.—The Controller of Stores of the Bengal-Nagpur Railway, Calcutta, invites tenders for a year's supply from April 1 of miscellaneous stores, including augers, crowbars, chisels, drills, files, hammers, shovels, spanners, canvas hose, coir fibre, cotton waste, jute waste, brooms, brushes, chemicals, nails, screws, buckets, soap, glass bottles, lenses, leather goods, uniforms, and stationery. January 24.

**Greece.**

Matches.—The Greek Ministry of Finance invites tenders for the supply C.I.F. Piraeus of 4,000 cases of safety matches, each case to contain 7,200 boxes. January 26. (D.O.T.)

**Yugoslavia.**

Blankets.—Notification was given by the Department of Overseas Trade in October last that the Army Clothing Department of the Ministry of War and Marine, Donji Grad, Belgrade, invited tenders for the supply of 120,000 Army Blankets. The closing date for these tenders was given as November 10, but from recent information received it appears that no tenders submitted on that date were accepted and that the offer is still open. New tenders will probably be called for to be presented on January 18. United Kingdom firms interested are reminded that representation by an agent in the Serb-Croat-Slovene State is essential.—(D.O.T.).

## FORTHCOMING SAILINGS.

*The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo, being given in parentheses :—*

*Anchor Brocklebank Line.*—S.s. Maimyo for Port Said, Colombo Madras, and Calcutta (leaves London, January 7) ; s.s. Maihar for Calcutta (Birkenhead, January 11) ; s.s. Manaar for Port Said, Colombo, Madras and Calcutta (leaves London, January 21) ; s.s. Malancha for Calcutta (Birkenhead, January 25) ; s.s. Malakuta for Port Said, Colombo, Madras and Calcutta (London, February 4); s.s. Mahratta for Calcutta (Birkenhead, February 8).

*Bibby Line.*—S.s. Gloucestershire for Marseilles, Port Said, Colombo and Rangoon (Birkenhead, January 4) ; s.s. Sittang for Rangoon (Middlesborough, January 7).

*Byron Steamship Line.*—S.s. General Napier for Patras, Piraeus, Constantinople, Constantza, Sulina, Galatz, and Braila, also calling at Volo, Salonika, Smyrna, Bourgas and Varna (Liverpool, January 10).

*Cunard Line.*—S.s. Tyria for Gibraltar, Algiers, Malta, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, and Batoum ( Swansea, January 5 ).

*Ellerman Lines.*—S.s. Estrellano for Genoa, Leghorn, Naples, Palermo, Messina, and Catania, ( Liverpool, January 12 ) ; s.s. Cressado for Gibraltar, Patras, Piraeus, Syra, Volo, Salonika, Smyrna, Constantinople, Bourgas, and Varna, ( Liverpool, January 21 ).

*Ellerman's City Line.*—S.s. City of Baghdad for Calcutta ( Birkenhead, December 30 ) ; s.s. City of York for Calcutta ( Birkenhead, January 7) ; s.s. City of Cairo for Calcutta ( Birkenhead, January 9 ).

*Ellerman's Hall Line.*—S.s. City of Genoa for Bombay, Karachi and the Punjab ( Liverpool, January 13 ) ; s.s. City of Auckland for Bombay, Karachi, and the Punjab ( Liverpool, January 13 ).

*Ellerman's Westcott and Laurance Line.*—Steamers sail fortnightly for Malta, Piraeus, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Galatz, and Braila.

*Glen Line.*—S.s. Glenariffe for Port Said, Port Swettenham, Singapore, etc. (London, January 5); s.s. Glenogle for Port Said, Singapore, etc. ( London, January 19) ; s.s. Glenapp for Port Said, Port Swettenham, Singapore, etc. ( London, February 2 ).

*Harrison Line.*—S.s. Tactician for Calcutta, ( Liverpool, January 7 ) ; s.s. Intombi for Port Said, Port Sudan, Aden, Mombassa, etc. ( Birkenhead, January 19 ).

*Henderson Line.*—S.s. Martaban for Port Said, and Rangoon ( Birkenhead, January 11.)

*Holt Line.*—S.s. Telemachus for Port Said, Port Swettenham, Singapore, etc. ( Glasgow, December 29 ) ; s.s. Agapenor for Port Said, Port Swettenham, Singapore, etc. ( Birkenhead, December 29 ) ; s.s. Pyrrhus for Port Said, Port Swettenham, Singapore, etc. ( Birkenhead, December 29 ) ; s.s. Titan for Port Said, Port Swettenham, Singapore, etc. ( Swansea, January 5 ).

*Johnston Line.*—S.s. Wingate for Piraeus, Syra, Smyrna, Volo, Salonika, Constantinople, Bourgas, Varna, Constantza, Sulina, Tulcea, Galatz, and Braila ( Liverpool January 17 ).

*Papayanni Line.*—S.s. Asturian for Tangier, Malta, and Alexandria ( Liverpool, January 14 ) ; s.s. Gerano for Algiers, Malta, Piraeus, Syra, Volo, Salonika, Smyrna and Constantinople ( Liverpool, February 4 ).

*P. and O. Line.*—S.s. Soudan for Colombo, Madras, and Calcutta ( London, December 30); s.s. Delta for Bombay ( London, December 30 ) ; s.s. Nore for Colombo, Madras, and Calcutta ( London, January 13 ) ; s.s. Macedonia for Bombay ( London, January 13 ) ; s.s. Perim for Bombay ( London, January 14); s.s. Morea for Bombay ( London, January 20 ) ; s.s. Sardinia for Colombo, Madras and Calcutta ( London, January 27 ).

*P. and O. British India Line.*—S.s. Domala for Bombay and Karachi ( London, January 6 ) ; s.s. Nirvana for Colombo, Madras and Calcutta (London, January 14); s.s. Hatarana for Colombo, Madras and Calcutta ( London, January 21 ) ; s.s. Morvada for Colombo, Madras and Calcutta ( London, February 3 ).
